Many of Mr. Osbeck's details are curious.—Both he and Mr. Toreen speak of the windows having small square panes of mother-o'-pearl, instead of "glass or lead." Mr. Toreen says:—"When the rooms cannot get light enough from the doors and open walls, they have windows of mother-of-pearl, for which reason the cathedral church at Goa, on account of such windows, need not be thought one of the wonders of the world." Were it not for this grave assertion, we should have supposed our authors to mean oyster-shells, which are still in common use among the Chinese, as well as the Portuguese at Macao.

"All Europeans," says Mr. Osbeck, "go here, as well as abroad, only in their waistcoats, with a white cotton cap, and a hat over it, carrying a stick in their hands. Coats are only made use of when one European visits another."—Speaking of the Chinese, also, he says: "In winter they frequently put on thirteen or fourteen garments, one above another, or get them lined with furs. Instead of muffs they carry a live quail in their hands." This use of the quail is new to us. The Chinese frequently carry them about, and are very fond of fighting them, but we doubt, if they ever keep them for the sake of warmth.

The well-known fact, that a person falling overboard at Whampoa seldom if ever re-appears, till the third day, when the body usually comes up

in the same place where it fell, is also mentioned. "The sailor, who some days ago fell from our ship into the river, and had been by the rapid stream carried immediately to the bottom, was now found floating on the water, as commonly happens on the third day."

The pagodas are the most remarkable edifices that are to be seen near Canton; and attract the attention of all who visit the celestial empire. Some have supposed them to be intended for watch-towers, and in confirmation of this opinion, it has been said, that they sometimes have masts projecting above the roofs. But this is an error;—at least, we have not been able to ascertain that the Chinese consider them of any other use, than to keep off evil spirits from the neighboring country;—and what has been supposed to be a mast is, in fact, a part of the building. By the old writers, these pagodas have generally been called *towers*, while by the word *pagoda* temples were designated. Mr. Toreen gives the following description of the exterior of this class of buildings.

"On some high hills there are towers. They have all of them eight sides, are nine stories high [more or less], are almost every where of equal breadth within, have everywhere windows, and terminating in a point. I was told, that in time of war, they were used as watch-towers: they are therefore so dispersed that the given signals can easily be seen from one tower to another. In the villages were less, square towers, three stories high; but the Chinese said, that they were pagodas."

The pagodas in the neighborhood of Canton contain nothing within them; and have often no entrance, except by the windows; but in the more northern part of the country, they are used as temples,* have stairs from one story to another, and contain idols in each story. The temples, vulgarly called Joss-houses, (from a Chinese corruption of the Portuguese word *deos*, god,) are a

* Our remarks, page 167. concerning *meaou* and *td*, should have been limited to Canton—not being applicable to every part of the country.

very different description of buildings. The smaller ones consist of only one or two idol courts, with images, altars, incense-tables, tablets, &c., within them. The larger ones comprise several distinct buildings, one behind the other, and separated from each other by open courts. Annexed to these, are rooms for the priests, who, in the smaller temples, are but two or three in number. Small schools, also, are sometimes joined to them. The largest and most remarkable temple in Canton is the "Honan Joss-house," on an island immediately opposite to the city: it is, more correctly speaking, a Buddhist manastery, and contains, we believe, from 100 to 150 monks.

To return to Mr. Osbeck. In the month of December, the ships prepared to leave China, previous to which, they removed from Whamboa, to a station down the river. Of Whamboa, we here extract the following account, which Mr. Osbeck gives on occasion of his first reaching China :

"Arriving at *Wampu*, you have a large field with rice on your right, for no other corn is usual in this country: part of this field near the river is separated from the rest by a ditch, leading to a *bancshal*, or warehouse, for English, Swedish, and Danish ships....*Bancshal* is the place, or warehouse, where we stow all our unnecessary wood and tackle, pitch and tar; and keep our chickens, hogs, &c., during our stay in China....

"The Danish island (which bears that name because that nation commonly bury their dead in that place) is opposite to the *bancshal*. The French island is the next above the Danish; this is the burying-place of the English, Swedes, French, and Dutch. However, in both islands are likewise some Chinese graves. There are every where gardens, producing such fruits as in our country would be cultivated in hot-houses as rarities. But high places are never cultivated, because the sun entirely burns up whatsoever grows upon them....

"The rice fields, which are green on both sides of the river, as far as your eye can reach, the fine woods which consist of many sorts of trees, the hills, and the vallies, make the view beautiful, particularly on the left side; but the wet condition of the rice fields, and a mistrust of the inhabitants, did not allow me to examine things more clearly.

"There are three custom-houses, where all those who go in the Chinese boats between the town and the ships, are forced

to stay. Our people generally call them *Tiapp* (or *Chop*) houses. These *Tiapp houses* are built in part on a hard stony ground, and partly over the river, supported by posts. They have a bridge so contrived, that the boats may come to them at all times, as well during the ebb as the flood."

Second Bar, where large vessels stop, after leaving Whampona, is a much more exposed situation than the latter place. Mr. Osbeck says of it:—"We lay in a very bad berth here, and were exposed to storms and to the cold air of the sea. Here we learnt, that, though the Chinese winter is but just cold enough to produce an ice in the night, which is melted away in the day-time; yet the air about this season is very sharp and piercing." And Mr. Toreen says; "If any body had told me beforehand, that water would freeze naturally at twenty-three degrees and an half of latitude, I could not have believed it. But now I had the testimony of my own eyes, and the Swedish thermometer. Having staid eighteen months in this hot climate, the cold was somewhat troublesome in the open harbour, where we were exposed to the northeast wind."

At length, Mr. Osbeck left China, on the 4th of January, 1752. "After a stay of four months and ten days in China, our ship and the other Swedish ship began their voyage home. Every one leaped for joy, and my tea-shrub, which stood in a pot, fell upon the deck, during the firing of the cannons, and was thrown overboard without my knowledge, after I had nursed and taken care of it a long while on board the ship."—Such noisy ebullitions of joy at leaving China are now no longer seen; nor are salutes allowed to be fired within the Bogue or entrance of the Canton river.

We will here conclude our extracts from the voyages of Mr. Osbeck and Mr. Toreen, from both of which we have derived considerable instruction and amusement. Mr. Osbeck carefully followed the directions of his celebrated tutor, "the immortal

Linnaeus," in the study of every branch of natural history, but chiefly botany. All his walks are interrupted with long accounts of the plants he met with; and even from "the hay given to the cow in the factory," he procured "scarce grasses which would adorn the hortus siccus of an European botanist." Articles of commerce, occupations, manufactures, diet, in short, everything he met with, not excepting even the literature and religion of the Chinese, also came under his notice. We think his work well worthy the perusal of all who are desirous of obtaining correct information concerning China; though we cannot say much for the correctness of the Chinese names given in his journal.

- 3.—*JOURNAL of a tour through the settlements on the eastern side of the peninsula of Malacca, in 1828.* Printed at Singapore.

THE physical character of Siam, and the political, social, commercial, moral, and religious condition of its inhabitants, are very imperfectly known to foreigners. The lines of demarkation which bound this country, and separate it from Cambodia, the territory of the Laos or Chans, and the empire of the Burmians, are not well defined; but the situation of the country, occupying as it does an extensive valley, leads us to suppose that it must be very fertile, and rich in natural productions. This supposition is confirmed, by the

testimony of those who have had opportunity to ascertain its correctness, by personal observation.

This "famous kingdom," according to some published accounts, extends from north to south about ten degrees, and about four degrees, in its greatest breadth, from east to west; and contains a population of four or five millions.

Siam is worthy of much more attention than it has ever yet received from the people of the western world; and there is reason to believe, that those who direct their views to it, for good and noble purposes, will be richly rewarded. Bangkok has peculiar advantages; its situation is favorable to commerce. The Meinam, rising far in the rear of the kingdom, opens a channel through which the various productions of an extensive country may find their way to the metropolis; from whence, by the same route, articles from other climes, received in exchange, may go back into the interior, and even to the frontiers of other states. Bangkok affords facilities, likewise, for extending wide the knowledge of revealed truth; together with all the improvements in the civil and social relations of life, which are the inseparable accompaniments of that knowledge, whenever and wherever it is allowed to have its legitimate influence on the feelings and actions of men. Natives of Pegu, Burmah, Laos, Camboja, Cochinchina, and from the maritime provinces of China, and also from the islands of the great eastern Archipelago, are found here; and, with but very few restrictions, are allowed to engage in whatsoever occupation they prefer. In religion, also, most perfect freedom is enjoyed, and no pains and penalties are endured, except such as are self-inflicted.

In order that the advantages of commerce be fully secured, and the people raised to that rank in the scale of nations, to which their resources and numbers give them a just title, more information must be sent abroad, and an enterprising

spirit, that can meet and overcome difficulties, be called into vigorous action. We wish to see these objects attained. We wish to see the Siamese come out of bondage; and the substance and the abilities granted to them, consecrated to the glory of the Creator, and the well-being of his creatures. These are objects worthy of every attention; and with a view to facilitate their achievement, we propose to select for our readers a variety of facts and statements, contained in the documents before us. We must here, however, before proceeding to our task, enter our protest against those declarations,—always the offspring of weak or wicked minds,—that would consign to indiscriminate neglect information the most valuable, simply because it is contained in a “missionary journal.” Petty parties, divisions, animosities, backbitings, rivalries, strifes, and such like, are the abomination of the good man; he abjures them; he deprecates them; but never will he refuse to accept and value the truth,—published though it may be by the humblest of his fellow-mortals.

Mr. Medhurst of Batavia was the first Protestant missionary, so far as we know, who ever contemplated a visit to Siam; subsequently Messrs. Tomlin and Gutzaff engaged to become his fellow-travelers. But Mr. M. being more than once hindered from undertaking the enterprise, the two latter gentlemen, at length, determined to proceed without him. They embarked, August 4th 1828, on board a Chinese junk at Singapore; and after a voyage of sixteen days entered the mouth of the Meinam.

Only three days after their departure, Mr. Medhurst arrived from Batavia. Unable to obtain a passage either to Siam, Camboja or CochinChina, he resolved to explore the eastern coast of the Malay peninsula; and embarked, August 22d, on board a Chinese prow, carrying about 15 tons, bound for Pahang; from whence he proceeded to Trin-

gano, Kainman, Patani, and Songora, each of which settlements, he remarks, may contain, on an average several hundred Chinese colonists, with about as many thousands at the mines in the interior;—and altogether the Chinese settlers on the east coast of the peninsula cannot fall short of 15,000; and the Malays may be about 100,000. The cruel character of the Malays is pretty faithfully drawn in the following extract.

“What most disgusts and offends the eye of a stranger in passing through the town of Tringano, is the multitude of deadly weapons which abound among the people. Every man has a creese, sometimes two, and a sword besides; with one, two, and frequently three spears, on his shoulders; so that it is quite burdensome for each man to carry his arms; and the bulk of the people can do no work, having to carry such a load of destructive instruments about with them wherever they go. The consequence is that the men are all idlers, and the women do all the work, both carrying goods to the market, and disposing of them when there. The people being so plentifully armed, quarrels are very frequent among them, and murders not uncommon: immediately a cross word is given, the creese is drawn; if a man tries to escape, the spear is thrown after him, and if that misses, another is ready, and frequently a third, to do the work effectually. . . . The spears they carry about with them might rather be termed javelins, as they are heavy at the head, and taper to a point at the other end, so that they may be thrown remarkably exact, and seldom fly aside, or miss the mark, but at the distance of ten or twelve paces will pass through the body of any against whom they may be thrown.”

Thus armed and trained, it is not at all surprising, that “almost every evening one or another falls a victim” to these deadly weapons, and that “however numerous and glaring these murders may be, no notice whatever is taken of them by the ruling power.” We are further informed, that the administration of justice “is lax in every respect;” the thief has only to give back the thing stolen and receive a reprimand; but if he is caught a second time making such depredations, he then loses a hand or foot, which is immediately cut of

at the joint of the wrist or ankle. "But there is no such thing as flogging, or imprisonment, or working in chains; all which degrading punishments, the high spirit of the Malays would not bear, gladly preferring death in its stead." Such are the men who are to be tamed, and made the peaceful subjects of the Prince of peace.

The character of the Chinese, as portrayed in the journal, agrees pretty well, in its chief characteristics, with what is observable at Canton. Books were, generally, well received; and one man was so pleased with them, that he offered money to increase their circulation; this, says Mr. M., is the first time since my intercourse with this people, that I ever knew a Chinese ready to offer pecuniary assistance. All along the coast, the Chinese, though fewer in numbers than the Malays, are decidedly their superiors in every kind of labor and in commerce. But here, as everywhere else, they are given to the "vile habit" of smoking opium; some lamentable instances of which are noticed in the journal.

Songora is the first Siamese town on this side of the peninsula; it is divided into three parts, in which the Chinese, Siamese, and Malays severally dwell. The trade of Songora is principally confined to junks and native vessels, which pass up and down between Siam and Singapore. The Siamese here are easily distinguished by their stiff black hair, which they wear full in front, stroked back and smeared plentifully with oil; the women wear their tuft of hair on the fore part of the head, and are poorly clad. "The countenances of both men and women are, in general, intelligent and interesting, indicating a share of understanding superior to the common class of Malays."

Here we end our brief notice of Mr. Medhurst's journal, the value of which, to the general reader, would have been considerably enhanced, had the author added more concerning the productions of

the country, and the state of learning among the people. He has done well, we think, in publishing it.

Messrs. Tomlin and Gutzlaff passed *by* this coast, having only now and then a distant view of the main land or islands; which, as they appeared two days before they reached Siam, are thus described :

“ At sunset came close to the land we saw ahead at noon; it forms a most singular and picturesque scene on our left. A chain of rocky islands rising up in numerous sharp peaked minarets and blunt turrets, having altogether a most fantastic appearance. On discovering these well known land marks, the men were overjoyed and surprised at finding they were so near home. They, as well as we, have come unexpectedly hither; even our sailing master, the most experienced of all, was not aware of being so far advanced. Soon after first making land, at noon, our course was altered, now steering directly north; and ever since we have been running before a fine breeze, with all sail set, five or six knots an hour. Truly, we have great reason to praise the Lord for all his goodness! The people, as usual, expressed their joy and gratitude by giving a double portion to the gods! But at our evening worship below, we witnessed a more pleasing and triumphant scene. The captain, and several others, joined us in reading the cvii Psalm; G. suddenly rose at the end of this spirited and energetic song of praise, and, with peculiar vehemence of manner, commanded every one to kneel down and praise the God of heaven for his mercies; instantly, as if moved by a sudden and irresistible impulse, one and all were down upon their knees, and G. poured forth a strain of impassioned praise to the Most High, and in the name of all, gave thanks for his preserving and tender mercies to us, during the voyage. It seemed, indeed, as if the mighty Spirit of the Lord was present and moved every heart, so that each one, Christian and idolater, acknowledged his mighty power, and bowed beneath it. They have often been present, on recent occasions, listening attentively and paying a kind of outward respect, but never before heartily joined with us and bent their knees before the Most High God.

“ Every thing conspires to fill us with joyous emotions, and exalt our hopes in the Lord. The weather is altered for the better; and this has been one of the most pleasant days we have had for a long while; the night also was bright and lovely. The moon threw off her misty veil and walked in brightness, and the stars glittered in the heavens with peculiar lustre. The path of the moon was strewed with white filmy clouds, here spread out in a thin dappled surface, and there rolled up in delicate fleeces.”

The Meinam empties itself into the gulf of Siam by several mouths, forming a number of small low islands. The east branch affords the best navigable channel; although the bar, composed partly of hard sand and partly of soft clay, has on it only eight or nine feet at low tides; there are seventeen or eighteen feet on it at high water, spring tides.* Bangkok is about thirty miles distant from the mouth of the river, "which has a beautiful serpentine course, each sweep about a mile long."

After entering the Meinam, they dropped anchor just within the mouth of the river, where it is, they say, from $1\frac{1}{2}$ to 2 miles wide. The next day they ascended the river three or four miles, and anchored opposite Packnam, "a large straggling village on the right bank." Here there is a wall of apparent fortification, on each side; and on the right, a small circular fort, built in the water, one hundred yards from the shore; these, with some respectable tiled buildings and temples, are white-washed, and have a lively pleasing appearance, not a little heightened by the fresh verdure of jungle and grass. From hence the navigation is safe to Bangkok, and, it is said, still higher up the river; and the soundings are regular from six to nine fathoms, mud.*

The following paragraphs, which contain an account of their introduction to Siam, present us with a variety of facts and descriptions, characteristic of the inhabitants of the country.

"An officer, and a party of police, came on board (from Packnam); and the principal of them, a Chinese mandarin, hailed us frankly, and shook us by the hand,—our characters having been previously announced by the captain of the junk. Our skill in medicine was soon put to the test. An old man with a sore leg, and two rheumatics, were among the party. Our medicine chest excited considerable curiosity, and they seemed grateful for what was given them. Most of the party were tall, lively, and good humored, though they ransacked the

* See Horsburgh: also Milbyrn's *Oriental Commerce*.

whole junk in search of opium, and made no scruple of carrying off any little article that pleased them, each choosing according to his own fancy. These little depredations seem quite *lawful*, and therefore no one opposed them.

"We were detained for passes till the following morning. There being, apparently, some demur respecting ourselves, and the governor wishing to see one of us for further satisfaction, G. paid him a visit this morning, and was received with much respect. Excellent tea and fruits were brought out, and while he was invited to take a seat near the *great man*, and conversed freely with him, the rest, including the mandarin officer and the captain of the junk, sat silent at a distance. The servant bowed his knee on approaching the governor. G. parted with him on very friendly terms, apparently quite satisfied with our character and intentions. The governor's house is plain, and the whole village mean and dirty; G. could hardly move along the muddy streets.—Children were seen naked, but loaded with gold and silver ornaments."

The landscape improved as they proceeded up the river, "being adorned with a profusion of temples, gateways, columns and pyramids, glittering in gold." A great variety of trees were seen on the banks of the river. Betel, cocoanuts, plantains, bread fruit, bamboo, acacia, and the cotton tree were abundant, and entwined with a profusion of creepers (parasites). Their approach to Bangkok is thus described:—

"Opened the city suddenly at two or three miles distant. In approaching the capital, the scenery and dwellings on each side become more varied and beautiful. A temple somewhat like a village church, standing on the bank, with a few light elegant houses, half shaded by the foliage of trees, has a very rural and lovely appearance. Cauals, or small rivers, branch off from the river at intervals, running into the country—each opening a beautiful vista, with its grassy banks, and bamboos waving over the stream. A lively busy scene appears now on the river—hundreds of boats of all sizes moving in every direction.—A long line of junks on the left side, just on entering the city, with a range of Chinese smiths' and carpenters' shops; behind a splendid pagoda, literally blazing in gold, the Romish Episcopal chapel, standing close by, in a rural sequestered station—give variety to the scene. Our crew being now hailed by their friends on board another junk ringing a gong, one of our men mounted the poop, and returned a merry salute, which was repeated several times, each responding to the other till we got well into the city."

Well provided with books and medicines, and mindful of their high calling, no time was lost in applying themselves to their work; and seldom has there been exhibited, in modern times, a more interesting scene than that in which they now became the principal actors. Full well we know what is to be the happy issue of the grand drama. Kings *shall* become the nursing fathers and the protectors of those who turn from lying vanities to the service of the true God. The prospect of a great and speedy change in Siam is very pleasing. The clouds which begin to break away, *may*, indeed, gather again more thick and dark than ever; but such a doom we cannot anticipate,—the signs of the times forbid it. The course of the rising sun is surely upwards; the full orb will soon be above the horizon; storms and tempests may obstruct his beams, but cannot extinguish his glories.

To the details contained in the journal of Mr. Gutzlaff, which has appeared in the preceding numbers, we will here add a few particulars which will help to show the exact condition and progress of the Protestant mission in Siam. The royal family, and high officers of state, have, from the first, shown themselves favorably disposed towards the missionaries, and, though often moved to suspicion, their interest has not abated, but rather increased.

All accounts concur in giving to Siam a very numerous and most degraded priesthood. The number of priests in Bangkok alone is estimated to be more than 10,000: of these, 600 belong to one pagoda; and to another, one of the Phra klang's there is attached "an establishment of 80 priests." Among these *creatures*—who "are sometimes called gods," and are "worshiped," but oftener neglected and despised,—a friendly and an inquiring spirit was often manifested. The chief priest of the Phra klang was remarkably attentive and serious in his search after truth.

Mr. Tomlin supposes there are not less than three or four hundred pagodas in Bangkok, one half of which are in ruins. Some of the new ones "glitter and even blaze in gold and brilliant colors ; but as they are usually neglected, like the baby-houses of children, when they get tarnished a little, they soon become a mass of ruins." A large royal pagoda, near the king's palace, distinguished for the grandeur, symmetry, and variety of its numerous parts, and the magnificence and chasteness of the architecture, "consists of a large quadrangle, surrounded by buildings, and is entered by two principal gateways, on the north and south sides, in the centre of which stands what may properly be called the pagoda or temple. On the outside are groups of spires, of various altitudes, scattered over a large area, which add greatly to the beauty and diversity of the whole, when viewed at some distance."

Among all classes of people, from the palaces of princes to the meanest hovels, the desire for books was very great. The New Testament has been *translated* into Siamese, by the united labors of Messrs. Tomlin and Gutzlaff ; but the only work yet *printed* is a small tract ; the applications for this were so numerous, that many were obliged to go away without even a single copy. In the Chinese language, there was a good supply of books ; and individuals, sometimes, came a whole day's journey to obtain them. The following extract from a letter, written to the missionaries by Hing Me-twan, shows the feelings with which these books were, in some cases received.

"Felicity! Felicity! . . . Formerly we heard of the God of heaven, but knew not his revelation ; but now seeing the holy book, our joy is not surpassed by words;—happiness extreme! happiness extreme! We wholly trust in the God of heaven's merits—we disciples all believe in the doctrines of Jesus Christ and the holy book, but desire the God of heaven to send down illumination ; then simple men's happiness! Oh! we cannot describe it—but thrice praise!"

We marked, as we read the journals, several other passages which we intended to extract. But our limits forbid it. We cannot lay aside the journals, however, without expressing our gratitude to the writer, for the variety of information which he has given to the public. A good deal of interest,—our souls exult at the thought,—is beginning to be felt for the Siamese, both in Europe and America ; from both of which countries “embassadors” are about to be sent—not in courtly style, with a message to the king alone—but in lowliness and gentleness, to instruct the ignorant, to preach glad tidings to the poor, and to proclaim to all the acceptable year of the Lord.

From Mr. Abeel, who was with Mr. T. during his second visit to Siam, we have heard nothing since he embarked for Bangkok about the middle of last April ; but we hope to hear very soon, and to obtain from him and others, who may engage in the mission, much information concerning Siam. On the Buddhism of the Siamese, we have a paper now on hand. We intend that it shall appear soon.

MISCELLANIES.

SCARCITY IN PEKING.—The capital of the celestial empire has exhibited some peculiar scenes of distress and lamentations, during the past summer, occasioned, chiefly, by a long continued drought. As early as the 31st of May, an official paper was published by the emperor, lamenting the want of rain on the approach of summer. He had altars for prayer erected, with sufficient ceremony and respect, to sacrifice to the gods of heaven, and to be worthy of his own dignity, as officiating priest ;—in which capacity, he had devoutly knocked his head on the ground, and supplicated rain.—But, up to that day, genial showers had not yet fallen. His majesty says, that his “scorching” anxiety continued night and day, and he was, hour after hour, looking earnestly for rain—(but none fell).

He therefore turned his thoughts upon himself, and his government.—We have not time to give a full translation of his majesty's musings and his ultimate decisions, on this early occasion, and therefore we refer our readers to the original, the substance of which is, that the emperor is conscious of doing his duty, in a merciful manner, towards criminals and accused persons. His own conduct and wishes,—he says, rather proudly,—ought to have induced a sweet harmony between the rain-bearing clouds above, and the parched earth below. However, this has not been the effect. And, therefore, while he leaves the greater and smaller criminals in the other provinces to the course of law, he desires that in the province of the capital, a mitigation of punishment for the convicted, (except in cases of great crimes,) be adopted; that the accused be speedily brought to a just decision; and that imprisoned witnesses be either at once confronted with the opposite parties, or be set at liberty on bail. For he is aware that the prisons of Peking are crammed with suspected persons and witnesses, who are sickening, one after another, and pining in starvation even to death. "I deeply commiserate their condition," says the emperor. Then, he forthwith orders that all smaller offences be immediately disposed of, and the parties liberated. "Thus (he adds,) we may hope for timely, genial, and fructifying showers.—Let the Board of Punishments immediately obey these commands. Respect this."

The principle of this pagan paper seems to be conformable to the petition,—“Forgive us our trespasses as we forgive them that trespass against us.” But the emperor, unlike his father Keäking, does not take blame to himself. He throws the guilt on others.

In this and other Chinese pagan state papers, it is admitted that “the Heavens do rule;” that there is a Power above which rewards and punishes. It may be matter of form; or it may be sincere. But it is right in itself. It is said, that of late, in England, the Duke of Wellington's state papers, written for the sovereign, left out, either intentionally or carelessly, all acknowledgment of God, or of Providence; and that the present ministry, in two or three king's speeches, even when pestilence was threatening the land, said not a word by which it could be inferred that government was not a faction of atheists. There were complaints in various quarters; but by latest accounts, the ministry appears to have resumed the forms of theism,—the recognition of a Providence.

The above account was prepared for the press several weeks ago, but was mislaid. We regret this the less, since we are now able to append other accounts of a most interesting character. The drought was severe and of long duration; in consequence of which, the emperor, kings, and princes, fasted and prayed once in seven days, before altars dedicated to the

gods of heaven, the gods of the earth, of the year, of the land, of the grain, and finally to imperial heaven itself, and also to "imperial earth," with all the saints. His majesty, moreover, sent a king to *Tae-shan*, "the great mountain" in Shantung province, with Tibetan incense matches, to pray for rain in the emperor's stead.

In the province of Pechele, locusts were feared, in consequence of the long drought; and orders were issued by the government to adopt preventive measures.

The emperor himself issued a proclamation inviting plain statements of opinions, and details of abuses. In consequence of this, one of the censors has memorialized on the cruelties and injustice practiced in the supreme court of punishments. Torture, long imprisonment, and the willful implication of innocent persons, are the evils he complains of. He mentions two cases, in which the trials were continued forty days, where the accused had to kneel on chains and undergo other insults and torments. In one of these cases, the accused was proved to be innocent, and in the other the person died in prison.

But the most remarkable document is the prayer of the emperor; the form of which is that of a memorial sent to the emperor of China, by governors of provinces and other statesmen. His majesty, for the personal pronoun, uses the Chinese word *chin*, "a minister" or "servant,"—the same which those employ who write to him. We subjoin a translation of the whole paper.

A PRAYER FOR RAIN, written by his Imperial Majesty Taoukwang, and offered up on the 28th day of the sixth month of the 12th year of his reign.—July 24th, 1832.

"Kneeling, a memorial is hereby presented, to cause affairs to be heard.

"Oh, Alas! Imperial Heaven, were not the world afflicted by extraordinary changes, I would not dare to present extraordinary services. But this year the drought is most unusual. Summer is past, and no rain has fallen. Not only do agriculture and human beings feel the dire calamity: but also beasts and insects, herbs and trees, almost cease to live.

I, the minister of Heaven, am placed over mankind, and am responsible for keeping the world in order, and tranquillizing the people. Although it is now impossible for me to sleep or eat with composure; although I am scorched with grief, and tremble with anxiety; still, after all, no genial and copious showers have been obtained.

"Some days ago, I fasted, and offered rich sacrifices, on the altars of the gods of the land and the grain; and had to be thankful for gathering clouds, and slight showers; but not enough to cause gladness.

"Looking up, I consider that Heaven's heart is benevolence and love. The sole cause is the daily deeper atrocity of my sins; but little sincerity and little devotion.—Hence I have been unable to move Heaven's heart and bring down abundant blessings.

"Having respectfully searched the records, I find, that, in the 24th year of Keënlung, my imperial grandfather, the high, honorable and pure emperor reverently performed a 'great snow service.' I feel impelled, by ten thousand considerations, to look up and imitate the usage, and with trembling anxiety, rashly assail heaven, examine myself, and consider my errors; looking up, and hoping that I may obtain pardon. I ask myself,—whether in sacrificial services I have been disrespectful? Whether or not pride and prodigality have had a place in my heart, springing up there unobserved? Whether, from the length of time, I have become remiss in attending to the affairs of government; and have been unable to attend to them with that serious diligence, and strenuous effort, which I ought? Whether I have uttered irreverent words, and have deserved reprehension? Whether perfect equity has been attained in conferring rewards or inflicting punishment? Whether in raising mausoleums and laying out gardens, I have distressed the people and wasted property? Whether in the appointment of officers, I have failed to obtain fit persons, and thereby the acts of government have been petty and vexatious to the people? Whether punishments have been unjustly inflicted or not? Whether the oppressed have found no means of appeal? Whether in persecuting heterodox sects, the innocent have not been involved? Whether or not the magistrates have insulted the people, and refused to listen to their affairs? Whether in the successive military operations on the western frontiers, there may have been the horrors of human slaughter, for the sake of imperial rewards? Whether the largesses bestowed on the afflicted southern provinces were properly applied; or the people were left to die in the ditches? Whether the efforts to exterminate or pacify the rebellious mountaineers of Hoonan and Canton, were properly conducted; or whether they led to the inhabitants being trampled on as mire or ashes? —To all these topics, to which my anxieties have been directed, I ought to lay the plumb-line, and strenuously endeavor to correct what is wrong; still recollecting that there may be faults which have not occurred to me in my meditations.

"Prostrate I beg Imperial Heaven, (*Hwang Teën*,) to pardon my ignorance and stupidity: and to grant me self-renovation; for myriads of innocent people are involved by me, a single man. My sins are so numerous, it is difficult to escape from them. Summer is past, and autumn arrived; to wait longer will really be impossible. Knocking head, I pray, Imperial Heaven, to hasten and confer gracious deliverance,—a speedy and divinely beneficial rain; to save the people's lives; and in

some degree redeem my iniquities. Oh—Alas! Imperial Heaven, observe these things! Oh—Alas! Imperial Heaven, be gracious to them. I am inexpressibly grieved, alarmed, and frightened.—Reverently this memorial is presented.”

This is a most singular production. It is one too of great value; it is worth more than scores of quartos and folios of the vain speculations which have been published concerning China. Even allowing that much of the coloring has been given to it for effect merely (which we are slow to admit), still it exhibits an exalted personage in a most interesting and affecting point of view. It is withal a very serious document. As it conducts us to the anti-chambers of the “celestial court,” and there shows us the “minister of heaven” scorched with grief, poring over his atrocious sins, and with trembling anxiety, recounting the errors of his public and private life; our sympathy is excited, and we, instinctively, re-echo his lamentation, *Woo hoo!* Oh, Alas!

It exhibits weakness and darkness peculiar to the human mind, while unblest by the revealed Word and by the Spirit of the only living and true God. It shows, also, very distinctly, if we mistake not, the symptoms of an oppressed and declining empire. We predict nothing. We should rejoice to see “the great Pure dynasty” long stand strong, flourishing in all the glory, peace, tranquillity, and prosperity which it now proudly and falsely arrogates. The welfare of the Chinese empire is the dearest object to our hearts on earth. But our own minds, in accordance we believe with the minds of millions, forbode an approaching change. We cannot deny the evidence of our senses; and we will not, knowingly, conceal the truth. Causes are operating on this nation,—would they did not exist,—which must produce tremendous effects. The state groans; and already convulsions begin to be felt. And oh, should the bands of government be once broken asunder, and this immense mass of population—an ocean of human beings—be thrown into confusion, the scene would be awful. We gladly turn from the contemplation of such a picture.

The emperor’s anxieties, occasioned by the long continuance of the drought, are now terminated. By a paper in the Gazette, dated at Peking, July 29th, it is stated,—that after the emperor had fasted, and offered the prayer given above, before the altar dedicated to heaven,—at about 8 o’clock on the same evening, thunder, lightning, and rain were intermingled: the rain falling in sweet and copious showers. The next day, a report came in from the prefect of Shunteên foo* that two inches had fallen: and on successive days, near the imperial domain, a quantity fell equal to four inches. For this manifestation of heavenly compassion, the emperor, in an order published,

* This is the Chinese name of Peking and the department annexed to it

expresses his deep devotion and intense gratitude: and the 2d of August is appointed as a day of thanksgiving. Six kings are directed to repair to the altars dedicated (1) to heaven, (2) to earth, (3) to the gods of the land and grain, (4) to the gods of heaven, (5) to the gods of earth, and (6) to the gods of the revolving year.

During the drought and scarcity government sold grain at reduced prices. But there were dealers, who employed poor old men and women to go and get the cheap good grain, for the said dealers to hoard up, to be resold when the price should be still higher.

The precise idea, which his imperial majesty attaches to the words "imperial heaven," we will not stay here to determine. It is manifest, however, that such a variety of objects of adoration cannot be acceptable to HIM who has declared,— "*Thou shalt have no other gods before me.*" Jehovah is not a man that he should lie;—he will not give his glory to another. The conduct of the emperor in praying, fasting, and self examination, ought to reprove the sluggish Christian. But we shall do exceedingly wrong, if we attempt to excuse such abominable idolatry, and to throw the mantle of charity over that which God abhors.

It is a very remarkable circumstance, connected with the drought, that none of the priests of Taou and Budha were ordered to pray as they usually have been heretofore on similar occasions. This single fact shows in how low estimation *they* are held by the emperor.

STATE OF CHINA.—Chincho, one of the imperial historiographers, has memorialized the emperor on the state of the civilians throughout the country, and has requested his majesty to issue his corrective injunctions to them. The emperor approves of the suggestion, and has published the following document accompanied by an order to make it known "inside and outside,"—i. e., both at court, and throughout all the provinces.

"It has always been the case that tares, if not weeded out, injure the good grain; and the most noxious tares among the people are vagabond associations. Did local magistrates, as soon as they saw or heard of such unions being formed, set faithfully to work to prosecute, they might put an end to them root and branch.

"Of late degenerate magistrates not only will not prosecute, but will go so far in many ways, as to screen offenders. And governors of provinces, lieut.-governors &c., as soon as they find, that the appellation 'vagabond association' is applicable to accused parties, forthwith endeavor to melt down the case and unstring the bow. By this procedure they give confidence and a stepping stone to the banditti. Just as in the

case of *Chaou*, the golden dragon, where a rebel gang of about six or seven thousand men was formed: Were none of these members of vagabond associations? Yet the local magistrates would say nothing more than that the vagabond highlanders were creating a disturbance; and so they hoped luckily to escape the guilt of a neglect of duty. This is a specimen of the provinces generally.

"Hereafter, governors and lieut.-governors must make a point of strictly enjoining all subordinates, to be assiduous in searching for and finding out vagabond associations; and when discovered, let them most rigorously apprehend the offenders, and permit no denial or excuse. Thus eradicating the tares they will tranquillize the good; and vagabond associations will of themselves be discontinued.

"Of late the appeals to Peking have mostly been cases of banditti issuing from hills and retired places in crowds, beating, and murdering people. Of the power of these, the local magistrates are afraid, and dare not seize the offenders. Murderers escape for years, and at last appeals are made to Peking. But the end of government, in appointing a magistracy, is to persecute the bad and give repose to the good. Whereas when offenders escape the net of the law, and no vengeance is taken on criminals, ignorant people get accustomed to see such things, and the idea arises in their minds, that violence is better than quietness, and so one or two desperadoes lay plots, and easily induce hundreds and thousands to unite and perpetrate the greatest enormities.

"It is hereby ordered that all governors and lieut.-governors give strict orders to all subordinate officers, that all murderous banditti must be seized and severely punished. The notion of converting great affairs into little ones must not be indulged," &c., &c.

The effect of this and similar manifestoes is very trifling. After a few days of noise and bustle, things return again to their old course.

To the Editor of the Chinese Repository.

SIR,—If you deem the following thoughts suitable for insertion in your new publication, you will oblige me by giving them a place in the Repository.

Your's, &c.

Z.

AN APPEAL TO FOREIGN CHRISTIANS IN CHINA.—Those of us who profess Christianity in China, are as a mere drop in the ocean compared with the native population, who are either ignorant of the gospel or opposed to it, throughout this large empire. But they and we are equally accountable to the great Judge of all,—the Lord Jesus Christ; for they and we "*must all appear before the judgment seat of Christ.*" It is not my

intention, at present, to enter into a consideration of the question concerning the state of the idolatrous heathen. My wish is to call the attention of Christians—those who avow themselves to be the disciples or followers of the Lord Jesus Christ, to their own religious condition, character, and appearance, in China.

Of national or established churches, we have individuals belonging to a great variety; and we have some who have been educated without the pale of government churches. We have Christians of the Lutheran church, and of the Greek church; of the English and Scotch churches; of the Dutch Reformed, and of the Russian church. From America, also, we have Christians of several denominations;—Episcopalian, Presbyterian, Congregational, and some others. But amidst all this external and geographical diversity, we have an internal, and, where it is felt, a very powerful centre of unity, *viz.* sincere devotedness to the principles taught, and the practice enjoined, by our divine Master, the Lord Jesus Christ. Now amidst all the varieties of nation and communion, among the followers of Jesus, there are in the sight of God—I firmly believe it—only two classes, the righteous and the wicked;—those who love the Saviour, and those who do not. Common sense indicates that those who are attached to the blessed Saviour, though of different nations, or states, or other geographical divisions,—though of different national, particular, or local churches, should in China rally round the same standard, and avow their principles—“Glory to God in the highest, and on earth, peace and goodwill to men.”

But those, who, though avowed followers of Jesus yet doubt his character, question his principles, or disobey his precepts, will of course form another class, it may be a majority,—I say it with sincere grief, fearing it may be true. But shall the majority, in such a case, silence, and, to all practical purposes, annihilate the minority of obedient disciples? It ought not so to be! I humbly, but earnestly adjure all who “love our Lord Jesus Christ in sincerity,” to show more zealously than they ever yet have done, their attachment to each other for the Saviour’s sake; and, I might add, for their own sake—for the sake of their own salvation, and for the salvation of the heathen around them.

Religion is the chief concern
Of mortals here below;
May we its great importance learn,
Its sov’reign virtue know!

More needful this, than glitt’ring wealth,
Or aught the world bestows;
Nor reputation, food, or health,
Can give us such repose.

RELIGIOUS INTELLIGENCE.

INDIAN ARCHIPELAGO —Closer union among the disciples of Christ, stronger love to the Saviour and to the brethren, and more self-denial and self-consecration, than the world has ever yet witnessed, are to be, we conceive, among the first and the happiest effects of the present system of missionary operations. Union and love, especially, will be greatly promoted by a better and more intimate acquaintance among the members of the great Christian family—the church of God.

The following letter, from a missionary of the Netherlands' Society, addressed to the Editor of the Chinese Repository, will, we hope, by promoting a better knowledge of, excite a deeper interest, in the missions of that society.

DEAR SIR ;—It affords me great pleasure to give you some outlines of the missions, under the direction of the Netherlands' Missionary Society, in the Indian Archipelago: Their first missionaries sent to those parts were Messrs. Kam, Bruckner and Supper. The two former are still alive; Mr. Bruckner has gone over to the Baptist missionary society. The principal station was begun at Amboyna, a most delightful island, with a numerous population, who were partially Christians. The stations at Samarang and

Batavia were only temporary, and have long ago been relinquished.

As the Dutch government were very anxious to promote the spread of Christianity in the Molucca islands, new laborers came out and were stationed on Booroo, Ceram, Banda, and Ternate. At all these islands there were then a few Christians, the number of which, since the arrival of the missionaries, has considerably increased.

A Mr. Le Brun, an excellent young man, was stationed at Timor, and gained by his unwearied labors many hearts for the Saviour. He extended his exertions to the neighboring islands, Rotty and Letty. As the Lord blessed his exertions, the society established new stations upon some of the neighboring islands; among which Letty and Moa are the most prominent.

Mr. Hellendoorn, the missionary at Menado, on the northeast coast of the island of Celebes, has, lately, been very successful in the establishment of schools, and in increasing the number of converts; in consequence of which, the society has sent an additional number of laborers, to strengthen and extend the mission in that quarter. The society has, likewise, a station at Rhio, and intends to establish another on Sumatra.

There are several thousand Christians at the Molucca stations. Schools have lately been opened, churches established, and chapels built. Though a great part of the converts are only nominal Christians, there are many amongst them, who adore their Saviour in spirit and in truth. The difficulties of spreading Christianity on these islands are, perhaps, as great if not greater than on the islands of the Pacific ocean. Some of the tribes, and among them the Alfoors, are fully as savage as the inhabitants of New-California. Nevertheless, Christian congregations exist amongst them, and schools also have long since been established.

At a future time, I hope to give you a more particular account, while I remain, &c.

Mr. WOLFF's *proposed visit to China*.—The Calcutta Courier announces the arrival at Simla, the late residence of the governor-general of India, of Wolff, the converted German Jew; who proposes entering China, by way of Tibet, in search of the descendants of Israel. He has forced his way, in a very extraordinary manner, overland, to his present station; and,—unless he be cut off by a natural death, under great privations,—or by a violent one by the hands of his fellow-men,—his appearance in Canton is by no means impossible.

SIBERIA.—From an address of the Rev. William Swan, before the London Missionary Society, we learn, that the Scrip-

tures are now translated into the Mongolian language.—which is “spoken and read (for the books in that language are numerous) from the shores of the Baikal to the gates of Peking.”

Mr. Swan has spent about fourteen years in Siberia, associated with Messrs. Yuille and Stallybrass. They have three stations *viz.* Selinginsk, Khodon, and Ona; where they preach the word, and are instructing a small number of youths.

A century ago, Mr. Swan says, there was not, in those parts of Siberia where he has been for several years, one priest, properly so called, and not one heathen temple; but *now* there are nearly twenty temples, to which are attached 4000 priests of Budha.

—PORT OF CANTON. The American Seamen's Friend Society, as we learn by their 'Magazine,' have resolved to extend their operations; and have appointed three gentlemen to chaplaincies in foreign ports; *viz.* Rev. John Diell, to the port of Honolulu, Oahu; Rev. F. S. Mines, to the port of Marseilles; and the Rev. Edwin Stevens, to the port of Canton. Mr. Stevens embarked at Philadelphia, on board the ship Morrison, about the last of June, and arrived in China on the 24th instant, after a voyage of 119 days. The ships at Whampoa now are
Brit. 25; Seamen about 1700;
Amer. 15; Seamen about 240;
Neth. 2; Seamen about 50;

There are also at Lintin, the common anchorage for ships arriving on the coast of Canton, about 20 ships, and 900 seamen.

LITERARY NOTICE,

SAN TSZE KO, SUH KEAE, "*Songs of three characters, with colloquial explanations,*" or *the Sacred Edict in rhyme.* 16mo. 38 leaves. 1816.

THIS little book was composed and printed under the reign of the late emperor Keäking. The edition before us was prepared,—in imitation of the celebrated school book, called the *San tsze King*, or "Trimetrical Classic,"—by Le Laechang, magistrate of the mountaineer district of Leënshan, in Canton province; and was chiefly intended for the use of the *Yaou* tribes under his jurisdiction.

The *Shing Yu*, or Sacred Edict,—the foundation of the little book before us,—has obtained considerable note among European sinologues, from the able translation given of it by the late Dr. Milne of Malacca. That work is divided into sixteen sections, containing sixteen maxims of the emperor Kanghe, followed by amplifications by the emperor Yungching, and colloquial paraphrases by *Wang Yewpo*, a high officer of state.—The 'Sacred Edict in rhyme,' is in like manner divided into sixteen sections. Each section is headed by one of Kanghe's maxims, and consists of twelve stanzas or verses, of twelve characters, or four lines, each. The subject matter of these verses is chiefly taken from the paraphrase of *Wang Yewpo*; but each line consisting of but three characters the conciseness of the style often renders it almost unintelligible, without the aid of the colloquial explanation which follows each verse. This latter is written in a plain and easy style,—and generally shows very clearly the meaning of the text.

As a specimen of the work, we subjoin a translation of the first section. To make the meaning clear, it has been requisite to weave parts of the explanation into the text. But, though not closely literal, no Chinese idea has been sacrificed, nor any English one introduced, to render the translation *readable*. The Chinese begins thus.

Tun heaou te, e chung jin lun.

Méen hwaé paou,
Peih san neén;
Foo moo gan
Tang haou Teen.
&c. &c. &c.

"Be regardful of the filial and fraternal duties, in order to give importance to the human relations."

The parents' tender care can be dispensed,
Not till three anxious years their child they 've nursed:
A father's watchful toil, a mother's love—
E'en with high Heaven equality demand.

Let, then, the son his parents' board provide
With meat nutritious,—and from winter's cold,
With warmest silk their feeble frames defend;
Nor with their downward years his efforts cease.

When walking, let his arm their steps support;
When sitting, let him in attendance wait.
With tender care let him their comfort seek;
With fond affection all their wishes meet.

When pain and sickness do their strength impair,
Be all his fears and all his love aroused;—
Let him with quicken'd steps best medicine seek;
And the most skilled physicians' care invite.

And when, at length, the great event * doth come,
Be shroud and coffin carefully prepared.
Yea, throughout life, by offerings and prayer,
Be parents present to his rev'rent thoughts.

Ye children, who this Sacred Edict hear,
Obey its mandates, and your steps direct
Tow'rds duty's paths;—for whoso doth not thus,
How is he worthy of the name of man?

The senior brother first, the junior next,
Such is the order in which men are born;
Let then the junior, with sincere respect,
Obey the sage's rule,—the lower station keep.

Let him, in walking, to the elder yield,
At festive boards, to th' elder give first place;
Whether at home he stay, or walk abroad,
Ne'er let him treat the elder with neglect.

Should some slight cause occasion angry strife,
Let each recal his thoughts once and again;
Nor act till ev'ry point he thrice hath turned;
Remembering whence they both at first have sprung.

* This expression is used emphatically for a parent's decease, which "is the greatest event of a man's life."

'Though, like two twigs which from one stem diverge,
Their growth perhaps doth tend tow'rd different points ;
Yet search unto the roof, they still are joined ;
One sap pervades the twigs,—one blood the brothers' veins.

In boyish sports, how often have they joined !
Or played together round their parents' knee !
And now, when old, shall love quick turn to hate,
While but few days are left them yet to love ?

Hear, then, this Sacred Edict and obey,
Leave ev'ry unkind thought ; what's past forget ;
While singing of fraternal union's joys,
Remember that there 's pleasure yet behind.

JOURNAL OF OCCURRENCES.

THE REBELLION of the Yaou-jin and their Chinese associates is at an end. Two or three hundred boats, it is said, have gone to Leenchow to bring back the troops; and the imperial commissioners, Hengan and Hoo-sung-ih, have returned to Peking, with additional honors.

Hengan, who is said to have more influence with "the one man who rules the world," than any other courtier, has reported to his majesty a long series of victories in daily skirmishes with the rebels; stating, also, that more than one half of the mountain tribes have begged to be allowed to surrender, and to give up their leaders and their arms.

It is stated that Hengan and his colleague ordered the judge Yang Chien, to send forth among the mountaineers, a proclamation, that imperial legates had arrived; that troops were gathering like stormy clouds; and that, from all the provinces, large levies of veteran troops were pouring in, and would certainly, in the event of further resistance, wash like a deluge the whole population from the face of the earth;—or, to change the figure, would burn them up, indiscriminate-

ly—good and bad—whether precious gems or comban stones, &c., &c.

The judge addressed the people like a friend, calling upon them to save themselves. The commissioners feigned perfect ignorance of the whole; and while the highlanders were treating, the imperialists were plotting and straining every nerve to effect their destruction.

The commissioners state, that their endeavor had been, in obedience to an imperial order, to scatter auxiliaries, and soothe the principals,—to divide and conquer. The immense army of the manifesto, gathering like clouds from all the provinces, and covering the heavens with darkness, consisted of 3000 men ordered from Hookwang!

Hengan says, many of the tribes submitted even on the terms he proposed, viz. the Mantchou tonsure, together with depriving the ears of the rings commonly worn by the mountaineers. At the date of the memorial, from which we have collected these statements, Hengan supposed "ten days would be sufficient to shut up the affair, and close further proceedings. So it has proved.

On the 15th instant, the imperial commissioners received a dispatch from the emperor, approving of their proceedings, but degrading governor Le. Peacock's feathers, rings, &c., in profusion, have been sent down for the meritorious; among whom we observe the name of Ko Tse-tein, who was lately at Macao, as the "Casa branca Mandarin,"—the *hae-fang tungche*, or guardian of the coast. This little man, is by descent, one of the Yaou-jin, lately in rebellion; and governor Le sent him up, expressly to do the needful. His death had been reported, but the report now appears to have been untrue.

Two legal judges, Yang and King, sent up to the high-ts, have so acted that their merits and demerits *balanced* each other; therefore the commissioner requested that they might be passed over.

Thus the war has ended as almost all wars do—in Europe. all parties (excepting a few slain, degraded, &c.,) returning to the state they were in before the war. The mountaineers have agreed to stay at home, and the imperialists have agreed not to go among the hills to extirpate them.

GOVERNOR LE, immediately after his disgrace, having delivered up to Hengan the seals of office, set out on his journey to Peking; where on his arrival, he is to be put on trial before the Hing Poo, or Tribunal of Punishments. His family left Canton for their home in *Kedangse*, on the 15th instant.

THE VILLAGE TYRANT.—A case which has lately excited considerable attention, and been matter of much talk in Canton, is that of Yè Mungche, a Peking officer, who, by his pride and profligacy, has brought himself to an untimely end. On the 27th of the 4th moon, the fooyuen Choo sat in person on his trial, and sentence of death has been passed on him, but has not yet received the imperial sanction.

Yè Mungche (or, as the first syllable of his name signifies, Leaf,) is now in the 44th year of his age. In his youth he was a good scholar, and rapidly rose to the highest degree of literary rank. The first

and most honorable scene of literary combat, in China, takes place at Peking, in the presence of the emperor. There Leaf succeeded, and was forthwith appointed to a respectable place in the Board of Revenue; in which situation he remained some years at the capital. Two or three years ago, his mother died; and he, being thereby incapacitated, by law, from holding office for three years, returned to his native village in Tungwan district, accompanied by a Peking servant, whom he brought with him.

Leaf, a clever man, and a treasury secretary from Peking, was a person greatly esteemed and feared in his native village. But he carried his acts of injustice in raising money by intimidation, and his acts of profligacy, on the persons of wives, daughters, and nuns, to such an extreme degree, that scores of accusers have appeared at Canton against him. His maltreatment of others to gratify his vicious propensities has caused upwards of ten suicides. We have the native details before us, but we decline entering into them minutely. The tyrant Leaf was a terror to all the neighborhood. The police-men were afraid to attack him. But an old friend of his, the Pwanyu magistrate, succeeded in betraying him. The magistrate and he were sworn brothers, that is, they had, in Chinese phrase, "exchanged cards." This magistrate went and paid his old friend a cordial visit, and said, "Brother Leaf, there are various charges against you at Canton; go with me, and let us set them to rights." Leaf immediately consented, but as soon as the worshipful magistrate had brought his friend to Canton, he sent a posse of special thief catchers from the fooyuen's office, who speedily took him into safe custody.

The Kwangchow foo magistrate, who sat on the trial, was also an old friend of Leaf's.—Leaf denied, positively, every charge, and the magistrate was unwilling to torture him. He therefore said, "Brother Leaf, I wish you would confess, for it will disgrace our whole caste to subject you to the torture." But the prisoner was obstinate. So the magistrate took his Peking servant, who, having been constantly attached to his person, knew all his wicked ways, and tortured him, till he made a most ample confession of the criminal acts of his beloved master.

Leaf was found guilty, and is now in common jail, awaiting the imperial confirmation of the sentence passed upon him. It is said that the fooyuen and judge of Canton have been intent on putting him to death; but the Board in Peking has written a letter to Choo, requesting him "to punish lightly." This has enraged the fooyuen so much, that he has written to the emperor, requesting leave to retire from his majesty's service, on the plea of old age and sickness: Whether his resignation will be accepted or not remains to be seen.

THE MARCH OF ENTERPRISE.—The other day a local magistrate reported for the fire-men of Canton, that one house having taken fire, it was burnt and four houses around it were pulled down, to prevent the flames spreading. The method was effectual, though the sacrifice was great. For this mode of operation, though in the present instance, judging after the fact, it seemed carried to an extreme, the Chinese are we believe, wholly indebted to Europeans. Formerly, the Chinese would not pull down their houses to stop the progress of fire; but they readily do so now, old custom notwithstanding.

DEATH CAUSED BY WHIPPING.—In Szechuen an officer of government has been dismissed the service and brought to trial for having caused the death of one of his attendants, by subjecting him, on two successive occasions, to the infliction of one hundred blows on the back. The man was accused of appropriating part of the price of a coffin; and of speaking impertinently to the magistrate. There was an endeavor to show that *opium smoking*

caused his death, but the proof was deficient. No justice could be obtained in the province, till an appeal was made to Peking.

A THOUSAND NAMES OF BUDHA.—Some persons at Peking, and among them a Tartar soldier, have been convicted of forming a sect, whose distinguishing feature was the reciting a thousand names of Budha, and collecting money. The proceedings are pronounced worthy of the most intense detestation. Some of the leaders have been capitally punished, and the general to whose division the soldier belonged, has requested a court martial on his conduct, for not discovering the affair sooner.

PIRATES. A yushe, of censor, has reported to the emperor, respecting the lengths to which piracy is carried, all along the coast of Canton. "According to the yushe," says his majesty, "the piratical banditti have the boldness and audacity to dig up graves, and plunder the clothes of the dead; yea, even to carry away the coffins and publicly in the face of day, to extort ransoms for them. This is the case throughout the province, but particularly near the provincial city, and in the districts subordinate to the capital;—What are the local officers attending to?—Why do they sit like wooden idols; and suffer such bold-faced unfeeling wickedness? Let Le and Choo command severely all their subordinates, to exert themselves sincerely and bring to strict punishment every pirate that exists, till not one is left to slip out of the net. Thus shall cruelty be eradicated, and the spirit of perverseness be torn up."

Postscript.—It has just been officially announced, that his excellency Loo, our new governor, will set out from Leénchow on the 1st of November, on his way hither. The anchásze or judge Yang, and the Kwángheé, or commandant of the town militia, King, will precede him a few days.

Yesterday, October 30th; at about 2½ P. M., a fire broke out, and burned with great violence, in part of the western suburbs of the city, called *Sha-meen*. Being almost entirely confined to wooden houses and mat sheds (occupied by gamblers and public women), and to small boats closely crowded together, the fire spread rapidly, and in the course of two hours consumed several streets or lines of houses, besides a large number of boats. We are at present wholly unprovided with details, but cannot doubt that the extent of loss has been very great.

THE
CHINESE REPOSITORY.

VOL. I.—NOVEMBER, 1832.—No. 7.

REVIEW.

MEMOIRS AND REMARKS, *geographical, historical, topographical, physical, natural, astronomical, mechanical, military, mercantile, political, and ecclesiastical, made in above ten years' travels through the Empire of China.* BY LEWIS LE COMTE, *jesuit; confessor to the duchess of Burgundy, and one of the French king's mathematicians.* A new translation from the best Paris edition. 1 Vol. pp. 536. London. MDCCXXXVII.

TIME is not the destroyer of truth. Some parts of Le Comte's book are of little value now,—as they were, indeed, when he wrote them,—being nothing more than complimentary addresses to ministers of state, and to lords and ladies of rank, to whom he 'communicated himself,' in a series of letters, which constitute the work before us: other parts of it, such for example, as that which contains a division of the empire into "fifteen provinces," are not applicable to the present condition of the country: much of the work, however, is exact narration of what now exists; and the period of almost a century and a half, since which time it was composed, has taken nothing from many of its most beautiful and correct descriptions of persons, places, and things which belong to the

celestial empire. The task which the "learned jesuit" undertook, in giving an account of the "new world," was arduous, and required no ordinary qualifications; in reference to it, his preface contains excellent remarks, some of which we quote, that the reader may judge if time has blunted their point.

"The business of writing voyages is not altogether so light a task as most are apt to fancy; it requires not only wit and judgment, to manage it successfully, but likewise sincerity, exactness, and a simple insinuating style; and learning besides,—for as a painter, to be a master in his art, ought to know the propriety and force of all sorts of colors, so whoever undertakes a description of the people, arts, and sciences, and religions of the new world, must have a large stock of knowledge, and, in a manner, an universal genius. That is not all neither; he must have been an eye-witness of most of the actions and things he reports, he must be skilled in the customs and language of the inhabitants, he must have corresponded with those of the best fashion among them, and been frequently in conversation with their principal officers; in a word, to enable him to speak with certainty and assurance of the riches, beauty, and strength of an empire, he must have taken an actual survey of the multitude of its subjects, the number and situation of the cities, the extent of its provinces, and all the remarkable rarities in the country. I confess, indeed, this is something more laborious and expensive than to frequent the company of the virtuosi at home, or supinely tumble over the history of the world by the fire-side; and yet, after so much fatigue, travelers of all men are the least esteemed upon the force of their writings.

"There is a set of idle people that amuse themselves with what passes daily before their eyes, and are little affected with news from remote parts of the globe. 'Tis grown a maxim with others to

reject all foreign stories for fables; these value themselves upon their incredulity, and are such strict friends to truth, that they never acknowledge any. Another sort, again, throw away a book of this kind for a miracle, or some extraordinary accident, anything out of the way (beyond their common prejudices), that they find in it, as though nature, having exhausted all her treasures upon our portion of the earth, could produce nothing uncommon elsewhere; or as though God's power were more limited in the new eastern churches than among us.

“And some there are that run directly counter to these, who inquire after nothing but wonders, satisfied only with what raises their admiration; they think all that's natural flat and insipid, and if they are not roused up with astonishing adventures, and continual prodigies, drop asleep over the best penned relation; now to humor such creatures, one had need to cast the world into a new figure, and give mankind other shapes.”

Few individuals ever enjoyed better opportunities of acquaintance with China than Le Comte. It having been his “business to run over all China,” where, from province to province, and from city to city, in the course of five years he traveled above two thousand leagues, he was an eye-witness of almost all the scenes he describes. Besides, his extensive learning and erudition give him additional claim to be admitted as a competent witness in regard to the affairs of which he treats. Our object, in taking up this work is not either to extol it, or to rate its author, or the community to which he belongs; but to select from it such narrations, and accompany them with such remarks, as shall serve to illustrate the present condition of the country and its inhabitants.

Le Comte and five other jesuits left France for China, early in the year 1685. They were all sent out by the command of the king, and in the

character of his majesty's mathematicians, that, by teaching these sciences, they might take occasion to promote the gospel. They sailed in the same ship with F. Chaumont, who was sent by his majesty, on an extraordinary embassy, to the court of Siam. Arriving there, four of their number immediately took ship for Macao, one returned to France, for "a recruit of missionaries and mathematicians" for Siam, and the other, our author, took up his abode "in a convent of talapoins;" but when his friends, who had sailed for Macao, and had been shipwrecked, returned to re-embark, he resolved to quit the convent, and to go on to China with them. Accordingly, on the 17th of June, 1687, they all sailed for Ningpo, "on board a small Chinese vessel."

Nearly everything connected with their voyage, the rude junk, the narrow cabin, disorder among the sailors, idolatry, &c., was exactly like what was observed a hundred and forty-four years afterwards, as described in the journal we have already published. There is a notable difference, however, in two particulars;—in the first case, no *opium scenes* were exhibited; and in the latter, no attempts were made to work miracles. Le Comte speaks of the "Typhon, than which nothing is more terrible in the seas of China and Japan;" and also of the frightful appearance of an "infinite number of rocks and desert islands, through which they were obliged to pass;" and of channels "so narrow, as not to exceed ten paces in breadth," and of "a pretty wide bay, in which the Chinese observe a profound silence, for fear of disturbing a neighboring dragon." As our author has not given us the names of these places, we are unable to determine their exact situation; it is certain, however, that they are north of Canton, and are, perhaps, the identical places which the Arabians called the gates of China;—if so, their *Can-fu is not Canton*, as has been generally supposed.

We shall have occasion to refer to and remark on this subject at another time.

One hundred and six years before the arrival of Le Comte and his coadjutors, "the missionaries of the society of *Jesus* had carried the light of the Christian faith into China;" and only two years had elapsed, since Kanghe had thrown open the ports of his empire to all commercial nations, and permitted the exercise of a *free trade* to his own vassals;* besides, Père Verbiest, president of the Tribunal of Mathematics, and the friend and tutor of the autocrat, had obtained from his majesty permission for the five new missionaries to enter the country; but notwithstanding all these considerations, and the fact also that Louis the fourteenth, in his "zeal for the propagation of the faith, not only honored these fathers with the title of his mathematicians, but "gratified" them with settled salaries and magnificent presents, yet still Le Comte and his companions had no small difficulty in gaining admission into the land of the "infidels." We will give his own narration of this matter.

"It was with transporting joy we reached that land, in which we had, during so many years, ardently desired to preach the gospel. The sight of it inspired us with an unusual zeal, and the joy of viewing that happy soil, which so many good men had consecrated by their labors, we thought an ample amends for ours.

"However, it was not so easy to enter, though we were so near the city (of Ningpo). China is a very ceremonious country, wherein all strangers, but especially the French, have occasion for a good stock of patience. The captain of our vessel thought fit to conceal us, and on our arrival, we were let down into the hold, where the heat, which increased the nearer we approached the land, and several other inconveniences, rendered our condition almost insupportable. But, in spite of all precaution, we were discovered; and an officer of the customs spied us, and, having taken an account of the ship's cargo, set a man in her, and withdrew to inform his master. This mandarin, who holds his commission immediately from court,

* See Contribution to an Historical Sketch of the Portuguese settlements in China. By A. L. Knt.

and is therefore much respected, ordered us to be brought before him, whom we found in a large hall, assisted by his assessors, and other inferior officers; we were waited on thither by a multitude of people, who are there more curious of seeing an European, than we should be here of viewing a Chinese.

“No sooner were we entered, but we were admonished to kneel, and bow our heads nine times to the ground, that being the custom in those parts of doing obeisance to the prime mandarin, who, in that quality, represents the emperor's person. His countenance was very severe, bearing a gravity that challenged veneration, and a dread, which increased at the sight of his executioners, who, like Roman lictors, attended with chains and great sticks, in a readiness to bind and cudgel whom his mandarinship pleased.”

After a good deal of delay and vexation, caused by the commissioner of customs, and ‘the viceroy, who bore as great a love to their money as he did hatred to their belief,’ they were at length, with their “several bales of books, images, and mathematical instruments,” on their way to Peking, where they arrived on the 8th of February, 1688. They were scarcely in sight of the capital, when they received the news of father Verbiest's death; and on entering the city they found the court in mourning for the empress dowager. When twenty-seven days were passed, during which the laws obliged the emperor to a “close mourning,” he immediately sent a messenger to welcome the strangers; and arrangements were soon made for an introduction to his majesty, which Le Comte thus describes;

“After a quarter of an hour's walk, (through the outer courts of the palace,) we at length, came to the emperor's apartment. The entrance was not very splendid, but the anti-chamber was adorned with sculptures, gildings, and marble, whose neatness and workmanship were more valuable than the richness of the stuff. As for the presence-chamber, the second mourning not being over, it was still disrobed of all its ornaments, and could boast of none but the sovereign's person, who sat after the Tartar's custom, on a table or sopha raised three feet from the ground, and covered with a plain white carpet, which took up the whole breadth of the room. There lay by him some books, ink, and pencils; he was clothed with

a black satin vest, furred with sable; and a row of young eunuchs plainly habited, and unarmed, stood on each hand close legged, and with their arms extended downward along their sides; which is looked upon there as the most respectful posture.

"In that state, the most modest that even a private man could have appeared in, did he choose to be seen by us, desiring we should observe his dutifulness to the empress his departed mother, and the grief he conceived at her death, rather than the state and grandeur he is usually attended with.

"Being come to the door, we hastened with no little speed (for such is the custom), till we came to the end of the chamber opposite to the emperor. Then all abreast we stood some time, in the same posture the eunuchs were in. Next we fell on our knees, and having joined our hands, and lifted them up to our heads, so that our arms and elbows were at the same height, we bowed thrice to the ground, and then stood again as before. The same prostration was repeated a second time, and again a third, when we were ordered to come forward, and kneel before his majesty.

"The gracious prince, whose condescension I cannot enough admire, having inquired of us of the grandeur and present state of France, the length and dangers of our voyage, and the manner of our treatment by the mandarins: *Well*, said he, *see if I can add any new favor to those I have already conferred upon you? Is there anything you would desire of me? You may freely ask it.* We returned him humble thanks, and begged he would permit us, as a token of our sincere gratitude, to lift up each day of our lives our hands to heaven, to procure to his royal person, and to his empire, the blessing of the true God, who alone can make princes truly happy. He seemed well pleased with our answer, and permitted us to withdraw, which is performed, without any ceremony. The great respect and dread, which the presence of the most potent monarch in Asia inspired us with, did not yet awe us so far, but that we took a full view of his person. Indeed, lest our too great freedom herein should prove a crime, (for in what concerns the emperor of China, the least mistake is such,) we had first obtained his leave.

"He was something above the middle stature, more corpulent than what in Europe we reckon handsome; yet somewhat more slender than a Chinese would wish to be; full visaged, disfigured with the small pox, had a broad forehead, little eyes, and a small nose after the Chinese fashion; his mouth was well made, and the lower part of his face very agreeable. In fine, though he bears no great majesty in his looks, yet they show abundance of good nature, and his ways and actions have something of the prince in them, and show him to be such."

Arrangements had already been made, with the consent and approbation of the emperor, that two

of the five new missionaries should stay at court, while the other three should go into the country. Le Comte was among the latter number, which gave him the opportunity of traveling six thousand miles, "up and down, through almost all the provinces." One cannot imagine, he says, what care the Chinese take to make their roads convenient; their posts are as well regulated for the conveyance of [official] letters, and you may travel as safely, as in Europe. All this, doubtless, was true in the time of Kanghe, but must now be received with some limitation.

Towns and cities have their determinate figure; they "ought" all to be square as far as the ground on which they are built will allow, so that the gates on the four sides may answer to the cardinal points, north, south, east, and west. They "are (by old custom, the common law of the land, but not always, we believe, in fact,) divided into four parts, and those again into several smaller divisions, each of which contains ten houses, over every one of which subdivisions an officer presides, who takes notice of everything which passes in his little ward, tells the mandarin what contentions happen, what extraordinary things, what strangers come hither and go thence." This system of divisions is carried to a very considerable extent at the present day. Commencing with the provinces the series of divisions descending terminates in the fathers of families, who are responsible for the disorders and irregularities committed either by their children or servants.

Our author gives particular accounts of several of the cities of China, and describes their situation, extent, &c. He remarks at considerable length on the population of Peking, and thinks he "shall not be very wide of the truth," if he allows it to contain two millions of inhabitants. The population of China is a difficult subject, and must be reserved for a separate paper. In his account of

Nanking he gives a somewhat minute description of the celebrated porcelain pagoda, which we quote entire.

"There is without the city (and not within, as some have wrote) a house named by the Chinese "the Temple of Gratitude," (paou-gan sze,) built about 300 years ago. It is raised on a massive basis, built with brick, and surrounded with a rail of unpolished marble; there are ten or twelve steps all round it, by which you ascend to the lowermost hall, the floor of which stands one foot higher than the basis, leaving a little walk two feet wide all round it.

"The front of this hall or temple is adorned with a gallery and some pillars. The roofs (for in China there are usually two, one next to the top of the wall, and a narrower one over that) are covered with green varnished shining tiles; and the ceiling within is painted and made up of several little pieces differently wrought one within the other, which with the Chinese is no small ornament. I confess that medley of beams, joists, rafters, and pinions, is a singularity which surprises us because we must needs judge that such a work was not done without great expense; but to speak truth, it proceeds only from the ignorance of their workmen, who never could find out that noble simplicity, in which consists both the strength and beauty of our buildings.

"This hall has no light but what comes in at the doors, of which there are three very large ones that give admittance into the tower I speak of, which is part of this temple. It is of an octangular figure, about 40 feet broad, so that each side is 15 feet wide. A wall in the like form is built round it, at two fathoms and a half distance, and, being moderately high, supports the one side of the pent-house, which issues from the tower, and thus makes a pretty kind of gallery. The tower is nine stories high, each story being adorned with a cornish three feet wide at the bottom of windows, and distinguished by little pent-houses like the former, but narrower, and (like the tower itself) decreasing in breadth as they increase in height.

"The wall is, at the bottom, at least 12 feet thick, and above eight and a half at the top, cased with Chinaware laid flat-wise; for though the weather has something impaired its beauty, there is yet enough remaining to show that it is real Chinaware, though of the coarser sort, since it is impossible that bricks could have retained that lustre above 300 years. The stair-case within is narrow and troublesome, the steps being very high. Each story is made up of thick pieces of timber laid cross-wise, and on them a floor, the ceiling of each room being beautified with paintings, if such paintings as their's can be called a beauty. The walls of the upper rooms beat

several small niches full of carved idols, which make a pretty kind of checker. The whole work is gilt, and looks like carved stone or marble; but I believe it to be only brick, for the Chinese are very skillful in stamping all kinds of ornaments on it, which through the fineness of their sifted mold becomes more easy to them than to us.

"The first floor is the most lofty, but the rest are of an equal height. I have told the steps, which are 190 in number, being almost all ten large inches high, having measured them very nicely, which amounts to 158 feet. If you add to this the height of the basis, that of the ninth story, which has no steps to mount thence to the top, and the cupola, the sum will be at least *two hundred* feet in height from the ground. This cupola is none of the least ornaments of that building, being, as it were, an extraordinary thick mast or may-pole, which, from the floor of the eighth story, rises above thirty feet higher than the top of the tower. Round it a great piece of iron runs in a spiral line, several feet distant from the pole, so that it looks like a hollow cave, on the top of which is placed a large golden ball. This it is that the Chinese call the porcelain tower, and which some Europeans would name the brick one. Whatever it may be made of, it is undoubtedly the best contrived and noblest structure of all the east. From its top you have a prospect of the whole city, and especially of the mountain on which stands the observatory, which lies a good league north-east and by east from it."

This long description of the porcelain tower (Lew-le tǎ), together with what we have already given in preceding pages,* affords a pretty correct account of the Chinese tǎ, or pagoda.—In connection with the above description Le Comte tells us about some "big bells," in Peking, cast near three hundred years ago, weighing 120,000 *lbs.* each. This, he owns, is surprising, and could scarce be believed, had we not father Verbiest's word for it, who himself has exactly measured them. Bells of a moderate size are very common in the large cities of China. They are not excellent in their kind; are never, we believe, worked with the wheel and axle; and their clappers are of wood instead of iron. They are used in temples to arouse the attention of "the sleeping gods," or to call together the priests; and in the

* See pp. 167 and 221.

city watch-houses they are employed to distinguish the five watches of the night; and, if need be, to sound the alarm when fires break out, or thieves and robbers are discovered.

Of the natural features of the country, our author says but little; he was pleased with the pleasant champaign provinces of the south; and delighted with the bolder and more rugged scenery of the north, than which, "the Alps and Pyrenees are much more passable; and one may properly say of China, that where it is fine, nothing in the world is finer; and, when it ceases to be so, nothing is more horrid and frightful." China, he says, like all other countries, is divided into hills and plains, and the nature of the soil is different, according to its particular situation! The northern and western provinces bear wheat, barley, several kinds of millet, tobacco, peas, &c.; those of the south abound in rice. Pears, peaches, apples, apricots, figs, grapes of all kinds, pomegranates, walnuts, chestnuts, and a great many other fruits, grow here as in Europe; but generally speaking, they are "not near so good as ours." Of "Thee" and "Gin sem" (tea and ginseng) he gives us no marvelous accounts. But the tallow tree, is "prodigious." "It is about the height of our cherry tree, the branches are crooked, the leaves shaped like a heart, of a lively brisk red, its bark smooth, the trunk short, and the head round and very thick. The fruit is inclosed within a rind divided into three segments, which open when it is ripe, and discover three white kernels of the bigness of a small nut. (And then) the wonder is, that this kernel has all the qualities of tallow; its odor, color, and consistency; and they also make candles of it, mixing only a little oil when they melt it to make the stuff more pliant."

Le Comte touches lightly on the husbandry of the Chinese; describes briefly their "big ships" and huge barques; does not admire very much their art of navigation; but thinks their "knack" of

sailing upon torrents, somewhat wonderful and incredible. They do not row their ordinary barques, he says, after the European manner, but they fasten a kind of long oar to the poop, nearer one side of the barque than to the other, which they make use of as the fish does his tail, thrusting it out, and pulling it to them again, without ever lifting it above the water. This use of the oar, or *scull*, is admirable, and prevails in every part of China.

The Chinese are masters in the "matter of fishing." Their rivers, lakes, and seas, abound with scaly tribes; and besides the line, nets, and ordinary instruments for taking them, they have two ways of fishing, which seemed to our author very singular and odd.

"The first is practiced in the night; when it is moon-shine; they have two very long, strait boats, upon the sides of which they nail, from one end to the other, a board about two feet broad, upon which they have rubbed white varnish, very smooth and shining; this plank is inclined outward, and almost toucheth the surface of the water. That it may serve their turn it is requisite to turn it towards the moon-shine, to the end that the reflection of the moon may increase its brightness; the fish playing and sporting, and mistaking the color of the plank for that of the water, jerk out that way, and tumble before they are aware, either upon the plank or into the boat, so that the fisherman almost without taking any pains, hath in a little time his small barque quite full.

"The second manner of fishing is yet more pleasant. They breed, in divers provinces, cormorants, which they order and manage as we do dogs, or even as we do hawks for the game; one fisherman can very easily look after an hundred; he keeps them perched upon the sides of his boat, quiet, and waiting patiently for orders, till they are come at the place designed for fishing; then, at the very first signal that is given them, each takes its flight, and flies towards the way that is assigned it. 'Tis a very pleasant thing to behold how they divide among them the whole breadth of the river, or of the lake; they seek up and down, they dive, and come and go upon the water an hundred times, till they have spied their prey; then do they seize it with their beak, and immediately bring it to their master. When the fish is too big, they help one another interchangeably, one takes it by the tail, another by the head, and go after that manner to the boat; the men hold out long oars to them, upon which they perch themselves with their fish, and they suffer the fishermen to take the prey from

them, that they may go and seek for another. When they are weary, they let them rest a while, but give them nothing to eat till the fishing is over; during which time, the throat is tied with a small cord, for fear they should swallow the little fish, and when they have filled their bellies, refuse to work longer."

That the Chinese language is perfectly unique is a fact, perhaps, no one would care to call in question; but that "everything therein is mysterious," will be admitted only by those who can find mysteries in everything. Le Comte seems to have understood pretty well the difficulties of the language, and was not wholly insensible to its excellencies; his remarks, however, on this subject are not accurate; and we "shall not be very wide of the truth," if we say the same also of his remarks concerning the books and learning of the Chinese. He questions their excellence in mathematics, but yields them the palm in judicial astrology, because they "have a knack of lying handsomely, which no nation can dispute with China." He can hardly endure their physicians, and thinks the most dangerous disorder in the land is, that every body is admitted to practice physic. In a word, he judges them mean proficient in the sciences, but allows them to succeed much better in the arts.

The French king's mathematician was a very correct observer of the manners, customs, and character of the Chinese. He avers that, as among other people, avarice, ambition, and pleasure go a great way in all their transactions. They cozen and cheat in traffic; injustice reigns in sovereign courts; intrigues busy both princes and courtiers; and "the desire of getting, torments them continually, and makes them discover a thousand ways of gaining, that would not naturally come into their heads." Moreover they are dexterous, laborious, and "curious to find out the inventions and contrivances of other nations, and very apt (in a *very* few particulars only) to imitate them."

In point of morals, Le Comte regards the Chinese as having greatly degenerated. In olden times they were far more sincere, honest, and less corrupted than at present; "they were the wisest people of the universe." Their moral principles, their political rules, and their maxims of good policy, "are as it were the very soul of their government," and afford a marked distinction between the Chinese and other men! The degeneracy of the Chinese is admitted by all; but we cannot go along with our author, when he declares China to be happier in its foundation than any other nation under the sun; and asserts, that for two thousand years after their origin as a nation, the Chinese had the knowledge of the true God, and practiced the most pure morality.

To the priests of Taou and Budha, the jesuit gives no quarters. These "wretches" by their hypocritical practices abuse the credulous, and "get money out of them by magical arts, secret thefts, horrible murders, and a thousand detestable abominations, which modesty will not let me mention here." In this judgment multitudes of Chinese concur; but when he goes on to affirm that the Chinese have never *deified* their sage, and that the honors which they pay to Confucius "are not divine worship," millions of this people will dissent from him, and protest against his declaration. If the Chinese pay divine honors to any being in heaven, or on earth, or under the earth, it is to Confucius; to him they offer prayers and sacrifices; and him too they worship and adore. It is a very prevailing opinion among the Chinese, also that in morals, their nation has greatly degenerated, and still continues to grow worse and worse; this opinion is correct, and most evidently so in reference to their religionists.

The jesuits, while they remained in this country always kept a watchful eye on the policy and government of the Chinese. With this subject Le

Comte shows himself to be well acquainted, and he writes learnedly upon it, expatiating on the functions of the emperor and his ministers, on the modes of punishment, on the revenue system, army, &c.

The emperor's authority is absolute, "and the good or ill fortune of his subjects is owing wholly to him." All officers and places of power, kings and princes "of the blood," and the *gods* too, as well as men, are subject to his will. Nor does the grave itself put an end to his power over his subjects, whom when dead, "he either disgraces or honors (as much as if they were alive), when he hath a mind either to reward or punish themselves or their families. He makes some, after their decease, dukes; others counts; and confers upon them several other titles, which our language knows no names for. He may canonize them as saints, or, as they speak, may make them naked spirits. Sometimes he builds them temples, and if their ministry hath been very beneficial, or their virtues very eminent, he commands the people to honor them as gods."—His authority extends to language also, and *custom*, which even the Greek and Roman powers could never subdue, "is submissive and humble in China, and is content to alter and give way when the emperor commands." He can "abolish" any characters or phrases already received, or bring any new ones into use at his pleasure.

But though the emperor is clothed with such unlimited power, still there are considerations which will influence him "to govern by justice and not by passion." The most noticeable of these is this, that certain officers may tell the emperor of his faults, provided it be in such a submissive manner, and with that veneration and respect which are due to him. This is often done; and the emperor himself sometimes, as was the case last summer, issues a proclamation, inviting plain statements of opinion, and details of abuses.

The emperor delegates much of his authority to high courts and officers in the capital, and to governors and other magistrates in the provinces. To these, other courts and officers are subject; yet all, both high and low, are dependent on the will of the sovereign. The governors of provinces are kept in check, by other officers appointed from Peking; by the right which the people enjoy of petitioning the emperor in person; by spies, which the emperor "disperses up and down" through the provinces, to ascertain the conduct of his viceroys.

"They have still a further means to oblige the viceroys, and other governors, to a strict care of their charge, which expedient I do not believe any government or kingdom, though never so severe, did ever yet make use of. It is this, every governor is obliged from time to time, with all humility and sincerity, to own and acknowledge the secret or public faults committed by himself in his administration, and to send the account in writing up to court. This is a more troublesome business to comply with, than one readily imagines; for on one side it is an uneasy thing to accuse ourselves of those things which we know will be punished by the emperor, though mildly. On the other side, it is more dangerous to dissemble them; for, if by chance they are accused of them in the inspector's advertisement, the least fault, which the mandarin shall have concealed, will be big enough to turn him out of his ministry. So that the best way is to make a sincere confession of one's faults, and to purchase a pardon for them by money, which in China has the virtue of blotting out all crimes; which remedy, notwithstanding, is no small punishment for a Chinese; the fear of such a punishment makes him, oftentimes, exceeding circumspect and careful, and sometimes even virtuous against his own inclinations."

Le Comte says the Chinese soldiers continue, as they always were, soft, effeminate, and enemies of labor. Concerning the Tartars, Kanghe, "who says nothing but what is proper, as he does nothing but what is great," gave this short account: *They are good soldiers when opposed to bad ones, but bad when opposed to good ones.*—Punishments hold a very prominent place in the policy of the Chinese; for as they are liberal in their rewards, so they are severe in their punishments.

Capital punishment is inflicted by decapitation, by strangulation, and by cutting the victim into "ten thousand pieces." The most usual punishment is the bastinado on the back; when they receive but forty or fifty blows, they call this a "fatherly correction." This punishment is not accounted very scandalous; and after it is inflicted, "the criminal must fall on his knees before the judge, and, if able, bow three times to the ground, and give him humble thanks for taking this care of his education."

The introduction and progress of the Christian religion in China, the manner in which it was promulgated, and the support given to it by an imperial edict, are among the last and most interesting topics upon which our author remarks. He reviews, briefly, the accounts of St. Thomas, and the Nestorians—who are "*believed*" to have first introduced Christianity into China,—and then passes on to eulogize the great leader of the Jesuits, who, on his way to China, died at the isle of Sancian in the year 1552. According to Le Comte's account, even Moses was not more desirous of entering the Holy Land, than was St. Xavier to carry the treasures of the gospel into China. "Moses' death was a punishment to him for his lack of faith; St. Xavier's seems to have been a reward for the abundance of his." It was he, who established upon a solid foundation all the missions in the Indies, and encouraged his brethren to attempt the conversion of China. Roger, Pasio, and Ricci, the indefatigable sons of Loyola, carried forward the enterprise of their famous leader, determined "to spend all their pains, and, if it were necessary, all their blood in this great work." We will give Le Comte's own narrative of the first endeavors of these men, in the work on which they had now entered.

"The difficulties, which the devil raised, did not discourage them. They entered one after another into the southern provinces. The novelty of their doctrine brought them auditors,
21

and the sanctity of their lives made those auditors have a favorable opinion of them. At first they heard them with pleasure, and afterwards with admiration. Father Ricci, above all, distinguished himself by his zeal and understanding; for he was thoroughly instructed in the customs, the religion, laws, and ceremonies of the country, all of which he had studied a long time before at Macao. He spoke their language fluently, and understood their writings perfectly; this was joined to a sweet, easy, complaisant temper, and a certain insinuating behavior, which none but himself had, which it was hard to resist; but above all, an ardor which the Holy Ghost instills into the workmen of the Lord's harvest; all this I say, got him the repute of a great man and an apostle. Not but that he met with a great many rubs in the work of God. The devil overthrew his designs more than once. He had the superstition of the people, the jealousy of the honzes, and the ill humor of the mandarins to deal with; all which violently opposed what he was about to establish. Yet he never gave over; and God gave him perseverance, a virtue very necessary in the beginning of such enterprises as these, which always meet with opposition, and which men of the best intentions in the world sometimes let fall, discouraged for want of present success to fortify their design."

After many years of "fruitless labor," Ricci had the satisfaction of seeing "many and mighty conversions in the provinces." Mandarins opened their eyes to the light; and at length, the emperor himself received and heard the "apostle," and "was so taken with" divers European curiosities and some pictures of our Savior and the Virgin Mary, that he ordered them to be set up in an high place in his palace. This conduct of the emperor gained Ricci the goodwill of all the lords at the court; and, "in spite of the opposition of some magistrates, who, according to their custom, could never deal handsomely by a stranger, he bought an house at Peking, and gained such a foundation and establishment there, as hath been since the support of all the missions in this empire." And such was the progress of the mission, that soon several mandarins began "to preach the gospel, and there were some of them who by their zeal and understanding promoted the affairs of religion as much as the most fervent missionaries."

But it was not long before this series of "triumphs" was broken; changes, sad reverses, and hot persecutions came in quick succession. The bonzes opposed them; the mandarins plotted against them; and "some Portuguese of Macao, incensed against the Jesuits, resolved to destroy them in China, although with them they destroyed the Christian religion there." Weak Christians were scandalized, and forsook "the faith." Missionaries were imprisoned, were scourged, till they "died of their torments." Amidst all these difficulties, their work still progressed; new laborers arrived; "miracles were wrought," and the number of the faithful was increased; till, in the 31st year of Kanghe's reign, an imperial order was obtained, declaring, *that all the temples dedicated to the Lord of heaven, in what place soever they may be, ought to be preserved; and that we may safely permit all those who would honor this God, to enter into his temples, to offer incense to him, and to pay that worship to him, that hath hitherto been practised by the Christians according to their ancient custom; so that none may, for the time to come, presume to oppose them.*

Such was the situation of the mission when our author closed his account. The scenes which have followed in the grand drama may come under review at another time. In the perusal of the book, we have found many things to admire, some valuable hints, and a variety of sensible observations; and we cannot but regret that such opportunities, and such resources, should have been turned to so little advantage. There were, doubtless, engaged in the mission *good men*; there were certainly many zealous, devout, and sincere champions for "the faith." But the faith for which they sought was not always—we believe it was not—the faith once delivered to the saints. While some of them doubtless, sought to extend, and establish that

kingdom which is not of this world; others most evidently, sought for a far different kingdom, and by aspiring after secular power, which as ministers of Christ, they ought to have avoided, they "themselves sapped the foundations of the fabric they had erected. Intoxicated with success, they sought too much notoriety. Laying aside that humility, which had at first recommended them to notice, they betrayed a lofty and imperious spirit. They supposed the favor of the sovereign the best security for their labors." They found such "weighty reasons" against publishing a complete version of the Bible, that it seemed a "rash piece of impudence" to attempt it. Thus they built upon the sand, and their ruin was inevitable. They have fallen; and their example should serve as a beacon to warn others off from like dangers, lest they also meet a similar doom.

COMMUNICATIONS.

LABORS OF THE MISSIONARIES.*—In No. 10 of the *Foreign Quarterly Review* there is an article on the progress of Christianity in China, introducing a parallel in the labors of two bodies of men, between whom, neither in situation nor views, can I discover many points of similitude. While passing the highest eulogiums on the courage and perseverance of the Jesuits, in their attempts to spread the knowledge of the Christian faith, the Reviewer takes occasion to speak slightly of similar endeavors of Protestant missionaries, as though he considered the trifling labors of the one completely overshadowed by the important results obtained by the other. It is, however, admitted by him, that the Jesuits have colored, rather highly, the pictures they have drawn of the successful results of their missions; and this, I believe, few will doubt. It may, therefore, perhaps, be well to inquire into these results, and then draw such inferences as may appear just.

* From a Correspondent.

Of all the brilliant exertions of this order, lauded as they have been, and indefatigable and sincere as they certainly were, what now remains? With the striking exception of the Paraguay missions, the whole of the regions visited by them, have relapsed into their ancient errors; and the enemy has regained the territory which seemed to be wrested from his dominion. The comparatively small number who, in China or Japan, yet call themselves Christians, or are, sometimes, so considered by European writers, have so mixed up some of the tenets of our holy religion with their own customs and modes of idolatry, that they may be said, in all but the name, to have relapsed into utter darkness. The reason of this change appears to me obvious enough: the sudden advance, and as sudden decay, of Christianity in these regions, may, I think, be traced to the simple fact that the whole of the fabric of the Jesuit missionaries was based on enthusiasm.—The gorgeous display, which always attended the outward observances of their worship, was far better calculated to attract the attention of a people, (the whole of whose ideas of a religious worship consisted of ceremonies, more barbarous, though scarcely less splendid;) than could the plain unaffected adoration of our Maker in spirit and in truth, as inculcated by the reformed religion, which exacts conviction, full and undoubted, of the doctrines it promulgates, as essentially necessary to a belief in Christianity.

These remarks will not, I trust, be deemed uncharitable towards a body of men who, as individuals, merit the highest eulogium, and whose temporising may be excused, or palliated, when we consider the obstacles they had to encounter, and the *esprit du corps* by which they were influenced, inducing them to multiply the number of their converts, trusting to Providence for the sincerity, or to their future exertions, when firmly established, for a removal of the remnants of paganism, of which they could not but disapprove. But, it must not be forgotten that the same system of proselytism, which has just been alluded to, was the grand feature of all their operations in the conquered western world; the mere avowal of the Catholic faith, without inquiry as to its sincerity, or attempt to establish more than an outward recognition of that faith, being deemed sufficient even, when such avowal was extorted by punishment, and the fear of death.

One of the points, most strongly urged by the reviewer is the superiority of the Catholic missionary on account of his being free from the incumbrance and cares of a family. Now, although the isolation of the one and his consequent independence of action, and greater freedom from control, be admitted; yet it may be, I think, a fair subject of dispute whether this very drawback, as it may at first sight appear, be not, in reality, an advantage which places the Protestant missionary at least on a level with his Catholic brethren. From

the notorious jealousy and dread of espionage, which present the most formidable obstacles to the admission of foreigners into the empire of the East, he is more exempt. In all parts of the globe, he, who, as Bacon expresses it, "has given hostages to fortune," is, necessarily, less suspected than he who comes alone, and charged only with his personal safety. If, to this, we add the less cause for jealousy or suspicion on other points, regarded by all the Orientals as of the highest importance; as, also, the total absence of political intrigue which has proved the main cause of the destruction of the labors, and in later times of the very existence, of the first mentioned powerful, ambitious, and talented body, it will, I hope, be granted that (especially in a country subject to a purely despotic government) the Protestant possesses advantages peculiarly his own.

In the remarks made by the Reviewer, in depreciation of the means and objects of the Malacca college, I look in vain, for the acumen which distinguishes many of his remarks, and for the fairness which should have guided them.

It will not be conceded that because the Institution puts forth no pompous pretensions, nor claims to success, beyond what may reasonably be anticipated, it is to be looked down on, or abandoned by those, who would think their support well bestowed, if they found its object starting into and claiming notoriety. The means by which good, however ardently desired, is to be achieved, must be taken into view; and I should be much inclined to think that more real good had been effected where *one only* had been (by early instruction well grounded and thoroughly understood) weaned from the idolatry of his country, than where numbers from enthusiasm, or a mere worldly motive, abstained, for a time, from their own mis-called acts of devotion, to go through the forms and observances of Christians, while their hearts remained unconverted. A convert, in early life, is ever the most zealous and the most sincere. If, in addition, we consider the advantages gained through his education, and the intimate knowledge of his countrymen which he, of necessity, possesses in a far greater degree than a stranger would ever hope to attain, the superiority of such an apostle to the heathen, over all others, will be manifest.

When this subject is examined fairly, in its various bearings, the prospect of ultimate success, even though that success be but gradual, will not appear so totally against the members of the Protestant church, or so comparatively unimportant, as the Foreign Quarterly Reviewer has been erroneously led to suspect, and so unhesitatingly and, I think, unadvisedly, given to the world.

THE REMARKS of our correspondent seem to us very just and candid; in most of them we entirely concur, and could wish

that, on some points, they were more extended; and we are not the less willing to give them a place in the Repository, because we suppose them to be from the pen of a member of the Catholic community.

It is some time since we read the article in the Quarterly; but if we are right in our recollection, the *real* object of the Reviewer, not indeed his ostensible one, was to detract from the missions of the Protestant churches, generally, as they are managed at the present day; and though evidently no friend to the Jesuits, or even to the Catholic community in general, yet he was willing to elevate them, if by so doing he could throw into the shade those of an opposite character. Hence he attempts a comparison where no similitude exists. He tasks himself to show up the "meritorious" achievements of the Jesuits, in carrying their operations into the very heart of the Chinese empire, and of "preaching the gospel in the very teeth of the dumb idols;" he extols the zeal and indefatigable labors of Ricci, Schaal, and others, bishops and vicars; makes honorable mention of the "royal and private charity" which they enjoyed; counts the thousands and tens of thousands of their converts—but, concerning the history of the Protestant, "the story is soon told," or in other words, "there is nothing to say."

There is no better way to determine the value of any system, than by observing its legitimate effects, both immediate and remote. So our correspondent, in order to ascertain the true character of the Catholics in China, thinks it best to inquire into the results of their labors. From the fact that so little remains of all their works, he argues, fairly, that there was a defect in their system. This, however, should be guarded; for we might ask, what now remains of the seven churches, and of others established by the apostles themselves. In reasoning on this subject we should keep constantly in mind, that man in his present fallen state, is always, until "created anew," inclined to depart from God. But this touches only *a part* of the difficulty. Why have not England and Scotland relapsed? The gospel once had no better footing in the British Isles than in China; and with intellectual furniture, and every kind of apparatus for the multiplication and extension of knowledge, men were never better furnished than were the early missionaries to this country. Where then was the defect? Was the zeal of the missionaries too great? Were their advances too rapid? Were conversions more sudden and frequent than when Paul and Peter preached? The Jesuits and their coadjutors forgot that their warfare was a spiritual one,—or rather, ought to have been such; and hence they threw aside "the sword of the Spirit, which is the word of God," armed themselves with carnal weapons, and their hosts were suddenly overthrown.

We have no objection to enthusiasm in religion, any more than in mercantile, or in any other affairs; provided, nevertheless, it be of the right kind, is according to knowledge, is only

the vigorous exercise of an impassioned mind, panting for the attainment of high and noble objects, like those which concern man's immortal destiny. This is not only allowable, but it is indispensable to great attainments. Sincerity also is necessary. It is not enough, however, that a man be *sincere*, as the word is often used. Paul was as sincere and as hearty before, as after his conversion; he *verily thought* himself in the right, when he was actually wrong. But all this sincerity did not render him guiltless; neither could it make the Jesuits virtuous men.

When our correspondent comes to speak of sincerity as "the plain unaffected adoration of our Maker in spirit and in truth, and of the conversion of the "heart," on the one side; and on the other, of the system of proselytism, and outward recognition of the faith prompted by fear of punishment and even death; we then have the subject in plain terms, and see not a parallel, but rather *a contrast*. We do not doubt that there were good men among the Jesuits, and those who labored with them in China; great numbers of them died for their religion; and, if among all that was wrong in their conduct and views, "we can discover spirits so pure and elevated as those of Fenelon and Pascal, we think there is great reason to believe, that the commanding features of the revealed religion, rendered doubly impressive by their novelty, might produce the most salutary effects on their converts." But they failed where *all* are in danger of failing; they failed in giving to those who were perishing for lack of vision, the *pure light* of revealed truth—the HOLY BIBLE; and, consequently, they failed to employ the best possible means for inducing their pupils and others within their influence, to exercise repentance towards God, and faith in Jesus Christ, and of establishing them on that rock that can never be moved. Had Verbiest, instead of furnishing for his majesty 300 pieces of artillery, opened the batteries of the press; had he removed the "weighty reasons" for not publishing, what *Jesus* has commanded his followers to publish, and distributed freely and extensively, through all the provinces of China, the Word of life; then, doubtless, a foundation had been laid, and a superstructure raised, more strong and enduring than the everlasting hills, against which neither imperial edicts, nor the "gates of hell" could have prevailed.

As a general rule, and one which should have but *few* exceptions, the missionary should, we think, be one who has "given hostages to fortune."—The advantage of early instructing heathen children in the Scriptures, cannot be over-rated. We pin our faith on no man's sleeve. When we recommend the Bible, we do it on the convictions of our own hearts; nevertheless we are willing to back our opinion by the testimony of such men as Bacon, and Milton, and Hale, and Boyle, and Locke, and sir William Jones.

Lord Bacon says; "There never was found, in any age of the world, either philosopher, or sect, or law, or discipline, which did so highly exalt the public good as the Christian faith."

John Milton, the immortal poet.—"There are no songs comparable to the Songs of Zion, no orations equal to those of the Prophets, and no politics like those which the Scriptures teach."

Sir Matthew Hale.—"There is no book like the Bible, for excellent wisdom, learning, and use."

The Honorable Robert Boyle.—"It is a matchless volume; it is impossible we can study it too much, or esteem it too highly."

John Locke.—To a person who asked this profound thinker, which was the shortest and surest way for a young gentleman to attain to the true knowledge of the Christian religion, in the full and just extent of it, he replied, "Let him study the Holy Scriptures, especially the New Testament; therein are contained the words of eternal life. It has God for its Author, salvation for its end, and truth, without any mixture of error, for its matter."

Sir William Jones.—The following words were written with his own hand in his Bible;—"I have carefully and regularly perused these Holy Scriptures, and am of opinion, that the volume, independently of its divine origin, contains more sublimity, purer morality, more important history, and finer strains of eloquence, than can be collected from all other books, in whatever language they may have been written."

Beyond all controversy, the Bible is the noblest instrument that can be employed, not only for moral, but for *intellectual* cultivation. For personal and national defence also, it is better than swords and ramparts. But language fails us on this subject; we can find no terms which will express the greatness of its value: and we can only say that all other books of history, philosophy, and politics, are poor indeed, and worthless in comparison with the living oracles of God.

A glory gilds the sacred page,
Majestic like the sun;
It gives a light to every age,
It gives—but borrows none.

The Hand that gave it still supplies
The gracious light and heat;
His truths upon the nations rise,
They rise, but never set.

Let everlasting thanks be thine,
For such a bright display,
As makes a world of darkness shine,
With beams of heavenly day.

THE BUDHISM OF SIAM.*—Buddhism appears, of late, to have attracted, very much, the attention of scholars in Europe, Though this far extended superstition is found, in the several countries which have adopted it, under a variety of forms and local peculiarities; yet there are certain general characteristics which render it at all times easily recognizable, as originally the same, in all countries where it has prevailed. But to trace its nature from the works, almost innumerable, which have been written on Buddhism, in the Bali or Pali language, is perfectly impossible: for with no religious creed has such extravagant and incomprehensible language been employed, in the delineation of its dogmas,—language which can convey to the reader's mind nothing but confusion. So long, indeed, as these voluminous writings confine themselves to the delightful regions of Magadha or South Bahar, (the birth-place of Budha,) they are intelligible; but as soon as they ascend to the celestial regions, and the Budhistic paradise,—or launch into the unfathomable depths of the metempsychosis, and the innumerable *Kalpas*, the reader is lost in a chaos of unmeaning words, or of the grossest absurdities.

The 'restorer of the peace and happiness of mankind,' in Siam is Sommona Kodom, who is said to have been born at Ceylon, or Lanka, as their sacred books call it. This individual was the founder of Buddhism in Laos, Cambodia, and Siam. Whether he was a disciple of Budha himself, I have never been able to make out. His life is described as a series of the most benevolent actions;—he bestowed alms upon all who asked them; and he even went so far as to kill his own family, in order to feed the priests. Not satisfied with these outward actions, he practiced habitual mortification of his body by fasting and prayer; whereby he acquired a fame for sanctity, and great renown amongst all his cotemporaries. In consequence of this great sanctity, he obtained power to work miracles, and to assume whatever size and stature he pleased. At one time, he appeared a mighty colossus; at another, he became so diminutive as scarcely to be perceptible. Things past, present, and to come, were all open before him. With the swiftness of thought he could transport himself from one place to another. Great were his exploits,—incontrovertible his power! But, after the performance of so many great and wonderful actions, he died in a fit of anger for having eaten pork. After death, he advanced to the highest state of happiness,—*annihilation*, while at the same time he remains the great benefactor of all that moves on earth. Another Sommona Kodom is yet to come, who will perfect the work of his predecessor, and restore eternal peace; after which all will move on, in unceasing metamorphosis, till the whole be swallowed up in annihilation.

* By Rev. Charles Gutzlaff.

Such is the hero of Siamese *Budhology*. His votaries are very numerous. They have taken possession of the fat of the land. They live in a state of celibacy. Their houses, not dissimilar to cells, are built in the neighborhood of their temples or pagodas. The greater part of the day they spend in idleness; but towards evening, as the sun goes down, they assemble to recite their vespers. The dawn of the morning calls them to the exercise of their mendicant functions, when they are accompanied by their disciples, carrying a large basin for the reception of food. They stop before every house, and receive from the inmates boiled rice, vegetables, and meat. With these supplies, they hasten homewards. As the food they receive is more abundant than they themselves can consume, they feed, with the remainder, poor people and animals. Being the only instructors of youth, they usually have some boys as their pupils, who at the same time, act as their servants. The houses built for these priests, or *talapoys*, are far better even than those of the inferior nobility. Thus, while nominally they have retired from the world, and renounced its pleasures, they are in reality far more comfortable than those who continue in the exercise of worldly business, laboring for such a numerous host of idlers.

Priests are present at all the religious ceremonies of the Siamese. They also repair to the houses of individuals, to recite prayers, and to initiate children into the duties of the world—which is considered a peculiar ceremony. In all respectable families, there is, at stated periods, a species of prayer meetings, or domestic services. On these occasions, a talapoy attends to recite prayers; which he reads, in a monotonous singing tone, from a Pali work. During this time, his auditors all remain in a kneeling posture. When he perceives that they have become tired or drowsy, he ends the service, and is then regaled with food; after which the assembly disperses. But the principal duty of a talapoy is to learn the Pali language. A few only acquire such a knowledge of it as to *understand* even the easiest works which it contains. The major part are satisfied when they can *read* it fluently.

The Siamese *nuns* are generally old, decrepit females, who act as the servants of the talapoys. They are treated with very great contempt, and do not exercise any religious functions.

The vows of a talapoy are not binding. He may enter, leave, and re-enter the priesthood, at pleasure. Those, however, who have attained a high rank in the priesthood, find it difficult to leave their elevated stations, and descend again to the commonalty. On account of the great sanctity which attaches to the life of a priest, all the male population enter the priesthood for a time; nor are even the princes exempt from this duty. As may be supposed, these novices are not very exact in the performance of the duties required of them. And after having learned a little Pali, they enter again into

the world. A talapoy is not amenable to the laws. If he has committed a crime, he must be secularized, before he can be punished. Even the king is required to pay his respects to these hierarchs, and to hear their exhortations in the most humble posture.

A few of the maxims to be observed by the Siamese priest-hood are here subjoined.

"Dig not the earth whereby that element is greatly insulted; which should rest undisturbed."

"Neither sit nor sleep in so high a place as that of your superiors."—The principal etiquette of the talapoys, as well as of the whole nation, is in the manner of sitting. Inferiors must crouch down before their superiors, while the latter occupy the first and most elevated seat.

"A talapoy who rides on a horse or an elephant, or who is carried in a palanquin, sins." He must avoid being burdensome to either beast or tree.

"A talapoy, who eats anything that has life, sins." Even the kernels of fruits are included in the catalogue of prohibitions. The priests themselves cannot boil rice, for the grain is said to have life. Hence it is either given to them boiled, or their servants prepare it for them.

"A talapoy, who uses shoes that cover his heels, sins." Hence they wear sandals.

"A talapoy, who does not eat with crossed legs, sins." This is their general mode of sitting, as well when reciting prayers, as when—in the state of apathy which their law directs them to attain to—they are engaged in religious contemplations.

REMARKS ON THE COREAN LANGUAGE.*—The civilization and literature of the greater part of eastern Asia originated in China. In China, first, characters were formed to express ideas; in China, sages and lawyers lived and taught; and from China, the other nations received their civil institutions. Corea, Japan, the Lewchew islands, Cochinchina, and Tungking were successively reclaimed from barbarism. When these several nations adopted the Chinese mode of writing, they introduced also the original sounds of the characters; but as their organs of speech differed widely from those of the Chinese, they were either unable to pronounce them correctly, or they founded them with similar sounds in their own

* By Rev. Charles Gutzlaff.

language, which were more familiar to their ears. We find, therefore, a great variety in the pronunciation of the Chinese characters, among all the nations who have adopted them as their medium of writing; yet, even in this variety, there is a striking analogy with the pronunciation of the Chinese character in the court dialect, which is the true standard.

The more literature advanced, the more common the use of such phrases in the colloquial dialects became. Thus, though the spoken languages of the nations by whom Chinese characters were adopted, at first widely differed from the Chinese, yet they gradually became assimilated,—just as, by the adoption of Latin words and phrases among the barbarians who overthrew the Roman empire, their native tongue was gradually changed into a Latinized jargon or *patois*. Nevertheless, the Chinese characters, when merely read over, were unintelligible to an illiterate native, unless properly explained in his native tongue; though the sounds were not entirely foreign to his ear. Thus two languages arose, one merely expressive of the sounds of the written characters, the other expressive of the ideas uttered. For the latter, the natives of the respective countries abovenamed, invented alphabets, strictly adapted to their own organs of speech.—These general remarks apply fully to the Corean language.

Though the majority of the inhabitants know how to read the Chinese written language, they have, nevertheless, for greater convenience, adopted an alphabet suited peculiarly to their own tongue, similar in theory to the Japanese syllabic system. The formation of the alphabetic characters is extremely simple, but at the same time very ingenious.

There are fifteen general sounds or consonants; which, with their characters, are, ㄱ ka, ㄴ na, ㄷ ta, ㄹ nal, ㅁ mah, ㅂ pah, ㅅ tsa, ㅈ a, (or gna),

ㄷ tsha, ㄷ cha, ㅋ k'ha, ㅌ t'ha, ㅍ p'ha, ㅎ ha, ㅅ wa. These fifteen being joined, as initials, to the vowels and diphthongs, form a syllabary of one hundred and sixty-eight different combinations. The following are the eleven vowels viz. ㅏ a, ㅑ ya, ㅓ ö, ㅕ yö, ㅗ oh, ㅛ yoh, ㅜ oo, ㅠ yoo, — ü | e, ä. The consonants appear often to change their pronunciation considerably; and the vowels sometimes do the same, but more slightly. This is generally, if not at all times, for the sake of euphony.

The Corean language, like other languages of eastern Asia, has neither declension nor conjugation. It agrees exactly with the Chinese, so far as regards position, as a substitute for inflection. The pronunciation of the Chinese characters has been so completely mixed up with the original language of the country, that the present spoken language consists in great part of composite words, in which the words of both languages are united to express one single idea. Hence the language is extremely verbose. At first sight, it appears to differ widely from the Chinese, and to bear a greater resemblance to the Mantchou, but on nearer inspection, the reverse is found to be true. The Chinese has been so thoroughly interwoven with it, and so fully moulded according to the organs of the natives, that one may trace the meaning of whole sentences, after having been somewhat accustomed to the sounds wherewith the natives read the Chinese characters.

The resemblance between the Corean and Japanese languages is very striking. The Coreans study euphony to excess, and often omit or insert a letter to effect it. We may call the Corean a very expressive language, it is neither too harsh nor too soft. The Chinese language is sometimes unintelligible to foreigners, because it contains a great many sounds, which are only half pronounced; while the Corean is full and sonorous, and may be easily

understood. The Coreans confound, interchange, and transpose the letters *l*, *m*, *n*, and *r*. As they are a very grave people, they pronounce their language with peculiar emphasis. Their language is expressive, not on account of the great number of ideas which they can convey through this medium, for the natives are poor in thoughts, but because of its sonorous nature. We meet in it all the terms for abstract ideas which the Chinese language contains; but for many of those ideas, they have nothing more than the sound of the Chinese characters, and not an original word.

It is remarkable, that not only the Chinese, but also the nations who have received their civilization from them, have taken the utmost pains to cultivate the Chinese language. To encourage the study thereof, it has been made a duty, incumbent on all who aspire to literary honors, and thereby to office in the government, to know that language thoroughly. This seems to be no less the case in Corea, than in the other *Chinese language* nations; and hence it is that the Chinese character is so generally understood in a country which, in civilization, is far inferior to China, as it is also to Japan.

We have not been able to ascertain whether there exists, among the Coreans, a variety of dialects; this we can only *suppose* to be the case from the nature of their language. We endeavored to obtain some native books; but in this we failed; and indeed, we were not allowed even to have a sight of them. The books which have, by way of Japan, fallen into the hands of Europeans, are almost the same as the Japanese; and are interspersed with explanations of the most difficult passages.

The Coreans with whom we came in contact were acquainted with the Chinese classical books: and this seemed to be the extent of their knowledge; hence we may very safely conclude, that the Coreans possess scarcely any works, except those which they have received from China.

MISCELLANIES.

UNIVERSAL PEACE.—Mr. Editor; As you avow yourself a friend of peace; and, as you are, I trust, a soldier of the Prince of Peace; I beg leave to recommend to the perusal of your readers a sermon intended to prove, from the word of God, that a period of our world will arrive in which *Universal Peace* shall prevail among all nations. This sermon is the sixth in a volume of discourses, by the late Dr. Bogue on the Millennium. He rests his proof, of course, on the Divine Testimony. To those who object, "How can these things be?" he opposes simply this reason, "The mouth of the Lord of Hosts hath spoken it."—"They shall beat their swords into ploughshares, and their spears into pruning-hooks; nation shall not lift up sword against nation; neither shall they learn war any more."

Whence come wars and fightings? From men's lusts and passions, pride, anger, covetousness, revenge, &c. But the Gospel, when understood, believed, and practiced, makes men humble, just, patient, forgiving, contented. Suppose then the principles of the gospel universal, that which is now regarded as an impossibility would follow as a natural consequence; and the class of fighting Christians would become extinct.

S. H.

ANGER, *indignation*, *hatred*, and *revenge*, are words of rather ominous import. We mean, at present to make a few remarks on the first. *Anger*—according to Locke, as quoted by Johnson—is "uneasiness or discomposure of the mind, upon the receipt of any injury, with a present purpose of revenge." The etymology of the English word *anger* is not well ascertained. Some think it from the Latin *ango*, "constrained, vexed;" or from the Greek *αγγελος*, meaning, "to *desire eagerly or earnestly*;" for says Theodoret, the angry person *eagerly desires* to be revenged of his enemy. Aristotle says, "*anger* is vehement desire accompanied with grief." The Stoics defined it, "a desire of punishing him who seems to have hurt us in a manner he ought not." The Latin etymologists derive their word for anger, from *urendo*, "heat and burning." The Hebrews, from breathing strongly and quickly; snuffing with the nostrils, &c.; because in *anger*, animals, both brutes and human beings, are much affected in their breathing. The

common expression in Chinese for becoming angry, *viz.*, *sàng ke*, "producing breath," has the same allusion as the Hebrew, to the effects of that passion. For anger, the Chinese also use the word *noo*, which has a different allusion. According to the Imperial Dictionary, the character is composed of a *cross-bow* and *heart*; because, it says, in anger, the eyes and face are distended like a bent bow; and it is then the *heart* should regulate the passions.

Confucius in the *Chung Yung*, or *Constant Medium*, makes *noo*, *anger* or *displeasure*, the opposite of *he*, *satisfied*, *well-pleased*. And in this connection, *anger* is no more a vice than its opposite, being well pleased. It is in this sense that *anger* exists in *virtuous* minds. The definitions given by Locke and the Stoics describe anger in a malicious mind. And, no doubt, all the natural passions differ in their exercise according to the state of mind, whether virtuous or vicious, of the agent. Our blessed Saviour himself looked round on a number of philosophical cavers, with "*anger*, being *grieved* for the hardness of their hearts." (Mark 3. 5.) But *anger* is a passion so easily carried to excess, to the injury both of one's self and others, that it is very difficult to "be angry and not sin." (Eph. 4. 26.)

Some there are, indeed, who seem to think that a Christian should never be angry. Liberal sceptics especially think that he has betrayed his own cause, when he expresses displeasure or indignation against the enemies of Divine Truth. They assume that Christian meekness and humility, require the extinction of anger. They wish to treat Christianity as a mean-spirited imbecile superstition. And hence, often, instead of replying to the arguments of their Christian opponents, they begin to lecture them on their temper—their want of meekness: and, indeed, every one who is "reproved sharply,"—or even bluntly and softly—does not easily yield. Still it is the Christian's duty to be displeased with all vice and impiety, and to bear his testimony in distinct and pointed language against them. But in all this there should be no *desire of revenge*. No! far from it. The only revenge he should seek, is to see the repentance and salvation of his fellow sinners.

Dean Stanhope says, "Anger is a passion which is capable of serving excellent purposes, when managed with sobriety and discretion; and which the honor of God, the reverence due to the laws, the love of virtue, or the protection of good men, may make not only innocent, but necessary and commendable. Thus Moses was exceedingly provoked, and his 'anger waxed hot' at the molten calf which the Israelites had made, to dishonor God and themselves in the wilderness. And our blessed Saviour, the perfect pattern of meekness and patience, is said not only to have been grieved, but to have looked upon the Pharisees with anger, because of the hardness of their hearts." (Mant's Bible.)

Scott, the commentator, says on this passage,—“Our Lord’s anger was not only not sinful, but it was a holy indignation, a perfectly right state of heart, and the want of it would have been a sinful defect. It would show a want of filial respect and affection, for a son to hear, without emotion, his father’s character unjustly aspersed. Would it not then be a want of due reverence for God to hear his name blasphemed without feeling and expressing an indignant disapprobation?” It is here, we apprehend, that Christians are, generally, defective. They are quick enough to feel what crosses their own humors, or hurts their own persons; and are too soon made angry on such accounts; while they can witness with indifference the conduct of the wicked, or hear without indignation the language of the impious. A book that amuses in some parts, though filled with irreligion and impiety in others, will be spoken of even with complacency. In such cases the want of feeling a righteous indignation does not speak much in favor of the state of one’s own heart. It is then, however, that there is the least danger of sinful anger; or, as Matthew Henry quaintly expresses it,—“The way to be angry and not sin, is to be angry with nothing but sin.”

Although we have written so much in favor of anger, that has a just cause, is not carried to excess, nor continued too long; we are not insensible of the evils of an irascible temper. We quote with reverence that the Almighty is angry with the wicked every day. (Ps. 7. 11.) But yet he is *slow to anger*, and of great kindness. (Joel 2. 13.) And it is written, “He that is slow to anger is better than the mighty.” (Prov. 16. 32.) “He that is soon angry dealeth foolishly.” (Prov. 14. 17.) Anger resteth only in the bosom of fools.” (Eccl. 7. 9.) “A bishop must not be soon angry.” (Tit. 1. 7.) “Whoever is angry with his brother without a cause, is in danger of the judgment. (Math. 5. 22.)

Chinese moralists dissuade people from violent and boisterous anger,—when the face becomes “red as fire, and the mouth and tongue are loud as thunder,”—because of the evil it does to the person himself, his dignity, and his bodily health; and because of the mischief it often occasions to others. European physicians admit that the unhappy influence of anger, on the biliary and hepatic ducts, is quite surprising. Violent anger has a great tendency also to excite enormous hemorrhages, and is extremely pernicious both in men and women. The Chinese consider it injurious to the liver. And as Europeans suppose it lays the foundation of calculous concretions, so the Chinese imagine it occasions the formation of carbuncles. And, during our stay in China, we have often heard of death being the result of violent and protracted fits of anger. We would therefore conclude by saying, by all means avoid causeless anger; be not angry for slight causes; and be not “soon angry” for any cause.

RELIGIOUS INTELLIGENCE.

PENANG.—Of the religious condition of Penang, a friend who has long resided on that island, says, "it is a land of darkness, and apparently a barren waste. We have many difficulties and discouragements to meet. Satan seems to reign triumphant in the hearts of the various inhabitants around us. Nothing but the almighty power of God can make the means of grace effectual to their conversion. May the divine influence of the Holy Spirit descend in copious showers on these desolate fields, that the people who sit in the region and shadow of death may rejoice."

After giving this dark picture, our friend proceeds to notice the interest, which the government and some individuals have manifested, in the measures that have been adopted to improve the character of the native inhabitants. For about thirteen years, schools, both for Malay and Chinese children have been opened; and one of them has been kept in an idol's temple. The Holy Scriptures, as well as many other books, have been put in circulation.

The good, which foreign residents in the East may do, by countenancing and supporting schools and the circulation of books, is very great. This subject has been overlooked, and greatly neglected, though it is

one of much importance. It certainly should, and we wish it might, receive greater attention.

SANDWICH ISLANDS.—The first Christian teachers, who went to the Sandwich Islands, were instructed by those who sent them forth, "to aim at nothing short of covering those islands with fruitful fields, and pleasant dwellings, and schools, and churches, and raising up the whole population to an elevated state of Christian civilization; also to introduce, and get into extended operation and influence among them, the arts, institutions, and usages of civilized life and society; above all, to convert them from their idolatries, and superstitions, and vices, to the living God." Thirteen years have not yet passed since these men entered on their labors; then, it was difficult to find a people in a lower state of degradation; they were without letters, and all the comforts of civilized life; now, they have books, schools, and written laws; churches have been built, useful arts and institutions introduced; and they are taking rank with the civilized and Christian nations of the earth.

Our latest accounts from the Islands are to Sept. 16th; by which we learn, that the various improvements which have

been commenced, continue to progress; and that a deputation had been sent to the Marquesas, and the Society islands, with a view to promote benevolent operations there. The reinforcement arrived at the Islands on the 17th of last May; the annual meeting of the missionaries was held immediately afterwards; fifty-two were present, five only being absent. At the solemnities of the sacrament, 4000 natives were present, of whom 300 were communicants, and partook of the sacred emblems of our Lord's death. Kaahumanu, regent, died on the 5th of June; her biography, it is expected, will be published.

In regard to the charges which have been brought against the missionaries at the Sandwich and South Sea islands, by Kotzebue and others, we are glad to see the mild, candid, and completely triumphant vindication which has been published by Mr Ellis.

BOMBAY.—We have letters from Bombay and Belgaum to about the middle of last Aug. From one dated at the latter place, we have interesting particulars concerning the progress of truth at Poonah. Not long ago, the government would not admit missionaries into that place; and a quantity of tracts, which were sent thither for distribution, were "seized by the magistrate there, and forwarded to the government at Bombay, who wrote to the missionaries, prohibiting their sending any more. The persons, who took the tracts for distribution were marched out of Poonah under guard."

Now, there are two missionaries seated in that very place; others are at stations more in the interior; and still others, at other places in the vicinity; "and within the last two or three years several missionary tours have been taken in various directions; the tidings of salvation proclaimed in the name of the Lord Jesus, and portions of Scriptures and Tracts widely distributed. Thus the good seed of the everlasting Gospel has begun to be sown in these parts, and means are using daily, for the still more general diffusion of the knowledge of Christianity.

"It remains for us to persevere in labour, and to be earnest in prayer for a blessing from above, so that the seed may take root, spring up and bear fruit to the glory of God in the conversion and salvation of immortal souls. He who has thus opened a wide field for labor, removed every obstacle to the free communication of his Word, who has raised up and sent forth the laborers into the field, doubtless, can and will in his rich mercy, and by the power of his Spirit, cause the work to prosper. "His holy word sent forth, shall fly the spacious earth around; and every soul beneath the sky shall hear the joyful sound." —Yes; not only *hear*, but the idols shall be banished—they shall be cast away as unprofitable things. Idolatry shall be abolished, and all the inhabitants of the earth shall come under the dominion of Christ, and unite in ascribing to him power, and glory, and crown *Him* Lord of all."

LITERARY NOTICES.

THE CATECHISM of the Shamans; or the laws and regulations of the priesthood of Budha in China; translated from the Chinese original, with notes and illustrations. By CHARLES FRIED. NEUMANN. 8vo. pp. 152. London; Printed for the Oriental Translation Fund, and sold by J. Murray, &c. 1831.

THIS work is dedicated to sir George Staunton, Bart. "with profound respect and esteem," by the translator. Sir George is, we believe, one of the most persevering patrons of Chinese literature in Great Britain. And we have heard that he is particularly attentive to continental poor scholars in general, and to sinologues in particular. Of our friend Neumann, too, we cannot but speak in the language of unaffected respect and regard: although we cannot praise him for perfect accuracy, nor yield entire submission to all his German theories. We remember him very well, and always enjoyed his discursive conversation on all subjects, excepting "*peculs* and *catties*," to which he had a great aversion. We avow ourselves Neumann's friends, but that shall not prevent our telling him, and the world, (we mean the Chinese reading world—a very

small portion of mankind,) what we think of his "Catechism."

In the first place, we object that he has not told us what in the original, is the name of the book he has translated. We looked over his pamphlet, as critics do, once, and again, and a third time, and after all could find no native name to his catechism. We found, very easily, what he calls "The Breviary of the Shamans," because he gave the name of it both in Chinese and English, "*Shamun Jih jung*;"—but here, as well as in many other places, he is careless and erroneous in his Chinese spelling; his *jung*, should be *yung*; and in other places, his *chung* should be *chuang*, &c., &c. However these are little faults. We have, by search found out his original, the name of which is *Sha-me leuh-e, yaou leö*, "an Epitome of the most important prohibitions and regulations for Shamans." Our copy is the *Chung kan*, a new edition; and it contains, *tsäng choo yuen ke so yen*—"additional comments, with minute explanations of the causes and rise of things" (or phrases).

This is probably the same edition that the Professor had; but why he has called the *ten* prohibitory precepts, and *twenty-four* regulations for personal

Literary Notices.

conduct,—intended, as is said in the book itself, to give dignity and inspire respect,—“A Catechism,” we do not know. There is nothing of the catechetical form in the composition. Indeed, we have never seen that form used in any Chinese book. The ten precepts in Mr. N.’s translation are thus arranged.

1. Thou shalt not kill any living creature.
2. Thou shalt not steal.
3. Thou shalt not be lewd.
4. Thou shalt not do wrong by thy mouth.
5. Thou shalt not drink strong liquors.
6. Thou shalt not perfume the hair on the top of thy head; thou shalt not paint thy body.
7. Thou shalt not behold or hear songs, and pantomimes, and plays; nor shalt thou perform thyself.
8. Thou shalt not sit or lie on a high and large couch.
9. Thou shalt not eat after the time.
10. Thou shalt not have in thy private possession either a metal figure (an idol), or gold, or silver, or any valuable thing.

Such is the decalogue of the Shamans! The original expressions are more simple than the translation of Mr. N. He has, unnecessarily, added *thou* to each interdict to make it read like the Decalogue of Moses: as in other places, he very erroneously applies Christian names to what differs materially from the Christian sense.

standing, and throws dust in the eyes of others, to give color to his own sceptical theories; such as that, all religions are alike; and to the philosopher all are equally untrue. In this way he uses Scripture, church, clergy, &c.; and says first, that Buddhism is like Roman Catholicism; and next, that it is the Lutheranism of the Hindoo church; whilst another Indian sect is its Calvinism; and a third its Socinianism. He might with as much philosophical accuracy, say that every brute biped is like man, because it has feet, and body, head, eyes, mouth, and ears;—which certainly indicate a great deal of similarity. How can a system which talks of Deity as being “*nil*ity,” “a something-nothing, or a nothing-something,” &c., be compared to anything either Jewish or Christian!

The Chinese wording of the first five interdicts is thus;

1. Puh sha säng, “Do not kill sentient beings.”
2. Puh taou, “Do not steal.”
3. Puh yin, “Do not marry.”
4. Puh wang yu, “Speak not falsely.”
5. Puh yin tsew, “Drink not wine.”

The third interdicts to the Shamans all sexual intercourse; and these precepts are for the priests, and not for the people, therefore Mr. N.’s translation is wrong. The word he has translated *lewd* is explained as we have now given it. The Confucianists often laugh at the Buddhists for interdicting marriage; which seems to have induced the commentator to :

a note, saying, that this third precept does not apply to those who live at home, in the same sense. It only interdicts those not included among wives and concubines. The fourth interdict forbids, not only saying what is false, but also all bad language calculated to corrupt or injure others; scolding, tale-bearing, &c.

The twenty-four "insipid regulations," as Mr. Neumann calls them, which form the second book of his Catechism, are divided into sections which are numbered. We subjoin the heads of the chapters,—“intended to give dignity and inspire respect.”

1. Respect to be paid to the great Shamans.
2. Duties to a teacher (or gúrú).
3. On going out with a master.
4. Behavior in public, and
5. At the public table.
6. Concerning the performance of worship.
7. On hearing the law.
8. On studying the sacred Books.
9. On entering the halls of a monastery.
10. Concerning behavior, on entering the hall for worship.
11. On the transaction of business.
12. On bathing.
13. On entering a privy.
14. On sleeping.
15. On sitting round a fire.
16. On behavior in the sleeping room.
17. On visiting a nunnery.
18. On going to people's houses.
19. On begging for food.
20. On going among the multitude.
21. On going to the market.
22. In nothing, to act for one's self, but to ask permission.
23. On going to a distance, or traveling.
24. Concerning utensils and vestments.

Under these twenty-four heads or chapters are many things silly, trivial, mean, and disgusting; neither conferring dignity, nor respectability on the contrivers or performers. Such as;—you must not call a great Shaman by his name; you must not listen by stealth to a great Shaman explaining the law; you must not speak of his faults; you must not sit, but rise up when you see a great Shaman passing by; you must not enter the master's door without thrice making a noise by smacking your fingers; you shall look upon a *hoshang* priest as if you saw Budha himself; when you wash your face you must not use much water; you must not blow your nose, nor spit in a temple, in clean rooms, or on the clean ground, or in clean water; you must not laugh much; if you do laugh aloud or yawn, you must hide your mouth with your sleeve; must not form a friendship with a young Shaman boy; whenever you close your hands in prayer you must not let your ten fingers be in disorder; must not put your fingers in your nose; when hearing the law, you must not spit nor cough aloud; you must not blow the dust off the sacred books with your

breath; for in the first place, the breath stinks; and in the second place, it shows want of respect; you must not study books of divination, of physiognomy, of medicine, of drawing lots, of astronomy, of geography, of charms, of alchemy, or any magic arts; you must not study poetry; you must not take hold of sacred books with dirty hands; before sacred books you must consider yourself in the presence of Budha, and not joke or laugh.

Such is a specimen of this religion of reason, and the rules of a Shaman monastery. We will not conduct our readers to the bath, and some other places alluded to above, in the heads of chapters.

Prof. N. has, in general, given the sense of the original; we have observed a few places, however, where he has mistaken it. As for example, in page 109, on hearing the law, the original reads, *Puh tih we huuy, ching huuy; juh puh chuh kow*, "you must not when you don't understand, say, you do understand; and what enters the ear, (instantly) utter with the mouth." This Mr. N. translates, thus, "All that enters into your ear, shall not indiscriminately pass out of your mouth; you shall not say what should not be stated before the congregation." Here the sense of the whole paragraph is lost, and he has introduced "a congregation;" whereas there is properly no such thing as a congregation in the whole system. The persons present are all priests and pupils. Mr. N. has taken a sense of *huuy* which does not apply here. Morrison

(4560) defines it "to unite; to assemble; an association;" thus far congregation would do. But he gives below what shows that *huuy* also means to unite thoughts; to associate ideas; to *understand*. One of Morrison's examples is, *huuy tso*, to know or understand how to do a thing.

In page 147 also, the Prof. has quite mistaken the sense. The original reads, *yuen king, yaou keü leäng päng*—"When traveling to a distance, you must avail yourself of the company of a virtuous friend; *Koo jin sin te we tung, puh yuen tseën le kew sze*, the "ancients, when the ground of the heart did not understand; did not regard a thousand *le* (miles), as too great a distance to go and seek for a teacher." Of this, Mr. N. gives the following version. "With regard to traveling for visiting a friend who lives far distant, our forefathers formed different opinions;—but this is certain, you should not ask the master for permission if your friends or parents live farther off than a thousand *le*." This is blundering with a vengeance. The phrase, "*puh yuen tseën le*," seems to have puzzled the Professor; verbally "not distance thousand *le*,"—but the word *distance* is used as a verb, or to consider as distant. Mencius has the same expression. The king said to the philosopher, *Sow, puh yuen tseën le urh lae*—Venerable Sir, you having not thought a thousand miles too great a distance to come hither, &c.

We shall notice only one more place in which the translator misleads his readers. See page

78, the tenth law; "Thou shalt not have in thy private possession either a *metal figure* (an idol), or gold, or silver, or any valuable thing." The metal figure (an idol) is a perfectly erroneous translation. The two words "*sang seüing*," which Prof. N. takes for a metal figure, would in the Chinese original, seem to mean a *living image*; but they are explained to be used for some foreign words that crept into the text in passing from India; and the next two words *kin yin*, gold and silver, are given to explain the sense of *sang seüing*: so that the *metal figure* (an idol), should be blotted out of the translation. The original is, "Do not grasp hold of gold, or silver, or any precious thing." Idolatry is not at all interdicted in the Catechism of the Shamans.

Thus we have taken a hasty survey of our friend's book. In the conclusion, he thanks the British residents in China, generally, for their kindness to him; and mentions the names of Mr. Dent, and Dr. Morrison in particular. He is not so polite to the Chinese, whom he designates "self-conceited and semi-barbarous," and thinks that a civilized and warlike nation must "necessarily, in spite of itself, extend its empire over them." We for ourselves positively disclaim the wish for any other conquest than that of truth over error.

In closing this article, we have to record, with deep regret, the death of the respectable oriental scholar and sinologue, M. Abel-Remusat. He is cut off in the midst of his labors to elucidate the subject of Buddhism.

κ κ

THE Divine Authority and Perpetual Obligation of the Lord's Day. By DANIEL WILSON., M. A. Vicar. London; 1831. pp. 206.

A COPY of this excellent little book, and one only, so far as we know, has reached China. It is from the pen of that eminent servant of Christ, whose name appears above, as vicar of Islington; but who is now Dr. Wilson, the lord-bishop of Calcutta. The work consists of seven sermons, prefaced by a pastoral address to the inhabitants of the parish of Islington. The whole is dedicated to the bishop of London, who has distinguished himself as the advocate of the Sabbath, in opposition to the archbishop of Dublin, who has, we think, erred egregiously, by pleading for its abolition, under the Christian dispensation.

The bishop maintains that, although subordinate matters concerning the *Sabbath* of the Jews, and *Lord's day* of the Christians, have been disputed, it has, in every age, since creation was finished, been a fundamental point, that there should be a day of religious exercise and holy rest, after six days' work. And that the "whole church of Christ, in the proper sense of that term," has maintained this great doctrine.

In studying the subject, Dr. Wilson has omitted no author of any note, belonging to any nation or any church. He is obliged to dissent from eminent writers of his own church, the famous and elegant bishop Taylor; Drs. Ogden and Paley;

Literary Notices.

archbishop Bramhall, and the present archbishop of Dublin, &c.; and he joins with the nonconformist Dr. Owen, who lived in the times of Cromwell; with Jonathan Edwards of New England, who has "defended," the bishop adds, "the change of the Sabbath from the last to the first day of the week, in his own lucid and convincing way." "Dr. Dwight, continues the bishop, as well as his illustrious countryman, Edwards, has honored the American school of theology—rapidly rising into importance—with a most convincing and able discussion of the question, in all its branches, both theoretical and practical. This perhaps forms the best of our modern treatises; though it would be unjust to Dr. Humphreys of Amherst college, to withhold a tribute of praise from his excellent essays."

Dr. Wilson thinks the best single sermons, in a practical point of view, on this important subject, are those of dean Milner, archdeacon Pott, and Dr. Chalmers "of the Presbyterian church in Scotland;" "the last is in the most powerful and awakening manner of its author, and of itself settles the question." Thus liberal is our author in giving praise where he thinks praise to be due.

The train of argument pursued by the bishop is, that the Sabbath was appointed by divine command as issued in Paradise; republished in the

decalogue or moral law; enforced by the prophets: recognized and vindicated by the Lord of the Sabbath, and his Apostles; and received, and acknowledged in the primitive, and every succeeding age of the church.

Thus far Dr. Wilson avoids mentioning the authority of the church of England, in reference to her own members; but in an appendix he states what that is, according to her *fixed formularies*; and takes occasion to reprove the Rev. Mr. Fellowes, "a clergyman high in station, who, notwithstanding the articles, liturgy and homilies of his church, has attempted, in order to support his non-observance of the Lord's day, to sweep away the ten commandments altogether."

In conclusion, we might be asked, "How comes it to pass that the Chinese have lost the knowledge of the Sabbath? which we would answer by asking another question, How comes it to pass that the Chinese have lost the knowledge of God himself, and of creation, as well as of the Sabbath? We suppose that an objector would not infer from this fact, that there was no Almighty Creator, though he would have us infer that there was not, originally, any Sabbath.

We sincerely wish the bishop of Calcutta would reprint his very seasonable book; and let it be circulated widely throughout the East.

* We observe with pleasure, that throughout his work, the bishop prefers the Old Testament term, *Sabbath*, and the New Testament one, *Lord's day*. We have not noticed anywhere that he uses the word *Sunday*, but by way of reproof, he speaks of "Sunday recreations, the Sun-

JOURNAL OF OCCURRENCES.

LEENCHOW.—On the 10th instant, reports reached Canton from governor Loo at Leénchow, saying that the mountaineers had broken forth again in all directions, plundering, and murdering the people. He-ngän the imperial commissioner ordered two forts to be built, on two commanding hills, to awe those who had recently been in rebellion. But the highlanders waited till the commissioners had set off for Peking, and the troops were withdrawn to Canton, when they assembled, and attacked the workmen; and, after putting them to death, laid their works in ruins.

It is further rumored, that a large party of banditti in the neighborhood of Shanchow, a little to the eastward of the late seat of the insurrection, have commenced resistance to government, under the appellation of the Yangteë-fan association; or "*the iron-bar political union.*"

On the 26th, it was reported that governor Loo had sent to the foo-yuen for the wang-ling, or royal order in his keeping, that he might put to immediate death *three hundred* members of the Triad Society, whom he has seized at the hills. It is his purpose not to leave one of them alive.

DECAPITATION, &c.—On the 22d instant, *seven* men, and on the 25th, several more were beheaded, at the usual place of execution in Canton. In a former number we mentioned the decapitation of *seventeen* individuals. These executions are performed in the most public manner, and are of very frequent occurrence, amounting to many hundreds and some say from one to two thousand annually; they are noticed, in the court circular, in the most summary manner. Without even mentioning the names or the number of criminals, it is simply

stated, *keuë fan jin peih*: such and such officers reported that, "*the execution of the criminals was completed.*"

The design of such exhibitions, so far as they are intended to be a *terror to evil doers*, is very good; but it may well be questioned whether the end proposed is attained. Such gross exhibitions of cruelty, so frequently presented, not only shock the better feelings of the human heart, but tend to render the hardened more hard, and the desperate and cruel still more ferocious. Especially must this be the case, when there is but little moral feeling, and when there is no fear of omniscience, nor apprehension of a just retribution in a future state of being. Many in China, not only of banditti, but of the "*best classes*" also, are atheists, and *deny the immortality of the soul*. With such principles,—or rather with such a want of principle,—oppression, or want, or passion, urges them on to desperation, till they fall victims to the "*paternal laws*" of the land.

Suicide, which cannot, as in England, be here attributed to gloomy weather, is owing to the erroneous opinions entertained on religion. We should tire our readers were we to notice all the cases of this kind, which we hear of. While writing one account, another and another is reported. A youth belonging to one of the government offices, being prevented by his father from marrying a prostitute, went, and with her took a dose of poison in their wine. He perished; the woman's life was saved by an early emetic. He, probably, was last attended to, and when it was too late. The poison had taken its full effect, and life was extinct.

We hear, also of banditti coming at night, and carrying off young

Journal of Occurrences.

2

from lonely houses near the banks of the river; then, having abused their persons, offering to ransom them for a ransom. Alas! there is no knowledge of God; no love to his Name; or fear of his wrath in the land.

The young man, alluded to above, died, the report says, at the *hwa-lin*, or "flower forest," as the haunts of prostitution and debauchery are called; for the Chinese, not only in their poetry, but also in their common phrasology, represent the paths of vice, as "strewn with flowers." Thus they lend their literature, and their poetry, to disguise the fact, that those paths, and those abodes are "the way to hell; going down to the chambers of death." Prov. vii, 27.

FIRE AT SHAMEEN.—By the fire of October 30th, mentioned in our last number, the destruction of property was very great, and several persons lost their lives. Upwards of ten of the pitiable victims of that infamous neighborhood were lost; a part of whom were burnt to death; and the others were carried off by banditti, to be resold or redeemed. For one individual 300 taels of silver were demanded as a ransom, by the men who stole her. This money not being speedily forthcoming, the deprived men brutally violated her person, till by their crimes they caused her death. This unhappy sufferer was only 20 years of age.

Fires break out at this place almost every year; and although they are officially attributed to accident, yet there is reason to believe they are caused by incendiaries. The local magistrate has issued a proclamation, offering a reward of 100 dollars to any one who will seize a principal incendiary; and 50 dollars for an accomplice. But the seizure must be made at the spot where the fire commenced, and at the time of the act!! If any seize an innocent person, and bear false witness against him, they will be punished as if they had committed the crime themselves.

DOMESTIC SLAVERY.—The buying and selling of boys and girls, which is one of the bad effects of the laws of China, is an unpleasant subject of contemplation. We are assured, that by far the larger portion of the

eight or ten thousand of that unhappy class of women, referred to above, who have their abodes in and about Canton, are persons who were bought when mere children. In this situation, they are compelled, by the cupidity of one class of persons, to yield themselves up to the vicious propensities of another class; and to put on a smile, and appear gay, while they possess a diseased body, and an aching heart. Thus they are inwardly they are suffering the agonies of a guilty conscience. It has always appeared to us, that, that selfishness, which seeks its own gratification, by sacrificing thereto the happiness of another sentient being, is the very spirit which actuates devils in hell.

THE YELLOW RIVER.—On the 14th ult., an affray took place at the junction of the Yellow river with the Hung-tshih lake, which excited the indignation of the emperor. To mitigate the entrance of the waters of the river into the lake, certain embankments have been raised by government. The rise of the river threatened their destruction, and some workmen were employed to strengthen them. For some reason, not explained in the Gazette, a large party of insurgents, headed by some respectable people, came in boats, and were provided with small arms. They put a stop to the work; tied up the workmen; and before military help could be procured, excavated a passage more than ninety cubits wide and thirty cubits deep, to render the river and the lake one confluence of waters.

When a military force appeared, the insurgents fled away in their boats. On account of this proceeding, the emperor has ordered all the principal officers, and among the rest, *Changtsing*, who is styled the governor-general of the river, to be subjected to a "severe" court martial.

DEATH OF A FAMILY.—One of the hoppo's custom-house attendants, named Choo Payay, had a north country servant, named Yang, who had been with him a long time. Yang was married, and had a daughter about fourteen or fifteen years of age. She was engaged to be married

a man belonging to the government office. Yang owned a house in the city where his wife and daughter lived. On the 20th of the last moon, Yang went round to the neighboring shops, and paid all his debts, which suggested a suspicion that he had obtained some ill-gotten gains. However there was no proof of this. The next day, the door of his house remained unopened till noon. The neighbors knocked and called; but no answer was given. At last, they broke open the door, and on entering found Yang and his wife hanging by the neck, on the opposite sides of the bed, and the daughter roused, dressed in scarlet, and other gay raiment, lying on the bed, a corpse. They were all three quite dead.

The neighbors united their names and informed the Nanhae magistrate, and also Yang's master. The next day, as the magistrate was proceeding to hold an inquest on the deceased, the master, Choo Payay, laid hold of his sedan, knelt, and knocked head, entreating him to desist; which, at last, the magistrate did, on the master's promising to have all the bodies decently interred.

The cause of this melancholy catastrophe is not known. Who can but lament the ignorance, or pride, or passion which leads to self murder!

The cause of the girl's being dressed arises from a belief, that after death, the individual will appear among the inhabitants of the invisible world in the attire in which she died. We once knew a case of a young wife, who being offended with her husband, dressed herself, took poison, and died. Even murderers, going to the place of execution, dress themselves, from the same motive, in the best raiment they can procure.

A MATCH.—The bad effects of the system of early betrothing young children, or even infants before they are born, as is sometimes done, was exemplified the other day in a case which occurred in a village of the Pwanyu district. The lad *Ho* was early betrothed to the lass *Seay*, of course, without their consent. When this took place, both families were prosperous. *Ho's* affairs, how-

ever, went ill in the world, before the proper age for marriage arrived. On this account marriage was deferred for several years, till the lady reached the age of 24, and the gentleman 26. He appears to have been some spoiled child, which Miss *Seay* would, of course, know by report, though she was supposed never to have seen him. Her family wished to get rid of the contract, but the poor and the profligate would not consent to give up the match. The unfortunate young woman must marry. Therefore, on the 25th day of the 9th moon, the external ceremonies were performed, and the lady was carried to the house of the husband. When evening came, however, she would not retire; but addressing her husband said, "Touch me not, my mind is resolved to abandon the world, and become a nun. I shall this night cut off my hair. I have saved two hundred dollars, which I give to you. With the half you may purchase a concubine; and with the rest enter on some trade. Be not lazy and thriftless. Hereafter remember me." On saying which, she instantly cut off her hair. The kindred, and worthless husband, seeing her resolution, and, of course, fearing suicide, acquiesced, and Miss *Seay*, who left her father's house to become a wife, returned as a nun.

It is said, young ladies are often reduced to this necessity, and cry, and plead with their parents to permit it, rather than become wives of men reduced to poverty, and perhaps of bad character besides. But few have the resolution to get rid of a bad bargain in the spirited manner of Miss *Seay*.

A LITERARY GRADUATE.—A young man named *Lew Tingse*, who is a literary graduate, has appeared at the Board of General Police* at Peking, with a sealed document from his mother, complaining of the unjust and tyrannical treatment of certain official people, who contrived to get his father driven from his farm, and then so maltreated his mother and sister, that the sister threw herself into a well and was drowned.

* *Toochá Yuen*, means the "Censorate," or the court of universal scrutiny. It is appointed to receive appeals to the emperor.

In ancient times a drum was placed at the imperial gate; by beating upon the drum, oppressed persons gained permission to appeal to the emperor in person. Now, instead of this process, the Board of General Police are empowered to receive appeals, and to transmit them, if they think proper to his majesty. In the present instance, according to a regulation established by 'K'eking, the late emperor, the young man was compelled to break open his own sealed letter, and after an examination of its contents, was locked in irons, and delivered over to the criminal court, to abide the consequences of an appeal to his majesty.

AN INVITATION TO PROSECUTE.—We were not aware that the Chinese government ever sent forth an invitation to the people to come forward, and give evidence against an individual, who was accused of crimes by common report, till we met with an instance of it in a recent publication. *Yé Mungche*, of Tungkwan district, called the village tyrant in our last number, carried his atrocities to such a degree, that the people who hated him, were, at the same time, afraid to complain against him. Both the local government, and the supreme authorities in Canton, had heard much of his atrocious proceedings, but there was a defect of legal proof. A proclamation was, therefore, issued by *Woo*, the magistrate of Tungkwan heñ, saying, that "he had heard rumors of *Yé's* usurping people's lands; getting possession of their houses; seducing their wives and daughters; harboring banditti; devouring the villagers as if they were fish or flesh; and to raise money, committing an unheard of atrocity;—opening the graves and carrying off the bones of the dead, in order to obtain a ransom for them."

A new ballad concerning *Yé*, ridicules him as a man of virtue; for, he put the bones into separate bags, and labelled them, to enable the living to recognise the bones which belonged to their respective ancestors.

The magistrate supposes it possible that some lies may be mixed up with the truth, but he invites all who have truth to tell, to come forward and do it.

NEW SECT.—There are several hints in the Peking Gazette, concerning one *Yin Laouseu*, who called himself Nan-yang Budha, and drew away several thousand disciples after him, whose ramifications extended to three provinces. His body has been cut to pieces by the slow and ignominious process, and his head paraded about in the place where he taught, as a warning to all. The old man's son, *Yin Ming-tih*, for conniving at what his father did, and "assisting his wickedness" was decapitated immediately after. Some others are named, who are to meet the same fate after the autumnal assize.

THE INTEREST OF MONEY.—In the Peking Gazette we observe, that the Chinese government frequently puts money out at interest with the merchants, for the purpose of creating a perpetual local fund. On the northern frontier, the following case illustrates the usage, and shows the rate of interest.

His majesty was requested by *Woo Chungkih* to lend ten thousand taels to be given to the merchants at one per cent. per month, which would produce 1,200 taels a year. Of this sum, one half was to go annually to replace the original ten thousand, and the other half to be applied to the public demands of the station. After fourteen years, when the loan would in this manner be repaid, the whole of the interest and capital was to belong to that station. Then in the event of intercalary years, when there were 13 months, another hundred taels would be forthcoming, and in the same way half was to go to replace the original sum, and the other half for public use. One only wonders what commerce, on the northern frontier, could afford to borrow money at 12 or 13 per cent. per annum.

UNBURIED DEAD.—It is the usage among the natives, to keep the dead bodies, of parents especially, till they can obtain a lucky place to inter them. The rich being deceived by pretended geomancers, often keep their parents for years uninterred; but they are confined and lodged in a building appropriated to them. The poor who cannot get satisfied in regard to the place of burial,

leave the remains uninterred about old hills or hedges; not in all cases very well coffined. On the 3d inst., government issued an order to all such, directing them, either to inter these remains within a limited time in places of their own, or bring them to the charity burial ground,—the Golgotha, or *Calvi capitis area*, the Calvary of Canton,—that they may be there buried.

"An angelic remedy for opium-smoking."—Among the many doctor's placards pasted against the wall of the Company's landing-place, there is one with the above title. This "angelic" intimation was received by means of the *ke* (see Morrison's Dict., 5300) or pencil, suspended above a table, having sand strewed on it. After certain incantations were performed, the angel came, and moved the pencil, so as to write the secret prescription. The materials of which the medicine is compounded, is the *secret*; the mode of using it is fully explained in the placard, and is rational enough. It is to diminish the quantity of opium daily; and beginning with a little of the substitute, to increase it daily, till the opium is left off altogether. Then to begin and gradually leave off the substitute, taking nothing instead, till it is altogether disused, and the patient is happily freed from any desire or necessity either for the one or the other.

HOO KWANG.—A case of adultery and murder having occurred in this province has been carried before the emperor. The wife of Heë Wantseäng, apparently a person of respectability, carried on an adulterous intercourse with Keä Yingfang and a servant Lemo, who is already dead,—in consequence, probably, of the treatment he received since the affair was discovered. The master wished the wife to quit her husband, and abscond with him; which she refused to do. It was therefore resolved on by some of the parties to poison the husband. This diabolical plot succeeded. He was poisoned with arsenic. The Courts of Hoonan concluded their trials by reporting to the Board at Peking, that Lemo, now dead, was the sole agent of committing the murder; that the other two persons were innocent of this; they even knew nothing at all about it. The Board and

the emperor will not believe this. Dissolving the arsenic required time; it could not be done in a moment; the deceased servant may merely have done what he was commanded to do by the master. It is, therefore, decreed that the trial shall be renewed, and the witnesses and parties be questioned by torture to elicit the truth.

ASYLUM FOR THE BLIND.—The Pwanyu magistrate has issued a proclamation concerning this governmental institution, requiring all the blind to appear in person, and show their tickets, and be examined. According to his account, there are 2394 blind people, both men and women, who receive a monthly allowance. The amount is said to be 4 or 5 mace a month, under a shilling a week. This is insufficient for food, and they are allowed to beg, to sing, &c., for the additional means of subsistence. There is no useful work, such as basket-making, contrived to keep them employed. Nor is there any asylum supported by voluntary subscription. The magistrate suspects that tickets are handed to those to whom they were not originally given, and that people only "half-blind" impose on the government. He threatens such in case of detection.

THIEVES.—In another public proclamation he complains, that since the autumn has set in, he has been annoyed by numerous applications on account of petty thefts. These arise, he says, from the district constables and night watchmen receiving bribes to connive at, and protect, opium hotels; gambling houses; and abodes of ill-fame where stolen goods are received, and thieves and vago-bonds "nestle." He calls upon landlords, who may have, "by mistake" let their houses to such people, to expel them; in doing which he will lend his assistance. If they do not, and are afterwards found out, he threatens to confiscate their houses, and punish their persons.

Punishment requested.—The governor of Peking has requested the emperor to punish him severely, for failing to detect Yin Laouseu, who had formed a plot to rebel, and obtained thousands of associates in three provinces. The emperor has granted the governor his request.

MARINE INTELLIGENCE.

WHAMPOA.—The arrival of a chaplain for seamen in the port of Canton, was noticed in our last number. He has now preached four Sabbaths, and, as we hear from various quarters, to numerous and attentive auditories. The masters of different ships have very obligingly, prepared their decks for these services, and offered their boats to convey the chaplain from and to Canton, where he resides.

Notice has been given, that on the next Lord's day, Dec. 2d, by permission of Divine Providence, the Bethel flag will be hoisted for the first time on board the ship *Morrison*, and that the Rev. DR. MORRISON will perform divine service, and preach a sermon on that occasion.

We are most heartily glad to see the interest which is beginning to be manifested, here and elsewhere, in behalf of seamen. They are emphatically, the sinews of commerce, and substantial links in the great chain that binds continents together. Weaken them, and you hinder the free intercourse of nations; destroy them, and you strike a death-blow to the vitals of states and empires; elevate them, and under the direction of intelligent and scientific masters, you have a community, than

which none is more hardy, active, generous, and worthy.

For the sake of our distant readers we would remark, that Whampoa is the anchorage for all foreign vessels trading at Canton. It is in lat. 23 degrees 6½ min. N., and about 14 miles east from Canton city. It has now about 50 sail, and about 3000 seamen. It is a fine, safe anchorage; and contains, annually, during the autumnal and first winter months, according to the number of sail, one of the finest and richest fleets in the world.

LINTIN.—There are now at this anchorage some fifteen or twenty ships; the U. S. ship *Peacock*, captain D. Geisinger, is among this number.

COAST OF CHINA.—On the 29th of Sept., the emperor in council, issued an order to all the maritime provinces, directing the local officers to put the forts and ships-of-war in repair, in order to scour the seas from time to time, and drive away any European vessels that may make their appearance on the coast. Allusion is made to the ships which have lately entered the "inner seas," (as he calls the northeast coast) much to the annoyance of his majesty.

Postscript.—Governor Loo is still at Leñchow, executing his "royal order;" three of the rebel leaders have been put to the sword. We hear this morning, that he will detain 3000 troops at the foot of the hills to keep down the insurgents.

The weather continues unusually mild; but very dry and very warm.

CHINESE REPOSITORY.

 VOL. I.—DECEMBER, 1832.—No. 8.

REVIEW.

THE *Sacred Edict, containing sixteen maxims of the Emperor Kanghe, amplified by his son, the Emperor Yungching; together with a paraphrase on the whole, by a mandarin. Translated from the Chinese original, and illustrated with notes.* By the Rev. WILLIAM MILNE, Protestant missionary at Malacca. Pp. 299. 8vo. London: 1817. Printed for Black, Kingsbury, Parbury, and Allen.

“CHINA presents the very remarkable spectacle of a vast and ancient empire, with a civilization entirely political, whose principal aim has constantly been to draw closer the bonds which unite the society it formed, and to merge, by its laws, the interest of the individual in that of the public. All other ancient civilizations have, on the contrary, been based upon religious doctrines, which are the best adapted to give stability to human society, by softening the ferocity naturally incident to [fallen] man.... As far as we can trace the organization of society in China, in the remotest antiquity, we find it established on the politico-patriarchal principle. The emperor is considered as the father of his people; his subjects constitute his family. The prime virtue, the prime

duty, is filial piety; children are to practice it towards their parents, and subjects towards their monarch* and those who represent him. The ancient Chinese never acknowledged a system of religion as a preservative of social morality, and to be denoted by any kind of worship."

This extract, which we have made from the writings of a learned French sinologue, is a very befitting introduction to the remarks we propose to make on the *politico-moral* work, the title of which stands at the head of this article. Among all the modern standard works of the Chinese, there is no one which holds a higher rank in their estimation, than the Sacred Edict. Though it is emphatically true that the Chinese rulers and teachers, like their brethren in Western Asia, in other times, "say and do not," still it is desirable to know what they do *teach*. A succinct account of the Sacred Edict will, we think, go far to supply this desideratum.

The *sixteen maxims* were written by Kanghe, the second, and the most learned, beloved, and renowned emperor of the present dynasty, near the close of his reign. This ended A. D. 1723, when he was succeeded by his son, the emperor Yungching, who published the *amplification* of his father's maxims, in the second year of his reign. Wang Yewpo, superintendent of the salt revenue, in the province of Shense, was the mandarin who wrote the paraphrase; but at what time does not appear, either in the translation, or the copies of the original which are now before us.

By a national statute it is required, that the Sacred Edict be proclaimed throughout the empire, by the local officers, on the first and fifteenth of every moon. The manner of doing this is thus described in the translator's preface. "Early on

* The phrase, "father of his people," is not much used by the Chinese; words *keun, te wang, huang-te, te'en-tse,*—prince, sovereign king, em. heaven,—&c., are frequently employed.

the first and fifteenth of every moon, the civil and military officers, dressed in their uniform, meet in a clean, spacious, public hall. The superintendent, who is called *Le-säng*, calls aloud, "Stand forth in files." They do so, according to their rank: he then says, "Kneel thrice, and bow the head nine times." They kneel, and bow to the ground, with their faces towards a platform, on which is placed a board, with the emperor's name. He next calls aloud, "Rise and retire;" they rise and all go to a hall, or kind of chapel, where the law [sacred edict] is usually read, and where the military and people are assembled, standing round in silence. The *Le-säng* then says, "Respectfully commence." The *Sze-keüng säng*, or orator, advancing towards an incense-altar, kneels, reverently takes up the board on which the maxim appointed for the day is written, and ascends a stage with it. An old man receives the board, and puts it down on the stage, fronting the people. Then, commanding silence with a wooden rattle which he carries in his hand, he kneels, and reads it. When he has finished, the *Le-säng* calls out, "Explain such a maxim, or section of the Sacred Edict." The orator stands up, and gives the sense,"—i. e. rehearses the amplification, or paraphrase, or both.

This practice of publishing imperial edicts is of very ancient origin, and has received different modifications and attentions at different periods. The *Shoo King* says, "annually, in the first month of spring, the proclaimer of imperial decrees went hither and thither on the highways, with his rattle,* admonishing the people." Subsequently, the laws, or imperial edicts, were publicly read on the first of every month; which practice seems still to be required, but is in fact, we believe, wholly discontinued. At present the public reading of the Sacred

* The rattle was usually a metallic bell, with a wooden tongue; but sometimes, it is said, the bell itself was made of wood.

Edict is kept up in the 'provincial cities,' but is neglected in the country towns, or *heën* districts. 'The people rarely attend this *political* preaching of the "mandarius."

The sentiments of the sacred edict are those of the *Joo-keavou*, or the sect of the learned,—the Confucianists. The maxims of Kanghe, in the original, consist of seven characters each; the characters of which the amplifications are composed are numbered, and the amount, usually about six hundred, is set down at the close; the characters of the paraphrase are not numbered; they constitute, however, about two thirds of the book. It is only in their most valuable works, that the Chinese number their characters; in this they resemble the ancient Hebrews, who used to number the words of their sacred writings; but among the Chinese it is a modern device, which, on account of the many various readings and discrepancies in the works of Confucius, Laoutsze, and others, has been adopted in order to preserve, in future, the genuineness of the text.

The style of the book before us, as composed by three different authors, exhibits considerable variety; the maxims are drawn out in measured prose; the amplifications are, the Chinese themselves being judges, written in a high classical style; but the paraphrase is colloquial and diffuse, abounding with the provincialisms of the northern capital. The translation from which we shall give some extracts as we proceed, is faithful to the original, perspicuous, and sometimes verbose. But our object in taking up this work, is not so much with a view to notice the method and style of the original or the translation, as to show the *sentiments, opinions, and habits*, which the Sacred Edict inculcates. To this task we proceed, and with as much brevity as the nature of the work will admit. We take the sixteen maxims in their order, copying them from the translation.

- 1.—*Pay just regard to filial and fraternal duties, in order to give due importance to the relations of life.*

敦孝弟以重人倫

On these two duties the Chinese raise the whole system of their morals, and their civil polity. From parental virtue—which “is truly great and exhaustless as that of heaven”—Yungching urges the exercise of filial piety; which, he says, is founded “on the unalterable laws of heaven, the corresponding operations of earth, and the common obligations of all people.” The “precise design” of his sacred father, in publishing the Sacred Edict, was by filial piety, to govern the empire; hence he commenced with filial and fraternal duties. The son must employ his whole heart, and exert his whole strength in behalf of his parents. Gambling, drunkenness, and quarreling are the destroyers of filial piety; and, in a word, every species of misconduct is unfilial. Were all dutiful to their parents, and respectful to their elder brothers, throughout the whole empire, or *world*, there would be rest; and as a final argument, their ancient proverb is quoted, “Persons who discharge filial piety and obedience, will have children dutiful and obedient; the obstinate and undutiful, will bring up children undutiful and obstinate.” Such are the retributions, and the *only* retributions, which are unfolded in the moral and political systems of the disciples of Confucius; to them, in their sacred books, life and immortality are not brought to light; and like the Romams “their foolish heart is darkened.”

- 2.—*Respect kindred in order to display the excellence of harmony.*

篤宗族以昭雍睦

Throughout the Chinese empire there are only about one hundred family names; hence the family relations are exceedingly numerous. To count up

the number of their remote ancestors, to trace their genealogies, and to keep their family calendars correct, the Chinese, often, take the greatest possible care. But it is, usually, easy to compute the number of their "kindred," (of which they reckon nine gradations,) because they not unfrequently inhabit the same house. A case of this kind is cited by Yungching; and another referred to, where seventy persons all ate together; and in this latter case the harmony was such, that even "the very dogs," of which "about an hundred" belonging to the family, were *renovated!* The nine gradations of kindred are thus denominated by Wang, in his paraphrase; "I myself am one class; my father is one; my grandfather one; my great-grandfather one; and my great-great-grandfather one. Thus above me are four classes. My son is one class; my grandson one; and my great-grandson one; and my great-great-grandson one. Thus there are four classes below me. These in all, myself included, make nine classes of kindred."

Yungching gives the following as the probable reasons why kindred are not respected, and harmony illustrated, *viz.* "either that the rich are niggardly, and void of the virtue of liberant; or that the poor are greedy, and have insatiable expectations; either that the honorable trample on the mean, and, relying on their own influence, annihilate regard to the heaven-appointed relations; or that the mean insult the honorable, and cast their angry pride at their own bones and flesh; either that having had a strife about property, the mourning badges are neglected; or that having met with occasional opposition, the virtues of kindred are instantly lost; either from privately listening to the ignorant talk of wives and children, or from erroneously regarding the false and reproachful speeches of tale-bearers;—hence arise altercations, injuries, and every evil." The admonitions and counsels of the emperor are in a similar strain, and are also *equally just.*

3.—*Let concord abound among those who dwell in the same neighborhood, in order to prevent litigations.*

和鄉黨以息爭訟

The remarks on this maxim are very similar to those which occur under the preceding one; with this difference, that they are applied to a neighborhood instead of a family. The causes and effects of *discord*, and the means of preserving *harmony*, are pointed out, and all are warned and exhorted to avoid the one, and to pursue the other. "But this exhortation," says Wang, "though addressed to the soldiers and people, especially requires you, noble families, country gentlemen, aged persons of superior capacity in the neighborhood, first to set the example of harmony, in order to excite the simple people to imitation." In winding up his exhortation, the superintendent of the salt revenue becomes rather pungent and severe in his remarks on a class of men, whom he regards as the great promoters of litigations. He says:—

"Not attending to their proper duty they wish to become pettifogging lawyers; and with that view, connecting themselves with persons in the public offices, they learn to compose a few sentences of an accusation, the one half intelligible and the other not. They speak many things, contrary to their own conviction, in order to blind the minds of others. These persons set themselves up in the villages, and move persons to lawsuits; and then, acting as busy-bodies between the parties [with the specious pretence of being mediators], swindle money and drink from both. Moving and at rest they have only one topic, "Maintain your dignity;" they also say, "Rather lose money than sink your character." The stupid people, besotted by them, are led into deep waters; and notwithstanding, are unconscious of having acted wrong in listening to them. Probably these low-rate lawyers, either form vile schemes to set men at variance, or, walking in devious ways, assume threatening airs to frighten and deceive them; either put on the mask of friendship, yet lead men into snares; or knavishly borrow the language of justice, yet secretly effect their own private ends. According to the royal law, this description of persons ought to die—the justice of superior powers assuredly

The Sacred Edict.

will not excuse them—when the measure of their crimes is filled up, their misery will be complete;—they will suffer the due punishment of their wickedness. Reflect for a moment. What one of all these bare-stick lawyers, of whatever country, ever came to a natural, or prosperous end?"

4.—Give the chief place to husbandry and the culture of the mulberry-tree, in order to procure adequate supplies of food and raiment.

重農桑以足衣食

In nothing are the Chinese more worthy of commendation, than in their attention to agriculture and the manufacture of cloth; in these particulars they have been equalled but by few, and excelled, perhaps, by none. Their *modus operandi* is simple, often rude; and in every respect peculiar to themselves. They are strangers to the modern improvements, and rely on diligence alone for success. "Of old time the emperors themselves ploughed, and their empresses cultivated the mulberry-tree. Though supremely honorable, they disdained not to labor, in order that, by their example, they might excite the millions of the people to lay due stress on the radical principles of *political economy*." So says Yungching, and adds, "Suffer not a barren spot to remain a wilderness, or a lazy person to abide in the cities. Then the farmer will not lay aside his plough and hoe; or the housewife put away her silkworms and her weaving. Even the productions of the hills and marshes, of the orchards and vegetable gardens, and the propagation of the breed of poultry, dogs, and swine, will all be regu- larly cherished, and used in their season to supply the deficiencies of agriculture."

There are very few substances, animal or vegeta- ble, products of land or sea, which do not come into the list of edibles among the Chinese. In times of scarcity, in particular, which frequently occur, it would be difficult to say what they will not eat. A complete account of this subject would make a novel chapter in the history of the Chinese.

5.—*Hold economy in estimation, in order to prevent the lavish waste of money.*

尙節儉以惜財用

Next to diligence, *economy* is to be practiced, and most rigidly in every expenditure, except in that required for the management of funeral obsequies,—"the greatest work of human life." In the book before us, while the people are required to go to the very utmost of their ability in preparing a coffin and grave clothes, in order that the mortal remains of their parents may enjoy repose, they are dissuaded from inviting the priests of Taou and Budha to recite the sacred books, and to pray for the dead.

If a "desire of getting" could preserve from prodigality, no people would be more secure, in this respect, than the Chinese; but such is not the fact. *To-day we have wine, to-day let us get drunk; to-morrow's grief let to-morrow support,* "are two very bad sentiments, which are constantly in the mouths of men of the present age," and the ways of wasting a patrimony "are very many."

6.—*Magnify academical learning, in order to direct the scholar's progress.*

隆學校以端士習

The Chinese have four degrees of literary rank; *Seutsae*, "talent flowering;" *Keujin*, "a promoted man;" *Tsinsze*, "introduced scholar;" and *Hanlin*, "ascended to the top of the trees." By the first, the individual rises one step above "the simple people," and becomes a candidate for the second degree; which, when obtained, makes him eligible to office. By the third, he is qualified for an introduction to the imperial presence; and by the fourth, raised to the summit of literary honor. The Chinese have always paid great attention to learning. "Of old, families had their schools; villages, their academies; districts, their colleges; and the nation, her university; of consequence

no one was left uninstructed." Not exactly so now; for though the schools, both public and private are numerous, yet they are poorly conducted; besides, probably not less than two tenths of the male, and nine tenths of the female population, are utterly destitute of instruction.

7.—*Degrade strange religions, in order to exalt the orthodox doctrine.*

黜異端以崇正學

Almost all kinds of false religions, that ever flourished in the world, seem to have found their way to China, where, with various modifications, they now exist. But they exist without any life-giving principles; systems they are, without foundation, without order; framed in darkness, and upheld by ignorance and superstitions. They do not, and from their very nature they cannot, afford support equal to the exigences of man; and hence proving unsatisfactory, it is not at all surprising, that they should be neglected, and even deprecated by those who see and know their destructive effects. If we mistake not, all false religions in China are on the decline: and sure we are, that, by many of the learned, and of those in authority they are but little regarded, and but poorly supported.

"From of old *three sects* have been delivered down. Besides the sect of the learned, there are those of *Taou* and *Fuh*."* Very little is said, in the Sacred Edict, of the sect of the learned; but of the other two "orthodox sects," as well as of some of the "strange religions," we find pretty full descriptions; some of these we quote.

"As to the sect of *Taou*, what they chiefly insist on,—the law of renovation, by which they talk of solidifying the quicksilver; converting the lead; calling for grumbling dragons, and roaring tigers; forming internal and external pills; and I know not what else,—have all no farther object than that of nou-

* *Fuh* is an abbreviation of *Fuh-too*, the Chinese pronunciation of the characters which they use to denote *Budha*.

rishing well the animal spirits; and of lengthening out life for a few years: that is all. Mr. Choo says, "What the sect of Taou chiefly attends to is, the preservation of the breath of life." This single sentence expresses the summary of the religion of Taou. It is true that the superior men among the priests of Fuh, who reside in the pearl monasteries of the famed hills, and well understand to deliver doctrines, reduce the whole to one word, *viz.* the *heart*. And those good doctors of Taou, who, in the deep recesses and caves of the mountains, seek to become immortal, conclude the whole with this one thing, namely, *renovation of spirit*. Yet, when we attentively examine the matter, to steal away thus to those solitary abodes, where there are neither men, nor the smoke of human habitations; and to sit cross-legged in profound silence, is completely to root up and destroy the obligations of relative life. Now we shall not say that they cannot either become equal to Fuh, or attain the rank of the immortals; but if they really can, who has ever seen the one class ascend the western heavens; or the other take their flight upwards in broad day? Ah! it is all a mere farce! A mere beating the devil! But, notwithstanding, you people are easily imposed on, and induced to believe them. Do but observe the austere priests of Fuh, and renovating doctors of Taou, who, for advantage, destroy the relations of human life;—they are not worth the down of a feather to society.

"All these nonsensical tales about keeping fasts, collecting assemblies, building temples, and fashioning images, are feigned by those sauntering *Ho-shang* and *Taou-sze*, (priests of Budha and Taou,) to deceive you. Still you believe them, and not only go yourselves to worship and burn incense in the temples; but also suffer your wives and your daughters to go. With their hair oiled, their faces painted, dressed in scarlet, trimmed with green, they go to burn incense in the temples; associating with those priests of Fuh, doctors of Taou, and barestick attorneys, touching shoulders, rubbing arms, and pressed in the moving crowd. I see not where the good they talk of doing is: on the contrary, they do many shameful things that create vexation, and give people occasion for laughter and ridicule."

All this, and much more of the same kind, the "salt mandarin" is pleased to say concerning the sects of Taou and Budha. Nay, he attacks the moral character of "grandfather" Fuh; accuses him of being *avaricious* and *unfilial*; and, in short, declares the "god" to be a *scoundrel*. His followers are unfilial and wicked in the extreme; but those of the Taou sect are still worse; "they talk

The Sacred Edict.

about employing spirits, sending forth the general of the celestial armies, beheading monsters, chasing away devils, calling for the rain, worshipping the Great Bear, and—I know not what else." In this way business is neglected, all talk of wonders, and the hearts and morals of the people are destroyed. Other sects "of most abominable men," are noticed with equal severity; and finally, the religion of the Romish missionaries comes under review. Upon this, Wang remarks:

"Even the sect of *Teén-choo*,* who talk about heaven, and chat [prate] about earth, and of things without shadow, and without substance,—this religion also is unsound and corrupt. But because [the European teachers of this sect] understand astronomy, and are skilled in the mathematics, therefore the government employs them to correct the calendar. That however by no means implies that their religion is a good one. You should not on any account believe them. The law is very rigorous against all these left-hand-road, and side-door sects! Their punishment is determined the same as that of the masters and mistresses of your dancing gods [i. e. male and female conjurers]. Government enacted this law to prohibit the people from evil, and to encourage them to do good, to depart from corruption, and revert to truth, to retire from danger, and advance to repose."

We will make but one more extract from this part of the Sacred Edict, and then leave our readers to make their own reflections, and draw their own conclusions.

"Having already two living divinities † placed in the family, why should men go and worship on the hills, or pray to those molten and carved images for happiness? The proverb says well, "In the family venerate father and mother; what necessity is there to travel far to burn incense? Could you discriminate truth from falsehood, you would then know, that a

* *Teén-choo*, "Heaven's Lord." This term, it is well known, is not Chinese; it was, after much controversy, adopted by the Romish missionaries; Christianity, according to Romanism, is known universally in China, by the phrase *Teén-choo-keaou*, or "the religion of Heaven's Lord." — after all but a *void* expression for the religion of the Lord Jesus.

† *Teén-choo*, placed in the family, are father and mother.

clear and intelligent mind is the temple of heaven, and that a dark and ignorant mind is the prison of hell. You would act with decision, and not suffer yourselves to be seduced by false religions. Your own characters once rectified, all that is corrupt would retire of its own accord. Harmony and order reigning to a high degree in the family, on the appearance of calamity, it may be converted into felicity. To maintain faithfulness to the prince and filial duty to parents to their utmost, completes the *whole* duty of man. Then you will receive celestial favor."

8.—*Explain the laws, in order to warn the ignorant and obstinate.*

講法律以儆愚頑

Both in the amplification and paraphrase of this maxim, the remarks are confined to the Penal Code. The principal things "insisted on" in this code are beating, banishment, beheading, strangling, and cutting into small pieces. It would require a volume to detail all the crimes for which these punishments, with various modifications, are inflicted. Some of them,—such as theft, robbery, arson, forgery, drunkenness, fornication, seduction, kidnapping, murder, sedition, rebellion, heterodoxy, accusing falsely, imitating demons,—are enumerated; and the people assured, that even the very slightest transgressions, though they should proceed from ignorance, cannot pass with impunity. Hence they are called upon to listen to the admonitions of the law, that they may avoid its heavy penalties.

9.—*Illustrate the principles of a polite and yielding carriage, in order to improve manners.*

明禮讓以厚風俗

The Chinese have long been celebrated for *their* politeness. Many of their rules of conduct are indeed excellent, and would not suffer at all in comparison with those of the Chesterfieldian code. True politeness, in their view, does not consist in mere external embellishments, but in propriety of behavior, and a yielding spirit.

The Sacred Edict.

propriety they seem to understand a certain
 "by which all things, material and imma-
 re kept in their proper order, and honored

 o perfection." But—alas! "though every one knows
 o talk of politeness and yielding, few practice
 them." This is according to their own showing; and
 whether the witness be true or false, we leave it
 with our readers to judge.

10.—Attend to the essential employments, in order
 to give unvarying determination to the will of
 the people.

志定民業以本務

In the Sacred Edict, the Chinese are spoken of
 as constituting five classes, viz. the learned, hus-
 bandmen, mechanics, merchants, and soldiers. The
 appropriate duties of each of these classes
 are regarded as the essential employments. Each
 class must constantly and diligently attend to the
 proper duties of their own sphere, that they may
 be profitable to themselves, and useful to the world.
 Even women have their proper work. They must
 dress flax, spin, weave, embroider, make shoes,
 stockings, &c. But there are some very bad peo-
 ple, "who love to enjoy themselves," to eat good
 things, to wear fine clothes, to sit at ease, and
 to about idling; and, at length, they transgress the
 and commit unpardonable offenses.

11.—*Instruct the youth, in order to prevent them from doing evil.*

訓子弟以禁非爲

This maxim, according to Yungching, refers chiefly to domestic instruction, and the formation of early habits. His "sacred father" regarded all in the empire as his own children, and widely diffused the means of *family instruction*. And "we," he continues, "having received the mighty trust, and realizing our sacred father's compassionate regard to all, are no day without thinking of you, our people; and no day without thinking of your youth.

At the age of ten, the blood and spirits of youth are unsettled, and their understanding begins, gradually, to unfold itself. For educating and restraining them, there is no period equal to this. Fathers and elder brothers must now watch over them, guard their incautious steps, unfold their "*virtuous nature*," restrain their corrupt propensities, and enlarge their capacity for knowledge. They must also go before them, personally, as their exemplars; and must daily cause them to see and hear something good, till their virtuous habits become confirmed. Then fathers and elder brothers will all have glory; their gates will be illuminated; and felicity and honor descend to their posterity.

12.—*Suppress all false accusing, in order to secure protection to the innocent.*

息誣告以全善良

The necessity for this maxim is very great. If we credit our imperial writer in his amplification, the "*masters of litigations*" are not few, nor their crimes of any ordinary turpitude. The lust of gain having corrupted their hearts, and their nature being moulded by deceit, they scatter their poison, confound right and wrong, use the pencil as their sword, and look on lawsuits and jails as mere children's play. "The innocent who are falsely

The Sacred Edict.

accused, are indeed, greatly to be pitied; but those pretches who falsely accuse them, are still more to be detested."

13.—Warn those who hide deserters, that they may not be involved in their downfall.

誠 懇 逃 以 免 株 連

Soon after the present Tartar race ascended the throne of China, a law was passed forbidding their soldiers going from one province to another without a permit, and declaring those who did so "deserters." The law requires that these deserters, and the principal persons in the families where they are concealed, shall be banished beyond the limits of the provinces to which they belong; and that the superiors of the ten neighboring families shall be beaten and banished to some other district in the same province, for three years.

14.—Complete the payment of taxes, in order to prevent frequent urging.

完 錢 糧 以 省 催 科

The revenue of the Chinese arises chiefly from taxes on land and merchandize; and not "a thread or a hair too much" is ever demanded. The taxes are very important; with them the mandarins are rewarded for ruling, the soldiers for protecting, and the emperor furnished with the means for feeding "our people;" and an hundred other things are accomplished—all in behalf of the people. Still there is often great delay in the payment of taxes. "Now if by delay, the payment could be prevented, it would be all well;" but this cannot be the case; presents, and flatteries, and bribes, and excuses, will "at last" be vain; collectors, like hungry hawks, will devise numerous methods to supply their own wants; and the nameless ways of spending, will probably amount to more than the sum which ought to be paid; ergo, taxes must be paid. the clerks will

15.—*Unite the paou and keä, in order to extirpate robbery and theft.*

聯保甲以弭盜賊

No method of suppressing these evils is equal to “the law of the *paou* and the *keä*.” Ten families form a *keä*, and ten *keä* constitute a *paou*. Every *keä* has its elder, and every *paou* its chief. A register is prepared, and the names of all are enrolled. On the highways sheds are erected, where the military, who keep watch, may lodge; at the ends of every street and lane there are gates, where bells are placed, and lamps furnished with oil; and after nine o'clock at night, walking must not be allowed.—Henceforth let all these things be rigorously put in execution.

But notwithstanding all this, and the fact that the work of *extirpation* has long been in full operation, still thefts and robberies multiply day after day, so that the country cannot obtain rest. The reasons for this “are about three, *viz.* the unfaithfulness of local officers; the influence of shameless country squires; and the fact that the people are not careful to observe the rules of the *keä* and *paou*.”

16.—*Settle animosities, that lives may be duly valued.*

解讐忿以重身命

“We think that among the principles of human conduct, there is none greater than that of preserving the body. The people have bodies, by which to attend to the radical things, to cultivate the land, nourish their parents, and support their families. The military have bodies, by which to practice the military art, and afford protection, in order to remunerate the government. The body was made for use; therefore men should love themselves. But the passions of living men are deviating, and they cannot change them. They indulge their tempers till they burst forth, and cannot be stopped. Provoked to anger for a single day, unconquerable enmities are produced; mutual revenge is sought; both parties are wounded and injured. It arose from very small beginnings, but great injury results.

“Our sacred father, the benevolent Emperor, in consequence of desiring to manifest compassionate regard to you,

closed the sixteen maxims of the admonitory Edict by teaching to respect life. The heart of heaven and earth delights in animated nature; but fools regard not themselves. The government of a good prince loves to nourish, but multitudes of the ignorant lightly value life. If the misery arise not from former animosities, it proceeds from momentary anger. The violent, depending on the strength of their backbone, kill others, and throw away their own lives. The pusillanimous, wishing to bring the guilt of their blood on others, throw themselves into the water, or hang themselves. Anger rises to enmity, and enmity increases anger. The original causes of this are indeed not confined to a few. But that in which the military and people more easily offend, arises, in many instances, from indulging in the use of *spirituous liquors*; for spirits are a thing which can disorder the mind and will of man, and occasion a loss of his equanimity. Probably, while guest and host are taking a glass together, they proceed from mirth to drunkenness. Then an improper word leads to laying hold of daggers, and encountering each other; or probably, a cross look creates an offence which could have been as easily settled, at first, as the melting of ice; but which, after the passions are heated by wine, breaks forth, and is as hard to endure as the deep enmities which should be revenged. It is generally seen that in five or six cases out of ten, involving life, which come before the Criminal Board, the evil has arisen from spirituous liquors. Alas, for them! the body is placed in chains; their property lost; their persons thrown away; and not only so, but their families are involved; and misery spreads through the neighborhood. After this to beat on the breast, bitterly wailing and repenting, what will that avail?"

"With respect to the injury of ardent spirits, let it be more vigilantly watched against. The ancients [at seasons of festivity] appointed a person to watch and keep an account [of the number of cups they drank]. They feared, that noisy mirth and songs might end in strife, and in throwing about the crockery. Should we then drown reflection in the puddle of intoxication, and throw our persons in the way of punishment?"

"Soldiers and people, respectfully obey this: disregard it not. Then the people in their cottages, will be protected; the soldiers in the camp, enjoy repose; below, you will support your family character; and above, reward the nation. Comfortable and easy in days of abundance, all will advance to a virtuous old age. Does not this illustrate the advantages of settling animosities?"

With these words of the imperial successor of Kanghe we close our extracts from the Sacred

Edict. Again and again we have read the work both in the original and in the translation. By each repetition our minds have been more and more thoroughly convinced of the complete *atheism* of the joo-keou. Many of their writings, like the Sacred Edict, abound with excellent precepts and remarks, and afford satisfactory proof of the fact that, "that which may be known of God is manifest in them," "so that they are without excuse." But although the eternal power and Godhead are "clearly seen," and "these [disciples of the sage], having not the law, are a law unto themselves," yet what is the result of all this light upon these polite and amiable sons of Han? It is precisely the same we think, that it was on the minds of the learned and polished Romans; who "professing themselves to be wise, became fools, and changed the truth of God into a lie, and worshiped and served the creature more than the Creator."

It was "for this cause" that *they* were given up to vile affections: "being filled with all unrighteousness, fornication, wickedness, covetousness, maliciousness; full of envy, murder, debate, deceit, malignity; whisperers, backbiters, haters of God, despiteful, proud, boasters, inventors of evil things, disobedient to parents, without understanding, covenant-breakers, without natural affection, implacable, unmerciful." All this was true of the Romans, and so it is of the inhabitants of this empire. The Chinese "are without God;" and in their belief, "that undiscovered country, from whose bourne no traveler returns," does not exist. Even Confucius seems to have had no just idea of the being and attributes of the High and Lofty One; or any adequate conception of the immortality of the soul, and of man's future state in a world to come. Heaven and Earth were the greatest existences he acknowledged; and even these might be worshiped only by sovereigns; for the people could not, without "presumptuous assumption," attempt the worship of these powers.

A BRIEF SKETCH OF THE LIFE AND LABORS OF THE LATE

REV. WILLIAM MILNE, D. D.

Few subjects of contemplation are more delightful than the rise, development, and mature operation of a vigorous and commanding mind. If the course of that mind is upward, from a lower to a higher sphere of influence, our interest increases while we witness its gradual progress, against the impediments of early habits, through enclosing difficulties, and over new obstacles. And if this exaltation of rank, rests, not as too many, upon a basis of wrongs, and miseries, and blood, but upon the blessings diffused around that course, the highest degree of approbation and of pleasure attend such a review. Indeed, in our opinion, the noblest object of contemplation in all this world, is the man whose settled and sole business for life, is *doing good*. Men love, approve, or respect that man; angels "minister unto him," the eyes of God are over him, and the Highest calls him his "son."

Such a man requires more firmness of purpose, and vigor of character than the common world ever furnishes. For with all the weakness of human nature, he is to resist the control of vicious passions and propensities, which are common to him with all others. And this contest is to cease only with life. Then, he must totally renounce the common and selfish principle of living for himself, or of having any personal interests at all, except as he makes the cause of his Master his own. Here, almost all fail; and not a few whom we would hope are real Christians, make it doubtful, by their conduct, whether they have passed this initiatory step of a benevolent life. Yet thus far is but preparative; the actual duties of the life he has chosen, remain to be performed, amidst all the internal and human temptations to abandon or slight them, together with the discouragement, perhaps, of small success, and the indifference, or ridicule, or opposition of those whom he would benefit, and of others;—thus continuing to serve an invisible Master whom his eyes have never beheld, till his strength is spent, and he sinks into the grave. Does the service of the world require any such energy of mind, and self-control as this? No; fixedness of purpose and independence there, is but the steadfast pursuit of one selfish purpose, to the disregard of other objects less esteemed.

Dr. Milne, whose life has suggested these prefatory remarks, appears to have been one of the few, in whom were combined, the energy of mind requisite to command influence, and the disposition of heart to apply that influence to the noblest purposes. To feelings naturally ardent, he added such diligence in pursuit, perseverance in purpose, and fruitfulness in resources, as results from an extraordinary devotion to the great missionary work. In many of the first qualifications, he ranks high among modern missionaries.

William Milne was born in Aberdeenshire in Scotland, in 1785. His father died when he was six years of age, and his mother gave him the education common to boys in his condition in life. In his early orphanage, it appears, he was put under the care of a relative, who neglected his morals till he became notoriously wicked. His own account of himself at this time, is the following. "The natural depravity of my heart began to show itself by leading me into the commission of such sins as my age and circumstances admitted. In profane swearing, and other sins of a like nature, I far exceeded most of my equals, and became vile even to a proverb. I can remember the time (O God! I desire to do it with shame and sorrow of heart), when I thought that to invent new oaths would reflect honor on my character, and make me like the great ones of the earth."

Though he had been the subject of occasional serious impressions, yet it was not till sixteen years of age, that he knew the value and love of the Saviour, as the Saviour of sinners. At sixteen, when he had fondly hoped to drink in his fill of iniquity, the Lord, who had better things in reserve for him, removed him to another place, where he enjoyed the privilege of pious friends, and social prayer. From this time his pursuit of pleasure was marred, and the attainment of religion seemed the only substantial good to an immortal creature. But here he found those little trials, the endurance of which, no doubt, contributed to that decision which was afterwards characteristic of him. We give his words:

"As the family where I lived were strangers to religion themselves, and derided them who made it their concern, I was very disagreeably situated. My only place for quiet and unnoticed retirement, was a sheepcote, where the sheep are kept in winter. Here surrounded by my fleecy companions, I often bowed the knee on a piece of turf, carried in by me for the purpose. Many hours have I spent there in the winter evenings, with a pleasure to which I was before a stranger; and while some of the family were plotting to put me to shame, I was eating in secret, the "bread which the world knoweth not of."

His "delightful employment" of watching the flock, gave him much opportunity for reading, to which he was always attached. A book of martyrs, entitled "*The Cloud of Witnesses*"

Life and Labors of the

contributed also to the formation of some traits of his character. "Boston's Fourfold State," led him into a better acquaintance with himself, and after much distress of mind, he obtained such views of the free grace of the gospel that his whole heart was captivated. "Having," said he, an earnest desire to devote myself to God, I was encouraged to do so in the way of a personal covenant. Retiring to a place surrounded by hills, I professed to choose the Lord as my God, Father, Saviour, and everlasting Portion, and offered up myself to his service, to be ruled, sanctified, and saved by him. This was followed with much peace of mind and happiness, with earnest desires to be holy, with a determination to cast in his lot among the despised followers of the Lamb, and with concern for the salvation of others. Two years after, he renewed this covenant, wrote it down, and "subscribed with his hand unto the Lord;" and the next year, he was received as a member of the congregational church at Huntly. "What a wonder am I to myself! Surely the Lord has magnified his grace to me above any of the fallen race."—Such were his recorded feelings at this time.

From this period till his embarkation for China, he was not idle in his new Master's service. Long before he ever thought of that profession in life which he subsequently entered, he "felt so much interested in the coming of Christ's kingdom among the nations, that he used to spend hours in prayer for this desirable object," regarding it as a common Christian duty. It was not till about twenty years of age that his views were directed to the personal consecration of himself to the missionary work; and then many obstacles opposed his desire. However, after spending five years in making provision for the comfortable support of his widowed mother and sisters, he saw this object accomplished. "Should I leave my mother and sisters in want," said he, "the missionary cause will suffer reproach."

Respecting his first application to the committee at Aberdeen, who were to decide whether he should be accepted, and should prepare for the work, there is an authentic anecdote told, too characteristic of his spirit to be suppressed. When he first came before them, his appearance was so rustic and unpolishing, that a leading member of the committee said, "he could not recommend him as a missionary, but would not object to recommend him as a *servant* to some mission, provided he were willing to go in that capacity." When this proposal was made to Milne, and he questioned upon it, he immediately replied with a most animated countenance, "Yes, Sir, most certainly; I am willing to be anything so that I am in the work."

The committee accepted him, and directed him to Gosport, in England, where he went through a regular and successful course of studies, under the Rev. David Bogue. "I began,

said he, with scarcely any hope of success; but resolved that failure should not be for want of *application*." How well he kept this resolution, may be seen in his subsequent labors, as well as by the following extract from his private journal, eight or ten years afterwards. "Nov. 26th, 1820. The University of Glasgow conferred on me, without fee or solicitation, the honorary degree of Doctor of Divinity; this distinction is, in one respect like my daily mercies, unmerited. May I be the humbler and more useful for it, and never act unworthy of the honor."

In July, 1812, at the close of his studies, he was ordained to the ministry, and dedicated to the service of Christ among the heathen. He was soon after married to Miss Cowie, daughter of Charles Cowie, esq. of Aberdeen. Mrs. Rachel Milne is described by a friend still surviving, as "eminently pious, prudent, and meek-tempered. They were much attached to each other, and lived most happily together, till her death in 1821." About a month after Dr. Milne's ordination, they embarked at Portsmouth; and having touched at the Cape of Good Hope, and the Isle of France, they arrived at Macao, and were most cordially welcomed by Dr. and Mrs. Morrison, July 4th, 1813.

After a few days' residence here, he was ordered by the governor, to leave Macao in 24 hours. He accordingly proceeded to Canton, leaving his family under the roof of his friend Dr. Morrison. Following the suggestion of his fellow-laborer, he laid aside, while in Canton, almost every other pursuit but the language. Dr. Milne entered on his work under more favorable circumstances, than his predecessor had done. Still it appears the task was not easy. "I had an idea, said he, that the language was very difficult; an idea which I have never yet seen any reason to change. I felt convinced, that a person of very humble talents, would need great diligence, undivided attention, and unyielding perseverance, to gain a knowledge of it, sufficient to make him serviceable at all to the cause of Christianity." Accordingly, to this, he devoted his strength, his time, and his heart. From morning to night he plodded over the characters, gaining little help, and that from a native teacher, till the arrival of Dr. Morrison at Canton. His studies were now better directed, his progress more rapid, and his knowledge more accurate. He kept his native teacher by him all the day, and applied to him on all occasions; nor was it long before he was required to use his small stock of Chinese.

The translation of the Chinese New Testament, which was now completed by his colleague, together with some thousand copies of a tract, were put into Dr. Milne's hands for circulation. Having no home at Macao, nor permanent residence at Canton, after only six months' study of the language, he departed to visit Java, and the Chinese settlements in the Archipelago, and

there to distribute the books. After visiting the towns and villages of Java and some other islands, where Chinese resided, distributing the books from house to house, and putting them into other channels also for circulation, he returned at the end of eight months to China. The winter of 1814, as well as the preceding, he spent in Canton, studying the language, with the same ardor as at first. He opened his rooms also for public worship on the Sabbath to the foreign residents, and seamen who chose to attend.

According to views which had long been cherished by Dr. Morrison, a station was needed for the mission, as a centre of communication and action, and where Christian books might be safely published. Dr. Milne was selected to locate, at Malacca, the hitherto unsettled mission. "Aware," said he, "that the progress of institutions is slow, when there is neither wealth nor influence at command, we resolved to begin on a small scale, but constantly to keep our eye upon, and direct our efforts towards, great ends." In the spring of 1815, Dr. Milne and his wife entered their new scene of labors, and were kindly received by the resident, Major Farquhar, who was ever their friend. The Dutch Christians, who were entirely destitute of preaching, applied to him for assistance. He accordingly began and continued, till his death, to preach before them once on each Sabbath: for which services they gave him a small salary during life, and afterwards a pension to his children from the Orphan Fund.

One of his first efforts was directed to the establishment of a Chinese free school. The Chinese had never heard of such a thing, and could not, for a twelvemonth, believe, that their children were really to be taught, and books furnished them, *gratuitously*; they suspected that presents would yet be demanded, or that some selfish and sinister purpose would yet "leak out." They could not comprehend the idea of doing and spending so much, simply to do good to others. Thus many kept back their children for the first year. The school opened with only five scholars. By the most cautious process he also succeeded in introducing the use of Christian books, and prevailed on both the teachers and scholars to attend Christian worship. In 1820, Dr. Milne says, "connected with the missions are 13 schools, in all containing about three hundred children and youth." Some friends in the army and in Bengal aided him in this work, by liberal donations. His remarks on this occasion seem to be worthy of remembrance. "Missionaries, to whose lot wealth rarely falls, feel greatly encouraged by such assistance. Wealthy Europeans, or persons in comfortable circumstances in India, may do much good by their liberality. It may feed the poor, clothe the naked, and teach multitudes of ignorant heathen children, to peruse the records of eternal life."

Another work in which he immediately engaged, was the publication of a periodical, called the "Chinese Monthly Magazine." This was continued, with very little assistance, till his death. Thousands of copies were yearly circulated among the Chinese of the Eastern Archipelago, in Siam, Cochin-China, and also in the Chinese empire. Two years later, he began an English quarterly periodical, entitled the "Indo-Chinese Gleaner." This was a much more laborious work than the former, but he also received much more assistance, about one half being furnished by his senior colleague. This was also continued till Dr. Milne died, and expired with him. His opinion of the value of such periodicals, is certainly that of one who had experience; he says; "In the intellectual wastes which missionaries usually inhabit, thought becomes torpid, mental energy languishes, and the ordinary range of vision becomes narrow. If a publication combines religion and philosophy, literature and history, there is something to inform the understanding, to rouse the dormant feelings; something to awaken caution; to encourage languishing hope, something to excite benevolent sympathies, something to draw out fervent prayer to God, cordial thanks for his blessings, active zeal in his cause, and ardent love to all his children."

The last three or four years of his life, were much devoted to the "Anglo-Chinese College." The corner-stone was laid, Nov. 11th, 1818. In 1820, it was so far advanced that a class was formed, and instruction given. This College originated, as is generally known, with a donation of £1000 from his predecessor; but the charge of erecting buildings, and the details of its organization, devolved on Dr. Milne. From that time till his death, he was the Principal of the institution, managing its general affairs, and giving instruction twice or thrice daily in the Chinese language. In 1817, he welcomed the arrival of a fellow-laborer, the Rev. W. H. Medhurst. The next year, three or four more arrived, most of whom have since ceased from their earthly labors. After studying the language for a time at Malacca, they separated, as new stations were successively formed at Penang, Singapore, and Batavia.

In the midst of these labors, Dr. Milne was called to mourn the loss of his dearest earthly friend. Sickness had often visited them. Death had already taken two dear children from the afflicted parents; but the mother was yet spared. In March, 1819, she was called to her rest, dying in peace, and in the full hope of a blessed eternity. Most deeply and tenderly did the surviving husband feel the loss. "The desire of his eyes was taken from him." Often, from this time even till his death, the pages of his private journal are wet with the tears of the husband, while they show also the consolations of the Christian. "O Rachel! Rachel! endeared to me by every possible tie! But I will try not to grieve for thee; as thou didst often request before thy departure, I will try to

cherish the remembrance of thy virtues and sayings, and teach them to the dear babes thou hast left behind. The Lord gave, and the Lord hath taken away, and blessed be the name of the Lord."

From this time, the care of his four surviving children was heavy on his mind; but he slackened not his hand in the work of the Lord, rather quickening his steps as he came nearer the goal. For more than two years all the concerns of the mission had devolved entirely on himself. It was his to visit, and petition government; to plan and superintend the mission buildings; to oversee the schools; to prepare the Magazine; to edit the Gleaner; to teach in the college; to carry on translations; and daily to pursue the study of the Chinese, the Malay, the Siamese, and the Cochinchinese languages. From some of these labors he was relieved by his younger brethren. He found time also, to "preach the word." From the first year of the mission he preached in a pagan temple, weekly, to the Chinese on Thursday evenings; on the Sabbath, besides preaching to the Dutch, he had, while his health admitted, two services in Chinese. "The difficulty of collecting a congregation, he says, was all along felt. The Chinese spend the day in hard labor, and their evenings are very commonly devoted to gambling. When a few persons came to hear, it was no easy thing to fix their attention. Some would be talking, some laughing at the novelty of the doctrines preached, and some smoking their pipes. But the few who attended regularly, soon became very decorous and attentive."

The reception of his preaching among the heathen, as described to him by one of the converts, is very characteristic of Chinese sentiments. "Some treat the gospel with the highest contempt; others say, what is the use of spending so much money in making books, &c., for our instruction? Where people are out of employ, were he to give five dollars, or where persons are commencing a pepper plantation, a few dollars to assist them; that would be spending money more to the purpose. If he will give us money, we will be his followers. He is a very good man, that we all know, but though he has been here more than two years, what good has he done us? Who has received his doctrines? Yet he has even deprived us of cock-fighting! What use of calling us to embrace his religion and to worship his God? May we not just as well call him to embrace ours, and worship our gods?" Another person who was in his employ says, "It is all very well, I now receive his pay, I ought to serve him, I will agree with him; if he even bid me go out and read to the people in town when he is absent, I will do it."

Yet these labors had the effect gradually to enlighten the minds of many, to reform their conduct, and to weaken their attachment to idolatry. The present native teacher Afá is the

first convert whom he baptized. This convert outlives his instructor, of whose life and habits he loves to speak; he adheres to his profession still at the end of sixteen years, though tried by the loss of his property, by scourging, and imprisonment. He is now an ordained Evangelist of the London Missionary Society.

But the work to which he devoted most of the study and labor of his last seven years, and that which will cause the name of Milne to be longest remembered, was the translation and composition of books. By his early diligence in the study of Chinese, he acquired great facility in writing on moral and religious subjects in that language. "No tracts," says his surviving colleague, "are so acceptable to the Chinese, as some of poor Milne's." He used his pen for all occasions, and literally spent his life in writing. In the translation of the Old Testament, he ardently desired to participate, and chose the following historical books, supposing them easiest to translate, viz., Deuteronomy, Joshua, and Judges, the two books of Samuel, of Kings, and of Chronicles, Ezra, Nehemiah, Esther, and Job; in all thirteen. The rest were translated by Dr. Morrison. He wrote also in Chinese not less than fifteen tracts, varying from ten to seventy leaves, besides a full commentary on Ephesians, and an elaborate work in two volumes entitled an "Essay on the Soul." His own view of these multiplied works, is found in his private journal.

"They appear many for my strength, especially if to these the care of my own family be added. I humbly hope also that they are, and will be useful to the church of God. But when I view them as connected with the imperfection of my motives, and the dullness and deficiency of spiritual affections in them, I am disposed to adopt the language of the Prophet; "very many, and very dry." They appear to be almost "dead works." Woe's me! Woe's me! my dead soul! Lord make it alive to thee, and this will give life to all my labors."

In 1822, the life of this laborious servant of Jesus terminated. After many premonitions of danger, and partial recovery, the continued and large expectorations of blood, showed the fatal progress of disease. Though it was rightly apprehended that the liver was the seat of complaint, no remedies could longer check its gradual and certain progress. After a voyage to Penang for health, he returned emaciated and weak, to die at his post. There he had planted the standard of his Master, there he defended it, and there he fell. Approach and behold the scene. He has not now to relinquish his treasures, for they are laid up in heaven for him. He has no late and desperate work of repentance yet to perform. He has no secret or open enemies to forgive, for he cherished no ill-will to any. He has not now to seek that Friend to stand by him, who never forsakes; in his youth he sought him, and found him, and committed to him the keeping of his soul

against that day. He is not leaving his home, and his friends, for a friendless exile; but he is going to his Father's house, to see that wondrous Savior, who loved him and gave himself for him. Yet the closing scene of this good man's life was peace, not joy. It is a serious thing to die. It is a serious thing to stand before the *perfect* judgment.

On the 2d of June, 1822, Dr. Milne died at the age of thirty-seven years, about ten years after his arrival in China.

Thus have we traced, very imperfectly, the course of this servant of God, from Europe to Asia—from the condition of a shepherd boy, among the hills of Scotland, to that of the devoted missionary, dying amidst his labors at Malacca. Many of his early companions, doubtless, died in their vices as they lived, and in their own native village; he lived the life of the righteous, and his books are now read by thousands in Asia. Truly, might he say, "God had better things in reserve for me."

His success as a missionary resulted very much from his humble piety, and his entire devotion to his work. He used to say, "when I am convinced a thing is *right*, I could go through the fire to accomplish it." He was fully convinced the cause of missions was the cause of Heaven, and neither fire nor water could impede his onward course. One great object constantly filled his mind and fired his soul, the establishment of Christ's kingdom among the nations. This called forth his earnest prayers in his youth, and engrossed all his labors in later life. At all times and places, and on all occasions, the missionary work was the first with him. "This one thing he did." In the beginning of his course he made it a rule to devote fourteen hours of the day to study and devotion, six hours to sleep, and the rest, to meals and recreation, walking twice a day for health. But in the later years of his life, finding it impossible to sleep so much, he used to sit up till two o'clock in the morning. There is no doubt, that his health suffered from intense study, and much writing. But his naturally impetuous determined mind, though softened by the grace of God, bore him along with an impetus not easy to withstand. Hence in his private journal, we meet with such reflections as these. "Attempting too much labor for my strength, seems to be my fault." Considering his want of an early education, the results of his ten years' missionary life, are indeed astonishing.

His readiness to seize on every circumstance which could bear on the cause, was also the effect of the concentration of his powers on this *one* work. An extract from one of his private prayers well expresses his desire; "Give me wisdom and energy to know and seize on all the facilities furnished by thy Providence, for promoting truth and righteousness. May I be humble in myself, and greatly value the talents of others. O bless my family, my partner in life, bless our little ones

with the beginnings of eternall life. Fit me for a useful life and a happy death. My eyes are this evening lifted up towards thy mercy in Christ. It is my only hope, my sole plea. Look upon me, pardon me, bless me and mine, in time and through eternity, for Christ's sake. I give myself afresh to thee, my Creator, Redeemer, and Sanctifier; seal me and save me. Amen and Amen."

If the character of a man is noble in proportion to the good which he designs and executes, then the life of Milne may be compared with others of greater name. Many foreigners have resided for ten or twenty years, on these remote shores of Asia; have amassed their thousands among these heathen, and then returned to enjoy, in their own land, the fruit of their labors. They had money and influence while living here, enough to diffuse widely around them the blessings of education and Christianity. But they gathered up their thousands, and hasted quickly away. Ignorance remained unenlightened as before, and misery unalleviated. Yea, they hasted by like the wind, they passed away and were forgotten. Among them came also one, who, beholding the miseries of heathenism, passed not by on the other side. He instructed the youth in schools, he enlightened the aged by books, he opened his hand to give the words of eternal life to all. He amassed not silver and gold, but Bibles; and soon he also returned to enjoy the fruit of his labors; returned, not to his native land whence he came out; but, we doubt not, to the city of the living God; where, with the "noble army of martyrs," he now reaps the gracious reward of a life devoted to the Saviour of the world. His name passes not away forgotten from Asia; being dead he yet speaketh daily to thousands of reading pagans, and the day of regenerated China, we believe, is brought nearer by the labors of William Milne.

* While preparing this sketch, a fact has come to our knowledge, which we are unwilling to suppress. In the "Memoirs of Milne," there is an extract from his "will" concerning the education of his children. He was particularly solicitous that they might be very early taught two things, (1) *to seek first the kingdom of God and his righteousness*, and (2) *to be diligent in business*; and adds, in another paragraph,—*"It would be a most grateful and delightful anticipation for me to cherish, that they, or some of them, should devote themselves to the service of Christ as Chinese missionaries."*

The desires of the good man's heart seem likely to be granted. His eldest child, Amelia, who was born in China, is, we understand, expected soon to accompany a lady of great respectability to Malacca, for the purpose of giving to Pagan and Mohammedan girls a Christian education. She comes to the endeared spot where her beloved parents labored and died; and where their remains are deposited till the morning of the resurrection. They died at their post, and their children are about to enter into their labors.

Their three sons have resided chiefly at Aberdeen; but are now, by latest accounts, studying in Edinburgh. One of them, who was named after his father, and who is said to possess much of his father's decision of character, has recently enrolled himself among the professed disciples of Christ.

MISCELLANIES.

NATIONAL CHARACTER OF THE CHINESE.*—The character of nations, like that of individuals, often changes. This remark applies to China as well as to other countries, though perhaps not to the same extent. The Chinese national character is not now what it was in the commencement of the present dynasty; nor was it then what it had been in the days of Confucius. From the time of Yaou and Shun down to the time of that philosopher, it had also undergone those changes which commonly attend a state of progressive civilization. In the reign of these excellent chieftains, China was yet a small country, and but just emerging from barbarism. A little before their days, the people lived in the savage state. They resided in woods, in caves, and in holes dug in the ground. They covered themselves with the skins of beasts; they also made garments of leaves of trees, of reeds, and of grass. They ate the flesh of animals, with the blood, and the skin, and the hair; all unboiled, and unroasted, and undressed. They could neither read, nor write, nor cypher.

Their dead often lay unburied. Sometimes they were thrown into ditches, and sometimes cast without shroud, coffin, or ceremony, into a hole dug with the end of a stick in the ground, where wolves, insects, and other creatures, devoured them. They were in a state equally barbarous and savage with that in which the Britons lived during the reign of Druidism, before the conquest by Julius Cæsar.

From the time of Yaou and Shun, the Chinese territory extended, its population increased, and its character improved. While it remained in the feudal state, neither arts nor sciences flourished. Necessity was the mother of invention in China as well as in other nations. Increasing numbers taught them the necessity of labor; labor, of instruments; and instruments, of skill; this produced some improvement in the practical arts, the progress of which was secured for a time by the impulse of the principle which gave them birth.

In literature, nature itself became their instructor. By the impression of the feet of birds on the sand, and the marks

* From the writings of Milne; see *Memoirs of the Rev. William Milne, D. D.*, by Dr. Morrison: Malacca: 1824; also the "Retrospect," by Milne.

on the bodies of shell-fish, they caught the first idea of writing. Their written character continued for a considerable time purely hieroglyphic; but after passing through various changes, suggested partly by convenience, and partly by genius, it gradually lost its original form, and approximated to one better adapted to the purposes of government and of literature.

In the earlier ages of China, before its inhabitants were collected into towns and cities, and large associations, along with their rusticity of ideas, manners, and virtues, they also preserved the ruder vices of uncivilized life; but were not yet contaminated with the intrigue, the falsehood, and the hypocrisy, which too often attend a more advanced stage of society. Hence many of their sages of subsequent times, affected with the evils which passed under their more immediate review, and forgetting those which existed of old, pass the highest encomiums on the ages of antiquity. Even things which were really the consequences of ignorance and barbarity, they sometimes mistake for virtues of high character. They erroneously conceived, that the vices of their own times were rather the necessary consequences of high civilization, than the native corruption of the human heart, displaying itself in another form. In the days of Confucius, and for some time after, China continued divided into a great many small kingdoms, which all united in acknowledging the supremacy of the emperors, while each possessed within itself all the arbitrary power of a feudal state.

In the dynasty Tsin, the power of the states was abolished, the whole amalgamated into one, and the government erected into that gigantic despotism, the great lines of which it preserves to this hour.

The wisdom of the ancient rulers and sages of China formed a code of laws which, with many defects, possessed also many great excellencies. Through the numerous ages in which these laws have existed, they have been executed with various degrees of moderation and humanity; and sometimes without the oppressive exertion of arbitrary power. The huge machine of their government has been often battered, both from without and from within, and still its essential parts hang together.

For ages, the arts and sciences in China have been stationary; and from the accounts of the last English embassy, seem, at present, rather in a retrograde state. The obstinate refusal of the Chinese to improve, is rather to be viewed as the effect of principle, than the want of genius. They consider the ancient sages, kings, and governments, as the prototypes of excellence; and a near approximation to the times in which they lived, the highest display of national wisdom and virtue. They are still the blind slaves of antiquity, and possess not that greatness of character which sees its own defects, and sighs after improvement.

Tartars now govern China. The milder sons of Han* could not withstand the arms of the conquering Khan. The wild Scythian, who ate the flesh of horses, and drank the milk of cows, was fit for every enterprise. His restless ambition, nothing but universal empire could satiate; and scarce any obstacle could resist his savage prowess. At length, after the reverses attendant on a state of warfare continued with various interruptions for several centuries, he seated himself securely on the throne of China, where he now holds the most prominent place among earthly princes; and assumes to be "the head of all—the son of heaven—the emperor of all that is under the starry firmament—and the vicegerent of the most high."

It is now about one hundred and eighty years since the Tartars obtained the government of the whole Chinese dominions. They united China to their own territory, and thus formed one of the most extensive empires that ever existed. They adopted many of the customs of their newly acquired subjects; but they did not give up those which formed their own national peculiarities. They continued to preserve the essential parts of that code of laws which they found existing in China; while they, at the same time, imposed certain regulations which were viewed by the conquered either as highly disgraceful or oppressive; and the non-compliance with which, cost some of them their lives. The executive government was soon filled by Tartars, who at times affected, and still affect, to treat the Chinese with contempt. To contend is of no avail: the Chinese must submit, and (as they sometimes express themselves) "quietly eat down the insults they meet with."

Since the union of China to Mantchou Tartary, there have been two national characters in the empire, reciprocally affecting each other. The high and exclusive tone which had ever been assumed by the emperors of China, was highly gratifying to the mind of the victorious Tartar, while the power of his arms secured the honor of superiority to himself. The qualities of the Scythian character have been softened down by the more mild and polished ones of the Chinese; and the cowardly imbecility of the Chinese has been in part removed by the warlike spirit of the Scythian. The intrigue and deceit of the Chinese, and the rude courage of the Tartar, seem to unite in what may be considered the present national character of China; and so far as that union does exist, it will render her formidable to their enemies. What cannot be effected by force, may be by fraud, and *vice versâ*; and what any one of these qualities singly may not be able to accomplish, the union of both may. But this mixture of qualities is

* Han is a term often used by the Chinese themselves in order to distinguish them from the Tartars. They call themselves Han tze, 漢子 "Sons of Han."

heterogeneous and unnatural; and there is reason to suppose that the seeds of national evil are in it, like those liquid compounds, e. g. water and oil, the parts of which are made to adhere for a time by mechanical agitation, but when allowed to settle, resolve themselves without any external cause to their simples; so perhaps it may be with China.

The tempers of her own legitimate children and those of the strangers who rule over her, are discordant, and refuse to coalesce; and if they do not by their own operation work her complete ruin, they may either make the country an easier prey to its foes, or prevent the emperors from sitting easy for any length of time on their thrones.

In point of territory, riches, and population, China is the greatest of the nations; and has, perhaps, to a degree beyond any other, the art of turning all her intercourse with foreign countries to her own advantage. But here she shows but little honorable principle. Idle displays of majesty and authority must satisfy those nations that seek her alliance; for in vain will they look for truth and respectful treatment from her. If they be contented to knock under, and acknowledge that their bread—their water—their vegetables—and their breath, are the effects of her bounty; then she will not deal unkindly with them—she will not oppress them—she will even help them. Proud of an imaginary benevolence, which is high as the heavens, and broad as the ocean, she will throw the boon to them; but withal is sure to remind them, with the tone of authority, to cherish feelings of respect and submission towards those by whose beneficence they subsist. But woe to that nation that dares presume, even in the secret corners of its heart, to consider itself equal, or within a thousand degrees of equality—that country is rude, barbarous, obstinate, and unfilial; and not to tear it up root and branch, is considered a display of forbearance worthy of the celestial sovereign alone!

If, in the intercourse of China with foreign nations, she cannot with truth and justice make all things appear honorable to herself, she makes no difficulties about using other means. She discolors narratives—she misquotes statements—she drags forth to the light whatever appears for her own advantage—and seals up in oblivion whatever bears against her. She lies by system; and, right or wrong, must have all things to look well on paper. This view of her political character is not less true than it is lamentable.

Let us turn to her *moral* character; and here we shall, as in other countries, see much that is good, with a great preponderance of that which is evil. The morals of China, as a nation, commence in filial duty, and end in political government. The learned reduce every good thing to one principle; viz. that of paternal and filial piety; every other is but a modification of this. In this they think they discover the seed of all virtues, and the motives to all duties. They apply it in

every case, and to every class of men. They trace its origin high up to those operations which at first separated the chaos, and see its importance illustrated in every operation of nature. Immediate parents are considered the father and mother of the family. The rulers of provinces, the father and mother of the province. The emperor and empress, the father and mother of the empire. Heaven and earth, the father and mother of the emperor, and of all this inferior world. *Yin* and *Yang*, the father and mother of the post-chaotic universe. The principle now under consideration, is supposed to teach the good emperor to treat the people with the tenderness of a father: and the people to obey the emperor with the veneration of children. Under its influence, the good parent stretches his views forward to thousands of future generations, and lays up good for his unborn posterity; and the good child turns his thoughts backward to thousands of past ages, and remunerates the favor of his deceased ancestors. China considers herself as much a parent when she punishes, as when she rewards; when she cuts off the heads of her obstinate children, as when she crowns the obedient with riches and honor; and the minister of state, but yesterday raised from the rank of a plebeian, is not more obliged to render thanks for the paternal grace that has elevated him, than the criminal just about to be cut in a thousand pieces, is to bow down and to return thanks for the paternal discipline which will, in an instant, exterminate his terrestrial being.

The laws of China operate very powerfully against the exercise of benevolence in cases where it is most needed. Whatever crimes are committed in a neighborhood, all the neighbors around are involved; and contrary to what is the case in most other civilized countries, the law considers them guilty, until they can prove themselves innocent. Hence the terror of being implicated in any evil that takes place, sometimes prevents the people from quenching fire, until the superior authorities be first informed—and from relieving the distressed, until it is often too late. Hence it not unfrequently happens, that a man who has had the ill fortune to be stabbed to death in the street near to his neighbor's door, or who, having fallen down through fatigue or disease, dies, is often allowed to remain on the spot until the stench of the putrid corpse obliges them, for their own safety, to get it by some means or other buried out of the way. It is easy to see how powerfully this operates as a national check to benevolence.

SENSUS COMMUNIS.—In Europe, and wherever Christianity is generally known, the *common sense* of all persons, however hostile to true religion, is against idolatry and polytheism. Monotheism is the universal creed, both of the vulgar and of the philosopher. The other belief appears ridiculous. But it was

not so when Moses, in the midst of polytheistic idolaters, and in a barbarous age, introduced monotheism,—the doctrine of one God, the Creator, the constant Preserver and Governor, and the final Judge of men. Nor was it the case in Greece or Rome, when Christianity began its course. Nor have the philosophers of India or China, if they attained to the knowledge of one God, been able to diffuse it among the people. The *common sense* of China is against monotheism. The monotheist appears to many, ridiculous and impious.

We have before us an exemplification of this in a paper written by an educated man, who had spent some years at the Anglo-Chinese College. The subject of his paper is the diversity of sentiment and feeling among men, not only under different circumstances, but also under the same circumstances; and he illustrates his subject by a paragraph on his own experience, in the following personal narrative.

“This year during the summer, in the beginning of the 7th moon, returning to Canton from Singapore, in a European ship, we had a strong gale of wind for four or five days. The masts and sails were all carried away; and every body on board came upon deck; it being necessary to nail “oil-cloth” over the hatches. From the 8th to the 10th no fire could be lighted on board. There was nothing but biscuit to eat; and in addition to these circumstances, the vessel leaked on both sides. Scores of men, by turns, kept pumping night and day. The captain looked extremely sad; and of the passengers, some were looking up to heaven, and uttering sighs and groans; some were calling aloud on heaven to save them; some were crying and shedding tears. I lifted up my heart to Heaven, and prayed in silence. I recollected my personal sins and wickedness, and that for ten years I had crossed the seas, and heard the holy religion of the divine Heaven, but had not given my heart to its cordial reception; nor taken the things which I had heard, and taught them to others. I determined, if God would forgive my sins, and save me from this calamity, and bring me to my home to see my kindred and friends, that I would take every pains to instruct them, and point out their erroneous opinions of God, in which they daily indulged, and to open a way for the regeneration of their hearts, and lead them to the holy religion. I purposed, if my life was spared, to spend it hereafter in obedience to the commandments of God: holding fast his precepts, and not daring to defile myself with my former pollutions.

“At this time the maddened winds blew, and drove with vehement rapidity, the falling rain. From head to foot all were drenched through, and pierced with cold. I thought to myself that if God did save the ship, this body of mine would be sick. But if I did get home and meet once again my wife and children, should I then die, it would be better, than to have my dead body cast into the sea to be devoured by the

fish. When the Great Ladrões appeared in sight, all on board, high and low, beat their foreheads with their hands, and thanked heaven for their preservation.

"After landing, all the people began to collect money to buy victims, incense, and candles to go to the idol temples to offer thanks. I asked them to what god they were going to give thanks; to the god of the sea or to the god of the winds? Or if they were going to give thanks to the most high God, the Sovereign of heaven? All the people on hearing these words, made them the subject of jest and mockery. The next day, they applied to me for a subscription, and said, that if I did not subscribe I should be called mean and parsimonious. But (I thought) if I offered incense to an idol god, I was disobeying a precept of the Most High.

"At this juncture it happened that a subscription came round for poor shipwrecked sufferers; and to it I doubled my subscription, for their use, and to work together with the mercy of the Most High in their deliverance. On observing this, some said, I was an impious man, and did not respect the gods; others said, I had conferred a real and substantial benefit." &c.

Thus it appears, that the rational monotheism of a half-converted Chinese, was the subject of derision and of blame, to the common sense of his pagan countrymen.

INSECURITY OF PROPERTY in China, arises not from direct robbery on the part of government officers; but from alleging against the possessors of property, either truly or falsely, the violation of some law. We have known dollars paid to the amount of many thousands, in consequence of accusations entirely groundless. A case occurred about a month ago, to parties of whom we had some knowledge, in which truth and falsehood were mixed up together. A Chinese named *Lia*, or in English, *Forest*, was invited, upwards of twenty years since, to Bengal to teach the Chinese language. He left a wife and daughter in this country; but like many of the same class he married another wife in Calcutta. In the course of years, he became wealthy, having saved about two lacks of dollars. The person he married seems to have been the daughter of some Chinese resident there; for, not long ago, he sent his second son, with his mother to China, to honor his deceased parents, and take care of his first wife. The youth was about 20 years of age, and brought with him 20,000 dollars in goods. Last winter young *Forest* was married. On that evening, when the bridegroom was expected, an uncle seized his person, and demanded a thousand dollars to let him go. This was done on the pretext that his father had made an unfair division of his grandfather's patrimony; and the said uncle from poverty had been unable to marry. To save appearances on such an occasion, *Forest* gave a bond for a thousand dollars, and was liberated.

Having built a small neat house, and everything indicating prosperity, the circumstances of old Lin became the talk of all the neighborhood,—near which was a police office. At length, some north country sharpers got the story, and contrived a plot to extort money. As Forest was walking before his door one evening, the sharpers came up and asked if that was not the house of Lin. An affirmative was given, when they proceeded, as principal and witnesses, to urge a claim against Lin senior, for 3000 taels, which he had borrowed before he went abroad. They sanctioned their demand on Lin junior by the adage,—A son must pay his father's debts.

Young Forest retired, and sent out his father's old wife to talk to them. She puzzled them a little by asking particulars, as to time, place, &c.; and the sharpers went off with a threat to appeal to the mandarin. Instead of that, however, the next day they prepared a sedan chair, and as Forest came out of his house, seized him and put him into the chair; and were in the act of carrying him off, when they were stopped by the police, who heard Forest inside abusing them, and calling out *murder!* One of the sharpers declared that the youth was his son, who had run away from his studies, and got into bad company; which had compelled the father to adopt the present course. The police did not see much either of paternal affection or filial duty in the proceedings, and took them all into custody.

The old lady at length made her appearance before the mandarin, and told a plausible tale; that her husband had gone to sea, the ship was lost, and he could not return. Therefore he had remained abroad, and when dying directed this son to return. The sharpers could not tell so good a tale; and so Forest was dismissed, and the others thrown into prison, to be punished. Thus Forest has escaped this time; but he must see his deliverers, who know the facts of his case; for the children in the neighboring streets call him *fan tze*, the foreign lad.

BENEVOLENT ENTERPRISE.—When great enterprises are to be planned and carried forward, the difficulties that may attend their progress and completion, together with their probable result, near and remote, should always be carefully considered. If an extensive canal, or rail-road, is to be constructed, many calculations and surveys must first be made, and with great care. If the condition of man is to be meliorated—if his “combativeness,” superstition, ignorance, and immoralities are to be exchanged for peacefulness, intelligence, justice, kindness, and such like, it is necessary first to become acquainted with his condition and character. The correctness of these remarks none will deny; they are the dictates of common sense, and involve the principles on which we daily act, and which are

recognised in that Divine declaration, that "the children of this world are in their generation wiser than the children of light."

That a wide field for commercial enterprise has long been opened in the East, is sufficiently attested by the millions of treasure and of merchandise which have, during the last two or three centuries, floated around the Capes. Still, a more correct and extensive acquaintance with these countries, and with their productions and inhabitants, would greatly increase the advantages of commerce. But if in this point of view there is anything to attract our attention—and there is not a little which *does* attract it,—how much more do we find which ought to interest us, when as moral and religious men we survey the same field? The West has been enriched by the productions of the East; silks, and spices, and other valuable commodities, in immense quantities, have been wafted from the shores of the Pacific and the Indian oceans, to the numerous harbors on both sides of the Atlantic. And what has been given in exchange? Generally an equivalent, we doubt not, in commodity; and sometimes with it also, we fear, have been scattered the seeds of death. In some instances, however, a good influence has been exerted; salutary measures have been adopted; changes for the better have taken place; and a little light breaks in upon the dark prospect. We refer not merely to the cases where the "bread of life" has been given to the hungry poor; but to all those, where efforts have been made for the improvement of general knowledge,—in the sciences, the arts, or the ordinary circumstances of life.

In the healing art, for instance, we have more than one example, immediately at hand. To pour light on dark eye-balls; and, by the simplest process imaginable, to raise an impregnable barrier against what had long been regarded as one of death's surest messengers, may not in themselves be deemed worthy of any special notice.* We might make the same remark concerning the work of translating and circulating the oracles of God,—of shedding heavenly light on benighted minds, and of proffering the balm of consolation to wounded spirits.

* We have for a long time been desirous of obtaining for the pages of the *Repository*, an account of the introduction, progress, and present state of *Vaccination* in this country. The Gentleman who has the honor of introducing this practice among the Chinese, will very obligingly furnish us with all the principal facts of the case. But as his papers had been sent on board the ship in which he sails for England, before we made the request, he will forward the documents to us from Java. Few, if any individuals who have ever left this country, are more worthy to be remembered by the Chinese, than Dr. Alexander Pearson. He carries with him the high esteem and regard of all who knew him, and may justly cherish the recollection of having benefited thousands who can never enjoy his acquaintance.

It is now, we believe, four or five years since the infirmary, for the benefit of *blind* Chinese, was established at Macao. We hope it may be in our power, ere long, to give some particulars concerning that establishment.

Yet who does not see, that, in the one case as well as in the other, such acts will be followed by the most happy results, the influence of which will not be confined to a few, but extended to many individuals, and be perpetuated to future generations. "Millions of money," according to the views of a late biographer, are "quite sufficient to constitute the sublime." But, be adds, money in itself is nothing. So we may say of action. And as money hoarded up is useless, and the *love* of it the *root of all evil*; so action which reaches not beyond one's self, is poor and criminal. But without action the riches of Cæsus, or the mines of Potosi, would be profitless; still it is the circumstances of action—its motive and direction,—which give it value, or make it positively bad; when inspired and directed by goodwill, it then rises to a high order, partakes of the nature of godliness, and yields *great gain*. On this principle, "two mites" may out-value "abundance" of treasure; and in the "*moral sublime*" equal millions of money! Little, very little does that man know of happiness, who has never tasted the luxury of doing good. Such action is like the quality of mercy,—

it is twice blessed;
It blesseth him that gives, and him that takes.

These eastern nations present a wide field for benevolent and philanthropic enterprise. Their commercial, political, and social relations are to be viewed in a new and clearer light, and changed for the better. In many of the useful arts, and in the sciences—especially those of education and morals,—great improvements are to be made. Education is to be better understood, and more generally enjoyed; and the monstrous systems (if systems they may be called) of morals and religion are to be exchanged for the pure and perfect one, inculcated by Him who spake as never man spake—whose yoke is easy and whose burden is light. In hastening improvements like these, who would not delight to participate?

RELIGIOUS INTELLIGENCE.

VAN DIEMEN'S LAND.—A letter is before us, dated Hobart Town, July 2d, 1832, from which we learn a few interesting particulars. A new chapel, of moderate dimensions, has recently been erected at Hobart Town; and a church has been organized; and a spirit of religious inquiry, which seeks for an abundant increase of the means of grace and of the fruits of the Spirit, is beginning to be manifest. And while multitudes

are prospering in their worldly circumstances, a few are becoming prosperous in spiritual things; of these few, some are members of the Church of England, others are Presbyterians, others are Wesleyan Methodists, and others are Independents.

Our correspondent makes worthy mention of those who preach the gospel at Hobart Town; and adds, "We do not, however, at present, see those glorious effects, resulting from the labors of ministers of the gospel in these places, which have been experienced in other lands, and which we are anxiously desirous to witness here. It is my earnest prayer, that the Lord would revive his work in the midst of the years, and cause his word to have free course and be glorified."

In a waste so dreary as Van Diemen's Land, it is peculiarly pleasing to meet with such an excellent spirit as that which is breathed forth in the letter before us. Let such a spirit become universal, then the solitary place shall be glad, and "the desert shall rejoice, and blossom as the rose."

SIAM.—From the Singapore Chronicle, for the 18th of October last, we learn that the Siamese have committed new outrages on the Malay inhabitants, on the east coast of the Malayan peninsula, at Patani, and other places. The chief object of the Siamese seems to have been to obtain money and slaves.

On the 15th of August, a fire is said to have broken out in the "Malay district" of Bangkok, by which, about one hundred of their houses were

destroyed. It is said also, that the small pox had prevailed to a great extent in that city, and carried off many children.

In the notices of Siam, which have been given to the public from the pens of Messrs. Gutzlaff and Tomlin, there are several references to Burmah, and some account of the natives of that country who reside at Bangkok. Christian books, in the Burman language, long since found their way to Siam; and at length, a member of the Burman mission, the Rev. J. Taylor Jones, has been commissioned to repair to Bangkok; and on the 16th of Oct. was at Penang on his way thither. Mr. J. expects to meet Mr. Abeel at Bangkok, and anticipates the early arrival of other laborers. A countryman of Mr. Gutzlaff's is expected to arrive at Bangkok, in the course of a few months, with a view to aid in the work which has been commenced by our friend and Christian brother. But what are these, two, three, five, or ten—more or less,—among the thousands of Siam? With emphasis we may quote the words of our Lord:—*The harvest truly is plenteous, but the laborers are few; pray ye therefore the Lord of the harvest, that he will send forth laborers into his harvest.*

There are resources enough in Christendom, if they were put in requisition, to supply the whole Pagan world immediately with the means of Christian instruction. The work is vast, and it will be accomplished; though it may be hastened, or retarded, or stopped, for years, according as Christians show themselves faithful, or the reverse.

LITERARY NOTICES.

THE *Christian Advocate's* publications for 1829, 1830, and 1831. By HUGH JAMES ROSE, B. D., *Christian Advocate in the University of Cambridge*. London: Rivington.

THE first of these Essays is entitled, "Christianity always progressive;" the second, "Brief remarks on the dispositions towards Christianity, generated by prevailing opinions and pursuits;" and the third, "Notices of the Mosaic Law; with some account of the opinions of recent French writers concerning it." The whole are written in a clear, dispassionate, and argumentative style, for which Mr. Rose appears distinguished. As there are allusions to China in them, we have thought it right to call the attention of our readers to these works.

The first Essay is intended to answer "the objection made to Christianity, on account of its want of universality." "It is unquestionably an old one," as Mr. Rose remarks, and has been often answered; still it is one that often rises anew in the human mind, and has peculiar weight situated as we are, where Christians, even in name merely, are to the rest of the population as a drop in the ocean. Some persons profess-

ing Christianity whom we have known, partly in consequence of the difficulty alluded to, have said, in direct opposition however to the declarations of Sacred Scripture, that it was not intended to be universal; or if it were so, it must be left to the Almighty to work a miracle to make it so. And on this view of the case they would neither use means themselves, nor encourage the efforts of others, to diffuse Christian knowledge in Pagan or Mohammedan nations. Those who may have indulged such opinions, will find in Mr. Rose's Essay, strong arguments tending to show that they are wrong in opinion, and blameable in conduct.

Mr. Rose arranges his observations under two principal heads. The first, to show what it is reasonable to expect from Christianity; and in the second place, to inquire whether those reasonable expectations have been fulfilled. He considers that unreasonable expectations have perplexed the believer, and given a fancied triumph to the infidel. His argument (so far as we have gathered it from a hasty perusal,) rests on this foundation:—The ever-blessed God has granted to mankind a revelation of his Will, in a manner similar to the grant of the

reasoning faculty, and various physical benefits, for man's improvement and welfare, now or for ever, as the case may be; still leaving man a free agent, to use or to abuse these gifts. Hence the progress of divine revelation throughout the world has been impeded by the remissness of its friends, and the hostility of its foes;—both, by the way, still accountable to God for their conduct.

That the Almighty Ruler of the human heart, says Mr. Rose, might arm any truths which he is pleased to reveal, with such powers of winning or enforcing their acceptance, as would be irresistible, is unquestionably certain: but it must be remembered, that such powers would therefore at once close or prevent the argument. And we add, reduce man to a machine, and destroy his responsibility.

That Christianity is but partially diffused throughout the world after eighteen centuries is the fact; the inference from which, according to Mr. Rose, is not that Christianity is not true; but that its friends have been most supine, and its foes most virulent; that man is in fact, far gone from righteousness; that the human heart is deceitful and desperately wicked. We concur with him in this inference, and we join heartily in his closing admonitions to Christians generally, whether in their individual or social capacity, to use means to propagate the gospel.

He has some thoughts that apply only to his own government (the English), in reference to Hindostan. But there are in

his book some remarks which apply to all Christian governments: "Shall the day never come, (he exclaims,) when governments and nations will feel their highest interest, will confess their highest duty; and hasten to give, at least, the weight of their influence, and the impulse of their resources, to the cause of God and man?" In several parts of his Essays we think he is too national and sectarian for the spirit of that holy religion, which has broken down the partition wall between Jew and Gentile, and admitted to the covenanted mercy of God, through Christ Jesus, all nations and kindreds and tongues and people.—As he says concerning Mr. Ward's book on India, so we must say of his, "It is very valuable, though tainted with petty sectarian feelings."

In his second Essay, Mr. Rose adverts to the argument given above, "That, as it has pleased God to use human agency in the propagation and confirmation of Christianity, it is credible, that its progress may be retarded, and its final triumph delayed, by the errors and sins of the agents, and the evils which are consequent upon them."

It is his opinion that in Christendom a disbelief of Christianity, commonly called infidelity, is most prevalent in a "superficial age." He does not think that "the writers against revelation who appeared at the end of the seventeenth, and beginning of the eighteenth century, in England, (though perhaps superior to their continental brethren,) were entitled to consideration for any great

ability, any depth of research, any extent of learning." He gives his reasons for this opinion, in a brief review of the objections of Toland, Chubb, Collins, Shaftesbury, Tindal, and Morgan. There is only one topic in this Essay which is applicable to China, and that is the "rage for utility"—the neglect of everything that is not *useful* to the acquisition of money.

The Chinese always justify ignorance of foreign languages, and the affairs of mankind generally, by affirming that such knowledge is useless to them. As Mr. Rose complains, the useful for *what*, is not commonly avowed by the pseudo-philosophers of the daily press. *Usefulness* and *money-value* are equivalent terms with them. Whatever is *profitable*—i. e. which will bring most money, is *most useful*. "Everything is viewed through the medium of the market; and no ingenuity could devise a principle better calculated to debase and degrade mankind, and to destroy all the qualities by which God has sought to raise them above the level of the beasts that perish. If the political economists of the *present* day, had no other sin against the public good to answer for, but the establishment of the sovereignty of money, theirs would still be a fearful account to render. They have themselves chosen this base idol to worship, for it was not necessarily presented to them by the science which they profess to cultivate."

Mr. Rose's third Essay, written for last year, has more that

has a reference to China, than the two preceding; and we can cordially recommend it to the perusal of our readers. He says, that the certainty, that "truth will prevail at last" is one of the best comforts which the thoughtful heart can enjoy in this world. It is assuredly one great comfort amidst strife and violence, to know that eventually "it shall be well with the righteous;" and it is the belief of this fact, though yet future, that must bear up their spirits amidst many present evils.

Two writers have arisen in France, M. Benjamin Constant lately deceased; and M. Salvador. They are neither of them Christians, yet take the part of Christian writers against Messrs. Voltaire and Volney; against their flippancies and scurrilities. M. Constant takes so much of the Old Testament as pleases him for a Divine Revelation, and rejects the rest.

"*I recognise,*" he says, "*the revelation made to Moses,* in that part of the Hebrew books where every virtue is recommended, filial love, conjugal love, hospitality to the stranger, chastity, friendship, which no other legislator raises into the rank of virtue, justice, and even pity, though the epoch of pity was not come, for that epoch is Christianity; there is the voice divine, there is the manifestation of heaven on earth, and there only one cannot be deceived in doing every justice to it; because it responds to every sentiment, ennobles and purifies every affection, goes before the light of the age, and, in the midst of barbarism, sends into the soul, truths

which reason would not have discovered till much later."

M. Constant further observes, that "without Moses it is probable that all the efforts of philosophy would have ended only in plunging mankind into pantheism, or hidden atheism, in which the religion and philosophy of India lost themselves together." He recognises "the revelation made to Moses, because he cannot in any other way explain the appearance of Theism in a barbarous age and people."

M. Constant is in this conclusion, we believe, perfectly right. And to India, he might have added China, as plunged by the religion of philosophy into pantheism or hidden atheism. We have endeavored to find God, the eternal Jehovah, the Almighty, the blessed and self-existing God, the Creator of the universe,—but we have sought in vain among all the philosophy and the religion which we have met with in China.

Voltaire said that "the constitution of China is the best in the world, the only one founded on the rights of fathers, the only one where a governor is punished if he does not receive the applause of the people when he quits his charge, the only one which has instituted rewards for virtue... The learned mandarins are considered as the fathers of the towns and provinces, and the king, the father of the empire," &c. M. Constant comments with a just severity on this passage, and reproaches Voltaire with having had another aim than the truth in this representation.

M. Constant's opinion concerning the Chinese, we are sorry to say, has a great deal of truth in it: they are, he observes, of all people the most attached to materialism, they have no notion of spirituality, they are blind fatalists; their doctrine is far more dry than any other pantheistic scheme:—"it supposes the existence of one only substance, without attributes, without qualities, without will, without intelligence;" (we suppose he means the *le* of Confucianists—see Morrison's Dictionary 6942,) "it knows of no motives but blind fatalism, and of no perfection but a blind apathy, without virtue and without vice, without pain and without pleasure, without hope and without fear, without desire and without dislike, and finally *without immortality*." (Here there is a good deal of Taoism set forth.)

But this is far from all; and he goes on to state, that we find "Religion reduced to frivolous and fastidious ceremonies, which only recal despised and forgotten opinions, etiquette in the place of feeling, a lifeless form for belief, signs without signification, a practice without a theory, irreligious abstractions for the high, and stupid superstitions for the people, the worship of one's ancestors, and yet no belief in a future life; the worship of spirits, and yet the most positive and gross materialism; for the rest, the most grinding oppressions, the most absolute power, barbarous punishments, corruptions without limits, craft in the service of fear, a complete absence of all generous

sentiments, an apathy which yields only to the love of gain, and a frightful fixedness even over the traits of the melancholy and degraded human form. This is what we see in China."

Such are the opinions of M. Constant *versus* M. Voltaire. The inferences Mr. Rose draws from these statements, are worthy of a Christian Advocate; and show how meagre, poor and thin, philosophical theology appears by the side of the theology of Moses and of Christ.

TRAVELS IN CHALDEA:—by Capt. Robert Mignan, 1829.

WE notice this work at present, merely to remark on a paragraph (on page 318) concerning the arrow-headed characters of ancient Babylon. The Captain observes, that there is a singular coincidence in some of the *Persepolitan numerals in common with the Roman and Chinese*. "The letter < formed of two arrow-heads joined together obliquely, represents the letter H; which letter being the fifth of the Sabeen, as well as of the Hebrew alphabet, represents the number five; and so in Persepolitan; change the position of it, and you have the Roman V, the numeral for five. Two of these placed together, form the letter X, the Roman numeral for ten; the same in Persepolitan and Chinese."

Now in this, and many similar cases, before endeavoring to account for the "singular coincidence," it is requisite in the first place to ascertain whether there be a coincidence. The Chinese character for *ten*, is, indeed, the figure of a cross; and the Chinese phrase for cross,

is, *shih tsze kea*, "A *ten character frame*," or stand; but it is never like a St. Andrew's cross, or the letter X. In all the ancient and modern Chinese books, that it has been our lot to examine, never did we meet with the character *ten*, written like an X; nor have any of our Chinese friends, though not ignorant of their ancient lore, ever met with such a *ten*; therefore we conclude that the "singular coincidence," so far as Chinese is concerned, does not coincide with the fact. The Chinese Dictionaries which analyze the formation of characters, make no allusion to the arrow in that for *ten*. The *Shwö-wän* says, "Ten is a perfect or complete number. The horizontal line represents the east and west; the perpendicular one, north and south; thus all things contained within the four points of the compass are included by the character *ten*. One of the old Chinese characters for *ten* is a round black dot in the centre, and four lines radiating to the east, west, north, and south."

THE LIFE OF WICLIF; by Charles Webb le Bas, M. A. Professor in the East India College, &c. London: Rivington. 1832.

LE BAS is a talented and pious minister of the Episcopal Church in England; and this work will, we believe, sustain his character. It is one of a series of theological and ecclesiastical works, being published after the modern fashion of useful, and family, and other libraries. Mr. Le Bas, in his

preface, acknowledges at considerable length his obligations to Mr. Vaughan, the most recent of Wiclif's biographers. Vaughan "prepared himself for his task by a more complete, and scrupulous examination of all the extant writings of Wiclif, than has, probably, ever been undertaken before." And Vaughan, with his publishers, liberally and kindly gave permission to Le Bas to print, from the previous work, the catalogue of Wiclif's writings" (the *one man* in his day). Mr. Vaughan, is we believe, a member of one of the Congregational churches in England. And the Christian co-operation here alluded to, is just what it ought to be all the world over, among the disciples of the Lord Jesus Christ.

THE SACRED HISTORY OF THE WORLD.—Philosophically Considered; by Sharon Turner, F. S. A., &c.

This well-intentioned, and we think, well-executed work, is thrown into the form of letters to a son. Mr. Turner says truly—"Nature will never be properly understood, if its creation by the Deity be excluded from the thought. . . . It is the great mistake of many eminent philosophers on the Continent, that they systematically exclude the Deity from all their reasoning on the formations and principles of things; and strive, in vain, to account for them rationally without Him." Christian deists and wicked men, to all practical purposes, are mere Budhists who make the Deity a "nihilty."

JOURNAL OF OCCURRENCES.

FORMOSA.—The news from this island, called by the Chinese, *Taiwan foo*, has of late been of the most disagreeable character. For several days the information was whispered, rather than announced; but since the 15th inst, there has been no doubt in regard to the existence of an open, and, so far as the imperial government is concerned, rather a serious insurrection. From slight causes, managed by the police, and made the ground-work of oppression and extortion, the public mind was roused to exert the physical power it generally possesses, which resulted in the immediate *murder*—if we may so express it, of about seventeen hundred soldiers, and upwards of twenty officers, civil

and military, of his Majesty's service. According to some of the reports, *all* the imperial authorities, civil and military, are either killed, or scattered among the hills, or driven from the island. Large bodies of troops, have been ordered from Fuhkeñ, and two or three thousand from Canton; but by the latest reports we have heard, the insurgents remained unchecked, and were committing new depredations.

HOOPH.—It is rumored here, that in the province of Hooph, several towns are in the hands of insurgents.

LOCAL OFFICERS.—Governor *Lee* arrived here from Leñchow, on

the 15th instant. He received the seals of his office, as governor of the two provinces, Kwangtung and Kwangse while at Leënchow.

Choo, the fooyuen, has delivered up his seals of office to the governor; and, on account of his ill health, has retired from official duties, for a period of three months, with his Majesty's permission.

Choo, the hoppo, is to retain his office at the port of Canton, for another year.

Le, the late governor of Canton, has arrived safely at Peking; and it is said, will soon be put on trial for his ill conduct at Leënchow.

The fashionable Doctor in Canton is, at present, *Chin Shetih*, a man upwards of 60 years of age. He rose in his profession from a state of poverty, a mere hawker of drugs. At present he is said to be possessed of a million of the currency of the land. Still he preserves his old simple habits. His house is situated near the Tartar general's—the tseäng-keum,—in the old city; early in the morning it is open for patients, who, as they come in, are conducted to a room adjoining the doctor's, where they wait for him in silence. Patients who wish him to call at their houses enter their names and places of abode with his door-keeper. About 9 o'clock he sallies forth, committing himself entirely to his faithful servant and chair-bearers, who carry him round to the patients in the order of time, as reported at his gate. Those whose names are first entered are first served, without reference to their condition, whether poor or rich. He makes no charges. His patients may give nothing—or three cash, or three hundred, or three thousand, for a visit; just as they please. He receives no money with his own hand. People's *tangible thanks* are given to his servant.

Chin, whose name means *Sink*, is a man of few words: and these few uttered in the dialect of Whampoa district, of which he is a native. He speaks the mandarin, as a broad Scotchman speaks English; turns a *rod* into a *road*, and makes other such like blunders. And further, he either cannot, or will not, satisfy glib people about the power of the drugs he administers;—which

by the way, it is said, are very few. He rings the changes upon some 20 or 24 medicines, being rather a cautious practitioner. He is the opposite of the *rhubarb doctor*, who long held the reigns of medical sovereignty in Canton; for *Doct. Sink* never administers rhubarb at all. Still, he has become popular among the rich natives, and in all the public offices. They say that, although he does not speak good mandarin, and is not able to explain the properties of his prescriptions, yet people very generally get well under his care; and therefore he has risen to his present influence and affluence.

(From notes of conversation with a Taou priest, doctor Yellow. 1832.)

THE VILLAGE TYRANT.—We noticed this unhappy individual in a former number. His life is still spared; though it is said, sentence of death is recorded against him, to take place during the present season. This sentence, however, is generally commuted for transportation.

A ballad concerning him, which professes to be a moral warning to rich and influential men, contains some exhibitions of mind under trying and distressing circumstances, which we foreigners can find only in description. The feelings and language of two suicidal persons are narrated. Pride and revenge are predominant in their character. The Tyrant's dream is given at length. We intended to give a translation of it, but as a whole it is not translatable. His visions of the infernal regions are mixed up with indecent descriptions of crime and punishment.

The outline is this. In his dream he finds himself in the hands of an infernal police, who use him rather uncourteously. He is a little terrified, and asks for leave to visit his home, before he is dragged to the king below. In the midst of their laughter and scorn, he is permitted to go for a short time. In his dream he gets home; and being unexpected, finds his family occupied in gross licentiousness. His rage is worked up to the highest pitch, by the scenes he witnesses; but while in the act of taking revenge he is hurried off by his guards to the regions below. Being arrived, he is subjected to

trial by the *Yen Wang*, or infernal King. He and his paramours are adjudged to various punishments, on the evidence of those he had corrupted, and robbed, and whose bones he had dug up.

This last act is considered the most heinous; and for it the fooyuen is determined, if he can, to have his life. In his dream, the nuns who intrigued with him, are punished by having red-hot irons thrust into their bodies; the beautiful widow, who left her husband's old mother and eloped with him, is made to embrace a red-hot iron pillar; and with the other women is to be sent back to the world as female cats and dogs. The men who were his accomplices are to transmigrate as privy flies, and scaly moles, &c. &c. He himself, if we remember rightly, is to be dashed upon a hill studded with spikes and knives.

All the proceedings in this *infernum* are conducted according to the manner of Chinese courts. And the superstition goes so far as to induce the belief that money will be useful to the dead. There are persons who burn a great many gilt papers annually, under the mis-belief that all the money they cost will be laid up for them in the *Yin-ko*, or Treasury of Hades, for their use after death. Hence the rich put gems in the mouths of dead bodies before burial; and the poor, a cash or a piece of silver, that they may not be pennyless on the other side of the grave.

We leave the reader to draw his own reflections from these ridiculous, but notwithstanding, melancholy statements. They are scarcely within the limits of decorum, but we do not imitate the delicacy of those who tell the public that they could unfold a very horrible and abominable

tale, while at the same time they leave the matter in utter darkness, and stimulate the imagination to guess whatever it pleases.

SLAVERY IN CHINA.—It is perhaps not generally known that the children of the slaves in China, are born slaves; and the children of free masters enjoy their rights over slaves throughout all generations. There have been cases in which the masters have become poor; and allowing their slaves to go and provide for themselves, they have become rich; but being again found by their masters, the latter have seized all the property. There are slaves of another class who are not bought outright, but with the condition that they may be redeemed. Good masters admit the claim when made agreeably to contract: but bad ones use every expedient to prevent the claim of redemption.

OBITUARY.—The twelfth brother of the salt merchant, *Le Inhyay*, the namesake, friend, and informer of governor *Le*, died at his brother's house on the 9th day of the 10th moon. All the neighbors rejoice at the event, and say, "Another great gambler is dead, and *Se-kwan* district is freed from a great nuisance."

THUNDER occurring in unusual and unseasonable times is considered by the Chinese, ominous of some political change,—a revolt of statesmen, or death of the monarch, &c. If it thunder during the 10th moon, which this year began on the 22d of Nov., it is thought particularly unlucky. People say it did thunder twice, on the 2d of December; and that the late insurrection of the mountaineers of *Le-anchow* is a proof of the theory.

Postscript.—The accounts from *Formosa* continue to be unfavorable to his Majesty's government. The number of soldiers and officers killed, as stated on a preceding page, is probably much below the truth.

The unusually mild and warm weather which prevailed at the close of the last month, has been succeeded by several cold, cloudy, and rainy days. Ice was found this morning; the weather is fine and bracing, with a strong wind from the north.

THE

CHINESE REPOSITORY.

VOL. I.—JANUARY, 1833.—No. 9.

POPULATION OF THE CHINESE EMPIRE.

GEOGRAPHERS and historians, statesmen and political economists, have differed widely in their views of the population of the Chinese empire. With few exceptions, when they have written on this subject, they have been alike perplexed and perplexing,—affording very little satisfaction either to themselves or to others. “Of the bolder and more confident writers, some have gone to one extreme, and some to the other;” while “cool and impartial men” have taken a middle course. The tendency of all these various and contradictory accounts has been, to confound and embarrass, and unsettle the opinions of all. In this way it has become fashionable to doubt, to question, and to deny, without any reference to the evidence by which they are supported, all the accounts that have been published on the subject; and in short, to dismiss the consideration of the question by affirming, that nobody knows, or can know, “for certainty,” aught about the matter.

It is manifestly impossible to reconcile all the statements and opinions, which have been advanced on this topic; yet, as it is one of considerable interest, as well as of difficulty, we doubt not that there are many, who, like ourselves, are desirous

of knowing the simple facts of the case, and the foundation on which the various published accounts are based. In this investigation we must, ultimately, rest the decision of the question on Chinese authorities; because no foreigner knows, or has the means of knowing, by personal inspection, or by any calculations which he can make, what is the population of the empire. But as these published accounts, though usually referring to Chinese authorities, are so contradictory, it is necessary that we should bring them, or some of them, into review; examine them; trace them up, if we can, to their origin; and value them according to the amount of testimony by which they are supported.

We commence with the works of the abbé Grosier, which appeared in France about half a century ago, and a translation of them in London, in 1788. Concerning the population of China, he says:—

“One of those things which have been thought most incredible and contradictory by Europeans, is the prodigious population of China. Father Amiot has been at great pains to investigate this point, which hitherto has been examined with too little attention. It is evident from his calculations, that China contains at present two hundred millions of inhabitants. This enormous population may appear astonishing; but, when we have weighed the proofs, and followed the reasoning, which this learned missionary makes use of, we shall find that his account is by no means exaggerated. The lists and documents on which this interesting discussion is founded, are taken from a Chinese book, entitled *Ta Tsing y-toung Tche* [*Ta Tsing-yih-tung Che*].—*An account of what is essential to be known respecting China*. This work was composed and arranged by order of the present emperor Kienloug, and published in the eighth year of his reign.”

Amiot published his book about the year 1770. Grosier, in order “to justify the assertion of this learned missionary, and to free him from all suspicion of exaggeration,” found it necessary “to enter into details,” and to make sundry observations. In doing this he remarks, that the *Yih-tung Che* shows only

the number of those who are *taxable* in each province of the empire; and that these amounted to 28,516,488; and adds, that by the word taxable, *jin ting*, heads of families only are understood; while the word mouth, *kow*, is used for individuals. He then supposes that there are five individuals in each family; and with the addition of considerable numbers of civil and military officers, literati, &c.; by including the population of Fuhkeën, seven millions and odd, which on account of "haste or forgetfulness," Amiot omitted to mention, he raises the sum total to 157,301,755.

In order to complete the complement of two hundred millions, Amiot (according to our author) thinks he may be permitted to follow the suggestion of "a German professor named Paw," and gather them from the *robbers, troglodytes, wandering families, mendicant monks, eunuchs, slaves, blind females, and bonzesses*, who inhabit the Celestial empire. And lest there should yet be a deficiency, he adds the "inhabitants of those floating cities, who live in barks or on rafts, and seem to form a distinct nation in the middle of the empire." Such, according to Grosier and with his corrections, was Amiot's view of the population of China in 1743.

As the facts here adduced "may, perhaps, still leave some doubts, on the minds of our readers, of the possibility of making the inhabitants of China amount to two hundred millions," Grosier subjoins a "more complete enumeration," which was made in the twenty-seventh year of Keënlung. This estimate of the population was taken from the "Tribunal of lands," in Peking, and was received in France in 1779. It was written both in Chinese and French, having been translated into the latter, at Peking. According to this account, the empire contained 198,214,553 inhabitants, "men, women, and children." There is still a deficiency in the total number; but as twenty years had elapsed since the epoch of this numeration, and as it could

be proved by facts, that the population, for a long time past, had been progressively *increasing*, Grosier thought it safe to "presume" that the empire, at the time he wrote, contained two hundred millions of inhabitants.

But whence proceeds this increase of people in this "remote corner" of Asia? Is it owing to physical causes, or are these only second, and assisted by the influence of moral and political institutions? To this question Grosier supposed it difficult to give a precise answer; and advanced the following as the most apparent causes of this extraordinary population:—

1. The strict observance of filial duty throughout this vast nation, and the prerogatives of paternity, which make a son the most valuable property of a father.

2. The infamy attached to the memory of those who die without posterity.

3. The universal custom which makes the marriage of children the principal concern of fathers and mothers.

4. The honors bestowed by government on those widows who do not enter a second time into the state of marriage.

5. The frequent adoptions, which prevent families from becoming extinct.

6. The return of wealth to its original stock by the disinheriting of daughters.

7. The retirement of wives, which renders them more compliant towards their husbands, saves them from a number of accidents when big with child, and constrains them to employ themselves with the care of their children.

8. The marriage of soldiers.

9. The fixed state of taxes, which, being always laid upon land, never fall but indirectly upon the trader and merchant.

10. The small number of sailors and travelers.

11. The great number of people who reside in China only by intervals.

12. The profound peace which the empire enjoys.

13. The frugal and laborious manner in which the great live.

14. The little attention that is paid to the vain and ridiculous prejudice of not marrying below one's rank.

15. The ancient policy of giving distinction to men and not to families, by attaching nobility only to employments and talents, without suffering it to become hereditary.

16. The decency of the public manners, and a total ignorance of scandalous intrigues and gallantry.

We have been thus particular in noticing the opinions and statements of Grosier, chiefly because they have been so often referred to, and quoted by those who have written concerning China. But as we have not at hand, "An account of what is essential to be known respecting China," which "Chinese book is one of those which are to be found in the king's library at Paris," and as foreigners are not now privileged to take statistics "from the Tribunals" at Peking, it is not in our power to verify or disprove the accounts of Amiot and Grosier, by comparing them with their originals. We shall have occasion, however, in another part of this paper, to refer to these accounts, and to compare them with those which have been given by other writers; we shall also, before we dismiss the subject, allude to Grosier's remarks concerning the increase and amount of population in this country.

Sir George Staunton, in his account of the embassy of lord Macartney to China, in 1793, has given, "for the reader's information," a table of the population and extent of China Proper, "taken in round numbers from the statements of Chow ta-zhin." This officer, he says, was a man of business and precision, cautious in advancing facts, and proceeding generally upon official documents. The statement was taken from one of the public offices in the capital, and shows the amount of population according to the returns made from the provinces the preceding year. As the table is one of much importance, we will introduce it here; and with it, Grosier's account of the population of China, in the twenty-seventh year of Keënlung. Fungteën, in Grosier's account is often called *Leaoutung*, and is so written on most of the European maps. The population on each square mile, is taken from Barrow's work. We would here advertise the reader, that we have changed the orthography of the names of the provinces, and have employed that given in Morrison's Dictionary.

Names of the eighteen PROVINCES:	Population given by STAUNTON.	Population given by GROSIER.	Sq. miles in each Prov.	Eng. acres in each Province. sq.	Pop. on each mile.
Cheihle	38,000,000	15,222,940	58,949	37,727,360	644
Keängsoo Ganhwuy	32,000,000	23,161,409	92,961	59,495,040	344
Keängse		11,006,640			
Chêkeäng	21,000,000	15,429,690	39,150	25,056,000	536
Fuhkeên	15,000,000	8,063,671	53,480	34,227,200	280
Hoopih	14,000,000	8,080,603	144,770	92,652,800	187
Hoonan	13,000,000	8,829,320			
Honan	25,000,000	16,332,507	65,104	41,666,560	384
Shantung	24,000,000	25,180,734	65,104	41,666,560	368
Shanse	27,000,000	9,768,189	55,268	35,371,520	488
Shense	18,000,000	7,287,443	154,008	98,565,120	195
Kansuh	12,000,000	7,412,014			
Szechuen	27,000,000	2,782,976	166,800	106,752,000	162
Kwangtung	21,000,000	6,797,597	79,456	50,851,840	264
Kwangse	10,000,000	3,947,414	78,250	50,080,000	128
Yunnan	8,000,000	2,078,802	107,969	69,100,160	74
Kweichow	9,000,000	3,402,722	64,554	41,314,560	140
<i>Fung-tên</i>		668,852			
	333,000,000	198,214,553	1,297,999	830,719,360	257

“The extent of the provinces,” sir George goes on to remark, “is ascertained by astronomical observation, as well as by admeasurement; and they are found to contain upwards of twelve hundred thousand square miles, or to be above eight times the size of France. The number of individuals is regularly taken in each division of a district by a tithing-man, or every tenth master of a family. Those returns are collected by officers resident so near as to be capable of correcting any gross mistake; and all the returns are lodged in the great register at Peking. Though the general statement is strictly the result of those returns added to each other, which seem little liable to error, or, taken separately, to doubt; yet the amount of the whole is so prodigious as to stagger belief. Even in calculations altogether certain, but immense in their results, as the valuation of the enormous bulk, or distance of the fixed stars, it requires a mind conversant in such subjects, or at least,

habituated to such assertions, to remove all doubt concerning them. After every reasonable allowance, however, for occasional mistakes, and partial exaggerations in the returns of Chinese population, the ultimate result exhibits to the mind a grand and curious spectacle of so large a proportion of the whole human race, connected together in one great system of polity, submitting quietly, and through so considerable an extent of country, to one great sovereign; and uniform in their laws, their manners, and their language; but differing essentially in each of these respects, from every other portion of mankind; and neither desirous of communicating with, nor forming any designs against, the rest of the world."

Similar to these views are those of Macartney's private secretary. That none of the statements hitherto published are strictly true, Barrow is free to admit; but that the highest degree of populousness that has yet been assigned may be possible, and even probable, he is equally ready to contend. He acknowledges, at the same time, that, prepared as the embassy were, from all that they had seen and heard and read on the subject, for something very extraordinary, yet when the above statement was presented, "the amount appeared so enormous as to surpass credibility." He assures us, moreover, that they had always found the officer, who gave them the statement, a plain, unaffected, and honest man, who on no occasion had attempted to deceive or impose on them; they could not, therefore, consider it in any other light than as a document drawn up from authentic materials. Nevertheless, "its inaccuracy was obvious at a single glance, from the several sums being given in round millions." The fact that two of the provinces contain exactly the same amount of population, is another obvious proof of the inaccuracy of the statement given to the ambassador, which

has been suggested by some writers, and ought not to have been overlooked by Barrow. So if we should say of Austria and France, in 1828, that they contained, "in round numbers," 32 millions each; or of Spain and the United States of America, that they each contain, at the present time, 13 millions, "in round numbers,"—the inaccuracy of such statements would be obvious at a single glance. But notwithstanding these difficulties, Barrow undertakes to show, and does show satisfactorily we think, that there is no want of land to support the "assumed population" of three hundred and thirty-three millions. This being the case, he concludes that the population is not yet arrived at a level with the means which the country affords of subsistence.

M. Lavoisne quotes the statement of Grosier and Staunton; but he cannot admit that of the Abbé; and thinks it "hardly credible," that, in the course of thirty-two years, the population should have increased nearly 135 millions; he concludes, therefore, that the whole population of China Proper, and Chinese Tartary, may be estimated at three hundred millions.

Malte-Brun, though certainly a "cool and impartial" man, treats the writers on this subject rather cavalierly, and disposes of the question in few words, which we quote:—

"China might undoubtedly dispense with a great part of her army, which travelers tell us is innumerable. Some call it 1,462,590 others 1,800,000. We shall not attempt to contradict either of the statements. It is equally certain, according to the Chinese, that the imperial fleet consists exactly of 9999 ships. All this is sufficiently moderate for an empire which contains ["exactly"] 333 millions of inhabitants, as his excellency Tchou ta-tzin officially assured lord Macartney.

"But what degree of confidence can we place in these enormous statements, when we find that a statistical account compiled by command of the emperor Kienlong only half a century ago, made the number of peasants who were liable to the manorial tax amount only to twenty-five millions;

when we find old censuses, which for fifteen centuries make the population of China fluctuate only between forty-eight and sixty millions; and when, on comparing the tables of population of 1743, given by father Allerstein, with those of lord Macartney for the year 1793, an increase of three or four-fold is found to have taken place; when, in fine, we may see that each of these estimates labors under evident error, some of the numbers being literal repetitions of others, and other sums out of all proportion?

"Cool and impartial men rate the population of China, properly so called, at one hundred and fifty millions. The army, which may amount to 500,000 or 600,000 regular troops, and a militia of nomades of military habits, has nothing formidable but its numerical amount. Bad artillerymen, ignorant of the art of military evolutions, and what is worst of all, destitute of courage and the military spirit, the Chinese would probably yield as easily to a moderate European force, as they have formerly so often fallen under the invasions of the hords of central Asia."

We shall not attempt to contradict this cool and impartial account. The Chinese empire, including the tributary states, and those under its protection, according to the *Encyclopædia Americana*, on the basis of the *German Conversations-lexicon*, contains two hundred and forty-two millions of inhabitants; while China Proper has only one hundred and forty-six millions two hundred and eighty thousand, of whom two millions live on the water.—No references or authorities are given to support these assertions.

The writer of the article on China in the *Encyclopædia Britannica* tells his readers, 'the accounts of the population of this country have generally, been treated as *fabulous* by the western nations.' He deigns, however, to quote the statements of the abbé Grosier and sir George Staunton; but avers that the accounts on which these statments rest, *are found, when, investigated, to abound in inconsistencies which destroy their credit!* And he makes "Mr. Barrow, after balancing and comparing a variety of authorities, conclude, that the actual amount of the population of China is about

one hundred and forty-six millions." In his supplement, he adds many more remarks to the same effect.

A more recent account has found its way into the world from Berlin. It appears over the date of July 3d, 1830; and is signed Z; and was published in an English newspaper, "The Times," for July 23d, 1830. The writer states the number of departments into which each province is divided, and gives the names of the capitals, and total amount of the population of each. The province of Shense has 257,704 inhabitants; Kansuh 340,086; and Kwangtung, in its 13 departments, has the "enormous" population of 1,491,271 inhabitants, men, women, and children. All the other provinces are enumerated; and the writer then adds;

"Taking the new edition of the *Imperial Geography*, which was published in 1790, as our guide, it appears that the population of these 18 provinces amounts to 142,326,734 souls. But to these must be added 12,000,000 of inhabitants which, though subject to the sceptre of the Celestial empire, do not form an integral part of China; as well as its naval and military force, which comprises 906,000 men, and 7,552 officers; and its civil establishment, amounting to 9,611 servants. With these additions, the total population of the Chinese dominions, according to the census taken in the year we have mentioned, was 155,249,897. Now, when we look back on the increase which has taken place since the period of the conquest of China by the Mantchous, and find that the population has quadrupled itself in somewhat less than a century and a half, it is natural to conclude that it must have received no inconsiderable addition during the last 40 years; nay, there exists a proof of this conclusion in the increasing spirit of emigration among the Chinese, which appears to be encouraged by their government, instead of being discountenanced by prohibitions as it was formerly. Looking at this fact, with reference to colonization, it is not an extravagant anticipation to conceive the day may arise, when the free Chinese laborer shall occupy the station of the African or Indian slave."

There is appended to the report of the Anglo-Chinese College, for 1829, an abstract of the

general laws of China, containing statements which bear directly on our subject. The edition of the *Ta Tsing Hwuy-teën* from which the abstract was taken, was published in the 10th year of the reign of his late majesty Keäking. According to this work, the Board of Revenue takes cognizance of the amount of population. At the commencement of the reigning Mantchou dynasty, a census was taken in reference to a poll-tax, and a liability to service, of all males above sixteen, and under sixty years of age. The poll-tax was afterwards, by Kanghe, blended with the land-tax; and the poll-tax for ever interdicted. Under Yungching and Keënlung the census was taken, in order to know the amount of population throughout the whole empire, and in every given district. The objects of thus enumerating the people, were to aid the government in appropriating relief in times of famine and drought, and also to assist the police by having a list of all the persons in every family. After these remarks concerning the objects of the census, and others detailing the method of taking it, some statements are advanced to show the amount of population at different periods; these we will quote entire.

“ In section 141 [of the *Ta Tsing Hwuy-teën*], page 38, the emperor Keënlung states the population, in a proclamation addressed to the whole empire, calling upon all ranks and conditions of men to economize the gifts of heaven, food, &c., and by industry to increase their quantity; for observing the increase of population, since the period of the conquest, he looks forward with deep concern to the future, when the population shall have exceeded the means of subsistence. The land, he says, does not increase in quantity, although the people to be fed, increase so rapidly. He says, that in the 49th year of Kanghe, the population of the empire was 23,312,200 and odd. Last year, he adds, the amount made out, according to returns sent from all the provinces, was 307,467,200 and odd. Keënlung wrote in his 58th year, so that the census was taken the year before lord Macartney's embassy. This confirms the account given to his lordship; for the book before us was never intended for an European eye.

"The increase seems so enormous in a period of about eighty-two years that some error in the figures might be supposed. However, the emperor remarks, that the increase had been about fifteen-fold, which shows there was no such mistake; since fifteen-fold would make the amount three hundred and forty-five millions. This statement confirms Malthus' assertion, that population may double itself in twenty-five years; for this is nearly doubling it in twenty years.

"After the great destruction of human life during the war of the conquest, it appears, from the work before us, that there were large tracts of unoccupied land, the owners of which had been destroyed or dispersed. These lands were given, as a perpetual inheritance, to any who would undertake to cultivate them. And subsequently every encouragement was given to cultivate waste lands. Government even gave to the poor, cattle and implements of husbandry; and levied no tax for a number of years. Up to this very period, it is always a great point with the government of China to till the plains, and plant the hills, so as not to leave, as they say, one inch of uncultivated land throughout the empire. Large tracts of land are given to the resident military in Mantchou Tartary, and elsewhere, beyond the frontier of China Proper. The land tax is rated partly in money and partly in kind, according to the goodness of the land and the nature of the produce."

In the above extracts, as in one or two other instances, we have omitted the dates, as given according to the Christian era. We have done this to prevent confusion; for there exists, among some of the writers on this subject, slight discrepancies in dates; which might very easily occur in adjusting the Chinese dates, to those of the Christian era. Besides their cycle of sixty years, the Chinese have another method of fixing their dates; during each emperor's reign, they date from the year he ascended the throne. The 12th year of *Taoukwang* commenced on the 2d of February, 1832, and will end on the 19th of February, 1833. The late *Keüking* reigned 25 years; *Keënlung*, 60 years; *Yungching*, 13 years; *Kanghe*, 61 years; and *Shunche*, the first Mantchou-Chinese monarch of the Ta Tsing dynasty, reigned 18 years. The reigns of these six emperors carry us back, from the current year of our era to 1644. We have introduced these remarks here, for the sake

of any of our readers, who may not happen to have a list of the emperors of the reigning dynasty at hand. But this by the bye.

The last account which we have to notice, at this time, of those which have been published by foreigners, is contained in "A Companion to the Anglo-Chinese Kalendar, for the year of our Lord, 1832." This work gives a statement of the population of China and its colonies according to a census, which was taken in the 17th year of Keäking. The population of the eighteen provinces, of Formosa, Barkoul, and Oroumtsi, of Leaoutung, of Kirin, Hihlung keäng, Tsing hae or Koko nor, of foreign tribes under Kansuh and Szechuen, of Tibetan colonies, of Ele and its dependencies, of Turfan, Lobnor, and the Russian borders, are all included in this statement, and present a total of 361,693,879 individuals, exclusive of 188,326 families. It is added in the work from which we have taken these facts, that

"This statement, contained in the latest edition of the Ta Tsing Hwuy-teën, or Collection of Statutes of the Ta Tsing dynasty, will probably serve to set at rest the numerous speculations concerning the real amount of population in China. We know from several authorities, that in China, the people are in the habit of diminishing rather than increasing their numbers, in their reports to the government. And it is unreasonable to suppose, that in a work published by the government, not for the information of curious inquirers, but for the use of its own officers, the numbers so reported by the people should be more than doubled, as the statements of some European speculators would require us to believe."

We turn now to Chinese authorities; but will go no further back than to the time of the first emperor of the Ming dynasty. According to a census, which was taken in the 26th year of Hungwoo's reign, A. D. 1393, the number of families was 16,052,860; and the number of individuals 60,545,811. This account is contained in a work entitled Yu chuen tsze che tung keën Ming ke kang

muh, which, in four volumes, is a continuation of the *Kang-keën E Che*. The whole work is in thirty-five volumes, and contains a compendious history of the Chinese, from their earliest times to the close of the last dynasty.

It was not until after protracted and destructive wars, that the Ta Tsing dynasty gained complete dominion over the extensive territories that now constitute their wide empire. We have before us an account of the population at the commencement of the reigning dynasty; it is contained in a geographical account of the empire; but it is incomplete, and from the circumstances of the case it could not be otherwise. The proud inhabitants of the celestial empire did not willingly, nor at once, submit to the sceptre of "the Great Pure dynasty." Death, in some cases, was preferred to the tonsure. It was a long time before the whole population of the ancient provinces were submissive. The province of Canton affords an instance of this fact. It was after the commencement of the last century, and towards the close of Kanghe's reign, that the emperor's son-in-law, Ping-nam wang, "the Subjugator of the south," reduced the whole province to his father's sway.—Until the whole country was subdued, a complete census was impossible.

We pass on now to the 50th year of Kanghe, at which time the empire enjoyed general peace and prosperity, and the tide of population, we may suppose, began to rise at a pretty uniform, and, if the work to which we are about to refer be true, at a very rapid rate. This work is entitled *Suh-sew Ta Tsing Hwuy-teën Taoukwang woo-tsze heä yu che*. It is a new edition of the statutes of the Ta Tsing dynasty, published in the 8th year of Taoukwang, by imperial authority. The work is in 48 volumes, octavo; and was printed at Peking. It contains two statements of the population of the empire; the first according to a

census taken in the 50th year of Kanghe; and the second according to one taken in the 17th year of Keäking. Both of these statements we will here bring into view, and with them another, contained in a little duodecimo edition of the Ta Tsing Hwuy-teën in sixteen volumes,—which shows the population in the 18th year of Keënlung.

Names of the eighteen PROVINCES.	Population in the 50th year of KANGHE.	Population in the 17th year of KEÄKING.	Fam. in the 18th year of KEENLUNG.	Individuals in the 18th year of KEENLUNG.
Chihle	3,274,870	27,990,871	3,071,975	9,374,217
Shantung	2,278,595	28,958,764	4,539,957	12,769,872
Shanse	1,727,144	14,004,210	1,779,247	5,162,351
Honan	3,094,150	23,037,171	3,029,528	7,114,346
Keängsoo	2,656,465 *	37,843,501	5,478,287	12,618,967
Gauhwy	1,357,829	34,168,059	4,136,125	12,435,361
Keängse	2,172,587	23,046,999	2,185,195	5,055,251
Fuhkeën	706,311	14,777,410	1,127,746	4,710,399
Chêkeäng	2,710,312	26,256,784	3,043,786	8,662,808
Hoopih	433,943	27,370,098	1,756,426	4,568,860
Hoqnan	335,034	18,652,507	1,664,721	4,336,332
Shense	2,150,696	10,207,256	1,033,177	3,851,043
Kansuh	368,525	15,193,125	1,002,518	2,133,222
Szechuen	3,802,689	21,435,678	750,785	1,368,496
Kwangtung	1,142,747	19,174,030	1,241,940	3,969,248
Kwangse	210,674	7,313,895	943,020	1,975,619
Yunnan	145,414	5,561,320	371,284	1,003,065
Kweichow	37,731	5,288,219	629,835	1,718,848
	28,605,716	360,279,897	37,785,552	102,828,318

To the number of families in the 18th year of Keënlung, 59,212 belonging to Shingking or Leaou-tung must be added; and to the number of individuals, 221,742; which gives a total of 37,844,764 families, and 103,050,060 individuals. There is a degree of indefiniteness in this account, as given in the work before us, which renders it to our minds very unsatisfactory. The term *jinting* is used, but evidently in a sense different from that given by Grosier; for instance, Canton

* This number includes the inhabitants of Soochow. Keängsoo and Gauhwy were formerly united, and called *Keängnan*.

province "has jin-ting 1,241,940 *hoo* (or families), and 3,969,248 *kow*" (or individuals). The total number of individuals is very small in comparison with the number of families; and should we allow but four individuals to a family, it would raise the total number to 151,379,056.

The other account is plain and definite, to a degree far surpassing anything else with which we meet in this investigation. In the census for the 50th year of Kanghe, we have omitted the inhabitants of Fungteën and Keihlin (116,475), and also several thousands of soldiers in the provinces. The census for the 17th year of Keäking includes, besides the inhabitants of the eighteen provinces, those of Shingking, Keihlin or Kirin, Turfan, and Lobnor, and natives of Formosa, in all 1,413,982; also 188,326 families on the west and the north of China proper. Allowing four individuals to each of these families and it gives with the other numbers, a total of *three hundred and sixty-two millions, four hundred and forty-seven thousand, one hundred and eighty-three*.

We will remark here in passing, that the *Suh-sew Ta Tsing Hwuy-teën* is the same work (only a later edition) as that referred to in the *Companion to the Anglo-Chinese Kalendar*, noticed on a preceding page (357). The statistics contained in it are the data on which government acts in levying taxes, &c. It contains the regulations and laws of the six 'Tribunals in Peking. And it is in that part of the work which refers to the Tribunal of Revenue, that the statements given above are to be found. All the people (*fan min*) are included in the census. Males are denoted by *ting*, and females by *kow*, as also are those males who have not completed their 16th year. Thus we have in the *ting kow* the whole population of the empire, except, we believe, those who are "employed in the civil and military service" of the emperor.

We will pause here, and collate the principal statements which have now been brought into review, and will present them in chronological order, giving the dates according to the Christian era, and annexing the authority for each account. The several statements show the number of individuals.

	POPULATION.	A. D.	AUTHORITIES.
1st,	60,545,811	1393	Kang-keén E-che.
2d,	23,312,200	1710	Anglo-Chinese Col. Report.
3d,	23,605,716	1711	Ta Tsing Hwuy-teén, New edi.
4th,	157,301,755	1743	Amiot.
5th,	103,050,060	1753	Ta Tsing Hwuy-teén, 12mo edi.
6th,	198,214,553	1762	Grosier.
7th,	155,249,897	1790	Z. of Berlin.
8th,	307,467,200	1792	Anglo-Chinese Col. Report.
9th,	333,000,000	1792	Sir George Staunton.
10th,	361,693,879	1812	Ta Tsing Hwuy-teén, New edi.

These are all the statements, based on *original* accounts, which we have found in the preceding investigation. Of the *first* in order of time, we have nothing more to say. When the number of Chinese scholars shall be multiplied, and the antiquities of this nation are well understood by foreigners; when "fables" are exchanged for facts; the western nations will doubtless gain new information concerning the population of China, through the successive dynasties, from her earliest to the present times. Surely we ought not to complain of their statements, when the difficulty arises from our own ignorance.

The *second* statement is moderate, and is probably far below the actual state of the case. The *third* statement shows a large increase for a single year. But the fact that parts of the country, including whole clans and tribes, were not subdued until about this time, affords strong presumptive reasons for supposing a rapid increase. The interdiction of the capitation tax, which now took place, would most surely produce an increase in the number of *enrolled* subjects.

The increase as exhibited by the *fourth* statement is very great; and we may well suppose that the causes for such an increase, which we have already noticed, especially the change in taxation, continued to operate, until the whole population was registered. We should bear in mind also the *manner* in which that statement was obtained. This last consideration will help to remove a difficulty in regard to the *fifth* statement; which according to the book, shows a decrease in the population. Amiot, according to Grosier, by allowing five individuals to each family, and with the aid of a few officers, civil and military, literati, &c., raised the amount of population to the number which we have given above. So allowing *five* individuals to each family as given in the duodecimo edition of the 'Ta Tsing Hwuy-teën, we have instead of 103,050,060 a total of 189,223,820. Whether this be the fact or not, the method holds as good in the one case as in the other.

Grosier's account, which is the *sixth* statement in the order we have adopted, does not appear inconsistent with these views of the subject. It is the first which gives, or is supposed to give, the whole population; and this it does in a literal translation of the Chinese, thus—Chihle "*province great little men women in all one thousand five hundred twenty-two ten thousands two thousand nine hundred forty*,"—15,222,940; and so of all the other provinces. This account is consistent with itself, and appears to be authentic.

But not so the *seventh* statement. Shense and Kansuh have, when united, a population of 597,790 souls, according to Mr. Z. Now if Barrow is right in allowing to these two provinces 154,008 square miles, then there exists the amazingly dense population of about four individuals, men, women, and children, to each square mile. "This phenomenon," perhaps, suggested to Z., at Berlin, the *new idea* that the Chinese government encourages emigration

instead of hindering it, as formerly by prohibitions; it may also have supplied him with the *notorious fact*, that "the English government in India have notoriously shown extreme anxiety to induce him (the free Chinese laborer) to settle in their eastern possessions."

In the three remaining statements, there is only one point on which we will now remark, and that is the difference between the two numbers which have been given for the year 1792. Which of the two statements is correct, or whether they both may not be wrong, we have not at present, the means of determining. The account given to Macartney by the Chinese officer was in round numbers, and was not claimed to be minutely accurate, and under such circumstances would not be very likely in the hands of a Chinese statesmen to suffer diminution. It ought, moreover, before we impeach either of the statements, to be well ascertained that they were both made out from returns, which were given for the *same* year.

Several topics of inquiry and remark here occur to our own minds, which are deserving of consideration. We have endeavored to state all the circumstances of the case fairly; and we shall be both glad and grateful for any facts or suggestions,—either from friends or strangers,—which may aid in the further discussion of this subject *

* To be continued.

INTERCOURSE OF THE CHINESE WITH FOREIGN NATIONS.

AFTER the passage round the cape of Good Hope was discovered, the Portuguese were the first of the western nations, who found their way to the shores of China. They were soon followed by the Dutch, the French, the Spanish, the Danes and the Swedes, the English, and last by the Americans. Concerning the intercourse of the Arabians, the Egyptians, and the Romans (so far as any such intercourse ever existed) with "the celestial empire," it is not very likely that much information will ever be obtained. Not so, however, in regard to the nations above named. The history of their intercourse with the Chinese, ought not, and we think it will not be forgotten. That intercourse has, from its very commencement, presented some very remarkable features, which could they be faithfully portrayed, would afford much valuable instruction. The "Contribution to an historical sketch of the Portuguese settlements in China," which has recently been published, is a good specimen of what may be done. That unostentatious little book, though designed by its author for only a few "friends and acquaintances," contains a great variety of historical matter, some of which we propose soon to transfer to the pages of the Repository.

As an introduction to a review of that work, we will here present in chronological order, a few facts, which we have collected from various sources, and which will serve in some measure to show what intercourse the Chinese have had with other nations, in former times. We cannot vouch for the accuracy of the dates; if they are not correct in some instances, they are probably near the truth;

and the facts, though found in foreign books, are most of them, as the reader will perceive, translations from Chinese authors.

In the time of Hwang-te, a foreigner came from the south riding on a white stag. Subsequently islanders brought *as tribute*, flowered garments. And from the east, the Yuë-gow, whose hair was cut short, and whose bodies were decorated, brought cases made of fish-skins, sharp swords, and shields. It was about this time that the Chinese "conquered the land of demons" on the north.

During the Chow dynasty, the Chinese had intercourse with eight barbarous nations of Teenchuh (India). In the time of the western Han dynasty, persons came from Cantoo, Loo-hwang-che, and other nations in the south. The nearest was about ten days' journey, and the most remote about five months. Their territories were large and very populous, and they possessed many rare commodities. The emperor Wooto sent able ambassadors to the different mercantile countries, where they obtained bright pearls, gems, and curious stones, yellow gold, and various other commodities. They were well entertained wherever they went. And from that time the above named articles continued to flow into China. The Japanese are said to have sent tribute to China about this time. Ma-yuen erected brass stakes to prevent the ingress of southern and western foreigners.

In the time of Hwan-te, Teenchuh, and Ta-tsin (India and Egypt or Arabia), and other nations came by the southern sea with tribute; and from this time trade with foreigners was carried on at Canton. During the Suy dynasty, ambassadors were sent to the surrounding nations.

Frequent embassies were sent from Japan to China, and vice versâ; and in one instance when an embassy was sent from China, it is said, that

the ambassador and king *wrangled about ceremonies*, which led to the ambassador's return, without having communicated the orders of his court.

The island of Hainan was first occupied by ^{A. D.} ^{654.} the order of the second emperor of the Tang dynasty. A regular market was first opened at Canton, and an officer was appointed to ^{700.} receive a part of the profits for government.

The largest ships that came were called "single masted ships," and contained 200,000 catties. The second size were called "cow-headed ships," and were about one third as large as the others.— The emperor required them to bring camphor, and other fragrant substances. A tootuk attempted, by mistake, to seize some goods belonging to a foreign vessel, and the captain in a rage killed him. Trading vessels began to introduce extraordinary and rare manufactures.

^{795.} The chief officer in command at Canton, wrote to court, stating, that the trading vessels had all deserted the port, and had repaired to Cochinchina; and he added, that he wished to send a sort of consul thither. Some of the ministers were in favor of the measure; but the imperial will was determined in opposition to it, by the opinion of one who argued to this effect;— "Multitudes of trading vessels have heretofore flocked to Canton; if they have all at once deserted it and repaired to Cochinchina, it must have been either from extortions being insupportable, or from some failure in affording proper inducements. When a gem spoils in the case, who is to blame but the keeper of it? If the pearl be fled to other regions, how is it to be propelled back again? The Shoo King says, "Do not prize too much strange commodities, and persons will come from ^{879.} remote parts." The Cochinchinese made war

upon Canton by land; and a public spirited man obtained celebrity for building large vessels to bring grain from Fuhkeën.

The officer appointed to remain at Canton (as a commissioner of customs), first exacted ^{A. D.} two candareens duty—(but on what amount ^{1200.} of goods it does not appear). Foreigners resident at Canton, received from the Chinese, metals, silks, &c., and in return they gave rhinoceros' horns, elephant's teeth, coral, pearls, gems, crystals, foreign cloth, pepper, red wood, and drugs. A board of revenue was established at the capital; foreigners were ordered to bring their goods to Canton, and no commerce was allowed, but what was carried on by government capital. Afterwards all kinds of merchandize, except curious gems, were allowed to be sold in the market; and a *tenth* of the value required as *duty*, which amounted to several times ten thousand taels, and was distributed for the support of district magistrates. Foreign commerce was interrupted for a time; but ^{1292.} afterwards, "regularly restored."

The first emperor of the Yuen dynasty ^{1300.} sent a trusty ambassador to cultivate an amicable intercourse with Japan. In his letter he said, —"*The sages considered the whole world as one family, but if all the members have not a friendly intercourse, how can it be said that the principle of one family is maintained.*" The king of Corea sent an envoy with the Chinese ambassador, but they both returned without effecting a landing. The same emperor and his successor sent ten different times, to Japan. The second, third, fourth, and fifth times simple envoys were sent; the sixth, seventh, eighth, and ninth, military expeditions were dispatched, which were intended to conquer Japan; all these were unsuccessful. The last that was sent was a priest of Budha; but he never reached his destination.

About this time, there was an inferior officer at Canton, who, observing the large number of vessels that came thither, could not restrain his avarice; he made a statement to his superiors and

complained, that good and bad goods were blended together, and begged that for the time to come they might be separated. There was failure in the amount of duties one year, and an investigation was instituted, and a stop put to the evil.

The provinces of Chekeäng, Fuhkeën, and Kwangtung, were appointed for the reception of foreign ships; and an additional officer was appointed at Tseuenchow (Chinchew). The foreign merchants wished to go to other ports, by giving a bond that they had no prohibited articles, they were allowed to do so, and arms were given them for their defence. Not long after these regulations were adopted, an edict was published, stating that foreigners offered many useless things for sale; naming the articles that might be bought with money; and adding, that if foreigners should be defrauded, the Chinese would be punished. The ^{A. D.} foreign trade was stopped at Canton, but open-
1366. ed again the next year.

1370. Early in the Ming dynasty an ambassador was sent to Japan, who having, after much difficulty, gained access to the king, spake thus—“I am not an envoy from the Mungkoo Tartars, but from the sacred son of heaven, the holy and divine emperor; if you choose to rebel against him, and disbelieve me, you may first kill me to prevent the subsequent calamity that will overtake you; but the army of my sovereign is *heaven's* army, of which there is not one man, but is able to withstand a hundred enemies; the ships of my sovereign are able singly to fight a hundred Mungkoo armed vessels. Where the decree of heaven is, what human power is there that can oppose it?”—After this speech the king treated him kindly.

Hungwoo sent a priest of Budha to deliver an edict to the Japanese; the object of which was, “to *command* the nation to venerate Budha.” The priest received very full instructions from the emperor, as to the subjects on which he should

insist, the first was the ancient royal law of "universal and equal benevolence to all, whether remote or near at hand." This priest was a man in high reputation, and is said to have fulfilled his task with intrepidity and success.

It was decreed by the Chinese, that foreign nations should bring tribute every three ^{A. D.} years. The regulations at Canton were made ^{1400.} extremely strict. One hundred and twenty houses were built for the accommodation of foreigners. Ships bringing tribute were required to land their goods, and to wait till the harvest was over.—An ambassador was sent to Japan to purchase rarities; he sailed from Ningpo. At first the ^{1420.} Japanese treated him with civility, but afterwards very rudely, and he was obliged to flee for safety; which he was enabled to effect by means of a woman, who piloted him out to sea, and he returned unhurt. Subsequently other embassies were sent; chiefly with a view to remonstrate against the conduct of the Japanese pirates, who infested the coast of China.

About the middle of the Ming dynasty, the Portuguese borrowed the use of Haou-king-^{1550.}gaou (Macao), which is situated in the midst of dashing waves, where immense fish rise up and plunge again into the deep; the clouds hover over it, and the prospect is really beautiful. They passed over the ocean myriads of miles in a wonderful manner, and small and great ranged themselves under the renovating influence of the glorious sun of the celestial empire.

During the reign of Chingti, foreigners from the west called Fä-lan-ke (the French), who said they had tribute, abruptly entered the Bogue, and by their tremendously loud guns shook the place far and near. This was reported at court, and an order returned, to drive them away immediately, and stop the trade. At about this time also, the Hollanders (Ho-lan-kwö jin), who in ancient times

inhabited a wild territory, and had no intercourse with China, came to Macao in two or three large ships. Their clothes and their hair were red; their bodies tall; they had blue eyes, sunk deep in the head. Their feet were one cubit and two tenths long; and they frightened the people by their strange appearance. They brought tribute."

In a similar manner the character of the other nations, that have visited China, is described; but a more authentic record is needed. [*For the above, see the Indo-Chinese Gleaner, Morrison's View of China, and Notices of China.*]

MISCELLANIES.

JULIAN.—Flavius Claudius Julianus, the Roman emperor, called Julian the Apostate, is one of the most extraordinary characters recorded in history. Educated as a Christian till about twenty years of age; from that time till thirty he was secretly a pagan idolater; and for two years upon the throne of the Roman empire, a determined enemy of Christianity. At the early age of thirty-two, he fell in battle, fighting against the Persians; A. D. 363.

Julian is extolled to the skies as a philosopher, by the modern sceptics and infidels of Europe; who were as much as he apostates; and hence probably, they had a fellow-feeling for him; and in praising Julian, notwithstanding his apostacy, his ten years' dissimulation, and his subsequent extravagant superstition, at the same time defend and praise themselves. All that the pagan sophists, who gloried in having recovered such an exalted personage as the emperor, have written in praise of their convert and pupil, is greedily swallowed; whereas anything written to his dispraise is qualified or disbelieved. Christian historians have written of Julian with pity and with indignation. That he was deserving of pity as a young man of good talents, but of a weak judgment, great pride and vanity, cannot be denied; and at the same time, his dissimulation for one third of his life, his hostility to the one living and true God, and his contempt and persecution of the followers of Jesus, must on every principle of common sense be condemned.

Julian's case had many mitigating circumstances. He was deeply injured by his kindred, who professed Christianity; and he was eventually surrounded by pagan philosophers. People may talk of ancient pagans as they please; but we, who have long lived among modern pagans, are very suspicious of their veracity. Professed Christians injured Julian, and he took refuge among pagan zealots. There is no evidence that he ever from choice embraced Christianity; and what is the use of a forced profession? Of no use, we answer; but it is rather an evil. Julian was sent *from* those who should have taken an interest in his education, and in the formation of his principles, to the charge of those who, in all probability, cared little about him, so that their own ends were answered.

Now we fear that something very similar is the case with many a young man, who is sent *abroad* to make his fortune. Of his going abroad in quest of an honorable subsistence, we do not complain. But often his previous training and his subsequent society; just like poor Julian's, are more fitted to make him a pagan than a Christian. We could exemplify these remarks in detail, but we desist.

The weakness of the emperor's judgment we infer from his credulous and ultra belief of all the nonsense of Greek and Roman mythology, while he rejected as incredible, the religion of the Bible. And in this we think the *imperial apostate* much resembles the philosophical apostates of modern times. They have been men of weak, vacillating judgment, notwithstanding the elegant learning of some, and the metaphysical acuteness of others. Gibbon, for example, first most solemnly abjured Protestantism for Popery; then recanted, and joined a Calvinistic church; and next, by his constant perusal of pagan writers, he secretly relinquished Christianity altogether; became the apologist of polytheistic fooleries; and the insidious slanderer of true religion. His well known saying, that the vulgar consider all religions as equally true, and the philosophers think them equally false, amounts to *blank atheism*. For the belief of a God, who is neither to be feared nor loved, adored nor obeyed; from whom no help is to be expected; who is neither to be praised nor supplicated; is equal, so far as utility is concerned, to believing that *there is no God*.

Where is the sound sense of a man who will not believe his own existence, unless he can prove it by a syllogism; or, who prefers the consolations of a godless, ever-changing, ever-doubting, visionary philosophy, emanating from the reasonings of weak-headed men; to the consolations which are in Christ, attested by historical and supernatural facts, contained in genuine Scriptures, which reveal the character, perfections, and will of our almighty Creator and Judge, and the future destinies of the righteous and wicked, through eternity? Where is the good sense of the man who would prefer the silly, puerile,

pagan jokes of Hume the apostate, on the approach of death, to the solemn remarks and Christian hopes of the philosopher Locke, at the same awful period? Virtuous sceptics, we think, show a very weak judgment; but vicious ones rank still lower. To believe that "murderers of fathers and murderers of mothers; haters of God;" the malicious and licentious; the enemies of Christ, and the patrons of vice, have nothing to fear; whilst the obedient servants of the Almighty, and the benefactors of mankind have nothing to hope for, appears to indicate a perversity of judgment, and a degree of credulity, that ought to make a rational being ashamed of himself. We know that many of the concealed Christian apostates of the present day secretly smile with self-complacency, supposing themselves to be the wise ones of the age; while they regard the devout worshippers of Jehovah, the obedient followers of the Messiah, as simple, weak-headed, and, as they say in pity, "well-meaning people," whom it would not be quite right to shock with their philosophical discoveries. We deeply lament that such feelings should ever exist, and sincerely wish that all who cherish them may see their error ere it be too late. "*The fear of the Lord, that is wisdom; and to depart from evil, that is understanding.*"

Gibbon gives the dying speech of Julian; and when the elegant historian wrote it out, he remarked, that certainly it must have been composed beforehand, by the philosophic emperor, who professed a constant intercourse with Mars and Jupiter, &c. Now in our humble opinion, this fine speech for a polytheistic idolater was composed after the young man's death, by one of those historical speechmakers so common in the talking days of Greece and Rome.

Pagan and Christian writers concur in a far different testimony, viz., that poor Julian, when mortally wounded, received into his hand the flowing blood from his own body and threw it up in the air, saying, "O thou Galilean, thou hast conquered me." Others say, he threw it in the face of the sun, because his rays favored the Persians in battle. Now these are both credible, because Julian issued imperial edicts, requiring that Christ (our blessed Savior) should be called the Galilean God, and his followers Galileans, and not Christians. On the other hand, during his lifetime, he, like some modern Christians and pagans, was angry with his deities, because they did not requite according to his wishes, his sacrifices and prayers.

According to Lardner, a very dispassionate writer, these are the probable facts; but Gibbon unwilling to "stain" his page with such a fact concerning his hero, omits the whole in his text; and saves himself from the charge of misrepresentation, (for Gibbon was never ignorant,) by simply saying, in a note, "The calumnies of Gregory, and the legends of more ancient saints, may now be silently despised."

THE HAPPINESS of a future state.—The following letters from our correspondent and his friend, are rather curious, as well as interesting. They would carry us at once into the dark world of Chinese metaphysics, and lead us to inquiries upon which we are not yet prepared to enter. We are glad, however, to hear any interrogations on this subject, and to place on our pages any facts or opinions that may aid in future investigations. Very many of the Chinese seem to have no idea at all of *another world*, properly so called. *This* is the only world of which they have any knowledge. They speak of a future state of being; but it is in this world. They often talk of three distinct states of being, a past, the present, and a future one. Hence the good lady, who is wedded to an unfortunate husband, consoles him in times of calamity and distress, by bringing against him accusations of evil deeds done in a previous state of being; and hence too the common saying among the Chinese, that “those who have been mandarins for one generation, will be beggars for the next ten,” as a punishment for their oppressions and injustice during the present state.

Though we must postpone the consideration of this subject, yet we purpose to resume it ere long. We will here introduce both of the letters; and remark, that we have not as yet, “any correspondent in Japan.”

To the Editor of the Chinese Repository.

SIR,—Having observed in No. 8 of the Repository some paragraphs which tend to answer the questions proposed in the accompanying letter, I am induced to send it to you for publication, if you please, and to say you will oblige me as well as my friend, by more direct answers to his inquiries. I think your opinion of the Confucian philosophers is that they anticipate *no future state of existence at all*; and of course never speak about that in which its happiness will consist. But then there are the other Chinese sects—the Budhists, and Paouists, and perhaps, to these may be added, the popular belief loosely floating in the imagination of the vulgar, who are of no sect.

Your paper on the village tyrant's dream, shows that the very phrase a “future state,” has not usually the same meaning in China, which it has in Christendom. In China, I perceive it generally, if not always has a reference to the *metempsychosis*—or the return of souls to this world. In which case the happiness anticipated, consists in being human creatures instead of brutes; in being men instead of women; in being rich, in holding high offices in the state, in general prosperity, &c., instead of the reverse of these.

The Chinese Budhists, I believe, wish not hereafter to be born at all into this troublesome world; they hope for a super-human state. But the happiness of super-humanists is attained by few, and that not till after many transmigrations of the soul into and

out of this sad world. When the Budhists shall be so happy as to cease to be human beings any more, they anticipate, as the highest possible happiness, that divine state which, in your Repository, you call "*nikility*."—Now if it be true that people's anticipations of future happiness indicate the present character of their minds; then, the Budhists might be supposed to be a lazy, inactive, "*do-nothing*" sect; and the Confucianists, who expect no happiness, nor fear any misery after death, would be low principled, worldly minded, beastly or ambitious, as their turn of mind happened to be for sensual indulgence or worldly honors. Or perhaps sometimes, in extraordinary characters, the low brute, and the proud demon would both be conspicuous. Is such the fact? If so, then my friend's theory seems to be good.—But I am anticipating your remarks and information, which I hope this previous delivery of my own opinion will not hinder.

Your's, X.

P. S. If you have any correspondent in Japan, pray write and ask him what the fact is about their *right hands*. If the *left hand* be the place of honor, I should not wonder that they [the Japanese] are *discovered* to be a left-handed race!

[We subjoin the letter which accompanied the above from our correspondent. It is dated ———, February 7th, 1832.]

My dear Sir,—Knowing the friendly intimacy which has long subsisted between you and ———, I have ventured to request you to trouble him with a few inquiries, upon which his researches have qualified him in a peculiar manner to give information. The question which I wish solved is this. In what do the Chinese mythologists and philosophers consider the happiness of a future state to consist?

I feel convinced that the importance of this question will be deemed both by yourself and him a sufficient excuse for the trouble it may occasion; lest however this importance should not immediately strike you, I will subjoin the object which I have in view in proposing it. It is to ascertain the state of mental cultivation, and of moral purity, which this singular nation has attained; and likewise to decide a point of no small interest to our philologists. Can anything, for example, show the progress of mental cultivation among the Greeks, more strongly than the contrast between the warlike conceptions of the employments of departed spirits in Homer, and the sublimely philosophical speculations of Plato, on the same subject? Can anything show more plainly the laxity of morals of the eastern nations, than the sensuality of the Mohammedan religion? And where can we obtain stronger evidence of the common origin of the various Celtic nations, than in the close resemblance, amounting almost to identity, which prevails in their *myths* and ancient systems of theology?

I am afraid you will hardly preserve your gravity when I tell you that I am likewise requested, and that in the most importunate manner by a distinguished philologist, to endeavor to obtain from the same source, information as to the fact whether the nations of Japan use their right hands with as superior a facility to their left, as is found to be the case among the other nations of the globe, I believe without a single exception.

I am, &c.

THE GOSPEL ECHO.—*The following lines were found in a pew in the church of Kirkbean, the 17th of September ———, supposed to have been written by a lady.*

True faith producing love to God and man,—
Say, Echo, is not this the Gospel plan?
Echo—the Gospel plan.

Must I my faith in Jesus constant show,
By doing good to all, both friend and foe?
Echo—Both friend and foe.

When men combine to hate and treat me ill,
Must I return them good, and love them still?
Echo—And love them still.

If they my failings carelessly reveal,
Must I *their* faults as carefully conceal?
Echo—As carefully conceal.

But if my name and character they tear,
And cruel malice too, too plain appear;
And when I sorrow and affliction know,
They love to add unto my cup of woe;—
Say Echo, say,—In such peculiar case,
Must I continue still to love and bless?
Echo—Still to love and bless.

Why, Echo! How is this! thou 'rt sure a dove!
Thy voice will leave me nothing else but love.
Echo—Nothing else but love.

Amen, with all my heart, then—Be it so.
And now to practice I'll directly go.
Echo—Directly go.

This path be mine, and let who will reject,
My gracious God me surely will protect.
Echo—Surely will protect.

Henceforth on Him I'll cast my every care;
And friends and foes—embrace them all in prayer,
Echo—Embrace them all in prayer!

RELIGIOUS INTELLIGENCE.

MALACCA.—The Rev. Samuel Dyer of Penang is, we hear, about to remove to Malacca, and is to be connected with the Anglo-Chinese College, During his residence in Penang, Mr. Dyer has been engaged in constructing *metallic movable types* of the Chinese character. His labors seem likely to be crowned with ample success; a small font has already been completed; and a larger one, to consist of at least 14,000 characters in *variety*, is now preparing.

We have before us a specimen of the New Testament, which was printed with Mr. Dyer's metallic types; it is beautiful, and will not suffer in comparison with the best style of block printing, which we have ever seen done by the Chinese. Rapidity in execution will be one of the most prominent advantages of this method of printing. But we will not now proceed to remark concerning these types, because we expect, in the course of a few months, to obtain from Mr. Dyer himself, a complete account of this subject.

Our last dates from Malacca are to the first of Nov. The college and the several schools continue to enjoy prosperity. More laborers are needed, to

preach the word, to teach from house to house, to distribute the Holy Scriptures, and to instruct in schools. It pains our hearts to reflect, that among the many thousands of Chinese south of us, accessible to the Christian teacher, and able to read the glorious gospel of God, there are so few laborers. Mr. Medhurst at Batavia, Mr. Dyer at Penang, Mr. Tomlin at Malacca, and Mr. Abeel in Siam, are the only preachers for the Chinese scattered through an extensive field, now all white for the harvest.

Though the Bible has been translated into Chinese, and two complete editions have been printed; though excellent tracts have been written and printed, and with the Scriptures widely circulated, and some of them read by the monarch on the throne and by thousands of his subjects; still it is the day of small things. The work to be accomplished is vast; the difficulties to be encountered, and to be overcome, or removed, are numerous; while the laborers are few, and are compassed with many infirmities. But—thanks be to God for the blessed assurance,—the race is not to the swift, nor the battle to the strong. *Not by might, nor by power, but by my Spirit, saith the Lord.*

CHINA.—In the second number of volume XXVIIIth, of the *Missionary Herald*,—for Feb. 1832, published in Boston,—there is an article from the “*Gazetta di Venezia*,” which contains a letter from Monsignor Jacobo Suigi Fontana, bishop and vicar apostolic of Szechuen (Szechuen), in China. The letter is dated Sept. 2d, 1829. It found its way from Italy to England; thence to America, and back again to China in the autumn of 1832; having been three years in performing the circuit.

Monsignor J. S. Fontana reached Szechuen in 1812. In 1815, the late emperor Keäking encouraged a persecution against the Christians. The bishop's predecessor, Monsignor Dufresse, bishop of “Trabacca,”* and vicar apostolic of Szechuen, was arrested and condemned to death, by decapitation, “obtaining thereby the crown of martyrdom.” “The bishop of Zela, coadjutor, was driven from his home,” and at length, died at “Toncino.” Before Dufresse was brought to the sword (it is not an axe in China), another missionary, who since died at Macao, was summoned from Peking; because D. said on his trial, that P. L'A. resident in Peking, had induced him to enter China. But L'A. denied the truth, (so said M., agent from Rome,) and thus escaped with his life, while Dufresse was sent to the sword.

We have noticed these matters in passing, in order to show something of the man-

ner of doing things by the “vicars apostolic,” in China, and elsewhere. Poor Dufresse indeed suffered death; and the writer of the letter in question wishes to have his head cut off in like manner. “If I should obtain the grace to die,” says he, “like M. Dufresse my predecessor, under the *axe* of the executioner, the day of my death will be far more happy than that of my birth.”—The number of Christians in his “Vicariato,” he says, is sixty thousand.

But we hasten to notice an error taken from Timkowski's book, and appended to the good bishop's letter, *viz.*, that “all religions are tolerated in China;” and that “the policy of the Mantchou court has adopted the maxim of leaving every man to believe what he pleases.” Yes, many thanks to them! Every man may *think*, or *believe* what he pleases; but he may not *say*, or *profess*, or *teach* what he pleases, in religion. The writer specifies Budhism, Taouism, Confucianism, and Mohammedanism. He perhaps knew that the religion of Jesus is *not tolerated*; although he asserts that “all religions are tolerated.”

Gutzlaff's second Journal will be forwarded in a few days to America, to be published there. It narrates the incidents of his voyage on board the Lord Amherst, along the coast of China, to Corea, Lewchew, &c.—It contains twice or three times as much matter as the first, and is fully equal to that in interest.

* What this and some of the other Latinized names are, in Chinese, we cannot even guess.

LITERARY NOTICE.

Proposed correction of an historical fact.—We have received the following statement from a venerable gentleman, long resident in China, with a request to insert it in the Repository, which we do with the hope of eliciting the truth.

“In turning over a few volumes of the *Lettres Edifiantes et Curieuses*, edition of Paris, 1781, I met with a narration descriptive of the last hours of the immortal Kanghe. For the sake of correcting an historical misrepresentation, I shall take the liberty to report facts.

“The emperor went to Haisse (French spelling) with the intention of hunting a tiger, but perceiving that the exceedingly intense cold threatened his life, orders were issued to return to the imperial country-seat, Chang-chun yuen, two leagues from Peking. His blood being coagulated, no medical prescriptions could afford relief. Feeling that the dissolution of his bodily frame was approaching, Kanghe summoned to his chamber, on the 22d December, 1722, the grandees of the court, and in their presence declared, that the fourth of his sons should succeed to the empire. Kanghe expired at eight o'clock in the evening; at five o'clock next morning, the prince

having seated himself on the imperial throne, took the name *Yungching*, and was greeted by the princes, grandees, and mandarins of the supreme Tribunals at Peking, as their sovereign lord, and emperor of China.

“Grief and deep affliction relax the springs of mental power, the elasticity of which in a healthy mind, time, and the solaces of friendship may gradually restore. For this purpose, Yungching on his elevation to the throne, intrusted to his near relative Long-co-to, a man of eminent talents and experience, the duties of *first minister*. Long-co-to, under the mask of a zealous servant, knew how to fascinate his master so that no one at court dared give the most distant allusion to the vexations, extortions and tyranny which the minister fearlessly exercised over his fellow subjects.

“At length, a governor of the provinces of Keängnan and Keängse, endeavored in a respectful memorial to raise in the emperor's breast, suspicions against the prime minister. Having read it, Yungching sent the same back, with the following written at the bottom: ‘Long-co-to if guilty, ought not to be accused in general terms by you; you must point out his faults

and produce the proofs which you possess.' In obedience to this command, the governor substantiated the heads of his accusation, in a second memorial, the contents of which the emperor was pleased to lay before his confidential servants. Long-co-to was deprived of the rank of count; and to atone for his crimes, was banished to a district of Tartary, from which after more than a year he was brought back to Peking. Meanwhile the Tribunal of Crimes, by examining his conduct, detected no less than forty-five cases of criminal conduct. They were of such a nature that the emperor admitted they deserved death; but added he, 'when I recollect the mournful day in which my father, about to ascend to heaven, had assembled round his bed all my brothers, and the great men of the court, and declared by a verbal message through Long-co-to, that I was the son to whom the dying father left the empire, my indulgent heart throbs in favor of a culprit, who by the laws of the land, has forfeited his life; I cannot sanction his death-warrant. Let Long-co-to live, and let a house be built on an empty place near Chang-chun yuen, thirty feet long with three chambers, where he shall remain a prisoner all the days of his life.'

"The Rev. Father Verissimo Monteiro de Serra, bishop elect of Peking, was not acquainted with the particulars just detailed; for had he been, the assertion of an ignorant or malicious

mandarin, that Yungching had ventured fraudulently to alter the last will of his father relative to the succession, would merely have drawn from him a sardonic smile; or had *Padre Serra*, as he is styled in the Canton Register of distant date, been endowed with the slightest touch of pyrrhonism, an excellent antidote against credulity, he would certainly not have countenanced so absurd a calumny."

Our correspondent here sets the letters published in France, in 1781, in opposition to the statements of De Serra, who returned from Peking to Macao in 1827, and considers the latter as credulous and absurd. That under a despotism like the Chinese, one brother should attempt to, and succeed in supplanting another, does not appear to us either incredible or absurd; and therefore we would not, without evidence to the contrary, reject the supposition.

In China there is no history of the present dynasty. Every such publication is disallowed. There are MS. notes concerning the reigning family handed about secretly, because interdicted. We have them not at hand at this moment to consult; but we have conversed with educated natives on the subject, and they tell us, the popular tradition is, that Yungching was an usurper. He is however regarded by the Chinese as a good monarch. He did away with the capitation tax; * he enacted some humane laws

* On page 355 we have erred in attributing the interdiction of the poll-tax to Kanghe. That emperor fixed the rate and forbade an increase; but Yungching in his second year repealed it altogether

in favor of officers, both civil and military; and he also included the common soldier in his consideration, by giving him an additional month's pay at the new year, and by granting him a small sum on the death of a parent, &c.

There are sixteen words attributed to him, which to this day are written and hung up in every court of justice, to stare the mandarin in the face when trying his fellow creatures,—with but little effect however. The following are the sixteen words:—(O ye judges)—

*Urh fung urh luk; min kaou min che;
Hoü min e nooh; shang te'n nan te.*

Your emoluments and your rewards,
Flow from the people's marrow & fat;
Low people you may easily oppress,
But high heaven you cannot deceive.

Notwithstanding all this praise, the Chinese consider Yungching to have usurped the throne; and they tell how it was done. To a sinologue we could easily show how Kanghe's dying decree was altered by one short stroke of the pencil; but to the English reader the explanation would be obscure and uninteresting. It is known also that Yungching put to death two of his brothers, for conspiring against him; which fact increases the probability of his usurpation. We are sorry to differ from our venerable friend, knowing it is at the risk of being considered by him rather too slightly touched with pyrrhonism. Still we think the bishop De Serra's tale is probably the true one.

JOURNAL OF OCCURRENCES.

PEKING.—The emperor has been much distressed by the death of *E-tsin-wang Yung-tssan*, an elder brother of the late Keüking, and uncle to the monarch. (See *J. R. Morrison's Companion to the Kalendar for 1832*.) He died on the 10th of the 9th moon, (September 4th, 1832.) His majesty went and visited his uncle the day before his decease; and offered libations to his manes the day after. All the theatricals and rejoicings previously ordered for the anniversary of the sovereign's birth were countermanded; and the joy of the imperial court was that day turned into mourning.

This event moreover is probably considered as inauspicious; and com-

ing just after the highland rebellion; followed also by the revolt on Formosa; European ships in the north on the coast near the capital; and pirates in the south, must altogether, have caused in the imperial mind considerable anxiety.

FORMOSA.—Reports, direct from Fuhkeën, reached Canton on the 18th instant, that the imperial troops have been repulsed in attempting to land on Formosa, and 1300 killed. Five thousand troops have been ordered from this province, and we hear that there are demands for more.

COCHINCHINA.—A Chinese priest who has lately returned from Cochia-

china' was requested by one of his countrymen to write and tell him his opinion of that place. We have his letter before us, and give the substance of it.

"On the evening of the 30th of the 10th moon, I received your elegant letter; and have informed myself perfectly of its contents. Gannan (Cochinchina), is otherwise called Keaouche. It consists of the provinces, Tungking, Nanting, Egan, Tainghwa, Hwuy-gan, and Lunglae. The royal city is Shunhwa, which is otherwise called Foochun, "the rich spring season," and the title of the country is, the *Great Yü*, and the sovereign's appellation is Ming-ming, i. e. "by the illustrious decree." The form of government, is on the model of the "Great Pure dynasty"—China.

"As to punishments; in little matters there is no difficulty; but thefts and robbery are all punished by decapitation. Opium is strictly prohibited. In grave cases, the criminals are beheaded or strangled. In lighter cases they are transported or given to the army.

"The officers of government in all the provinces are very good; but the nation has a bad monarch. He is intensely set on getting gain. The houses of the Canton and Fuhkeēn merchants are excessively troubled with the government extortions. And when these public halls have no money it is extorted from travelers. In such cases the ill-usage is extreme. In Tungking, there are two or three great commercial houses, which, in consequence of the king's bad character, are packing up and returning home, to China. In my opinion, the Cochinchinese should change and get a new king. Then trade might be carried on to a great extent.

"The articles required by that country are, drugs, crapes, Bohea tea, chinaware and such like. Among the smaller articles are Pwanwoopans, wax pills; small looking glasses with covers; green, copper-head hand-umbrellas.

"In Cochinchina they have no soy; provisions are cheap. Women are more numerous than men. Their customs, or public morals, are bad. The professions respected there, are the medical and geomantic. Their streets are bad. Brick houses rare:

the most of the dwellings are mat sheds. In going on board ship you should take a good supply of olives. I cannot now write all that I would.

"You said, Brother, that after five days I need not write; you would not trouble me. More than that time has elapsed. The delay was occasioned by brother Kelun's not delivering your letter when he arrived on the 27th, but keeping it till the 30th. Don't be offended," &c.

The Golden Dragon's family.—The numerous accounts which have been published concerning the rebellion at Leēnchow have made the name of *Kim Lung*, "the Golden Dragon," familiar to our readers. In previous numbers we have noticed the capture of some of the members of his family. A late Gazette states, that three of his sons, and a daughter, and daughter-in-law, and a brother, with two of the rebel mountaineers who joined him, have been delivered over to the Tribunal of Punishments in Peking for trial. The Tribunal is directed, after having examined the prisoners, to report to his majesty.

ALMSGIVING.—During the unusually cold and rainy weather of December, a Chinese lady—so we are told on good authority—caused *five hundred jackets* to be distributed among the aged and infirm beggars of Canton. On subsequent days, the *tsungkwun* or general of the troops in Canton, was following up the example, but distributed with a less liberal hand. The poor in China are very numerous; and "charity" obtained *vi et armis*, is frequent enough; but almsgiving, like that which we here notice, is of rare occurrence.

PIRATES.—Early in December, it was reported in Canton, that there were a large number of piratical junks cruising on the coast of southwest from Macao; and that among their leaders there was one, who has recently taken for his bride a princess of Cochinchina, and had returned to China to follow up the practice of his father, who was a pirate of considerable distinction. The story of the princess may not be true; but of the existence of a large fleet

of pirates, amounting, at least, to thirty or forty sail, there seems to be no doubt. They have produced a good deal of fear among the local officers along the coast, as well as much annoyance to the inhabitants.

But they seem not to confine themselves wholly to the coast. In one instance, and within a few days, they are said to have reached Canton city, and in a curious manner. There is living in the north part of the city a very aged doctor, whose name is Chin Shetih. For several years he has been the most celebrated physician in the place; has amassed a large fortune, and keeps a splendid establishment. It has been said of him, that he first rose to notoriety by pretending to cure leprosy. This reputation he sustained by first occasioning, when called to visit patients, a false species of leprosy, which he afterwards found no difficulty in curing.

The pirates, for some of them have not come from afar, knowing the circumstances of the doctor's wealth, and what was much for their purpose also, his great greediness of gain, formed a plan to carry him off. Two of their number, dressed like the attendants of a naval officer, were deputed to repair to Canton, and with a box of silver amounting to one hundred taels, to wait on the old gentleman, to present him with the money, and to solicit him in the most importunate manner, to visit their master in distress on board his junk, which, they said, was anchored a few miles below the city. Flattered and cheered by the money, doctor Chin was soon seated in their boat, and did not learn the secret until he was seen by persons on board other boats weeping bitterly, and begging to be allowed to return. In this situation, terms of release were proposed; he might write to his friends in Canton; and if in the specified time and manner they would pay *two thousand taels*, he should be released, otherwise he should be cut in quarters and *sunk* in the sea. The proposals were accepted, and the doctor, after the money was received, returned unhurt to his family.—So much for doctor Chin, alias Dr. Sink; see also our last number, page 343.

TITHING SYSTEM.—In consequence of the late discovery of conspiracy and rebellion, in the case of Yin Laousew, "who called himself Nan-yang Budha," it was been ordered, that the *tithing system* of mutual responsibility should be rigidly enforced. The local officers have however remonstrated, on account of the vexatious effects of the system.

This is the same system as that referred to in the Sacred Edict, where the emperor Kanghe says, "Unite the *paou* and *ked*, in order to extirpate robbery and theft."

Unprivileged people.—In consequence of the long drought at Peking last summer, government was obliged to furnish supplies for many of the poorest classes of the people. In this case, as well as in most, if not all others, the *mix* or "*unprivileged people*," are spoken of with tenderness. We could hardly find terms in Chinese to translate the phrases, "swinish multitude," "rabble," &c. In all Chinese official documents, the people are spoken of, and addressed with kindness, and as rational creatures.

In social and civilized life should not all the citizens be objects of care to the whole community; if the poor and ignorant are vicious, in a greater degree than the educated classes, where is the blame? Does it rest on the students or the teachers? We answer, on both. If the lower orders of a state are ignorant and vicious, we deem it morally certain that the opulent and educated are in great fault. It is lamentable to behold such vast multitudes in China, as sheep without a shepherd; or as the old emperor Keenlung said, as "*having tigers for shepherds*."

Cruelties and murder.—From Gan-hway a man has appeared at Peking to petition the emperor in a case of murder. The elder brother of Ma-urh-tuh, to obtain the young man's wife, hired persons to go and dig out his eyes. But in the struggle the younger brother broke his thigh, and soon died; and the elder brother took the deceased's wife. An old uncle urged a prosecution against him for two years in the provincial courts, but without suc-

cess, and has at last gone to Peking.

KIDNAPPERS.—In the Canton court circular, for the 7th instant, the seizure of one of this class of men is noticed; his name is Chung Asan. He has been delivered over to the Nanhæ magistrate for trial. There are, it is said, hundreds of kidnapers in and about the city of Canton, who are constantly carrying off and selling young women and children, and who gain their livelihood by this wicked traffic.

TEA.—From Kansuh province a tea merchant named *Peih Kinghing* appeared before the Board of general police, in Peking, to complain of a recent law of the local government, and its pernicious effects on the regular merchants and traders.

Nayenching, then governor of Peking, was sent to western Tartary as civil commissioner in the time of Changkihuh's rebellion. After that was suppressed, he enacted various new laws to cut off more effectually all Chinese intercourse with foreign tribes. Among other regulations, it was decided that the Mongol Tartars at Koko nor should not have tea supplied to them. Natives who were detected in transporting tea to them were to be treated as "Chinese traitors." The consequence of this prohibition is, that the tea, which grows in Hookwang province, is smuggled out in various ways, by a multiplicity of passes and by-roads, so that the licensed merchants of Kansuh have little or nothing to do; and the revenue suffers a deficit.

Peih Kinghing states that formerly, upwards of two millions and one hundred thousand cattie of tea passed through his hands, annually; and he paid in duties to government more than one hundred and seventeen thousand taels, every year. But all this is done away with by the new law, and its consequences. The case has been referred to the emperor.

This procedure shows considerable spirit in Peih Kinghing, who takes his life in his hand, goes individually to remonstrate against a law of the empire, originally proposed by a statesman possessing high powers, and subsequently confirmed by his majesty. It is likely we shall hear

no more about it, but from the favorable manner in which the Board represented the case, we expect the emperor will grant the prayer of the petitioner.

On further reference we find that this law, of which Peih Kinghing complains, originated in the 4th year of Taoukwang,—that is, about eight years ago. Nayenching being there subsequently, could only confirm it; which it appears he did; for he had full powers to make any alterations he pleased.

WIDOWS.—There is a small fund in the city of Canton for the relief of widows. It is of recent origin, having commenced operations only on the first year of the present emperor's reign. Government unites with *shansze*, or gentry, in supporting and managing it. It is already getting into disorder, and the Leängtaou has issued a threatening proclamation to the widows. They get about five taels per annum, one tael for each quarter, and one to pass the new year. The number now on the fund is 1500. The complaint is that those who get married, sell their tickets instead of returning them; and the friends of those who die do the same. This is a sort of parish relief, and those who have kindred on the spot do not like the exposure, and browbeating necessary to get the sums; so that the chief applicants are widows whose kindred live at a distance from Canton.

URH LAOUYAY is the second son of a rich merchant who has been dead many years. Urh was bred in the army, and by his father's wealth made many friends at Peking. He presumed on the influence of such friends,—for they were many of them high in office,—and attempted to elevate his father to *posthumous* village honors, to which his humble origin, and his mean profession of trade did not entitle him. Under the charge of endeavoring to deceive his majesty, from whom the patent was to be derived, Urh lost his commission, and was threatened with death; to avert which, *tears and dollars* flowed in abundance.

Some years elapsed before Mr. Urh recovered from the shock and the

shame of this transaction. He never, however, lost his fancy for making "mandarin friends" by the dint of money, which the commercial house of his late father had to supply. It is said, that his establishment of wives, concubines, &c., with presents to officers of government, requires a lack of dollars per annum.

Of late he has been concerned in an affair of adultery, suicide, and bribery. In his house there are scores of nurses and female servants. One of these, a married woman and an attendant on one of his concubines, named Yuë-chung, became pregnant by her master. The concubine beat her several times, and extorted confession. Yuë-chung then turned upon her lord and abused him. He denied the charge, and ordered her to expel the servant, and to send her away to the house of her husband. But the night before the expulsion was to take place, she hanged herself on the bedstead of Yuë-chung. The husband heard of the disgrace and death of his wife, and was about to petition the government, when a "friend" was employed to offer money as a compensation. It was finally arranged to give 500 taels of silver "to stop his tears."

PAWNBROKERS.—The magistrate of Nanhæ has issued an order to all this class of persons, to diminish the interest during the winter months. This it appears is an annual custom. The ordinary interest charged by pawnbrokers is 3 per cent. per mensem; or 30 per cent. per annum. If the pledges be not redeemed they are sold at the end of three years.

Beside these government pawnbrokers who pay a duty, there are unlicensed and illegal places where

a high advance is given on the pledge, and *ten per cent. per month* charged. If not redeemed in three months, the pledge is sold. The first sort are called *tsang pao*, and the last are named *tsang ya*, that is, temporary watchers.

ILLEGAL FEES.—Lieut. governor Choo, being petitioned a short time since to do away with some illegal fees, gave the following answer;—"To disallow clandestine fees sounds very well. By doing so, the higher officers 'fish for praise,' and villainous underlings get gain; for they still exact the fee, although disallowed. I rose from being an inferior officer, and know perfectly well all the base practices. All that is practicable is to keep a sharp lookout from time to time, and prevent the thing going to great extremes. The prayer of the petitioner cannot, on any account, be granted."

Reply to Chin Fauson's petition.

COPPER.—The governor of Yunnan province has written to inform his majesty, that during the last year 5,763,200 and odd catties of this metal were procured; which is 1,646,600 catties more than the quantity fixed by the government. This copper is all transported to the north of China.

SHIPWRECKS.—One of the *yuëts* has reported, against the inhabitants on the coast of Shantung, who, when a merchant vessel is driven on shore, as frequently occurs, come together in great numbers, break up the vessel, and carry off all the property. These "*wreckers*" are spoken of with great indignation, and his majesty's interference is requested.

CHINESE REPOSITORY.

 VOL. I.—FEBRUARY, 1833.—No. 10.

POPULATION OF THE CHINESE EMPIRE.*

BEFORE closing the first part of this article, which appeared in our last number, we received the following communication; which, as it is brief, and presents a serious difficulty, and withal is in exact keeping with an opinion somewhat prevalent on the subject, we give entire: it is addressed to ———, is without date, and reads as follows:

“Dear Sir—, Having heard of your intention to write on the population of China, I wish to bring to your notice a remark made to-day in my hearing by an intelligent native; it was to this effect. The ordinary report of the population is a matter of mere form, to which no particular attention is paid; and when a census is especially called for by the emperor, the local officers just take the last one, and make a *lumping addition* to it, in order to please his majesty with the flattering idea of increase and prosperity. Now although it be true, that the enormous census of 333 millions was not made to impose on foreigners, as Dr. Morrison has said, yet it might have been made by this proud people to impose on themselves. What truth can you expect from a government,

* Continued from page 363.

which as you have shown, avows and teaches atheism! I dare say you will make out a mighty population from Chinese books; but Chinese books, and above all, Chinese state documents are little to be trusted. Your's, Amicus."

To raise difficulties on such a subject is an easy matter. Amicus might have gone further, as others have done; have called in question the credibility of Chinese statesmen; denied their competency to count by millions; and then gone on to demonstrate the impossibility of the land and the waters of the celestial empire supporting the "assumed" population. He could maintain all these positions by "stubborn facts;" for how can it be believed that Chinese officers, some of whom are Mohammedans, some disciples of Confucius, some followers of Laoutsze, others of Budha, and others of no creed whatever, denying the immortality of the soul and the being of a God, should in all their departments, make faithful returns to each other, to the high Tribunals of the empire, and to the one man who rules over all beneath the starry heavens! How can it be credited, that these officers, who, as all the world knows, are utterly ignorant of astronomy, and geography, and "unskilled in the mathematics," should be able to enumerate the families and individuals in a province! How, in short, can sterile hills and barren wastes, and plains, and meadows, without flocks and herds, and beyond the reach of modern improvements, be capable of subsisting 333 millions of people!

The difficulties in which the subject is involved are not small; and yet, considering the circumstances of the case, they are not greater than we should expect to find them. From the accounts exhibited in the first part of this paper, it appears, that between the time of the first monarchs of the Ming dynasty, and the period when the present reigning family gained complete dominion over

the ancient provinces of China, the amount of population diminished nearly *two thirds*. We wish this fact to be particularly noticed: for the censuses of 60 millions, during the first emperors of the Ming dynasty are universally allowed, while only about 23 millions appear on the imperial register, near the close of the prosperous reign of Kangle. That a great diminution should have been occasioned by the long and bloody wars of the Mantchous, is highly probable; and it is equally evident that a part of this alleged decrease of 37 millions was only apparent,—the whole population not being registered in the later account, because not subdued. Hence we supposed that 23 millions, as given in the Ta Tsing Hwuy-teën, for 1710, was considerably below the actual number of inhabitants in the empire. This consideration will much relieve the subject from the difficulty presented by rapid increase, the greatest difficulty in the case. For if we suppose the unsubdued and unsettled inhabitants, who were *not enrolled* would have raised the census in 1710 to 30 millions, instead of 23, then a rate of increase which would double in *thirty* years, would have made the amount of population nearly 360 millions in 1812.

In all ordinary cases of this kind, the highest national authorities are deemed sufficient, and they would doubtless be so in this instance if they only confined the population to “proper limits.” When any nation or state have been at great pains to estimate their numbers, and for their own purposes of government, it has been usual, we believe, to receive their accounts. If Russia or Denmark publish accounts of their population, their accounts are deemed worthy of belief, and amply sufficient for all practical purposes; no other authorities are sought. So also when France publishes a census of 32 millions, she is believed, and her account received, her wars, her morals, and her

creed notwithstanding. But not so in regard to China; she lies by system; she avows and teaches atheism; she is proud and mendacious; and hence her statistics are all exaggerated.

Were the Chinese able to review the accounts which foreigners have given of them they would scarcely find less that is objectionable and erroneous, than the critics of England and America are wont to do in the various descriptions of their respective countries. Nations do not often have occasion to complain that they are represented in too bright colors by foreigners. We are in danger, perhaps, of allowing to the Chinese accounts too little, rather than too much authority. They ought not to be discarded, where there is nothing to impugn their credibility.

The collated statements on a preceding page (361),—if we except that from Berlin, and view them in connection with the remarks which accompany them,—show a pretty regular increase. The statements based on the Ta Tsing Hwuy-teën—than which we know of no better authority in China,—show an account perfectly consistent with itself. These statements have not been made by foreigners, nor for foreigners: they have been made by the Chinese themselves, and for their own purposes of government. It cannot be doubted, therefore, that the Chinese regard them as authentic and accurate, and *believe* the population of the eighteen provinces in 1812 amounted to 360,279,897. Was such the fact?

If the accounts which the Chinese give of their population are untrue, it is because they are either unable or unwilling to make them correct. To be convinced that they are *able* to make an accurate census, it is only necessary to observe the minute divisions into which the eighteen provinces are divided. For example; Canton province is divided, first into thirteen *foo and chow*; these are subdivided into seventy-two *heën*; from the *heën* the division is

carried down to the *keü*, which consists of only *ten families*. Ten *keü* make a *paou*, or neighborhood of one hundred families, which has a headman or constable, whose duty it is to watch over the whole; and, among other things, to keep a list of all the families and individuals within his jurisdiction. Now it is the duty of this constable to report the names of those within his limits to the chief officer of the *heën*; who reports to the chief officer of the *foo*; he again to the treasurer of the province; who in his turn reports, annually, on the tenth moon, to the Board of Revenue at Peking. Such is the division and the order required by the laws of the land. This system certainly enables the government to know and to state accurately the number of individuals, not only in every province, but in any given district of each or any one of the provinces.

But is this system of dividing and numbering the people actually observed? Are all the families and individuals—men, women, and children, carefully enumerated, or is the census made out on the “lumping system?” Now as there is an annual census, (and others sometimes “especially called for?”) the business of numbering the people must of course attract some attention; under which circumstances such a broad and long continued system of falsehood and deception, would furnish a “phenomenon” not less incredible than the amazing amount of population. But let us go back to 1710, at which time the rapid increase complained of began, and take another view of this subject. That the lumping system has prevailed for more than one hundred and twenty years, and during that time has been practiced by all the successive officers of the several provinces, *foo*, and *heën*; and by the Board of Revenue at Peking during its changes,—seems to us hard to believe; it is a supposition not well weighed. “But it is not pretended that this new system of numbering the

inhabitants has existed for so long a period as one hundred and twenty years." It is then rather a modern manœuvre, which officers have lately introduced for the purpose of covering their own negligence, and of flattering his majesty with the idea of great increase and prosperity. This is the fact, undoubtedly, so far as the lumping system has obtained. But in examining the progress of the numbers it will be seen, that from 1792 to 1812 the rate of increase *greatly diminished*, which certainly would not have been the case on the lumping system; for on that plan, in a period of twenty years, there would be, instead of 54 millions as the account now stands, an increase of more than 230 millions.

But what is the testimony of "intelligent natives" on this subject? When *we* have inquired of them, as we frequently have done, their usual answer has been, that they knew nothing respecting it; but have added, that their officers could tell, because they had the names of all the people. And when further pressed for a more specific answer, some have told us stories similar to that heard by Amicus; others have told us the following: that each officer on leaving his station, in order to show that prosperity has attended his administration, gives a return of all the soldiers who are or recently have been on the rolls; and in enumerating the common people, he includes the names of both soldiers and people, thus counting a part of the population twice. This report we know to be false; though it seems as plausible, and as well substantiated as that related in the hearing of Amicus. Others have assured us that the returns are *below* the truth—the names of many individuals being omitted. So the Companion to the Anglochinese Calendar, which we have already quoted says; *We know from several authorities, that in China, the people are in the habit of diminishing rather than increasing their numbers, in their reports to government:*

—an account quite as credible as either of the preceding. If foreigners, situated as they now are with regard to China, discard the most authentic documents which the records of the country can produce, and betake themselves to mere verbal testimony, they will, themselves being judges, exchange bad for worse—the more for the less credible testimony. We feel constrained therefore, to admit the authority of the written records; though we do it with great caution, and receive them not as altogether unobjectionable, but as furnishing the best evidence which we can obtain in the present circumstances of the case.

Again it is objected, that the rate of increase presents an unanswerable difficulty; for it is supposed absolutely impossible that the human race should increase with the rapidity exhibited in the statements given above. But if we survey the condition of society in China, during the last one hundred and twenty years, we shall cease to wonder that the increase should be rapid.

Since the prosperous days of Kanghe, the empire has enjoyed uninterrupted peace, or at least, freedom from war. Occasional insurrections, and piratical depredations there have been; of late years, these have become frequent. But *war*, like that by which the Mantchou conquest was achieved; like that which often swept over the plains of ancient Persia; and last, which has stained with human blood, and strewed with human bones the fairest states of modern Europe,—has not been witnessed in China. Instead of that, a continuous peace of one hundred and twenty years, has blessed the country,—a fact not often seen in a great nation, and the reasonable effects of which on the population can hardly be duly appreciated. Look at the nation at the beginning of this period. Invited by the security of peace, and by the bounties offered by government, they spread over the waste, and fertile soil of China; multiplying with-

out fear or restraint, throughout the provinces. So far has this spirit proceeded, that as we know, the old fortifications along the coast have chiefly fallen to ruins, and no modern ones are constructed; many of the soldiers have become farmers and laborers; the "military spirit" seems nearly to have forsaken the conquering Tartar, and the conquered Chinese; while the national industry, and national fecundity remain unabated.

The checks to rapid increase are few; the most noticeable are; (1.) the occasional absentees from home for years, though many young men who go abroad to other provinces or countries, make annual visits to their families; (2.) infanticide, which is practiced to some extent; (3.) domestic slavery, which often prevents the marriage of the persons sold; and (4.), if Canton is a fair specimen of the empire, the "social death" of thousands, who by various means are devoted to a life of infamy and crime, in those abodes justly denominated the "gates of hell."

The causes which favor a rapid increase are, (1.) the general peace; and (2.) the early, and with the exceptions just specified, universal marriage. Polygamy exists, and not a few there are, who have two or more wives or concubines; yet such relations are not deemed very reputable, unless the first wife be barren. Nor are illegitimate children numerous; but instances of eight, ten, or twelve sons, all of one mother, are not unfrequently found, and are always regarded as "prime luck." A census which should show at once the relative number of the sexes, and the ages of the whole population, is a desideratum which none can desire more earnestly than ourselves, but which we fear will not soon be supplied. Most of the "apparent causes" enumerated by Grosier to account for "this extraordinary and enormous population," are by no means so *apparent* in China as they seem to have been to the writer at Paris.

Some who have written concerning China have taken it for granted that the population has been stationary for the last century; and with this, and other assumptions, conclusions have been formed which are exceedingly erroneous. But happily, during the progress of the disputes on this subject, the question of the *possibility* of so rapid an increase, has been settled by a case in point. We have before us a document which shows that the population of the United States of America has *quadrupled* within the last *fifty* years;* and the writer of that document, who was a man of great practical wisdom and experience, supposes that the population in that case, for a long time to come, "will continue to increase with nearly the same degree of rapidity as at present." Whether the supposition of the late Mr. Evarts be well founded or not, the recorded *facts* cannot be denied; and may help to convince us that a rate of increase equal to that exhibited by the Chinese, is within the range of actual occurrences.

But again, it is doubted whether the soil is capable of sustaining so great a population. Let some of the European states be placed in comparison with China, so as to show at one view the density of population in each. By data taken from the Encyclopædia Americana, the number of inhabitants on each square mile—

in England is about,	225
in the Netherlands,	275
and in the Duchy of Lucca,	350
while in China Proper, we have only about	280.

There is perhaps a greater proportion of uncultivated land in China than in either of the other states named above; but the fact is not certain; it is certain however that, as a whole, China is in a very high state of cultivation. Agriculture is generally held in the highest esteem of all the employments, and

* See the Quarterly Register of the American Education Society, vol. 3d, 1830; also the 21st annual report of the A. B. C. F. M. Boston: 1830.

almost every product of the ground is appropriated to the feeding and clothing of men. Large portions of the country yield two crops annually, and those generally very abundant. Every animal and vegetable substance also is an edible with one class or other of the people. Large quantities of vegetable produce, which in any other country would be devoured by the flocks and herds, are here consumed by human beings. And it is surprising with what economy many of the poor live. A bowl of rice, with a few vegetables, and a little fish or fowl, which are very abundant, are the entire provisions of multitudes.—If we regard these two circumstances only, *viz.*, the amount of the produce of the soil, and the manner in which the people live, we have strong presumptive evidence of a very numerous population.

The famines which frequently visit this country, do not probably result so much from the want of a sufficient amount of produce, as from the want of facilities in transportation. Communication, notwithstanding all their canals, is slow; and often great pains are taken to hinder intercourse, not only with foreigners, but also between the different parts of the empire. The principle is that every province, and part of a province, must provide for itself. But in ordinary seasons little more is raised than is barely sufficient for immediate consumption; a small surplus only is placed in the public granaries, which, when a single crop fails, is generally inadequate to supply the numerous demands. Barrow has assigned three reasons for the famines which “occasionally commit such terrible havoc in this country;”—the equal division of the land; the mode of cultivation; and the nature of the products. We cannot follow him in his discussion, and will only remark, that he repeats and maintains the opinion that the country is capable of sustaining a much larger population than the 333 millions given to Macartney.

We are indebted to a correspondent,—who has enjoyed excellent opportunities to form a correct opinion on this subject, and who regards the Ta Tsing Hwuy-teën as “the only fair guide” in the case,—for another view, and one which brings the question partially within the range of our own observation. In the eighteen provinces there are 1518 of the smaller divisions—heën, chow, and ting,—each of which, were the population equally divided, would have about 237,000. What now is the fact in those districts with which we have some acquaintance? Nanhae and Pwanyu, which include the cities of Canton and Fuhshan, and also the village of Whampoa, have on the lowest estimate more than twice the given number. Singan would probably fall below the average number. Heängshan heën might be assumed as a standard. Judging from what we have seen of Heängshan, we are inclined to believe that it contains more than 237,000 inhabitants. It is well known also that the eastern districts of this province are very densely populated, scarcely less so than the country around Canton city. Other districts must of course fall below the average number.—After going through with this view of the subject, and presenting other reasons in favor of the Ta Tsing Hwuy-teën, the gentleman remarks, “on the whole my opinion goes to receive this account as the most accurate that has yet been given of the population.”

Here, after having brought into view what have seemed to us the most authentic documents, and the best supported opinions, we submit the subject. It has been our steady endeavor in this discussion, to put our readers in possession of the best authorities and testimonies which we could command, that each might weigh the evidence and form an opinion for himself. As for ourselves, we rest the question for the present on the authority of the Ta Tsing Hwuy-teën. If in the progress of this work, we shall be able to proceed, as we

desire, to a minute historical and geographical survey of each of the provinces, we shall then have better opportunity to judge in this matter. In the meantime, we shall seek for new sources of evidence, and gladly hail any additional light that may be thrown on so interesting a subject.

Whatever may be the exact amount of its population, the empire presents a grand spectacle for contemplation, and a vast field for philanthropic and commercial enterprise. If the Christian merchant and teacher will come and occupy the field which is opening before them, and with the spirit to do to others as each would have others do to him, new relations with China, and a better interest in her behalf, must soon exist. The peculiar position and temper of this nation should not damp and repress generous feeling, and benevolent action. Man has a right to claim fellowship with his fellowman. The Chinese themselves, on the authority of their own sages, have maintained that *the whole world is one family*, and that of course, mutual intercourse ought to be cultivated; but in practice they utterly renounce this principle, and have long stood aloof from the great family of nations. In this attitude they have become proud, selfish, and exclusive. Notwithstanding all this, the merchant has not ceased to obtain the richest productions of their soil, and to furnish them with a liberal exchange of commodities. Here the traffick has ceased. No reciprocity of feeling, no intercourse of thought, no exchange of friendly sentiments, has been encouraged or allowed. Thus the bonds of brotherhood have been sundered; and mutual hostilities, generated and perpetuated.

What then shall be done? Is China to be abandoned for ever? In present circumstances it is difficult to say definitely what line of conduct ought to be pursued. If Christian philanthropists should feel as deep an interest in the intellectual and moral character of China, as they do, and with good reason,

in her commercial relations, ways and means enough could be devised, for benefiting this people. Greece has had her advocates, who from the pulpit and the press, and in the halls of legislation and public assembly, have pleaded nobly for her. Poland too, and other states have elicited the generous exertions of philanthropic men. But where have been the like exhibited in behalf of China? She disdains such friendly offices. And what then? Is she all that she claims to be? Because the lunatic fancies himself a king, is he to be regarded as such? Does this empire present no claims on heaven-born charity? Are there here no miseries to be relieved? No dark and cruel superstitions to be chased away? Yes, answers the voice of Christian philanthropy; and inquires, *what shall be done?* Seek, we would reply, and cultivate an acquaintance with her; study her character; learn her language;—not so much with a view of deriving riches or honor from the acquisition, as for the sake of conveying knowledge to her inhabitants. Great numbers of her sons can read;—and there is, to a considerable extent a *taste* for reading among the Chinese; but most of their popular books are light and trivial; many of them are low and obscene in the extreme; and not a few of their sacred books are meagre and most positively bad. Now to open to all the inhabitants of this great empire the exhaustless treasures of revealed truth, and to furnish them with a new literature, enriched with all the improvements of modern science, requires coöperation among the friends of China; the work is vast, and thousands may join in it.

REVIEW.

Contribution to an historical sketch of the Portuguese settlements in China, principally of Macao; of the Portuguese envoys and ambassadors to China; of the Catholic missions in China; and of the papal legates to China. By A. L. Knt. Macao; China. 1832.

HIGH commendation is due to the author of this "humble essay," for his rich contribution to the historical records of foreigners in China. Had he devoted to his subject less attention, and followed the fashion of the day, he might have given to the public a quarto or a folio, instead of a duodecimo of less than two hundred pages. Seldom if ever have we found so much matter of fact, concerning the East, thrown into so small a compass. The work affords abundant proof that "considerable pains have been taken in collecting the material;" and though "traced by the pen of a foreigner,"* it will be read with pleasure and interest, not by a "few friends" only, but by many strangers, who will be grateful for his patient and successful research. As only "one hundred copies" of this work were struck off, and those were designed for distribution among the author's "friends and acquaintances," he will the more readily, we hope, excuse us for making copious extracts from his pages.

He divides his work into five parts; (1.) temporary settlement of the Portuguese in China; (2.) their fixed settlement in Macao,—terms of tenure, dependence on and independence of China, and

* A native of Sweden.

present state of the settlement; (3.) Portuguese envoys and ambassadors to China; (4.) Roman Catholic mission in China; and (5.) papal legates to this country. These topics are discussed fully and carefully by the author; we propose to follow him so far as to preserve the thread of his story, and to bring into view the principal facts which he has narrated. To accomplish this in the limits of a review, it will often be convenient to break up paragraphs and sentences; in which case, however, it will not always be necessary to mark with double commas the parts which we quote. The author preserves the patronymic name by which persons were known in their native countries; e. g. Ruggiero, instead of Roger; and so of others.

1. *Temporary settlements of the Portuguese in China.* The Portuguese passed round the cape of Good Hope near the close of the fifteenth century; and secured a footing on the western shores of Asia, by possessing themselves of Goa. In 1511, the cruel Alphonso assaulted and took Malacca; and five years afterwards Raphael Perestrello made sail in a junk for China. His success gave rise to an enterprise of greater magnitude; four Portuguese and four Malay vessels under the command of Fernão Peres de Andrade, sailed for China in 1517. Six of these ships were allowed to moor at Tam-ao, "a port in one of the three islands called San-shan, by corruption St. John;" with the others, Andrade proceeded by permission to Canton, where he was allowed to trade: but news soon arriving that pirates had attacked the vessels anchored at San-shan; Andrade immediately settled his concerns at Canton, "joined his friends, and completed at Tam-ao his mercantile operations."

"Anxious to take his departure at the commencement of the approaching monsoon, he, like a man of probity, proclaimed his readiness to do justice to every body, who might have reason to complain of any of his companions. This candid offer so enchanted their minds, that the Chinese began sus-

pecting there was nothing but an unmerited slander in what they had heard of the egotism and violence, the Portuguese had made themselves guilty of in India.

"This favorable opinion prevailed, when Simon de Andrade, a brother of Fernão, entered, in 1518, the port with one ship and three junks. The bent of his spirit was greediness, partiality, and despotism. With such a temper he willingly countenanced robbers, kidnappers, and all sorts of malversation. He built a fort, and ended by arrogating to himself the prerogative of a sovereign; he hazarded to condemn a sailor to death, and had the man executed. This act of open hostility, and the refusal to withdraw from the island, filled the measure of iniquity. A Chinese squadron laid siege to the port. Simon would have perished of hunger, had not a strong favorable gale most opportunely arisen: he took advantage of the accident, and retired with three of his vessels (1521).

Not long afterwards other voyages were undertaken; and in 1560, it is related by a Jesuit, "that five or six hundred Portuguese merchants were constantly dwelling at Lam-pa-co. Previous to this time, (1533) *Ningpo*, in the province of Chekeäng, had become exceedingly rich and flourishing, principally by the trade with Japan; but by the ill conduct of the inhabitants, the provincial government (1545) assaulted the place; "everything was laid waste; 12,000 Christians, including 800 Portuguese were killed; 35 ships and two junks burned." Four years later, the Portuguese were driven from their newly formed settlement at *Chincho*. Thus "banished from the eastern provinces of China, the foreigners resorted to Lam-pa-co and the illicit trade on the Chinese sea."

2. *Fixed settlement of the Portuguese at Macao.* Under this division of his work, the writer first reviews the "*terms of tenure*," and discusses the question, whether the kings of Portugal are entitled to number Macao among their ultra-marine dominions. He thinks there is good reason to believe, from Dr. Morrison's "View of China," that Europeans came to Macao as early as 1535, and had temporary shelters on the island in 1537. By solicitations and bribery, liberty was obtained

to erect some sheds for drying goods, which were introduced under the appellation of tribute, and which, it was alleged, had been damaged in a storm. "By liberally feeing the nearest inspecting authorities, the foreigners were, by degrees, permitted to build substantial houses." And "by submission and gifts, petty mandarins connived at an increasing population, at the establishment of a government, at the influx of priests, and their endeavors to convert infidels to Christianity." In 1582, the governor of Canton summoned before him the chief officers of the infant colony; two individuals repaired to his residence, were traduced as culprits before his tribunal; they were upbraided; and their constituents censured for their audacity in depending on any other laws, than those by which China was governed. The merchants were to be expelled, and the ports shut for ever against them. In twenty-four hours this tone softened, for magnificent presents had been heaped on the governor and those of influence. In these circumstances, as no mention was made of signal services rendered to China, and no imperial edict transferring the dominion of Macao to the Portuguese was produced, our author is led to concur in the opinion of a bishop of Macao, who, in 1777, wrote, that it was "by paying a ground-rent the Portuguese acquired the temporary use and profit of Macao *ad nutum* of the emperor." At present, the amount of this rent is limited to five hundred taels per annum.

How far the Portuguese are *dependent on China*, is the next question that comes under consideration. In 1573, the Chinese resolved to erect a wall across the isthmus which separates Macao from the island of Heängshan. Through this barrier a door of communication is opened, but is always guarded by Chinese soldiers, whose duty it is to prevent foreigners from passing it. Within these limits, and as early as 1587, a *civil* mandarin was appointed to reside, and "govern the

city in the name of the emperor of China." A tsotang, an assistant of the Heängshan magistrate, came to Macao in 1800; he keeps a watchful eye on the inhabitants, and is the organ of communication with the higher mandarins. The Portuguese are not allowed to build new churches or houses without a license from the Chinese authorities. A similar degree of control is exercised by the Chinese also in *criminal and commercial* cases. These positions are illustrated by a narration of facts; and the conclusion is, that "in a political point of view, the inhabitants of Macao may live free from all apprehension of being invaded as vassals of Portugal." In 1725, an order from Yungching restricted the shipping of Macao to twenty-five vessels.

The author, as he proceeds to show how far the Portuguese are *independent of China*, draws before his readers a sketch of the history, structure, and relations of the government of Macao. In 1585, the inhabitants, by permission of the viceroy of Portuguese India, adopted rules for a municipality; which were confirmed, and privileges granted. The government of Macao consists of a governor, who is usually chosen by the governor-general of Goa; an ouvidor, or chief-justice, who has the appellation of *minister*; a Senate; &c. So late as in 1690, the mandarins of Heängshan were in the habit of summoning before them vassals of Portugal residing at Macao. But to obey their order, was forbidden in 1689 by the viceroy of Goa, and in 1712 by king John V.—

"By an order of the Prince Regent of Portugal, dated 1803, a homicide cannot be delivered up to the Chinese; if he be found guilty by the laws of Portugal, he shall suffer death by the hands of a Christian executioner. This command was attended to for the first time in 1805."—

"Connections with Portugal and Goa. . . . We have hinted in the course of this narrative at the submission of Macao to the superior government. An annual account of its political, economical, municipal doings, of the number of its inhabitants, of

its shipping, &c., is reported to the minister of ultra-marine affairs at Lisbon, and to the supreme government of Portuguese India."

The *political* intercourse of the settlement with China, seems to have been very limited. One of the last emperors of the Ming dynasty, about 1620, negotiated with Macao for a small military force, which was to proceed against the Mantchous; but in 1651, the governor of Canton summoned some of the principal members of the settlement before him, and enrolled the inhabitants of Macao as the vassals of his master,—the then reigning emperor of the Ta Tsing dynasty. Again in 1809, a convention was concluded with the government of Canton, by which Macao furnished six ships to act in concert with an imperial squadron against Chinese pirates. For this aid, Macao received eighty thousand taels, and the promise to be reinstated in its ancient privileges, if any could be proved to have existed. The pirates were subdued; high privileges were claimed by the Portuguese; but little or nothing was ceded by the Chinese.

The *commercial* intercourse with China, Japan, Manila, Timor, Batavia, Goa, and Malacca, is briefly noticed. As vassals of China, the Portuguese pay less duties on goods from Canton to Macao, than those paid on shipments at Whampoa; the same rule obtains in regard to return cargoes. For nearly two centuries the Portuguese have had no intercourse with Japan. The commerce with Manila is of little importance, and "perhaps less to Macao than Manila." The Chinese admit the Spanish flag at Macao, on the same conditions as that of Portugal. Intercourse with Timor and Batavia, which was once of importance, now requires no more than a single ship annually; and that mainly for the purpose of bearing governmental despatches, &c., from and to the supreme government at Goa.

We pass now to survey the *actual state of Macao*, its trade, population, public buildings, &c. Of the trade we have the following account:—

“At present, the whole shipping consists of sixteen * ships, measuring 5331 English tons. The greater part of the ship-owners are destitute of sufficient means to lay in a suitable cargo, and bear the charges of a long voyage. Many vessels are therefore loaded, at least in part, by Chinese adventurers, for Singapore, Batavia, Malacca, Pulo Penang, Calcutta, Bombay, Damaun, Mauritius, &c. This accommodation is mutual, for though the freight is rather high, the property on board a Portuguese ship is considered safer than in a junk. Chinese and Macao merchants send, however, to the abovementioned places, China produce on board English ships, the freight being cheaper, and the duty in British ports 10 per cent. less, than if the goods were unloaded from a Portuguese ship. So material a difference operates against the shipping business of Macao, particularly on the exports. To secure the imports a strong inducement is now held out..... The whole income from the customs, in 1830, was

taels 69,183 †

The disbursements to the military	29,622
to the civil servants.	24,470

Total, taels[†] 109,451

A century ago, or in 1730, the customs yielded 7,825 taels; and the ordinary and extraordinary expenses were taels 10,735.”

The *population* of Macao divides itself into *three* distinct classes; vassals of Portugal; vassals of China; and foreigners: and of each in its turn we will give a brief sketch. First of the Portuguese;—

“If what a grave historian asserts, be true, (and there is no ground to impeach his veracity,) that the prisons of Portugal were now and then emptied, and the vicious tenants, and even culprits, who should have finished their career on the galleys, were sent on board the royal fleets to serve in India, we shall have less reason to shudder at the enormities perpetrated by the Portuguese in many parts of Asia. Some of this unholy stock respected neither friends nor foes, and seized every opportunity to enrich commanders and their hordes. They were at times

* The whole number of ships is now (1833), we understand only twelve.

† Of this sum, 30,132 taels were raised from duty laid on 1,833½ chests of opium imported at Macao.

pirates, or smugglers; and at times, strolling merchants. Several of this contaminated caste settled, no doubt, at Macao, with men of more correct feelings. By this mixture, those who had reluctantly run the race of vice, were by good example recalled to the comforts of social life, which were soon enhanced by nuptial ties. Malay, Chinese, Japanese, and other women became their partners in wedlock, and mothers of a generation, the descendants of whom are perhaps still members of the community of Macao. This progeny is distinguished by the denomination of *mestizos*, or mongrels. Next to this class, range those whose forefathers were not Portuguese; they are either Malay or Chinese converts, but like the Portuguese posterity, free citizens. Their occupations at Macao are limited, as no other mechanical arts than those required by navigation are exercised. Young people of the inferior order either go to sea, or enlist as soldiers; the more fortunate follow the business of merchants,—the holders of a few chests of opium being known by that appellation. Many have made fortunes by the drug, and some have acquired great wealth. A scrupulous friar once intended to refuse absolution of sins to dealers in opium, and would have denied it, had casuists not always a metaphysical hole to slip through. To deal in poison is more immoral than to deal in slaves. By the first mentioned trade, we challenge nobody, we act in secret, and injure whole nations; by the latter, a chance of resistance is offered. The havoc in one case cannot be ascertained, for it is uninterrupted and hidden; in the other it may, for it is open hostility; the ratio at which the mischief acts, may, perhaps, be estimated as an unity to a million. Formerly, the merchants of Macao dealt more largely in slaves, kidnapped in China, Japan, and many other parts. They actually import but few, and those principally by the Timor and Goa ships. How numerous the slaves were twenty years ago, will be evident from the returns of the population the parish ministers handed to the bishop in 1810. It consisted of 1172 white men, 1846 white women, 425 male slaves, and 606 female slaves, making a total of 4049 individuals,—the clergy and military not being included. In 1830, it was estimated at 4628; *viz.* 1202 white men, 2149 white women, 350 male slaves, 779 female slaves, 30 men, and 118 women of different castes. All are Roman Catholics. Portuguese born in the dominions of Portugal, actually living at Macao, do not exceed sixty-two in number. Neither they, nor any other vassal, can quit Macao without the previous consent of government.”

A concise description of the *public buildings* is here introduced by the author, which shows that the ancient inhabitants spared neither treasure nor pains to embellish and protect Macao. The *churches*

are twelve* in number; which are divided into parish churches, collegial churches, &c. Formerly there were two collegial churches; at present there is only one, that of St. Joseph. The plan of this church and college belongs to the Jesuits. We will quote the description entire;—

“Though the corner-stone was laid, it is said, in 1730, the Jesuits had not the pleasure of hearing mass at St. Joseph’s earlier than 1758. From the garden you enjoy a cheering prospect of the Inner Harbor and Typa, as also of the bleak rather small but of harmonious proportions. The church is At two exterior angles of the fabric are two towers; in one of them is a chime; and in the other, in a lower part, a clock. The instructions delivered in the college, were moulded on those of St. Paul. They ceased in 1762, and were not resumed for more than twenty years. At length, the court of Lisbon, in 1784, transferred this establishment to the *Congregation of the Missions*, and in 1800, the charges to be paid by the senate were definitively settled. These professors are six in number, one of whom is the Superior. The principal aim of this institution is to provide China with evangelical teachers. Young Chinese, not exceeding twelve in number, are admitted, and furnished with that they necessarily want. If they evince a sincere desire to become priests, their education is directed that way; but it generally requires ten years before the candidate can get the very first order. Those, whose vocation is dubious, wait longer, or leave the college if they please: others who want application, or are noted for misdemeanor, are sent away. The professors give instruction in the Portuguese tongue, Latin grammar, arithmetic, rhetoric, philosophy, theology, &c. The children of the inhabitants of Macao participate in these studies, though few of them are made priests. The Chinese language is also taught, and English and French occasionally. Parents who can afford to pay for their children a small remuneration monthly for food and a cell, fix them at college, where the students learn to speak genuine Portuguese, and acquire probably a taste for the improvement of their minds. Some children dine at the college, and join their families at night; others attend the lectures delivered *gratis* by the professor at determined hours. In 1815, eight young Chinese, two Malays and sixteen boys born at Macao, were settled in the college; and in 1831, there were seven

*these, there are four or five small chapels. The number of
five.

young Chinese, two boys from Manila, whose fathers are Portuguese, and thirteen born in Macao."

Besides the college, there is *one school*, where children are taught to read and write their mother tongue; * and *another royal school*, where a Professor explains the principles of the Portuguese and Latin grammar, for the benefit of those who are desirous of improving such advantages. These are supported by royal bounty.—Some friars also improve their leisure hours in teaching Portuguese and Latin.

Capuchins, Augustines, and Dominicans constitute the regular clergy of Macao. *Convents* were early founded; but most of these are poor. The female convent St. Clare, *Mosteiro de Sa. Clara*," was erected as early as 1634. The number of nuns has been various, but is now fixed at forty. This convent was burned down in 1825, but the greater part of it has been rebuilt. There are likewise *hermitages* of some note; there are also *charitable institutions*; and among them one hospital, and an asylum for female orphans.

Fortifications were commenced early in the seventeenth century. Macao is walled on one side, and has six forts. The whole military force ought to be four hundred common soldiers, headed by eighteen officers. A spacious *senate-house* completes the list of public buildings.—Notwithstanding his patient research, our author has not been able to discover the "many fine buildings ranged in large squares, surrounded by court-yards and gardens," which are spoken of by Krusenstern in his Voyage round the World. The *cave* said to have been inhabited by Luis Camoens is briefly noticed.

The *Chinese population* is composed of different classes, and cannot be accurately numbered; it is estimated to be about 30,000. They have one temple within, and three without the precincts

* Many of the inhabitants of Macao do not speak pure Portuguese, but use a dialect which differs widely from their mother tongue.

of the city. A *procurador*, who is a member of the Senate, and the organ of communication between the city and the mandarins of the district, is denominated Chief of the Chinese living at Macao; but he exercises over them little or no control. The right of *foreigners* to reside at Macao has been a subject of much dispute; a pretty full view of the question is presented in the work before us; our limits will not allow us to give the details; suffice it to remark, that at present, all foreigners are allowed to reside in that settlement. Our author closes this part of his work in the following words;—

“We have thus given a succinct historical narrative of a place situated in 22 deg. 11½ min. north latitude, and longitude 113 deg. 32½ min. east of Greenwich. The climate is healthy; we have good water, bread, and a well stocked bazaar. On landing, you have before you a spacious semicircular bay, encompassed by rising hills, crowned with forts, convents, churches, and private buildings. The circuit of the peninsula is said to be about eight English miles, its greatest length three, and its breadth nearly a mile.”*

MISCELLANIES.

The vane of superstitious delusions, or false religions, whether polytheistic, Mohammedan, or pseudo-christian, is strongly affirmed by the author of “Saturday Evening.” “Although our knowledge of the human race is now incomparably more extensive, and accurate, than has ever been heretofore possessed, we can descry in no direction, a young and hale and mantling religious delusion, such as threatens to become invasive; or which attracts the eyes of mankind by the signal proofs it

is giving, of its sway of the imagination and the turbulent passions of our nature. The contrary is the fact, and it is so in every zone. It is conspicuous that the demons are holding the reins of their power with a tremulous hand. The spirit of counsel and might has left them; the spirit of adventure and bold imposture has also departed. It seems as if there were neither courage nor concert in the halls of ærial government. Not only is every extant form of error *ancient*—most of them immemorially so—but every form is *imbecile* as well as old." Or, if we would seek a phrase that would at once describe the present condition of every false religion, universally, we find it in the language of the writer of the Epistle to the Hebrews;—They are "become antiquated and decrepit with age," they are in their dotage; and we hope that it may be added, they are "nigh to their final disappearance"—they are ready to vanish away.

Mr Gurney, the supposed author of "Saturday Evening," takes a rapid, but vivid, survey of the various forms of false religion, in the south of Europe, and of Asia, among the Indians, Tartars, Hindoos, and Chinese. Of the people among whom we live, he says with much truth;—"By civilization and industry, but not in matters of religion, the Chinese is entitled to take a rank above his northern neighbor, cousin, and conqueror, the Mongol. In truth, it must hardly be said that there is anything of religion in China, if we deduct on the one hand what is purely an instrument of civil polity—a pomp of government; and on the other, what is mere domestic usage, or immemorial *decoration* of the home economy. Ages have passed away since mind, or feeling, or passion, animated the religion of China. The religion of China is now a thing, not only as absurdly gay, but as dead at heart, as an Egyptian mummy—it is fit only to rest where it has lain two thousand years—touch it—shake it—it crumbles to dust. Let but the civil institutions of China be broken up, and we might look about in vain for its religion." Mr. G. deems that "the religion of the prophet is now in its stage of extreme decrepitude; and that on "the haggard superstition of the west," "have come the many loathsome infirmities that usually attend the close of a *dissolute life*." The Greek church cannot be said to be in its *second* childhood, "for *childishness* has been its character even from its youth up." Through a long life of fourteen centuries, it "has cared for nothing but toys."

From these premises three inferences, our author says, may be drawn. The authentic, the evangelic, and the prophetic. The authentic reasoners "indulge the belief that the instinct of religion in the human mind is slowly wearing out—that the habitude of worship is being obliterated." That this is the result to which the creed of atheistic scepticism leads many individuals is too true; but that such a result will become

general is contrary to the unbroken evidence of experience in all ages, and in all places;—not to say the invincible proof of Christianity. And the Christian will indulge the expectation that this is “a day of preparation,” in the sense of enterprises; and on this ground, notwithstanding all discouragements, it may be hoped, not feebly, that “the Sabbath draweth on.”

Christian Faithfulness.—“The words of the wise are as goads, and as nails fastened by the masters of assemblies, which are given from one shepherd.” Eccl. xii. 11. The one shepherd, Christ Jesus, gives his faithful ministers wisdom from above, to speak a word in season to their fellow sinners; which word, by the agency of the Holy Spirit, pierces the consciences of guilty men, and convinces them of their danger from the justice of a holy God; which words often stick fast as it were in the memory, and produce a salutary change in complete repentance and conversion—even many years after, when the speakers have been long dead.

We have known a recent instance of this. The late Dr. Milne when dying was condoled in respect to his children, by the Mandarin Teacher of the Anglochinese College. The dying missionary replied to the speaker, who was a self-righteous Confucianist, or in other words, a hardened atheist; “I am not anxious, Choo seën-säng, about the temporal provision of my children, who are soon to be orphans; but I am anxious for the salvation of *your* soul.” These words, and various other affectionate appeals of Dr. Milne, and the late Mr. Collie, Chinese professor and subsequently principal of the college, operated on his heart; and there is reason to hope, that they have issued in his cordial reception of the gospel of Christ; and he has at length, after rejecting the gospel for about fifteen years, avowed his faith in Christ and been baptized.

For the first two or three years, he says, the Christian religion, and even theism appeared to him *foolishness*. Since that time his contempt and opposition have gradually diminished; but even now he speaks of himself with fear and trembling. He has spoken of the vanity of idols to his wife, and to his sister, who is a widow; but they laugh at his religious opinions. He speaks of their conduct, not with anger but compassion, remembering that he himself acted a similar part in the days of his ignorance. In this he obeys the admonition of St. Paul to Titus,—To show all meekness unto all men; for we ourselves also were sometime foolish, disobedient, deceived, serving divers lusts and pleasures, living in malice and envy, hateful and hating one another;—the kindness and love of God our Saviour toward man, made the change.

Christians and missionaries should not refrain from affectionate admonition and rebuke, because they may not have been regarded heretofore; but should act on the principle laid down in this saying—“In the morning sow thy seed, and in

the evening withhold not thy hand, for thou canst not tell whether this or that shall prosper, or whether both shall be alike good."

The above mentioned facts show to us, what indeed we have long been convinced of, *viz.*, the importance of schools and colleges for the inculcation of Christian doctrine. We do by no means undervalue the labors of the preacher; but still we think that if there be given only a passing word of exhortation, it will seldom convey to the *heathen*, information enough to convince their understandings, or enlighten their consciences. They require *line upon line, and precept upon precept*. Or, according to the figure of our motto, the nail to enter deeply, and to be fixed securely, must be struck often on the head; which can be well accomplished by those "masters of assemblies," the pious schoolmaster, and the Christian professor, in seminaries of sound learning, and "saving knowledge."

Friendly Admonition.—There are seasons—almost every person can refer to such in his own history, when a plainness of speech is used, which evinces the great excellence of godliness. The voyager, when all hopes of life were lost, has witnessed such seasons; those who have felt the concussions of an earthquake, and heard the crash of falling towers and domes, have witnessed such seasons; and so too have multitudes who have stood and listened to the last broken accents of dying friends. At such times, riches and honors, frowns and flatteries, are lightly esteemed; and words of *friendly admonition*, with a solemnity that cannot be described, break from the lips.

Something of this same kind of honesty is very frequently witnessed at the parting of friends, especially when the time and distance of separation are to be long. An instance of this we have in the *farewell sermon* of the Lord Bishop of Calcutta, delivered at St. Mary's, Islington, on the 17th of last June. The main topic of his discourse is *practical piety*, which "is important, not only because it is that kind of religion that most glorifies God, edifies our neighbor, and brings comfort to our own minds, but because it is the only means of securing ourselves against the seductions of erroneous teachers, of our being preserved amidst the snares and temptations of the world and Satan, and of introducing us into God's heavenly kingdom."

The whole of the discourse is characterized by earnestness, great plainness of speech, and a tender regard for those to whom he was soon to bid farewell. Plainly, yet affectionately, he admonishes *the sceptic, the worldly professor, and the professors of evangelical truth*; and in conclusion, he earnestly commends "all to take the *friendly admonition* of the last accents of one who desires to discharge his last duty, not merely by affection and the most sincere wishes, but in honest endeavors to save every soul he can ere he embarks as it were, for

another world." And therefore, (the speaker goes on to remark) I must come to thy conscience, *sinner*, wherever thou art. I cannot find thee out, but God has thee under the glare of his eye at this moment! Thou art quivering in thy seat at this instant, though I know thee not! Take the friendly warning, and escape! Flee, I pray thee, from the wrath to come! flee to the Saviour ere it be too late! Begin real religion! Renounce thy wine, thy harlots, thy lusts, thy pleasure, thy merely human science, thy poetry, thy philosophy, thy everything that stands in the way of heaven; and when you have received the love of God, you will simply use what is lawful in these things. O, remember it is not what I say—sayeth not God the same? Is not God love? If an earthly parent require the love of his child; if the love of a friend be the only essential quality of friendship; if a benefactor look for gratitude; I appeal to your common sense, I appeal to the tribunal of conscience, if it be not hardened by profligacy and habits of vice, which desolate conscience, and leave it like a seared and callous flesh; if there be a conscience, if there be anything of moral feeling in the sinner, shall not the God that made thee have thy supreme love? Shall not the Redeemer that died for thee claim and possess thy affection? Shall not the sanctifying Spirit see thee praying for his grace? Shall not the love of God be paid to thy heavenly Father, thy heavenly friend, thy divine benefactor? Yes! O, may the angels of Christ take up the tidings to his throne that every sinner here is beginning to repent? Yes; I pause while the desire is formed in the breast of every sinner. Let each one put up to the throne of mercy this ejaculation, 'Lord, give me thy grace, and may I begin this heartfelt religion!' . . . I pause that you may make the prayer in your own breasts. O, my God! Is there one that has not made the prayer? Is there a heart so hard that it has not seized the moment to aspire after grace and salvation? No; I so trust thy mercy, that I cannot think there is one from the youngest to the oldest, that has not addressed a prayer for the love of God; and in that persuasion, beloved, I bid you *farewell*."

RELIGIOUS INTELLIGENCE.

SIAM.—Amidst the many discouragements and oppositions which sometimes threaten to stop or retard the progress of Christianity, it is a strong consolation to know assuredly that the truth of God will finally triumph. We are sorry to hear

that Mr. Abeel, on account of ill health, has been obliged to leave Siam. On the 15th ult., he was at Singapore, where he had been for about two months; and though his health was considerably improved, it was still uncertain with him, whether

he should return again to Bangkok.

From a communication now before us, written by Mr. Abeel, and which we will publish in our next number, it appears to be doubtful whether Protestant missionaries are to be tolerated and allowed to prosecute their labors under the present government of Siam. There is at present we suppose, no Protestant missionary in that country; Mr. Jones was, by late accounts, at Singapore, waiting for an opportunity to go up to Bangkok.

During his last visit to Siam, Mr. Abeel was occupied much of the time in distributing Christian books among the people on board the Chinese junks. About 80 of these junks, he says, visited Siam during the last season.

VAN DIEMAN'S LAND. We have before us a letter dated Hobart Town, Van Dieman's Land, which fully confirms the account we gave in our number for Dec., that much good is already accomplished, and in progress throughout that colony. There are families, a few at least even in the interior, where God is known and worshiped; and where the family altar has been erected, and that grace has appeared which teaches men to deny ungodliness and worldly lusts, and to live soberly. Among other improvements, a *temperance society* has been established. These facts show "no doubt, the best side of the picture;" or rather, they exhibit "some of the bright spots in a dark picture;"—they are an earnest of what is yet to be seen and enjoyed.

MR. WOLFF.—Reference was made to this very extraordinary man in our number for October last; the *Oriental Christian Spectator*, of the same date, contains his journal to Bokhara. It is full of interest; but gives no information concerning the Jews in China.

The people of Bokhara, he says, "are good natured, but exceedingly effeminate, have no energy and are a complete kingdom of mullahs." He was informed that the ancient rabbies of that place "asserted Bokhara to be the Habor, and Balkh, the Halah, of 2d Kings, xvii, 6;" but they have, he adds, "no written account of it." On his arrival at Balkh, he ascertained that it was first called Hanah, and then Halakh, and by the latter writers *Balkh*; this account makes him not only suppose that Bokhara and Balkh are Habor and Halah of the Mosaic history, "but likewise that Turkestan is the land of Nod, (Genesis iv.) i. e. where Cain dwelt when he went out from the presence of the Lord, and that Balkh is Enoch (Genesis iv, 17,) built by Cain."

"The inhabitants of Khiva and Bokhara (he says), are called *Osbeck*, os signifies *self*, and beck, *lord*." "It is totally a mistake to call the Osbecks *Tartars*;" "they do not know here the name of *Tartars*." "We laugh about the ignorance of the people of this country with regard to Europe, and our learned professors in Europe know as much of this country with all their books, as the Turcomans of Mowr do about England." There are at Bokhara about 200,000 inhabitants.

LITERARY NOTICES.

Chinese Printing.—Mentoin was made in our last number of Mr. Dyer's *metallic types*. An account of these, which was written by Mr. Dyer is now before us, by favor of Dr. Morrison; it was accompanied by the following note, addressed "To the Editor of the Chinese Repository."

"My dear Sir;—Inclosed I send for your perusal an essay on the subject of *movable types*, written by the Rev. Samuel Dyer of Penang. Mr. Dyer has for the last six years turned his attention to this subject, and will, I trust, eventually succeed. The importance of procuring Chinese movable types at a moderate expense, is, in my judgment, an object of the first importance toward the diffusion of useful knowledge and the Christian religion, in Eastern Asia and the islands thereof. In China, all the lighter reading, and tracts for the poor, are in respect of religion, science, and morality, miserably deficient, or positively bad. A new literature, innocent and instructive, must be created by the friends of China. And to produce it, I know nothing so important as the casting of cheap movable types, or Chinese characters.

"I remain your's faithfully.

ROBERT MORRISON."

We shall, perhaps, be able to form a more perfect idea of Mr. Dyer's proposed improvement, if we keep in mind the method of printing with *wooden blocks*, or plates; which, by the bye, has existed, and been in general use, among the Chinese, for at least nine hundred years. It is in fact, a species of *stereo-type*; and is well described in Dr. Milne's "Retrospect," to which we are indebted for most of the few following remarks. See that work, pp. 222—266.

The block, or wooden plate is first squared to the size of the pages, with a margin at top and bottom; it is in thickness generally about half an inch; it is then planed smooth on both sides, each of which contains two pages, or more accurately *one leaf*, for the Chinese number the *leaves*, not the pages of a book. The surface of this block is now rubbed over with rice boiled to a paste, or with some glutinous substance, which makes it perfectly smooth, and at the same time softens and prepares it to receive the impression of the characters, which are soon to be placed upon it.

This block, together with an exact copy or fac-simile of the characters which are to fill the page or leaf, is put into the hands of the *block-cutter*; who

before the glutinous matter is dried up from the board, puts the sheet on *inverted*, rubs it down with a brush and with his hand, until it sticks very close to the board. He next sets the board in the sun, or before the fire, for a short time; after which he rubs off the sheet entirely with his fingers,—but not before a clear impression of the characters has been communicated to the board. The engraving tools are then employed; and all the white part of the board is cut out, while the black, which shows the characters, is carefully left. The cutting of the block being completed, the process of printing follows. The block is laid on a table, and a brush made of hair, being dipped in ink, is lightly drawn over the face. The sheets being already prepared, each one is laid on the block, and gently pressed down by the rubbing of a kind of brush, made of the hair of the *tsung* tree. The sheet is then thrown off; one man will throw off 2,000 copies in a day.

These remarks will suffice for our present purpose; and we proceed to introduce Mr. Dyer's account of metal types; and will make as copious extracts as the nature of the document will allow;—but must, *for want of the very types which he describes*, omit a part of the account. He has divided the subject into *five parts*; we will take them in their order.

1. *The nature of Chinese metal types.* Chinese metal types may be compared to English *logotypes*—where one type contains a complete word: for in Chinese, one character expresses

a complete word, and not a single letter, or even a simple syllable of a word.

In forming a font of English *logotypes*, of course, it would be desirable to have more types of such words as occur more frequently, and fewer types of such words as occur less frequently; in fact, to have a due proportion of types, according to the proportion of times in which each word occurs, as near as that proportion can be ascertained.

E. g. Suppose the word "the" occurs oftener upon an average calculation, than the word "and;" and this again oftener than the word "that;" it follows that we want more types of the word "and," than of the word "that," and still more of the word "the,"—in order that there may be a due proportion of each; in fact, the proportion of *logotypes* should be calculated, just in the same way that the proportion of each particular *letter* has already been calculated, for the use of English printers.

But as some words occur oftener in one book than in another, owing to a diversity of style, subject, &c., the font, in order to be generally useful, must be calculated not from one book alone, but from many, and those of diverse style, subjects, &c. It is in this way, the present estimated proportion of each particular Roman letter has been obtained.

Precisely this plan should be adopted, in forming a font of Chinese *logotypes*. For it is almost necessary that Chinese metal types be of this description.

2. *The desirableness of a font of Chinese metal types.* Chinese metal types are exceedingly desirable, in order that we may be able to combine the

Chinese character with the European. This circumstance however, we suppose, can only be duly appreciated by those who are acquainted with Chinese literature. Dr. Morrison's Dictionary could not have appeared in its now elegant state, but for Chinese metal types of some kind; the same may be said of Premaré's *Notitia Linguae Sinicæ*. It is true, that Mr. Davis's tract on Chinese poetry is printed very handsomely with wooden blocks; but then the wooden blocks, I imagine, do not combine with the metal, strictly so speaking; they only unite with it as woodcuts.

How far are metal types desirable, with respect to the printing of the Chinese Scriptures? See Bib. Soc. 11th Report, p. 147. Dr. Marshman's opinion is this:—"One instance of their utility you have already seen, in our being enabled to get and correct ten or twelve proofs of one sheet, before we finally struck it off. This, however, we could not have done in wood. There, all is immovable; no improvement after the chisel has begun its work, but by means almost equally expensive with cutting a new block; and if we say correct it ten or twelve times, only think of the expense of getting ten or twelve fair copies of each sheet. But the moving of a few characters up and down, or the replacing them with others, is the work of a far less number of minutes.... Another advantage arises from the difference between metal and wood, in point of durability, &c."

The Dr. goes on to calculate

the difference of expense between the two methods, and makes out a saving of *two thirds*, by the use of metal.

2. *Of the defects and disadvantages of past attempts to form Chinese metal types.* We believe the only three fonts in existence are at Macao, Malacca, and Serampore; they are all deficient, inasmuch as fresh characters must be supplied as required, while any work is passing through the press; at least, if that work contain more characters, or characters of more sorts, than have been employed in printing any preceding work, which will generally be found to be the case in printing a work of any extent.

We believe the whole of these types have been engraved upon the face of metal; but whether it be owing to the difficulty of engraving on so hard a substance as the metal, or to any other cause, it is a fact that they are not only inelegant, but possess an air *so foreign*, that it is by no means advisable to print the Scriptures and tracts with them, while we can obtain woodenblocks; for these latter far surpass anything we have yet seen printed with metal, either at Macao, Malacca, or Serampore.

The small font sent out from England, has been tried with admirable success; we have not heard a dissentient voice: the only defect seems to be the *smallness of the font*.

[This font is at Malacca; and the *beautiful specimen*, which we noticed in our last, was printed with it.]

4. *Suggestions for an improved font of metal types.*

There is no doubt that metal types may be made by means of punches, in the usual way. Mr. Figgins, a respectable type founder in London, has attempted it with great success. Had he been familiar with the character, his success would have been still more complete. But then, this method involves such an immense expense, owing to the variety of character, that it is to be feared we must wait long for a fount obtained by this method.

By preparing a set of blocks, and forming from them a set of stereotype plates, each the common height of metal types, and then sawing the metal plates into pieces, (a process which has succeeded very well in a late experiment upon a small scale,) metal types may be obtained without punches, and the character will be a *fac-simile* of the original blocks.

The original blocks must contain such an arrangement of the characters, that when the process is completed, there will result a due proportion of each.

[Having no type for Chinese printing, we must omit Mr. Dyer's illustration of this part of his subject. It appears, however, that he has made out the proportions for the new fount, by calculating the relative number of characters in *fourteen* Chinese authors,—some historical, some moral, some native, some Christian, &c.]

The variety of characters occurring in those portions of the fourteen authors alluded to, was only 3240; of which several hundreds occur exceedingly seldom; and as not only these, but several thousands more are necessary to make the fount tolerably complete, they must of course be cast, though in

the proportion of 2, 3, 4, and so forth to 700.

It is proposed to cast a variety of 12,000 or 18,000 characters; these when cut will occupy the space of 200 blocks (more or less) these blocks to be cast once, twice, thrice, &c., in order to give a due proportion of every character....

But successful as our late experiment has proved, there is one serious difficulty attending it; a font in continual use may last, say five or seven years, and then it must be recast; now the difficulty and expense of procuring a new fount every seven years, is very great, unless we had the means of casting them in India. Having most maturely weighed the matter for six years, I am persuaded that however successful our present plan is, we ought to *commence* punch-cutting....

[In favor of punch-cutting, Mr. Dyer advances several arguments;—“that a punch is the foundation of perpetuity;”—“if the punches of the most important characters in the language, be cut, we could recast the mass of characters ourselves;”—“the further we proceed in punch-cutting, the greater the advantage;”—“if we had only a hundred punches, and those were the first 100 in the before mentioned calculation, they would be of immense service to us; the mass of the language is not much more than 1200 (twelve hundred) characters in variety.” N. B. “The types cast from matrices, can easily be made to agree with the types cast from blocks, provided the characters themselves are of the same size.”]

5. *Proposal for cutting the punches.* As the Archipelago is now opening extensively, and we are now wanting types in Cambodian, Laos, and so forth, and our opportunities are enlarging, it is very desirable that *we should have a worker*

in steel on the spot; we could then proceed with punches of Chinese, Japanese, Cambodian, Laos, &c.; and if we only had a person who understood the whole, we could employ native Chinese under him, and cut many punches at one rupee, or two shillings English each.

Mr. Dyer proceeds to remark on the qualifications which a person engaging in this business ought to possess, and the manner in which he should be furnished for, and supported in his work; he presents several considerations relative to *economy* in the work, and then says, "certainly we can work upon punches many times cheaper in India, than in England;—I have it from good authority and an experienced individual, who says, *ten times* cheaper."

It appears from parts of Mr. Dyer's paper which we have omitted, that he is preparing blocks for metal types, and will forward them to England with all convenient dispatch; he is also preparing a specimen of character, with notes, &c., to enable any public spirited type-founder, who may be disposed to engage in such an enterprise, to commence cutting punches immediately; everything has been done to point out the way, and to facilitate the business, so that the artist may proceed without delay. We wish Mr. Dyer every success in his noble undertaking; his object is surely an important one; and we hope he will receive the approbation and support of good men not only in England, but throughout Europe and America. The

friends of letters and Christianity in India will also, we hope, give the subject the attention which it demands.

We are inclined to think, judging from what we have seen, that *metal types* will prove to be (in some instances at least) as much superior to the common *block printing* of the Chinese, as a fine European merchantman is superior to a common Chinese junk. We do not expect that the Chinese will at once see, or rather *acknowledge*, this superiority. They have long seen the superiority of the European ship, but they are slow to acknowledge that superiority, and do not avail themselves of the improvement.

The Chinese have *felt* the defects of their method of printing with wooden blocks, and they have tried, but with little success, to remedy them. As early as the *thirteenth* century, they are supposed by some writers, to have invented movable types; but as these were "made of burnt clay," they must have been very rude and useless.

In 1722, Kanghe, who has been justly esteemed the most learned monarch of the present dynasty, ordered a great number of movable types to be prepared. These were made of copper, but how they were prepared—whether they were *cut* or *cast*—we do not know. Defective and inelegant, as these undoubtedly were, Keenlung was pleased to denominate them *congregated pearls*: yet, strange to tell, during a scarcity of coin, he allowed them to be melted down; this measure

however, he afterwards regretted, and caused 250,000 wooden ones to be cut in their stead.

These facts, while they evince the defects and failure of the Chinese in typography, show the desirableness of some improvements in their printing. For ephemeral works, and where much expedition is required, they have adopted another method, which differs from either of the preceding, and of which the Canton Court circular (which is issued daily) affords a specimen. This method of printing is executed with *waxed plates*. They are prepared by spreading a thin coat of wax upon a board, and then forming the character on the wax, just in the same manner as it was formed on the smoothed surface of the board of the wooden blocks. The printing which is done in this way is scarcely legible.

Having said so much concerning metal types, we ought also, perhaps, briefly to notice some of the advantages and disadvantages of printing with wooden blocks. Here we may refer again to the "Retrospect."

Some of the *disadvantages* of the Chinese method of printing with wooden blocks are the following.

1. It is not well adapted to ephemeral works, which require dispatch,—such for example, as an extra gazette, lists of sales, &c.,—because *days* are required to cut characters for a piece of work, which with metal types might be completed in a few *hours*.

2. When printing is extensively carried on in the Chinese method, blocks accumulate and become cumbersome; be-

cause however many inches of letter-press there may be in a book from beginning to end, there must be exactly as many inches of block;—precisely as in the European stereotype, with this difference, however, that the wooden block is uniformly cut on both sides.

3. When a very large edition of a work is printed off from the blocks, (however excellent they may be,) the face of the character wears down, and it loses its clearness; good blocks, however, which are carefully used will last to print, ten, twenty, or even thirty thousand copies.

4. The necessity of cutting the same character over and over again, if it should occur one, three, or five thousand times in the same book; and the inapplicability of the blocks to any work but that *one* for which they were prepared,—are great disadvantages.

5. The Chinese mode of printing is, like their national policy, very *unsociable*; it is ill suited to sort with that used in other languages. Attempts have been made to combine blocks and types in the same form, but they do not look well, and are exceedingly inconvenient.

6. To these we may add, that Chinese blocks are of no service when the characters are worn down; whereas metal types, however old, furnish the material for a new font. These, and some other minor disadvantages are noticed in the work of Dr. Milne.

The *advantages* of the Chinese method of printing with wooden blocks, may be such as the following.

1. It seems to possess all the advantages of European stereotype, except these two—the durability of the blocks, and the combining of several pages in a single form: and on account of the ease with which the blocks are prepared, the Chinese has an advantage over the European method.

2. All sizes and forms of the character may be cut on the same wooden block, by the same hand, with nearly equal expedition and cheapness. Suppose a book on science is illustrated by a paraphrase and notes. Here the text would be in larger letter, the paraphrase in a smaller, and the notes in a third size; to these add the mathematical, astronomical, and physical signs—all of which in the work supposed would find their place;—here then is a combination of *six* kinds of letters and signs, which require to be cast in *six* kinds of matrices, the expense of which must be very great; but this expense, on the Chinese method, is not incurred.

3. The apparatus necessary for the whole process of Chinese printing with blocks is exceedingly simple. No foundery for casting; no complicated machines for printing and binding, are required. In printing on a small scale, every instrument necessary for the whole process, (a table and a chair excepted) may be packed up and carried on a workman's back; and all the work performed in the corner of a cellar, or a garret, without noise, and by the labor of a single individual; and to carry it on upon an extensive scale, a common trunk

of four feet by two and a half, will contain the requisite apparatus.

This view of the subject, Dr. Milne supposed might be applied in its practical results to cases like the following. In a season of persecution, when the utmost vigilance of the Chinese police is roused to search for everything that relates to the gospel, the Christian printer, if persecuted in one place, may in the silence of the night, remove to another; where, if he can obtain some small apartment, he may be at work again early the next morning, as if nothing had happened; and should he in his flight, not be able to carry his implements with him, he will find another set for a very small sum of money, in the space of twenty-four hours, in any town or village where blacksmiths are to be found. Here he may print a few hundred or thousand copies of small tracts, or portions of Scriptures; and distributing them as he finds opportunity, he may be ready to move again, in a short time, should the violence of persecution render it necessary.

Another case is supposed;—when missionaries may be permitted to travel through the country to propagate the Gospel, they may then introduce *itinerant printing*,—which will exhibit the press in a light entirely new. “Let us then for once, send the press out to make the tour of China. Suppose a missionary sets off from Canton, taking his printer with him, and a small box or bundle of tools. Paper, and wood for plates, he may find almost every where. He pursues his course

along the southeast coast, through the provinces of Fuh-keän, Chekeäng, Keängnan, and Shantung, to Peking; and on his way home pursues a different route, through Shan-se, Kansuh, Szechuen, Yun-nan, and Kwangse. Now, in each of the provincial towns, he may find it necessary, or useful, to publish a small tract, or some select portion of the word of God. Part of the day he preaches, and part of it is devoted to preparing these for the press. If they do not extend beyond eight or ten pages, the printer will, in as many days, finish one. The tract is then printed, distributed, and the blocks are made a present to some person, who may from regard to his own interest, multiply copies and sell them. If he wants the same tract or some other one at the next province, or large town, it can be prepared; and if he travels by water, the printer may be at work all day, as the inland navigation is seldom attended with such motion of the vessel as to prevent people from carrying on their usual work. The tract may be nearly ready by the time they reach the place where it is to be circulated. It is circulated; and another, if wanted, prepared, printed, circulated, and the blocks, as in the former instance, given away. Thus he does throughout all the ten provinces through which we have conducted him. On his return home, he can calculate that he has, by the good hand of his God upon him, not only preached the gospel round the border of the Chinese empire, but also printed ten or more

tracts, in ten of its provincial cities, in each of which, thousands of copies were distributed, and where the blocks still remain to multiply thousands more."

These two illustrations will apply with equal force to objects of *science*. The scientific man, while lecturing on history, natural philosophy, &c., in his tour through the provinces of China, may print abstracts of his subjects, and leave them behind him or circulate them as he passes along from city to city.

We have now given succinctly, what appear to us the principal advantages and disadvantages of the Chinese method of printing with wooden blocks. These remarks in connection with Mr. Dyer's account of metal types, we hope will help to excite and direct attention to *Chinese printing*. The press is a powerful engine; and we cannot doubt that—under God—it will eventually prove in China, one of the mightiest engines for the diffusion of truth which the world has ever witnessed.

Cost of printing the Sacred Scriptures in Chinese with wooden blocks. The following statement we have obtained from an experienced native workman. The cost of the blocks will vary according to the *quality* of the wood of which they are made, and the *style* in which they are cut; and it is estimated to be—

for the superior style,	\$1,800
for the middling,	1,400
for the inferior,	900

The cost of printing will vary according to the quality of

the paper, ink, &c., and the style of execution. After the blocks have been prepared, and when an edition of several hundred, or a few thousand copies is required, the cost of each copy is estimated to be—

for the superior,	\$3
for the middling,	2
for the inferior,	1½

From another source we have a different estimate; the cost of the blocks of good material and cut in a good style, is put down at \$1,300 (thirteen hundred dollars), and the printing, including as above, paper, ink, &c., is \$1 (one dollar) per copy.

We have before us two books which will illustrate the economy of the Chinese method of printing with wooden blocks.

1. *Shing-shoo Chow-chin*, or 'the Sacred Sleeve Gem.' This little book, which consists of extracts from the Sacred Scriptures, contains more than two thirds as many characters as the gospel of St. Mark. The

blocks for printing the book cost ten dollars, and the printing of 3,000 copies, including paper, &c., cost thirty dollars more; thus after the blocks are obtained, copies of the Sacred Sleeve Gem are furnished at the rate of one dollar per hundred.

2. *Ta-tseuen Tung-shoo*. This is "a large and complete Almanac" for the 12th year of Taoukwang (1833); it contains one hundred and nine leaves, or 218 pages octavo, and is sold at the rate of eight dollars per hundred.

Chinese lithography.—Two or three years ago, Mr. Medhurst of Batavia, employed the lithographic press for printing Chinese; subsequently, and for the same purpose, a press has been set up at Macao: both of these attempts have been successful. During the last season, a lithographic press has found its way to Canton, where, we are happy to know, it is in successful operation.

JOURNAL OF OCCURRENCES.

UNDER this head, our difficulty does not consist in want of matter; but in the labor of selection and compression. The sources of information are partly official, and partly popular rumor. The credibility in our judgment is about six of the one and half-a-dozen of the other, out of ten tenths of the whole. In very few cases is the whole tale untrue; and in as few cases, is the story wholly false. All that we can do is to report faithfully to the best of

our knowledge and belief. Perhaps we should omit the last word; for it seems to be our duty to report for the sake of general information what is said to be the fact, whether we believe it or not. We take the liberty in many cases to defer our decision—whether to receive as true or not—what may be commonly reported. And we wish our readers to take the same liberty with what we narrate; for we have not the means of arriving at the highest de-

gree of probability, though we always aim at it, and will never report what we know to be untrue.

FORMOSA.—The reports from this island continue to be contradictory; at one time it has been reported that all the inhabitants of the island were in rebellion, with a force of 700,000 strong! again it has been rumored that the imperialists have gained the mastery.

The affair has produced considerable sensation at Peking; and a 'flaming dispatch' has come down from his majesty, by which it appears that the governor of Fuhkeën is to take the field, and that two imperial commissioners, with thirty subalterns from Peking, are to join and aid his excellency in putting down the rebellion. Large numbers of troops in the provinces of Canton, and Fuhkeën, and Chekeëng, are at the command of the commissioners.

Trade on the northeast coast of China.—Several official documents have been issued, both by the supreme and provincial governments, in reference to the English ships which have appeared on the coast, during the last six or eight months. A brief exposition of the intentions of the English in this part of the world as being commercial, and pointing out the benefits of amicable and free commerce reached his imperial majesty; and though not couched in the servile language which he might wish, yet probably, it tended to inform and influence his understanding. For in the recent documents, although there is expressed a firm resolution to limit the commerce to Canton, there is nothing of anger apparent. He directs that no supplies of water or rice shall be given or sold to foreign ships wishing to trade on the coast, nor must they be allowed to buy or sell goods; still they are not to be fired on; nor any attempt to be made to search them. So far his majesty is mild. The governor of Keängnan was evidently in favor of some trade to the northward. He proposed to search the ships, and if they had contraband goods, then drive them away—implying, that if they had not, they might trade. And the governor of Canton instead of suggesting the seizure of the persons on

board any of these ships to punish them; proposes that after their return they may be allowed to trade at Canton, and the hong-merchants be required to deal justly with them. Thus, he adds, he intends to follow up his sacred majesty's extreme desire to facilitate the intercourse of merchants, and to show tenderness to strangers from distant parts of the world. Whether all this soft talking will be followed by more liberal acting or not, we do not pretend to say; but some persons think it almost amounts to a tacit connivance.

Mr. Gutzlaff's Christian name *Keale* (for Carlos) has come to the emperor's notice twice. He was on the coast of Keängnan the 19th of December, and the ship in which he sailed, had been the means of saving twelve shipwrecked Chinese, who were landed on the island Tsungming (see D'Anville) to which they belonged. Did deeds of beneficence and kindness always accompany commerce, it would be a double blessing to the nations of mankind.

GOVERNOR LE.—According to late accounts from Peking, governor Le is to be banished to Oroumtsi, there to await the pleasure of his majesty.

Low Yungking, who was with governor Le at Leëncchow, and who was taken with him a prisoner to Peking, is sentenced to hard labor at Ele.

PATRONAGE.—In the 160th Peking Gazette for the current year, his majesty has published to the empire a decree against a system of patronage, very common throughout the provinces, but ill calculated to preserve good government. It was occasioned by a gross abuse of the practice by the Tartar lieutenant-governor of Shanse, Ohlihtsingo. The phrase for this patronage is, that the superior and inferior, "worship and recognize each other as teacher and pupil." The inferior officer becomes the slave of his teacher; and the superior gives the whole of his influence to support and defend the pupil in his mal-administration. It is easy to see how badly this will work for the welfare of the people.

The emperor says, the higher officers of the state ought to correct

themselves and be an example to their inferiors; to view the affairs of the nation with the same care that they do their domestic affairs, and measure the hearts of the people by their own. Then they would be to him as arms and fingers, for effecting his imperial will. But this system of patronage leads to bribes and corruption, and reciprocal protection in every species of illegality; and public justice is sacrificed for private favor; the affairs of the nation are considered as trifles; feelings of partiality or resentment are fostered; and cabals are formed which are a disgrace to government. He admonishes governors, &c., to lay their hands on their heart in the silence of night, and say whether they do not feel ashamed of such practices; and he threatens hereafter to punish severely those who do not reform. Governors, says he, should "split the face of favor," and act according to real facts, promoting the deserving, and reporting the unworthy; holding with a firm grasp the great principles of justice, and not sinking down into such vulgar practices.

State of Chinese Society.—About eighteen or nineteen years ago, a linguist of Canton named—— was transported to Elo for an alleged connection with foreigners, villainous, traitorous, and so forth. The young man himself possessed some natural cleverness and a great deal of impudence, with very little principle. Although a convict, he was on his departure not destitute of money. The hong-merchants probably assisted him. At the place of his banishment he made himself useful as a clerk to government; and got into scrapes, as was his custom. About

three years ago this man, about forty years of age, returned from exile; attempted again to come forward among the barbarians; but was rejected by the co-hong, and therefore he now lives in retirement, indulging himself in his vices. Returning not long ago from a dinner party to his own house, he attempted violence on the person of his son's concubine,—a poor woman in all probability bought with money. She resisted the brutal intention of this lord of the mansion. He chastised her so severely as to occasion her death. The facts became generally known to the police; but the influence of money with the parents of the deceased and the underlings of office, hushed up the affair, and atoned for the murder.

DEATH.—The Chinese dislike the use of this word, and, in order to avoid it, contrive various periphrases, such as "absent," "rambling among the genii," &c. Of late we have observed one new to us; of a certain one it is said, "he being sick occasioned a vacancy," i. e. died.

The taedngkuen, or Tartar general of Canton has been recently suspended from office, in consequence of his conduct during the late rebellion at Loenchow.

The Chinese new year, (the 19th of his present majesty's reign) commenced on the 20th instant. The Canton court circular for the 20th of the 12th moon, announced, that from that date until the 20th of the first moon of the current year, all the public offices will be closed, and the circular discontinued. In special cases, however, business may be transacted, though usage does not demand it.

Postscript.—The mercantile business of Canton has been carried on, during the last season, with few if any hindrances or interruptions. The Factory of the Honorable East India Company left Canton for Macao on the 27th instant; many of the Chinese merchants from the provinces have completed their transactions, and are returning home.

The weather during the month has been rather mild—occasionally damp and rainy—but during the holidays very fine. Now (on the evening of the 26th) we have a strong breeze from the north, with a good bracing air.

THE
CHINESE REPOSITORY.

VOL. I.—MARCH, 1833.—No. 11.

REVIEW.

Contribution to an historical sketch of the Portuguese settlements in China, principally of Macao; of the Portuguese envoys and ambassadors to China; of the Catholic missions in China; and of the papal legates to China. By A. L. Knt. Macao: China. 1832.*

3. PORTUGUESE *envoys and ambassadors to China.* The Chinese have, in their own estimation, no equals. Their country occupies the principal and central part of the earth's surface; and their emperor is the supreme potentate who rules over all nations. They enumerate, in their imperial books, no less than thirty tributary kingdoms. Portugal is among this number. No sooner were the Portuguese permitted to settle at Macao, than "their vassalage began;" and they were required like the inhabitants of Corea, Cochinchina, Siam, &c., to acknowledge their dependence, by sending envoys and ambassadors with tribute to the sovereigns of China. Several of these missions are mentioned in the work before us; we will briefly notice each of them in their order.

* Continued from page 408.

Thome Pires was the *first* Portuguese envoy to China. He was appointed by the governor of Portuguese India, and was instructed to propose to the emperor of China a treaty of commerce. He embarked with Fernão Peres de Andrade; and on his arrival at Canton (1517), he was accommodated, and provided for, in the usual style of foreign ambassadors. The emperor was immediately made acquainted with his arrival and the object of his mission; but he took time to deliberate. A subject of the late Sultan of Malacca was then at Peking, and claimed protection against the Portuguese, who had (in 1511) wrested from his master, a vassal of China, his capital and dependencies. The emperor had requested the Portuguese to restore to the Sultan his sovereignty; but perceiving that the recommendation was slighted, policy suggested the propriety of admitting the Portuguese envoy, and Pires, after a lapse of three years, was allowed to proceed from Canton to Peking. But in the mean time, Mohammedans at Canton had disclosed the design of the Portuguese;—"they aim at ruining all foreign shipping, that they alone may carry exports and imports all over the world." This invidious insinuation gained credit; and in connection with the ill conduct of Simon de Andrade at Sanshan, induced the governor of Canton, in a memorial to the emperor, to write—"the Portuguese have no other design than to come under the denomination of merchants to spy the country, that they may hereafter fall over it with fire and sword."

All this, with the unrelenting diplomatic complaints from the ambassador of the Sultan of Malacca, and frequent reports of the iniquitous proceedings of the Portuguese in India, moved the emperor to appoint a competent tribunal to examine whether the embassy was legitimate or spurious. Pires and his companions were adjudged to be spies, and were sent back prisoners to Canton, there to

be kept in custody. Were Malacca restored, the envoy and his retinue should suffer no harm; but if it were not restored they should be dealt with according to the law;—"by its tenor, Thome Pires and others suffered death in September, 1523."

In this connection, our author remarks with severity on the conduct of other European nations in their early intercourse with the Chinese. He quotes examples of "plunder and piracy," which show that the Chinese have had cause for treating foreigners with distrust, and for excluding them from their country. Other examples are on record which prove "that at the end of three centuries, the boasted European civilization is still unwilling always to respect international laws and right."—This is a topic of thrilling interest to the friends of China. If the conduct of foreigners be characterized by acts of cruelty, oppression, and injustice, its evil consequences will be twofold; they will be felt both by the foreigner and the native,—but chiefly by the latter. In point of morals, the Chinese by their own confession are growing worse and worse; and for aught we can see, this retrogression will continue, and will be increased as it continues, until some counteracting influence comes in from abroad. Let the conduct of foreigners then, in their intercourse with the Chinese, be marked, be *distinctly marked*, by deeds of probity, justice and good-will, and great and salutary will be its effects. Wrath can be conquered by kindness; and a proud, selfish, and exclusive spirit, even of the most desperate character, may be subdued by gentleness, kindness, and that charity which "seeketh not her own."

The *second* embassy which we have to notice, was undertaken at the suggestion of Francis Xavier. "The apostle of the East," contemplating the expediency of opening a way for Christianity in China by means of an embassy, suggested the

plan to Dom Alfonso de Noronha; it was approved, and Diogo Pereira was appointed for this mission; he was furnished with suitable presents, which were to be delivered to the emperor in the name of King John III. Xavier embarked with Diogo in this expedition; they left Goa in 1552; but on their arrival at Malacca, their ship was deprived of her rudder by the prefect Alvaro, and the project of proceeding to China was abandoned.

A *third* diplomatic mission was undertaken in 1667. In order to prevent piratical depredations, Kanghe had commanded all his subjects, who were living on the borders of the sea, to remove four or five leagues from the coast, and to suspend all navigation southward. This was in 1662. By the intercession of Schaal, the Portuguese of Macao were exempted from removing to a new place, but navigation remained forbidden. Informed of this state of affairs by the senate of Macao, the viceroy of Goa chose Emmanuel de Saldanha, and sent him in the name of King Alfonso VI., to the court of Peking. The expense of this embassy was 30,365 taels; but the result of it "so little answered the expectations of Macao, that the senate solicited his majesty not to intercede in behalf of his vassals at Macao with the government of China, were it not in an imperious and cogent case."

Such a case, it was thought by the court of Lisbon, had arrived. The disputes of the Roman Catholics about certain ceremonies, (which will be noticed on a subsequent page,) induced Kanghe (1721) to send Antony Magalhaens to King John V., that by the king's mediation he might induce "the Pope to put a stop to the polemic animosity of missionaries, and to grant to the Chinese proselytes permission to practice the established customs of the empire." Yungching, shortly after his accession to the throne, forbade in 1723 the exercises of Christianity throughout his dominions. "In order to soften this severity, and to calm the

mind of the emperor, his most faithful majesty sent, as his representative, Alexander Metello de Sousa e Menezes with father Antony Magalhaens to China; they landed at Macao 1726."

A few days before the ambassador set off for the capital, he received from the tsung-tuh, or governor of Canton, a copy of an imperial order, which, among other expressions, contained the following:—"The European ambassador has passed many thousand miles to come here; the tsung-tuh of Kwangtung must give him servants and provisions during his journey, and a mandarin to attend and take care of him. . . . In reference to the departure of the ambassador, let that be left to his own will; it is not proper to molest him by hurrying and pushing him on; thus shall the tsung-tuh, as my representative, convince him of my kind affection." On the 18th of May, 1727, the ambassador made his entrance into Peking. Of his audience with his majesty, which took place ten days subsequently, we quote the description entire:—

"Two mandarins in actual waiting at court preceded; then followed an assessor of the Le Poo, or council of state (translated also, Tribunal of Civil Office), and Parennin a French jesuit, the interpreter; next came the ambassador carrying with both hands his master's letter; and after him followed the secretary, and a third gentleman bearing the title of mordomo, who was conducted by a mandarin. Accompanied by the assessor, his excellency entered the western gates, ascended the steps of the throne, kneeling presented the credentials; he rose, went out by the same way, and in front of the middle door that was open, the ambassador and retinue performed the usual act of obeisance. This ceremony being over, the ambassador was brought to the foot of the throne, and seated at the head of the grandees; shortly after he had permission to make his speech, which he delivered placing himself on his knees upon a carpet.

"On the 7th June, the presents contained in thirty chests and boxes, were offered. The emperor said:—"It gave him great pleasure to perceive in so many precious things the affection of the king of Portugal." From that day the ambassador resided a whole month at Peking. He and his family were by an imperial proclamation allowed to stray without

impediment over the place in any direction they pleased. On the 7th July, his excellency had his audience of leave at Yuen-ming yuen, a country-seat at no great distance from the capital. That day, the emperor presented with his own hands to the ambassador a cup with wine, and sent from his own table several dishes. Leaving the place, presents were distributed to the retinue of the ambassador, and to his excellency; among other things, Yungching gave several trifles, which were valuable solely because they were the gifts of a monarch. Metello received also thirty chests and boxes to be delivered to his faithful majesty the king of Portugal."

Little or no advantage seems to have resulted from this embassy, though it cost the inhabitants of Macao the heavy sum of 30,000 taels. Another embassy reached Peking in 1753; it was conducted, and it ended very much like the preceding one. This, we believe, was the last Portuguese embassy to the court of Peking.

4. *The Roman Catholic missions in China.* The first Roman Catholic missionaries, who were at all successful in China, were *jesuits*. In 1541, the next year after their order arose, Xavier came to the East; in 1552 he left Goa, touched at Malacca, and before the close of the year died at Sanshan. Dominicans, Augustines, and Capuchins followed, and attempted to enter the country, but were repulsed. In 1579, Miguel Ruggiero an Italian jesuit arrived in China, and commenced the study of the language. Two years subsequently he came, in the capacity of a chaplain, with the Macao ships to Canton; and here "the missionary gave vent to his vocation, and began converting people." In 1582, he was joined by Matthew Ricci. "To conceal their real intention, the missionaries recurred unblushingly to a falsehood, affirming that their only wishes were to make themselves masters of the Chinese language, and to become acquainted with the arts and sciences of the country." They encountered much opposition; but at length, "were at liberty to settle at Chaochow foo, where in fact, they arrived in April, 1589." Our author gives

vivid picture of their reception at that place. The literati praised their precepts so far as they coincided with those of Confucius; they admitted the propriety of worshiping the Lord of Heaven; but they railed at the doctrines "of original sin," "of eternal torments, of the incarnation, of the Trinity, and of not being allowed to marry more than one wife; they accused the Europeans of teaching a spurious and pernicious doctrine, of building churches at the expense of their dupes, of introducing young girls to monasteries, of forgetting their parents when dead, of paying respect neither to the departed, nor to Confucius, but merely to a stranger they called Jesus." But "the incredulity of many, the rancor of others, and not even the queer theatrical jests, were sufficient to dishearten Ricci, who by his knowledge of mathematics, experimental philosophy, &c., had means to amuse, entertain, and please visitors from many parts of China; some of them became his converts; others his protectors and friends."

By the advice of Alexander Valignano, Ricci and "his brethren jesuits," in 1594, threw off the garb of the bonzes, and put on the more respected dress of the literati. In such an attire Ricci became a fit companion to men of rank; and was enabled to proceed with recommendations to Nanking, entertaining the hope that he might there be permitted to raise the standard of the cross; but betrayed by his features, he was suspected of being a Japanese spy (for China had a war with Japan), and was ordered to quit the place immediately. He now directed his steps to Nanchang foo, the capital of Keängse, where he was permitted by the governor, in 1595, to lay the foundation of a religious institution. His activity and zeal were further stimulated by 'the dignity of Superior of all the missions in China, present and future,' which was conferred on him by Valignano, our author thinks in 1597. Soon again Ricci found

opportunity to visit Nanking; but the war with Japan still continued, and the fear of strangers likewise. The superior therefore turned his course to Soochow foo, in the province of Keangnan; at which place he was permitted in 1598 to establish Christianity.

“At length peace being concluded with Japan, Ricci determined to appear a third time at Nanking, where he now was welcomed with that amity, frankness, and good breeding, which are said to be characteristic of those who belong to the old capital of China. The reputation of a “*savant*” had preceded Ricci. His lectures on exact sciences were listened to with rapture; they excited in the auditory a sincere wish to become acquainted with the truth of mathematics. To gratify his hearers, father Matthew translated the elements of Euclid; and a new Christian by the name of Paul, *Sinice* Siu, gave them the fullness of the Chinese idiom. By this work Ricci conciliated such an affection, that even those, who were greater admirers of his philosophical than of his religious tenets, acquiesced in his instituting a (1599) at Nanking a church, in which Lazar Cattaneo remained. Being favored with many recommendations to men of high rank and reputation at Court, and with letters patent from a great magistrate granting him liberty to carry to the presence of the emperor a few European curiosities, Ricci, accompanied by a Spanish jesuit Diogo Pantoja, set out for Peking. At Lin-tsin-chew, an imperial toll on the Grand canal, an eunuch, Mathan, administrator of the customs, tendered his services to the strangers. . . . Ricci declared to Mathan, ‘that he desired to have the honor and good fortune personally to present to the emperor the insignificant trifles he had brought, and to spend the rest of his days in the service of their common lord and master.’ The eunuch took the priests in one of his boats to Tientsin and lodged them in the fort, that their persons might not be exposed to insult, nor their property to depredation.”

After a delay of six months the strangers were permitted to proceed to Peking; they entered the capital on the 4th of January, 1601.* The emperor accepted their presents, and commanded that they should first be accommodated at the place where foreign envoys usually alighted, and after-

* Our author says 1606, which we suspect is an error of the press; Sernedo, and Du Halde write 1601. In this and in some other instances, we wish the writer had given a reference to his authorities.

wards be allowed to "take a house at their own convenience;" and at last, he assigned to them a fixed stipend, some say every three, others every four months. So many signal favors gave lustre to the two Europeans, whose real intentions were carefully concealed from the court. In the mean time, jesuits joined their associates not only at Peking, but at the intermediate and collateral stations, which Ricci had established in his progress from the province of Canton to Peking. So long as the jesuits had the exclusive care of the mission in China, the undertaking went on peacefully. At Peking their numbers increased greatly, and they were allowed to purchase a house, which however was afterwards converted into a church, and dedicated to St. Joseph. Some of their neophytes became men of influence; and "the goodwill of many was bought and preserved by liberal offerings at the altar of self interest." Thus the Roman Catholics settled at Peking. Ricci died in 1610.

"Men free from illusion and bribery were on the alert; they traced the progress of the mischief in all its bearings, and felt the imperious necessity of checking its growth before it got strength to set at naught the commands of government." By an imperial decree, dated February 14th, 1617, the missionaries were to be sent from court, and from the provinces to Canton, that they might return to their homes. This order was but partially obeyed; the priests found shelter and protection in the families of their converts, and the storm was soon spent. Jesuits came to China in great numbers: among them, and the most distinguished for his missionary zeal, and knowledge in mathematics, was John Adam Schaal, a German.

The *Ta Tsing* dynasty arose in 1644: its first sovereign commissioned Schaal to reform the *Calendar*; which was done so well, that the emperor appointed him 'president of the tribunal of astronomy.' The Jesuits now had great influence; and

permission was granted them to build two new churches in the capital, and to repair many which were decaying in the provinces. New laborers in considerable numbers were allowed to enter the country; and one of them, Ferdinand Verbiest a German, became coadjutor to Schaal in his astronomical pursuits. The imperial favor lasted during the whole reign of Shunche. At his demise Kanghe, a young lad eight or nine years old, was left to succeed to the throne, under the guardianship of four Tartars. These men viewed the talents of Schaal with impartiality, but held his religious profession in no peculiar regard; and the infallibility of the doctrine propagated by the jesuits, was questioned.

By papal concessions, free ingress to all the provinces had already been granted to friars of all denominations. Mendicants, principally Dominicans, quarreled with the Jesuits about the signification of the words *teën* and *shang-te*, and the veneration the Chinese paid to Confucius and the dead. This strife revealed the important secret, that the principles of the new doctrine were made to subserve the purposes of these who were aspiring to influence. It was remembered also, that while the catholics continued in Japan, nothing but intrigue, schism, and civil war was heard of; calamities that might sooner or later befall China, if the criminal eagerness of the missionaries in *enlisting* people of all classes were not checked. 'The members of the different orders wore distinctive badges of medals, rosaries, crosses, &c., and were always ready to obey the call of their chiefs, who could have no scruple to lead them on to action, the moment a probability of success in subverting the existing political order and ancient worship of China should offer.' A remonstrance containing these charges was presented to the four regents, the tutors of Kanghe. "The case was tried by several tribunals, whose members expressed (1665)

their conviction, that Schaal and his associates *merited the punishment of seducers, who announce to the people a false and pernicious doctrine.* Schaal died of grief; Verbiest and others absconded; and many were expelled from the capital and the provinces to Canton."

Kanghe having taken the reins of government in his own hands, made Verbiest director of the tribunal of astronomy. Influenced by this jesuit, the emperor in 1671 allowed the missionaries, who had been banished to Canton, to return to their respective churches, but decreed at the same time that *no Chinese shall embrace christianity.* In 1688, Gerbillon and Bouvet, two French jesuits, were allowed to join Verbiest at court. But the affairs of the mission soon wore a different aspect:—

"In the minds of men of a cultivated and sound understanding, the foreign sect had never ceased to excite suspicion;—it might in time be the cause of dissensions, strife, and schism—a reason why really good patriots always advised to drive its propagators from the country. In the beginning, interested men winked at the residence and occupations of missionaries; who, being strengthened by friends and neophytes, acquired influence to elude the force of decrees, and even means to return into favor with government. The missionaries had already weathered two storms, denominated "*general persecutions,*" each of six years duration; a third was now in progress. A fooyuen of the province of Chekeäng determined, notwithstanding the solicitations of his friends, to draw by a memorial the attention of Kanghe to the inevitable disorder which threatened China, were fanatic foreigners any longer suffered to spread a doctrine equally adverse to the existing religion, as to the independence of the state. It was examined by the Le Poo, or Tribunal of Rites, whose members insinuated that no foreign creed ought to be tolerated in the empire. Greatly alarmed at this hint, the missionaries were night and day, it may be said, on their knees worshiping a sovereign on whose clemency and partiality their existence depended. . . . At length, the emperor condescended to receive from the priests a memorial, which was transmitted to the Le Poo with a command to revise it. Finding no reason for an alteration, the Tribunal abided by their former opinion. The emperor was going to conform himself to it,—saying to So-san, I regret I cannot comply with the petition of the Europeans;—when that prince, a cunning and subtle courtier, insinuated that the emperor's supreme

will might be intimated. Kanghe allowed himself to be misled; So-san brought the message to the Le Poo, who drew up a decree which was signed by Kanghe, 22d March, 1692; it authorized the exercise of the Roman Catholic religion in China."

During the period which elapsed between the publication of this decree and another which was signed by Yungching, and which expelled the missionaries from the provinces, there were exhibited a series of very extraordinary transactions. The missionaries were in constant collision with the high authorities of the empire, while they incessantly wrangled among themselves; moreover the jurisdiction of the field they occupied, was a subject of dispute by the emperor of China on the one side, and by the kings of Portugal and the Roman pontiffs on the other; while at the same time, the two latter powers sharply contested the same point between themselves.

Kanghe, like Shunche his predecessor, tolerated but never embraced the religion of the Roman catholics; he granted many privileges to the promulgators of that creed, yet he never forsook the religion of his fathers. It was only under various restrictions that he allowed the jesuits, and the others who followed them, to reside in his dominions; but the members of the several missions disregarded the imperial decrees, and yielded obedience to their papal masters—and this it was that brought them in frequent collision with the civil authorities.

We have already alluded to the disputes which arose, at a very early period, between the jesuits and the other orders concerning various rites and ceremonies. Ricci, as Superior of all the missions in China, drew up a number of rules for the regulation of those who might join in the labors of the mission; he considered the rights and customs of the Chinese to be merely civil and secular; such however were not the views and opinions of

others. John Baptist Morales, a Spanish Dominican, declared them to be superstitious and idolatrous; as such they were condemned by the congregation of the Propaganda Fide, and its opinion in 1645, was confirmed by Innocent X. But shortly after this, Martin Martinez a jesuit, proved to the satisfaction of the tribunal of inquisitors, that these rights and customs were of a civil nature; and in that light they were approved in 1656 by Alexander VII. Thus the two opposite opinions were sanctioned by papal authority.

An involuntary conjunction of the missionaries in 1665 at Canton, to which place they were banished by an imperial order, inspired them with a desire to fraternize, and to set at rest certain questions concerning which they had been and still were divided. Not less than twenty-three jesuits, Dominicans, and Franciscans, who were living together in a seminary that had belonged to the jesuits, held several meetings, in which the controverted points were discussed by 'learned and orthodox philologists.' Forty-two articles, that should hereafter serve for rules of conduct were unanimously adopted. One of these articles runs thus:—

“In respect to the customs, by which the Chinese worship Confucius and the deceased, the answer of the congregation of the universal inquisition, sanctioned 1656 by his holiness Alexander VII., shall be invariably followed; for it is founded upon the most probable opinion, without any evident proof to the contrary; and this probability being admitted, the door of salvation must not be shut against innumerable Chinese, who would abandon our Christian religion were they forbidden to attend to those things they may lawfully and without injury to their faith attend to, and forced to give up what cannot be given up without serious consequences.”

Such was the agreement. Yet very soon after the missionaries were allowed to join their respective establishments, a Spanish Dominican, Dominick Navarette (one of the individuals who signed the agreement) hoisted the standard of reprobation

against the rites and customs of China, and was "joined in chorus" by many others. In 1693, Charles Maigrot, bishop and apostolic vicar, by his own authority and without applying to his principal at Rome, issued a mandate, which added fuel to the already violent dispute. Irrespective of the decree of the holy inquisition, which had been confirmed by Alexander VII., Maigrot decided, that *Teën* signified nothing more than the material heavens, and that the Chinese customs and rites were idolatrous. In 1700, Kanghe declared in an edict which was communicated to the pope, that *Teën means the true God*, and that *the customs of China are political*; yet the decision of Maigrot was supported by four inquisitors, and confirmed (20th Nov. 1704,) by a decree of Clement XI.

To settle a dispute which had existed for almost a century, Tournon, an apostolic visitor and legate, was now on his way to China; a man, says Mosheim, "whose good disposition was under the influence of a narrow spirit, and a weak understanding." Tournon disliked the jesuits, and suspected their sincerity; and by neglecting to embark at Lisbon (as he was bound to do,) he arrayed against himself the crown and court of Portugal, the archbishop of Goa, and the bishop of Macao; the latter was directed to publish an order forbidding the Catholics in China to acknowledge Tournon to be an apostolic visitor. He arrived in China in 1705; and shortly after, having received from Europe, Clement's decree of Nov. 1704, he echoed by mandate, that no Chinese Christian should ever practice the customs and usages which had been interdicted by the pope. But Kanghe was not the man who would transfer to a pope the right of legislating over his own subjects; he issued, 17th December 1706, a declaration, "that he would countenance those missionaries who preached the doctrine of Ricci, but

persecute those who followed the opinion of Mai-grot." In accordance with this determination, an examiner was appointed; and those missionaries who would comply with the will of his majesty were to receive an imperial license, and those who would not, were to depart within five days to Canton and embark for Europe.

The battle now waxed hotter and hotter. To meet the exigencies of the case, Tournon published (1st June 1796, and 25th January 1707,) two mandates forbidding the missionaries under pain of excommunication, to enter with the examiner upon any discussion concerning the controverted subjects. These mandates were approved by a congregation of inquisitors; and in 1715, they were converted into a law. To enforce this apostolic constitution, Clement XI. sent the patriarch Mezzabarba as his legate to China; he arrived in 1720; but finding that Kanghe persisted in his determination never to grant to the papal court any kind of jurisdiction over his subjects, the legate thought proper, in accordance with his power, and for the sake of saving religion from the disgrace of being banished, to concede "eight permissions;" which however, as they did very little to reconcile the contending parties, were afterwards abrogated and condemned.

One other scene belongs to this period, and is closely connected with the preceding; we quote it entire:—

"Gregory XIII. entrusted the spiritual government of all China to the bishop of Macao, and the missionary care to jesuits and natives of Portugal. That kingdom, whose population was always small, could not supply an extending mission in Asia with indispensable laborers; popes therefore permitted, by degrees, Franciscans, Dominicans, Augustines, secular priests of the seminary of foreign missions at Paris, and those of the Propaganda Fide, to exert their devotional zeal in various parts of China. Any institution, either of them had organized, was considered property by birth-right, to be governed with the consent of the prelate by members of its own body. These concessions the King of Portugal deemed

derogatory to his royal claim; for were it necessary, he argued, to subduct from the bishop of Macao any part of the spiritual obedience of China, the sovereign of Portugal alone had the right to divide it, and to nominate ecclesiastics proper for the discharge of episcopal duties in any part of that vast empire. Upon this plea, Alexander VIII. consented that Peter II., king of Portugal, should appoint three bishops, and fix the limits of their respective jurisdiction. The three dioceses which Peter proposed, comprehended not only China, but also Tungking and Cochinchina,—a pretension so unreasonable that the Vatican refused to sanction it. The king's claim, Innocent XII. annulled (1696) by the bull "*E sublimis*," assigning by his sole and supreme authority to the bishopric of Peking, the provinces Pih-chih-le, Shantung, and the eastern Tartary; to that of Nauking, the provinces of Keängnan and Honan; and to that of Macao, the provinces Kwangtung, Keänge, and the island Hainan; he reserved to himself to govern the rest of China by apostolic vicars, nominated by the congregation of the Propaganda Fide, and approved by the pope."

We have now noticed, as they are sketched in the work before us, the most important events of the mission down to 23d Jan. 1723, when by an imperial decree, 300 churches and 300,000 Christians were, it is said, deprived of their rulers and priests. A few missionaries were tolerated at Peking; a few were concealed in the provinces: many who were driven to Canton, prevailed on their converts to trace a route by which they might come back and continue their occupations; and out of thirty exiles, sixteen returned; such a defalcation created suspicion, and the remaining priests were sent to Macao with a positive injunction to leave the country by the first ship that went to sea.—The jesuits acted with more prudence, and did not abscond. This mark of obedience, and the influence of their protectors reconciled them with the court; and Yungching appointed Ignatius Kægler president of the 'tribunal of astronomy,' and gave him a title of honor.

Keënlung ascended the throne of his father in 1736. His hatred of the priests, who were still secretly laboring to extend the proscribed doctrine,

induced him to search for them with uncommon eagerness and perseverance. A zealous governor of Fuhkeën, having discovered Christians in his province, imprisoned them, tried them, convicted them of disobedience; and the emperor not satisfied by driving the priests out of the country, to which they usually returned again, ratified the sentence by which a bishop, *Peter Martyr Sanz*, lost his life. Sanz was not the only victim in Fuhkeën. The author goes on to remark:—

“That the emperor might trace with greater certainty the odious priests and his rebellious subjects, secret orders were sent to the governors;—many missionaries were apprehended, ill used, tortured; many churches were plundered, and many families ruined. The two provinces Sianse and Shense suffered most. The loss of missionaries was easily retrieved, for new subjects flocked to China. Those who were not vassals of Portugal, or could not produce a license from the court of Lisbon to remain in Asia, were refused admittance to Macao; but found protection at the procurator’s of the Propaganda Fide, *G. della Torre*, who lived in Canton. From thence he was in the habit clandestinely to forward preachers to different parts of China. A zealous satellite,—a Chinese educated at Naples in the college “*della sacra familia de Gesu Christo*,” a priest named Peter Zay,—had constantly been successful in delivering unmolested at the places of their respective destination those missionaries whom the procurator had intrusted to his care and foresight. Another Chinese from the same college, whose name was *Philip Lieu*, engaged to bring, at less expense, four Europeans to Segan foo, the capital of Shense; they had reached Seängyang foo, in the northern parts of Hoo-kwang, and were invited to alight at the house of a new Christian, to whom the conductor was addressed. The missionaries rejected the offer, but were soon after assailed by a gang of mandarin runners, headed by the perfidious Christian, and stripped of everything valuable which they possessed. In the expectation that their crime might be hid and pass unnoticed, the gang declared at the office of a military commander, that four Europeans were proceeding to Shense with an intention to tender their services to the Mohammedans, who were in arms against government. In consequence of this calumny, the missionaries were imprisoned (1784); examined and sent to Peking, in company with those who had undertaken to carry them to the place of their destination.”

Peter Zay fled to Goa; of his associates, some
“when siezed, lost their fortitude at the sight of the

instruments of torture, and exchanged the crown of a martyr for an ignominious, miserable life; others, allured by the hope of pardon, apostatized unhesitatingly, and reverted to the worship of their ancestors; the most sly made no difficulty of letting their judges into the secret of the missionary system." These proceedings led on to a minute investigation, and "many missionaries in disguise were found in almost all the provinces;" they were imprisoned; and their coadjutors, and Chinese priests, fled and hid themselves in dens and caverns. "To mitigate the severity of the persecution and of the prison, and likewise the degree of punishment that awaited the culprits, the prelates residing at Peking, spared neither supplications, intreaties, nor bribes. However, their solicitations effected no relief. Every effort to save their friends had proved inefficient; when all at once the most unexpected decree of 9th Nov., 1785, filled all Christian hearts with consolation and gladness. Fully convinced by inquiries and proofs, that the missionaries had no other object than to teach religion, Keënlung released twelve Europeans which were in jail, and granted them either to remain in their respective churches in Peking, or to proceed accompanied by a mandarin to Canton, that they might return to Europe. Nine of them accepted the last proposal; three joined their friends at Peking."—This narrative, our author remarks, was borrowed from a manuscript notice, which the Rev. J. B. Marchini, procurator of the Propaganda, communicated to his superiors at Rome.

During the present century, the mission has been in a low and declining state; yet on two or three occasions at least, it has drawn forth the severe animadversion of government—once in 1805; again in 1811; and a third time,* according to bishop

* See preceding page 377; also Milne's Retrospect page 128. On the 2d September 1814, says Dr. Milne, there was issued a very violent edict, in which harsher language was employed than had ever before been used.

Fontana, in 1815. Our author is unable to determine precisely the number now belonging to the Roman Catholic missions in China. But he says, we shall approach the truth by borrowing some statistics from the Rev. J. B. Marchini's map of the missions which was presented in 1810 to the then governing bishop of Macao.

<i>Bishoprics.</i>	<i>Composed of the provinces.</i>	<i>Europeans.</i>	<i>Native Chinese priests. christ'ns.</i>

5. *Papal legates to China.*—This article is premised by a brief account of what is meant by the king of Portugal's patronage. By their patronage the sovereigns of Portugal claimed the right, not only to establish churches and to govern those which already existed within the limits of their dominions, but also to assign pastors to such churches as might be erected in any part of the heathen lands of Asia, which were independent of Portugal: further, by bulls of Gregory XIII. and Clement VIII., no ecclesiastic could proceed to Asia without the permission of the court of Lisbon. But subsequently,—when the Dutch, English, and others, had formed settlements in India.—Urban VIII. revoked the former bulls, and allowed missionaries to proceed to Asia by any way they

Papal Legates

pleased. In 1688, the court of Lisbon, jealous of its royal prerogative, decreed that every missionary going to Asia, should take the oath of "universal patronage;" the counsellors of the Vatican opposed the decree, by commanding that no superior of the regular clergy should suffer any of his subjects to take the oath.

Alexander Valignano and Miguel Ruggiero, who were among the first catholics that came to this country, exerted all their influence to induce the pope to send a legate to China; but neither their arguments, nor the dispute between the court of Portugal and his holiness, could induce the latter to set on foot such a mission. For nearly a century, almost the whole of the navigation to Asia was under the control of the Portuguese, and during the whole of that period all direct intercourse between Rome and Peking was deferred.

We have already seen Tournon and Mezzabarba at Peking, and have noticed the occasion of their going thither. The conduct of Tournon drew down upon him the severe displeasure of the emperor, and the legate was commanded to leave the capital in a few days; he arrived at Macao, 30th June 1707, where he had to encounter disobedience, humiliation and confinement; for disregarding the authorities of Macao, and the rights of "the royal patronage," Tournon was deprived of his liberty, shut up in a private house (not in the episcopal palace as Mosheim states), and watched by rigorous, inexorable guards. Disgusted with incessant vexations, Tournon resolved to handle the weapons of the Vatican; he hurled against his principal enemies ecclesiastical censures; but they were treated with so little respect, that the bishop of Macao ventured to stick up at the very door of the legate's residence a *monitory*, in which he was exhorted under pain of excommunication to excommunicate within three days his censures, and to exhibit evidences of his legateship.

“The dignity of a cardinal, to which Clement XI. had raised Tournon, could not eradicate the recollection of painful and undeserved insults which impious men (he thought) had levelled against his sacred person; and though his eminence bore with singular resignation such humiliation, sorrow hastened, no doubt, the dissolution of his bodily frame,—for he expired, not as Mosheim relates on the 8th of June, 1711, but at one o'clock P. M. on the 8th of July, 1710.” Thus terminated the career of *Charles Thomas Maillard de Tournon*.

The other legate, *Charles Ambrose Mezzabarba*, came to China with the approbation of the court of Lisbon, and was well received by that of Peking. He “was instructed to express the pope’s sincere gratitude to Kanghe for his magnanimous kindness towards the missionaries, to beg leave to remain in China at the head, or as superior of the whole mission, and to obtain from Kanghe his consent, that the Christians in China might submit to the decision of his holiness concerning the rites. . . . Mezzabarba at his reception congratulated Kanghe upon the brilliant and glorious victories which his armies had achieved in Tibet,—a speech that could hardly fail to conciliate the goodwill of the victor. Kanghe distinguished the legate by peculiar affability, but altered his tone whenever the ceremonies condemned at Rome, came under consideration.” The legate soon perceiving that the emperor would not surrender any part of his inherent authority, solicited and obtained permission to return to Europe. On his arrival at Macao, he was furnished, by the emperor’s command, with a variety of presents for the pope. The presents, and the ship in which they were embarked, were burnt in the harbor of Rio de Janeiro; the pontiff however took opportunity, by dispatching two friars with a letter and presents, to acknowledge the imperial favor, and to solicit again protection for the Europeans and the natives who professed

Christianity in China. The emperor returned a courteous answer, but declared at the same time that he could not permit the missionaries to live in the provinces.

In closing the book before us, we can repeat the commendatory remarks with which we commenced this review. It exhibits the mission in other and darker colors than those which have usually been given by the jesuits; but as the intercourse of foreigners with China, may long feel the influence of that mission, it is exceedingly desirable to know fully its character. If the whole or a part of those expensive and painful efforts to plant the Gospel here were undertaken with the design of gaining worldly aggrandizement, rather than of blessing the Chinese by the reign of the Prince of peace; or if a series of sinister actions characterized the conduct of the professed followers of Jesus, surely it should be known—that the evils entailed may be more speedily removed, and their recurrence prevented. Our author has enjoyed good opportunities to learn the true facts of the case; still we do not vouch for the correctness of all the statements, nor wish to be held responsible for all the sentiments, exhibited in the extracts. We would not speak irreverently of Christianity under any form, nor even seem to call those pagan ceremonies innocent which God abhors. We join heartily with our author when he recognizes the rule *'of doing to others what we wish should be done to us,'* and anticipates the reign of "divine benevolence and brotherly affection:" and moreover, since it is right to obey God rather than man, we hold that there is no human authority, no ancient custom, no imperial edict, that can abrogate the Redeemer's command, to *go into all the world, and preach his gospel to every creature.*

EARLY INTRODUCTION OF CHRISTIANITY INTO CHINA.

THAT Christianity was partially made known in China at a very early period, seems now to admit of little doubt. But the *date* of any attempts to plant the gospel here, earlier than the entrance of the jesuits in the 16th century, is not very well established. Indeed it is deemed uncertain whether any efforts at all reached so far as this country, during the apostolic age: but it is to this point first we offer such testimonies as can be had, and chiefly from Yeates' Indian Church History.

The first circumstances which attended the kingdom of God coming with power, on the day of pentecost, were admirably calculated to give celebrity to the gospel; and not only so, but to give it rapid and extensive promulgation. Of those persons who heard the apostles speak in their own language the wonderful works of God, there were "Parthians and Medes, and Elamites, and the dwellers in Mesopotamia—and devout men out of every nation under heaven." These on returning to their own country, could not fail to spread abroad the wonderful facts and the glad tidings of salvation: so that in Persia and its confines, beyond the Euphrates and Chaldea, some knowledge of the gospel must have been immediately carried. These facts are to the point of our first inquiry; for we wish to move on with the progress of Christianity eastward, to see whether it is *possible* that it should have gone to the extremity of Asia in that age.

The Syrian and Chaldæan writers, according to Assemannus, relate that "Thaddeus one of the seventy disciples, went into Mesopotamia, and that he was sent thither by Thomas the apostle, soon after our Lord's ascension: also that the same Thaddeus had with him two disciples to assist in the promulgation of the gospel, whose names were Marus and Agheus, both of the seventy." Barhebræus writes, that "Marus survived the martyrdom of his fellow laborers, but was obliged to remove eastward. He preached in Assyria and in all the land of Shinar. He taught in three hundred and sixty churches, which were built during his time in the east; and having fulfilled his preaching for 33 years, he departed to the Lord, in a city named Badaraja, and was buried in a church which he had built." These extracts are sufficient for our present purpose—to show that at an *early* period of the *apostolic* age, churches were not only planted in the chief cities of these several countries, but so founded and governed by the labors and wisdom of these apostolic men, that they soon became the emporia of the gospel to the remotest regions of the east.

The eastern or Chaldean Christians 'throughout all Asia from Antioch to the walls of China, celebrate Thomas as their chief and great apostle. He was the first preacher of Christianity among the Hindoos, and founded the churches of Malabar, where to this day, the ancient monuments, writings, and traditions, afford the most indubitable proofs of his apostolic labors among them. More than two hundred thousand Syrian Christians on the coast of Malabar and Coromandel, hold with one uniform tradition, that Thomas the apostle was the founder of their churches.' It appears from the learned Assemanus, and other subsequent writers, that Thomas, having passed through the country from Malabar to Coromandel, and made great conversions to the faith in those parts, proceeded over to some coast on the east called China, which *may have been* that country now called Cochinchina. Indeed when we reflect on the vast extent of China, and on the rapidity with which Christianity made its way eastward through Persia, India, and Tartary, it is scarcely possible to deny its entrance into this vast dominion also. The only rational objection is the distance of place; but are not the eastern parts of India also distant? Yet we are certain from history that Christianity had in the apostolic times reached those countries. That it should have been carried into China in the same age, is not impossible therefore; but considering the spirit of its propagators, it is very *improbable* that they would rest in India without attempting to penetrate its eastern and populous vicinity; or having attempted and been totally repulsed and excluded, that no memorial of it should have been left.

The Syrian chronicles relate, that Thomas having gone through Mesopotamia, Chaldea, Persia and Parthia, went to the utmost confines of the east. Theodoret says, that the Parthians, Medes, Brachmans, the Hindoos and other bordering nations, received the gospel of Christ from Thomas. The Malabar Christians relate, that St. Thomas went from Meliapore, where he converted the king and the people to the Christian faith, to China, and preached the gospel in the city of Cambala (the city of the great khan), and there he built a church. The same is also attested by the Syrian writers. In the Chaldean ritual there is an office for the celebration of St. Thomas the apostle and martyr. 'By the blessed St. Thomas, the Chinese and Chushiths were converted to the truth. And again; the Persians, the Hindoos, the Chinese, and other regions, offer memorials of veneration to the sacred name of Thomas.'

Antonius Govea relates the apostle's return from China to the coast of Coromandel, where by reason of the innumerable conversions to the faith of Christ, he exposed himself to the hatred and envy of two brahmins, who having raised an uproar against the apostle, buried him with stones; but another brahmin perceiving him yet alive, thrust him through with a lance, and he expired. His sepulchre was hewn out of a rock

in the mountain, afterwards called St. Thomas' mountain. According to the Indian tradition, the martyrdom of the apostle happened in the sixty-eighth year of the Christian era, and in the reign of their king Salivahan. On the 22d day of August, A. D. 380, the coffin of St. Thomas the apostle, which had been brought from India at immense expense, was deposited in the great temple of Edessa, dedicated to him. Even the day of the removal of the body of St. Thomas, is commemorated at this time with great solemnity in India.

Du Halde says, the famous "Quan-yun-chang" who lived in the beginning of the second century, certainly had a knowledge of Jesus Christ, as the writings of his hand, subsequently engraven upon stones, plainly prove. These mention the birth of the Savior in a *grotto*, his death, his resurrection, his ascension, and the impression of his holy feet; traditions which are so many riddles to the heathen. The Chinese histories give no date to the introduction of Christianity, and are silent as to the results of missionary labors. All that appears from them is, that about that time (the beginning of the 2d century,) an extraordinary person arrived in China, who taught a doctrine purely spiritual, and drew the admiration of the world upon him, by the fame of his virtues, by the sanctity of his life, and by the number of his miracles.

From this time till A. D. 636, we have no records of Christianity in China. The celebrated monument discovered in 1625, if authentic, furnishes the history of the progress of the gospel, from 636 till the date of its erection in 780. We cannot pretend to enter into any thorough defense of its authenticity, nor is it now necessary, as that was done long since. But from a general and obvious view of the case, we cannot be credulous enough to believe it either totally or chiefly a fabrication of the jesuits. That they might often have felt it desirable to prove to their hearers, the antiquity of the gospel and its former influence even over China, we can well believe. But that they could think of palming such a forgery upon them is really incredible: for the account is, that Chinese workmen found it buried under rubbish, made it known to the governor, who examined it, placed it in a pagoda near by, where it attracted so much the attention of the learned natives that they came from all quarters to see it. A native Christian after a time also came, and perceiving the meaning which others did not, wrote a copy to his distant friend, a Christian mandarin, from whom it first reached the foreigners. That the jesuits therefore could hope to deceive the *pagans* by this artifice seems impossible. There is no other strong motive to induce them to forge it, unless perhaps to account to themselves and Europeans, for the distressing similarity between many popish and Budhistic ceremonies. But a mere glance at the facts stated, will be

Early Introduction of

sufficient to show the futility of such a supposition. For the monument has been visited by many fathers, at various times, examined leisurely, and repeatedly copied and translated. Semedo visited it three years after its discovery, and had a thousand opportunities to scrutinize it fully. It was open to all the different and warring orders of priests, who have none of them ever dreamed of disclosing the forgery to the injury of the other. As to the correctness of the translations, there are evident discrepancies, but such as rather strengthen the belief in the identity of the originals. It was discovered at Sengan foo, the capital of the province of Shense, situated on the south side of the Yellow river, lat. $34^{\circ} 15' 36''$ N., and long. $106^{\circ} 25'$ east from Paris. A Christian church was soon after founded there in consequence and in commemoration of the discovery.

The monument itself is a marble table near ten feet long and five broad. On one side is a Chinese inscription of twenty-eight lines, and sixty-two words in each line, making about 1736 characters. Over it is the title in nine Chinese words, translated thus: *this stone was erected to the honor and eternal memory of the law of light and truth brought from Ta-çin (Syria)*. On the margin and at the bottom of this inscription, are writings in the Syriac language. The body of the inscription is divided into twenty-one verses, the first few containing a summary of the Christian faith; the rest form a sort of chronicle of the mission from its arrival in 636 till the erection of the stone in 780. According to this record, the mission entered China A. D. 636, in the reign of the emperor Taetsung, was favorably received, and before the end of the century, Christianity was promulgated and churches built in the ten provinces which then composed the empire. A persecution against the Christians arose in 699, and a fiercer one in 713. During this time, a great many churches were destroyed, and doubtless many of the teachers suffered martyrdom; hence we find that a second mission arrived in China soon after, the names of whose leaders are enumerated. Then follows the state of Christianity during the reign of three or four emperors who favored it, one of whom "honored the commemoration of Christ's nativity with profound respect." It closes with the date of the erection of the monument, and the name of the writer of the inscription. The Syriac inscription contains the names and offices of the leaders of the missions arranged in seven classes, from the bishop downward, the number of ninety-two. This is the only known record of the progress of the mission for 140 years after its introduction; but if the country were open to investigation, we may see that other records of similar character would reward the progress of the progress of the gospel subsequent to the arrival of the Romish mission.

aries, we are indebted chiefly to the valuable notes of Murdock's new translation of Mosheim.

Timotheus the patriarch of the Nestorians, who lived till 820, appointed David metropolitan of China; and this sect seems to have become numerous in Tartary and in the adjacent regions. In the time of Genghis khan and his successors, though the Christians resident in those countries were much distressed, yet it appears from unquestionable testimony, that numerous bodies of Nestorians were still scattered over all the northern parts of Asia and China. In 1202, Ghenghis khan conquered Un khan, the fourth and last of the Christian kings in central Asia, who bore also the name of Prester John. He married the daughter of Prester John, and several of his descendants had Christian wives. Till near the close of this century, most of the Mongol princes, though tolerant to all religions, rather favored the Christian. This afforded a fine opportunity for the Nestorians to propagate their religion all over the east, and particularly in China.

The Roman pontiffs also sent not only ambassadors to the emperors, but missionaries also, chiefly Franciscan and Dominican monks, quite to Peking and China. There they gathered some churches, and at length established an archbishopop with several suffragans. In 1307, Clement V. constituted John de Monte Corvino, archbishop of Cambala, that is, Peking. He translated the books of the New Testament, and the psalms of David, into the language of the Tartars. Benedict XII., in 1338 sent new nuncios into China and Tartary; and so long as the Tartar empire in China continued, the Latins and Nestorians had liberty to profess and propagate their religion. Much greater success would doubtless have attended these efforts in China and elsewhere, had the Christians been united; but the Catholics and Nestorians strove to undermine each other, and were each in turn protected at the expense of the other. But near the close of this century, (the thirteenth) the Mohammedan religion gained the ascendancy, especially in the west, and the khans in some instances allowed the Christians to be persecuted.

In the fourteenth century, the Turks and Tartars wholly extirpated the Christian religion in many cities and provinces, and caused the religion of Mohammed to be taught in its stead. The nation of the Tartars, where such numbers had professed or tolerated Christianity, universally submitted to the Koran. The mere nod of the terrific Tamerlane was sufficient to cause multitudes to abandon Christianity. But he also employed violence and the sword; and being persuaded that those who should compel many Christians to embrace the religion of the Koran, might expect high rewards from God; he inflicted innumerable evils on those who adhered to their profession; cruelly butchering some, and dooming others to perpetual slavery. Thus, and by preventing the arrival of new

teachers, the Christian religion was overthrown in Tartary and China. No mention of Latin Christians is made subsequent to 1370. But some traces of the Nestorians residing in China, can be found as late as the 16th century, yet this little handful of concealed Christians must soon have become extinct.

MISCELLANIES.

THE RELIGION OF MY FATHER.—"The emperor Napoleon gave directions to the priest Vignali as to the manner in which he wished his body to be laid out in a *chambre ardente*, (a state room lighted with torches.) 'I am neither an atheist,' said Napoleon, 'nor a rationalist; I believe in God, and am of the religion of my fathers. I was born a Catholic, and will fulfil all the duties of that church, and receive the assistance which she administers.' (*Life of Napoleon.*)

"There are several important topics suggested by this declaration, but permit me, Mr. Editor, to inquire of you concerning one only. How comes it to pass that it is so generally considered meritorious, to be of the religion of one's father? Inasmuch as all men know, that fathers may err on this important subject as well as sons; and if the principle were universally acted on, every form of idolatry and superstition would be immortalized. The principle is of course condemned in the Holy Scriptures; for if it were a correct one, the revelation of the Almighty himself, could not be received where polytheism had previously prevailed. The command of the Almighty sometimes is, "walk ye not in the statutes of your fathers—neither defile yourselves with their idols." (Ezek. xx, 18.) It was long ago foretold as the consummation of God's will, that the gentiles should come from the ends of the earth, and say, "surely our fathers have inherited lies, vanity, and things wherein there is no profit." (Jer. xvi, 19.) And St. Peter declares that true Christians are "redeemed from their vain conversations received by tradition from their fathers." (1 Pet. i, 15.) I know that men should honor their father and their mother, but they should honor their God and Saviour more. Neither reason nor revelation require a blind conformity to the religion of one's native country, or one's parents; and I cannot even surmise how it is considered a virtue.

Your's, Omicron."

The inquiry and remarks of Omicron present a most interesting subject of thought to us who live in China, especially when

it is remembered how many millions of our race inherit their creed in the way which he exhibits. A few reasons which go to account for the prevalence of this fact, have occurred to our minds. Most of them will apply in some degree to the distinguished example which he quotes; but other causes also seem to have had an influence with Buonaparte. He had a powerful mind in its application to all his accustomed objects of thought. He knew how to collect and arrange facts in the most perspicuous order, and then the strength and clearness of his mind enabled him almost intuitively to look right through them to the correct conclusion. Few probably equalled him in the rapidity and extent and general correctness of his decisions, on all ordinary practical occasions. Yet with all this, we can easily conceive that the same mind when applied to the facts and the proofs of spiritual religion, and of a future state, might be at a loss, hesitate, and be unable to form any satisfactory conclusions. And this by no means because the nature of the subject is such as forbids knowledge the most satisfactory and consoling, but simply because the powers of the mind by long and exclusive devotion to sensible objects, have never acquired but have rather lost the capacity of deciding confidently on spiritual subjects. He has now, we suppose, for the first time seriously to apply his mind to these subjects, and its operations are awkward, and occasion him just distrust of the correctness of the conclusions to which they may lead him.

His self distrust would be such as a merchant would feel when called the first time, to administer medicines to a sick man: or a physician, in conning a lawyer's brief; or perhaps better yet, such as a man who has devoted his life to mathematics and the exact sciences, would feel in a jury-box when called to decide on the guilt of a prisoner, from uncertain and contrary evidence, none of which is mathematical. Yet his less learned fellow-juryman by his side, finds no difficulty in coming to a clear and correct judgment in the same case. And he is naturally qualified to form a conclusion equally correct, or perhaps more so, but his habits have been such, that he cannot form any opinion in such a case, which he himself dare trust. So in the case of Buonaparte, and of many others; when their long and tenacious hold of worldly things, is forcibly loosened by losses or by the approach of death, and they turn an eye to the unknown future, they are too unused to the subject, and have not time to form an opinion of their own. Half awakened to the fact that some preparation is needed for the unknown but inevitable future, they look for the way in which their *fathers* went; and as the easiest way to calm their natural fears, give themselves up to a trodden indeed, but to them an unexplored way. Thus they vainly attempt to throw off from their own mind, the responsibility which the Maker imposed upon them, of ascertaining

and going in the *right way*—imposed by the very gift of conscience and of reason.—But in regard to the great multitudes of common men who believe as their fathers did, other reasons also seem to be operative to this result.

There is a weakness, incident more or less to all minds, but particularly frequent in such as are little accustomed to independent thought,—the weakness of *feeling security from numbers*. To be quite alone in any dangerous situation, aggravates the apprehensions which might naturally be indulged; so it is whether any assistance can be expected from that society or not. Though every man professes to believe, so far as he has any belief, that he must answer for himself alone to his Maker, yet the consciousness of untold guilt pressing upon his mind as he approaches the eternal world, operates to make this inevitable loneliness more insupportable. And this natural weakness of character, makes the *momentary* relief of hiding his individuality among a multitude of similar cases, a frequent resort. For it is easier to believe that a vast number of culprits together will receive a better lot from the judge, than could be expected by a solitary and guilty *one*; and at the worst, any lot will be more tolerable, shared with many, than the same endured alone. Many thus, without any proof whatever that the way is right, plunge into it because it is “broad, and many there be which go in thereat.”

It is also much easier to pass along down unquestioned and unquestioning in the way the fathers trod, than to seek out and explore an untried way where no footsteps mark the path. To do *this*, is assuming more responsibility to one's self, than is to be expected from any *common* interest which is felt respecting the end of the “customary way.” He who does this, must renounce that indolent and indifferent habit of regarding his future well-being, which is not only so consonant with, but so necessary to a life of worldly enjoyment. But to have the responsibility of adopting a correct creed, thrown off from one's self upon his fathers, is to be quite rid of employing his own best powers and time upon it, and with an easy conscience to take the prescribed form, and thus pass smoothly down——where the fathers are. To adopt a set of reputable and established opinions, therefore, is far more agreeable to the general indifference or slight concern of men respecting religion, than to be at the pains of employing that reason which God gave for this very purpose.—If well balanced reason decides, that our father's belief is the true one, of course, such a case is not the one here reprehended.

But perhaps a more powerful cause still, is found in the sort of veneration which is attached to the *old way*. The parental authority and character communicate much of that veneration. The traditions which were handed down from past ages, and which are inculcated by parental precept and example, often take such a hold on the mind as never to be wholly lost. Around

them are clustered the first recollections of our moral, if not of our natural life. If good and true, the memory of such parental instructions embalms and hallows the truths, which a pious parent instilled into the mind of an affectionate child. Nothing except the very *evidence* itself of the divinity of our religion, sheds at this moment such joy and sacredness over the doctrines which we embrace, as the full persuasion, that as they made our father's life happy and death triumphant, so they have prepared an abundant entrance for him into the everlasting kingdom of our Lord, where all who follow our Master will meet. So on the other hand, if the traditions and superstitions handed down from an ancestry be false and even pernicious, as they may be, yet we can easily conceive, that associated as they are, with the first moral impressions of the mind, and accredited by the assent of parents, they may, without even a shadow of evidence to support them, command no ordinary influence over an unreflecting man. And to honor parents, opinions may be retained for which no reason can be given, as is found to be the fact at present in China. In such a case, it will often be esteemed rather a matter of merit to receive the old belief, than to question its correctness, or to reject it when evidently erroneous. Such at least will often be the result, when the great inquiry is not, what is the *right way*? but what is far more general in this careless world, what is the *custom*? Not feeling bound to know the Giver of every good gift, and to learn the worship acceptable to him, they never use that divine gift which He has bestowed on all men, and by which he requires them to forsake the wrong, and to follow in the right way. Right or wrong they go on, without knowing whither they go, and making even that culpable ignorance a merit, by drawing over their eyes the *veil of filial respect*, so as to hide the blessed God from themselves.

Another idea which often adds to the veneration which ancient opinions command, is their age. Those doctrines which have satisfied the father, should satisfy the son; and it requires no small share of fortitude to throw off the hollow forms of a senseless, cold hearted worship, and seek a more rational and satisfactory intercourse with God. He must either be unusually restless, or as we would rather hope, uncommonly earnest to secure his welfare in a future world, who will dare to stand up against the current of old superstitions, to throw such disrespect on the wisdom of his ancestors as to declare them in the wrong, and to bear the name of apostate. The very antiquity of any prevalent delusion throws something of respect and awe around it, but is itself no evidence of its truth. Every sober and reflecting mind must know, that the intelligent creature who lives, and breathes and walks, amidst *nothing but his heavenly Father's works*, can never justly complain for want of means to know, and reasons to love the only

true God; and he who renders divine homage to something which he has not good reason to believe the Giver of every good gift, is very presumptuous and unauthorized. Could we only see men willing to examine earnestly and honestly the revealed religion of Jesus Christ, we should be sure of the immediate and universal adoption of Christianity. We claim no more for it than a thorough and honest examination—we need no more, we wish no more.

THE PORTS OF CHINA.—How long the present system of excluding foreigners from the northern ports of China, and from the interior of the country will continue, and what are to be the results of the recent voyages along the coast, are questions which will frequently recur to those who are interested in the affairs of 'the celestial empire.' Without attempting to give an answer to either of these inquiries, we will advert to a few facts which will serve to exhibit the policy of the Chinese government since Europeans first visited the coast of this country in 1516.

For more than a century past, almost the whole of the European trade has been restricted to Canton and Macao. But it was not always so. At different times during the reign of the Ming dynasty, the ports of Ningpo and Chusan in Che-keäng, and the port of Amoy in Fuhkeën, were opened to Europeans, and became large marts for their commerce. Kang-he, in the twenty-third year of his reign, opened all the ports of his empire, and allowed a *free trade* to his own subjects and to all foreign nations. This regulation continued in force for about thirty years. But at length it was argued against this regulation, that foreigners and adventurous Chinese who were living abroad would impoverish the country by exporting large quantities of rice! For this, or some other reasons equally cogent, foreign trade was restricted; the emigration of natives and the ingress of foreigners were prohibited; and, if we mistake not, the building of vessels on the European model was likewise interdicted.

In the 5th year of Yungching, a change occurred; the population of Fuhkeën had become so dense that supplies from abroad were greatly needed; the people of the province therefore were allowed "to trade to the nations of the south bordering on the China sea;" the same privilege was extended to the province of Canton, "which is a narrow territory with a numerous population!" Regulations of a similar kind were made for Shan-tung, and other provinces on the sea-coast. It appears, moreover, that in some instances 'honorary buttons and military titles' have been conferred on the owners of junks for bringing cargoes of rice from Siam.—[See "Abstract of the general laws of China," which is appended to the Report of the Anglochinese College for the year 1829.]

FREE TRADE.—In connection with the preceding statements it will be in place to notice here a decree of his present Majesty, who has recently declared—‘that the trade of the Booriats on the frontiers of Cashgar shall be free from all imposts whatsoever.’ They are allowed to bring their horses, sheep, &c. &c., for sale, without paying any duty or tax to the Chinese government.

CHRISTIAN BOOKS IN CHINA.—In further confirmation of the importance of the press in China, we insert the following letter from a gentleman,* who, going on a trading voyage, kindly offered to take a box of christian books. It contained, we believe, copies of the New Testament, prayer books and tracts.

“To——; Dear Sir, I beg the favor you will inform——, that I distributed the box of books in the Chinese character given to me by you, all along the great province of Fuhkeen, beginning at Hou-tu-san, and ending at Fu-chu-fu, including Amoy and seven Chu-fus. These books were every where received with thanks, and in many places sought after with avidity. My rule of distribution was, never to give to any individual who did not first prove to me that he could read and write. It may be worthy of——’s attention in future, that where a complete set can be given, the favor seems much greater.”

I remain, &c.

We should be very glad to see a Book Society for China—a society for the promotion of useful secular knowledge, as well as a society for the promotion of christian knowledge. We believe they would not hinder but aid each other. The greatest difficulty consists in getting a competent supply of good writers and translators. Bible and Tract Societies do not, so far as we know, afford any support to those who translate and write for them; and Missionary Societies generally prefer preaching to writing; or if they encourage their missionaries to write, they wish it to be on subjects strictly religious. With this we do not find fault; but only state the fact, to show that there is still room for a *Chinese Book Society*, of a more general character than any thing that yet exists. To supply the youths of China, and the surrounding nations with books which are both interesting and useful is a mighty object. We sincerely desire that it may soon be attained.

Christians by birth, and christians by conversion.—Wherever modern missionaries have gone, there has usually been an hostility between these two classes; it has existed in India, and it exists in the south seas. As long as the natives were pagans, there seemed a sort of good fellowship; but as soon as they professed christianity, that ceased. And missionaries are

* This gentleman was not a missionary

accused of sowing the seeds of strife. The christians-born, say that they have made the natives worse. But the other statement is, that the natives can now better appreciate their rights as men, and the real character of their foreign visitors. They are no longer such easy dupes to their cupidity and irregular passions. Hence arises the contrariety. To defend their own cause the christians-born say, the new made christians are hypocrites; that they yield to temptation and bribery from the foreign christians.

That all the heathen converts are really what they profess, we do not suppose; and besides, there are now even in the south seas those who, like their foreign visitors, are merely christians-born, and have no more of christianity than the name. And no doubt, knowledge is power; power for evil, as well as for good. Hence the station and influence and learning of many nominal christians, are all employed against the very precepts and principles of that holy religion by which they are called. But are all christians-born therefore hypocrites? Are all the ministers of religion a bad set? Where is the christian conduct of those foreigners who tempt the natives to vice?

In connection with this subject, we cannot but exhort the missionaries at the islands, to be careful to practice that "godly discipline" which was in the primitive church, and 'disown' those who walk not according to the principles and precepts of the gospel. We believe they have no idea of forming what is called a "national church,"—a church that claims as its own all persons born in the land,—a practice of religious men, which though ancient, is in our opinion destructive to the peculiar character and purity of the church of Christ; which should be a society of faithful disciples, from which, of course the faithless and unfaithful should be excluded. The union of the church to the world has done immense injury to both.

Chinese School at Naples.—The Biblical Repository for April 1832, published at New-York, contains an account of 'theological education in Italy,' which was written by Prof. Tholuck of Halle. Among other institutions the writer describes the "Propaganda Fide," which was founded in 1622, and consists of several distinct departments; one of which was intended expressly for youths from China and Japan. "But as it was found that the converts from these countries could not bear the climate of Rome, the establishment for them was transferred to Naples." It is thus described;—

"This missionary school was first established by a priest, Matteo de Baroni Ripa, in 1692, under the title; "Congregazione collegio e seminario della sacra famiglia di Gesu Christo;" and was afterwards enlarged by various benefactors, especially by Charles III and pope Benedict XIV. This congregation is composed of Neapolitan clergy, who, besides the

usual exercises of a cloister, devote themselves to the education of young Chinese, east Indians, and other orientals, and especially also Greeks, in order to train them up as missionaries to those countries respectively. The *procurator* of the 'Propaganda Fide' in Macao, who is at the head of the Romish missionary establishment there, first receives the young Chinese from the missionaries who reside in the different provinces of the 'celestial empire,' in order to make trial of their capacities and of their call to a missionary life. For this purpose they spend two or three months in a convent at Macao. They must too be descendants of Chinese catholic christians, and must have received permission from their parents or guardians to go to Europe.

"If now these young persons are found qualified, the procurator sends them, at the cost of the Neapolitan congregation, to Naples. Here the young Chinese first of all learn Latin,* from an older Chinese; and at the same time, Italian. After this, they begin, in the first year, their course of studies with rhetoric and philosophy, under a clerical instructor of the congregation; in the following years they pursue theological studies. Then follows an examination, either in the Propaganda at Rome, or by the archbishop of Naples. Their vows are six,—chastity, poverty, obedience, the priesthood, constant activity in the service of the Propaganda, and perseverance in the missionary life until death. In China, every missionary receives from the Propaganda a yearly support of eighty ducats; the ducat being equal to about eighty cents. The mission house in Naples is distinguished for neatness and an appearance of comfort; there are in it at present (1831), nine Chinese and four Greeks. Among the three or four instructors, are some men of very pleasing manners; but they seem not to be penetrated with ardent zeal, either for the cause of science or for the spread of the gospel."

LITERARY EXAMINATIONS.—One of the themes from the *Four Books*, proposed in Nanhæ district for the present examinations is, "*Fanche asked in what benevolence consisted. Confucius replied, to love men. He next asked, what constituted knowledge. The Sage replied, to know men.*" (See Collie's Confucius, page 56, section 21.)

It is added, that Fanche did not comprehend this; and Confucius added, elevate the upright and dismiss the depraved; thus you will make the depraved upright. Fanche departed,

* Walking along one of the streets in the suburbs of Canton, a few days ago, we were accosted by a young Chinese *latinist*. He said that he had studied eight years at the College of St. Joseph in Macao; his knowledge of the Latin tongue, however, seemed to be very limited, and his pronunciation was entirely Chinese. He was ignorant of the mandarin, but spoke the Canton dialect well, and said that his family lived in the suburbs of the city.

and waited on Tsze-hea to whom he said;—I had just now an interview with Confucius, and when I asked him what knowledge consisted in, he replied, 'elevate the upright, and dismiss the depraved, thus you will make the depraved upright.' What does he mean? Tsze-hea replied,—rich are his words! When Shun was emperor, he selected and elevated Kaou-yaou from among the multitude, and the vicious retired to a distance: when Tang was emperor, he selected and elevated E-yin from the multitude, and the vicious removed afar.

This passage is much extolled by the Chinese scholiasts; who laud equally the sage and the scholar. Confucius gave a short and rather ambiguous answer in order to draw forth more inquiry; and Fanche had sense enough to go to a fellow student and request his opinion. They suspect he was at a loss to see how knowledge and benevolence could unite; for the more you know of men very often, the less reason you will have to like them. But they consider that Confucius has completely solved the difficulty. Use, said he, your knowledge of human nature, ye rulers, to discriminate the upright from the depraved, and give office only to the good. Here is knowledge in operation. Thus the depraved will disappear, as if they removed to a distance, for they will be reformed; thus, one of the greatest acts of benevolence; the reformation of the vicious, will be effected; knowledge and benevolence be reconciled! Herein do the "riches," the fullness and comprehensiveness of the sage's words appear!

A PROCLAMATION BY CHGO, THE LIEUT. GOVERNOR OF CANTON.

The officer whom we thus designate, is second in authority in the province, and is by right, a member of the governor's council. In Chinese he is called seun-foo; also foo-yuen, and foo-tae. The word *seun* means to patrol; to cruise about. The revenue cutters, and police cruizers are designated by this word joined to *chuen*, a 'ship' or 'boat;' and the European men of war are usually denoted by the same phrase. *Foo* means to lay the hand on and soothe; to keep still and quiet.—It is in this capacity that the magnate Choo issues the following admonitory commands. We consider the proclamation as rather a curious document, containing much that is good, but on the whole very defective in principle, and in moral sanctions.—The original document, which is designed to be pasted up against the wall, is four feet high and five feet broad. Every character or word is about an inch square.

We admire the principle that governments should educate, as well as punish. To promote moral and religious education is no doubt a primary duty of governments. Some of the useful knowledge societies appear to us to err, by giving such prominence to intellectual, as almost to neglect moral education.

We much approve too of the *soother's* closing thought, that governmental love to the people is not at all so productive of good as the people's loving themselves—which is a counterpart of the adage, 'that self-government is the best form of government.'

The *Shin-sze* (Morrison's Dict. 9266), rendered in the translation, 'the learned gentry,' are people who have obtained some literary degree, which however can be bought with money, as well as obtained by reading books, although all profess to be *tuh-shoo jin*, 'book-reading men.'—They are generally a proud, supercilious class, and not seldom very ignorant. They may be called "the infidel priesthood" of China. And never were there any priests more ambitious or aspiring than they are. They claim precedence of every body. They alone can serve his majesty in all civil offices. They alone can be judges and magistrates. And as for their learning, it consists solely in a grammar-school education. The politico-puerile ethics of Confucius constitute their bible, to deviate from which in the least degree is heresy. These learned gentlemen, generally teach that men have no souls; that death is annihilation; and by a very just inference, that there are no rewards or punishments beyond the grave. This they say is the orthodox faith, to which every good Chinaman must assent. Any belief beyond this unbelief, is denominated *e-twan*; *seay-keau*,—heterodox principles; depraved doctrines, &c. Such are the "shepherds" of China.

Concerning such instructors, we do not wonder that the magnate Choo should use the irreverent phrase, "divine vagabonds." The two words, which in the translation have been so rendered, are *shin*, a god; a spirit; that which is divine; and *wan*, a sharper; a black-legged swindler; a vagabond. These are not usually priests as we might suppose, but laymen, who have the charge of temples, or are dealers in incense-sticks, divine candles, gilt paper, idols, &c. Idolatry in China is not less expensive than the best endowed church in christendom, and probably much more so. Those who make "silver shrines," and gods and goddesses, &c. &c., in China must be very averse to the "new sect every where spoken against," which requires only the homage of the heart; and renders useless the crafts we have enumerated;—but we must let the lieut. governor speak for himself.

"Choo, an attendant officer of the military board; a member of the court of universal examiners; an imperial historiographer and censor; patrolling soother of Canton; a guide of military affairs; and controller of the taxes;—

"Hereby issues a proclamation for the purpose of correcting the public morals, and delivering strict admonitory orders. In the art of government, moral instructions and the infliction of

punishments are mutually assisting; but punishments should come after the act; instructions should go before; and that neither should be neglected, has long been decided.

"Two years have elapsed since my arrival at my official station in Canton, and I have observed the multitudinous robberies and thefts therein. Streets and lanes are never tranquil. Daily have I led the local officers to search and seize, so that we have had no strength for any thing else; but the spirit of robbery has not even till now ceased. This has arisen from my defective virtue; the smallness of my ability; and the insufficiency of majesty and mercy in my conduct; I feel ashamed of myself.

"But I consider that luxury and extravagance are the causes of hunger and cold; and from thence robberies and thefts proceed. The learned gentry are at the head of the common people; and to them the villagers look up. If they do not sincerely and faithfully issue educational commands, to cause the public morals to revert to regularity and economy, so that sons and younger brothers may gradually learn to be sincere and respectful, then where is that which has long been considered the best device for a radical reform, and a source-purifying process in a country? Availing myself of this doctrine, I shall select a few of the most important topics and proclaim them perspicuously below. That which I hope is, that all you learned gentry, and old men among the people, will from this time and afterwards make a work of stirring and brushing up your spirits, to become leaders of the people; and to assist and supply that in which I am defective. When there are native vagabonds in a district who oppose what is good, and play with acts of disobedience, I shall order the local magistrate to punish them severely; but still, scribes and police-men must not be allowed to make pretexts and to create disturbance. Oh! alas! Those who will not be concerned about the future, must one day have trouble near at hand. This, I the lieut. governor distinctly perceive is the source of nefarious conduct. My mind is full of regret on the subject; and I will not be afraid to iterate instructions and issue my commandments for the sake of the land. Ye learned gentry, and presbyters of the people, respectfully listen to my words. Despise not. A special proclamation.

"*First.* Exhortations and persuasions ought to be extensively diffus'd.

"The national family has appointed officers, from provincial governors and lieut. governors down to district magistrates, who hold the station of guides and shepherds; and whose duty it is equally to renovate and to lead the people. Although sons and younger brothers may be deficient in respect, it is because fathers and elder brothers have not previously taught them. And how can the learned gentry in villages, and hamlets, lanes and neighborhoods, shut their eyes and view such occurrences

as not concerning themselves? The teaching of the magistrate is interrupted by his being sometimes present and sometimes absent. The teaching of the learned gentleman is continuous by his constant presence. Here he was born; and here he grew up. He is perfectly acquainted with the public morals—what is beneficial and what is prejudicial. Moreover he knows perfectly the roots of the mulberry which join neighbors' houses, and the altar tree whose shade is common to all. And still more, he feels every pain and pleasure that is felt by any of his clan. To fathers he can speak of tender-heartedness; to sons he can speak of filial piety. He can exhibit his instructions appropriately to every man, and convey them delicately in the slightest conversation. With half a word he can dissipate an intricate feud. It is easy for him to avail himself of his influence and persuade to that which is right.

“Learned gentry should read the useful books of sages and worthies; and for the national family they should be useful men. If to-day they are living in the country, instructors of morals and examples of propriety; another day they will fill official stations, following what is good and obtaining the highest recompense. Being abroad and at home makes a temporary difference, but the incumbent duty in both stations is the same. At home manifesting the principles of good government, is also being in the government.

“I the lieut. governor in patrolling and soothing this region, always toiling hither and thither about public affairs, cannot get time to grasp the hand, and hold conversation with the learned gentry, and be always exhorting and exciting each other; but sometimes when I obtain an interview with you I shall issue my commands, that you may enjoin those commands on other gentry, that every one may instruct his own neighborhood; and all correct their own kindred. Then one village will exhibit beautiful morals. By union, scores of villages will exhibit the same beautiful morals. Then a whole been district will, in every house, become the same. Then he who carries a heavy burden will only have to call, and he will be sure to have help, like Tseang-pih of old; and when fording a stream, if in danger, he will only have to cry out and some friend will come to his aid.

“He alone who has no blemish himself, can perfectly mend others. That which I hope is, that the virtuous will take the lead of the vicious. Only the good man will receive entirely the advice given him. None ought on account of talents possessed, to reject those who are not talented. In ancient times, Yen-keun-ping let fall the screen at Ching-too, and all the men of Shuh were renovated. Ching-tze-chin himself ploughed at the mouth of the valley, and all the people of Kwan-yew followed his example. When a scholar and good man girds up his loins and walks firmly, he becomes the leader of all the country-side. No doubt when people look up at his gate they

will desist from their contentions; when they hear his name, those who are wrong will feel ashamed. In all you learned gentry I have substantial hopes.

“*Secondly.* Plainness and economy should be greatly esteemed.

“Since I the soother of the people came to my present office, I have for two years observed and investigated the state of things among the people at Canton. I have looked at their airs, and inquired about their customs. I have secretly indulged intense sorrow, and been filled with extreme regret; and for nothing more than to see useful property thrown away for useless purposes; to see limited strength wasted on projects from which no benefit could accrue. In country places, the lasting occupations of husbandry and mulberry-culture are still attended to with a spirit approaching to simplicity; but in the city of Canton, at Fuh-shan, and at all the places where markets are held and official people live, there is a strife and emulation to exceed in gaiety and extravagance.

“At every anniversary of the birth-day of a god; or when plays are performed at masses for departed shades; or thank-givings are offered for divine energies exerted in behalf of any one; or grateful processions with prayers are carried round,—all of which are what propriety does not interdict,—but every one wants to boast of great things and to vie with others in expense; one imitates another, and in a worse degree. Some even go to the extreme of erecting lofty and variegated pavilions, and for a great distance raising flowery palaces. Fire trees and silver flowers fill the streets and stop the lanes. Men and women assemble promiscuously, greatly to the detriment of the public manners. The sums expended must be reckoned by thousands and tens of thousands. And in a few days the whole is of no more use than mire or sand, and is thrown away like a child's grass dog (a toy). Moreover a blast may set on fire [the adjoining buildings] and cause a conflagration, which will occasion the resentment of myriads of families. It cannot be that these things emanate from the wishes of the many. They must be led into error by “divine vagabonds” (who make a pretext of serving the gods to serve themselves).

“Consider, the shopmen in a street all live by a little trade; their origin not bigger than a fly's head; their end a mere trifle; and the profits they gain are small. But in a moment it is spent in wind and flame, and thrown away for useless regrets. Heaven's ways hate self sufficiency; demons and gods abominate a *plenum*. To consider such services as prayers, must be followed by divine reprehension. But he who is careful of his useful property and his limited strength, and turns them to his own advantage, can gradually increase the means of supporting himself and family; or, if he employs

them for the good of others, he can lend to those who are in want: such an one, men will assist and the gods protect.

"I the lieut. governor, am in my own person economical and simple, that I may be an example to the people. It is my sincere desire to make my nursing to consist in giving no trouble, and to teach by my own mode of living. This is what you learned gentry and common people all know and all have seen. Hereafter when any anniversary of a god's birth occurs, there is no objection to your going to a temple to suspend lanterns and hang up ornaments; offering sacrifices with abundance and cleanliness.

"But as to the street exhibitions, you must not listen to the divine vagabonds, who make pretexts to collect money, and gather together men and women promiscuously. If such people assemble, the district constables, and street seniors must be responsible. The learned gentry are permitted to proceed summarily, and report them to the local magistrate for punishment; and to pull back again the people from the regions of sterile custom.

"As to all cases of assuming the cap (or toga), marrying wives, or burying parents, with the sacrificial rites attendant thereon, in matters of dress or drinking, whether poor or rich, all should have a tender feeling for commodities; and a tender feeling for subsequent enjoyment [i. e. avoid all waste]. The said learned gentry also should substantiate the wish of me the lieut. governor to correct the people and instruct them in morals, should advise them to substitute plainness for extravagance, and by economy nourish wealth; so that the people of a year of plenty may so hoard that plentiful year's wealth, that the people of a year of scarcity may look up to a year of plenty's accumulations; would not this be beautiful!! Ah! Government's love to the people, is not so good as people's love to themselves! Would the people but love and compassionate their own persons and families, where would be the occasion of their waiting till other persons laid plans for them! And if reciprocally acting they thus formed the "wind," (the fashion) they might go on and become wealthy and never know discomfort.

"Using these topics, I have lucidly and intensely proclaimed them, that all might hear and know, wishing that none will tread in the steps of their former iniquities, but all practice to the utmost good morals.

"Taou-kwang 13th year, 1st moon, 23rd day." (March 14th, A. D. 1833.)

Note. Parts of the above document have been re-echoed by the chief magistrates of the heen districts throughout this province; the force of the original however receives no augment from the inferior officers—the reverse is true. This perhaps the soother anticipated; for another proclamation, we understand, is about to be published by himself and the governor jointly.

RELIGIOUS INTELLIGENCE.

SIAM.—The following communication from Mr. Abeel was written about four months ago, and after his second visit to Bangkok. There is much cause for devout gratitude to God, that the incipient efforts to extend a knowledge of the gospel to the inhabitants of Siam have been in any degree successful. We have watched the progress of that mission with deep solicitude; and our surprise is, that among such a people as the Siamese, there has been so little opposition. The success thus far has fully equalled our expectations. Not five years have elapsed since Messrs. Tomlin and Gutzlaff first reached Bangkok, and were allowed to *begin* their work. The desire for books has been very great, and has prevailed not only among the Siamese and the Chinese, but among those of other languages also. At times during the progress of their work, they have had equal access to the palace and to the cottage; and have had crowds of visitors, who came for medicines and for books,—“high and low,” says Mr. Abeel, “priest and people, men and women, old and young, natives and foreigners, have thronged our cottage and urged their suit with an eloquence which could scarcely be resist-

ed.” Two of the young princes, and several other persons of distinction, he mentions also, were among their occasional visitors. Such was the state of the mission fifteen months ago; and such it has been described in the preceding pages of this work. But on his *second* visit, which was made during the last summer, he found the aspect of the mission in some degree changed. Referring to this change, Mr. Abeel takes occasion to remark on the *caution* which ought to be used in making reports of the progress of christianity. He says:—

In looking over the pages of the “Repository,” I find much written about Siam, and at the same time the expression of a hope, that the subject may be continued by myself and others. I should be happy, if the state of the infant mission in Siam would allow me to answer, in faithful representation of fact, your most glowing expectations, and even lead to hopes which no past occurrence could justify,—I refer to the hope of a speedy and universal triumph of the gospel over all the forms and follies of their idolatry. But while we *know* that this event is determined, let us be cautious not to *antecipate* it,—lest the prayers of

christians be restrained, and their energies paralyzed,—lest the taunts of the sceptic become *rational*, and the faith of “the faithful” in our mutual reports be shaken,—lest the great adversary gain an important advantage, and the last (present) state of Siam be worse than the first. Caution would be the less necessary, if the object was merely to square opinions with the cavils of those who would fain credit nothing, which is written about the progress of truth in the present day. This would indeed be a vain attempt. Such minds bear the stamp of derangement, at least of monomania, and no argument can be expected to have effect upon the point of their phrenzy, until the balance of reason is restored. Still caution is necessary; for without it, we injure the cause which we espouse and which we labor to advance.

When the first missionaries visited Siam, many expressions of kindness were shown to them by almost all classes of the community: and had they been permitted to remain, the interest of the nation might have survived the novelty which probably gave it birth, and grown with the growing friendship of the parties. Changes however have taken place, and so many and rapid have they been within this short period, that no one has remained to improve his acquaintance, and divert the interest of it from the missionaries to their work—from the disciple of Jesus to the Savior himself. Though this has been repeatedly attempted, and has not been attempted in vain; yet there has not been opportunity,

either to continue the instructions which have been commenced, or even to see the results of what has been taught.

The character of the Siamese, high and low, is well drawn in Gutzlaff's journal. Fickleness, insincerity, a determined selfishness, combined with a total ignorance of the most corrective truths and principles, enter into the composition of the people at large. True, the gospel can, and it is a subject of joyful gratitude, the gospel shall transform this very character into a moral symmetry the most lovely; but until this change is witnessed, we can lay but little stress upon the simple professions of those who never sacrifice nor venture any thing for the object of their affections. Whether we are to be tolerated and allowed to proceed in the important work for which alone we visited this country, remains to be tested. As is stated in the journal referred to, every thing is incipient. “The weapons of our warfare” have not even been prepared. “The sword of the Spirit” has not been unsheathed, for “the word of God” is not yet *printed* in their language. It is true that some of the people have been partially taught orally, and by means of the tract distributed last year; but it cannot be said that their strong holds have been fairly assailed. If the stupendous fabric of idolatry in Siam—broad as the whole land, and high as the towering pride of the monarch and his “mighty men”—should fall or even totter, upon the application of a feeble power, it would stand alone in the

history of events through all the ages of the past.

Idolatri has almost every thing to support it in Siam. Their pagodas are the only schools of learning for the males, and he who refuses to become a priest, must remain "ignorant." The king has ever been one of the strictest devotees of Budhism. The prince "whose right it is to reign" is a talapoin. The one who bids fair for the throne, and has ever been the most intimate friend of Europeans, is a great admirer of his brother's sanctity, and consequently of the religion that sanctifies him. Almost all classes, when rice is dear, have the liberty to assume the yellow robe, and take up their quarters in a pagoda. I mention these things, not to discourage the minds of any who may engage in the work, but to prepare them for its better accomplishment. That there will be opposition, there is no question—to what extent we can only conjecture—with what success we all know. It is not the character of a soldier fighting for earthly glory, to shrink back, because he is likely to be opposed: opposition generally proves his stimulus, and instead of mastering, only matures his courage. These difficulties then should be known and calculated upon, since they cannot quench the zeal nor in the least repress the ardor of the true follower of Jesus. If such should be the consequences to any, it is still necessary that the "full cost be counted" by all. It will prove a test of the fitness of the instrument for his work; it will tend to chasten his pride, sim-

plify his motives, teach him his own weakness, and direct his soul in humble importunate prayer (his most powerful weapon) to Him who is able and has determined to convert the heathen.

Upon my arrival in the country, the captain of the junk—of an officious, or perhaps more strictly a fearful spirit,—informed the king that I had returned with a good supply of books; (the books were Chinese, whether this was mentioned to the king or not, I cannot say,) upon which his majesty saw fit to issue a royal veto against their distribution: the king said, if our object was to change religions, we were welcome to attempt it in other countries, but not in his. Whether there had been a previous concert between the priests and his majesty, or whether it was a mere momentary whim or fear of the latter, I cannot determine. Other circumstances led me to conjecture that the former was the case; that the priests had become somewhat alarmed at the distribution of the tract, and the natural tendency of its contents, and availed themselves of their interest with the king to retain their official advantages, by preventing the diffusion of anti-pagan doctrines.

My particular object in hastening from Singapore before my health was established, was to supply the Chinese junks trading to Siam, with christian books; and through the kind interposition of the Lord, it was conceded by the king's officers, that that business did not come within the royal interdiction. I would limit myself to this task.

I neither promised nor intended; so that when the junks were supplied to the number of fifty; the king, I hope, really—and I practically—forgot the prohibition. As the conversion of China is of all others the most important in the list of missionary objects, it may not be improper to repeat, what has been frequently mentioned, that no foreign country presents so many advantages for this undertaking as Siam. During the present year, about 80 junks visited the place; 30 had sailed before we arrived; among the remaining 50, the books were generally well received, and there is every reason to believe were carried to China.

As you perceive from previous journals, the medical dispensary

attracts numbers from different quarters. It is peculiarly adapted to Siam, both in charity to the their dying bodies, and as one of the best means, I mean remotely, of saving their souls.

The circumstance which I regarded as most favorable, during my last visit, was the increasing numbers upon our Sabbath exercises. It seldom exceeded twenty; but this was many more than ever attended before;—and I believe by the exercise of a little wisdom, the number might be almost indefinitely increased.—Of these a few, *very few*, manifested a considerable change in their character—having renounced their idols, and evinced considerable eagerness and self-denial in their search after the truth.

LITERARY NOTICES.

THE HOLY BIBLE IN CHINESE. A second edition of the Bible has recently been published at the Anglochinese college, Malacca; it is a large and beautiful octavo in 21 volumes, and has been printed with new blocks. Had the college been the means of accomplishing nothing more than the publication of this and a former edition of the Bible, we should think its founder and contributors abundantly repaid for all their labors. But we know from good authority, that many of the students, who have been educated in the col-

lege, are now filling respectable stations; civil or commercial, in the Straits; and that some of them are teaching the English language in Pegu and Cochinchina. And above all, we rejoice to know that some have there received the gospel in the love of it; obey its precepts; enjoy its consolations; and assist, even in China itself, in diffusing a knowledge of its righteous requisitions and its glorious promises.

THE ASIATIC JOURNAL.—The numbers of this work for last

Sept. and Oct., contain "an historical sketch of the reign of the emperor Kheen-lung;—from Chinese and other authorities." "The honorary name of Kheen-lung" is given "in Mandshoo," and translated, 'assisted by heaven.' This is very feeble; keen denotes *heaven; celestial*; and lung, *prosperous; glorious*. The sketch details a series of insurrections, wars, and executions of generals, which exhibit the monarch as a vigorous, but cruel man.

The October number contains a brief memoir of the late T. P. Abel-Remusat, well known as one of the best Chinese scholars in Europe. He has left three unfinished works; the last of which is a great desideratum, viz. "A natural history of the eastern countries of Asia,"—that is, China, Japan, and Tartary. "Chinese dictionaries, both native and foreign, seldom designate plants, minerals, and

animals by any thing else than vague terms." A work like that which Remusat contemplated by the aid of Cuvier and others, is greatly needed—but Remusat and Cuvier are both dead.

The Nouveau Journal Asiatique for last July and August has a long "Notice de l'encyclopédie littéraire de Matouan lin,"—par M. Klaproth. And from Paris also has been issued a Chinese play, called Hœi-lan-ki,—par M. Julien, who, we understand, has been appointed to succeed the late Abel-Remusat in the professorship of Chinese. This translation was printed by the English oriental translation Fund. M. Julien has attended to the poetry of Chinese, and purposes to continue the study of it, with the design of compiling a *poetical dictionary*. We heartily wish him success in his work.

JOURNAL OF OCCURRENCES.

THE HIGHLAND REBELLION; or Leen-chow mountaineers.—From the Peking gazette of October 28th 1832, we perceive that five persons, the kindred of Chaou, the Golden Dragon, have been sentenced to immediate death by the slow and ignominious process of 'cutting to pieces.' Their names were Chaoufuhkin, Chaoufuhyin, Chaoukinwang, Letihming (who was declared king by the insurgents), and Tangtinghing, of whom we do not remember to have read any thing. The imperial sentence directed that their heads should be carried about among the multitude, and a Tartar of high rank was

ordered to go and witness the execution.

We have before us a paper which was written by a scholar, and which represents the submission of the mountaineers to be a mere farce; and the conduct of He-ngan,—the emperor's brother in law, who was one of the imperial commissioners on the occasion,—a gross imposition on his Majesty, and a disgrace to the nation. The writer expresses great indignation against, and contempt for the high authorities, who by bribery induced the mountaineers to allow his Majesty's troops the empty forms of victory, and triumph, where there was need of the

ty. We are surprised that any one should choose to risk his personal safety by writing such a libellous paper, merely to give vent to his feelings,—for that is the only object which he seems to have had in view.

The speaking of the money of the government,—which, he says, is procured by the toil and sweat of the people, is the very marrow of their bones; he adds; the commissioner gave five hundred thousand taels weight, (for which was the sum given in silver,) to the rebels, and a flourish of drums! He wonders at the commissioner's cowardice and utter want of shame, which prevented his blushing when he received the rewards of victory, such as rings, peacock's feathers, &c. He affects however respect for his majesty, whose displeasure he calls upon to avenge his anger;" and deeply regrets that the emperor has been so misled on, in a matter originated by the despicable and detested highlanders. It has been recently reported that already they descend to the assistance in parties to plunder as before, that local officers refuse to acknowledge the fact. The 500,000 taels given to bring over a few, who constituted Chinese officers and received commissions with the cap and insignia, is represented as taken away; for the hill-men will not submit to their new made orders, and have forced them to relinquish their commissions and return to their knobs.

Private rumors state that old Sun, Lord Macartney's friend, has been punished He-nan for deceiving the emperor, for usurping all power at the time of the distribution of office throughout the empire, for taking his departure home at midnight from the imperial palace, &c.

FORMOSA.—The sudden declaration of the government that tranquillity is restored on this island, is no less surprising than the hasty submission by the mountaineers of Leenchow. Very short time ago, two Tartar regiments were despatched poste-haste to Peking, taking with them thirty Tartar officers, and possessing power over the experienced troops from various provinces, even so far as Szechuan—on the opposite side of the island. Now all at once the troops

are countermanded, and the rebellion on Formosa suppressed! Whether there has been a change of counsels at court; or the imperial arms have really been victorious; or the leaders of the insurrection have quarrelled among themselves and yielded to their common enemy; or whether like the Leenchow highlanders they have been bribed to hold a truce and deliver up a few unhappy associates to be slaughtered, remains uncertain.

GOVERNOR LE.—Extracts from the Peking gazette of February 15th 1833, contain the final decision concerning our late governor, magistrate Le, and confirm the account given in our last number. He has been compelled to pay from his accumulations a sum equal to three-tenths of the expenses of the highland war. But his majesty says this punishment is not enough to cover his crimes, of mismanagement; procrastination; specious but untrue representations; and the indulgence of the Canton military in opium, by which their strength was destroyed. He is therefore transported to Oroumtsi in western Tartary to exert himself and atone for his offenses. It is supposed he will be restored in a year or two.

A poor native, who was standing by while we read these "extracts" concerning governor Le, said, "Ah! in our country, it is a bad case—no one that can give money, may exert himself meritoriously; he who has none, all his exertions are in vain." This seems verified in the present instance; for general Lew who acted under governor Le, for the same offenses as were alleged against his superior, is condemned, though upwards of seventy years of age, to transportation to, and hard labor at Ele, without any hope being held out that his sufferings will be considered an atonement. In China, it is the law that old men may pay a pecuniary fine as an "atonement," (the gazette uses this same word in the decision against governor Le,) but the sentence expressly forbids any being accepted in the case of general Lew. Indulging his troops in opium, and a precipitate ill-judged attack at five passes, in all of which he was repulsed with great slaughter, are the crimes alleged against him.

It is remarkable that during Le's trial, our present governor wrote up

to the emperor, that of late, his predecessor had written frequently to the king of Cochinchina about pirates, &c., which intercourse Le had not laid before his Majesty. This was brought against Le as an additional offense; inasmuch as all intercourse with foreign states is deemed of the highest importance at the imperial court.

ABDALLAH, a captive.—The 124th No. of the Peking gazette contains an article in reference to the descendants of "Khodsijan," the Mohammedan rebel against Keenlung, mentioned in page 52 of the Asiatic Journal for September 1832. When the two princes Bootatoo and Khodsijan were defeated and perished, many of their kindred, according to the barbarous usage of Asiatic conquerors, were put to death; this was in 1759. The gazette before us notices that there was an infant son, who could have no knowledge of, nor take any part, in his father's rebellion. His life was spared and he was given to be a slave to an officer of merit who was engaged in the war. His name was *Apotechale* (Abdallah? "the slave or servant of God"). During the third year of the present reign, Abdallah having conducted himself in a quiet inoffensive manner, was, according to the law respecting Mohammedans, with all his family permitted to enter the white 'standard' of Mungkoo's, and to be employed in the service of government.

Only three years after this, the rebellion of Chang-kihur broke out at Cashgar, and Abdallah and his family, (for he was related to Chankihur,) were again implicated, though they

were perfectly innocent of any connection with the rebel. He and his children were separated and sent, some to Yunnan provinces; some to Canton, to Kwango, to Fuhkeen, &c.,—to be imprisoned for ever, in solitary cells. The female part of the family were sent to Keangan, Hangchow, &c., to be slaves. In this state they remained the last six years. Abdallah and Pihpakih (a son we suppose) died in the mean time. Changkihur having perished, and these helpless prisoners and slaves having "behaved quietly," his Majesty in order to imitate the clemency of his grandfather, and exhibit his own "mercy beyond the law," has decreed that Abdallah's coffin be permitted to enter Peking for interment, and his family, male and female, be restored to the Mungkoo standard.

ANONYMOUS ACCUSATIONS.—A case of this kind has occurred in Peking, which has drawn forth a long memorial from one of the Yu-ahs. Somebody threw into a stable an anonymous impeachment of several officers in one of the supreme courts. The rule of proceeding in such cases, requires that the document shall be immediately destroyed by the finder. He who wrote, and he who attempts to act upon it are both liable to punishment. In the present case the libel came to the knowledge of the emperor, and he wished the allegations, which were rather of a serious nature, to be examined into. His censor remonstrates and wishes the law to be adhered to, because of the evil effects that must arise from opening a door to malicious selfishness by a contrary procedure.

Postscript.—Early in the present month it was announced in Canton, that the rebellion on the island of Formosa was at an end, and that the orders for more troops had been countermanded; but no account was given of the manner in which peace had been obtained.

Fuhkeen junk, which have recently arrived at Macao, bring reports that the insurgents, 200,000 strong, are in possession of Luchow, and that the governor of Fuhkeen and other officers are at Keit-tai, endeavoring to subdue the rebels by offers of money and of office; the system (the same that was finally adopted at Leenchow,) has, it is said, been partially successful.

THE
CHINESE REPOSITORY.

VOL. I.—APRIL, 1833.—No. 12.

REVIEW.

The history of that great and renowned Monarchy of China, wherein all the particular provinces are accurately described; as also the disposition, manners, learning, laws, militia, government, and religion of the people; together with the traffic and commodities of that country; lately written in Italian by Father ALVAREZ SEMEDO, a Portuguese, after he had resided twenty-two years at the court and other famous cities of that kingdom. Now put into English by a person of quality, and illustrated with several maps and figures to satisfy the curious and advance the trade of Great Britain. London, 1655.

WE are much pleased with this book, because it presents us the observations and reasonings of an intelligent man, made at a time when the history of a great and remote empire began to excite attention in Europe. For in later years, when more dissensions had arisen among those who were best able to write this history, or when the various theories which learned men had formed respecting China and her policy, required any certain statement and coloring of facts to support them, such

coloring and such peculiar facts are often found in the histories. Our author gives us the results of his own observations on the various subjects embraced in his work, and with so minute and circumstantial description as exhibits the work of an eye-witness. Much of what he relates was gained by personal observation for his own purposes of intercourse with the people; much knowledge of the nobility and officers, from intimacy with Christian mandarins; and much information respecting the government, laws, punishments and prisons, from painful personal experience. As he himself remarks in his description of the courts, prisons, and punishments:—"but some will ask me how I came to be so expert in these points. Truly I must answer him in a word, that though this knowledge be not worth much, yet it cost me very dear." *Et quorum pars magna fui.*

Alvarez Semedo, procurator of Japan and China, after spending above twenty years in Peking and in the provincial cities, returned to Europe about 1734 to obtain recruits for the service of the society of Jesuits. While in Europe he published this volume, which attracted so much attention that it was "done into English" a few years after. Although some of his accounts which were then fresh, have become antiquated and obsolete in the course of two centuries, and though many points of which he treats have been subsequently illustrated more at large, still "great stores of information" remain uninjured. To the friends of China, everything concerning her past or present condition or future prospects, will possess peculiar interest. To nothing which affects her best welfare do we feel indifferent; for on this we concentrate our highest earthly hopes, and to this we wish to direct all our earthly labors.

The work is divided into two parts, in the first of which is a description of all the provinces; of the persons of the Chinese; of their literature; their arts;

their customs ; their religion and government. The second part is a history of the operations of the Romish missionaries in China, their successes and their sufferings : after which follows the supplement to these present times, wherein is contained "the Chinesses most cruell warre with the Tartars, by whom they are now conquered."

The first extract which we make, presents the Chinese in the costume of his countrymen before the last Tartar conquest.

"They suffer the hair of their heads to grow as long as it will, both men and women. They are almost universally black-haired ; hence cometh that name by which they are called among other nations,—the kingdom of the black-haired people. They have also black eyes, which are very small, with an elongated opening ; little noses, which are neither large nor high, accounting such a deformity. They clip not their beard, letting it grow according to nature. They will be more troubled to lose one hair of their head than all the hair of their face." (Afterwards as the conquests of the Tartars advanced, changes were gradually but forcibly introduced.) "The Tartars having taken a city, proclaimed that they should kill none of the inhabitants if they would cut their hair, and use the Tartar's habit." For the Tartars shave both the head and beard reserving only the mustaches, and on the hinder part of the head, they leave a tuft which being curiously platted, they let hang down behind in a cue. Their garments are long robes falling down to the feet, but their sleeves are not so wide and large as the Chinese use. The dress is the same for the men and the women."

This violent introduction of a new and barbarous fashion, was stoutly resisted by the patriotic and proud, and there was more than one example exhibited of a man "strangled by a hair." Rather than submit to the degradation of adopting these foreign customs, some high-minded Chinese lost their hair only with their head. But so universal and established is this *foreign* fashion in China at the present time, that it may be doubted whether the people would now revert to their old habit again, unless compelled by violence equal to that which once drove them to renounce it. In the

following extract concerning the dispositions of the Chinese, our author describes such a people as cannot exactly be found here at the present day; yet he certainly shows himself free from prejudice *against* them.

“They magnify very freely whatever is virtuous in the actions of their neighbors, courageously opposing that emulation which in almost all other nations suffereth none to be pleased with any but themselves. When they see anything which cometh from Europe, though there be in it little art or ingenuity, it is commended by them with singular applause—a modesty indeed worthy to be envied so much the more, because it is seen in a people that exceed many others in their abilities. They are inclined to virtue; I do not say they are exempt from the vices proper to all pagans, and indeed to all mortals; but they esteem those which make profession of virtue, and particularly of some virtues which are despised by other gentiles, as humility and chastity.”

Doubtless our author intends here to speak of those established forms of friendly and ceremonious intercourse, which make humility and even servility fall from the tongue in set and measured phrase. For, that there is no general disposition among the Chinese to magnify the virtues of others, need not be told to them who know anything of the “celestial empire.” The pride and self-importance of the Chinese has long been too proverbial even among their friends, to claim for them any real *humility*, or any of the other virtues which cluster around this great enemy of selfishness. Though Alvarez here shows himself the friend of China, yet in other parts of his book he also shows himself noways blind to their “defects.” He says that the rich and established merchants are of good credit, very punctual and honorable in fulfilling their engagements; but acknowledges that their way of bargaining is fuller of craft and subtlety than is to be found anywhere else in the world. “The nature of the whole nation, as well of the sellers as the buyers, is much inclined to guile and deceit, which they put in execution with admirable subtlety.”

Respecting the population of China, our author makes but one brief remark, directly; but throughout his work, the occasional exhibition of the numbers in any city, in any trade, in an army or in a defeat, imply a very great population.

“This kingdom is so exceedingly populous, that having lived there two and twenty years, I was in no less amazement at my coming away than in the beginning, at the multitude of the people. Certainly the truth exceedeth all hyperboles; not only in the cities, towns and public places, but also in the highways, there is as great a concourse as is usual in Europe at some great festival. And if we will refer ourselves to the general register-book, wherein only the common men are enrolled, leaving out women, children, eunuchs, professors of letters and arms, there are reckoned of them to be fifty-eight millions fifty-five thousand one hundred and four score.”

Whether this enrollment can be fully depended on, which he does not assert, or whether it is only “founded on fact,” yet the constant implication of great numbers which is involved in the whole history, would lead us to assign a much denser population during this period than is usually done; and the official reports of the government at the *present* time, would be very consistent with such an opinion.

In his description of the province of Shense, our author speaks of a product better known since his time.

“*Cha* (tea) is the leaf of a tree about the bigness of a myrtle, or in other provinces of the herb basil, or the small pomegranate. They dry it over the fire in iron sieves, where it hardens and sticketh together. There are many sorts of it, as well because the plant is various as also that the upper leaves do exceed the others in fineness. There is of it, from a crown a pound to four farthings according to the quality of it. It being thus dried and cast into warm water, giveth it a color, smell and taste, at first unpleasing, but custom makes it more acceptable. ’Tis much used in China and Giappone (Japan), for it serveth not only for ordinary drink instead of water, but also for entertainment to strangers when they visit them. Many virtues are related of this leaf: certain it is, that it is very wholesome, and that neither in China nor Japan, is

any one troubled with the stone, nor is the name of this disease known. It is also certain that it powerfully delivereth from the oppression of sleep whoever desireth to watch either for necessity or pleasure; for by suppressing the fumes, it easeth the head without any inconvenience; and finally it is a known and admirable help for students. For the rest, I have not so great assurance of it that I dare affirm it."

The admirable virtues of this "cha" have been better understood since that day. The price and the quality have risen with the demand. There is now tea of so excellent quality as to sell for *thirty-two* dollars a pound. But none of this reaches the foreigners. Among the articles of commerce with Canton at that time, tea is not enumerated, probably because it was but a trifling article of export. But since that day, this leaf has "discolored the water" among many nations of the globe.

In China; where so much of their morality, and policy, and religion even, is made to depend on the parental and filial relations, we should expect that *marriage* would be a matter of much ceremony and sacredness. It is so to a great degree, notwithstanding the authorized violations of the "more ancient and better custom," of having but one wife. Some of the customs attending this ceremony, we think, would hardly take among our "barbarous" western gentlemen and ladies, who pretend to have a heart of their own, and to claim the right of the disposal of it. "Fathers often contract marriages for their children while yet very young, and sometimes before their birth; and these contracts are binding on the children, although their fathers die before the time, or one of the parties meanwhile fall from his honor or estate, &c.,—excepting both parties voluntarily agree to break off the contract." Our author says;—

"In the kingdom of China, as doth plainly appear by their books and chronicles, formal marriages have been in use ^{above} 2400 years. Always from that time to this, there have been

among them two kinds of marriage, one a true one, for the whole life of the two parties; and then the woman is called a *wife*, and received with extraordinary ceremonies. The second is rather a concubinage permitted by their laws, in case they have no sons by the wife; but now it is grown so common that although some do forbear having them upon the account of virtue, yet it is very frequent with rich men, [and others also] although they have children, to take concubines. But the manner is very different from the true marriage; for although they contract in some sort with the father of the maiden, yet in truth she is bought and sold, and often by a person that hath no relation to her only that he bred her up for that purpose. For there are many in China, who bring up young maidens and teach them music, dancing and other perquisites of women's breeding, only to sell them for concubines, at a great price. Yet it is not accounted a matrimony, nor hath it the solemnity of marriage belonging to it, nor any obligation of perpetuity, but the man may put her away, and she may marry another, in case she be wholly withdrawn from the company of the first. The manner of treating them is also different. They eat apart by themselves in their own chambers, and are in subjection to the true wife, serving her in some things as her servants. The children which they bear do not do them reverence as to a mother, but they pay it to the true wife, whom also they call mother. Sometimes it happens that they take a concubine, and keep her only till she bring them a son; for if the lawful wife will not suffer her to stay, as soon as the child is born, they send her away or marry her to another, and the child which stayeth behind, never knoweth her who bore him. Widows may marry if they will, but women of quality seldom do it. A young maid will hardly marry a widower, which they call *patching up the house and the bed*.

“On the wedding day towards evening, the bridegroom sends the sedan, of which they have very curious ones made for this purpose only, richly adorned with silk and locked on the outside. The mother of the bride putteth her into the sedan and locketh the door: and sending the key to her son-in-law's mother, she herself departeth along with the company. When she is come to the bridegroom's house, the mother-in-law unlocketh the sedan, and taking out the bride delivereth her to the bridegroom. Then they both go together to the chapel of their idols, where are likewise kept the images or names of their ancestors. There they make the ordinary reverence of bowing themselves four times upon their knees: and presently they go forward into the inner hall where their parents are sitting, to whom they make the same reverences; then the bride retireth with her mother-in-law and other women to the female apartment, where she hath a particular chamber for herself and her husband. Into this room no other man may ever enter; not the men-servants except while they are *little* boys, nor male kindred unless they be

the younger brethren of the husband, of very small age; no, not the husband's father. So that when the father would chastise the son for any fault, (which is common there for their fathers to do, although the son be married,) if he can get into his wife's chamber he is safe, for the father may not enter there, nor speak to his daughter-in-law unless on some set occasions. For they believe that the least overture which women give to the conversation of men, is a large gate opened to the danger of their honor. This which may be accounted a harsh strictness is turned into a pleasant sweetness by custom."

One cause of the remarkable uniformity and unchangeableness of the national character of the Chinese is seen, if we mistake not, in the *unalterable literature* of the country. The student of the present day is poring over not the same letters merely, but the same books, the same maxims and laws, the same precepts and history, in the very same expressions which the scholar of 2000 years ago studied. Here, phrases of ceremony and maxims of life are stereotyped, government is stereotyped, and thought itself is *stereotyped*, and passes down from age to age unchanged. An original thought in their antiquated literature, would be like a foreigner on their forbidden soil—a suspected object and interdicted by law. As we are the antipodes of the western world in location, so very much are we in fashion. The "march of thought" there so boasted, is forward; here it is backward, for the past is the field for literary laurels. "The spirit of the age" which there awakens men to better hopes and privileges, and turns the eye of the Christian forward to the long expected reign of his Savior, here draws up the heart within itself, and turns the eye away from a better and brighter prospect for China,—turns it back upon the dark and dubious past. In the sphere of a Chinese's hopes, there is no sun of glory yet to rise to gild the dusky prospect; his sun has set, and the nation has walked in the twilight—if it be not better called night—these two thousand years.

“Of their sciences, we cannot speak so very clearly, because really their authors have not been so fortunate as Aristotle, Plato, and the like, who have handled them methodically; but the Chinese have written little or nothing of many of the sciences and liberal arts, and of the rest but superficially, except those which concern good government and policy. From the very beginning it hath been their chiefest aim to find out the best way of government. Confucius composed five books in order, which are at this day held as sacred; he made also many other books; and of his sayings, there have been written since many more books. His first book is called Yih King, and treats of his natural philosophy, of fate or judiciary prognostication, philosophizing by numbers, figures, and symbols, applying all to morality and good government. The second is called Shoo King, containing a chronicle of the ancient kings and their good government. The third, She King, is of ancient, metaphorical poetry, respecting the inclinations and customs of mankind. The fourth, Le King, treats of civil and religious rites. The fifth is called Chun-tsew, and treats of the history of their country.

“There are also four other books which were made by Confucius and his disciple Mencius. In these nine books is contained all the natural and moral philosophy which the whole kingdom studieth, and out of these is taken the point which is proposed to read or compose on, in their examinations for literary rank. Upon these books they have several commentaries and glosses, but there is one of them which they are commanded to follow, and it hath almost the same authority as the text. These nine books are held in a manner sacred; in them, their glosses and commentaries, consisteth the great endeavor of their studies,—getting them by heart, attempting to understand the difficult places in them, and forming diverse senses upon them, by which to govern themselves in the practice of virtue, and to prescribe rules for the government of the kingdom according to the wise maxims which they there find. And because the examinations are very rigorous, and it is no easy thing to be ready in all these books, the order is, that the examination for the *first* degree be upon the last four books; that for the *second*, upon the same four and also upon one of the other five. For this reason none is obliged to be very perfect in more than one of those sciences which he doth profess, and upon that the point is to be given him.”

The permanency of the Chinese government in its great outlines, compared with the perished and forgotten governments of the world, is a very striking feature in the history of China. There must have existed either in the people or else in their

institutions, something to cause this striking difference. Many great nations have arisen since the patriarchal days of antiquity, attracted a large share of the world's attention, and have long passed away from the earth,—till the student of past history has thought that there was no living witness of those ages remaining. But lo! we have found in China a relic of the past, a living memorial of the days and of the government of the patriarchs. "God hath not left himself without witness" in this. The splendor and elevation of the court of Peking, compared with other oriental courts, may be attributed in part to the *literary* cast which the institutions of China give to the government. We do not characterize it as useful and practical learning to any great extent, but still it is mental cultivation. The fact that the public sentiment here has never sunk so low, as to call for those degrading public ceremonies and religious rites which shock humanity in some parts of India, may perhaps be traced to the same cause. We do not say that every cruel or disgusting rite is purged from the religious worship of China; but it is well known that the gross outrages of decency which are not uncommon in other pagan countries, are seldom practiced here. In the descriptions of Semedo, we recognise the *literary institutions* in their best state; but as they are still essentially the same in form, though not having equal life, they are worthy of our notice. We will give the substance of Semedo's account.

As there is no other path to office in China, but over "the hill of science," and no shorter one to respect and influence, the number of aspirants is very great. The degrees of literary rank are four; *sew-tsaë*, 'talent flowering;' *keu-jin*, 'promoted men;' *tsin-sze*, 'introduced scholars;' and *han-lin*, 'ascended to the top of the trees.' The number of competitors, the interests involved, and the small number of successful candidates, altogether

make the public examination a scene of lively interest.—We will begin with the *first* degree. To obtain this, the candidates undergo three successive examinations. The first of these is in the *heën*, or the smallest district of a province; the chief magistrate of the district appoints the time and the theme for examination; and the assembled candidates are allowed one day for writing their essays. These when finished are inspected by the magistrate, who selects the best, and causes the name of the authors to be entered on a roll and pasted up on the walls of his office. This is called *having a name in the village*;* and by this it is known who are allowed to pass to the second examination; which takes place in the *foo*, or next larger district, and is similar to the first, only more rigorous. The successful candidates in these two examinations, come for their third trial in the provincial city before the *heö-ching*, or ‘literary chancellor’ of the province. Those who are now successful receive their *first* degree. This entitles them to be candidates for the second degree, raises them above the common people, and delivers them from the bastinado of the inferior officers. This degree is conferred twice in three years; and also since the Mantchous ascended the throne of China, on the recurrence of every decade of years in the monarch’s reign.

“The examination of the candidates for the second degree is held every three years in the chief city of each province, and upon the same day throughout the empire. It lasts about twenty-five or thirty days, though the candidates are under actual trial but three days, *viz.* the 9th, 12th and 15th of that [the 8th] month. The chief examiners are the greatest officers in the province, besides assistants, and above all the president who comes from court for the purpose. When the officers are

* The result of the examinations which took place four or five weeks since in the Nanhae and Pwanyu heën was published on the 10th inst. The number of candidates was above 2000 in each district; but only thirteen in Nanhae, and fourteen in Pwanyu were able to obtain “a name in the village.”

Alvarez Semedo's

assembled, the students, who in the large provinces exceed the number of 7000, make their appearance. At their entrance they are all searched, and if any book or paper be found about one, he is excluded from trial. Each candidate then retires to his room, or rather cell, in the public hall. This chamber is about four feet by three, with the height of a man. In it are two boards; the one made fast to sit upon, the other movable so as to serve either for an eating table or a writing-desk. On the first day of examination, each candidate enters this cell which is guarded by military so as neither to admit of ingress or egress. Seven themes proposed by the president are now exhibited to the student; four from the King which the student pleases. Upon three from any one of the four last books of the philosopher, and each topic he is to write briefly, elegantly, and sententiously, so as to make seven compositions. These are then consigned to the proper officers who deliver them to notaries to copy in red letters, that the composer's hand may not be known to the examiner. The students are now at liberty; while the "faculty" on the two following days, review the papers with such rigor that the least error is sufficient to exclude the student from further examination. When that is done, a catalogue of those who have faults in their compositions is affixed to the outward wall, which serves for advice to return home, as they cannot go any further in this trial.

"The second time, they enter again on the 12th day of the month, and the process is the same as before, except that they give them but three topics, and these concerning doubtful matters of government, to see how they would advise the king. On the examination of these compositions, many are shut out from the third trial, which is on the fifteenth day. Here also three points are proposed, respecting the laws and customs of the realm. When these compositions are received, they are sifted again, and a small number is consigned to the president for the last scrutiny, and for assigning to each successful candidate his rank. When this is done, a catalogue of the names is exposed to the numberless people who are waiting, some for a son or brother, and some for a father or friend. The students having received from the king's officer their ensigns, as the cap, gown, and boots, presently go to give thanks to the president, who receives them on foot and treats them as his equals. As soon as these men have received this degree, they become honored, and by some means which I know not, suddenly rich. After this they go no longer on foot, but either an horseback or in a sedan. The number of these licenciates made every third year, throughout all the provinces, is about 1500,—a small number in comparison with all the candidates. In Canton where the examiner's hall is the largest, having not above 7500 little chambers in it, the great day are about 50,000."

The *third degree* is "solemnly conferred" at the court, once in every three years. All in the empire who have received the second degree, and have not in the meantime taken any office, are admitted to this examination. Their traveling expenses to Peking are paid either wholly or in part by the emperor. The procedure is the same as in the previous trials, except that the examiners are of higher rank. After this degree has been conferred, the "new doctors" are introduced to the emperor, and do him reverence; and the three highest receive rewards from his majesty's own hand.—The *fourth* and highest degree is also conferred once in three years; the examination for it takes place in the royal palace at Peking, in the presence of the emperor, and the candidates are those who have received the three other degrees.

The policy, the morality and the religion of China may be "summarily comprehended" in obedience to parents and to government. *Subjection* is the grand and universally acknowledged test of orthodoxy here. It may perhaps be designated as the popular and practical belief of China, that there is no authority binding on man, which is superior to the emperor's. All public laws and customs, all religious faith and ceremonies, all social duties and private life, all the words and works of men, are within his rightful sway, and indisputably subject to his will. Their parental and political education powerfully tends to the formation of such a public sentiment.

"The mandarin has power to inflict the *bastinade*, not only in the towns and cities of his own jurisdiction, but in any place whatever, though it be not properly under his authority. And with such facility do they bestow these blows, that men make no great account of them, though they are always paid them in ready coin; all do give them, all receive them, and all have felt them; neither doth it seem strange to any one, neither doth any hold himself aggrieved by them. In the same manner do masters chastise their servants, except that for the most

Alvarez Semedo's

part they do not take down their breeches. The like do school-masters use with scholars of whatever quality they may be, beating them with their breeches on. The same also do they use to little children. Often they die of the bastinadoes which they receive, especially if they have a man should live after delinquent; for it is impossible that a man should live after receiving seventy or eighty blows, if they are laid on him before one of the great tribunals. Any other punishments are over and besides this, which is never wanting; there being no condemnation in China, (unless pecuniary,) without this previous disposition; so that it is unnecessary to mention it in their condemnation; this being always understood to be their first dish. The cudgels used in this punishment are about five feet long, a hand's breadth in circumference at bottom, and tapering towards the top, so that they may be more conveniently used by both hands. They are made of bamboo, which is knotty and hollow, but different from cane in this, that it is a massive, strong, heavy, hard wood. As soon as the breeches of the culprit are pulled down, one of the attendants lays five blows upon his naked flesh; then comes another and lays on five more, so that it is always done by a fresh hand, till he has received the number assigned him."

In much of his detail of these punishments and of the courts, father Semedo spoke that which he knew and testified what he had felt. During the early part of the severe persecution against the Jesuits, which began in 1615, and did not wholly cease for many years, he was at Nanking, where it was most violent. Fernandez and Semedo were put together in the worst place of all the prison, where they lay three months with manacles on their arms. Their food was a little rice ill boiled, and by way of extraordinary favor they were allowed also half a duck's egg apiece. Semedo lay there sick nine months together, by which sickness however, he was *once* freed from the bastinado. "Father Vagnone with others was brought again before the officer, Shin, who examined them very closely, and said to the father; "what kind of a law is that of yours, which holdeth forth for God, a man who was executed for a malefactor?" From this the father took occasion, with a great deal of spirit, to open the mystery of the incarnate. The tyrant would not endure that

liberty of speech, but to take off his promptness, commanded that twenty stripes should be given him. As his former wounds were not quite healed, he endured incredible pain in having them opened with new blows, which were laid on so severely, that the blood spurted as far as where Shin sat."

Whatever opinions are entertained respecting the correctness of the creed, or the purity of the motives of these devoted missionaries, we believe it impossible to read the narrative of their high and inflexible purpose—amidst lingering, vexatious, and cruel sufferings—without admiration. We may deeply regret their mistake of making our Savior's kingdom to be "of this world:" still their self-devotion to their high object will command the respect of those who love firmness and vigor of character. They were many of them extraordinary men, their purpose was vast, their difficulties many, and their exertions great. Would that those who boast a purer faith, had only equal ardor to give its consolations to a wretched world! O, that they who better understand our Savior's kingdom, and profess to love it as their life, would more fully show that love to their fellow men also, by giving to all that unspeakable gift which belongs equally to all.—We cannot perhaps close this review better than by commending to the attention of our fellow Christians, and especially of Christian students, Semedo's description of the spirit which moved the Jesuits in Europe two hundred years ago; we commend it to them for its exhibition of prompt self-denial, rather than for the *mode* in which that self-denial was exhibited.

"After my return to Europe (about 1635), when my intention of seeking laborers for this vineyard was once divulged, presently there were so many candidates that there is scarce a province of our society, from which I have not received many letters from several fathers, not only offering themselves, but earnestly requesting me to accept them as soldiers in this enterprise. As if the trouble and pains of these long and dangerous voyages, and the persecutions so certainly to be under-

gone in this exercise, were to this undertaking, as prickles to roses; whereof St. Ambrose saith, they are *amatoria quedam illectamenta*. In Portugal, from the two colleges of Coimbra and Ebra alone, I had a list of ninety persons so desirous to labor in this mission, that many of them have sent me very long letters concerning their holy pretention, all written and signed with *their own blood*, witnessing in this manner that they had a holy courage that could despise the threats of martyrdom; offering cheerfully to the Lord that little blood, as a testimony of the great desire they had to shed it all for his sake."

MISCELLANIES.

CLIMATE OF CANTON AND MACAO.—Foreigners in their present situation in China enjoy a very limited range for making observations on the climate of this country. But there seems to be little reason to doubt, what the Chinese generally affirm, that the climate of *China Proper* is, with few exceptions, agreeable and salubrious. Pestilences do not frequently visit the land; and the inhabitants sometimes attain to a very great age. One individual is mentioned in the Ta Tsing Hwuy-teën who died, during the reign of the present dynasty, at the age of 142 years.—The Chinese pay great respect to aged men; and their government honor with titles and with bounties the few who have the good fortune to outlive the great majority of their fellow-mortals. Those who reach the age of 100 years receive a sum of money equal to about forty-five dollars, to be expended in building an honorary "gateway," which is embellished with an inscription dictated by the emperor; those who attain to 110 years receive about twice forty-five dollars; those who reach the age of 120, receive thrice that sum; &c.

The climate of the middle provinces is said to be delightful. That of Peking is salubrious, and agrees even with strangers. Epidemic disorders are very rare, and the ravages of the plague entirely unknown. The water is frozen every year from the middle of December until March; but sometimes for a shorter period. In the spring there are violent storms and whirlwinds. The heat is very great in summer, especially in June and July; it is usually, however, accompanied with abundant rains. The autumn is the most pleasant part of the year,—particularly September, October, and November. The air is then cold, the sky serene, and the weather calm.*

* See Travels of the Russian mission to China, by Tinkowski.

The province of Canton is regarded by the Chinese as one of the most unhealthy portions of their country; and such it probably is. Yet still it is a healthy climate, and may be considered superior to that of most other places which are situated in the same degree of latitude. To enable our friends abroad to form an opinion of the climate of Canton and Macao, we will subjoin a brief series of remarks and meteorological averages which appear in *The Anglo-chinese Kalendar* for the current year. The latitude of Canton is 23 degrees 7 minutes north; and that of Macao is 22 degrees, 11 minutes, 30 seconds north.

The data on which the following remarks concerning the weather are founded, were taken from the meteorological diary of the Canton Register.

“January.—The weather, during the month of January, is dry, cold, and bracing, differing but little, if at all, from the two preceding months, November and December. The wind blows generally from the north, occasionally inclining to NE. or NW. Any change to the south, causes considerable variation in the temperature of the atmosphere.

“February.—During this month the thermometer continues low; but the dry, bracing cold of the three preceding months is changed for a damp and chilly atmosphere. The number of fine days is much diminished, and cloudy or foggy days are of more frequent recurrence in February and March than in any other months. At Macao, the fog is often so dense as to render objects invisible at a very few yards’ distance.

“March.—The weather in the month of March is also damp and foggy, but the temperature of the atmosphere becomes considerably warmer. To preserve things from damp, it is requisite to continue the use of fires and closed rooms; which the heat of the atmosphere renders very unpleasant. From this month, the thermometer increases in height, until July and August, when the heat is at its maximum.

“April.—The thick fogs which begin to disappear towards the close of March are, in April, seldom if ever seen. The atmosphere however, continues damp, and rainy days are not unfrequent. At the same time the thermometer gradually rises; and the nearer approach of the sun renders its heat more perceptible. In this and the following summer months, southeasterly winds generally prevail.

“May.—In this month, summer is fully set in and the heat particularly in Canton, is often oppressive;—the more so from the closeness of the atmosphere, the winds being usually light and variable. This is the most rainy month in the year, averaging fifteen days and a half of heavy rain; cloudy days, without rain are, however, of unfrequent occurrence; and one half of the month averages fine sunny weather.

June.—June is also a very wet month, though on an average, the number of rainy days is less than in the other summer months. The thermometer in this month rises several degrees higher than in May, and falls but little at night. It is this latter circumstance chiefly, which occasions the exhaustion often felt in this country from the heat of summer.

July.—This month is the hottest in the year, the thermometer averaging 88° in the shade, at noon, both at Canton and Macao. It is likewise subject to frequent heavy showers of rain; and, as is also the month of August, to storms of thunder and lightning. The winds blow almost unintermittingly from south-east or south.

August.—In this month the heat is generally as oppressive as in July, and often more so, although the thermometer usually stands lower. Towards the close of the month, the summer begins to break up, the wind occasionally veering from SE. to N. and NW. Typhons seldom occur earlier than this month or later than the end of September.

September.—In this month, the monsoon is entirely broken up, and northerly winds begin to blow, but with little alleviation of heat. This is the period most exposed to the description of hurricanes called *typhons*, the range of which extends southwards, over about one half of the Chinese sea, but not far northward. They are most severe in the gulf of Tonquin.

October.—Northerly winds prevail throughout the month of October, occasionally veering to NE. or NW.; but the temperature of the atmosphere is neither so cold nor dry as in the following months. Neither does the northerly wind blow so constantly, a few days of southerly wind frequently intervening. The winter usually sets in with three or four days of light, drizzling rain.

November.—This month and the following are the most pleasant in the year,—at least to the feelings of persons from more northern climes. Though the thermometer is not often below 40, and seldom so low as 30, the cold of the Chinese winter is often very severe. Ice sometimes forms about one eighth of an inch thick; but this is usually in December or January.

December.—The months of December and January are remarkably free from rain; the average fall in each month being under one inch, and the average number of rainy days being only three and a half. On the whole, the climate of Canton, but more especially of Macao, may be considered very superior to that of most other places situated between the tropics."

TABLES OF METEOROLOGICAL AVERAGES.

Tables of observations on the thermometer and barometer for the year 1831. The averages at Canton are taken from the Canton Register; the averages at Macao are taken from a private diary kept by Mr. Bletterman.

Abbreviation.—In table VI. "qu." is used for 'quantity'—in inches; and the two syllables "no ra." are used for 'number of rainy'—days.

GAZETTE.—The most probable etymology of this name, as is well known, is *gazette*, the name of a small coin, which was formerly current in Venice, and which was the ordinary price of the first newspaper published in that city.

The Chinese have something similar, but imperfect of its kind. It is a slip of paper which the printer thinks will excite interest. It is sold for the small copper coin, called a "cash," eight hundred or a thousand of which are given in exchange for a dollar. These trivial *millia*, are called *Sin-san che*, "newly-heard paper,"—which is exactly our term news-paper. But they are yet so unlike the newspaper in Europe that they do not deserve the name. The following is the whole of one of these *cash* papers which was published a few days ago.

"At Tungkeä chow, in Foochow heën, belonging to Kweilin foo, there lives a man whose surname is Wang, and his name Tsohang. Through life he has been addicted to poetry and books. This year on the third day of the first moon, he was going along the street, and met a mandarin; but he had not knowledge enough to stand back and make way. The mandarin lictors seized him, and took him to the public officer, alleging that he had stopped the road. He was forthwith examined in open court, and interrogated by the magistrate as to what had been his occupation through life. He replied:—'During the day, I went to the hills to cut wood; and at night I read books.' The magistrate said to him;—'Write out something that you remember perfectly, and let me see it,'—at the same time throwing a pencil to him. Tsohang took the pencil and wrote:—

F keä tso go, urh laou tsü;
Wang shan tsae tseou, too jih shin;
Chang keu shun shan, woo jin kin,
Puh che wang fá, leuh yen sin.

At my poor home there sit and sleep two aged parents;
For a livelihood I frequented the hills to cut and gather wood;
Being constantly in the woods far away from the haunts of men,
I was ignorant of the rigorous requirements of the royal law.

On seeing this composition the magistrate praised him and said:—

Seih yew foo sin, kwa keö jin;
Jih wang shan tseou, yay seih wan;
She keän hew ke, neän shaou tsze,
Tang kaou peih chen, pang shang jin.

In ancient times the wood-cutter hung his book to the buffalo's horns;
In the day time he worked among hills, and at night studied letters;
Cease, O ye worldlings, to insult poor young men;
Will come when their names will stand high in the literary gazette.

The story contained in this paper is probably a fiction; but the mode of proof adopted by the magistrate was suitable and convincing. We remember to have read of a similar one adopted, if we mistake not, in Ireland. A soldier in some of their troublesome times was noticed by some of the too busy alarmists, to retire every evening to a solitary field, and remain there for some time. His enemies accused him of plotting dangerous things; and the soldier was examined by his commanding officer about his object in going to that field at night. His answer was that he went thither to pray to his God in secret. It struck the officer immediately that if it were true, the man who could pray in the dark and was in the habit of prayer, would be able to pray without a book; and he forthwith desired the accused person to let him hear one of his prayers. The pious soldier readily complied, and kneeling down presented to the throne of the Eternal, a prayer so devout and appropriate, that he was immediately released from all suspicion and restored to the confidence of his superiors.

CHINESE FRAGMENT—a ballad: scene, Honan; period A. D. 250, during the civil wars.

Exceedingly cold and distressed, *San-neäng* approached the village well, weeping as she went to draw water from the crystal spring. Her bare feet which trod the snow, were pinched with cold; and on her shoulder she carried a broken pitcher. See the birds loath to quit their nests, or sheltered, remain among the mountain trees. And on the adjoining river, the aged angler has desisted from his occupation. In the adjoining forest there was a deep silence, except of the wind whirling round the sleet. And the thick fog joined heaven to earth. For several days the north wind had penetrated the weak frame of *San-neäng*, as she went backwards and forwards, proceeding with difficulty to draw water. At a distance, the abodes of gay and luxurious worldlings were to be seen; whilst near her were lumps of cold ice on the hills and the streams. At times the snow flakes filled the air like the clippings of the stork's white wings, or fell on the ground like myriads of butterflies alighting on the mud.

She exclaimed;—"To-day my life is a burden to me, because of my distress. I shall perish with cold in the midst of the snow. O heaven! tell me who will pity me! My husband has gone far from me, in search of the honors of war. He promised soon to return; but my eyes are consumed by looking with anxious expectation. My infant son too,—for whom, unassisted, I bit the natal cord,—he is far away. Nor sound nor letters have I heard or received from either. My husband returns not! My son I see not! Oh! painful destiny! All my hopes are disappointed. Tell me how to recover my husband—how to effect the return of my son."

Making this lamentation, she approached the well to draw water: when unexpectedly a young officer and his attendants passed by the lonely village, on a shooting excursion, urging their ways through the hills and woods in pursuit of a white too. This trifling circumstance was so ordained by imperial heaven. The officer urged on his horse to pick up an arrow which he had just shot, and which fell near the railing around the well. On seeing there a female, with big pearly tears falling down her cheeks, with disheveled hair and naked feet, drawing water from the crystal fountain, he approached and addressed her;—"May I ask why you, good woman, are weeping so profusely; and why amidst the snow-storm, you are here drawing water? I suppose you are some slave, or one betrothed to be a concubine. Has the marriage yet taken place? Tell me the truth."

On hearing this, she desisted from her tears, and said:—"The name of your slave (meaning herself) is Le.* I am suffering the bitterest ill-usage. My father's native place was Sha-taou. During the lifetime of my parents they formed for me a happy connection. I was married to an excellent man Lew Che-yuen. Our home, however, at the melon-gardens, was broken up. He grasped his sword, joined the army, and devoted himself to war. I know not if the valiant hero has yet obtained a dukedom. Here I am wearied with waiting, and my eldest brother's wife ill-uses me, with a design of forcing me to marry again. She bids me put off the shoes from my little feet, clothe myself in coarse garments, and come hither to draw water from morning till night. And when night comes, I am required sleepless, to grind corn with the hand-mill. Thrice every day I get a scolding and a beating. It seems to be thought that my heart is as hard as iron or stones. I was compelled to trust my infant son,—but three days from his birth,—to Tow-yuen, who took him to Funchow, in search of his father; hoping he would soon provide a whip to drive home his horse; but sixteen years have elapsed, and I have not heard the least report of either husband or son. Mother and son were separated never more to see each other! Alas, hundreds of hills and wilds, and clouds and fogs lie between us; and in my distress, although I should write a letter I have none to carry it."

The young officer having heard this recital, seemed stupefied with astonishment, and said:—"Your brother's wife is an unfeeling person. Her behavior is excessively wrong. But since

* Beside their *sing*, or 'surname,' the Chinese usually have several other names; (1.) *joo ming*, the 'breast name,'—which is given to children in infancy; (2.) *shoo ming*, 'book name'—the name given to a boy when he first goes to school; (3.) *kwan ming*; 'official name'—which is given into government by literary graduates, and other persons who have become with the government; (4.) *tsze*, a name or character which is taken at the time of marriage; and (5.) *haou*, a name or title which is taken by men at the age of fifty.

you know how to write, if you will write a letter now I will take it for you to Funchow, and inquire for your husband and son, and dare say I shall find them out. In thrice ten days at the longest, or perhaps in half a month, I warrant you, you will hear of their return; and you shall neither bear the ill-treatment of your sister; nor support your sorrowful head with your hand, whilst grinding at the mill; nor come to draw water at this well; nor longer endure cold and grief." So saying, he ordered his people to supply her with the four precious implements of writing.* She made a bow, profound as the sea; and for a moment ceased to weep. Having taken up the pencil, her tears again flowed; and she wrote;—"Oh my husband, our separation was easily effected; but how difficult has it been to bring us again together. Since we parted at the melon-gardens, thousands of clouds and myriads of hills have intervened. Husband, you have staid at Funchow seeking worldly honors; I alas, have been here, by the side of this well, shedding rivers of tears. Hasten in three days to return with your son—if you delay I shall have entered the barred gates of hades, and be among the shades! For every word I write, a thousand tears flow. Husband! let not an answer be a matter of indifference." Having finished the letter, she closed it carefully, and sprinkled the envelope with her tears.

The young officer took the letter, and secretly wiped away the tear, which had stolen upon the side of his cheek. He then said; "Draw your water and go home. I pity you being so thinly clad in the midst of this intense cold. Ere long you will meet with your kindred again. Trust to me, and cease from your sorrow."

So saying, he whipped his horse and went off at a gallop: but often looked back ere he was out of sight. The woman bowed to the officer; drew the water; and returned so light of foot as scarcely to touch the snow; saying to herself—"May he soon find out those I seek—may my anxious gazing on the azure sky in earnest expectation, soon be terminated. Oh my husband and son! How do I sigh for you! When shall I be rescued from my distress! When I shall see my husband and son—then my countenance will expand!"

That young officer was her son. Her husband Lew Che-yuen became the king of Tsin, and raised the afflicted snow-smitten water-carrier, San-neäng, to be the partner of his throne. He became the Hwangte, the great emperor of the How-Han dynasty, and received many good lessons from the empress, who had learned wisdom in the school of affliction.

* These 'four precious implements' are *paper, pencil, ink, and a stone* on which to rub the ink; these the Chinese call *woo-keä paou*, 'invaluable gems.'

Communion of Saints.

COMMUNION OF SAINTS.*—“I believe in the holy catholic church; the communion of saints,” &c. These, Sir, are phrases used every Sunday by a large number throughout the world, and often I apprehend deriding their import. Permit me to occupy a small space in your Repository to quote a few sentences from Abp. Secker on the subject. He says, “the word *catholic* applied to the church, is nowhere used in the Scriptures, but frequently to all mankind. The Jewish church was not universal, but particular, for it consisted only of one nation; the Christian church consists of ‘every kindred, tongue and people.’ Rev. v, 9. The catholic church then is the universal church, spread throughout the world; and the catholic faith, is the universal faith; that ‘form of doctrine’ which the apostles delivered Rom. vi, 19. What this faith was we may learn from their writings, contained in the New Testament, and *we can learn it with certainty nowhere else*. Every church, or society of Christians, that preserves this catholic or universal faith, is a part of the catholic or universal church; and because the parts are of the same nature with the whole, it hath been usual to call every church singly, which is so qualified, a catholic church. And in this sence, *churches that differ widely in several notions and customs may, notwithstanding, each of them be truly catholic churches.*”

These, Sir, are the words of the good Archbishop. He afterwards blames the church of Rome for claiming to be the whole catholic church: and adds, “the church of England pretends not indeed absurdly to be the whole catholic church; but is undoubtedly a sound and excellent member of it.” Now Sir, permit me to say that I much approve of Secker’s declaration, which is put in italics—that a difference in several notions and customs does not prevent particular churches from being truly catholic ones. That is, that *uniformity of sentiment and discipline is not necessary to the communion of Saints.*

Saint, it is very well known, is a Scripture term, denoting holy, and is in the New Testament applied to Christians generally, who ought to be holy. The abuse of the term has brought it into disrepute. By *communion*, is meant the fellowship of those who course in duties and privileges; the fellowship of those who have an identity of interests,—similar hopes and fears, and joys and sorrows. Now there is such a *communion* among many pious Christians of various nations and different churches. But although it exists, it is by no means carried to the extent that it should be. There is still a great tendency to consider *uniformity of sentiment and discipline as essential to it; and it is not uncommon to see Christians, who will not join in any act of social worship with others, because they do not belong to the*

* From a correspondent,—and addressed to the Editor.

church in which the others happen to have been educated. They will have no inter-communion. There can indeed be no communion, St. Paul says, between *light* and *darkness*—between the friends and the foes of the Savior. But, surely, there may be a communion between different *shades of light*. We know that in nature, they unite and form the brightest color; and why should not the friends of Jesus—different churches, their different ministers, and all Christian people—unite in spirit and affection and external communion, although their attire, their forms of public worship, or domestic prayer, may be different? “Can charity itself wish for a more beautiful spectacle than that of the numerous bodies of Christians holding the most unfettered inter-communion,—and encouraging each other in every great and holy enterprise?” The attempt for so many centuries, to induce *uniformity of sentiment*, has completely *failed*, and instead of promoting “the communion of saints,” has almost entirely destroyed it, so that many, who solemnly say they *believe* it, have a difficulty in affixing to the phrase any intelligible meaning.

I am your's faithfully,

S. S.

CHRISTIAN MISSIONS.—Hostility to Christian missions assumes at different periods a great variety of forms. We remember the time when the objection was derived from the alleged virtues of the heathen—both civilized and savage, both in India and the islands of the Pacific ocean. Now we hear from various quarters objections derived from the incurable vices of the heathen. In the first instance, they were represented as too good to require the gospel salvation; now they are too bad even to be mended. Matth. xi. 16—19. Those who do profess Christianity are all hypocrites; and the missionaries who hope better things of them are all deceivers—“a bad set.” There are persons too who declare that they will never believe the possibility of Chinese being sincere in their profession of Christianity; they must be bribed to profess and be baptized. The inference insinuated from these different premises is, that Christian missions are either unnecessary or useless; that those who undertake them or support them, are either weak or wicked, or both the one and the other. And by fair consequence that idolatry, or atheism, irreligion and vice, must be left to an undisturbed empire over the earth!

The professed Christians who make the objections above noticed, are reduced to this dilemma; either that they themselves, notwithstanding their profession, do not really value Christianity; or if they are sincere, they value, according to their own method of reasoning, that which is worth nothing.

That there exists in many instances an insincere profession of Christianity among new converts may be very true, or it may not—for what human eye can penetrate the secrets of man's heart? But is not the same the case in those nations

where Christianity has long been known? It would be as fair to impeach all the ministers of religion in Christian lands, as it is to impeach all missionaries; for hypocrisy and vice exist in no small degree in Christian nations. But the objectors do not wish to say that all the ministers of religion are either bad or useless; and therefore their objections to the missionaries, if they prove anything prove too much.

Of the missionaries sent forth by the church of Rome, we have no personal knowledge; we cannot undertake their defence; nor do we believe all that is said against them. That they bestow charity on the poor Christians in pagan lands we believe to be true; and that deceivers among the heathen may abuse it, is very likely: but lest charity be abused, shall Christians cease to be charitable? We know that the primitive Christians were charitable both to friends and to foes. At Jerusalem, the believers in Christ, for a time had all things in common; and St. Paul took contributions at Ephesus and in Macedonia, and elsewhere, for the "poor saints at Jerusalem."

That Protestant missionaries give bribes to induce a profession of Christianity we utterly deny; and that they knowingly encourage hypocrites is altogether incredible. Instead of being able to bribe, they are generally too poor to bestow any pecuniary charity, and too much despised to induce any hypocrite to wish to be numbered by the government, and hated by the people, as it is in China, what can induce a native to make a hypocritical profession of it? On the contrary, we know some persons who are convinced of its truth, but are prevented by fear of man from avowing their belief. Moreover, the absurd revenue laws of the government; the opposing commercial arrangements of foreigners; and the difficulties to be many Christians on the Lord's day, present difficulties to truth and piety, which embarrass the minds of some natives and hinder their profession of Christianity:—they would rather not profess Christianity, than profess it and then violate its precepts.

There is in England a Chinese who has a wife and children in Canton; but who either by his own lies, or the connivance of those who took him thither, has so imposed on a clergyman as to be married to an English woman. We have lately heard from a native Christian, that a Chinese having lived several years in the straits of Malacca, married there; and that now on his return to China, he is ordered by his mother to marry a person to whom he was espoused in childhood. This man applied to the intention of marrying another during less he relinquished the present wife, he could not be received into the life-time of his present wife, he could not be received into the Christian church. He pleaded that the intended marriage was a voluntary act—it was in obedience to his mother, and to release the espoused wife from her

engagement, as he is both sickly and poor, and unable to work; but the tyrant custom forbade him to do so; and he went away, says the native writer, "sorrowful and silent."

TOMBS OF ANCESTORS.—In 1700, the emperor Kanghe declared in an edict, which was communicated to the pope, that *teèn* means the true God, and that the customs of China are political.*

Pope Alexander VII, overpersuaded by the jesuit Martin Martinez, concurred in this opinion of the emperor. But since we do not believe in the infallibility of either emperors or popes, we dissent most respectfully from their decision. On the first topic, concerning the meaning of the word *teèn* or *tien*—the import of which is much the same as the English word *heaven*,—we do not design to enter at present; but will proceed to give a brief account of the rites performed at the tombs of ancestors, parents, and friends, which will enable the reader to judge for himself, whether the said rites are rational and innocent, or superstitious and idolatrous.—We take the following account from a native composition.

That this custom did not exist anterior to the age of Confucius, is inferred from the words of Mencius; for he affirms, that in the preceding ages, men did not even inter their deceased kindred, but threw their dead bodies into ditches by the roadside. Since they had no tombs, the writer of the paper before us very fairly infers, that there were no rites performed at the tombs. Confucius directed *tum-li* to be raised in order to mark the place of interment; this is the first intimation given of tombs among the Chinese. But in raising these, there was probably no other intention than to prevent the places of interment from being obliterated and forgotten. It is well known also that in that early age, some sons chose to remain for years in temporary sheds near the grave of a parent to mourn over it, and to "sorrow as those without hope." But we proceed to exhibit the present state of these ceremonies as being all that is of practical utility in deciding the question at issue.

The Chinese visit the tombs twice a year, in spring and in autumn. The first time is called *tsing ming*, "clear bright," referring to the fine weather which is then expected: the second is called *tsew tse*, "the autumnal sacrifice." The rites performed during the *tsing-ming* season are the most generally attended to by the Chinese. Their governors teach that the prosperity of individuals and families depends greatly on the circumstances of a parent's grave;—as its position, its being dry or damp, its being in good external repair, &c. Therefore to "sweep" and repair them, to mark their limits and

* See preceding page 438.

see that they are not encroached upon by others, are objects of the visits to the tombs. When there are large clans which have descended from the same ancestors, living in the same neighborhood, they repair in great numbers to the performance of the sacrificial rites. Rich and poor all assemble. Even beggars repair to the tombs, to kneel down and worship. This usage is known by the phrases *saou fun-moo*, 'sweeping the tombs,' and *pae shan*, 'worshiping the tumuli.' To omit these observances is considered a great offence against moral propriety, and a breach of filial duty. The common belief is, that good fortune, domestic prosperity, honors and riches, all depend on an impulse given at the tombs of ancestors. Hence the practice is universal; and when the men are absent from their families, the women go to perform the rites.

On some of these occasions—even where there are two or three thousand members of a clan, some possessing great wealth, and others holding high rank in the state,—all, old and young, rich and poor, are summoned to meet at the *tsou-ling tze-tang*, 'the ancestral hall.' Pigs are slaughtered; sheep are slain; and all sorts of offerings and sacrifices are provided in abundance. The processions from the hall to the tombs, on these occasions, are formed in the grandest style which the official rank, of the principal persons will admit,—with banners, tablets, gongs, &c., &c., &c. All present, old men and boys, are dressed in the best robes which they can procure; and thus escorting the victims for sacrifice and the wine for libations, they proceed to the tombs of their ancestors, and arrange the whole in order, preparatory to the grand ceremony.—There is a *choo tse*, 'lord of the sacrifice,' appointed to officiate as priest. There is a master of ceremonies, to give the word of command. There are two stewards to aid in the performance of the rites. There is also a reader to recite the prayer; and a band of musicians, drummers, gong-beaters, &c.

After all things are in readiness, the whole party stand still till the "master" gives the word. He first cries with a loud voice; "Let the official persons take their places:" this is immediately done, and the ceremonies proceed.

Master. "Strike up the softer music." Here the smaller instruments begin to play.

Master. "Kneel." The priest then kneels in a central place fronting the grave, and behind him, arranged in order, the aged and the honorable, the children and grand-children all kneel down.

Master. "Present the incense." Here the stewards take three sticks of incense, and present them to the priest. He rises, makes a bow towards the grave, and then plants one of the sticks in an incense vase in front of the tomb-stone. The same form is repeated a second and a third time.

Master. "Rise up." Here the priest and the party stand up.

Master. "Kneel." Again the priest and all the people kneel down.

Master. "Knock head." Here all bending forward and leaning on their hands, knock their foreheads against the ground.

Master. "Again knock head." This is forthwith done.

Master. "Knock head a third time." This is also done. Then he calls out; "Rise up; knock, knock head;—till the three kneelings and the nine knockings are completed." And all this is done in the same manner as the highest act of homage is paid to the emperor, or of worship to the supreme powers, heaven and earth. This being ended, the ceremonies proceed.

Master. "Fall prostrate." This is done by touching the ground with the knees, hands, and forehead.

Master. "Read the prayer." Here the reader approaches the front of the tomb, holding in his hands a piece of white paper on which is written one of the sacrificial forms of prayer. These are generally much the same; differing slightly according to the wish of the composer. The form states the time; the name of the clan which comes to worship and offer sacrifice; beseeches the shades to descend and enjoy the sacrifice; to grant protection and prosperity to their descendants, that in all succeeding generations they may wear official caps, may enjoy riches and honors, and never become extinct; that by the help of the souls in hades, the departed spirits and the living on earth may be happy, and illustrious throughout myriads of ages.—The prayer being finished, the

Master cries; "Offer up the gold and the precious things." Here one of the stewards present gilt papers to the priest, and he bowing towards the grave lays them down before it.

Master. "Strike up the grand music." Here gongs, drums, trumpets, &c., are beaten and blown to make as great noise as possible.

Master. "Burn the gold and silver and precious things." Here all the young men and children burn the gilt papers, fire off crackers, rockets, &c.

Such is the sum of a grand sacrifice at the tombs of ancestors. But to many the best part of the ceremony is to come, which is the *feast* upon the sacrifice. The roast pigs, rice, fowls, fish, fruits, and liquors, are carried back to the ancestral hall; where according to age and dignity, the whole party sit down to eat and drink and play. The grandees discuss the condition of the hall, and other topics connected with the honor of the clan; the young men carouse and provoke each other to drink deep. Some set out for home with a catty or two of the 'divine flesh,' which had been used in sacrifice; others stay till they wrangle and fight, and night puts an end to the entertainment.

Those who live remote from the tombs, or who have no

ancestral hall, eat their sacrifice on the ground at the sepulchres. And the poor imitate their superiors at a humble distance. Although they have no hall, no procession, no music,—they provide three sorts of victims; a pig, a goose, a fish—some fruits, and a little distilled liquor—for spirituous liquors are used on all these occasions. After presenting these at the tomb, they kneel, knock head, and orally or mentally pray for the aid of their ancestors' souls to make the existing and all future generations of descendants, rich and prosperous.

In these rites, there is some difference in the wording of the prayer, according as it is presented to remote ancestors or to lately deceased parents or friends; but the general import is the same. And to conclude; these rites are in our humble opinion, *neither rational nor innocent, but superstitious and idolatrous*; and such as no Christian could observe. Those Christians indeed who pray for the souls of the deceased, and to departed saints, will have some difficulty in defending their own practice and condemning the Chinese. No wonder that popes and jesuits were puzzled. But as we neither pray for nor to the dead, we fell consistent in condemning the practice altogether.

THE WORSHIP OF CONFUCIUS.—Further to illustrate the customs "by which the Chinese worship Confucius and the deceased," we subjoin the following extracts, from the *Indo-Chinese Gleaner*.

"From the Shing-meau Che, volume first, page second, it appears that there are in China *one thousand five hundred and sixty* and more temples dedicated to Confucius. At the spring and autumnal sacrifices offered to him, it is calculated in the above named work, that there are immolated on the two occasions annually, 6 bullocks; 27,000 pigs; 5,800 sheep; 2,800 deer; 27,000 rabbits.

"Thus there are annually sacrificed to Confucius in China, *sixty-two thousand six hundred and six victims*; and it is added, there are offered at the same time, *twenty-seven thousand and six hundred pieces of silk*.—What becomes of these does not appear.

"We here see that "the learned," in one of the most enlightened modern heathen nations, pay *divine honors* to a fellow-creature, who is universally acknowledged by them to have been a mere man. These same learned heathen generally teach that *death is annihilation*; and sometimes affirm that *there is neither God, angel, nor spirit*. How they reconcile their practice with their professed belief, I know not. For if there be no separate spirits they must, to all intents and purposes, sacrifice to the mere matter of which the image is made; or when a tablet only is used, their worship must be addressed merely to a *nominis umbra*;—a more absurd proceeding than that of vulgar idolaters, who affirm that a spirit dwells in the

image which they worship. If "the learned" in China would simply do honor to a name, why sacrifice innocent victims by thousands, as an expression of the veneration which they feel for their benevolent master?

PROVISION FOR THE PEOPLE.—Governor Loo and Magnate Choo have issued a joint proclamation, which is the result of a recommendation sent to the emperor by the late governor Le and Choo. His majesty has sanctioned the plan which was proposed. It is to invite the poor to settle down on waste spots of land wherever they may find them, on hills or plains, and cultivate them, in any way of which the land is capable, and for the cultivator's sole benefit—without land-tax or quit-rent, or any charge whatever from the local officers. The land thus cultivated may be liable to land-tax hereafter, but the land itself is to become the freehold estates of the occupants for ever. Government will give a grant or deed of occupation to the settlers. Only small lots are granted, and the rich need not apply.

This liberal offer is prefaced by a few remarks from the two authorities abovenamed. Then the names of the districts to which the license is to be extended; and the rules to be observed both by the people and the local officers. The proclamation runs thus:—

"Loo, Governor of Canton, &c., &c.,
Choo, the Fooyuen, &c., &c.,—

Hereby issue a proclamation to make known the regulations to be observed on commencing the cultivation of waste lands. In government there is nothing so important as a sufficient supply of food for the people. In villages the most honorable occupation is agriculture. For if a man be without food for one day he suffers hunger; and if agriculture be neglected, from whence is food to be procured? If the poor people will but spend their strength on the southern lands, food and raiment will be supplied; and they will never be brought to extravagance and disgrace, nor become the associates of vagabond banditti. All those who sink down to depraved courses, have been impelled to them either by hunger and cold, or by voluntary laziness. In Canton province, thieves and robbers are exceedingly numerous, and no doubt they have originated from these causes. In attempting to eradicate their evil practices, the first thing is to provide them the means of subsistence."

After these very sensible observations, as we esteem them, their excellencies proceed to tell the poor people that the great emperor has sanctioned their proceedings, &c. The local magistrates and underlings are told not to extort money from the settlers: but all such injunctions are in practice vain; they will do it, and in some measure always defeat the benevolent

intentions of government. For if food be the first essential of government, good principles in the executive, and among the people to be governed, are unquestionably the next. The Chinese say that pirates, thieves, and vagabonds, must all be *dutiful and respectful* to the police,—i. e. must give them a share of their gains, and then they can follow their illegal avocations with impunity.

EXHUMATION.—Governor Loo whilst caring for the living, has not, in his official capacity, forgotten the dead. It appears, according to his showing, that at the north gate of Canton city, where many are buried, there are three classes of “resurrection-men;” (1.) those who open graves and break the coffins of their foes from revenge and malice; (2.) those who do so to strip the dead bodies of their ornaments; and (3.) those who carry off the dead to obtain a ransom. These are crimes he says, ‘sufficient to make the hair of one’s head stand on end.’—(This metaphor must have been in the Chinese language before the Tartar tonsure and long tail were in fashion.)

The governor states the law against violent exhumation as follows; “To open a grave and see the coffin, shall be punished by perpetual banishment.—To open the coffin and see the corpse, death by strangulation.—To carry off the body and demand a ransom, death by immediate decapitation, both for principals and accomplices.” The law, his excellency assures his readers, shall be most strictly enforced, without the least mercy. “Take care,” says he, “and do not try the experiment with your own bodies.”

LITERARY NOTICES.

Christian books published in Chinese by the Romanists.

(1.) *Shing neñ kwang yih*: a verbal rendering of these words is, “sacred year extensive advantage.” This is the title of a work in 24 vols. duodecimo, which was originally published, A. D. 1738, by a Jesuit, who assumed the name, Fung-ping-ching. The edition before us was published in 1815. The

printing is not very good, and was evidently executed with movable types, which were probably made of wood, and of which .. is said there is a fount at the college of St. Joseph in Macao.

The work is divided into twelve parts, corresponding to the twelve months of the year, and consists of short devotional lessons for every day in each

month; the order or method is the same for every day, and is as follows:—

First. A short sentence from Scripture, or from some eminent Christian author.

Second. A legend of some saint or virgin.

Third. A short meditation derived from the legend.

Fourth. A very brief form of prayer consisting of a line, suited to some particular case, and suggested by the legend.

We do not possess any similar work of the Latin church, in any European language, and know not whether it be a translation or an original work; it does not profess to be a translation. The preface is written by a general of the Chinese army. The legends commence with a Roman lady, *St. Mih-la-nea*; and end with a Roman gentleman, *St. Se-urh-wuh-sze-tih-lih*. Not being versed in the "saintology" of the Romish Calendar, we confess our ignorance of the corresponding European names.

In the "striking sentences" or sayings quoted, there is much that is good; but the legends we cannot praise. They proceed on the false—the pagan principle—that bodily austerities are meritorious. Surely, if righteousness or acceptance with the Almighty, can be obtained by such things, then Christ has died in vain. If the legends were rational, still this is a fundamental objection. The doctrine implied is not Christian. It is that to which the natural reason of a guilty conscience has recourse where the gospel of Christ is not known.—For example, the sainted lady *Mih-la-nea*,

mentioned above, when fourteen years old, wished she might never be married. To please her parents, however, she did change her state, and had two children. But they died; she thought it a divine judgment, separated herself from her husband, and became a nun; fasted two or more days—even eight, at last; lay upon a bed that was too short for her;—then used no bed at all; lay on the bare ground, &c., &c., &c.

Among the saints we observe *E-ne-tseò*, 'Ignatius' Loyola, the founder of the Society of Jesus. His austerities are of course held up for imitation in pagan China. The whole work contains but little concerning Jesus, and his *finished redemption*; indeed we may say it contains *nothing* about that; for the work of redemption is supposed incomplete without the useless and ridiculous austerities dwelt upon in the legends of the saints.

Did our Savior or his apostles command such things as these, we would be silent. But divine wisdom has *not* enjoined these "bodily austerities." And what is man that he should "teach God knowledge?" What infatuation, either to add to, or take from the words of God and the institutions of Christ.

(2.) *Shing King kwang yih.*

This is the title of a book in two volumes; it accompanies the preceding, and professes to be a translation. It contains meditations on the gospels for fasts and festivals throughout the year, is prefaced by rules for meditations and employments for one complete day, and

Literary Notices.

contains specimens for eight days. We quote an example:—

1. Rise at five o'clock, and recite a morning service till a quarter to six o'clock.
2. Till six, prepare for meditation.
3. At six o'clock, meditate.
4. At seven, examine your divine work of meditation.
5. At half past seven, say mass.
6. At eight, take tea.
7. At quarter past eight, read books for two or three quarters of an hour.
8. Prepare for another meditation.
9. At nine o'clock, meditate.
10. At a quarter past ten, examine the work of the morning.
11. Half past ten, eat rice, or dine.
12. At noon, either read, or rest, or recite your private prayers, &c., &c., &c. "At eight o'clock go to bed as usual."

Such are specimens of the works which have been published in China by the Jesuits. To what extent these books have been printed and circulated we do not know. No less than thirty-one were noticed in an imperial edict in 1805; and some of similar description have been noticed by voyagers along the coast of China during the last year.

PEKING GAZETTE.—The document which is dignified by this name, is published in Peking by the government, and is there called *king-paou*;—king denotes *great*, and is commonly used by the Chinese to designate the capital of their empire; *paou* means *to announce*, *to report*. In the provinces it is called *king-too* *nyu-kö* *chaou*, or simply *king-chaou*. From Peking the gazette is forwarded to all the provinces, but the dispatch or register is only fifty,

and sometimes even sixty, days in reaching Canton. Here it appears in two forms, both of which are in manuscript. The largest is in daily numbers, and contains about forty pages, or twenty leaves, duodecimo; the smallest contains about fifteen or twenty leaves, and is issued only once in two days.

The largest is designed solely for the highest officers—such as the governor, lieutenant-governor, &c. The expurgated edition is designed for the inferior officers throughout the province. The gazette in this latter form is sold to the public at a high price, by writers who are connected with local offices.—There are persons who lend the gazette for perusal for a certain time, and for a very small charge. Rich individuals also, who have friends in the capital, sometimes receive the gazette in its best form, by private conveyance, direct from Peking.

The original design of the gazette seems to be entirely for officers of government; and its publication to the people is merely by connivance contrary to law, like the publication of parliamentary speeches in England. The press in China, on all affairs of government is entirely silent. But the Peking gazette contains much important and curious information, which, like very much that is written and printed, circulates far beyond the time and place for which it was intended. By it, the whole world is now made acquainted in some degree with the avowed feelings, wishes, and desires of the great emperor and his advisers, as well as of the greater occurrences among

PEKING GAZETTE.—The document which is dignified by this name, is published in Peking by the government, and is there called *king-paou*;—king denotes *great*, and is commonly used by the Chinese to designate the capital of their empire; paou means *to announce, to report*. In the provinces it is called *king-tee nyi-kö chaou*, or simply *king-chaou*.

From Peking the gazette is forwarded to all the provinces, but with very little dispatch or regularity. It is often forty or fifty,

and sometimes even sixty, days in reaching Canton. Here it appears in two forms, both of which are in manuscript. The largest is in daily numbers, and contains about forty pages, or twenty leaves, duodecimo; the smallest contains about fifteen or twenty leaves, and is issued only once in two days. The largest is designed solely for the highest officers—such as the governor, lieut.-governor, &c. The expurgated edition is designed for the inferior officers throughout the province. The gazette in this latter form is sold to the public at a high price, by writers who are connected with local offices.—There are persons who lend the gazette for perusal for a certain time, and for a very small charge. Rich individuals also, who have friends in the capital, sometimes receive the gazette in its best form, by private conveyance, direct from Peking.

The original design of the gazette seems to be entirely for officers of government; and its publication to the people is merely by connivance contrary to law, like the publication of parliamentary speeches in England. The press in China, on all affairs of government is entirely silent. But the Peking gazette contains much important and curious information, which, like very much that is written and printed, circulates far beyond the time and place for which it was intended. By it, the whole world is now made acquainted in some degree with the avowed feelings, wishes, and desires of the great emperor and his advisers, as well as of the greater occurrences among

the people in China, and its external possessions.

The recommendation of individuals for promotion; the impeachment of others; the notices of the removal of officers from one station to another, of their being rewarded or degraded, of their causing a vacancy by going to ramble among the *genii*, (a phrase denoting death, which the Tartar religionists have grafted on the language of the Chinese annihilationists);—these are the chief topics which fill the pages of the Peking gazette; these however are matters of no great interest to foreigners who are ignorant of the parties concerned.

As in China the emperor makes his own speech—i. e. his Majesty's opinions and decisions are given in his own name, the Gazette varies in interest according to the character of the monarch on the throne at the time; and also according to the different humors of the same monarch at different times. The late emperor during the latter part of his reign seemed ill at ease with himself, and wrote much. His present majesty does not so often take the "vermilion pencil" in his hand, nor expatiate so largely as his late father. The *Yushe*,—imperial historiographers or censors, as some have called a class of men, who were originally appointed many centuries ago for the very purpose of "talking" or writing to the monarch, (not at, as they do in some European countries)—according to their individual temper and the character

of the times in which they live, alter exceedingly the interest of the Peking gazette. We remember two of them during the late reign, who sent in a memorial lecturing the monarch on his extravagance and vices—some of which were such as the refined journalists dare not even allude to—and at the close of their paper, they offered themselves either to be broiled or fried, as it might please his majesty. On the accession of the present monarch also, there were a few bold censors who appeared in the Peking gazette. Reason's Glory* completely blunted the edge of their censure by complimenting them on their courage and fidelity, saying they were worthy compeers of the faithful sages of the olden time.

To a foreigner the most illegible parts of the Peking gazette, are the highly sententious and sublimely classical effusions of gratitude and admiration addressed to the emperor, who is there represented in all the hard words that the oldest Chinese books can furnish—as a sage—as a God—as Heaven itself. To be able to read the Peking gazettes off-hand, is no very easy attainment.

The Westminster Review for Oct. 1832 contains an interesting notice of "Earle's Nine months' Residence in New Zealand." Mr. Earle is an artist, and gives a very striking sketch of the New Zealanders' charac-

* 'Reason's Glory' is a literal translation of *Taoukweng*, which is the Kwü haou, 'national designation,' or title of the present emperor of China.

ter, their "vices and virtues." He confirms beyond all doubt, the horrible cannibalism of these savages. They justify it by the same wise reason that is urged on many other occasions. "*It was an old custom—their fathers practiced it before them.*" Though this is a savage argument, there are others beside savages who employ it.

Mr. Earle praises very highly the land and the people of New Zealand,—inferring their future capabilities from their present condition. He differs from the missionaries on one point that the Reviewers notice. He thinks the New Zealanders would like to have the British government take possession of the islands—the English missionaries there, think they would not. However he does not abuse them for their opinion. He was an artist; not anxious for the privileges of men-of-war's men; nor for the advantages of *free-traders*. The time is however now come, says the Reviewer, for the appointment of a commercial agent of the government, to be "*a controller and censurer of the somewhat lawless crews of the whalers and other vessels touching there.*"

MAGAZINES.—(1.) The Penny Magazine; (2.) The Christian's Magazine; (3.) The Saturday Magazine; (4.) The Guide to Knowledge; and (5.) The Instructive Magazine.

These are all weekly publications intended for the poor: each contains about eight pages of "letter press," and is embellished with prints to illustrate the subjects which are discuss-

ed. The first is published by the Society for Diffusing Useful Knowledge; the second and third by the Society for Promoting Christian Knowledge; the others are by private individuals. There is much that is useful in them all, and nothing perhaps that is positively bad. But they are all deficient,—even the Christian's Magazine has far too little religion in it. The *useful* Magazines omit religion entirely, and touch on moral subjects very lightly. They all refer to man as a mere mortal creature, to the entire neglect of his immortal soul—as if all that which concerns his eternal well-being were *useless!*

The usefulness of knowledge in many departments depends very much on the time, persons, and places for which it is intended. There are many topics dwelt on in these Magazines which are not very useful to a poor laboring man; and if they are, instead of his Bible, to employ his thoughts on the Lord's day, they will not only be useless, but pernicious. However, if they prevent, as they are intended to do, his perusal of cheap publications—infidel in religion, vicious in morals, and anarchical in politics,—they must with all their defects, be *useful*.

We agree with the Chinese moralists, that a knowledge of the relative duties of intelligent creatures is the most useful knowledge, and should be attended to before that which regards only the properties of matter or the works of art. We should like exceedingly to see an improved Penny Magazine in Chinese,

RELIGIOUS INTELLIGENCE.

BATAVIA.—One of the most lovely effects of Christianity is seen in its tendency to make all those who believe and obey its doctrines and precepts, of one heart and one mind. Many members there must be—and the more the better;—but there will be, there can be, only one body and one spirit; and such will be the influence of that *one* spirit on *all* the members, that when one suffers, all will suffer—each will weep with those that weep, and rejoice with those that rejoice. While we condole with our friends at the Straits for the loss which they have sustained in the death of the late chaplain* of Singapore, we rejoice that others are allowed to continue and to go on in the work of the Lord.—It is pleasing also to see among the inhabitants of some of the countries south of us, evidence of an increasing desire for a knowledge of Christianity, while we are assured at the same time that increasing efforts are being made to supply them with that knowledge: such evidence and such assurance we have in the following extracts, which we make from a letter dated Batavia, Jan. 29th, 1833.

“I am much pleased with A. F.’s tracts, and should be glad

if you could get blocks cut for the same at Malacca, and order me 300 copies or more for Java. I am going on with my work on Christian theology, which has advanced to the 68th page; I have nearly completed the first part, on the Divine attributes, and shall immediately proceed with Christ’s mediatorship, and other doctrines of the gospel. I have attended to the remarks made by yourself and Mr. —, in this new edition, and shall be very grateful for any further observations. While one of my presses is thus engaged in Chinese, the other is employed in Malay and Javanese printing, so that I cannot do so much with Chinese as if my undivided attention was given to it.

“We have of late greatly increased the distribution of tracts, and about 1000 get into circulation in our neighborhood every month. The greatest proportion of those tracts are in the Malay language. Our religious exercises in English and Malay are quite frequent, and tolerably well attended.

“I have lately got possession of a *comparative vocabulary of the Chinese, Korean and Japanese*, published by the Koreans, for the sake of enabling them

* The Reverend Robert Burn.

to learn Japanese. This I have been enabled most fully to decipher, partly by the help of a Corean and Japanese alphabet, and partly by the aid of Gutzlaff's Corean and English alphabet; so that I can pretty accurately affix the sound and meaning to every word. It is my intention to print it immediately, as I conceive it will be of vast importance in the present crisis; and though I have been a considerable loser by my former attempt, yet that shall not deter me from trying something of the same kind again, though on a far different plan,—printing only a small number, in the Chinese way, and adapted to Chinese students."

MOLUCCAS.—The following short extracts are from a letter dated Sourabaya, December 18th, 1832, which was written by one of the Dutch missionaries destined to the Moluccas.

"It will not be necessary to assure you that our affection is not merely that of a friend—it

is that deeper affection of a brother, a *brother* in Christ, arising from those principles which bind together the adherents of our heavenly Master; this affection I call the *bond* of Christianity—a bond which is not easily broken, because it is formed of love, which is produced by the spirit of love. So may it prove in this particular instance; and therefore the brethren are anxious to answer your request, and will furnish you with accounts of the Moluccas as often as there is opportunity.

"While the other brethren are seeking for an opportunity of going to the Moluccas, I am looking another way,—namely to China, to assist our brother Gutzlaff in his labors.... Pray for us, that we may become fit instruments in the Lord's hand to do his work,—that we may be encouraged to go on from one degree of grace to another, and enjoy mutually the smiles of that gracious Jehovah, who has loved us with an everlasting love."

JOURNAL OF OCCURRENCES.

PRIVATE LETTERS.—*Seu Paoushan*, one of the imperial censors, has written to the emperor, and requested him to interdict official persons at court from writing *private letters*, concerning public persons and affairs in the provinces. The censor stated that when candidates were chosen in Peking to fill offices in the provinces, and before they left the capital, private letters from their friends

and patrons were sent to the provincial authorities,—sounding the reins of influence and interest; and that in this way, justice was perverted.

From this general charge, his majesty thought the censor must certainly have some facts to substantiate his statements, and ordered the Privy Council to examine him, and make him write out the names of the offenders; but Mr. *Seu* either

could not or would not give the information required, and this has brought upon him the imperial displeasure. The emperor says, these censors are allowed to tell him the reports which they hear, to inform him concerning courtiers and governors who pervert the laws, and to speak plainly about any defect or impropriety which they may observe in the monarch himself; but he adds, they are not permitted to employ their pencils in writing memorials which are filled with vague surmises, and mere probabilities, or suppositions. This would only fill his mind with doubts and uncertainty, and he would not know what men to employ. Were this spirit indulged, says he, the detriment to government would be most serious;—"let Seu Paoushan be subjected to a court of inquiry."

if they fail to give him secret information of their ill conduct.

SET PHRASES.—Chinese official documents abound with set phrases, which by their constant recurrence become exceedingly wearisome. The emperor, or his amanuensis, is very fond of using the following phrases,—"You must make the water fall that the rock may appear;" "you must search to the bottom and investigate the roots;" "no reverse or confusedness of statement will be suffered;" &c. By the first of these phrases it is implied that the facts must be found out, and if necessary by torture.—The word 'order,' or 'command' will frequently occur ten or twenty times in a document of as many lines.

GENERAL JUN-LING-AH, on account of his advanced age, has been commanded to retire from his public duties; but in consequence of his services—having been in forty-eight battles, having killed eight rebels, and having been only once wounded—his Majesty has graciously allowed him half-pay for the remainder of his days.

MILITARY SCHOOLS.—In consequence of the imbecility of the imperial soldiery exhibited during the late rebellion at Leñchow, efforts are being made to improve both the discipline and the strength of his majesty's troops in Canton. A small number (about 20) veteran officers, from the frontiers of Kansuh and Shense, are employed as teachers of the military art and discipline. An eye-witness of some of these officers, describes them as much superior to the Canton men both in strength and agility. A part of their exercise consists of manœuvring with a species of fire-arms, which are eight or nine feet long, and so heavy as to require the strength of two men to carry them. These fire-arms are designed for highland warfare; and are borne on men's shoulders that they may be carried with greater speed up the rugged hills.

DOMESTIC COERCION.—On the 18th ult., in the district of Heāngshan, a mother applied to the *teotang* magistrate to punish her son (a young man) for disobedience. The magistrate complied with the request; and the youth after having been publicly flogged, went home, and either from mortification or revenge, took a large dose of opium which caused his death.

A LITERARY CHANCELLOR, DEGRADED.—Shing Szepun, who was recently the literary chancellor of Shantung and a dissipated man, carried his drunken frolics to such an excess—in singing songs and playing over his cups, that his behavior at length reached the "emperor's long ears." The chancellor was immediately degraded four steps, and removed to another place,—where he is commanded to behave better in future. From this occurrence his majesty takes occasion to lecture the provincial governors for conniving at such misbehavior, and tells them that in future they shall be held responsible for such persons.

CULTIVATION of the poppy.—Several individuals in Yunnan have been prosecuted for cultivating the poppy. But the local magistrate, *Heu Ssekê*, whose duty it was to sit in judgment in the case, attempted to acquit the accused and to deceive his superiors. In consequence of this conduct he has been deprived of his rank, and reported to the emperor.

SUICIDE.—In Peking, one of the *Yushe* or 'censors,' who was a member of the imperial household, has recently hung himself. He was found suspended by the neck at six

Journal of Occurrences.

clock in the evening. The alarm was immediately given; and his mother took down her son from the place where he was hanging,—but it was too late to save his life, for “the vital breath was gone, and the body was dead.”

The servant of the deceased was arrested and brought before the police. He testified that his master on the morning of the preceding day appeared deranged, but gave no other reason for the violent act of his master.—A further investigation was ordered, and the case reported to his majesty.

TEENTSEN.—His majesty had in contemplation to appoint a naval captain to defend the entrance of the river up to Teentsin, and commanded Keshen the governor of Pe. This precaution was probably in consequence of European ships appearing in that neighborhood. The governor's report is however against the measure, as being unnecessary. The entrance is so intricate that it is naturally defended, and the military officers on shore are perfectly competent to guard and defend the place. A new appointment would only incur a less expense.

GAMING.—“All persons convicted of gaming, that is to say, of playing at any game of chance for money or for goods, shall be punished with eighty blows; and the money or goods staked, shall be forfeited to government.

“All those likewise who keep gaming-houses, shall suffer the same punishment, although not actually joining in the game; and the house

appropriated to gaming, whether it is at the same time the ordinary habitation of the proprietor, or one expressly purchased by him for the said unlawful purpose, shall be forfeited to government. A conviction however shall not take place under this law, by implication, but only upon direct evidence against the accused parties.

“All officers of government offended against this law, shall be punished one degree more severely than other persons; nevertheless, a few friends playing together, for articles of food or drink, shall not, in any case, be punished under this law.”
—*Penal code of China; translated by Sir G. T. Staunton.*

There is scarcely any one vice to which the Chinese are so generally addicted as *gambing*; it prevails among rich and poor, young and old, and to the injury of all.

Within a few weeks, two documents have been issued by one of the local magistrates “strictly interdicting the practice, in order that the country may enjoy tranquillity.” “I observe,” says the magistrate, “that when *gambing* is practiced on a small scale, business is neglected and time wasted; when conducted on a large scale, the whole patrimony is squandered, and families are ruined;—or perhaps quarrels arise, and lives are lost; or pressed by want, the people are urged on to thefts, and great is the injury to the manners and to the hearts of men. When *gambing* houses are opened, multitudes assemble, the good and the bad are undistinguished, and the injurious consequences are indescribable. *Gambing*, repeatedly interdicted, still continues. This is most detestable!”

Postscript.—The Peking gazettes to the 11th of March have reached Canton. By that of February 9th, it appears that there have recently been some military operations on the frontiers of Shense, near the banks of the Yellow river. The borderers having during the winter made inroads on the Chinese territory to plunder the inhabitants of their cattle, the military were required to repress them.

Yu Kungchang, who took governor Le and other persons to Peking returned on the 27th ult. He reports that the governor had requested permission to in the temple Cang-e-mun previous to his going into the duties of public life.

CHINESE REPOSITORY.

VOL. V.—MAY, 1836.—No. 1.

Periodical literature: Chinese Almanacs; imperial Court Circulars; the provincial Court Circular of Canton; the Peking Gazette; with remarks on the condition of the press in China.

Literature forms a prominent characteristic of the present age. Within the last few years it has multiplied many-fold, and is increasing. In its various forms of Annuals, Quarterlies, Reports of scientific and benevolent institutions, and other works of a similar kind, men and means to a vast amount are employed. Arts, sciences, politics, religion, and the like, are brought within its sphere; and discoveries, occurrences, opinions, what men do and say, being carefully recorded, are borne through a thousand channels from one extremity of the earth to the other.

Difficulties also, which only a few years ago invariably presented themselves, are settled by the batteries of the press. In the triumphs of truth over error; reason, over brute force; knowledge, over ignorance; and right principles, established. The conduct of the ruler, the wants of the ruled, the will of the few and the wishes of the many, are made known simultaneously; freedom, liberty, duty, and justice, are more clearly defined and better understood; and the contests of contending parties, duly controlled, lead to results more salutary. For whatever is proved to be good, is commended; and evil, seen to be such, is rejected. Thus the errors of the powerful, often irresistibly so. Before it, ignorance and superstitions vanish; folly stands ashamed; and tyranny is exposed. Through the medium of the press, when its freedom is guaranteed, errors and abuses are disclosed; improvements are suggested; and multitudes, stimulated to noble exertions.

And thus the condition of the press and the character of the nations in any country, form a criterion by which we may estimate its rank in the scale of nations.

The periodical literature of China and the neighboring nations, if it deserves such a name, is very meagre; and the European publications, on this side the Ganges, are as yet few and of recent origin. Our remarks in the present article will be confined to the periodical publications of the Chinese; on another occasion, those of Europeans will form a proper subject for consideration. For the present, it is not in our power to give any well-authenticated information respecting this kind of literature in the neighboring nations. We shall feel greatly obliged, however, to any of our correspondents, who may happen to be in Japan, Lewchew, Cochinchina, Siam, Burmah, Asám, Nepál, or elsewhere in the unexplored regions of the east, if they will furnish us with information on this subject,—or on any other, suitable to our pages. And for the trouble and expense which they may incur in so doing, they shall be fully entitled to the same compensation which we ourselves receive,—the satisfaction of acquiring and communicating useful knowledge.

Annual reports of public institutions—such as literary, scientific and benevolent societies, hospitals, asylums, and the like, are not known among the Chinese: at least, we have not been able to find any such. Indeed, so limited are the institutions of this kind among the people of this country that they are scarcely worthy to be reported. In order to guard the morals of their subjects, the officers of government send forth annual proclamations, admonishing all people to be good, and threatening transgressors with condign punishment. These periodicals relate to thefts, robberies, gambling, commerce, agriculture, fisheries, and the preservation of property from fires, inundations and the like. For many years it has been the usage of his excellency, the governor, to issue one of these state papers, in reference to foreigners, “in order to show compassion to the distant barbarians.” Specimens of these have been translated and published, and need not be here introduced. There are also, we believe, some other works which come out annually, in the form of literary and moral essays; but these scarcely fall within the prescribed limits of this article.

Almanacs and calendars seem to be in universal use among the Chinese, though they are very poorly fitted for any useful purposes. The *Friend of India*, speaking of a native almanack in that country, justly remarks: “It is a common and not altogether unfounded complaint that Europeans know but little of the native character. This ignorance arises in some measure from the slender means we enjoy of acquiring a knowledge of those observances by which the national character has been moulded. To supply in some small measure this deficiency, we have thought that a review of the native almanac of the year would not be unacceptable to our readers. The various rules and observances enjoined in it, will serve to show more accurately than elaborate disquisition or learned research, the numerous links of superstition by which the votaries of Hindúism are bound. This almanac will afford abundant scope for ridicule to those who are disposed to laugh at the follies of mankind; and matter of deep and painful reflection to those who are anxious to secure the liberation

try from these degrading influences." (See volume i. These remarks apply in all their force to Chinese almanacs which it was our intention to review in this place, but the nature of the subject require us to postpone it for another article.

The *Imperial Calendar*, published quarterly at Peking, is a more important work. It resembles the national Calendars of western Europe. The title of the work will be found explained in our last volume, though not published under the direction of government, it is a valuable collection of information, in six small volumes, two of which are occupied solely with the names and titles of the officers in the imperial army. The other volumes, which the materials are drawn from the best authorities in the empire often highly revised, relate to revenue, agriculture, granaries,

They are, however, by no means free from error, or in a manner which does much credit to Chinese typography. The frequent and punctually the changes which are made among the officers of government, is one of the chief defects of the work,—it being that the compiler always desires to have those who have been promoted, or transferred in the government from one part of the empire to another, give notice of the same by sending to him such notices as are worthy of their rank and emoluments; and if they fail to do so, it usually happens that he also fails to make the proper entries in the Red Book.

The *Imperial Court Circular*, as we have ventured to designate it, is a *mun paou*, "a report from the gates" of the chief provinces. It consists of a small sheet, printed from waxen blocks only on one side, and that very illegibly. A few extracts will give our readers some idea of the contents of these papers, which are published daily and without the sanction of government. At the opening of each day, the publisher obtains the "matter" for the day from the clerks, who are stationed at the gates of the governor's office, and whose duty it is to record the visits which their excellencies receive and receive. The Circular comes out early on the morning. The first extract which we give is from the first published after the Chinese new-year; the other is an entire paper.

At Peking, 16th year, 1st moon, 20th day (March 7th, 1836). Governor T'ang, at eight o'clock A. M., under a salute opened the doors of his office, entered the great hall of audience, turning his face towards the palace of the emperor did not go; he then "opened the seals" of his office, and all his attendants came forward in their order, prostrated themselves before him, and offered their congratulations; the doors were then closed and he received and issued official documents. All the mandarins and literary gentlemen of rank directed their subalterns and messengers to present their congratulations." * * *

At Peking, 16th year, 3d moon, 12th day (April 27th, 1836). Governor T'ang, went to the office of the fooyuen and

joined him in the examination of a criminal case ; afterwards he waited on Häng, lieut.-general of the brigade stationed in the departments of Nanbeung and Shaouchow ; then he returned to his own office, and received and issued official papers. Häng, the lieut.-general, sent a messenger to thank his excellency for his visit and to return his (the governor's) card. Choo, the acting magistrate of Kwangchow foo, reported to the governor, that on the 13th of the moon, under a salute of gongs and guns, he should go to the collegiate hall to attend the third examination of the literary undergraduates of Nanhae and Pwanyu, together with those of the eight banners. Lew, the acting magistrate of Nanhae, reported himself by card at the governor's office. Lew Keënkäng, candidate for the district magistracy, reported that the Kwangchow foo had directed him to attend the examination at the collegiate hall. Sun, late acting magistrate of the district Chehing, reported his arrival—having retired from the duties of his office, requested an audience, made a declaration respecting his genealogy, and stated that having heard of the death of his father he was withdrawing from public duties. Ting Ekuh, an aidecamp of the governor, presented his thanks for having been appointed temporary superintendent over the salt works at Kanpih. Woo Yungtseäng, who has been permitted to fill the clerkship in the district of Hwa, reported that he had received orders to join the jailor of Kwangchow foo in guarding the degraded officer Loo Yingtseäng. Keäng Seuene undermagistrate of Keängtsun, in the district Shuntih, reported his arrival with five criminals, Keäng Hwuytae and others, for the autumnal assize, and took leave to return and bring more prisoners. Le Seihshow, candidate for the office of assistant district magistrate, reported that the period for which he had obtained leave of absence on account of ill health had expired, and that he was again ready to attend to the duties of his office. Chang Kingwan, sent by the Board of Office as a candidate for the secretaryship in the departmental magistracy, reported his arrival from Peking, and presented his compliments. Chang Seihshoo, the deputy appointed to oversee the cruisers about Canton ; and Lin Weie, joint-deputy over the custom-houses on the east of the city, reported that they had examined the boats of Chang Chaou, who conveys to Peking the fifth dispatch of maritime revenues, and that he had no contraband salt on board. Wang, the nganchä sze ; Choo, the acting Kwangchow foo ; Lew, transferred temporarily to the magistracy of Nanhae ; Seu, the magistrate of Pwanyu ; Kwö, acting colonel of the regiment in Kwangchow foo ; and Ying, the lt.-colonel of the fooyuen's right battalion,—together reported the execution of a criminal (Yë Ashun).

“ His excellency Ke, the fooyuen, received and issued official documents. Ah, the pooching sze, and Wang, the nganchä sze, requested an audience, reported that they were waiting his excellency's pleasure to attend the trial of a criminal case ; presented to him their thanks for his call on them, and returned to him the cards which he had left with them. Le, commissioner of salt, recently promoted to the office of ngancha sze in Shense ; Ching, the commissioner of grain ; and

of the circuit which includes the departments of Kaouinchow; these together presented thanks to the fooyuen, cards which he had left with them, and informed him of his pleasure to attend the trial of a criminal. Choo, wangchow foo; Shaou, an assistant departmental magistrate, an assistant magistrate in Kwangchow foo, stationed near Macao; Choo, of Yacchow, ready to be an assistant departmental magistracy; Ying, a departmental magistrate; g for the same appointment; Yö, candidate for the departmental magistracy; the chief magistrates of the two districts Pwanyu; Le, the acting magistrate of the district Singan; rily performing the duties of magistrate in the district ang Lansin, waiting to fill a district magistracy; Heu ting to be employed in the district magistracy; Leu candidate for the same; Fuh, sub-colonel, having command of the governor's troops; Kwö, sub-colonel of the department of Kwangchow foo,; and Ying, Lt.-colonel of right battalion; these, with all the subordinate civil officers at present in the city, reported to his excellency that they were waiting his pleasure to attend criminal. Choo, the acting magistrate of Kwangchow messenger to report that on the 13th, under a salute of old go to the collegiate hall to attend the third examination-graduates of Nanhae and Pwanyu, together with eight banners. Yae, the acting magistrate of the district permitted to perform the duties of the same office in the men, reported his arrival and presented his compliments. seën, a candidate for the departmental magistracy, on public business to the district Yingtih, having reported that he had completed the duties of his mission.), undermagistrate of Keängtsun, in the district Shuntih, arrival with five prisoners, Keäng Hwuytae and others, and received from the district magistrate of Heäng-autumnal assize, and having brought them to the city absence. Le Chookwan, undermagistrate of Shinngan, t Nanhae, reported his arrival with eleven prisoners, and others, whom he had received from the magistrate of eping for the autumnal assize, and having brought them took leave to return. Too Chin, an expectant of the in the departmental magistracy, reported that he had the duties assigned him in the examination of the streets, his thanks for a temporary appointment to be an assistant Singan district. His excellency, governor Täng, arrived (fooyuen) in examining a criminal; and at eight o'clock salute of guns the doors of the great hall of audience open, and their excellencies (the governor and fooyuen) s, supported by all the other functionaries assembled for

The police-officers of the ngancha sze were then directed forward the prisoner Yé Ashun, a native of the district

UNIVERSITY OF MICHIGAN LIB

Tsingyuen; he was forthwith brought in, tried, and led out. The fooyuen then requested the imperial death-warrant, and sent a deputation of officers to conduct the criminal to the market-place (just without the gates of the city,) and there decapitate him. Soon after the officers returned, restored the death-warrant to its place, and reported that they had executed the criminal.

The Peking Gazette, or as called by the Chinese more properly, *King Chaou*, "transcripts from the Capital," is a much more valuable production. In the provinces, it always appears in manuscript, being transcribed from documents which are made public in the emperor's courts at Peking. This, however, if we are rightly informed, is not done by persons under the immediate direction of government, as we formerly stated (vol. i. p. 506), but by booksellers at their own expense. Only a very few copies of the Gazette reach Canton, some of which are brought by the imperial couriers, and others by private conveyance; and the latter usually arrive first. From the few copies, many more are transcribed. These transcripts are circulated in various forms, according to the wishes of those who seek for them. In their best style they form a daily manuscript in small octavo of about forty pages; but in an inferior style, they appear only once in two days, and then do not contain more than fifteen or twenty pages, and often not so many.

As a specimen of that form of the Gazette which appears in Canton once in two days, we will here introduce a translation of an entire number, the 175th for the 15th year of Taoukwang, purporting to be for the 13th and 14th days of the 12th moon (Jan. 30th and 31st 1836). It contains fifteen separate papers, which for convenience of reference we have numbered. The edicts are called *shang yu*, "supreme (or imperial) edicts;" and are prepared at the emperor's direction by the Inner Council or by members of the Imperial Academy. However, if written, as they sometimes are, in the imperial presence, at his majesty's dictation, they are then called *choo peih* "writings in vermilion," being executed with red ink. All edicts and replies received from the emperor, are closed by the words *kin tsze*, "respect this," which none except the one man may use.—The "imperial pleasure" is obtained in the following manner. Daily at an early hour in the morning, the General Council of state assembles in the hall of audience, where the emperor comes forth to meet his ministers. Memorials are then presented. Usually, these have been previously opened, and answers to them prepared, such as it is presumed will be approved; and sometimes two, three, or more answers are attached, when the subject admits of being answered in so many different ways. The answer which is approved by his majesty is marked in red ink, with a heavy stroke of the pencil. This is called *che*, "the imperial pleasure," and with the original document, (copies having been first taken,) is returned to the memorialist whether in Peking or in the provinces. In case no one of the previously prepared answers is approved of, another is written by the officer in waiting at the emperor's dictation: this is called *choo pe*, "reply written in vermilion,"

turned to the memorialist. The appointment of officers, usually made in answer to either written or verbal representative styled *che*, "the imperial pleasure." The answers are usually brief, as "it is known," "let the appropriate decree be given," "another decree (or expression of the imperial will be given." "It is known," is a reply given to a decree in form, which requires no further notice. "Let the Board be informed of it," is applied to those state papers which are only to be placed in the archives of that Board. There is a form in which replies are frequently given to memorials, and in such cases they are called imperial edicts. This is when the memorialist is giving the substance of what has been represented, and the edict issues an edict thereon. When this is done, the edict is first published; and hence, afterwards, when the memorial appears in the Gazette it is stated *fungche e kuh*, "the imperial edict has been recorded." With these explanations we may refer to the "Peking transcripts," No. 175.

Imperial edict. The censor Chang Kin has presented a report, that in instructions be issued, prohibitory of excess and neglect of appointment of deputed officers in the provinces, and of neglect of forcing the services of private literary attendants on deputed magistrates. In all the provinces, the number of magistrates and of subordinate unemployed officers being large, there is here being much irregularity in regard to their various appointments, there must unavoidably be both good and bad individuals among them. If they be indiscriminately and in excessive numbers employed on deputations, a rapid growth of offenses and neglect will be the result. With regard to those private literary attendants whose duty it is to assist in preparing the originals of memorials and reports, it is essential that they should be confidential and trustworthy persons, tried and well-informed: then only can they be trusted in the task of affording assistance. On no account may they be allowed to dictate to the higher officers, or, presuming on their rank, to recommend their friends to newly arrived deputations, whereby detriment to public affairs may be occasioned.

With regard to this memorial it appears, that it has of late been common in all the provinces, to appoint very numerous deputation attendants of a variety of names, but chiefly under that of 'winter attendants' that, while yet unappointed, the sole aim of the subscribers is to gain an appointment on such a deputation; and usually, when an appointment has been obtained, all that they send away a follower to collect the fees and presents, and as that is effected, to report that the object of the deputation has been accomplished; that, moreover, some even go to the provinces carrying goods with them, in order to evade the custom-trusting them afterwards to others to sell for them. It appears, also, that when newly appointed magistrates are sent to the provinces, it is common for men of letters to repair to the provinces: literary assistants of the higher officers, and to induce

urge the higher officers to recommend them to the newly magistrates; that if these magistrates are men who pay much to public affairs, they usually engage other literary friends, while those who have been recommended to them by the officers receive simply a salary, and hold sinecures. Such an immoderate and excessive appointment of deputations, and these recommendations of literary assistants, cannot but have a bad effect on the civil administration of the country. It is indispensable that these practices should be thoroughly reformed.

Let general orders be given to the governors and lieut.-governors of the provinces, that every deputed officer is to be carefully selected, and not appointed indiscriminately. And whenever any offense is discovered, let his appointment be immediately cancelled, and proceedings commenced against him. With regard to the assistants of magistrates, let each magistrate have perfect freedom of selection; and let no one rely on his situation to force him in making their selection. Thus may civil administration be improved, and the grand rules of government be duly revered. Let general commands be made known to all. Respect this."

Imperial edict. The censor Fuhchang has reported, that in the department of Shunteën foo, there are still subordinate officers not assigned to the acting charge of district magistracies; and he therefore requests, that our pleasure be declared, and an investigation commenced. Let the chief magistrate of Shunteën foo make investigation, and report the facts. Respect this."

Imperial edict. Ching Tsooló, (governor of Fuhkeën and Cheung,) has forwarded a report respecting the seizure of certain bandits, and requests therefore the remission of faults marked, on account of former negligence, against the officers concerned in their capture. Tsäng Apaou and Chin Cheheaou, bandits on the rivers of Fuhkeën, having plundered and held in terror the whole district of Yenping foo, Tseäng Se, the director of the circuit, took them at his own cost which have resulted in the seizure of a hundred and seventy-three persons; he has also tried and convicted them in eleven hundred and sixty distinct cases. He has thus enabled wholly to exterminate those who have for years been scourges to the bandits. Let our favor be manifested to him, and the Board of Punishments take the reward of his merits into consideration. All officers, who, having before been guilty of neglect, have in this case aided in the seizure of the criminals, may be remitted their demerits, as these are in a measure balanced by their present merits. Choo Pingheuen, the magistrate of Kechnyang, having captured thirteen criminals convicted of capital crimes, and having also done a little merit in the seizure of Tsäng Apaou and his followers, let the demerits be remitted the faults marked against him when formerly acting in the district. Respect this."

Imperial edict. Oorkungé, (lieut.-governor of Chêkeäng,) has forwarded a memorial, requesting permission for a district magistrate to be appointed to his line of official employment. Wän Tingheên, waiting

who had failed to discover what was doing were several as is on record. On the present occasion, since the act of the rise of Lo Jooling, the officers have in no way investigated; and when that offender concealed himself in the adjoining districts of Shantung, the local officers united to pursue his retreat. They also discovered the banished criminal, and immediately apprehended him. Their merits are equal to balance their demerits. I therefore present a supplementary memorial, to solicit that I may supplicate the imperial favor to them, in restoring them to rank and remitting punishment in order that they may be excited to future efforts. Their pleasure declared hereon has been recorded."

A supplementary memorial of Ching Tsoolö, governor of Fuhkeen province. Before, on the first arrival of Yungan, the newly appointed magistrate of Kwangtsih heën, he being inexperienced in the administration, I and my colleagues reported that we had jointly appointed him assistant to the departmental magistrate, to enable him to gain experience by practice. When we received your majesty's reply—"he must be either incompetent or incapacitated; let him not be intruded on a situation which is unfit. Respect this." We find Yungan to be a man of just and vigorous age, and not wanting in intelligence. In the past months he has acquired a considerable degree of practical experience in judicial cases. He is also disposed to investigate and examine closely. And the magistracy of heën is one of but ordinary importance; it is not a high office.

When the said officer first arrived in the province, he was found to be laboring under a debt to the government, which he had incurred in such a manner as a newly appointed magistrate could not be expected to do; therefore we feared to send him at once to his office. His debt is now cleared off, and Yungan by his detention at the post office in the province has acquired some months' experience, and is now fitly capacitated for the post. It is right that we should forthwith appoint him to fill it, that he may feel the weight of responsibility. In accordance with your majesty's directions accordingly, we also, as the rules enact, present a supplementary report. The imperial reply received is, "Respect this."

These remarks, with the remarks we have already made, will enable you to form an opinion of the periodical literature and the state of the press in this country. It has been said, by high authority in the London Quarterly Review (vol. iii, p. 291), that "the press is free to every one;" and that "the printer and the vender are careful not to offend the government, and they may not venture to publish anything against decency and morality." The last part of this is most palpably true; but the first part needs to be qualified. It is correct, we believe, as stated in the Quarterly Review, "where a previous license is demanded, no *imprimatur* is required for a literary work;" but, on the other hand, can we say that the laws afford any protection or security to

ss? Not to mention politics and religion, we ask with refer-
 "all the other thousand fields of literary exertion,—all art, all
 , all criticism, all history, all philosophy, all political economy,
 'high heaven' of imagination, all the compositions devoted to
 truction of youth, all that is instructive in morals, edifying in
 r elevating in devotion,"—is there even one subject on which
 erty or freedom is guaranteed to the press? If there is, we are
 t of it. Indeed, so far as we know, freedom and liberty, as
 ood by the people of Christendom, are ideas for which the lan-
 of this country has no appropriate terms. A writer in the Indo-
 Gleaner, for April 1819, says; "China has always been
 to an absolute monarchy; and the press has not been free."
 e adds, "modern books in China, indicate no effort of the hu-
 tellect to enlarge the sphere of knowledge; they are mostly
 tions, made in obedience to the command of the sovereign, or
 ections of industrious individuals; they are productions of the
 rather than of the mind." It is even so. The press, in any
 sense of the word, is not free. It is *tolerated*, and that under
 illance which paralyzes the soul. Witness the Canton Court
 r; no sentiment, no opinion, ever comes forth in it. So in the
 Gazette; no thought, no word, except such as his majesty has
 ublic, goes forth in that publication. No more life is seen
 all "these thousand fields of literature," than appeared to
 phet in the valley of vision: like those bones, the works here
 eed very many, "and, lo, they are very dry." And until
 ew spirit—some pure breath of life divine and of hallowed
 a—come over this land, these desolations will remain, and
 eath-like slumbers be perpetuated.

I. *Remarks on the Hawaiian dialect of the Polynesian lan-
 age; prepared for the Repository, by the Rev. Lorrin Andrews,
 the High School, Lahainaluna, February, 1836.*

igin of the language of the Polynesians, divided as it is into
 different dialects, is buried in deep obscurity. The people
 ves know not whence they are, as the fabulous accounts of
 wn origin sufficiently testify; and yet, on the slightest inspec-
 ad comparison of the different dialects, it cannot for a moment
 bted that they had one common origin. And a singular cir-
 nce is, that the people at the extreme parts of Polynesia speak
 s of the general language the most resembling each other.
 been said that the dialects of the New Zealanders and the
 ans resemble each other more nearly than any of the other
 s. (See Grammar of the Tahitian dialect, p. 4.) But *whence*
 e inhabitants of Polynesia? *How* did they come, or get pos-

many islands scattered over such a vast extent of ocean? Why come? And *why* did they come? are questions that are answered without much conjecture. Yet, no doubt a thorough examination of the several dialects, and a comparison with the other with a view to ascertain the ground-general language, and a comparison with the languages of the adjoining continents, would not only be a subject of inquiry and interest, but would go far to indicate the probable origin of the language. It is to be hoped that the moral and intellectual darkness which has brooded over the islands of the Great Pacific, will ere long be dispelled, and that ample data for such an investigation

will be obtained. These observations are not intended as a philosophical view of the general principles of the language, but merely as general remarks to those who would become acquainted with it. Much time and labor will be required to all foreigners who have attempted to acquire even a superficial knowledge of the language, to say nothing of the danger of mistakes. Experience and practice only can rectify, for want of a knowledge of the principles relating to the idiom and grammatical structure of the language.

The most important thing to be attended to in studying a foreign language, indeed, almost any foreign language, particularly if it is not written or spoken, is the *idiom*, or the manner of expression in that language. The definition of words is a matter of little consequence. Hence it is well in the outset to divest ourselves of all preconceptions of the language we are about to study can be constructed and analyzed entirely on the principles of our vernacular language. That we have nothing to do but to acquire the definitions of words, and then be in the possession of a new language. We must remember that different people have different modes of speaking, according as the objects with which they are conversant, and about which they think and speak, are different. Hence the idioms of no two languages can be expected to be the same. In order to secure a competent knowledge of the idiom of a language, it would be well to commit to memory the various forms of simple and compound sentences, particularly the idiomatic expressions. These will serve as a nucleus around which the exceptions of the language may be made to adhere, when there is a disposition to secure them.

Like men, may, as it regards their idiom, be divided into different classes, and these again may be subdivided into lesser classes. The languages of Europe, for instance, including the Greek and the Roman, may constitute one great class. The languages of the East, of construction are similar. The ancient languages of the East, the Chinese, the Arabic, the Armenian, the Hebrew, &c., may constitute another class. And so of other parts of the world. Whoever shall attempt to write, speak, or resolve, one of these languages, without a knowledge of the principles of the other, will find himself involved in many difficulties. Take an example of two languages of the

me general class. Suppose a tyro in Latin, having mastered the grammar of his own mother tongue, English, but not having yet learned that the different languages are to be resolved on different principles, comes to this phrase in Latin, *Est mihi liber*, which means, he may be told, *I have a book*. But in parsing it by his English syntax, he will be liable to two grand mistakes: for he would, as a matter of course, call *mihi* the nominative case, and *est* the first person of the verb, to say nothing of the wrong idea he would attach to the verb *est* as a verb of possession. Every philologist knows that there is something exceedingly stubborn and unyielding in the laws of languages; they will submit to be governed only by their own laws, they will yield willingly to no other. Hence those laws must be understood before one can yield obedience to them either in writing or speaking. It would be easy to show that the grand principles of the Polynesian languages differ more, both in idiom and in syntax from the European, than the European do from the Asiatic. The facts, however, corroborative of this opinion cannot be introduced here, as it would extend these remarks beyond the limits prescribed. It should be remembered, however, that in comparing one language with another, particularly in comparing a barbarous language lately reduced to writing, and while but few of its words are in daily and common use, with a language with which we are well acquainted, and which has been the object of able and learned men to improve for centuries, we are liable to be led to false conclusions. To compare the Hawaiian, for example, with the English, would be like comparing a new born infant with a giant of mature age. If we wish to do this, we should take the English as it was when the country was invaded by Julius Cæsar. Indeed it is questionable whether a vocabulary made out in the days of Alfred the Great, after the language had been enriched by a host of words from the Saxon, could consist of more words than could be collected were a full vocabulary made of all the words in good use in the Hawaiian. But the English is grown by culture into an extensive and rich language, and so is the Hawaiian, and still retain its own idiom in all its purity. There is no probability, as there is no evidence, that the Hawaiian language has undergone any material changes for many generations. The *meles* and *kaos* (songs and legends) of the ancients are understood and recited by the people of the present time. It is also well known that unwritten languages are less liable to changes than written ones, as there is no method of spreading innovations to any extent even if they were made. The cultivation of the language is not the first thing attended to, even when a nation is disposed to emerge from a state of barbarity to a state of civilization. But in the usages and arts of civilized life, the Hawaiians had made no progress when Europeans were introduced among them a few years ago. There is not, indeed, a perfect uniformity in every particular in the use of the language from one extremity of the island to another, but there are no such variations as would deserve the name of dialects. They may, perhaps, be termed provincialisms. These may

to two general heads; the variations that arise from the of single sounds, or as they may now be termed, the of single letters; and the use of different words for ing. As to different enunciation, the Hawaiian original- until other sounds were introduced, had but two *mutes* guage. One of these would answer to the English *b* and to *k* and *t*. The *p* sound is the common one in distinc- hat of *b*; indeed the Hawaiians themselves never give to the strong sound of the English *b*, but when any letter is d by foreigners, they cannot distinguish it from *p*. With e other sound there is a great difference of usage. Some t with the middle or root of the tongue, when it becomes ith the end of the tongue, when it becomes *t*; nor can perceive the slightest difference. For the remaining e *d*, the Hawaiians have no equivalent, except in a few n it is difficult for English ears to determine whether is presented by *d*, *l*, or, *r*. Thus the proper name, *Hilo* ritten by foreigners as they supposed they heard it, *Hilo*, lido. As to the *k* and *t* sounds, before the conquests of ia, the former was prevalent on *Hawaii*, and the latter on ce that period there has been such an amalgamation of nd so many removals, that the pronunciation is no longer eographical divisions. It is not known exactly to what ncialisms exist, which consist in the use of different words : thing; probably to a considerable extent, but still not so he words, though not commonly used, are unintelligible

en supposed that the chiefs speak a different dialect from e people, or that they could do so when it was necessary. istake. In all despotic governments, like the ancient e these islands, there is kept up between the chiefs and ple as broad a distinction as possible. Indeed it was sop- lately, that the chiefs and people were distinct races of ould not be wonderful, therefore, that the chiefs should use and phrases that would not be entirely familiar to the com-

It is so in all countries where an aristocracy of any kind in view of all that can be collected from those who have le rank between chiefs and common people, and who have rse with both, it does not appear that the difference is ; it is between the higher and lower classes in other The Hawaiian language was first reduced to writing part of the year 1821; and soon after, schools were eser the islands, and multitudes acquired the first principles nguage. From the time the chiefs and people became ith the art of writing, or marking characters representing unds, they have generally used this method of conveying h other. Many legal proceedings have been written, iculated over the islands by means of letters written by e people.

A grand point in reducing a barbarous language to writing should be simplicity. Two rules should be observed; 1st, the characters should be sufficient to express the simple sounds; and 2d, if possible, there should be no superfluous letters. The reduction of the Hawaiian language to writing was not a hasty procedure. The above rules appear to have been kept constantly in view, though it was difficult at first, in many cases, to distinguish between a simple and a compound sound. Two points, however, were readily ascertained; 1st, that vowel sounds predominated to a considerable extent above those of consonants; 2d, that, to an English ear, the language was very monotonous. Five vowels and seven consonants, were all the sounds that could be recognized. Reference is not had here to all those nice shades of distinction, which are found in every language, and which would be impossible to find characters to express, for such abound in the Hawaiian; but reference is had to such sounds as are commonly expressed in the European languages by written characters. With all the possible combinations of so few letters, a language must be monotonous. The Hawaiian is restricted to less than half the number of the English letters; and it was found to be a fundamental rule, that *every syllable must end with a vowel*. It was very important, therefore, that the vowels, upon which so much depended, should be represented by such characters as would express them with the greatest simplicity and precision. It has always been considered a desideratum rather than an event to be realized, that in a written language the vowels should have but one uniform invariable sound. Though this point has not been completely gained in respect to the Hawaiian language, yet there is a near approach to it.

It has been objected to the orthography adopted in writing the Hawaiian language, that it gives to vowels different sounds from those of English, and this has been considered of course a needless innovation. It has been called in an English Review, *an affectation of diphthongising, &c.*, and the question has been asked, why the sounds of the vowels were changed from those of the English? But it should be remembered there is a previous question to be settled; Why did the English, in adopting the Roman alphabet in preference to the black letter, give their vowels the sounds they did, in opposition to almost all the other languages of Europe? It is well known that those who speak the English language, stand alone in the sounds they give to the characters representing the vowels. Almost all the nations of western Europe at the present day either use or can use the Roman characters in writing their languages, and pretty uniformly have given to all the vowels, except perhaps *o*, sounds different from those of the English. And it is well known too that the Italians, Spaniards, French, and Germans, laugh at us for it. Now it may be asked, why is this innovation upon the long established customs of so many nations? To what shall it be attributed? When these questions shall be answered, those who reduced the Hawaiian language to writing will be ready with their answer. But they need not wait so long, for there are other obvious and sufficient reasons at hand.

orthography adopted fully answers the purpose of expressing of the language. Reference is had here only to the *i*. It was mentioned before as desirable if possible that *i* had but one sound, and that this had in a good degree been done by the orthography adopted.

Sounds given to the vowels in the English language would express the Hawaiian vowel sounds without an utter ambiguity. Thus *i* in Hawaiian, sounds like *ee* in English. Words of words requiring the reduplication of *i* is numerous; ascend, in English dress, would need to be *peeee*; *hi*, to arms, would be *heeee*; *kiki*, small, would be *leeeleeee*, &c. Hawaiian, sounds like *oo* in *oo*; hence *ku*, to stand, would be *koo*, to let go, would be written *koooo*; *wuku*, small, would be *wookoo*; and *wuu* to stammer, would be *oooooo*! And the *u*ers. In using the English vowels, therefore, to write Hawaiian would be necessary to use the above orthography, or to use a series of points similar to the Masoretic if not quite as

denied that there are some formidable difficulties in the acquisition of a rough knowledge and investigation of the Hawaiian language are the following.

Want of a full supply of documents written by natives for reference or authority in matters of etymology and orthography though the means in this respect are increasing, yet hitherto have been too few to determine fully the *usus loquendi* of the language.

Great flexibility of the language itself in regard to forms of words.

This has been, and is still, the cause of much dispute engaged in writing the Hawaiian language. One, for instance, hears a particular set or form of words used to express an idea, he remembers it and reduces it to practice both in writing, and when he supposes himself fully master of the language sufficient to express that idea, he finds that another, in expressing the same idea, makes use of a set of words entirely different, not different, he alters the position of them so much so that it seems an entirely new form. But as the person taking much pains, has not so learned it, he is ready to object to the classic purity of the latter, and as authorities are scarce, as each one can summon from his own stock, to sustain the dispute, the dispute is likely to be protracted; whereas they, at the same time, be substantially correct.

Another more fruitful source of difficulties consists in the inaccuracy or faithfulness of those natives to whom application is made. Some are so unaccustomed, though they may be masters of the language, to the business of correcting others, that they let pass such as which they themselves understand, however awkward when compared with the real purity of their language.

The disposition of the Hawaiians to accommodate themselves to the convenience of those who consult them, is a difficulty in the way

getting pure expressions. When consulted respecting any word or phrase, their object seems to be to find out how much the person consulting them knows respecting the point himself. And if he appears to know *anything* they will tell him he knows *everything*. In giving a definition, they will give such as the person understands as synonymous, without much regard to precision or definiteness in case; and it is only by a long series of questions that the desired information can be obtained. They are exceedingly fond of introducing and using foreign words and foreign expressions, even to the confusion of their own words and idiom.

The sources of good authority for the use of Hawaiian words may be classed thus. 1. The letters, or other documents, which one chief writes to another. It is well known that a person is more careful of his words, when he sits down to write, than when he speaks. And a chief writing freely to another would be under no temptation to accommodate his language to the capacities of those whom he might suppose would not understand. 2. The *meles*, *kavikaus*, *kaeos* and *olelos* of ancient time written down by natives themselves. The errors and mistakes to which these would be liable would be in the omission of words and the orthography of some words. 3. The language of chiefs as written or spoken in their laws, charges, or commands to the common people. 4. That of the common people in their addresses, letters, or writing of any kind, designed for the ears of the chiefs. They may be expected, in such cases to use their best language. 5. The language which the common people use in corresponding by letters with one another. Such letters exist in great abundance, and almost every subject, and exhibit a great variety of style and forms of expression. 6. The letters or other documents of chiefs written for the perusal of foreigners. Perhaps these ought to be placed higher in the catalogue of authorities. The reader will judge for himself. The letters, &c., of the common people addressed to foreigners. Lastly, the writings of foreigners reviewed or corrected by natives. This species of writing is liable to two errors; a failure of the best selection of words to express the idea, and a liability to Anglicisms and idiomatic expressions of other languages in distinction from the Hawaiian.

The poetry of the Hawaiian language has been but little examined by foreigners. The form in which it is generally exhibited—the monotonousness of the *hula*, the monotonous unmusical character of the music with which it is connected, and its being entirely unintelligible to foreigners, give it a forbidding aspect. But if we may reason from those qualities deemed essential or generally connected with the existence of good poetry, viz. strong passions, a flexible language, a congenial mate, the existence of wars and military exploits, the intrigues of love, &c., we might expect a language adapted to poetry. And so we find it. It will be sufficient here to introduce two or three short specimens of Hawaiian poetry to show what the language actually contains and of course is capable of expressing. It should be pre-empted, however, that genuine Hawaiian poetry knows nothing of what

rhyme in English poetry, nor does it consist in any definite syllables in a line, but in a certain terseness of expression, in changing from thought to thought, conciseness, generalised and highly figurative.

Following is a specimen of the simplest kind of *kauikou* or *haka* a literal translation. It was first taken down by Mr. Ellis.

ua make kuu alii
ke kuu haku a kuu hoa.
ua i ka wa o ka wi,
oa i paa ka aina,
oa i kuu ihihune,
oa i ka ua o ka makau,
oa i ka wela o ka la,
oa i ka anu o ka mauna.
oa i ka ino
oa i ka malie,
oa i mau kai ewalu,
ua hala kuu hoa,
hoi hou mai.

Alas! alas! dead is my chief,
 Dead is my lord and my friend,
 My friend in the season of famine,
 My friend in the drought of the land,
 My friend in my poverty,
 My friend in the rain and the wind,
 My friend in the heat of the sun,
 My friend in the cold of the mountain,
 My friend in the storm,
 My friend in the calm,
 My friend in the eight seas:
 Alas! alas! gone is my friend,
 And will return no more again.

Following is a couple of distichs of an *Elegy* on love.

hi no inoa, o ke Aloha la, One only name he had, and that was love,
ha wale no kona alelo, And love only was all his talk:
hakua he mae i hanau mai, From sleep, his parent, was he born,
kaina ke kuko, he mihi ka Lust was his brother, and grief his
a nao. thought.

Following is a scrap of a *mele* or *Song* on the creation of Hawaii.

ka moku Born was the island, [and expanded;
lau, a loa, a ao, a muo, It budded, leaped, increased, flourish'd;
mokuku iluna o Hawaii It blossomed on the top, 'twas Hawaii,
nei no ka moku, This Hawaii was an island.
ka aina, he nuka Hawaii, Unstable was the land, tremulous Hawaii,
le ana no i ka lani, lewa honua. Waving in the air; waved the earth,
ua ua pahonia. From Akea 'twas fasten'd together.
na o ka moku me ka honua, Quiet by the roots the island and the land
lewa ealani i ka lima akau o It was fast in the air by the right hand of
ssii ta, a laa, [Akea, Fast was Hawaii;—decreed.— [Akea,
i ikeka he moku. Hawaii appear'd an island.

It is known that there are any long *meles* in the language similar to *Virgil*; but of shorter pieces, specimens might be collected in abundance that would not suffer by comparison with pieces of the same class from the poets of antiquity. Nor would the system of *mele*, or the rites and ceremonies of their ancient religion, they are in point of morality and decency, fall short of the systems of the *learned* nations of *Egypt*, *Greece* or *Rome*. The difference between the poetry and the prose of the Hawaiian consists; 1. In a different selection of such words, as are only used. In poetry, too, may be found most of the *dysphemisms*, or the simplest forms of words in the language, though, sound requires it, they do not hesitate to reduplicate or repeat the same syllables several times. 2. In conciseness.

The Hawaiians are profuse in the use of words in conversation, and in writing they appear to be much more so; but when they sit down to put their words into poetry, it seems to be an object to employ as few words as will possibly answer the purpose. Hence the poetic license is carried to a great extent. Many lines together, though the principal words are familiar, yet for want of their common adjuncts and common collocations, are unintelligible in poetry. 3. Abrupt and sudden changes in the figures. The language admits of a figurative style to a very great extent, but the figures of poetry come unexpectedly to the reader, for example in the song on the creation of Hawaii. The first line presents Hawaii as being born, the next as growing and flourishing like a plant and increasing to a tree, and in a line or two more it is a tumultuous unstable mass.

There has not been discovered the least vestige or sign of a written language having existed among the Hawaiians, anterior to the commencement of our mission. In this respect they were far behind the ancient Mexicans and even many tribes of Indians on the American continent, who though they did not know the use of letters, yet did usually convey ideas by visible representations, such as strings with beads, belts of wampum, &c.

It will be seen by reference to the Vocabulary and to the books that have been printed in the Hawaiian dialect, that several more letters have been introduced than were absolutely necessary to represent sounds purely Hawaiian. This was necessary, to some extent at least, because the language of the Hawaiians was utterly destitute of all words representing many ideas respecting the Christian religion, morals, civil duties, terms of science, &c. It has been necessary, therefore, to introduce new words. All languages do this to some extent, even German, though it is avoided there if possible. The English have no scruple on this head, but have received with open arms every new word or term that offered itself from any language. They have even borrowed from the Hawaiian; and this too when synonyms of the same already existed. With these words, too, the English have borrowed several letters such as *x*, *z*, the hard *ch*, the French *ch*, and the Greek *ph*. Thus the number of sounds are increased in the language, and thus the words are readily recognized by the eye as taken from a foreign language. So it has been necessary to do in the Hawaiian, without it more confusion would be made than benefit gained. Thus the foreign word *mare*, to marry, in pure Hawaiian orthography should be *male*, to expectorate. *Rama*, rum, would be *lama* a torch. The confusion would be more particularly manifest in proper names; thus *Ruta*, Ruth, in Hawaiian orthography would be *Luka* like; *Sara*, would be *Kala*, name of a man, &c. Though these foreign letters are necessary, yet it is not necessary to introduce every letter, nor even every syllable, of a word that may be brought into the language; only a sufficiency to show that the word is of foreign extraction is all that is requisite.

With regard to new words in a language just reduced to writing where improvements, or what is the same thing, where new ideas

it in, there are two methods of proceeding. One is to introduce words from other languages to express new ideas; the other is to give new definitions to words already in use. Both of these have been pursued in the Hawaiian. New words have been introduced as noticed above. Caution however will be necessary lest words be unnecessarily introduced, or such as are no more valuable than some that are already in the language. The number of words to which new ideas have been attached is not yet large, but probably will be greatly increased when moral, religious, and scientific studies shall be more extensively and systematically pursued. The ideas of heart, *uhane* the soul, and *Akua* God, and several other ideas attached to them now in the minds of the more natives that they had not a few years ago. The language of the Hawaiians, though very flexible, that is, capable of a great variety of forms in its expression, is nevertheless very regular in its construction, particularly in its syntax. The general rules are, perhaps, less violated than in most other languages, and when violated are more readily detected.

Inferred from the foregoing remarks that the language ought to be more fully cultivated. And it is hoped that it will be a point aimed at by those who become residents, patiently to study the ancient customs, laws, political maxims, and literature of the Hawaiians, that they may know where and how to apply the helping hand. Consider the circumstances of this people and of enlightened nations that are so different, that is deficient and erroneous; much to be lamented and deplored in a moral, social, political, and religious view. To be contented still, and look coldly on and censure, is not the best way to effect reform. It is a truth, and an affecting one too, that the nation, and of the people individually, calls loudly for the aid of the benevolent, the prayers of the good, and the exertions of the philanthropic. The question will probably in a few years be settled, whether the nation shall continue to exist, or whether the people shall become extinct. And this question, under the present circumstances, will be determined mostly by foreigners now resident at the islands. Let it not be thought that this has no connection with the welfare of the nation; it has much, and before much can be done for the improvement of the people in arts, in laws, in morals, in political regulations, those who would do them good must become personally acquainted with them and with all that appertains to their present and future welfare. It remains to be seen, whether the aid of men from Christian countries shall be stretched out to aid the natives of these islands; or whether the hard hand of extortion and oppression, of violence and passion, shall continue to be laid upon the people, all that constitutes a nation shall be gone, and future historians will say the nation has perished,—the inhabitants have gone, and no one who might have saved them, to the awards of eternity!

III. *System of Orthography for Chinese words:—that of Morrison's dictionary imperfect; unsuitableness of English, and unsuitableness of Italian vowels, for an accurate orthographical system; application of the Roman alphabet, as used in Italy, with some modifications, to the Chinese language.*

On a former occasion, when treating of the Chinese written language, we gave our readers some explanation of the sounds most generally attached to the characters of which this language is composed, that of the sounds existing in the court dialect, or general language of the empire. In so doing, we employed the system of orthography which had been adopted by Dr. Morrison in his dictionary, except in a few or two minor cases where it seemed inconsistent with itself. This we did, not because we regarded that system as in all respects the best which could be employed, but because we judged it inexpedient, that a well tried one could be adopted—one which had stood the test of experience—to deviate from that which had been employed in a system of such great value to every Chinese student, and which had in consequence already been brought into common use.

But in the system of orthography adopted by Dr. Morrison, there are several inconsistencies besides those to which we have already alluded, and inconsistencies which it must be inexpedient to amend unless the whole system be revised and altered. There are also a few cases in which that system is little adapted, if not wholly unsuited, to represent the sounds of some of the provincial dialects of the Chinese language; and on this account it was in a measure altered and modified by Dr. Morrison himself in his Vocabulary of the Canton dialect. Unfortunately, however, these alterations having been made without a revision of the whole system, they have given rise to still greater irregularities. These considerations have rendered it highly desirable, if possible, to adopt an orthographical system better fitted to be employed uniformly in all the dialects of the Chinese language. In the following pages we hope to show that to attain this is not impossible, that on the contrary it is to be attained with ease and with a great degree of simplicity. In taking up the subject at the present time, we have been in a great degree influenced by the efforts now going on in India to render general, throughout the eastern territories of Great Britain and in the adjoining countries, the adoption of one uniform system of orthography, suited to represent clearly and definitely the sounds of words in the Sanskrit, Persian, Arabic, and their kindred languages.

It is a common error in adopting an orthographical system, to endeavor to employ such modes of representing sounds as will be 'at sight' intelligible to a reader, a method which would undoubtedly succeed were it not in several respects impracticable. But as in this method no provision is made for new sounds, foreign to the language

raphy is employed, such sounds can be but very imper-
 nted by it. And no regard having been paid to the ele-
 ds, or of spoken language, each orthoëpist will probably
 ent mode of representing them. It is plainly impractica-
 ssent them, as that no explanation will be required. This
 ularly the case with the English vowels, with respect to
 s are set completely at defiance, so that there is not per-
 vowel sound in English which cannot be expressed in
 ent ways. Sir William Jones gives an instance of this
 ce, "a mother bird flutters over her young," where the
 s represented in six different ways; namely by *a, e, i,*
 to which may be added the sound of *ea*, in heard! This
 e case, but it would be easy were it necessary to show
 wel sound may be expressed in English orthography in
 different ways.

be impracticable to adopt a system of orthography which
 exhibit to the eye of the uninstructed all the true sounds
 language, and if it be in a more especial manner impos-
 ne a simple and definite system of orthography, in accor-
 the sounds most usually attached to the letters in the
 uage, why should we not have recourse to the less em-
 better understood systems in use on the continent of
 er than restrict ourselves to an orthography which is
 d to be the worst that can possibly be found? For the
 orthography is characterized in a peculiar degree by the two
 cts of a written language, *the application of the same*
eral different sounds, and of different letters to the same
 that precision in regard to the vowels, which we in vain
 English, we find in the Italian; and the consonants with
 ions, are nearly the same among most European nations.
 language, excluding the peculiar sounds of some of its
 has therefore been made the foundation of several of the
 ed systems adopted in various parts of the world,—by sir
 es and many other literary men in India, and by the
 in the South Sea islands, among the American Indians,
 r places. The orthography of these several systems dif-
 y any respects; in its vowels it is fundamentally the same
 sh and Portuguese, and varies but little from the ortho-
 Germany and Holland: it is therefore well understood in
 f the continent of Europe. By the literary gentlemen of
 been shown to be well adapted to exhibit in a clear and
 er most of the sounds of the Sanskrit, Persian, and
 ages; and entire works have been published in the Ro-
 er, conformably to this orthography, in several of the lan-
 dia. Is then this system (the system, as it has commonly
 in the east, of sir William Jones,) adapted to represent
 readers the sounds of Chinese words? For if it is, a
 age will be gained in point of simplicity, by assimilating
 phy of China to that of India, and of the Indochinese

ons. After a careful examination, we are of opinion that it is so
 opted, and that it is the best which can be employed to indicate the
 ounds of Chinese words. We will proceed, therefore, to represent
 in manner of applying it, and the invariable sounds given to each
 el, diphthong, and consonant, not taking into account those very
 nt variations which are common in every language, and which it
 ld be vain to attempt to distinguish.

s, however, the number of vowels in the Roman alphabet is less
 a the number of vowel sounds, we are obliged occasionally to have
 urse to *diacritical marks*; and it will be well in the first place to
 ut out in what manner these are used by us. As a general rule, a
 t vowel is left without any mark over it, while a fuller enunciation
 he same or nearly the same vowel is distinguished by the acute
 ent (´) over it; thus *a* is short as in *quota*, and *á* long as in *calm*.

Perpendicular mark. Both the long and short vowels are often
 ounced with an abrupt termination of them, either by simply
 ing at once to utter any sound, or by suddenly stopping the voice
 a passing out, and thus producing one of the three mutes, *k*, *p*, or
 To mark this variation, we use a small perpendicular mark (´),
 er on or after the vowel or diphthong so enunciated.

Acute and grave accents. The same letter has sometimes to
 used for two different long sounds, in which case we use the acute
 ent (´) over one, and the grave accent (`) over the other; thus
 have two long sounds of *e*, marked *é* and *è*, the first as *ei* in
 h, and the second nearly as *e'e* in *ne'er*.

Diæresis. To distinguish that sound of the vowel *u* which is
 ightly known as the "French u," we use the diæresis; thus,
 is pronounced like *Funé* in French.

Apostrophe. To mark some peculiar sounds which appear to
 e from attempted enunciations of consonants without the interven-
 of vowels, we use the apostrophe (') or mark of omission. The
 ables in which this occurs are three; namely, 'm, 'ng, and sz'. The
 nd of 'm is produced by simply closing the lips, and causing the
 e to pass into the nose, and thus producing the nasal m, with-
 having previously uttered any vowel: the sound of 'ng, is also
 duced by the passage of the voice into the nose, but with the
 ue raised towards the back of the palate; it is nearly the same
 he sound uttered by a sulky child when whining: the sound of sz'
 roduced by endeavoring to change the hissing sound of *s* into that
 , by endeavoring to slide from the hissing sound of *s* to the more
 al sound of *z*. The apostrophe is also used as the mark of omission
 re vowels, to show the dropping either of the nasal *ng*, or of *w* or
 The nasal may be dropped before most vowels, the *w* only before
 d *ú*, and *y* only before *i*, *í*, and *ii*.

The spiritus asper of the Greeks is employed to mark the inter-
 ion of an aspirate between a consonant and a vowel, or between
 onsonant and a half-vowel: it is not used before any word, but only
 r the consonants, *ch*, *k*, *p*, *t*, and *ts*. The aspirate before a word
 represented by *h*.

dialect of Fuhkeen, a strong nasal enunciation of the vowel, not quite amounting to the prefix or suffix of a nasal, as if by the utterance of the vowel sound through the escape of voice through the mouth. To represent Mr. Medhurst has used a raised *a* before, or *ã* after the *a* as a diacritical mark will be both more convenient in awkward in appearance, we have adopted a mark (°) the *ang* or *anus-wára* of the Indian languages, although *ang* appears to represent a more distinct nasal utterance.

's of the Chinese language now demand our notice. In ions of these, we shall not attempt to point out the minute ference, often observable in the pronunciation of some of vill give what, after a careful examination of the arrange- a in Chinese rhyming dictionaries, and a close attention nce of them by the living voice, appear to be their most ds. The different sounds to be represented may be shown, in English words, in the following manner, long and ations of the same sound being regarded as but one vowel.

- .. men .. - .. habit .. - .. - .. put .. - .. -
calm .. ne'er .. neigh .. police .. lord .. cold .. rude .. l'une .. allure.

ngement be correct, there are in Chinese ten vowels, ll proceed to explain or define more minutely.

ts a sound very frequent in English, in which language ed in seven or eight different ways, but most usually ; in but. When represented by *a* in English, it is never i Chinese on the contrary it often is. On this account e many objections to our use of *a* to represent this vowel. ons have occurred to ourselves; but we have been unay other letter which can so well represent it in every 'we were to adopt *u* in place of *a*, we have already three bed to that letter, which can be represented by no other nor would *u*, as in shun, give always the true pronuncia- any one may convince himself by a careful examination enunciated in pronouncing the last syllable of the word ith a heavy stress on it. This vowel is sometimes pro- rly as if it were a rapid enunciation of the *a* in calm.

n acute accent, is invariably long, as in balm, calm. aching sometimes to the *a* in want.

ly the same as in whet, yet, men, and is a sound which n occur in Chinese.

grave accent, is like the *e'* in ne'er, or as *a* in share : rotracted till it assumes almost the sound of *a* in ant, sound it is sometimes altogether changed. It has been hat, when thus protracted, there may be a short *e*, as in ing it; but we are doubtful if this suggestion be correct.

i acute accent, is invariably *ei* as in neigh, or *ay* in lay. iably as in pin, pit, and never as in pine.

í, with an acute accent, is the same sound prolonged, as in machine, police, or as *ee* in feel.

o, is pronounced as in lord, or as *a* in ball, or *aw* in awful; *o*, short, as in lock, lot, does not occur in any dialect of the Chinese with which we are at present acquainted.

ó, with an acute accent, is pronounced as in note, sometimes a little more protracted as in roll, cold, or even as if followed by the *o* in foot.

u is pronounced as in pull, push, never as in pure, nor as in flush.

ú, with an acute accent, is pronounced as in rude, rule, or as *oo* in good, fool.

ù, with a grave accent, is pronounced as in illumine, allure, a sound intermediate between *u* in rule, and the French *u*.

ü, is pronounced as in French, in the words *lune, user, &c.*

The following *diphthongs*, formed by the combination of the above vowels, are found in Chinese.

ai, is pronounced as in aisle, or as the English *i* in white, line.

ái, is pronounced exactly as the word aye.

au, is pronounced nearly as *ow*, in how, or *ou* in our, but is somewhat more slender.

áu, is a similar sound, but broader, being compounded of the *á* in calm and *u* in put, or *ú* in rule: it is broader than any similar sound in English, but comes nearest to the *ow* in howl.

ei, is pronounced nearly as *ey* in bey, dey, and is produced by a combination of the short vowel *e* and the short *i*, nearly the same as it could be in the word weight, were that word to be pronounced with a greater degree of stress on the *ei* than is usual. It is often confounded with the long *í* of machine.

éu represents a peculiar Chinese sound, produced by a distinct enunciation of the sounds of *é* long or *ay*, and of *u* short as in put, or sometimes perhaps of *a* short, in quota, the stress being laid on the long *é*. This is a sound which it is difficult to acquire correctly.

íu is a sound not differing much from the English *ew* in the words new, pew; but in Chinese more stress is usually laid on the *í* than on the *u*, and the latter vowel is nearly the same as in allure.

oi is pronounced nearly the same as in the French word *gôitre*, the *o* as in note or as in lord, and *i* as in pin, being both preserved distinct.

óu is a very lengthened sound of the *o* in roll, which seems to be followed by the sound of short *u* in put; the distinction between this and the sound of a protracted *o* is considered doubtful.

ui is a combination of the sound of the short *u* in put, or of the French *ú*, with short *i*, nearly as in fluid, or as in the French word *huie*.

úi, is a similar sound, the short *u* being changed for the long *ú*, or *oo* in fool.

ue, is composed of the short *u* in put, before the short *e* in men, making a sound which seems to resemble a protracted sound of the short *a* in quota.

osed of the short *u* in put, before the short *a* in quota, nder sound than the preceding; the two, however, are les very much confounded.

some other combinations of vowels which it will be umerate, the sounds of them being apparent from the h they are composed; viz. a short *i* as in pin, before or diphthong. These are *ia*, *íai*, *íáu*, *ie*, *iè*, *io*, *iu*,

able to represent with clearness and precision the sounds els and diphthongs in the Chinese language, we proceed sonants, taking first those which can be represented by of the Roman alphabet.

n, bard, is a sound unknown in most parts of China, but an initial in the dialect of Fuhkeên, the nasal *m* being le with it. In the north of that province, however, the ged either into *p* or *m*.

fast, is a frequent sound in Chinese: in the dialects it ed into an aspirate or vice versâ.

s in give, get, never occurs except in some of the never this letter is found in European dictionaries of nguage as an initial, the nasal *ng* should supply its place, phe marking the omission of that nasal. The same re- for the most part to the dialect of Canton.

spirate, is very frequent in Chinese; it is generally a ate than in English: in the dialects of the south it is of- to *f*, in the north into *s*, or *sh*. To mark an aspirate ant, we use the Greek spiritus asper in preference to *h*. t, or as *g* in gentle, is a sound which does not occur, s in some of the dialects. Correctly speaking, it is not mant, but is composed of *d* and the French *j*, or *zh*.

French *jamaís*, or as *s* in pleasure, occurs in Chinese, endency to change, as in German and Dutch, into the of *y*, and into *ny*. We affix a mark to this letter to from the *j* in *jest*; the mark should rather have been e latter *j*, which represents a compound sound, had this idy so generally adopted without a mark, in the Indian ese languages. The use of the two letters *zh* to express und, when so easily to be avoided, appears particularly

te, or as *c* in card, is a very frequent sound in Chinese, initial, but also in the dialects, as a final: as an ini- n confounded with the strong aspirate *h*. It sometimes spiration after it, being then pronounced as *k'h* in the rd, pack-house. When thus strongly aspirated, it is then, , in the northern pronunciation, into *ch*.

ne, is a frequent sound; it is often confounded with *n*. im, is also of frequent occurrence as an initial, but as a lects only: in these it often takes the place of the final

p, as also of the initial *w*. In the dialects of Fuhkeên and Canton, this sound sometimes occurs as a word by itself, unaccompanied by any distinct vowel sound.

n, exactly as in nun, occurs frequently in Chinese both as initial and final.

p, as in pippin, is also a sound of frequent occurrence in Chinese. In some syllables it is often confounded with *f*. It sometimes receives an aspiration after it, when it is pronounced as *p'h* in the compound word, hap-hazard. It is then represented by a Greek aspirate after it, as in *p'an*; for want of which we are obliged to use the inverted comma.

r, as a vibratory sound, is foreign to Chinese: it occurs, however, without any vibratory motion accompanying it, being then preceded by an indistinct vowel, or by the *a* in quota. This sound has been written *wk* and *culk*; the latter is plainly incorrect, the sound which it is intended to represent being enunciated, as we have said, by framing the mouth to express the sound of *r*, but without a vibratory motion of the tongue. We have never heard this sound changed at all into *l*; but in the dialects it is altogether transmuted, being pronounced the same as *l* long in machine.

s, as in sit, occurs as an initial only: it is often confounded with *h*, a sound which the people in some districts cannot pronounce at all. This sound never changes, as in English, into that of *z*, but it is combined sometimes with *z*, unaccompanied with any distinct vowel, forming a peculiar sound which can be caught only from the living voice.

t, as in title, occurs often as an initial, and in the dialects is frequently a final also. It sometimes receives an aspiration after it, when it is pronounced as the *t'h* in ant-hill, and written with a Greek aspirate following it, as in *t'an*.

v, as in revive, is a sound which does not exist in the general language of China, but it supplies the place of *w* in some of the dialects.

w, as in want, is a frequent sound: it is pronounced precisely as in the English word *wen*, and if preceded by an *h*, precisely as in *when*.

y, as in yet, is also a frequent sound: it is pronounced precisely as in *yet*, *yard*, and similar English words.

z, as in zone, is a sound never used but in connection with *s*. See under *s*, and below under *sz*.

The only combinations of consonants occurring in Chinese are, *ch*, *kw*, *ng*, *ny*, *sh*, *sz*, *ts*, and *tsz*: of these, *ng* and *sh*, although represented by two letters of the Roman alphabet, are indivisible sounds.

ch is an initial, pronounced precisely as in the word *church*, or as *ch* in French. This sound sometimes receives an aspiration after it, and is then pronounced as *ch'h* in the combined words *church-hill*: to avoid the repetition of the *h*, we write this with a Greek aspirate following the *ch*, as in *ch'an*. The aspirated *h*, is often turned into *h*, particularly in the northern pronunciation.

hw, is precisely the same as *wh* in English, in the word, *when*.

ing, occurs in Chinese both as an initial and final; as often difficult for a European to pronounce it correctly; readily be acquired by raising the root of the tongue to the palate, and at the same time causing the voice to pass into his initial is often altogether dropped, and an apostrophe or elation is then used by us to supply its place.

Spanish liquid *n*, occurs in Chinese, but is the correct one only of two or three words. It is often used in place of *j*, but incorrectly.

As in the English word *ship*, and occurs only as an initial letter, often used interchangeably with *s*, and sometimes with *sh*, if the letter is followed by *i* or *f*.

A peculiar sound, consisting in a sudden change from the hissing sound of *s*, to the more vocal sound of *z*; as in *sz*, *sz* in one syllable, which, being usually pronounced without a vowel sound, we write *sz*.

As in the words *wit's end*, supposing the *ts* removed from the end of the first, to the beginning of the second word. It receives an aspiration after it, and is then pronounced as *ts*. As in *Scott's house*, removing the *ts* of the first word to the beginning of the second word, *the word house*.

As in the words preceding sound placed before *z*, in the same manner as in the words preceding sound placed before *sz* above.

Which we have made in this system of diacritical marks, a change necessary in the mode of designating the tones, and the nature of voice, of the different syllables. We have formerly used the nature of these tones, as applied by the Chinese to dissonances which are otherwise pronounced alike; and on that system, we have reformed to the mode of noting them previously adopted by the missionaries, and after them by Dr. Morrison. The former system may be used as formerly, with the difference of placing the marks after the words, rather than over the vowels. It is now to revert to this subject at another time.

It has been particular in defining the sounds which it has been intended to represent, in order that we might prevent the possibility of mistake being taken. And our purpose in publishing the above scheme at this time, is to invite all our friends and correspondents to send us their opinions thereon, that with the different views we may be enabled before the close of the year to publish the subject more maturely, preparatory to introducing an improved system of orthography in our next volume.

following statement will show at one view the letters and which we have adopted, and the sounds they are intended to represent.

Diacritical marks.
of abrupt termination; as in chà.
marks to distinguish different long sounds; yé, yèn.
to distinguish French ü.
of nasal enunciation; as in chw'a.t

Vowels.
quota; examples, tang, ta. calm; yáng.
men; chek.*
e in ne'er; shèn, shè.
in neigh; ché, shé.
pin; ping, pi.
machine; pé.
lord; po, pong.*
note; pó.
put; pu.
rude; pú, pung.
allure; lún.
l'üne in French; lü.

Diphthongs.
in aisle; example, hai.*
same as aye; hái.
ou in our; hau.
ow, in howl; háu.
oy in bey; mei, wei.
zy in lay, and u in put;
chéung.*
w in pew; ch'ü, síu.
n göitre; loi.
lengthened sound of o.
n fluid; lui.

úi, the same lengthened; shúi.
ue, as u in put, and e in men; yuen.
ua, as u in put, and a in quota;
muan.

Consonants.

b, as in bard; ba, bé.t
f, as in fan; fán, fung.
g, as in give; gái, gak.t
h, as in have; hang, hung.
j, as in jest; uncertain if the
sound exist in Chinese.
j', as in jamais in French; jáng.
k, as in kite; kung, kú.
l, as in lame; lang, ling.
m, as in maim; man, mung.
n, as in nun; nun, nung.
p, as in pippin; pan, pung.
r, as in after; ar.
s, as in sit; sin, sing.
t, as in title; ting, ti.
v, as in revive; provincial for w.
w, as in want; wan, wán.
y, as in yet; ying, yèn.
z, as in zone; does not occur.

Combined consonants.

ch, as in church; ching.
hw, as wh in when; hwang.
ng, as in singing; ngáng.
ny, as ni in onion; nyáng.
sh, as in ship; shin, shing.
sz, a peculiar sound; sz'.
ts, as in wits' end; tsin, tsing.
tsz, a peculiar sound; tsz'.

sounds occurring in the Canton dialect, not in the general language.

sounds occurring in the dialect of Fuhke'n.

ers all we know of the production of our "Friend," we here
The accompanying lines being original, and never having ap-
it, are sent for insertion in the Chinese Repository,—if thought
lace there:—By a Friend. Canton, May 17th, 1836." Surely
known, in all his musings, never could have dreamed that his
so soon be published in the celestial empire. Should any of our
s not think the "lines" the best ever written, nor perceive
on the objects of our Journal, yet doubtless, they will find them
terlude between descriptions of 'accents,' 'aspirates,' and
he one side, and of 'albugos,' 'entropia,' and the like, on the
eave it with critics, without apology or prologue, to determine
the lines, only "presuming," as the Chinese say, "respectfully
r friends to bestow a glance upon them."]

What car is that the cautious sailors seek,
So silently to hoist upon the deck?
What feeble form therein extended laid,
By every eye so cautiously surveyed?
Pressed by a throng—all eager, yet not rude,
Anxious to scan, yet fearing to intrude—
Well may they pause and gaze intently. Here
No vulgar cause excites the unbidden tear:
At this sad scene may sorrow well break forth.
Behold the mighty Minstrel of the north!
Those pallid lips, which now so feebly move,
Sang Marmion's valor and de Wilton's love;
Sounded Clan Alpine's gathering cry to arms,
And sweetly whispered gentle Ellen's charms.
That fading eye in dying dimness quelled,
What brilliant visions hath it once beheld!
The court, the camp, the cottage, and the bower,
Alike were pervious to its searching power—
As oft, enraptured, it read nature o'er,
From Scotland's crags to Syria's burning shore.
Whilst by the Bard I now admiring stand,
And sadly mark that scarcely living hand,
The creatures of its skill appear to me,
Glittering in every bright variety.
The fiery chieftain, his devoted clan,
The gallant Graham, the stern Puritan,
The virtuous Jennie, and frail Effie's grief;
The gipsy Sybil, wise beyond belief,
The princely Richard of the lion heart,
The rival Soldan, graced by every art,
The stately Templar, and the Prior vain.
The Norman noble, and the Saxon Thane,
The bold freebooters of the olden time,
And Judah's maiden, simple yet sublime;
All these, and more, now rapidly flit by;

Reflected in the glass of memory.—
Ne'er shall the Poet number you again,
The wizzard sinks altho' his spells remain;
To sooth him now how little they avail,
Less than to Rhoderick the old Harper's tale.
And so exhausted will he brave the sea.
Still Caledonia, still he turns to thee,
Drags his faint footsteps from a foreign strand,
And dying seeks his own, his native land,
Sighs for those scenes his genius first made known.
And there, content, will draw his parting groan.
What tho' we grieve at thy approaching tomb,
Can Fancy's self portray a brighter doom,
A course more glorious than 'twas thine to run,
Delighting nations, yet offending none?
Ne'er swayed by envy, eager to commend,
Thy only rival proud to be thy friend;
Unchanged by all the flattery of Fame,
The both applauding worlds extol thy name;
With satire's venom, ever unimbued,
So simply great, so eminently good,
Childhood was charmed, and sober age approved,
Admired by all, by all admiring loved.

—, 1833.

J. D.

ART V. Ophthalmic Hospital at Canton: second Quarterly Report, from the 4th of February to the 4th of May 1836; by the Rev. Peter Parker, M. D.

[Some repairs of the hospital, which were much needed at the end of the second term, made it necessary to close the door for a few days,—during which, Dr. Parker is enjoying a visit at Macao. His Report, which he prepared before leaving Canton, goes to press during his absence; and in a few instances we have abridged the MS., it exceeding considerably the space allotted for it. The expenses of the term were \$441.92. The repairs are now nearly completed, and the doors will soon be reopened. The silk weaver, brought to the hospital on the 12th instant, continues to improve, and has a fair prospect of a speedy recovery. May 24.]

THE whole number of patients on the records of the hospital is now 283. There were admitted during the term 358, of whom 282 were males, and 76 females. In this number, those who remained on the list at the end of the last term, with those who, having been cured and discharged, have had a relapse or a new attack of disease, though numerous, are not included. Had the object been to swell the catalogue of patients received, and were the strength of an individual sufficient for the task of an adequate attendance, the aggregate might have been thousands. The difficulty has been in avoiding applications, rather than in obtaining patients. For nearly a month, the

noninally closed against new applicants, and at least one new patients have gained admittance by importunity and influence of their friends, when there were already as many as could be faithfully attended. The young man born at Malacca and educated at the Anglochinese college considered me essential assistance during the first quarter, and returned to Singapore, and a European subsequently employed having returned to England, the double task of prescribing medicines and administering the same devolved upon me. It is to be regretted that I have not availed myself of the assistance of untaught natives, whose labors have been more arduous than during the first quarter, though the number of new patients admitted to the hospital is small. It would add very much to the efficiency of the institution the constant services of a few well-educated native youth, who become masters of the healing art, and prepared to go through a thorough course of instruction, could be secured; and the benefit which would accrue to such young men, would by no means be inconsiderable.

At the commencement of the second term calls equally with that of the first term, I felt a tribute of heart to Him who has given it, and equally encouraged to enter upon the future. The following details of the institution has attracted more and more the attention of the public, who might be expected to be most unfriendly to it. Officers of government have in several instances personally countenanced the institution for medical care, and in their grateful acknowledgments received have exhibited no less warmth than their superiors in the humble walks of life, whom they have met in large numbers on the same floor. Ten officers of government with more than a hundred number of their attendants (private secretaries, clerks of offices, &c.) have visited the hospital as patients. On the 15th of June I recollect as many as five of these official gentlemen were present at one time, with seventy-five or a hundred other persons crowded about the room. An elderly man, who has filled the office of provincial judge, in one of the northern provinces, which is indicated by a blue button, has condescended to sit among the patients of the hospital. Another gentleman has at a time his office as district magistrate, for the same purpose, visited the hospital. A magistrate of Nanhæ heën, or the western district of Canton, in his card with a request that I would treat an afflicted relative.

The management adopted in the first report will be followed in the second, presenting a tabular view of the diseases, and then in the third, giving in detail a few of the more important cases which have been under my care. The table showing the ages of the patients is omitted. The diseases of the ear have been so numerous, and so varied, that it is deemed desirable to class them together, as has been done. The patients have been afflicted with more than one disease, and each is numbered in the tabular form. The cases which are of high frequency, must serve as specimens of the whole.

Diseases presented during the quarter; 1st, of the eye, 2dly, of the ear, and 3dly, miscellaneous.

No. 844. February 1st. Ascites with anasarca of the lower extremities. Oon Heong, aged thirteen. This little girl came to the hospital a few times last term, and was then absent till March. When

Applied to such as have become slaves to the use of "the drug."

the hospital, she appeared more like a monster than a girl

Her abdomen was greatly distended, her legs three or four natural size, and her face very much bloated; pulse 130, respiration difficult; severe and protracted cough at intervals. The disease was making rapid progress, insomuch as to be a fatal result, and told her friends they must either take her or be satisfied, if, after the best I could do, she should die in a few days. They were urgent she should remain, promising to make her comfortable. Calomel, jalap, and cremor tartar were first administered. Blisters were applied to the legs with manifest advantage. I gave a pill of calomel, gamboge, and pulvis scillæ (*R. cal. gr. j. gamb. gr. j. pulvis scillæ, gr. ij.*) was taken every night. I also gave spts. nitr. ether, each two drachms, and of tinct. of opium ten drops daily. This treatment was continued till the 15th, when absorption commenced and advanced most rapidly. About 10 lb of fluid was evacuated daily; the abdomen and lower extremities soon returned to their natural size; the fulness of the face disappeared; pulse 90, and the child, cheerful and light, returned about the hospital. The same treatment was still continued till the 20th, when she seemed to have nearly recovered her usual health. On the 21st, on change of air might be serviceable, she was permitted to go home for a week, receiving strict charge as to the diet and medical treatment during the mean time. The day after her return, she came to the hospital dressed in fine clothes and painted like a doll, and a box of tea and other presents were sent from her master. Her appearance was far from being unmingled. I had reason to think that the child, instead of being recovered from a premature grave and respectable in life and happy beyond the tomb, was a source of gain to her master when of a suitable age to be sold as a concubine. And to add to this, in consequence of not strictly adhering to the directions given at her leaving, she returned to the hospital a few days with a partial relapse, and has been put upon the same treatment again.

Gunshot wound. February 17th. Acheen, aged twenty-two, a young man unfortunately burst a matchlock in his hand. The day after the factory came to me in great agitation saying that the man was shot, and that he would request me to see him. I ordered a carriage to be carried to the hospital, where I would dress his wound. The next day him and his friends who came with him in great alarm to the hospital should prove fatal; but I soon found their alarm to be groundless, and they were pacified when assured of the patient's recovery. His thumb was blown off from about the middle of the first phalanx, the portion that remained dislocated, the fractured end turned upwards, and kept in that position by tendon and skin, with the thumb forming the ball of the thumb torn up to the wrist. Putting the wound in a proper state was commenced by cutting with the knife the dislocated piece of bone, the shreds of the cartilage of the metacarpal bone, then cleansing the edges of which were supported by adhesive straps, and

er these, large poultices were applied: in a few days, healthy granulations came on, and at the end of three weeks, the wound was quite healed. The patient was able to make considerable use of the reserved portion of the thumb.

No. 930. Encysted tumor. February 24th. Pang she, a young widow, aged 30, from Tungpo, had had for many years an encysted tumor upon the head, situated posteriorly and superiorly to the mastoid process, of an oval form, a little flattened; its length about three inches, and transverse diameter two and a half inches. It was successfully removed. Its contents, after evacuating a wine glass of fluid, were of the consistency of thick dough, and of a brownish color. About twenty days the incision was entirely healed, and the part cured.

No. 931. February 26th. Asthma and opium mania. Asay, aged 40, father of Akwei, the lad with imperforate meatus auditorius mentioned in the last report. This man had been afflicted with asthma from youth and had long addicted himself to the excessive use of opium. On account of his father's illness and expected death, the patient was unwilling to remain in the hospital, and after being permitted to return home became very irregular in his attendance. The father was brought in a boat opposite to the factories, where I was requested to see him. The alarm of friends was well grounded respecting him. He was very languid, breathed with great difficulty, and had general oedema throughout the system. Being unwilling to prescribe for him without seeing him daily, and being desirous also that his son should remain longer under my care, the father was received into the hospital, his health began in a few days to improve, and strong hopes were entertained of his recovery. When sent for one morning to see him, he was thought to be worse, I went directly, but found, to my surprise that he had been some time dead. Probably there was an effusion into the thorax. The other patients were immediately removed from the room and the door closed. Patients were received during the day, the friends were apprised of the event, and requested to come in the evening and remove the corpse.

The occurrence was regarded and treated as an event in Providence, and there was no disposition on our part to conceal the event. The corpse was removed and no difficulty ensued. A few days later, I was informed that Akwei must attend to the funeral ceremonies and could not come any more for the present. I explained to him the necessity of the case and objected to his leaving. He consented himself, however, and I heard no more of him till some weeks subsequently, when being in the part of the city where he resided, I was recognized by the grandfather and invited to the residence of the deceased. The car had been neglected and the orifice nearly closed up, having a depression in the situation of the foramen.

No. 962. March 5th. Disease of the Antrum maxillare. Ashun, of Hongkong, aged 34, a carpenter. The disease commenced a little more than a year ago. Formerly it communicated both with the mouth and nose, and discharged yellowish fluid. On a former occasion,

inted with the use of tools, he performed an operation f. With the aid of his knife and a looking-glass he ev-
 tents; but the disease returned, and, having heard of the
 preferred a three days' journey to the performance of
 ration by his own hand. When he came, the face was
 n, and painful, and in the mouth was the appearance of a
 the gum. It was evident that there was a deposition of
 need it in the mouth and evacuated two fluid ounces re-
 l. I afterwards passed a probe into the antrum, three or
 n several directions, without pain to the patient. There
 slightly defective opposite to it, which appeared to be an
 than a cause. I encouraged the patient to expect only
 relief. He returned the same night with a promise to
 in three days, his business not allowing him to remain
 treatment. As I have not since heard from him, I pre-
 e fluid has not again collected.

March 7th. Hypertrophy of the right eye with deep opa-
 rnea. Sze koo, aged 22, of the province of Nganhwy,
 Chaou Keu, a district undermagistrate in this province,
 t his card, a few days previously, with a representation of
 which a translation by Mr. Morrison is subjoined.

h present a statement respecting the affection of the eye under
 fers, requesting instruction. My young daughter is upwards
 old. In her right eye a covering (cataract) has grown up,
 pupil, which arose from a diseased state of the bowels, when she
 five and six years old. A covering of skin has grown over the
 e cannot see anything with it, and although she has been under
 nent, the sight has not been improved, but she can still perceive
 ight day). Probably the pupil is not injured, but only covered
 ataract (literally, white screen). I have heard of Dr. Parker,
 ato, and desire to solicit that he will look at the eye and take
 care. I request him to couch the cataract, and though she should
 see, I shall be satisfied. I particularly entreat him to adopt a
 y method of cure. If he can indeed cure her, she shall go on the
 to solicit his care of her, and I beg that he will either give her
 adopt some other good mode of treating her, permitting her to
 me day. If it be necessary to remain from home, it will be in-
 I trust he will inform me whether this be right or not. And I
 ressibly grateful."

ted puncturing of the affected eye and evacuating the
 nor, it has been reduced to nearly its natural size, so that
 er it, which is all that she or her friends were encouraged
 hen I "took her under my care," and with which they
 fied. Of the affection to which the father attributed the
 ye, she has also been relieved. Naturally amiable and good
 atly dressed, with less rouge and artificial flowers than
 countrywomen employ to improve their beauty, she seem-
 need intellectual and moral culture to fit her to be an
 ember of any good society. Her father, two brothers, and
 ; an interesting family, have all been my patients during

No. 1017. March 12th. Sarcomatous tumor. Atsoy, aged 14, of Ksha. This tumor commenced two years since, situated beneath right eyebrow. One part extended up upon the forehead two inches, the other downwards so as to conceal the eye. The lad, usually sprightly and pleasant, consented readily to have it extirpated. This was done on the 17th, when I found it to originate much deeper in the orbit of the eye than I had before supposed. I found it attached to its base near the orbital foramen by a kind of peduncle, into which I inserted an artery, that was furnishing it with full nutriment. Two ligatures required a ligature. The eyebrow was not much disfigured by being divided. The parts were united by a suture, the power of the eyelid was preserved, and the eye, before nearly useless, was again rendered fully valuable as the other. Judging from the size it had attained in two years, and the supply of blood it was receiving from the artery, it must have become a great evil. The wound healed kindly by granulations, and in three weeks the patient was discharged.

No. 1077. March 28th. Sarcomatous tumors. Asoo, aged 21. This young woman had a tumor from the pendulous portion of each ear, both about three fourths of an inch in diameter. March 31st, I removed the tumors by a double incision, in the form of the letter V inverted, and with sutures brought the lips together. Her first inquiry after the operation was if she ever again could wear ear-rings. The wounds healed by the first intention, and in a little more than a week the patient was quite well, and the natural shape of the ear perfectly restored.—One other patient with a similar affection of one ear has since been presented. Probably these tumors were originated by wearing earrings of great weight and of improper composition.

No. 1114. Nervous affection of the ear with malformation of the meatus. Le Kingko aged 67, of Fuhshan, the provincial judge or anchāsze before alluded to, came to the hospital on the 8th of April, requiring treatment for an affection of his ears. He complained of deafness and a noise in his ears. I found the meatus auditorius very irregular, preternaturally enlarged both internally and externally though too small centrally. Externally, the orifice was nearly triangular. Pulse 84, foul tongue, and costive. He was informed that the malformation was irremediable, that his general health might be improved, when probably the noise he complained of would subside, and his hearing might be also benefited though not completely restored. Treatment: Syringed the ears and introduced cotton, and gave of opium and rhubarb each eight grs. at night, and an ounce of sulphate of magnesia in the morning. Applied blisters behind each ear. April 12th. Left ear better, the noise nearly subsided. Gave of comp. ext. of colonyth twenty grains, ten to be taken at night and the remainder in twenty-four hours. Syringed the ear, dressed the blisters with basilicon, and directed him to come again in two days. April 12th, evident improvement in his hearing and general health, and the old gentleman expressed himself much pleased with the benefit received. Introduced a little terebinth cerate diluted, and the same treatment was continued.

April 20th. Nasal polypi. Tingqua, aged 65, a native and partner of one of the senior hong merchants, had for five years with nasal polypi in both nostrils. The polypus was completely removed in half an hour, and with good blood. The old gentleman proposed that I should remove the polypus, which was effected in fifteen minutes. This polypus was removed by bringing with it a piece of thin bone, one third of an inch long and one eighth wide. The patient endured the operation without sensible pain. I have repeatedly seen him since. In the nostril he can breathe as freely as ever, the other will be clear after the operation. Previously to operating upon Tingqua, I visited his house to visit his wife, who has long been affected with chronic iritis in both eyes. Her sight is now sensibly improved as she is still under treatment, I defer the particulars of her case. I have had other patients from the same family.

In several cases of nasal polypi presented, I may here mention one. This patient had also a polypus in each nostril, when I first saw them I judged them to be of a malignant character. They were inflamed and bleeding, and the least violence produced hemorrhage. I immediately pronounced them of a kind that would not be removed with forceps, and the patient went away. His condition was still revolving in my mind. I sent for him in a week, at which time I might again examine his case. I then abraded a portion of one polypus and waited to see if it healed. There was no hemorrhage. In a little time it healed kindly, and inferring from this what might be true of the whole, I proposed to remove the remaining polypus. I adhered firmly around nearly the whole circumference of the polypus, but how far back they extended I could not determine. With a small scalpel, as the forceps were inapplicable, I removed them both. Fortunately they were limited within the anterior part of the nostril. The operation was rather more than usual hemorrhage, but I have never known in which the result was more satisfactory.

In the last quarter, a larger proportion of cataracts have been removed than in the first term. Upon a child five years old, who was partially blind from cataract in both eyes for three years, an operation has been performed. The difficulty of confining the patient so as to couch it in the ordinary way rendered it difficult to introduce the needle in front, through the cornea and behind the lens. The next day I could not perceive where the operation had been made. The wound healed and the absorption of the lens. I have since operated upon the other eye, but before the operation will be complete, expect to introduce the needle again.

In the last fortnight I have operated upon five children (the youngest one years old,) for staphyloma. In two of these, the eye was so far as to render it impossible to cover it with the lids. In the removal of the protruding portion was attended with no serious consequences. In one case the excision left the lens so exposed that a new deposit over it presented the appearance of a membrane. The patient still insensible to light, but much improved

in appearance, and relieved of a source of perpetual inconvenience and pain.

No. 1279. May 3d. Injury by fall. Yeäng she, aged 24. A silkweaver. On the approach of a very severe thunder storm that occurred on the 2d instant, this woman went to take in some clothes from an upper loft, and in her haste to return fell from a ladder, a distance of twelve feet, upon a perpendicular piece of bamboo one inch in diameter and three feet high. It entered deep in the centre of the right arm-pit, came out above the shoulder beneath the clavicle which it fractured, reëntered the side of the neck, and passed apparently through the pharynx and œsophagus, rent the soft palate of the mouth from the fauces to the nose, and was arrested only by the base of the cranium. About eighteen hours had elapsed from the time of the accident, when I first saw her. The wounds had been covered over with some Chinese plaster. The patient had a high fever, hot and dry skin, pulse 125, and local inflammation about the wounds. Fluids taken into the mouth came out at the side of the neck, and the air also passed on respiration. Treatment: Dressed the wounds, applied poultices to the sore and inflamed parts, abstracted nearly fourteen ounces of blood, and gave her a calomel and rhubarb cathartic, half a drachm of Dover's powders to be taken in five grain doses hourly, and in the evening applied one dozen leeches about the clavicle along the course of the wound. May 4th. Patient as comfortable as could be expected from the nature of the case. Pulse 108. Free alvine evacuations, indicating that a large quantity of blood must have been swallowed. Fever of the system much abated as well as the local inflammation. She had expectorated about half a pint of thick lumpy sputum (she had previously a catarrh,) during the night. The poultices and Dover's powders were continued, with the addition of fifteen grains of carbonate of ammonia taken during the day.

May 5th. Symptoms of the patient as favorable as on the preceding day. I found the external jugular had been just avoided at the place where the bamboo reëntered. Slight fetor from the wounds, though the edges of them appeared well. Patient could swallow more easily, some appetite and less thirst than before. Dressed the wounds, injecting them with a solution of nitrate of silver, ten grains to the ounce of water, and continued the treatment with addition of an ounce of sulphate of magnesia, which was rejected. May 6th. No material change. Same treatment continued, and all the wounds were cleansed with a solution of chloride of lime. *R. tinct. rhubarb drachmæ iij.* May 7th, pulse 100; orifices of the wounds appeared healthy; the patient could swallow more easily than on any preceding day, but complained more than ever of debility. Considerable coma, with stertorous breathing. Perceiving some discharge from the fractured end of the clavicle, I examined it more particularly, and traced with my probe and directory the passage of the bamboo from the shoulder to the entrance of the axilla. I dressed the wounds as usual, and as there had been no evacuations, gave four grains of calomel to be followed by half an ounce of tinct. rhubarb, and thirty drops of laudanum to be taken at night.

patient to lie as much as possible on the affected side, to ion of pus into the thorax. The discharge from the similar to that externally, it appeared probable that there nication with the lungs. I had but little expectation of

May 8th, pulse 106. Expectorated dark coagula of blood, d some also from the wound in the side of the neck. In spirits, she had little pain, less comatose, no evacuation, h slightly sore. Dressed the wounds, gave a gargle of e drachm to four ounces of water. Ordered to be taken ery hour, rectified spirits of ether, and spirits of ammo- 1 of the former and twenty drops of the latter. Also to ne and apply spirits of ether to the temples. May 9th,

Pulse 90, more natural. Bowels free: appetite not nance much better: wound is healing: and the patient easily and less than before. Swelling and emphysema ctured bones subsided. Bandaged about the chest, and together, placed cushions under the arms, adhesive plase orifices, and poultices over them. Carbonate of ammo-

May 10th, much better; pulse 90, rather feeble. Less er, slept quietly. Wounds still appear healthy, granula- iced. Treatment, essentially the same. The patient at as allowed to eat broth and a little fresh fish. May 11th, all her symptoms favorable. Proposed that the patient o the hospital to-morrow. May 12th, she was able to be e hospital, and all the wounds apparently healthy. Not d. Same general treatment continued.

f Päng, *hoppo of Canton*, claims a remark or two in this time in the month of March, one of the linguists came me that the hoppo "had something the matter" with as the "great man" did not like to come to the hos- ist wished to know if I would meet him at the Compa-

As I had no right there, I preferred he should come to ence, the next day or at any time he chose, or if he pre- d go to his house. With this, the linguist was pleased, ould bring a reply the next day. He did so, informing oppo had looked in his book, and found that the 12th was an auspicious day, and that he would then come. ed, however, I was informed, that as he had some extra ould not be convenient, but he would see me before he eking. This, however, he has not done. As he was soon nself at the imperial court, it might not have been unim- uld have been instrumental in affording him an obvious from all I could learn of the nature of his disease, there nce of rendering much assistance by merely seeing him

lose this report without adverting to the encouragement e generous donations of friends and the kind sentiments formly accompanied them. The amount of donations re- exceeds \$1400, of which a particular acknowledgement

will be given at the expiration of the year. In the mean time, I desire to express sincere thanks in behalf of the hundreds, recipients of their munificence. It is an encouragement, a generosity, the more sensibly appreciated as it has been unexpected. I wish also to acknowledge the unremitting kindness of Dr Cox, who has continued to assist me weekly upon the day for operations.

In this hasty report it is impossible to convey to the mind of a stranger an adequate idea of the interesting scenes of the past three months. To do this he need imagine an assembly averaging from seventy-five to a hundred of the unfortunate in every rank. He need see the man or child lately groping in darkness now rejoicing to behold the light; here the fond mother, her countenance overcast with gloom at the apprehension that a darling child must soon die, presently wanting terms to express her joy as she sees that child prattling around her, insensible to the danger from which it has been rescued; and again he should witness the gratitude of those whose protracted afflictions they had supposed would terminate only with life, in a few days restored to health; and as he beholds considerable numbers who never again can see the light, think of a still larger company, who but for the timely relief afforded would have become like the unfortunate. Were it 'all of life to live,' were there no hereafter, the condition of man being as it is, there would exist no higher privilege than to be a physician, rendering advice and assistance and dispensing medicines gratuitously. But the reflection perpetually recurs, it is *not* all of life to live. Beyond the limits of man's earthly being, the soul's existence is eternal, and as the duration of the latter exceeds that of the former, so is its welfare more important and desirable; and the perfection of earthly felicity would be to labor *directly*, to labor long and successfully for it, and especially among those whose immortal happiness has so long been neglected. But since this is in a measure impracticable, and by the Chinese as a nation unappreciated, it is just occasion of thankfulness to God that those means can now be employed, which, in themselves most desirable, are chiefly important as preparatory to their reception of his most valuable gift to man, the Gospel, which is destined ultimately to bring into the fold of the Redeemer an innumerable multitude from the inhabitants of this unique and populous empire.

ART. VI. *Religious intelligence: Sandwich and Hervey Islands; Batavia; Singapore; Malacca; Penang; Siam; Burmah; and Bombay.*

WITHIN a few days, letters have come into our hands from the several places specified above. Among the communications from the Sandwich Islands, was the second article in our present number, with various specimens of new works which have appeared in the Hawaiian

r these favors we feel much obliged to those friends
ferred them, and hope our obligations may yet be still
"Vocabulary" shall soon be noticed.

om the Hervey Islands, dated Rarotgna, December 8th,
rs. Pitman and Buzacott, it appears that wars, pesti-
hurricanes, have been experienced in that place. The
extracts are from the letter before us.

he 'tender mercies of our God' we have been spared
s part of his vineyard for rather more than seven years
ring which period we have experienced a diversity of
native teachers from the Society Islands preceded us,
rs idolatry had been abolished and their temples des-
conduct of one of them, however, was so very incon-
were compelled to deprive him of his office, which has
red. As we acquired the language, we found the peo-
retched state of ignorance, but willing, and *apparently*
truction. At Avarua a very large chapel was erected,
feet long, where the people formerly worshiped. But
arrival they had removed to another part of the island,
ere we erected a building for the worship of God, one
ty-four feet by fifty-six, which was well attended. We
expediency of the people being divided and of residing
idaries of their respective leading chiefs. Three set-
consequently formed, in each of which was erected a
ool-house. * * *

nd patience were yet to be put to the test. A few
away when we were reminded of the instability of all
, by the visitation of a most destructive hurricane, the
time over-stepping its usual boundaries. In accom-
ointed work no time was lost. All our chapels, school-
rly every dwelling house in the island, in a few hours,
the ground; trees of many years growth were torn
; hundreds of our valuable bread-fruit and other trees
ct, scarcely any food was left for our poor afflicted peo-
l months afterwards they lived upon the roots of the *si*
ses. As soon as practicable we reerected our chapels
ouses, which was a work of great labor.

our settlements those who voluntarily attach themselves
ed into classes; and as the people forsook their evil
greed to the rules of our society, they were admitted.

we become more thoroughly acquainted with their
is public character. Our chiefs, though constant in
e on divine worship, and always ready to assist us in
dertaking, did not, for the most part, unite with us;
ably, that their private conduct did not correspond
of our society. A very great change, however, has
, and we scarcely know a chief on the islands but
attached himself to the cause of truth. Our chapels
ery Lord's day; and two evenings in the week our

congregations are very large. Our schools also are well attended, and the children take great pleasure in learning: we have about 2500 under a course of daily instruction. A very great spirit of inquiry at present prevails, and many profess to be seriously impressed with the word of God. Several have applied for baptism and admission to the Lord's table. Churches have been founded at each settlement; members in the whole about forty-eight; we have also several candidates."

Note. For want of room we are obliged to postpone the intelligence from Batavia, Singapore, Malucca, Penang, Burmah, and Bombay.

ART. VII. *Journal of Occurrences. Peking Gazette; Peking; Shanse; Hoonan; Tibet; imperial commissioners; Canton Court Circular.*

THE extracts which we have made from the Gazette and Court Circular, will indicate the state of public affairs both at Peking and Canton. The "autumnal assizes," mentioned in the Court Circular, are so called because, though adjudged now in the provinces, the criminals, or representations of their cases, are in autumn to come under the consideration of his majesty, who will then pronounce the irrevocable sentence. During the month, a malignant disease has been prevalent among the Chinese, in and about the provincial city; and deaths have been frequent and sudden. The fall of rain has been abundant; and in several instances, it has been accompanied with heavy gales, thunder, and lightning, sometimes terrific. The prospects for good crops of rice, silk, &c., are fair. Within a few days, arrivals (of foreign vessels) have been numerous. Among them are two of the U. S. navy: the sloop Peacock, C. K. Stribling, esquire, commander; and the schooner Enterprise; from Batavia, Siam, and Cochinchina. The Peacock, we understand, bears the broad pendant of commodore Kennedy.

The Peking Gazettes. The press of other matter has made us rather behindhand in our extracts from these documents, the principal source of general information respecting China which we possess. An account of the manner in which the Gazettes are compiled and published has been given on the sixth page of the Repository for the present month, accompanied by a translation of a whole number as a specimen,—a specimen, however, rather more favorable than is usually to be met with, the chief contents often consisting of long documents respecting arrears of duty, neglects of form at literary or military examinations, details of some trifling criminal case at Peking, or recommendations of officers for some not very important district magistracy. Through much uninteresting matter of this nature must we wade, in order to avoid missing objects of a more interesting character which we often find. Hence it must frequently happen that, for want of leisure sufficient to translate many documents, we are compelled to limit ourselves to a summary of their contents. Such a summary, however, at the least, we hope that we shall be able to give our readers regularly from month to month, being convinced that we shall thereby furnish them with more valuable information on many points than we can possibly do by any labored articles. Our present file reaches back to the beginning of November last, and extends to the end of February; but we have extracts respecting changes of appointments, degradations, and so forth, as well as of the more interesting documents, of a month's later date. We will arrange our summary with reference to the order of the different provinces, placing every thing of a more general nature under the head of Peking.

Peking. Several imperial edicts have lately appeared which are addressed to the whole empire. We published, last month, one on the subject of negligence

inments; and on a preceding page of our present number is a
 other against the practices of the 'literary assistants,' or private
 officers in the government. We observe, besides these, two
 literary chancellors. The first is prohibitory of their employing
 friends from the same province or district, lest the intimate
 these individuals should divert them from that impartiality and
 ch ought to characterize the assistants of officers whose duty it is
 literary merits of numerous candidates. The other edict in re-
 ry officers, is prohibitory of their receiving any kind of fees or

ral edict is in reference to the negligence with which the reviews
 n all the provinces are for the most part conducted; this is occa-
 port given by Shin Keheên, the newly appointed lieut.-governor
 the state in which he finds the military in that province. In this
 jesty is the more indignant, inasmuch as high military officers had
 asious been sent into that province to review the troops. After
 ese, his majesty concludes in the following terms: "Hereafter let
 s and lieut.-governors act with real zeal for the proper discipline
 id for the maintenance of correct principles in it; and let those
 o are specially appointed by us to review the forces, lay aside all
 o others, and distinguish with a perfect regard to justice the sev-
 demerits of those submitted to their inspection, even as if we
 sent to review them. By thus acting, they will not fail of fulfill-
 at duties intrusted to them."

character with this is another general edict, occasioned by the
 ' in which Wanfoo, one of the first ministers, performed the duties
 which he was sent to a Mongol tribe. The object of the mission
 te the conduct of the head of the tribe. It appears that in his
 bject, Wanfoo absurdly represented the prince as having, on one
 know nothing beyond what is here stated,) gone to a hunting
 a sedan; on which his majesty indignantly remarks: "What
 sible for him to have there! and who ever heard of going to a
 a chair! How could Wanfoo insert in a memorial statements so
 ?" Excited by this and other faults in the memorial, his majesty
 to the whole empire, and exclaims: "A thousand parts of the
 y demand our care, and if our thoughts wander from them in the
 cess or defect in one quarter or another is inevitable. Have all
 e recipients of multiplied favors, never heard that rule which a
 ave ratified, that

'Their merits, to their prince they owe.

'Their faults themselves must bear?'

is rule, they all screen one another; and to free themselves
 ation of error they make their sole object. In what way can
 selves 'the constant toil—the ill-report' which is spoken of?
 n, let them make it their anxious endeavor to rouse themselves
 and indolence, and rid themselves of every bad habit.—Let this
 as an edict addressed to all. Respect this."

late disturbances in Shanse formed one of the most prominent
 zettes at the close of the last year, having by their nearness to
 more particularly his majesty's attention. This insurrection com-
 1835, and was not entirely suppressed until after three months
 We have given all the information which the Peking gazette af-
 o its commencement in our number for June last year, and this is
 it until some time after, in a gazette of the latter end of July, of
 but lately obtained a copy. It contains a report from Oshunan,
 of the disturbance having been entirely suppressed. On this
 majesty, pleased to hear of the entire dispersion of insurgents, ap-
 t Oshunan had done, and waived the inquiry into his conduct
 ordinarily render necessary. A nephew, yet under age, of the offi-
 ll his household had been massacred by the insurgents, was declar-
 title which had been granted to the deceased officer, and it was

directed that on attaining his majority he should be presented for investiture. Various officers who had been active in the contest received promotion, and the people who had suffered, and those who had subscribed toward the expenses of the contest, were in various ways made the recipients of imperial favors.

But a member of the censorate had meantime been making inquiries, and discovered that the false doctrines which the instigator of the disturbances had disseminated had their origin as far back as 1822. This he immediately represented to the emperor, accompanying his representation with a request that the officers who had failed to discover this fact, from that period onwards, should be subjected to inquiry. His majesty now discovered that Oshunan had allowed half a year to elapse since the suppression of the disturbance, without having sent in any statement in regard to those officers who had neglected their duty, that on the contrary he had stated the case of some of these in the most favorable light, and that his recommendations of others, had been chiefly confined to the *civil* branch of the service. His majesty now found that since his appointment to the government of Shanse, Oshunan had shown himself inefficient; he was therefore degraded, and sent in a subordinate capacity into Mantchou Tartary. After this, a long list appeared of the officers who had since 1822 occupied the principal stations in the province, all of whom have been punished by degradation of rank in their various stations. Finally, another allegation having been brought against Oshunan, he was again condemned and degraded, and sent as assistant resident into Tibet, to reside at Chashi-lounbou.

Hoonan. We mentioned last month a vague report of disturbances in Hoonan; this report has been fully confirmed; the disturbances are not, however, among the mountaineers as then stated, but among the people of the plains, who assembled in the mountains until they were sufficiently prepared for an attack. We have before us a dispatch to the emperor, from Woo Yungkwang, the fooyuen or lieutenant-governor of the province, when on the point of proceeding in person to the scene of action, the substance of which we subjoin. The first information which the lieutenant-governor received of the affair was a dispatch from the chief officers, civil and military, in the frontier department of Paouking foo, adjoining Kwangse on the one side, and Kweichow on the other. This was on the 27th of March. Their dispatch was to the effect that on the 12th of the same month they had apprehended an individual on whose person they discovered a yellow flag and papers of a traitorous nature; that this individual divulged the fact that a party of insurgents was assembled in a mountainous recess in the district of Sinning heën, and that they were planning an insurrection; that another person was also apprehended, having about him traitorous documents, and that he confessed that the head of the insurrection, named Lan Chingsun, had fixed the following day (March 22d) for an attack on the city of Wookang; and that in consequence of these circumstances, the chief magistrate of Paouking foo had collected the military, and was proceeding at their head to the relief of that city. The lieutenant-governor was still engaged in attention to these dispatches, when a further dispatch of the 23d March reached him, representing that the insurgents had made an attack on 'Wookang, and requesting immediate reinforcement. 'During the perusal of this dispatch,' says the zealous lieutenant-governor, "my hair became erect from the force of my indignation and rage, that the rebel Lan Chingsun should have the extreme audacity to break forth into open insurrection in the broad light of day, and should with an assembled multitude have attacked a walled city. A crime so great, an offense so flagrant, demands the speediest and most severe punishment."

The lieutenant-governor, being under sentence of degradation, proceeds to point out the impossibility of waiting the arrival of his successor, and to represent what it was his immediate intention to do. Expecting that the governor was already on the way from Hoopih, the northern portion of the government, as he had previously notified his intention to visit the south at that period, it was his intention to expedite that officer's movements, and also to write to the newly appointed fooyuen and poohingsze, urging both of them to hasten to their new appointments. He was at the same time sending to Wookang, an immediate reinforcement of 800 men, whom he would soon follow; and the chief civil and military officers of Paouking, having left that city for Wookang, he would send 300

for the defense of the former station. Before concluding his received further information, that the insurgents, who were from two and strong, had been repulsed in their attack on Wookang; and that slain in the onset, they had lost many in their retreat, in consequence driven across a river. This satisfactorily proved to the lieutenant they were yet but a hasty assemblage, as it were a flight of crows, accompanying his military manœuvres with a proclamation promising those who would at once submit, he should be able to suppress them immediately. If the latest rumors be correct, he has been disappointed in his expectation.

The resident and assistant resident in this colony have been lately unwei, the late resident, has been recalled to Peking, and Kingluh in his place, and Oshunan has been appointed assistant resident, Hashi-lounbou.

Commissioners who have lately arrived from Peking are, Anming, the Board of Rites, and Chaou Shingwei, a vice-president of the shments. They are attended by four subordinate officers, one from d three from the latter, Board. The immediate object of their comse of mutual accusation and of appeal to Peking on the part of two legraded; one a chief magistrate in this province, and the other one of the Boards in Peking. The appeal by the mother of the the commissioners who were here in 1834, (see vol. iii, pp. 192, hom one only, Saeshangah, now survives. We defer the particur until the investigations are at an end.

Court Circular contains the following items of intelligence, since 10; a translation of the Circular for that day will be found on page umber.

13th of the 3d moon. Their excellencies the governor and fooyuen ived official papers; paid and received visits of ceremony. N. B. rming as they do a part of the routine of every day, with little vaot, ordinarily, he noticed—Fung Yaoutsoo reported that he had s to distribute clothing to the children at the founding hospital.

Le, commissioner of salt, recently promoted to the office of the province of Shense, reported to the governor that he should e seals of his office on the morrow.—In consequence of this change, ctor of the commissariat, will retire from the duties of that office, mporarily those of the salt department; and he will be succeede e being by Hung, who is waiting for a directorship. Six crimiht to the city for the autumnal assizes.

Their excellencies went early in the morning to the temple of the id offered incense; and then repaired to the "hall of ten thousand crated to the worship of the emperor), and there attended to the Sacred Edict. Seven criminals were brought in for the assizes.

he governor paid Le a parting visit, as that officer leaves the o proceed to Shense, of which province he has been appointed a commissioner.

3e governor went out of the north gate of the city to review troops id on returning, went and congratulated Ching, acting commisit being his birth-day. Five criminals arrived.

100, the acting chefoo, reported that he should go on the morrow, of gongs and guns, to the collegiate hall, and attend the fourth f the undergraduates. Wang Chinkaou, major of the left battaion of Heängshan, reported that he had captured a smuggler with s of camlets, and had brought the same to Canton.

he officers who had been sent to accompany Le, the late commiseyond the boundaries of Kwangchow foo, on his way to Shense, return. Five criminals arrived.

th of the 3d moon. Wang, the nganchäse of the province, came quest the governor to attend the assizes; and (according to cussecond and third deputation to repeat the request. At 8 A. M., he fooyuen's great hall were thrown open; the governor and all

UNIVERSITY OF MICHIGAN LIBRARIES

Journal of Occurrences.

Other high officers took their seats; one hundred and fifty-five criminals for autumnal assizes were brought in, judged, and led out; the fooyuen directed usual presents of cash, fans, and cakes, to be given to the criminals, and then led them to be remanded to prison. The hong merchants reported that they were going to meet the new hoppo.

15th. Prisoners were sent back from the city to the country. Officers were sent to meet the commissioners from Peking. Chingtsih reported the capture of two smugglers loaded with salt.

16th. Ho Pangyen reported that he had been directed by the poochingze nganchásze to conduct the prisoner Ma Tihtsin to Peking.

17th. The governor went early in the morning and offered incense in the temple of *tsuen kung*, one of the principal temples of the city; and then attended the review of the regiment on this station. The chefoo reported that to-morrow he would attend the fifth examination at the collegiate hall.

18th. His excellency, the governor, went to the great landing-place and reviewed the new hoppo, Wán, and inquired of him after the repose of his sacred majesty, the emperor. Two Tartar prisoners, formerly employed as officers, were put into the custody of the district magistrate.

19th, 1st day of the 4th moon. Their excellencies the governor and fooyuen went to the temple of the god of literature, and offered incense; they afterwards repaired to the great landing-place, took leave of Páng, the late hoppo; and presented by him their wishes for the repose of his sacred majesty. Choo, the chief magistrate, reported that to-morrow he would attend the sixth examination of the graduates, at the chancellor's hall.

20th. Their excellencies, the governor and fooyuen, went out of the city, and to the great western gate and offered sacrifices to the gods of the hills and the rivers; they then repaired to the great landing-place, received the two principal commissioners, and inquired after the repose of his sacred majesty. The sub-magistrate of Haefung brought to the city a female criminal, Ching Lin, and delivered her over to the custody of the nganchásze. The magistrate of Nanhae reported that at 2 o'clock this morning, a fire broke out in the western suburbs of the city, in a money-changer's shop, which was consumed, and two buildings were torn away, to extinguish the fire.

21st. The two senior hong merchants, *pin kow te e pin*, 'prostrated themselves (before the governor) and presented a petition of the barbarians.'

22nd. The governor arrived at the office of the fooyuen, and the doors of the great hall were thrown open under a salute of guns. These officers and the chief functionaries of the province arranged themselves for the trial; the chief magistrates, Chaou Heungwán and Chin Cheche, were brought in, judged, and sentenced; the fooyuen requested the death-warrant; and sent a deputation to execute the criminals to the market-place, without the southern gate, and there executed them. It was done accordingly, and the death-warrant returned to the place.

23rd. The magistrate of Nanhae reported that yesterday at 3 o'clock p.m., a fire broke out in the western suburbs; one house was destroyed, and one was burnt down.

24th. Loo Kekwang (Mowqua junior) reported his return from the country. Tsuy Kwóche, one of the assistant magistrates in the district of Pwanyu, reported that a fire broke out at 2 o'clock this morning in the suburbs on the east of the city; twenty-three buildings were burnt, and six were torn down. Seven murderers were brought to the city from the district of Tungkwan. A deponent was taken and handed over to the proper authorities for trial.

25th. Keiung Seuene, sub-magistrate of Shuntih, brought eleven criminals to the city. Fung Yungfuh reported the seizure of a thief. An execution took place during the day with the usual formalities.

26th. Wang Yukung reported that he had been directed to go with the sub-magistrate of Nanhae, and distribute the governmental gratuity among the blind and lame at *taefuh sze*, one of the temples of the city.

27th. The chefoo sent a messenger to report that to-day he will attend the examination of the undergraduates from all the (fourteen) districts of the province.

How foo

THE

NESE REPOSITORY.

VOL. V.—JUNE, 1836.—No. 2.

description of A'sám: extent and boundaries of its three divisions; with notices of the states and tribes bordering the north and south.

In a description of A'sám, we feel a little embarrassment to inform our readers on a subject with which we are aware must be much better acquainted than ourselves. But the importance of the country, as connecting the dominions of Assam, Burmah, and China, and the recently discovered tea shrub is growing indigenious in it, will excuse our interest in this bordering state. Much knowledge respecting it is derived from a series of excellent notices in the Friend of India, and the Calcutta Christian Observer; and in the periodicals we confidently look for further authentic information respecting this and other parts of southeastern India. In the present article we shall confine ourselves chiefly to a description of the country and its adjoining tribes, leaving an account of its productions, and prospects to a future number. In the history, it will be sufficient for the present to observe that the British territories in 1825, as a consequence of the Burman war. Since then successively the kingdoms of Assam, Kachár, and Manipúr have been added; and Manipúr has been brought under British influence. Thus the British government has acquired an immediate dominion or influence, an extent of 1000 miles on the eastern border of Bengal, more than three hundred miles in length and two hundred in breadth. So far as we understand the policy of the government, lieutenant Charlton is the military agent; major White, as political agent, usually resides at Assam; but the authority of captain Jenkins, the governor of Assam, is paramount throughout the whole country. The British are apparently pursuing a liberal and enlightened course of policy towards the natives under their control.

UNIVERSITY OF MICHIGAN LIBRARIES

A'sám is separated from Tibet on the north by wild hill tribes and the lofty Himalaya mountains; on the east a narrow strip only of the Burman territory divides it from the Chinese province of Yunnan; on the south, it borders on the Burman empire; and westward is Bengal. From the point where the united waters of the Ganges and the Brahmapútra pour into the bay of Bengal, if we ascend the latter river in a direction varying from northwest to northeast, till we reach a latitude of $26^{\circ} 10' N.$, and the longitude of $90^{\circ} 30' E.$, we find the town of Goalpara. This town situated on the left bank of the river is reckoned the western extremity of A'sám. From Goalpara it stretches with the river in a northeast direction, occupying the whole valley of the Brahmapútra to Sadiya, in latitude $27^{\circ} 50'$, and long. $95^{\circ} 10'$. This valley is closed in on the north by various ridges connected with the Himalaya mountains, and the Gáro, Khásiya, and Jynteah ranges on the south. These limits include a territory full three hundred miles in length, and though its breadth is not quite uniform or entirely defined, it may be set down at a rough average of seventy miles. Within these bounds, thus generally stated, lies that country of great fertility, and as it would seem, of almost unparalleled advantages in situation, which we now briefly describe.

The whole territory is divided into three portions, Lower A'sám, Upper A'sám, and the country of Sadiya. Lower A'sám extends on both banks of the Brahmaputra from Goalpara northeastward to the junction of the Dhunsiri with the great river, above the town of Bishwanáth. In a straight line this is a distance of about one hundred and seventy-five miles; and the whole extent is strictly under British rule. Through its whole length, Lower A'sám is divided nearly in the centre by the Brahmapútra. The chief tributaries received in its passage through this division are the Manas or Bonash which comes down from the north, and joins it near Goalpara; and the Jullung, if it be not more properly a part of the river itself, which leaving the Brahmapútra near Bishwanáth and rejoining it near Gowaháti, forms no inconsiderable island. On the north bank of the river, the principal divisions noticeable on the map are, Kámrup, and Duing. Gowahati, the usual residence of the commissioner, stands on the left bank, seventy miles in a straight line east from Goalpara. This latter town is described as fast rising in importance, and as a mart for exchanging the produce of the whole surrounding country. Gowaháti, the capital, is well laid out, and has become a populous town.

Upper A'sám extends in the line of the river, on its south bank, from Bishwanáth to the junction of the Dikho with the Brahmapútra; and on the north bank somewhat higher. In a direct line the length may be eighty or ninety miles. For the chief part of its course through this portion, the Brahmapútra is divided into two main branches or channels, the northern of which is called the Búri Lohit, and the southern which has the largest volume of water, the Dihing. These branches inclose the large island of Majuli, about sixty miles in length, and from ten to fifteen in breadth. This fine island, which runs almost the whole length of Upper A'sám, was once well inhabited

but is now mostly a wilderness. About twenty miles from the extremity of this island, the Dikho falls into the southern extremity of the great river, after running a short course from the northeast. Its banks are marked with the sites of several villages a few miles above, the Disung after a longer course from the north to the Bramhapútra. The tract lying between these two rivers, though bearing numerous traces of former inhabitants, is now overgrown with grass and forest jungle. The next branch of the great river is the Sadiya; rising among the mountains of the north, it flows westward, throwing off a branch to the north, which is the Bramhapútra opposite Sadiya, while the rest of the river goes on and intercepts the great river seventy or eighty miles above the Sadiya, at $27^{\circ} 15'$ and about twenty miles above the Dikho. The branches, it will be seen, include an extensive plain, the country of Sadiya, and bounded on the west by the Bramhapútra, the plain is almost entirely covered with grass and forest, and is sparsely inhabited by the people called Mútaks, or Múáris, of whom we may speak hereafter. Their residence and the residence of their chief is Runga Gora, on the north of Dibúru, along which is the chief part of the plain, extending far upon the southern bank of the river.

In the same manner on the north side, beginning at the extremity of Upper A'sám, we find first the district of Sísi, the country of great desolation from the ravages of wars before it came under British rule. The next are the Meris, a rude tribe totally different from the A'sámese, and thinly inhabiting the northern extremity of the Dihong. The largest of their villages is Motgong, where the chief resides; he has renewed allegiance to A'sám, and has protection for himself and for some of the Abors who live on the north of them. The river Dihong is an obscure river, because of the large volume of water it conveys, and it is said that it still hangs over its origin. Coming down from the north, in the mountainous district where the British and Tibetan boundaries are interminous, it falls into the Bramhapútra about the longitude of $95^{\circ} 25'$. Insuperable difficulties on the banks have hitherto prevented its survey by Europeans. According to measurement by captain W. G. S. the Dihong discharges 53,269 cubic feet per second; near Sadiya, 19,058; and the Dibong, 13,000. Being the largest of these three rivers, the estimate was 120,176 feet per second; then the volume of water in the Dihong is nearly equal to that of the Bramhapútra at Sadiya, it cannot be supposed to rise; and it may be believed with captain W. G. S. that the greater part of its waters from the Yáru tsanpú of the north also brings the waters of the true Bramhakúnd. The southern extremity of the mountains in the northeast falls into the Dihong, and the low triangular tract between these rivers is a tract without inhabitants, but the highlands to the north are occupied by tribes of Abors.

The country of Sadiya proper, which forms the third portion in the general division given above is a vast plain, having the Dihong for its eastern boundary, the Bramhapútra for its southern, and on the north and east is closed in by the same mountain ranges which terminate the valley of the Bramhapútra. "The town of Sadiya itself stands on a small stream called the Kúndil nulla, about six miles from its junction with the great river. About twenty miles eastward of Sadiya, on the Bramhapútra, stands Sonapúr, formerly a strong frontier post of the A'sámese government; beyond which the river is navigable only for the canoes of the country. The Sadiya district has a rich alluvial soil, low and well watered, exceedingly well adapted to the growth of rice and other crops, of which it produces two harvests annually." But only a small part of it is under cultivation at present, though it is expected that the continuance of peace, and of the present enlightened policy which the British authorities are here pursuing, will soon work a favorable change. The district of Sadiya was formerly subject to A'sám and peopled from thence, but its present inhabitants are chiefly refugee Khampítis and Múlaks, who were driven from their own abodes to the southeast, by the Singphos, about fifteen years ago; but during the civil wars, these refugees passed over and took possession of Sadiya, and when the Burmans invaded the country took part with them. They are subject to a Khampítí chief, who assumes the old A'sámese title of the Sadiya Kháva Gohain. The district has fully submitted to the British authority.

Our survey will be completed by noticing the plains on the south bank of the Bramhapútra, opposite the district of Sadiya. These plains are terminated by mountainous ranges on the south and east; they are intersected by two rivers, the Noa Dihing, and the Theinga páni; the chief of the population is found on the banks of the latter river. The A'sámese subjects once possessed these plains; then the Singphos and the Kákás, who were frequently ravaging A'sám with fire and sword, not only plundering property, but carrying off the people for servitude. Many of these wretched captives were restored to freedom when the British troops expelled the Burmans from the country.

In order to present a connected view of the geographical position and advantages of this country, we omit for the present other interesting topics, and proceed to notice the adjoining states and territories. The long and narrow kingdom of Nipál, which skirts the south side of the Himalaya mountains for several hundred miles, does not reach to A'sám, but appears to be bounded on the east by the independent kingdom of Bhután. This latter country running the same direction and shape resembling Nipál, by an undefined boundary, is conterminous with the northwest part of Lower A'sám. Next on the east in the same line is the territory of the Deb rája, the relations of which with A'sám we are not well informed of. Occupying the mountainous regions immediately to the north and west of Sadiya are various tribes of wild Ahors. This name is given to a number of tribes of the same origin, language, and customs; it signifies independent, and is well applied to these unsubdued and almost unknown mountaineers.

ulars relative to them we shall mention in another place. towards the northeast, among the higher ranges of the re the Bor Abors, or Great Abors, who are both more l more civilized than the other tribes of the same name. s are intermingled among these, but appear to be of an and in a subordinate condition. It is an important fact ya Kháva Gohain possesses over them all sufficient influ- le to give a safe passport to pilgrims journeying by the a to the Láma country. The journey from Sadiya to said to occupy twenty days, eight of which the traveler ntry of the Mishmís and Abors, and on the sixteenth ahlow, the frontier post of the Láma country. "Rohe- important town in that country, is reported to be a very th brick houses three stories high, having judges, collec- apparatus of a civilized government."

ow to the south of A'sám, and beginning in the same re, from the west, we shall mention in order the chief ontiguous states. These are the Gáros, Khásiyas, Ká- e kingdom of Manipúr. Southward of Upper A'sám, are the Nága hills, occupied with various Nága tribes, acknowledge more or less allegiance to the British or ements, though, if we are rightly informed, chiefly latter. These several states lie along in a single tract ch includes the whole space between A'sám on the et and Burmah on the south. The river Súрма rises ut the latitude of 25° north, and the longitude of 94° ing a general westerly course through three degrees, ilhet turns to the southwest, and empties into the lat. 24°. Between this river and the almost parallel on the north is the tract in question, of a breadth from one hundred and twenty miles, and in length extending or four degrees of longitude. The Gáros occupy the part of this interjacent tract, that part formed by the the Bramhapútra to the south, after passing through are now confined to the hilly island district, and either re famous for their ferocious conduct and manners. ir reputation in this respect is already much improved. Gáros eastward and southward, are the mountains of various Khásiya tribes. According to the Friend of ick we have derived most of the preceding facts, the abit these mountains, of which the Khásiyas are the , bold, robust race, fairer than their Bengálí neighbors, r superiors in personal strength. They live in com- we term villages, but which have no resemblance to a ain. Each has a chief over it, who has counselors to administration. Of these Khásiya communities there le number scattered among the mountains, and the ot fall short of a hundred thousand inhabitants in all. ecreasing, while under the oppressions of the Burmans,

must now increase in the quiet secured by the British rule over it. The most noted mountain is that called Cherra, or Cherra púm, which is, however, only five thousand feet high, while the highest is seven thousand feet. This has been well known as a sanatorium, a grateful retreat for invalids from the burning heat of Bengal; but cannot be supposed to enter into this disputed subject with all the details that characterizes our Indian friends. Jynteah, which appears to be either a part of Khásiya, or another name for it, has very recently become wholly under British control.

The little kingdom of Káchár, or Hirumbha, lies next westward of Khásiya, with A'sám on the north, Silhet on the south, and Manipúr to the east. Extending from 24° to 27° north latitude, and from 92° 04' east longitude, it is just within the temperate zone, and produces every thing necessary for the comfort of life. Within the last five or six years, this country has been taken wholly under British government. Its aged rája, whom the British had reinstated in his dominions by driving out the Burmans, was murdered, and as it was supposed by the instigation of the rája of Manipúr. On this event, in order to prevent the latter reaping the reward of his wickedness, Káchár was immediately placed under the British jurisdiction. An account of Hirumbha, published some years ago, estimated the population it contained to be 80,000, which would probably give a population of near half a million.

We have now gone over the territories which are wholly and properly under British rule, and last we come to the important state of the kingdom of Manipúr, which is little less than under the British protection. Many most interesting particulars relative to the government, language, and religion of the Manipúris are detailed by the English officers, major Grant, and captain Gordon, in the Calcutta Christian Observer; some of which we may present our readers hereafter. According to the former gentleman, the whole length of the Manipúr valley is about sixty miles, lying between 24° and 25° of north latitude, at an elevation of about three thousand feet above the sea. The climate is considered as highly salubrious; and the natives of Manipúr more healthy and robust than he had seen in any other part of India. Superior rice is raised in the valley; cotton and camphor on the hills, the former to a considerable extent. A great variety of fruits grow in Manipúr, but few of them, with the cultivation which the Manipúris will bestow on them, come to any degree of perfection. Hinduism became the established faith only a little more than half a century since, at the command of the rája; and it seems to have a slight hold on the minds of the people. "The Manipúris are eminently distinguished above the natives of western India, by a liveliness of disposition, a quickness of perception, an aptitude in receiving knowledge, and a spirit of inquiring curiosity, which in the European character are hailed as proofs of a fertile soil, requiring only the aid of careful and judicious culture." It is an important fact, that the present infant rája is beginning a course of English education, designed to be completed in the best manner that India allows.

the present resident at Manipúr, well aware of the step, is encouraging others of the better class of gage in the same study; and appears well disposed in every proper means of elevating the people. No far as we know, has yet entered that field.

George the Friend of India, after reviewing the whole, thus a portion of territory full three hundred miles nearly as much in breadth, has fallen under the care of the British government without any preconcerted and almost without the knowledge of the inhabitants metropolis. On the south, nothing separates us from the little state of Manipúr, recovered and preserved by us on the east, thirty leagues of Burman territory may separate us and the Chinese province of Yunnan; but if we look through territory wholly our own we come directly and is completely under the Chinese government.'

Siamese History: distinction of sacred and common eras; notices from A. D. 1351 to 1451, the eighth century of the common era. From a Correspondent.

Observations drawn from personal inquiry and journals published during a limited residence in Siam, have been published. Hitherto the accounts which the Siamese give of themselves have been inaccessible to foreigners, and with which they have always looked upon foreigners, studiously to conceal their national history; and after numerous protracted and unsuccessful efforts made enough to get possession of the first ten volumes written on the black books in common use in the countrysards and forwards somewhat like a fan. The whole may be comprised in about twenty-five volumes.

They have a sacred and a common era. The former is the death, or, as they say, the annihilation of God at the present time (1836) 2378 years. This is the religious writings and sacred edicts. The latter, dates from a man of distinction at Kutahong, (now called Bace in Kamboja, respecting whose exploits the Kamy marvelous stories. Of this era, the present year is used in their history, and in the transaction of business. Wherever, therefore, the Siamese common have only to add 639, and it gives us the Christian year, is not perfectly accurate, inasmuch as the Siam-

se year commences the last of March, or in the month of April, instead of January. It is my purpose in a succession of papers to present you the substance of the history above mentioned, without at all restricting myself to a rigid translation.

When these historical facts are placed before you, I propose to add some such speculations as I may be able, regarding the literature and religion of the country. It will be necessary as I proceed to add occasional notes for the elucidation of some facts which will be stated. It will be perceived that the history gives no account of the origin of the Siamese; but commences in the year 712 of their era, or 1351. Their pride forbids that they should dwell much on that subject. It may be necessary therefore to remark, what is quite evident from various authentic sources, that the Siamese did not exist as an independent people long before that period. Kamboja was a large and powerful kingdom, and included south Laos (now called Wiang Chan,) and Siam as tributaries. The total dissimilarity of the Siamese common language from that of Kamboja militates against the idea of the Siamese having sprung from a Kambojan source. On the other hand, the agreement of the Siamese and Laos, or Wiang Chan, languages, in all their most important terms, forms strong presumptive evidence in favor of their having originated from the Laos. There is abundant evidence from the Siamese writings that the Laos were formerly called Thai Yai, or the Great Siamese, which would be a very natural appellation if they were their progenitors. This name has now gone into desuetude, since the Siamese have become so great as to be unwilling to speak of others as great compared with them. Perhaps this subject may be alluded to again hereafter.

As various names must necessarily occur in these papers, to which the public are not accustomed, it may be here remarked that I adopt the following system of sounds to express them. The consonants are generally as in English.

a	as	in	America.	o	as	in	note.

í	as	in	marine.				

The first century, from 712 to 812 of the Siamese era, is more barren of interesting incidents than those which succeed it. In the Siamese era, 712. On Friday, the 6th day of the waxing moon, in the 1st month, at 3 o'clock and 50 minutes, the magnificent and sacred city *Sia Yutiyá** was founded. This had previously been declared a capital by Brahmans. There palaces were erected on the occasion, and his lordship *Utáng* was crowned as king, to whom the Burmans

* This is the city commonly called Yuthia, Yoodia, and by the Burmans, Indara or Yudaya. It was the capital of the country till destroyed by the Burmans about half a century since.

"mighty, supreme king Rámá the Búdha, who go-
 ficient country Sia Yutiyá, which abounds in all the
 arth." At that time, the king sent his son Rámme-
 n the province of Lopburi. And then, also, the
 following countries were considered as tributaries,
 Java, Tenasserim, Sidammarát,* Tavoy, Martaban,
 ŷklá (Singora), Chantapuri, Pitsanulók, Sukkhoty,
 chit, Kampéngpet, and Sawanpurí. This year, the
 my of 5,000 men to attack Kamboja. They were
 being reinforced, were victorious and brought back
 many Kambojan prisoners.†

On a Thursday, the 1st of the waxing moon, 4th month, at
 forty minutes, the king laid the foundation of a tem-
 ple, the wat of the heavenly Budha of Siam. A mare
 bore one head, two bodies, and eight legs. A hen hatch-
 ed one body and two heads!

The king's two sons died of the small-pox; and he
 buried over their remains, called the "Crystal Forest."

King Rámá died,‡ after a reign of twenty years, and
 Sawan returned from his provincial government and
 to her.

The prince Rájátirát came down from Supanpuri;
 he signed the sovereignty to him, and returned to govern

Rájátirát marched and subdued all the northern

This year is signalized by the subjugation of Panklá

The king made an attack upon Chakangrau.¶ The
 Siu and Komhéng came forth to the contest; the
 king and the latter with his forces returned home. The
 king returned to Sia Yutiyá.

The king, out of reverence to the duties of religion,
 ordered a stupa called Mahadhatu, nineteen fathoms,** with a spire
 of gold.

Of all what or where this country is. The situation of Malacca,
 Tavoy, Songklá, and Chantapuri, are well known; the others
 are unknown. Most of the names have specific meanings, given
 to them, from some production or quality in which each place
 is distinguished. Chantapuri signifies "the country of nutmegs;" Sawannalók
 "the land;" Kampéngpet, "the wall of precious stones," and Sa-
 wanpurí "the country."

The king's stupa was made slaves, of course.

The stupa, a temple, of rather collection of temples and priests' houses,
 a stupa, ardens, &c., and rather resembles a monastery than a temple;
 as seen in it in these papers.

As here rendered, "died," means "turned aside to heaven."
 A great want of loyalty to suppose, much more to say, that
 the priests are said to "return;" common people "die."

Of the three places, Panklá, Séngsiau, and Chakangrau is at

Its height is 4 cubits of 19½ English inches each.

Year 737. The king captured Pitsanulok and its governor Sám-u, together with a multitude as prisoners of war.

Year 738. The king went and took Chákangrau and the governor amhéng; pursued prince Pákong and his army, took him and his officers and returned.

Year 742. He marched to Chiangmai,* but being unable to enter and plunder the city Lámpáng, the king sent a message requiring the governor to come and pay his respects, and returned.

Year 744. Rájátírát deceased after a reign of thirteen years, and his son Utónglan, then a little child, ascended the throne and reigned seven days, when Rámmesawan came down from Lopburi, entered the palace, seized Utónglan, and had him killed at the wat Lokphya.

Year 746. Rámmesawan equipped his army, marched to Chiangmai, built a royal fortress near the moat of the city, at the distance of 140 sen,† and caused his officers to build forts round about him, and get every thing in readiness for plundering the city. The front ranks fired their cannon and broke down the city walls five fathoms in length. The king of Chiangmai then ascended the ramparts, holding a large fan, and caused a soldier to fasten a letter to an arrow and shoot it down into the Siamese camp. The purport of the letter was this; 'We beg you to refrain about seven days, and we will bring forth presents to confirm our mutual friendship.'

The Siamese king asked his nobles, what it was best to do? They replied, it was probable that the Laos king was adopting a stratagem to gain time; they therefore begged him vigorously to prosecute his design of plundering the city. The king replied, that such a procedure, under existing circumstances, would not comport with royal dignity, but that if the Laos king did not regard his engagement, there was no possibility of his escaping the power of the Siamese army. The Laos in the mean time exerted themselves to rebuild their shattered wall, and when the seven days were past; did not appear with their presents. The Siamese officers began to complain; there was ten slungs for a cocoanut shell full, and they had no means to buy it.‡ They therefore implored the king to proceed vigorously and plunder the city. The king accordingly in his compassion gave orders to proceed and plunder in earnest, and on Monday, the 4th of the waxing moon, 4th month, at 8 o'clock and 20 minutes P. M., just as the moon was setting, the persons designated, fired their cannon, took scaling ladders and ascended the walls; the Laos king could not resist them, but fled with his family, and at 5 o'clock in the morning, the Siamese soldiery entered the city, and apprehended Naksáng, the son of the king, whom they presented as a trophy of victory to his Siamese majesty. He told Naksáng, that had his father

* This is the country generally known as north Laos. The inhabitants differ from those of Wiang Chan, or South Laos, in their language, several customs, and a district government.

† A sen is 20 fathoms or 120 feet.

‡ A slung is 15 cents, or $\frac{1}{4}$ of a baht or tical, which is generally valued at 50 cents of a Spanish dollar.

he Siamese expression, and a very apt one it is for their
 ; a country, as was proved recently in the case of Wiang

case, two gilded salvers, a gold goglet, a royal sword, and some other presents.

Year 765. News of the death of the governor of Pitsanulok arrived, and that all the northern provinces were in a state of anarchy. The king immediately marched to Prabang to settle affairs. The governor treated him so respectfully that he soon returned and sent his eldest son to govern Supanburi, and his second to govern Preksi, and his third to govern Chainát.

Year 780. Indra rájá died after a reign of fourteen years. His two eldest sons returned to Sia Yutiyá and fought for the throne; they encountered with spears, cut each other's throats, and both died together. The nobles then repaired to the third son and told him all the particulars. He assumed the government under the title Rájátirát. He had the bodies of his two brothers burned at the wat of the Mighty Relic, where he erected to their memory two sacred spires, and changed the name to 'Royal Fortune.'

Year 783. Rájátirát came down from Chainát and took possession of the royal city Sia Yutiyá, where he appointed his son Pranakhón Indra king. Rájátirát brought with him images of cows and various other animals and deposited some in the wat Mighty Relic, and some in the wat Sanpet.

Year 786. Wat Mayeng was founded by Rájátirát. His son Rámnesawan went to Pitsanulok. At that time, the tears fell from the eyes of the image of Budha and appeared to be blood.

Year 788. The royal residence was destroyed by fire. Year 789. the three cornered throne was burnt. Year 890, Rájátirát sent an expedition against Chiangmai. He was unable to enter and plunder it, and being taken sick, returned. In the year 792, he started another expedition to Chiangmai, and took 120,000 captives and returned.

Year 796. The Rájá died after a reign of sixteen years, and his son Rámnesawan succeeded him, assumed the title Boromatrulokanát, (the dependence of heaven, earth, and hell,) turned his palace into a wat called Sisanpet, and went and lived beside the river. He then built two palaces, made a total overturning of officers and offices, founded cities and wats, and changed the names of old ones.

Year 802. The ravages of the small-pox swept away multitudes. In the year 803, an expedition was fitted out against Malacca.* And in 804, an expedition was started against Sisojturn, and the army being reinforced pitched at a place called Don.

Year 805. Paddy was a *tuang*† for a coconut shell full, and a *kian*‡ was 250 ticals. In the year 806, great pains were taken to advance the Buddhist religion, and 550 images of Budha were cast. In 808, a memorable festival in honor of priests was kept. At this time,

* Crawford's Indian Archipelago says, that in A. D. 1340 (one century earlier than this date), the king of Malacca engaged in war with Siam, whose king was killed in a subsequent battle.

† The *tuang* is $\frac{1}{2}$ of a tical.

‡ This is a measure in Siam consisting of eighty baskets of twenty-five coconut shells full.

mpiling the first article in our present number, and in correcte present one, we have found much difficulty in the orthogra- of places, &c. To those who are familiar with the affairs of d numerous discrepancies which now exist may not cause any ill will always confuse and disgust those who are not intimately history and present state of that country. If any arguments influence in this case, we would recommend strongly that a try gentlemen, from the various parts of the British empire in sly convened, to adopt a system, which should serve as a ystem" of our Correspondent is very incomplete; and in pri- um, we find an orthography which is still worse, with discritical without any key or explanation to them, making a complete list of vowels and diphthongs is very imperfect; and the "generally as in English," are most surely not always so. g proper names too, is cabable of being improved. *Rájátirát,* *tirát,* we suppose to be intended for the *rájá Tirát,* being the individual. And so of *Indra rájá.* For prince William, we *william.* We deem it sufficient simply to turn the attention nt to these points, assured he is able to put the whole matter (is second communication has reached us, and shall appear in Instead of writing *Lopburi* and *Loppuri,* it would be well, we ormyly *puri* or *púr,* the Siamese *b* notwithstanding.]

of teaching the Chinese language; defects of the
; desirableness of a new one, with suggestions
roduction.

r of the Repository (vol. iv., page 167), we offered the desirableness of having an alphabetic language Chinese instead of that now in use among them. e importance and practicability of this is strength- r's additional reflection on the subject. We hope . Yet as we cannot expect that it will come into e years, it is desirable, in the mean time, to make an of the cumbrous medium of communication, character affords. We intimated in the article re- lieve the language might be acquired in much less

time than is now occupied by Chinese boys in learning to read. We have thought on the subject since, and will now give a brief outline of the plan of education to which our reflections have led us. It is far from being completed, but there may be advantages in giving it early publication, that others may think on the subject, and devise something better adapted to accomplish the end in view.

The two great defects of the present mode of teaching in Chinese schools, are, 1st, that it is mechanical, and does not aim at, nor effect the education of the mind; and 2d, that it requires too long time to enable a scholar to read. The new system of instruction should aim at the correction of these two evils. The first would be corrected by causing the pupil to understand the meaning of every character, and every phrase and sentence, he reads. The second would be remedied, in some degree, by the same means, and still farther by leaving the practice of committing to memory so much as they do, and directing the scholar to aim at the knowledge of the characters, instead of seeking to be able merely to repeat the sentences, and, when he has made some progress, by teaching him to exercise his mind and to use a dictionary instead of following implicitly and inactively in the steps of his tutor.

Were we to undertake the teaching of Chinese children, we would have broad sheets prepared with pictures of objects, and the characters used to denote them placed in juxtaposition, in the following manner; except that we substitute the meaning of objects instead of their pictures, and the sounds of the characters instead of characters themselves. Thus;

man	<i>jin.</i>	sun	<i>jeih.</i>	hand	<i>s'ow.</i>
woman	<i>neu.</i>	moon	<i>yué.</i>	knife	<i>taou.</i>
child	<i>tsze.</i>	tree	<i>muh.</i>	cow	<i>new.</i>

When the pupil has learned a few of the most simple characters, representing objects with which he is every day familiar, we would teach him characters that are simple in their form, and denote common relations, thus:

father	<i>foo.</i>	mother	<i>moo.</i>	husband	<i>foo.</i>
son	<i>tsze.</i>	daughter	<i>neu.</i>	wife	<i>tsé.</i>

The picture of a man and a boy near each other would naturally suggest to every mind the idea of father and son; and so of other relations. We would then proceed to verbs in the same manner. Here the pictures would need to be a little more complicated, as the idea designed to be conveyed is so; yet it is evidently perfectly easy to convey the meaning of all characters to the mind of a child by means of representations of the objects which they designate. This mode of teaching might be continued till the pupil has learned the meaning and form of several hundred characters belonging to all the parts of speech; exclamations, interrogations, and some other particles, perhaps, excepted. We have taken a little pains to collect single characters, and names of things and verbs composed of more than a single

meaning of which we could contrive to convey by we already a list of more than 700. This number increased.

pupil has advanced as far as might be thought expedient, in this way, we would have him learn those would not be included in the characters learned by would then put into his hands the best native dictionary according to the radicals, and some book prepared for adapted to the capacity of children, and to the ability to read; or, if such could not be obtained, the read that we could find. We would have him study as early as possible; but he would of course need much his teacher. When he could read the book, and tell its contents, we would have him pass on to another more difficult, and study in the same manner. He gradually from the easier to the more difficult, till able to read any book on common subjects with ease. could be able to repeat a single line from the Chinese book, we would not care; but we would have him read with such attention to the thoughts is contained, that he could give a tolerable account of the facts, or doctrines, of the treat.

as far spoken of what the Chinese boy should learn. It to say a few words about the mode in which he should could begin to teach him much as the English boy is able. We would point to the first character in our and ask him in his "mother tongue," what it is, and to direct his attention to the picture at its side to give signified by the character. When he could answer cover the picture, and ask him the name of the and proceed thus with all the characters illustrated book should be in his hands to study by himself between his readings with his teacher. As a pleasurable change in the boy's studies, we would teach characters as fast as he learned them, at first with him, and then memoriter, without it.

learned the radicals, we would add another exercise. him to pay particular attention to the composition I require him to tell of what radicals they consist. what resemble spelling in alphabetic languages, analyzing would not give a clue to the sound. The, for instance the word *shoo*, book; and the scholar component parts, *peih*, a pencil, and *guz*, to speak: a trunk, and the scholar would name the radicals or it is composed, namely, *chuh*, bamboo, *muh*, a tree,

The advantages of this mode of analyzing the be very great. It would give the scholar a more of the meaning of the word, as its constituent parts suggest its primary signification, which is always the

per key to the secondary meanings attached to it. It would make also more familiar with its form, as it is easier to remember *tsëng* is composed of *chuh*, *muh*, and *muh*, than it would be to remember its fifteen distinct marks separately and without any such reference to the three parts of which it is composed. It would be of other advantage in enabling him to turn readily to words in his dictionary.

If a course of instruction like this be adopted, we confidently believe, one half of the time now occupied in learning to read might be saved. Children may also commence study at a much earlier period, which is now customary, and perhaps necessary in consequence of the tiresome mode of instruction. Their minds will also be excited more by the greater variety of mental operations to be gone through with in the new than in the old course, and by the various knowledge that would be gained while learning to read. As in English schools, a variety of studies should alternately occupy the attention of the child; and the acquisition of useful knowledge, as of geography, astronomy, history, &c., be attended to at the same time that the scholar is learning to read. But as our present object is not to sketch out a course of education, but only to offer hints on the first branch of it, we shall not dwell upon the subject.

The advantages of this mode of instruction appear as manifest and important to our readers as they do to ourselves, the question will naturally arise in their minds; How can it be introduced into general use? No one acquainted with the Chinese mind will doubt the difficulty of teaching any thing *new*. This difficulty is probably greater to the literati, than it is in the common people. Perhaps there is little or no hope of teaching an old man or even one who has advanced to the age of twenty-five years, and has been employed, as the literati are, in committing to memory their ancient classics, to understand the superior merits of a new method of instruction, and enter into the spirit of it. Our hope must, therefore, be in young men. If a few of them could be made to see the advantages of an intellectual and more speedy education, and to commence schools among the Chinese on the above plan, or some better one, we believe their success would soon lead to the more general adoption of it, and finally to its introduction into general use. For the attainment of this object, we think a school ought to be commenced as soon as possible by some English teacher, who should first acquire a knowledge of the language, and employ a Chinese assistant with the express purpose of training up Chinese schoolmasters. If he could not succeed in collecting a school in Canton, or other places in China, he might do it in one of those settlements occupied by Chinese out of the empire, to which the people emigrate. Youth of twelve or fifteen years of age is frequently seen among the emigrants, and might be collected into schools with perfect ease.

The scholars should be thoroughly trained to an intellectual method of study, and perhaps to the Lancasterian plan of instruction, or to some modification of it, that would make it better adapted to the

Chinese. They should be made acquainted also with general science, and be qualified like teachers in the training of their pupils to thought, and to an acquaintance with the habits, and the relations we sustain. To avoid the high prejudice against every thing foreign would throw the pictures should be made in the Chinese style, and have a Chinese dress and character, so far as possible. It is necessary also that the teachers should go to some of those places visited by foreigners, and introduce the new instruction without reference to the place where they learn, persons who taught them. When duly prepared, let them be the school imbued with the spirit of improvement, and they can do something for the benefit of 360,000,000 of those who use the language: and may we not expect that as important as those of Lancaster and Bell in England, will be effected in China? May we not hope that mental inactivity will draw to a close, and that an era of knowledge and a purer religion will the more speedily dawn on us?

Remarks and suggestions respecting the 'system of orthography for Chinese words,' published in the Repository for
From a Correspondent.

We offer any criticism on the remarks of our Correspondent promptly, carelessly, and obligingly canvassed the merits of the orthography. It is our particular request that others, and who are conversant with the Chinese language, will, in like manner, give their views on this subject. On page 69, our Correspondent says "work about to appear;" if he received this idea from the Repository in our last number, we correct the mistake: so far as there is no work about to appear on the subject in question. However, that a plan has been talked of, and is, we believe, under consideration, for forming a new dictionary of the Chinese language, if this plan be adopted, it will be desirable to secure for it the assistance of the sinologists, as well as that of all those who are now in the country, to render it as complete as possible in all the various arts, sciences, laws, government, philosophy, religion, &c. It is a great desideratum, and its completion will require much time. [The plan will, we hope, receive due consideration.]

The article in the last number of the Repository, on the extensive subject of Chinese orthography, concludes with a request to its readers to offer their opinions on it, with a view to the establishment of as accurate a system as may be attainable. And the same necessity of a reform in the orthography of Chinese is experienced, which has been felt in all the Indian languages, and which arises indeed inevitably from the variety of symbols of articulate sounds in one language are

or the first time applied to another. The opportunity which seems now contemplated of applying with greater care to the Chinese language those symbols familiar to European eyes is so important, and the task of correcting the imperfect application already made is one which is really so desirable to see executed correctly, and on general principles, once and for ever, that I doubt not it will be undertaken with the greatest caution.

It will not therefore be uninteresting to your readers to know that this very subject, in its most extensive point of view, is now engaging the particular attention of some of the most able men of the age at home; and that the difficulties in the way of the application of a general set of signs to all articulate sounds are undergoing, at this moment, with a view to practical usefulness, that investigation which is far more necessary in order to render them *infallible* than superficial observers would imagine. How far the labors of these men may prove serviceable to the Chinese philologist, I cannot pretend to say; but it seems reasonable at least to point attention to a quarter whence new and important light may be looked for, before the improved system of orthography be finally fixed. Professor Wheatstone of London following up the investigations of the Russian philosopher Krutzenstein with remarkable success; and the views, rather hinted than divulged in the concluding section of sir John Herschel's *Treatise on Sound in the Encyclopædia Metropolitana*, which point to a *universal language addressed to the eye* as something not absolutely hopeless of attainment, are, I believe, maturing, so far at least as to make their usefulness on an occasion like the present extremely probable.

Whether the Italian orthography may be fitly adopted, because it is confessedly less variable and imperfect than others, depends on the further inquiry, whether a still more perfect system may not be at once formed, as easily as an old one borrowed and altered to suit our purpose? The progress, however, that seems already made in the construction of a system founded on the Italian as a basis renders it perhaps supererogatory to make this inquiry now. If the entire system as now reconstructed from the Italian, with the modifications and addition of diacritical marks specified, possess the two great desiderata, 1st, of being absolutely invariable in its application in all cases whatever, and 2dly, of being sufficiently comprehensive and flexible in its plan, to include all varieties of sound in the language; if these two great objects be secured by remodelling an old system of orthography instead of constructing a new, the inconvenience attending the use of symbols that have a different interpretation elsewhere may not be much felt. I should say, however, that the necessity of a most rigid adherence in all cases whatever, to every part of the plan thus formed, is in this case more imperious than if a new system were formed, where mistakes from confusion with significations elsewhere could not well occur. And this remark is offered because in the article alluded to, I rather miss that emphasis upon the necessity of *invariableness*, which the occasion I am strongly persuaded requires. Such a thing as an exception to the symbolical signification once appointed,

e admitted from end to end of the work. If a sound the scheme of symbols is not already comprehensive accurately and certainly, the scheme must be added v symbol devised for the occasion, but on no account an ed even for a single instance, still less should it be made to fit, (as it were,) into a place not precisely its tion. There is, probably, a greater accuracy of ear re- ct slight variations of sound in familiar language, par- n acquaintance with it as is almost a universal event in on of ideas suggests to the mind the orthography, than most difficult of musical instruments. And the sentence om sir William Jones, is, I think, a good example of the ch is found in detecting these nice varieties in vowel mother bird flutters over her young," is given as an il- the same vowel sound represented in six different ways, , *i*, *o*, *u*, and *ou*, "to which may be added the sound of " I should have supposed the vowel *a* in that sentence ir W. Jones in mistake, or perhaps the mistake is in the me, or perhaps *I* am in the mistake; but it does ap- hat the sound of this vowel is widely different from that n sound which pervades the subsequent syllables. Yet there is, I think, a difference very observable on close) decided a difference to be overlooked by a critical his task, though it may be slighted by an indolent ear : n the *duration* of sound in the vowels *e* and *i*, and in the which is much greater than in the vowels *o* and *u*; and duration be on further inquiry found a general charac- æ vowels, it is clear that they will require a different the shorter vowels. Besides the duration, there seems at least three distinct sounds, reckoning from the sound *o* in *mother*, to the sound which belongs to *u* in *flutter*. ollowing extract from the Treatise on Sound, above connected with these minute distinctions of sound, in nguage in particular, may be interesting.

six letters which we call vowels, each of which, however, ariety of sounds quite distinct from each other, and roaches on the functions of the rest, a great many good are represented by binary or even ternary combinations. and, some single vowel letters represent true diphthongs, ound of *i* in *alike*, and that of *u* in *rebuke*;) consisting simple vowels pronounced in rapid succession, while, f what we call diphthong are simple vowels, as *bleak*, c. This will render an enumeration of our English nds, as they really exist in our language, not irrelevant. efore assembled in the following synoptic table suffi- of each to rendent evident their nature, accompanied ul instances of the corresponding sounds in other lan- ords of two or more syllables, those containing the d to be instanced are printed in italics.

VOWELS.

- { ~ Rood; *Julius*; Rude; Poor; Womb; Wound; *Ouvrir* (Fr.).
 } ~ Good; *Cushion*; *Cuckoo*; Rund (Ger.); *Gusto* (Ital.).
 Spurt; *Assert*; Dirt; *Virtue*; Dove; *Double*; Blood.
 Hole; Toad.
- { ~ All; Caught; *Organ*; Sought; Broth; Broad.
 } ~ Hot; *Comical*; *Kommen* (Ger.).
 Hard; *Braten* (Ger.); *Charlatan* (Fr.).
 Laugh; Task.
 Lamb; Fan; That.
 Hang; Bang; Twang.
 Hare; Hair; Heir; Were; Bear; *Hier* (Fr.); *Lehren* (Ger.).
 Lame; Tame; Crane; Faint; *Layman*; *Même* (Fr.).
Lemon; Dead; Said; Any; *Every*; Friend; *Eloigner* (Fr.).
Liver; Diminish; Persevere; Believe.
 Peep; *Leave*; *Believe*; *Sieben* (Ger.); *Coquille* (Fr.).
 s; sibilus; cipher: the last vowel and the first consonant.

TRUE DIPHTHONGS.

- Life. The sounds No. 5 and No. 13, slurred as rapidly as possible, produce our English *i*, which is a real diphthong.
 Brow; Plough; *Laufen* (German). The vowel sound No. 5 quickly followed by No. 1.
 Oil; *Käuen* (German). No. 4 succeeded by No. 13.
Rebuke; Yew; You. No. 13. succeeded by No. 1.
 Yoke. No. 13 succeeded by No. 3.
 Young; Yearn; *Hear*; *Here*. No. 13 succeeded by No. 2 more or less rapidly.
- The consonants present equal confusion. They may be generally divided in three classes: sharp sounds, flat ones, and indifferent or neutral. The former two have a constant relationship or parallelism in other, thus:

SHARP CONSONANTS.

- , *cell*; *σ*. (as we will here denote it,) *shame*, *sure schirm*;
θ. *thing*; *F. fright*, *enough*, *phantom*; *K. king*, *coin*, *quiver*;
P. papa.

FLAT CONSONANTS.

- ith*; *casement*; *ζ*. *pleasure*, *jardin* (French); *Ξ*. the *th* in words *the*, *that*, *thou*; *V. vile*; *G. good*; *D. duke*; *B. babe*.

NEUTRAL CONSONANTS.

- ; *M. mamma*; *N. nanny*; *v. hang*; to which we may add the neutral N in *gnu*, *Ætna*, *Dnieper*, which, however, is not pronounced in English sound. *R. rattle*; *H. hard*.

COMPOUND CONSONANTS.

- Tσ. church*, *cicerone* (Italian), and its corresponding flat *J*: or *D ζ. jest*, *gender*; *X. extreme*, *Xerxes*; *ξ. exasperate*, *Xerxes*; &c. &c.

here a scale of 13 simple vowels and 21 simple consonants, which are the fewest letters with which it is possible to write. But on the other hand, with the addition of two or three diacritical marks, and as many consonants, making about 40 characters, every known language might probably be effectually written, so as to preserve an exact correspondence between writing and pronunciation; which would be one of the great acquisitions not only to philologists but to mankind, as a step towards a universal language, one of the great objects which mankind ought to aim by common consent."

Observations, coming from such a quarter, may be of value. The objections arise from a comparison of this synoptical table with page 30 in the Repository, which I may be forgiven the author for offering; though it is evident that the subject has already been carefully considered by the writer of the article, as to the propriety of independent of foreign aid in completing his design. I will, however, to note briefly what has occurred to myself

in my suggestion would be, the formal enunciation of the new system in a very distinct manner at the commencement of the work. The general principles of the system may be stated in a few words; and then the result exhibited in a tabular form. The publication of something like a separate publication, and in a separate form, of the new orthographical scheme, is evident. For the present, however, will not be confined to its application to this single subject, but intend to be durable, and to guide the orthography of general writers on Chinese topics, it will be of consequence that the scheme laid down be one of easy reference.

With reference to this reference the more, I would suggest further that the articulate sounds in the Chinese language, have each their own number. Herschel's specimen-table numbers vowels, diphthongs, consonants, each in a separate series. But for the present, the one sequence of numbers, from the first elementary sound to the last, appears decidedly preferable.

As page 30 of the Repository appears to me capable of improvement; nor need I press further apology for suggesting that the diacritical marks ought not to form an independent system. They are mere cogents or influences, not articulates. Let them therefore be explained (if they are to be placed in any other place; but let the "table of articulate sounds in Chinese language" be kept strictly apart from all collateral matters. The pure result of all foregone explanations. This will be a petition in the table, of—for instance—the diacritical marks applied perhaps to two or three consonants, which will not be numbered separately as so many different sounds; but complained of, if there be actually such different sounds. A distinctive symbol for every sound in the language,

the very end to be aimed at. To abridge the *apparent* number of symbols, by hesitating to give one for each individual, sound, and to fix a number to it for better reference, is not lessening the labor of the student in the least, but only complicating the system which is his guide.

The two first sounds in the table at page 30 of the Repository appear to me—as far as I can judge by the exemplar sounds given of them, viz., *quota* for the first, and *calm* for the second—the same, only differing in length. The Latin *a* in *penna* is, I suppose, the identical sound in the word *quota*; and this, as far my ear can distinguish, is precisely the same sound as that of *a* in *calm* except that it is pronounced more quickly. In this case, I should think the use of the common prosodial signs (˘ and ˙), the most natural; and not the acute and grave accents applied in the present scheme.

The same remark seems applicable to the two first sounds distinguished by the letter *u* in the table, where the example of the first is the word *put*, and of the second the word *rude*. If the latter sound, as I conceive, be exactly of the same vowel sound as exists in the word *good*, I cannot see that it all differs from the sound of *u* in *good*, except in that it is more lengthened, and therefore if it claim a separate place, or number in the table at all, I would again recommend the familiar mark (˘) as the fit symbol of this distinction, and not the acute accent by which it is now distinguished.

The next vowel sound in the new table, illustrated by the word *ure*, appears to me a very decided diphthong. As such it will be found in Herschel's table of diphthongs above, numbered 4, and is resolved by him into the two vowel sounds of his preceding table, *u*. 13 and 1.

The last suggestion I would take the liberty of offering, is that the *exemplar words* to be given in the new table, when finally prepared, should be very abundant, and from as many languages as may be. The unconscious variations of sounds to which even educated men, natives of the same country, are liable in the use of *particular* words, are such, that the real sound meant to be indicated cannot always be shown with certainty unless by presenting a number of instances, and of as many different modes of spelling as possible.

P. S. Since writing the above, I have been led into further consideration of the table of the new diphthongs, but will only encroach on your time and space, so far as to express my doubts regarding the propriety of including the combination of *ui* in this list. The word *uid*, given as the example, is a decided dissyllable, and has no diphthong in it. I am inclined to form the same opinion also of both the other combinations *ue* and *ua*.

proposal for forming a Comparative Vocabulary of Indo-Chinese languages," together with a plan of the

ago we received a document containing the plan in its original form, and not long afterwards the same, except the catalogue of words and list of sentences, appeared in the Calcutta Christian Register, (vol. iv, no. x, 1835,) under the title which we have placed at the head of this article. "The plan" we shall quote entire, as it affords an essential aid in forming a system of orthography for Chinese. We shall quote some of the remarks in the Observer, viewed in the light of the first and second articles of our present number, and the orthography of being quoted. After speaking of the affinities between different languages, and of their great practical importance in the acquisition and extension of knowledge, the writer in the following proceeds:

As well known province on the eastern frontier of Bengal; and we have seen scattered notices of certain "Shán tribes," in the interior of the Burmese empire; but till very lately it was generally understood that these countries had any connection with each other. Recent inquiries, however, have demonstrated that the Burmese and Siamese are essentially the same people, while the A'sám are an offshoot from the same root; that with only certain variations of dialect, is spoken from the southern extremity of Siam, and that even the three countries can be traced, by an easy intercommunication, to a common origin. The Burmese call the whole of these remarks refer to Syán, which the Portuguese turned gave that name to the independent kingdom so called, which only part of the kingdom inhabited by the Syáns with which we are acquainted. On the other side, when these same people of Bengal, the Indians, according to their usual custom, prefixed a vowel to the two consonants, and called them which had been colonized by the Syáns, Asyán, or we have turned into A'sám. In the mean time, the Chinese, who continued to inhabit the country between them, long remained unknown to us; and when they were brought to light by the advancement of our frontier to the consequence of event of the Burmese war, we called them (Syán); but till very lately we remained in a state of ignorance of there being any connection between them and the Siamese. They are, however, the parent people, and although at present subject to foreign rule, are a people, who not only compose the bulk of the population of the northern provinces of the Burmese empire, but also of Yunnan, the westernmost province of China. Their

nt capital was Mogaum, but their independence fell before the
fortunes of the Burmese.

It is not easy at present to estimate the full importance of this
very, but thus much is certain; that, as it has been ascertain-
ed that only one language prevails in the countries between A'sám
and Siam, the same books, with only some slight modifications to suit
variations of dialect, will answer throughout the whole of this

*** It is also deserving of remark, that the countries inhabited
by the Shán race, form a belt extending across the Indo-Chinese pe-
ninsula, and separating Burmah proper from China; and, while the
Chinese dominions are in a manner insulated by it, the missionary
mission about to be formed at Sadiya will by the same means be
brought into connection with those on the shores of the China sea.
There will soon be a missionary establishment at each end of the belt,
one at Sadiya on one side, and Bangkok on the other; and if a third
establishment were to be formed at Mogaum or some other central
point in the Burmese Shán provinces, the chain of connection be-
tween the Bramhapútra and China sea would be complete. This
line of action opens to our prospect an avenue into the heart of east-
Asia, and if we can secure our position upon it, we shall be able
to enter into communication with the inhabitants of the Chinese and
other empires, from an exactly opposite quarter from that in which
we have hitherto had access to them. Burmah will be placed between
these new stations in the Shán country and the British provinces of
Assam, Arakan, and Yunnan, the great western province
of China, will be placed between those stations and Canton: and we
hereafter make advances to the points even beyond this, whence
the Chinese empire will be more completely laid open to our influence.
Though at present they appear distant, these prospects lie fully be-
fore us, and if proper means are adopted to gain the good will of the
Chinese government, we may expect ere long to see a missionary
establishment fixed in the Shán country, which will at once form a central
point of communication between all the Indo-Chinese missions, and
afford a new and important opening for the evangelization of the
Chinese empire.—We have been unconsciously led, by the in-
terest with which we regard the subject, to wander from the particu-
lar purpose with which we took up our pen. As an important advan-
ce has been already gained by a slight attention to the connection
between the languages of that quarter, we consider it our duty to pro-
ceed in the inquiry, until we succeed in obtaining the means of making
an accurate comparison of all the different languages and dialects
which are spoken in the Indo-Chinese peninsula, or in other words, in
the countries situated between India and China."

We resolve to prosecute this inquiry is worthy of all commenda-
tion, and if we can afford any aid to those who are engaged in the
same, we shall esteem it a pleasure, as well as our duty so to do.
The following paragraphs contain the "Plan of the Vocabulary."

At the request of various friends to native education, the fol-
lowing table has been prepared, containing about 500 of the most

language
are prec

sh words, with the corresponding terms in two of the languages, and blank columns to be filled up with other object is to obtain a Comparative Vocabulary of all spoken between India and China, for the purpose of origin and affinities. The first column in the table English words; the second, the corresponding terms in third, those in the language of the Syáms (Syáns or they call themselves, *Tai*.* The Shán words are given the dialect spoken in the neighborhood of Zenmè, the vern Laos. This language is supposed to be originally the same stock as the Siamese,† and it will probably be identical with that spoken by the various Shán tribes territories east and north of Ava.

adopted in this table, for expressing the *Tai*, or these sounds, is the one which is now so extensively used in Romanizing the languages of India, and is the plan proposed by the honorable John Pickering, mer. Acad., vol. iv.,) for writing the languages of all parts of North America in a uniform character, and now adopted by the missionaries among those tribes. It is a system as that introduced by the missionaries at the Society Islands. The vowels are used in accordance with the pronunciation on the continent of Europe. It has been necessary to introduce several diacritical marks, in order to denote the complex vowel systems of the Burmese and other fundamental vowel sounds are as follows :

as in America, agreeable; or short *u* in but.

far.

men.

they; or *a* in name.

pin.

pique, police.

not, nor, or *aw* in law.

note.

put, pull.

rule, or *oo* in moon.

ounds. The Burmese and Sháns have a broad sound resembling that of *e* in there, or *ay* in mayor, for which

grave accent.

is used to denote a peculiar sound of the *i* in the

manuscript, of great value, has recently been discovered in an old manuscript, late Commissioner at Manipúr containing a history of the kingdom of TAI, from the 80th year of the Christian era, to the time of its conquest and dismemberment by the Burmese, during the reign of Alaungmy, A. D. 1752. The capital of this kingdom was MÓNG HSA, a branch of the Eráwadi, several hundred miles north of Ava. This is a translation of captain Low's grammar of the *Tai*, or Siamese language, and more than half the words contained in his Vocabulary are as they are used among the Sháns.

Burmese language, not differing essentially from the sound of *e* in me. δ , denotes the broad sound of short *o*, in groat, or *a* in hall. It is necessary to use this character only in those languages which contain two modifications of this sound; as the English, which has short *o* in not, and broad δ in nought.

\ddot{u} , denotes the French *u*, or the German *ü*.

\ddot{u}' , is the same sound, but longer.

“*Diphthongs*. In the expression of diphthongs, it is necessary to combine the vowels in such a manner that they shall express the same sounds when united, as they do when separate.

ai , is the long English *i* in pine; a combination of the short *u* [*a*] with the sound of *i* in pin.

$\acute{a}i$, as heard in the word *ay*.

au , a combination of short *a* with the *u* in pur; forming the English *ou* or *ow*, as in loud, cow.

$\acute{a}u$, *a* in far, and *u* in put; producing a flat sound of the *ou*, such as is sometimes heard in the vulgar pronunciation of round, sound, bound, &c.

oi , short *o* and short *i*, as in oil, boil.

eu , is used to denote a peculiar sound of the Sháns, resembling the French *eu* in *peür*, *douleur*.

“The combinations ia , iau , iu , eau , $\acute{o}a$ or $\acute{u}a$, ue , ui , and $\ddot{u}i$, need no further explanation, as each of the vowels is used to express its own invariable sound.

“*Intonations*. The grand peculiarity of all languages connected with the Chinese family, appears to be the complexity and niceness of their system of intonation. The first diversity of tone which strikes us, is the use of the *rising and falling inflexions*, or the upward and downward slide of the voice in pronouncing a syllable. In English, we use inflexions not for the purpose of changing the significations of words, but to give them a more striking emphasis, or often perhaps merely for the sake of ornament and variety.

Where did you go?

Did you go?

“The word *go*, in the first sentence, has the falling tone; in the second, the rising. But in the Indo-Chinese languages, this modification of the tone produces distinct words, of an entirely different sense. To express this modification in the Roman character, it is proposed to draw a straight line *under the initial letter of every syllable which has the downward tone*; leaving the rising tone in its natural state, without any mark. The Burmese represent the falling tone by writing their *shépauk* at the end of the syllable; while in the Laos and Siamese systems, this distinction is denoted in writing by a difference in the *initial consonant*. The latter mode is preferred; for although a diacritical mark attached to a final letter might be quite practicable in Romanizing the Burmese, it could not well be adopted in the Shán and Siamese, on account of its interference with other important tones. We may illustrate the proposed plan of using the line

the words *no* and *not*, as heard in the following sentence, the former of which we have the rising tone; in the latter, the falling tone.

Did you say no?

Will you not?

I said no.

I will not.

The peculiarity of intonation, is the abrupt termination if it were broken off in the midst of its enunciation. The volume of voice is full at the end; contrary to the English intonations, where the sound is drawn out in such a manner, that the volume of voice gradually decreases from the commencement to the termination. To distinguish this peculiarity, it is proposed to place a final vowel or consonant, after the manner of the Latin. The Sháns apply the abrupt termination to words with a rising and falling inflection, thus making four varieties of intonation, while the Burmese have only three, the natural or *g*, and the abrupt.

The *g* forms the only remaining peculiarity of the Burmese intonation. For the expression of this, a straight line is drawn through the intermediate or final vowel. The five varieties of intonation can be expressed as follows:

- 1. natural rising tone.
- 2. same, with abrupt termination.
- 3. low monotone.
- 4. downward tone.
- 5. same, with abrupt termination.

B, *ch*, *d*, *f*, *g*, hard, *h*, *j*, *k*, *l*, *m*, *n*, *p*, *r*, *s*, *t*, *v*, *w*, *y*, in English. *H*, used after another consonant, shows a hard sound; thus, *kh*, is sounded as in *pack-horse*; *th*, as in *pothole*; *ph*, as in *up-hill*, not as in *philosophy*; *sh*, as not as in *ship*. To express the sounds of *sh* in *ship*, and *g*, the letters are united by a line drawn through them, as in *sing^g*.

Consonants. It is to be noted, that in all Burmese words, the added syllables of compound words, commencing with the sharp consonants *k*, *t*, *p*, or *s*, these letters are pronounced with a sharp intonation, to the corresponding flat or soft consonants *z*; unless when preceded by a sharp final consonant, in which case the original sound is preserved. It is further requested, that in filling up the blank columns of the Burmese dialects, the spelling may agree, as far as practicable, with the above here laid down. In case new varieties of intonation should be discovered, it is very desirable that they should be denoted by new letters, and not over the old. There will then be no need for diacritical marks, to express all possible varieties of intonation in every language; while the *intonations* will

be uniformly denoted by appropriate marks underneath. In introducing native terms into English writing and printing, all marks below the line, as they would convey no idea to an English reader, may be disregarded, and only the accents above the vowels be preserved.

"It is also requested, that information may be furnished on the following points. 1. Within what geographical limits each language or dialect which may be added to this Vocabulary is spoken. 2. The estimated number of the people who speak it. 3. The account they give of their own origin with any circumstances, which in the opinion of the writer tend to elucidate their origin and to establish an ancient connection between them and other races."

Here ends the "Plan of the Vocabulary," to which the writer in the Observer adds the following remarks:

"There can be little doubt that the Roman character may be applied with the greatest ease and advantage to the language of China, and it is quite certain that their present complex hieroglyphical mode of writing must, sooner or later, give way to some regular alphabetic system. The number of the Chinese *intonations* being, according to Dr. Marshman, not more than four or five, will be even less difficult of expression than those of the Sháns; and it is confidently believed, that several, if not most of their intonations will prove to be identical with those which have already been found common to both the Burmese and Sháns."

This subject of tones, so far as it regards correct speaking in the Chinese language, is very difficult, and very important. Though many of the Chinese know nothing of the subject theoretically, yet practically their intonations are surprisingly accurate. In his *Clavis Sinica*, (page 172,) Dr. Marshman says: "The tones, or intonations, by which the Chinese have varied their words are four. The first of these, the Catholic fathers divide into two; and indeed it includes two sounds, the one high and clear the other thick and low." These five they indicated by the same number of marks, thus p̄, p̄̄, p̄̀, p̄̀̀, p̄̀̀̀. See Prémare's *Notitia Linguæ Sinicæ*. In the introduction to Morrison's dictionary, part first, the same subject is briefly noticed and reference made to native works, in which it is treated of *in extenso*. We cannot now pursue the topic, and have thus adverted to it, merely for the sake of bringing it more distinctly to the notice of our readers, some of whom, we hope, will give it a thorough investigation, and favor us with the result of their labors.

P. S. For indicating the eight tones, which are clearly distinguished in some of the dialects of China, we have thought of using the four marks which were defined in our third volume, page 27, with only this difference, that each of the four there specified be divided into two, a high and a low, and be placed after the syllables to which they belong, in the following manner:

sien̄ sien' sien` siē
sien_ sein, sien_ sie_

Vocabulary of words in the Hawaiian language, pp. by the Rev. Lorris Andrews, of the High School, a. February 23d, 1836.

years 1821, when the language of Hawaii was first ting, and 1834, twenty-seven different publications of dialect, which, with several complete books of the Testament, gave a total of 36,640,920 printed pages. productions of the Hawaiian press in June 1834; since then kept in constant and vigorous operation. There is at this moment, no less than twelve different publications which came from the press during the year 1835; the Primary Lessons for children, Colburn's Intellectual entire New Testament, and a Vocabulary of the Hawaiian. This last, though confessedly very imperfect, looks promising. We notice the work thus early, in order to give a Hawaiian system of orthography before our readers in close view that proposed for Chinese words. For, it is only by a comparison of different languages and of the various characters of them, that philologists can ever expect to construct characters, signs, or symbols, which shall be of universal utility even for a limited application. Possibly an exact Hawaiian inconnection with the Chinese, may throw some light on the origin of the former. In the preface to the Vocabulary in which it has been "got up" and completed, the following observations follow:

Sandwich Islands's mission owes an apology to the Rev. Mr. Andrews for having reduced to writing a language of such various dialects as the Hawaiian, and published so many books in it without giving any account either of the genius, structure, or orthography of the language. Many reasons, however, exist why so little has been done in this respect. The want of leisure in any member of the mission sitting down to labors purely literary, is one reason. The want of proper materials heretofore for authority, is another. The Rev. Mr. Andrews, who has had the greatest influence in the mission, was first on the ground and acquired the language by the Rev. Mr. King, who, in coming with the natives, soon became independent of the Rev. Mr. King, neither a vocabulary or a grammar of the language: it was some time later, and most needed such helps, felt that they were necessary for the task of making them. But, however the mission may feel with regard to an apology in their favor, the Rev. Mr. Andrews, in the preface of the following Vocabulary feels that on explanation of him respecting the manner in which the work has

been done. In the month of June 1834, it was proposed by the Rev. Mr. Andrews to prepare a Vocabulary of the Hawaiian language. At the same time a wish was earnestly expressed and

often repeated since, that the work should not be delayed, but should be printed as soon as possible, and it was fully understood and expected that the work would necessarily be an imperfect one. On receiving the above appointment from the mission, the compiler set about a review of his materials for the compilation of a vocabulary. The materials at hand and from which the following work has been compiled were the following: 1. A vocabulary of words collected, it is believed, mostly by Mr. Loomis, formerly a member of this mission. This was transcribed by the compiler on the voyage from the United States, and was put to use in 1828. In using it, it was his object to insert every new word which he saw in print or heard in conversation, or could obtain in any other way, besides correcting such mistakes as had been made in transcribing from the copy of Mr. Loomis. It was also a point with him to insert, if possible, the authority. Owing however to his ignorance of the language at the time, many mistakes were made both in the orthography of the words and in the definitions. 2. A vocabulary of words arranged, it is believed, in part by Mr. Ely, at the request of the mission, and finished by Mr. Bishop. A copy of this was received and transcribed by the compiler in the summer of 1829. Every other page was left blank for the insertion of new words, and for any such other corrections or additions as should be important. In using this manuscript, the same method was taken as with the vocabulary of Mr. Loomis. New words, and new definitions of words before collected, increased the size of the book to a considerable extent.

“On the slightest review of these irregular masses of materials, it was manifest that the labor of a thorough examination of every word either by consulting intelligent natives, or by examining the *usus loquendi* from such manuscripts as could be obtained, or from the books that had been printed, must necessarily be a very protracted labor, of at least some years. In consideration therefore, of the urgent desire that something should immediately be commenced in the form of a vocabulary, and that a work having any pretensions to perfection must be slow in its progress, and protracted in its completion, and as the compiler was burdened with labors of another kind, he judged it best to reduce the materials he had on hand to order in the best manner his time would allow. He has done so without looking for any new word, or extending the definitions of such as were already collected, or consulting any native with regard to the propriety or impropriety of any definition. He feels it his duty, therefore, to forewarn those who may consult the following vocabulary, that they will often be disappointed. *It is by no means a perfect Vocabulary of the Hawaiian language.*

“Among many others, the following errors and deficiencies will be obvious. 1. The words are not always placed in their exact alphabetical order. In looking at two or three copies in transcribing, some words have been inserted a few places above or below where they properly belonged. 2. There are a great many words with which the compiler is not acquainted; having never heard the words

tives or seen them in writing. They are put down on of the manuscript vocabularies which he transcribed. words from manuscripts written by natives, the best not, perhaps, always been put down, or the figurative word has been inserted instead of the radical one, or vice versa a source of many mistakes in defining words in the work there are undoubtedly numerous errors in the orthography of words defined. The enunciation of Hawaiians is generally so that it is difficult in many instances to distinguish between different sounds, particularly when unaccented. 5. But notwithstanding the long list of errors obvious to the readers, it may be said that the work is greatly deficient in words. Words were collected from conversation, from manuscripts, and from books to almost any extent, but the time necessary for defining them properly, could not be spared without delay of the work indefinitely. There are probably a great many definitions of which are very deficient for want of investigation, probably some words are inserted and regularly defined which do not exist in this language or any other. The compiler cannot say that he made the best use he could of the materials in his hands at the end of the time at his disposal.

The work has been delayed several months, owing to causes which need not be mentioned, but which were not under the control of the compiler. All the deficiencies, errors, mistakes, blunders, shall appear in the perusal of the work, the compiler cannot say himself, and the forgoing simple statement of the circumstances under which the work has been composed, is all the apology he can give. The work might have been increased about one third if more examples that had been collected as authorities for the work had been included, but it was thought best in a mere vocabulary of the work to omit them. A few have been retained, taken generally from the manuscripts. It may be asked, after what has been said of the work, if it is so full of errors, deficiencies, misstatements, what use will it be? This question will be left for the compiler to answer for himself, after he has made a thorough perusal of it. In the mean time, it should be remembered, notwithstanding that respecting it is not, whether it is as good as it *could* be, but whether it is better than nothing at all? If it be really of *some* value, it will be used just in proportion to its value. If it be decided that it is no better than nothing, it may as well be thrown aside, and to such it will be as though

it were. I need not say a few things respecting the language by reference to the Vocabulary, but they are deferred for the time being, they may appear hereafter. It is hoped that others will be induced by the kindness of bringing to light the resources of the Hawaiian field is open and large, and they who shall bring forth the truth, with skill, patience, and perseverance, will reap a reward

The letters of the Hawaiian alphabet, which seem to be only twelve in number, are introduced into the Vocabulary in the following order.

1. **A**, generally as *a* in father, ask; sometimes, when standing before *k*, *l*, *m*, *n*, and *p*, it somewhat resembles *u*, in mutter; it has also, in a few words, a sound nearly resembling that of *aw*, or *au* in English,—the true sound is between the slender *a* in ask, and broad *a* in all.
2. **E**, is like the long slender sound of *a* in English, or like *e* in ebony; it is sometimes commuted for *a*, as *alelo* for *elelo*, the tongue; in an unaccented syllable at the end of a word, its sound is like that of the English *y*, as *ope*, *opy*.
3. **I**, has the sound of *ee* in English, or that of the French *i*.
4. **O**, has generally the sound of the long English *o* in note, bone; there is a difference in some words among the natives as to the quantity, some saying *mahope* and others *mahopyy*.
5. **U**, is generally that of the English *oo* as in too, fool, &c.; but when preceded by *i*, it sometimes has the sound of the English *u* or *yu*.
6. **H**, is an aspirate as in English; it is frequently euphonic, particularly between the verb and its passive termination *ia*, in which case it is sometimes exchanged for *l*, as *kaulua* for *kaulhia*.
7. **K**, varies somewhat from the sound of the English *k* to that of *t*, according as the enunciation is made at the end of the tongue or near its root; it is difficult to make the Hawaiians perceive the difference between the sounds of *k* and *t*.
8. **L**, a liquid as in other languages; hence it easily assimilates itself to such of the other liquids as are similarly pronounced, "viz., *n*, and the smooth American *r* [?] in foreign words;" sometimes, like *h*, it is used for the sake of euphony.
9. **M**, is used extensively, but its sound is not defined in the Vocabulary.
10. **N**, has the same liquid sound as in the European languages, and is frequently commuted for *l*.
11. **P**, like *m* is introduced without a word of recommendation or description.
12. **W**, is "the twelfth letter of the Hawaiian alphabet, the real sound of which is between the English sound of *w* and *v*."

Here with the letter *w* closes the Vocabulary, excepting only a few words on the last page. These "words, with many others, have been introduced into the Hawaiian language, and of course, with a sufficiency of foreign letters to show their derivation and to distinguish them from native words." The words specified are not more than forty-five, and are arranged under the letters *b*, *d*, *f*, *g*, *r*, *s*, *t*, *v*, *z*; among them are the following; *ba-ka*, tobacco; *ba-le*, barley; *bu-ke*, book; *do-la*, dollar; *fi-ku*, fig; *go-la*, gold; *ra-na* (Latin), a frog;

Satan; &c. Thus, for native words, only twelve to them nine others are added to express foreign words which have been introduced into the language, leaving only *c*, employed. In several cases the vowels are united, *ai*, &c., but these diphthongs are not defined, nor specified. These particulars, we presume, will attract attention whenever a grammar of the language shall be published. Numerous instances, we observe several words which, with the same orthography, are all different from each other: for example, *Ao, v.* to be or become; *Ao, s.* a cloud; *Ao, s.* knowledge; *Ao, s.* dried species of bird; and *Ao, adj.* enlightened: in other words a still larger number of repetitions, each with its peculiar signification. Thus *E*, is repeated ten times. Were the Chinese to use the Roman character the number of these repetitions would sometimes be more than one hundred and fifty; but distinguished by several distinct *shing* or tones. Now, it is not any thing like them, characterize the Hawaiian

u Heō, or Primary Lessons: character and object of the work; a translation of its several divisions; a translation with brief explanatory notes.

The title indicates, consists of a series of lessons, designed for the instruction of youth. Fully explained, it contains that kind of instruction which is peculiarly adapted to the young, through the first stages of their education; and, translated, the two words mean 'lesser knowledge.' In the original, no work was ever more unfit than the one which does, indeed, contain many most excellent precepts which ought to be taught early to learn, but which are couched in language above the comprehension of infant minds. The work is composed almost entirely of short paragraphs, selected from the classics, purporting to contain the maxims of wise men contemporary with Abraham, Moses, Solomon, Lycurgus, and Plato. The work ranks with the *Heaou King* and the *translation of the Heaou King* is already in the hands of the public. (See vol. iv, no. 8, page 345.) The term *u Heō* formerly gave as a translation of *Seau*, is evidently less accurate than the one which we have used in the compilation of the *Primary Lessons* by Choo Choo in the middle of the twelfth century, the work has found many commentators, twenty of whom have flourished since

UNIVERSITY OF MICHIGAN LIBRARIES

the conquest of the Mantchous, in 1644. One of the early commentators says, "We confide in the Seaou Heö, as we do in the gods; and revere it, as we do our parents."

The whole work is divided into two *peën*, or books; the first of which, says the writer just quoted, comparing it to a river, "is the fountain of learning;" and the second, "is the stream flowing from it."

The first book is divided into four parts, and contains the recorded sayings of eminent persons who lived in the times of Yaou and Chun, and of the Heä, Shang, and Chow, dynasties. These relate to the four following topics; namely, the first principles of education; the relative duties; and the duties due to one's self: these are the leading topics of the Seaou Heö; and in order to establish them, and to show that the actions of the ancients were in accordance with their precepts, there are added, in the fourth place, examples of the conduct of those who lived during the same period, which, according to Chinese historians, was from 2337 to 249 years anterior to our era, and while the art of writing was just coming into existence and passing through its earliest and most imperfect stages. The second book is in two parts; the first consisting of the good sayings of eminent men who flourished after the rise of the Han dynasty, B. C. 202, compiled with a view to illustrate more fully the three leading topics already named; the second containing a record of virtuous actions of those who lived in the same period, designed still further to establish the truth of the principles already advanced. The whole is divided into 20 chapters, containing 385 sections, thus:

BOOK I.

- PART i. Respecting the first principles of education; in thirteen sections.
 PART ii. Respecting the relative duties; in one hundred and seven sections.
 Chap. 1. Affection between father and son.
 Chap. 2. Principles of justice between a prince and his ministers.
 Chap. 3. The respective duties of husband and wife.
 Chap. 4. Gradations between seniors and juniors.
 Chap. 5. Faithfulness in the intercourse of friends.
 Chap. 6. Concluding summary.
 PART iii. On the duties to be performed towards one's self; in forty-six sections.
 Chap. 1. In regard to mental exercises.
 Chap. 2. In regard to external demeanor.
 Chap. 3. In regard to dress.
 Chap. 4. In regard to diet.
 PART iv. Examples of illustrious conduct of the ancients; in forty-seven sections.
 Chap. 1. Relative to first principles of education.
 Chap. 2. Relative to the relations of men to each other.
 Chap. 3. Relative to duties which are due to one's self.
 Chap. 4. Concluding summary.

BOOK II.

- PART i. A collection of good sayings; in ninety-one sections.
 Chap. 1. To illustrate the principles of education.
 Chap. 2. To illustrate the social relations.
 Chap. 3. To illustrate the duties due to one's self.
 PART ii. A narrative of virtuous actions; in eighty-one sections.
 Chap. 1. To confirm the principles of education.
 Chap. 2. To confirm the practice of relative duties.
 Chap. 3. To confirm the exercise of personal duties.

ld be taught to use the right hand. When able to talk, the lads be instructed to answer in a quick bold tone; and the girls, in w and gentle one: a leathern girdle should be given to the lads; a silken one, to the girls. At the age of seven years, they should ought to count, and to name the cardinal points. At the age of a, boys and girls must not sit on the same mat, nor eat at the table. At eight, when going out and coming in, and when eating drinking, they must wait for their superiors, being taught to pre- thers to themselves. At nine, they must learn to number the of the month. At ten, they (the lads only) must be sent abroad ivate tutors, and there remain day and night; studying the arts of ng and of arithmetic; wearing plain apparel; always learning to an themselves in a manner becoming their age; and both in vng instruction and in practice acting with sincerity of purpose. irteen, they must attend to music and poetry, marking the time as rehearse the odes of Woo Wang. When they have advanced to ge of fifteen, they must continue, as formerly, the recitation of y, using those odes which celebrate the praises of Wän Wang; at the same time, attend to the practice of archery and the man- ent of the chariot. At the age of twenty, they are in due form admitted to the rank of manhood, and to learn additional rules opriety: they may now wear garments made of furs and silks; rehearse the odes in praise of Yu; must be faithful in the perfor- ce of filial and fraternal duties; and though they possess exten- knowledge, they must not affect to teach others; but must re- at home and not spend their time abroad. At thirty, they may y, and commence the management of business, and while they ow have but few opportunities for extending their knowledge, should respect the wishes of their friends and strive to accom- te them. At forty, they may enter into the service of the state, e they will have to bring their knowledge into frequent use; and ir prince maintains the reign of reason, they must serve him, but wise not. At fifty, they may be promoted to the rank of chief ters of state, and engage in the management of the general go- ent. And at seventy, they may resign and retire from public s.

Girls after they are ten years of age, must not leave their apart- . Placed under governesses they must be taught to be mild in language and deportment; they must learn to spin, wind off d, and to weave cloth and silken stuffs; and thus perform those s which properly belong to women in providing clothes for their es. They may see to the preparations for the sacrifices; and ge the vessels and the offerings of wine, and vegetables, and aid in the sacrificial rites. At the age of fifteen, they are in due to be admitted to the rank of womanhood. And at twenty, they be married, unless by the death of a parent they have been call- mourning, in which case marriage must be deferred three years. a they are received with the prescribed ceremonies, they then e wives; but otherwise they are regarded as concubines."

wives and concubines have each their appropriate duties, confounded. When the six ceremonies have all been performed, and the woman brought home to the house of the man, as his wife; i. e. an equal, or one who is on an equality with him, if without such ceremonies she goes to the house of the man, she is called a concubine, that is, one taken, or one who is only inferior." See Seau Heö tseih choo, p. 5.

SECTION III.

Rites contains this precept: "Let children always stand upright and in their duty to listen with respectful attention."

SECTION IV.

Of learning (a section of the Book of Rites), it is one of the purposes of education, among the ancients, in their schools; districts their academies; departments their academies; and the provinces (or principalities) their

at the times of which this section treats, which was some two or three times as many, twenty-five families living together formed a place of education was called *shuh*, a hall or school-room. Families associated or dwelling near to each other, formed a place of education was called *tseang*, an academy, or school. To the composition of the word, "a covert for lambs." If families amounted to twenty-five hundred, they were called a *chou* (chow), and their place of education was called a *shih* (shih), or university. Of these four grades of schools, the *shih*, or primary education, and boys entered it at the age of five and continued there till they were fifteen years old, when they were to enter one of the other schools, there to study the branches of education.

SECTION V.

Mencius, "If men possessed of reason, having food and clothing, were satisfied to remain uneducated in luxurious ease, but little above the brute creation."

Yao (Yaou), anxious to promote the welfare of his people, appointed Seö to go as his commissioner and teach them their relative duties; that between father and son affectionately maintained; between the sovereign and his minister, the respective duties of husband and wife might be duly observed between superiors and inferiors; and faithfulness between

SECTION VI.

King orders to Seö, remarked: "Unless the people are taught, the five relative duties will not be performed: go, my commissioner, and respectfully inculcate the duties of the five, treating the people with kindness." Addressing his ministers, he said, "Go in the office of chief

musician, and teach the elder sons that they must be rigid, yet gentle; lenient, yet firm; rigorous, but not cruel; reserved, but not sluggish. The feelings of the heart are expressed by words in poetry; words are arranged by numbers in verse; numbers are regulated by intervals into tones; and the tones are reduced to harmony by a scale of notes, with which the sounds of the eight kinds of musical instruments are brought in unison, without the slightest jar or discord. With such music both gods and men are delighted."

SECTION VII.

According to the Book of Rites, the literary chancellor provides the inhabitants of the villages with the means of education in three distinct departments; and in order to give instruction to all the people those who are the most worthy, are honored and promoted. The first department includes the six virtues, wisdom, benevolence, prudence, justice, faithfulness, and gentleness: the second, embraces the six actions, filial obedience, fraternal kindness, kindred attachment, relative affection, true friendship, and tender compassion: the third, comprehends the six arts, viz., the ceremonies, music, poetry, directing the chariot, writing, and arithmetic. In like manner, by villages, he regulates all the people by enforcing the eight kinds of punishment; the first, for disobedience to parents; second, for abandoning kindred; third, for hatred of relatives; fourth, for the want of fraternal affection; fifth, for breach of friendship; sixth, for not exercising compassion; seventh, for tale-bearing; and eighth, for inciting rebellion.

SECTION VIII.

The royal statutes, contained in the Book of Rites, require the directors of learning to promote the four fine arts, namely, poetry, history, ceremonies, and music; and to establish four terms in which they shall be respectively taught, therein following the example of the ancient kings for training up literary men. Ceremonies and music could be taught during spring and autumn; and poetry and history, the summer and winter.

SECTION IX.

In the Students' Manual (written by Kwanchung), it is said: While the tutor gives instruction, the pupil must learn; and with gentleness, deference, and self-abasement, receive implicitly every word his master utters. When he sees virtuous people, he must follow them. When he hears good maxims he must conform to them. In a gentle and submissive manner, he must perform the duties which are owing to his parents and brothers; and must never behave proudly, presuming on his own abilities. He must cherish no wicked designs; but always act uprightly. Whether at home or abroad he must have a fixed residence, and associate with the benevolent. He must carefully regulate his personal deportment, and control the feelings of his heart. He must both when rising and at rest keep his clothes in order. Every morning he must learn something new, and rehearse

RT. VIII. *The third annual Report of the Committee of the Parapattan Orphan Asylum, Batavia; and the eleventh Report of the Anglochinese college, Malacca.*

From Batavia, the Rev. Mr. Medhurst writes, under date of February 9th, 1836, that he has "commenced the printing of the New Testament, of which 2000 copies will be completed in eight months, at the rate of one rupee per copy, including paper." This is to be done by lithography; and is the revised edition of the Chinese version. Mr. M. was expecting in a few days to leave Batavia for England, with all his family excepting his eldest daughter, Sarah Sophia, who remains behind, having formed a conjugal alliance with the Rev. Mr. Lockwood. Their marriage was solemnized on the 17th of that month. The Rev. Mr. Hanson and Mr. Lockwood, whose visit to Canton last autumn will be remembered by many of our local readers, reached Batavia on the 23d of December 1835, where they are pursuing the study of the Chinese language.

The Rev. Mr. Dyer, late of Penang, has removed to Malacca, where he is endeavoring to complete his font of metallic types for the Chinese character. He has kindly forwarded to us a specimen of his types, of which we shall soon give our readers some account. The Rev. Evan Davies has succeeded Mr. Dyer at Penang. According to our last letters from Malacca, the number of boys in the Anglochinese college was seventy. "There are," says our correspondent, "more than twenty schools, containing about 600 children under the care of the missionaries" of the London Society. "It was a pleasing sight indeed, to behold 100 Chinese boys assembled in the house of God on the Sabbath day, and listening to the regular exercises of the sanctuary." This was in the mission chapel. Besides the schools above mentioned, there are "free schools," and Mr. Tomlin's institution for all nations. The latter contains about 80 boys.

The two foregoing paragraphs were prepared for our last number, but were necessarily postponed. We have now the pleasure of adding extracts from the two Reports, the names of which stand at the head of this article, the first referring to Batavia, the second to Malacca.

The object of the Asylum is, "to feed, clothe, and educate orphan children, the descendants of Christian parents." The Institution for the current year is under the direction of a Committee, consisting of Dr. E. A. Fritze, president; E. Doering, esquire, treasurer; W. Young, junior, secretary; Rev. F. R. Hanson; the Rev. H. Lockwood; and H. K. Spencer, J. Davidson, A. L. Forestier, G. Macphine, J. Arathoon, J. B. Gray, and J. B. de Nys, esquires; Mrs. J. Batten is teacher in English; Mr. H. Kryger, teacher in Dutch; and Mrs. C. de Jonker, matron. "It is highly gratifying to see the lively interest that is taken in this work of charity both far and near." The finances are in a prosperous condition, and "the fund already amounts to £5000, and it only needs the extra exertions of each benevolent friend for a few years, to place the Institution beyond the reach of accident or harm." The total receipts for 1835 were £7464. 67; of which 1000 Spanish dollars were from China. Valuable donations of apparel and books have also been received; the latter from "benevolent individuals in America." With every friend of humanity, we rejoice in the prosperity of the Institution, and will gladly do any

r to promote its welfare. The following extracts, read at the annual meeting, February 1st, 1836. The Committee of the Parapattan Orphan Asylum, in recording during the past year, have fresh reason for gratitude for the abundant measure of success with which it has crowned their operations. Ever since its formation heaven seems to have rested on this Institution, a circumstance not only calls for thankful acknowledgments to the Father for his goodness, but affords moreover an incentive to persevering exertions in the cause of humanity.

On the anniversary, the Committee announced with pleasure the procuring of a suitable individual as an instructress for the children. They were led, on the accomplishment of such a long-cherished object, to anticipate most favorable results to the Institution, as the lady would be resident on the spot, and have her immediate cognizance and direction. The same day the new offices, to which allusion was made in the last report, were completed, Mrs. Batten removed to Parapattan, and discharged of her new and important duties in the last week of the year. For a short time the children were instructed in the school attached to the orphan house; but the place being too small and confined for the purpose, the Committee resolved to erect a new hall but neat and commodious school-room, on a site which would accommodate 25 or 30 children. This building is now finished, and furnished with desks, tables and forms, light and airy, and occupying a central situation, is well adapted to the purpose for which it is intended.

The children assemble daily; they commence their morning school at eight o'clock, and break up at twelve. During the hours of school they are taught reading, spelling, grammar, geography, and the catechism of nature, writing, and arithmetic. They are divided into five classes. Their progress in general is good; most of them understand and speak the English language with tolerable propriety. The total number of children is now 13 boys.

At 4 P. M., they again repair to the school and attend to their work. In this department of her labor, Mrs. Batten has been diligent in the diligence and improvement of her young charges. They are very anxious to outvie each other in the cleanliness and quantity of their work; and in securing the services of a fair teacher, and of those individuals who occasionally assist. They are engaged at their needles from 1 to 2 o'clock, and have made several articles of dress for themselves and for others. Some of them have been recently taught fancy-work, for the purpose of showing to the world that they are able to show a great predilection; but for want of the services of a teacher has not been able to bring them so far as they would wish.

They are equally industrious at their needles as the girls; and have made towels, and made trousers for themselves; while

The idea of putting on clothes of their own making, seems to inspire them with greater diligence in their work. Two boys are engaged in the printing business, and so long as there is work to be done, they are sedulously employed either in composing for the press, or distributing and sorting types. Both by printing and sewing, the children usually contribute a little towards the funds of the Asylum.

"The children with their accustomed regularity attend at the English chapel, on every occasion that divine service is there performed. Their attendance at the Sabbath school is also punctual, and has already been productive of great benefit to them. Once a week, the children attend a singing meeting, where they are instructed in psalmody. They are already acquainted with a number of tunes, and have made some proficiency in this agreeable science. One of the elder girls, who is a good singer, is also taught to play on the piano. As it respects their improvement in the Dutch language, the Committee are happy to state, that it is exceedingly satisfactory. * * *

"The Committee hope that the friends and supporters of this Institution will not only continue to give it their patronage; but also exert themselves in the sphere of their acquaintances and friends to obtain more funds, for the purpose of carrying on with still greater vigor, and, if possible, on a more extensive scale, the operations of the Asylum. They are assured that the highly favorable circumstances in which the children now appear, both in respect to their physical and moral condition, will be considered by all as pleasing proofs that the labor, time, and expense, hitherto bestowed on the Institution, have not been bestowed in vain. They doubt not but that every individual who has contributed towards this charity, when he sees so many helpless orphans rendered happy through his means, will feel that exquisite satisfaction which is always attendant on acts of disinterested benevolence. To see them, instead of falling easy victims to sloth and vice and wandering forlorn and unbenefitted, comfortably clothed, maintained, and educated in their duty towards their Creator and their fellow creatures, and promising to become hereafter useful members of society and ornaments to religion, must diffuse, in every benevolent bosom, something of that hallowed delight which the Divine Being enjoys while supplying the wants of his needy creatures, and who himself has said: It is more blessed to give than to receive."

The *Anglochinese college* has been often noticed in the Repository. A summary of its Report for 1834, was given in our last volume, page 8. The report now before us, for 1835, shows that a pleasing advance has been made during the past year. But we have no room to repeat what has already been stated in our pages. The patrons, trustees, and officers of the college have abundant encouragement to persevere. The field before them is wide, and has a strong claim on their best efforts. Their object is noble, and we heartily wish them God speed. The number of students is now 70. There are also, in connection with the Institution eleven Chinese "out-schools," containing 130 girls, and 230 boys; and six Malay schools, having about 100 boys and girls. In the printing department, there have been

of this nature are, it may be, not altogether wanting. As the fiscal reckoning now approaches, all the governors and lieutenants sin it on themselves to lay aside all undue regard for others, and to converse with their subordinates with truth and sincerity, to preserve the moral rank, the mental characteristics, and the government of each. Let them examine thoroughly in these particulars, and attend to all. Thus it may be expected that the pathway to official ease and free from every thing that can defile, and the administration daily become more resplendent in character. In respect to high and confident hopes. Make this edict generally known.

The next general order is directed against a practice common, that criminals are permitted to escape, because of their search for them beyond the immediate bounds of their own jurisdiction, and other "bad habits" of the magistracy, his majesty

of the Chinese government is, we believe, peculiar. Several palaces and courts attached to them, appear to be supported by accruing annually from money belonging to the government to the salt-merchants and others. From several memorials and edicts from his majesty, which have lately appeared, it seems that the government find difficulty in paying this interest, and the palaces and courts find themselves likely to be at the consequence of its not being forwarded at the proper time.

In appearance, perhaps few governments are so inefficiently trust-worthy; and consequently the larger portion for the poor, in reality finds its way into the pockets of those "fathers and mothers of the people." Drought, inundations, and various other events, call from time to time for a portion of the land tax, the payment of which is deferred for one or more years. In this way, large debts often accrue; and these which are not among the number of his majesty's debtors, become too heavy to be ever paid, and then a period of opportunity is afforded for wiping off the whole. Thus in the last year having attained her sixtieth year, his majesty was graciously granted a remission of all public debts contracted by the empire in 1830. This was not, however, intended to extend to the officers

who being often in arrear in the payment of the revenue, or are also frequently among his majesty's debtors. It appears, however, that officers of government have been in several instances anxious to obtain a remission of the grant of remission to the people; and this has been effected by a general order addressed to the whole empire. Of the empire, all Mongolia, with Shense, Chêkeäng, Kwangse, and others have chiefly felt the advantage.—The most substantial way in which benevolence is manifested is in the distribution of food to the people in cases of extreme cold or of famine; in which cases, to prevent the people from perishing, the government has previously cooked. Among the occasions for charity in this respect, during the last six months, we observe that in Teentsin, (in the latter place 32 000 taels were distributed among the people,) droughts in Shantung (to which 100 000 taels has been granted) as also in Keängse and Chê. In severe hail-storms in Shanse, hail-storms and want of unseasonable rain occasioning short crops in Kansuh. The names of these are not usually named; but in a few cases they are named. In reference to the entire remissions of debts contracted between 1830: In the province of Cheihle, 29,819 taels; in Cheihle; in Kwangse, 60,599 taels; and in Teitsihar in Mongolia, 270,000 taels, and of 250,000 sheih of grain, the portion of the government being debts contracted between 1830 and the present

ctors.

o reported that to-morrow he will go and distribute the
: children in the founding hospital. Wang Yuking re-
irected to examine the prisoners in the jails of Nanhse
on of capital punishment was reported.

June 3d. Two criminals, Ate and Kwö Fung, were brought to the city from the district of Tungkwan. The execution of capital punishment was reported. Chung Lun reported that he had been directed by the cheheñ of Nanhae to take the head of Yè Ashun and deliver it to the chief magistrate of Sanchuy. *Note.* The heads of criminals are often treated in this savage manner; after being severed from the body by the sword of the executioner, they are placed in cages, or rather baskets made of narrow strips of bamboo with broad openings between them like the meshes of a net, and in this condition, all covered with gore, they are sometimes exposed for days at the place of execution, and sometimes, as in the case of Yè Ashun, they are carried through the country to the place where the malefactors committed the crimes for which they have been executed, and there hung up *in terrorem*. The heads of those unhappy men who murdered the crew of the French ship *Navigateur*, and who were executed in Canton in 1829, were put in small cages and hung up on the sea shore in Macao, near which place they committed the acts for which they were beheaded.

June 4th. Their excellencies went to the great landing-place, received the new lieutenant-general Mängkwei, and inquired after the repose of the emperor. Four of the hong merchants reported that they had brought a petition of the barbarians. *Note.* Mängkwei belongs to the staff of Soolfungah, who is at the head of the Tartar garrison in our metropolis; Lunchung, mentioned above, is his associate.

June 5th. The governor waited on Le, the literary chancellor, and congratulated him, it being the anniversary of the birth day of the chancellor's mother. An officer of the commissariat reported that he had distributed rice to the Mantchou and Chinese soldiery.

June 6th. Their excellencies went to the temple *chinghwang*, and offered incense. And the lieutenant-governor prayed for fair weather. Woo Lansew presented a statistical account of the district Funghuen. The execution of capital punishment was reported.

June 7th. The keeper of the treasury reported that he had examined and prepared the 19th dispatch of treasure for Peking. *Note.* Each of these dispatches consists of 10,000 taels, one thousand being placed in each sack. Another person reported that he should leave Canton the next day in charge of treasure for the capital.

June 8th. Five officers reported themselves recovered from illness and ready for resuming their regular duties; three had been afflicted with colds; one with boils; and one with fever and ague. Two others reported themselves unfit for duty: the first, because he had taken cold; the second, because *toofuh puh haou*, literally, "bowels not good." *Note.* Almost every day some of the officers report themselves off duty in consequence of "ill-health." How far these cases indicate the general state of health among the people, we do not know: we believe, however, that these public functionaries are allowed to claim a certain amount of "ill-health" as current exchange for furlongs.

June 10th. Their excellencies, the governor and lieutenant-governor went early in the morning to the temple *chinghwang* and offered incense to the gods of the city.

June 12th. Their excellencies, after completing their other official business for the day, went to the temple *chinghwang* and offered incense; and again, on the morning of the 13th. And on the morning of the 14th, they performed the same ceremony in the temple dedicated to the gods of literature.

June 16th. Hoo Chingwang, an assistant magistrate in the department of Kwangchow, late resident at Tseñshan (near Macao), had an audience with the governor, and took leave of absence to go to Peking.

June 18th. The fifth day of the 5th moon. Their excellencies repaired to the temples *chinghwang*, and to that of *lung-wang*, the dragon-king and offered incense; and then returned to their offices, and received the congratulations of all the civil and military functionaries, literary gentlemen, &c., &c. *Note.* This day is ever memorable for the feats of the *dragon-boats*, properly so called.

June 23th. The acting cheheñ of Nanhae reported that a fire broke out on the preceding evening, near the *tsinghae* gate (on the south side of the city), and that one shop was destroyed, when the fire was extinguished. The hong merchants, prostrated themselves at the governor's gate and presented a petition from the barbarians.

INDIAN REPOSITORY.

VOL. V.—JULY, 1836.—No. 3.

As a sketch of its government, productions, trade, and with some notices of the customs of the people.

and boundaries of A'sám were briefly described in our No. 1, to which were added notices of the states and tribes to the north and south of the country. In this article we give a sketch of its government, productions, commerce,

As early as 1793, a connection had been established with the British government, and a treaty of trade formed, in consequence of the aid afforded by the British to the rájá in recovering his country from the hands of his enemies. Mohammed Cazim, in his description of the time of Aurungzib, the Indian conqueror, declares that the country was repeatedly invaded by powerful kings; and even Aurungzib retained his conquests in it. So uniform had been the success of the invaders, that "the natives of Hindustán consider the wizards and magicians, and pronounce the name of that wizard, and their incantations and counter charms. They say that when he sets his foot there is under the influence of witchcraft, and he cannot find the road to return." The chief rájá bore the name of "the white," thereby intimating the descent of his race from the British. The country was then described as populous, though it is the reverse.

It has been stated that this country was added to the British Empire in 1825, as a consequence of the war with the Burmans, in which it was rescued. At the close of that war, the whole north-western India, including Kutch Behár, Bijón, A'sám with all its wild tribes, Káchár, and Manipúr, was committed to the British. Scott. His incomparable temper, and the generous assistance he won the affection and confidence of the people to such an extent that at the present day no A'sámese can pronounce a blessing, and scarce without tears." The poor who had been scattered abroad, soon began to flock back to

ra Senápátí, and both himself and his people at present subject to British authority. The internal administration in his hands, except that in case of murder or other information must be given to major White. The rest of the province, at present lying waste, but by advantage for agricultural prosperity. The inhabitant a small tract on the Deburu, which passes through from east to west. They profess to be Hindus and Vishnu exclusively, but hold their religion so loosely, ignorant or negligent of its observances, that the people will hardly acknowledge them as Hindus.

On the north side of the river, north of the Múlaks, are the mountains. This name, it is said, means *independent*. Each village has a council of democratic government, and all its proceedings are decided by the voice of the people in open council assembled. It is the voice of the chiefs to carry into execution the will of the people.

In these respects, they remind us strongly of the American Indians. They are very fond of spirituous liquors, and of game in their diet, and abhor nothing but beef. The Singphos are killed with poisoned arrows, the poison being an extract from the tribes further eastward, from whom it is said to be a root, brought to Sadiya in baskets containing earth, and for five such baskets a string of beads is worth out two annas. It is prepared by reducing the root to a pulp, combining it with a mucilaginous vegetable juice of paste, which is smeared on the points of the arrows. The wound is fatal, and it is said, the wounded animals die within a hundred rods. Still it is not found to injure the animals killed by it. Of the religion of the Abors, except that they worship a mountain deity.

Sadiya is inhabited chiefly by refugee Khamptís. The Khamptís are but a few thousands in number, and their own chief, who yields obedience to the British authorities, are described as more fond of hunting and plunder than the recent introduction of opium, has, as in all other parts, destroyed their natural indolence and reluctance to the civilized life. The soil, however, is rich and needs little cultivation to make it extremely productive; the Singphos hunt game; the elephants yield ivory; and the rivers which flow from the town of Sadiya furnish gold. Both the Singphos use the musket in taking game, but their arrows are poisoned.

The Kákús are the chief possessors of the large tract of the Bramhapútra opposite to Sadiya, and are enclosed in on the east by mountains. The Singphos consist of twelve clans, each of which is called after its respective deity. The whole collectively are known by the name of Singphos. There is but slight union between the several clans, and on any occasions of great importance they do

combine. The Singphos in A'sám retain their original distinctions, and give to their new settlements the names of the old towns which they have left. Before the plunder of the country corrupted them, they were industriously engaged in agriculture and other occupations, but latterly these inferior services had been performed by A'sámesse captives, who were kept in the proportion of fifty to one of their masters. The Singphos have intermingled many of the superstitions of their neighbors with the religion of Gaudama, to which however they are yet so much attached that he has a temple and priest in every principal village. They practice polygamy without restraint. The Kákús are intermingled with the Singphos, yet are not counted a distinct people, nor in a servile condition: they are divided into four distinct tribes. The original country of the Kákús appears on lieut. Wilcox's map to be on the east bank of the Iráwádi. We are concerned to hear by a recent letter from Gowaháti that lieut. Charlton, the resident of Sadiya, has been obliged to leave his station and the province for a time, in consequence of a wound received in a skirmish with some Singphos who have lately been troublesome on the extreme southeast frontier. In the mean time, the civil and military charge of that frontier will be held by lieut. Millar.

The trade and productions of the country are in such a state as might be expected, where they are but just beginning to revive from the desolating influence of long continued misrule and war. Though rich in soil and possessing great advantages of situation for supporting a dense population, yet we are assured that the uniform aspect is that of a ruined country. Marks of numerous former inhabitants are everywhere seen; traces of ruins are found, of which an interesting description may be seen in the Journal of the Asiatic Society for April 1835, from the pen of captain G. E. Westmacott, assistant, governor general's agent. Those which were discovered by that officer were in Central A'sám, on the north of the river, in latitude between $26^{\circ} 2'$, and $26^{\circ} 51'$, and long. $92^{\circ} 19'$, and $92^{\circ} 55'$. They consist of the ruins of a temple, of granite buildings, of large altars and pillars, the history of which seems to be intermingled with absurd fables. The whole population of the country has been estimated at near 1,000,000 souls. From its diversified elevation, the soil is adapted to the cultivation of almost every variety of the fruits of tropical and temperate climates. Rice, sugar-cane, pepper, mustard seed, cotton, and moolah silk are the chief articles of produce at present; but in raising these the natives are indolent.

The attempts to ascertain the capacities of the soil for the purpose of cultivating there the tea shrub have excited much attention. It is now several years since it was first discovered that tea was growing in Manipúr. Some three years ago, the Court of Directors instructed the supreme government to ascertain whether it would not be possible to acclimate the tea plant in some part of British India. This led to the formation of a tea committee, of which Mr. Gordon, an intelligent and enterprising gentleman, was appointed secretary. In the prosecution of his duties, Mr. G. several times came to China,

district in this country, and procured large quantities of it. Meanwhile the important discovery was made, that opium was growing wild in the country of Sadiya itself. Durar a deputation was sent thither from Bengal, consisting of Dr. Wallich and his colleagues, to examine the whole subject.

This deputation has satisfactorily accomplished its object, and has obtained even more than was before suspected. Two species of tea were found in the country of the Maomariyas, and the climate of this country nearly resembles the rest of the great valley, so that the cultivation of it may be extended through the whole of the valley. The other locality is at the bottom of the Nága range, near the ruins of Purunder Singh's capital. Similar localities exist throughout the whole valley, and since it has been found on this range of hills, in the country of Manipúr, it must exist in intermediate places. We observe sanguine hopes of the attainment of entire success; the whole project of an Indian opium trade, a writer in one of the Indian papers, is already far advanced towards maturity, since the plant is found at once in the mountains and in the lowlands; and we may soon "afford to lose altogether the opium trade, which at present fixes upon us the stigma of the most abominable panders to human vice and depravity, which has hitherto been the chief support of our commerce."

The mineral and vegetable treasures of the country are but little known from the present cursory observations. Dr. Wallich, it is said, has never seen or heard of so rich a Flora as in the country of Sadiya. It is a rich and fertile soil, and the hills and mountains, which embrace nearly every variety of primary and secondary formations. From time immemorial, iron has been found in the sands of at least a dozen of its rivers, both north and south of the Bramhapútra. The smelting of iron is the chief branch of industry among several of the tribes, and tin and lead will probably be found within the frontiers of the country, and these, by the Burmans. There cannot be a doubt that there exists here equally good as that now brought 400 miles from the west. Excellent bituminous coal, much resembling that at present found like it in connection with shell limestone, both north and south of the Morung on the Dhunsirí. Other places are specified, where the existence of coal has been ascertained. The country is now dependent on Bengal for salt, yet salt-springs are found in the country of Burháth and near Sadiya, on the northeast of the country, and elsewhere in connection with sulphureous hot

springs. Sadiya appears to have been the entrepot of a very extensive trade, which converged to that point by well defined routes from the north, from China, the Burman empire, and India. The revival of this trade is one of the earliest efforts of the late Mr. Scott, and has been attended with success. The imports from India are all kinds of manufactures, glass, salt, opium, spirits, and the exports are gold, silver, ivory, copper pots from the Láma

, various roots, and native weapons of several kinds. Besides
 ly from the native rivers, gold is found more abundantly in
 on of those Singphos who are under the influence of Ava. It is
 a lumps of two or three sicca weight near Mogaung, the capi-
 the ancient kingdom of Tai; where also emeralds and other pre-
 cious are found. The chief destination of these precious stones
 a, where they are sold at high prices, but the Burmans levy
 of twenty per cent upon them at the mines. The Chinese mer-
 come from Manway, which lies to the east of a range of moun-
 tains, leaving the Singphos or Sháns immediately on the west. They
 only to cross these hills, bringing their goods on the back of
 mules, when a water passage is open down the Iráwádi to its
 mouth with the river on which Mogaung stands, the ascent of which
 difficulty requires five days. These merchants bring cloths of vari-
 ous kinds, particularly broad-cloths, nankeens, silks, tea, copper, and
 silver. Silver is their chief article of export, in small lumps, with a
 stamp and character on them. These are of various sizes,
 and are to be carelessly run in holes made with the finger, and stamp-
 ed so as to be warm. The Chinese silver is said to be very pure.

It is used as a constant beverage by all the tribes between old
 India and the confines of China. It is chiefly cultivated in the
 neighbourhood of Palong, where the manufacture of it said to amount
 to several lakhs of maunds, but it is different from that brought to the
 market. "The leaves are first heated in boiling water, and
 pressed down in pits or vats for several months, preserved from
 access of air, and finally crammed into earthen vessels or bam-
 boo tubes which are carefully closed and sent into all parts of the empire."
 It may resemble the brick tea sent to Tartary. The slave trade,
 which, I understand, is not suppressed, but the Khamptí and Singpho
 still maintain a constant traffic in slaves. Under the adminis-
 tration of the present commissioner, transit and internal duties have
 been taken even up; and if the country is destined to become the scene
 of extended tea cultivation, who can estimate its importance? It
 has suffered long and deeply from oppression and war, but now the
 people are protected and satisfied, and the revenue is understood to
 cover the expenses. If such is the case, while perhaps not more than
 one-fifteenth of Lower A'sám is under cultivation, it is easy to
 see what it must become under the course of improvements
 now begun.

On many accounts, A'sám is a missionary field of great interest.
 It is the most eastern point which western intelligence and the true
 religion have gained in this direction. Connected as it is with Tibet,
 and the quarters of Lamaism, with Burmah, and with the "inaccessi-
 ble" Chinese empire, we cannot but regard it with peculiar feelings
 as being destined in Divine Providence to be a centre from whence
 the light may radiate on all the surrounding darkness. It is
 only a few years since the system of Hinduism was introduced, and
 by the influence of the rájá and the Brahmans, it rapidly
 gained ground, it has not yet taken full hold on the passions of the

os Khásiyas, &c., on the south, and the Daffas, is, and other tribes to the north have, till lately, om its influence. The Khamptis and Singphos Mútaks are but lax Hindus. Yet this state ; and even now the Indian religion is extend- of British influence, and the introduction of

article with a view of the interesting prospects istian missionary and philanthropist. Most of that within a short time some movements have dicative of a desire to become acquainted with ement in the world. Limited indeed as this uraging to observe it at all, and the more so to re minds of some of the native rulers, the rájá s should be hailed as a good omen of better late Dr. Carey, several years ago, completed the ed Scriptures into the A'sámese language ; and pore mission is established at Gowaháti, where has been for some time past laboriously occu- of the young, the preaching of the gospel, and e Scriptures and tracts. The education com- er an active teacher, a year ago, has already l, including the sons of some of the principal

Mr. Rae is urgent that the gospel be sent to s well as to the remoter tribes. Mr. Lish, at imself so well established among the Khásiyas ague may be sent to him, in order that their ended into Jynteuh. But all these places are t all that is desirable ; Sadiya is therefore fixed eat promise.

istian Observer, captain Jenkins strongly re- to Sadiya, and accompanies his opinions with : is both practical and interesting. He observes rontier is chiefly occupied by the Khamptís and of the great Shán family ; and that as the dia- liffer very little from the Siamese and Burmese, rmah would have great advantages in the way ly with these tribes. The Sháns, he describes gent people than the Burmese, and ten times as nd their kindred races occupy entirely the two Ava, Húkúm and Múngkúm ; they occupy all rádí ; they stretch down the Salwen to Tenas- n, and Cochinchina are their proper countries ; population of Yunnan, a great part of that of up into that district which has always baffled Tibet, Tartary, and Szechuen ; whilst A'sám is the overflowings of this great people." The old people, and the Singphos are a less civilized e.

important and curious fact is announced in a more recent letter from the same gentleman. It seems 'that 250 Khúnúngs have settled at Sadiya to settle under us, who report that 5000 of their tribe follow if the present party hold out encouragement to them. Ex-Sadiya Gohain describes the Khúnúngs as a tribe subject to the Champtís, whose country is east of the Iráwadí. He says, 'they are wandering west, retiring before large bodies of Chinese who are desirous to settle on the Iráwadí. The Chinese colonists cannot get to the Iráwadí without coming in contact with the Burmese, under the name of the Bar Khamptís profess to be; but their allegiance is, in fact, very unwillingly paid. These movements enhance the importance of that frontier; but while they open a prospect of danger to us, they show the only way in which any great improvement can be effected to be made in the relations with the eastern tribes. Were the influence of Sadiya relinquished, those tribes would still pour in, but would be beyond control and improvement. If tranquillity can be preserved, their amelioration must follow. I should like to see our missions in the field early. The influence of persons skilled in the management of these tribes, and devoting all their time and abilities to the civilization of these rude races, would not fail of being useful to us and to the natives. Every day there opens a fairer prospect of spreading our influence over the Shán tribes and under Providence nothing but the want of mismanagement and remissness in availing ourselves of the facilities and facilities bestowed on us, can prevent the increase of our power and the improvement of our country and those who are connected with us.' Such are the sentiments of an enlightened politician. He concludes with the expression of other than mere political views: "No attention of mine should of course be wanting to make the country comfortable to any missionaries, and I will be willing to contribute my mite to their establishment. You may mention that I will be ready to settle as a *family* at Sadiya as a mission at Sadiya; whenever they have had a press at work six months, I shall be ready to double that sum, if I remain in charge of province."

In addition to the generous donation of captain Jenkins, major Bruce has offered to give 200 rupees, and Lt. Charlton and Mr. Bruce have offered to give 200 rupees each, towards the outfit of a missionary family who shall settle at Sadiya. We are happy to know that these advances have been promptly met. The Rev. N. Brown, late of the mission at Maulmein, volunteered to go to Sadiya, and has doubtless reached the place some months ago. He was accompanied by Mr. Cutter, a printer.

Since the foregoing article was written we have received files of Indian Affairs, among which are several numbers of the Journal of the Asiatic Society, and of the Calcutta Christian Observer, both affording much new and valuable information relative to Assam. The Journal contains an extract from a letter of captain Jenkins, dated Goalpara, December 5th, 1836, respecting the discovery of coal beds. "It now becomes almost certain that we shall find large supplies of this invaluable mineral on the south bank of the Brahmaputra; we already of four places where coal has been found, viz., 1st, under the hills; 2d, that of Dharpur Pergunnah; 3d, on the Suffry, a nullah near that salt formation; and 4th, on the Noa Díhing, in the Singpho district, Sadiya.

governor of *Chiangmai*. 815. The Siamese king ate elephant.⁷⁶ 818. An expedition to *Chaliang*-ese country first established. † 824. The governor of capital of South Laos or *Wiang Chan*) deceased, Siam sent one of his nobles to succeed him.

g compassionately allowed a festival of fifteen days in lics of Budha. 828. The king's son, at the age of tered the priesthood. 829. Left the priesthood, and he rank of premier. 831. *Taluk* deceased. 832. out an expedition against Tavoy, and just as Tavoy eld, there appeared various evil prognostics;—a cow one body and eight feet;—a setting hen hatched a r legs; and husked rice sprouted and put forth leaves. *át*, deceased, having reigned thirty eight years.

was first enclosed by a brick wall. 836. Four years the relics of *Boromaty loka náit* were deposited in rn. 838. The king revived the playing of ancient ilt the wat *Sisampet*, the great image in which was 1th month, the 8th waxing moon. 845. The above crated; its whole height was eight fathoms (52 En- face four cubits long and three broad, and the breast is broad. The gold used in casting it weighed the gold for the dress weighed 266 catties, &c.

used a work to be written on war and military tac- ill extant); also first established the plan of con- siness by written documents. About that time one ar *Paknam* was too shallow for large boats and the new. In digging, bronze images of *Tawadás* were e was inscribed the name *Séntá* (100,000 eyes), *Bátmongkón*. These were cleared of their rubbish *Pradéng*.

t tusk of the king's elephant grew loose and fell off. h the people showed a disposition to revolt, and government officers were put to death. frought, rice withered and destroyed. There was ke and a complication of calamities. 868. Rice ar. The king appointed his son *Aítawong* (of the ; premier, and sent him to govern *Pitsumulok*.

ation because it has obtained extensively among those who and Burmah. The animal so designated is more nearly of

; speak of their country on its restoration from foreign sub-

ties are equal to one pecul or 133 pounds.

871. There was a wonderful meteoric phenomenon in the night, rising from the S.W. and proceeding to the N.W., remarkably bright. It was seen on Sunday 8th day of the rising moon, 12th month. King *Rámá* died, after a reign of thirty-eight years and his son *A' tit a wong* succeeded under the name *Bóroma rája nó putang kun* (the king, the bud of deity).

875. The above king died, and his son, then a child, succeeded him. 876. The prince died and *Chaiya rája* succeeded. 880. This year, one or two foreign expeditions were projected, but with no important results. One day in the 4th moon, about 9 o'clock in the evening, there was a tremendous hurricane, which dashed many large boats to pieces. A nobleman named *Naráyun* committed treason, was apprehended and put to death.

887. A fresh expedition against *Chiangmai*, in which the governor of Pitsanulok was commander-in-chief. After various marches he reached Chiangmai, but what was done after their arrival there, the history "saith not," except that they returned. A conflagration occurred in the royal city during their absence, which lasted three days, and is said, by the register, to have consumed dwelling houses and temples to the amount of 100,050.

889. The king died on his return from *Chiangmai*, having reigned fourteen years. He had two sons; the eldest was called *Yótfá* (the summit of the sky); he was eleven years old. The youngest, five years old, was called *Sisin*. After the king's remains were burnt, a person named *Tian*, of the royal family, concluding it to be a perilous matter for him to enlist in political affairs, and seeing on other way to escape danger, entered the priesthood, and *Yótfá* was elevated to the throne, and his mother, *Si su dá chan* became regent. That year there was an earthquake.

890. The king had an elephant fight, in which one of the elephants had his tusk broken into three pieces. The king's elephant also ran about crying like a man. One of the royal gates also made a dismal creaking. At that time, the queen regent employed various intrigues for elevating her paramour *Banbutsitap* who was then a mere guardian of household gods. She had him introduced into the palace to some higher station, and eventually had children by him; and then, pretending that the prince was inadequate to the cares of governing so mighty an empire, held a mock consultation with her nobles, in regard to associating her paramour with herself in the government, till the prince should have grown up. They assented, and *Banbutsitap* assumed the government under the title of *Kun wara wong sá ti rát*, made his brother premier, and removed such officers as he supposed would thwart his designs.

891. The usurper then slew *Yótfá*, after he had been on the throne one year and two months. His brother *Sisin* was allowed to live. In these circumstances, four patriotic noblemen undertook to restore the country and elevate *Tian* (who had fled to the priesthood) to the throne. He, having gone through a variety of ceremonies, partly religious, partly cabalistic, to ascertain whether he should pros.

s, at length consented. Measures were concerted by

of east from Bangkok near the Kambojan frontiers.

of *Battabóng*. The expedition by water entered a small stream at *Put tai mái*. The first division pitched their camp only ten *sen* from the capital, but the royal brigade at 150 *sen* distant. The king of Kamboja, seeing he could not defend himself, sent a communication, the purport of which was; 'I, the governor of Kamboja, beg respectfully to pay my respects at your majesty's feet. I acknowledge my guilt in carrying away the inhabitants of Prachim, and humbly beg your majesty's pardon. I implore that you will not enter and plunder the city, but refrain three days, and I will come forth with offerings to your majesty, &c.' The king of Siam consented, and in three days the king of Kamboja brought his offerings, together with his two sons whom he also presented to the king of Siam. Then was his wrath appeared, and he bade the king of Kamboja remain and govern his country justly. As for his two sons he would take them away and adopt them as his own. He then returned home and sent one of the Kambojan princes to govern the province Sawanlok.

895. Altered the royal boats and had the heads of various animals carved on the prahus. 896. A great festival throughout the province of Chainát. 897. The king went to an elephant hunt at Bánglamang and took sixty elephants, male and female, and in the twelfth month obtained a male 'white elephant' more than six and a half feet high. News arrived, that the Kambojans were subjugated by the Cochinchinese. The king of Siam, determined to regain Kamboja and dispatch an army under the command of the governor of Sawanlok. 898. At the commencement of the dry season, the governor of Sawanlok began his march with 30,000 men. Through opposing winds the expedition by water did not meet that by land, which, on its arrival was furiously attacked by the Cochinchinese; the commander perished on his elephant and men, elephants, and horses* were taken by the enemy in great numbers.

899. The king's palace was destroyed by fire. An extraordinary festival in honor of the priests, on which occasion the king gave away a white elephant with bags of money tied to his feet, the value of which was 1,600 *chang*, or 128,000 ticals; also seven chariots drawn by horses. In the 7th month sixty elephants, male and female, were taken at Trokpra. 900. This year forty elephants were taken at Sénkó. The history states that in 902, forty elephants were taken, and in 904, seventy were taken.

* The Siamese arrangement is elephants, horses, and men, "and so *sexcenties*."

prospect of pecuniary emoluments, and of honor to themselves, in case they succeed.

It would, perhaps, be best to direct them to go to different provinces and places, and collect schools, and teach them on the new plan. If the children of the rich could not be induced to attend, it is perfectly certain that those of the poor could; so that the plan cannot fail for want of opportunity to make an experiment. An agreement might be entered into, that the scholars should receive a certain sum monthly for their support, during their attendance; and at the close of the time which may be deemed necessary for a fair experiment and the developement of the advantages of the system, such an additional sum as would prove a sufficient inducement to them to attend.

When the advantages of the new plan shall thus become evident by actual experiment in these schools, and shall have been brought to the notice of some immediately around them, let them publish in the best way they can find, the fact that they can teach the written language to children of ordinary capacity, within the time which they shall have found necessary; and also the other advantages of the system; and refer for proof to the actual experiment which they have made. Let them accompany this publication with an offer to take children into their school, and educate them on this plan. Possibly the advantages of the system may attract attention, and perhaps draw in scholars before this; but we may expect it now to attract more general notice. A people so eager for gain as the Chinese, will not fail to perceive at least one advantage of it; they will see that it will save the pay of teachers for two or three years or more, and secure to them, if they are poor, the labor of their children for the same length of time.

We may confidently expect that the publication of the benefits of the system, and the offer to educate youth according to it, will draw together a large number of children. They will probably soon become too numerous to be taught by a single teacher, even on the Lancasterian plan. Some of the scholars will therefore be called upon to teach; and the original teacher will perhaps open a school for the express purpose of training up teachers for the new system. When this shall be the case, the system may be regarded as fairly introduced. It will spread rapidly. The difficulties all lie in the first part of the way; and when they shall have been overcome, we may regard the salvation of Chinese from the cramping, stupifying, destroying influence of their present system of education, and all its attendant and consequent evils, as accomplished; and once accomplished, we may rest assured, it will be forever. No one will raise to life the hateful, useless monster.

"Well," some reader may say here, "this looks very well on paper, but it is too much like a 'castle in the air;' I fear it would not appear so well in trial." It is indeed a plan merely, but there must always be plans before there can be *doings* that will promise much good. We propose it as a plan which we earnestly wish to see perfected in its theory, then acted upon. We believe it to be a practicable plan;

can point out any part of it, of the failure of which ability, we will try to amend it, or abandon it ourselves, it to be forgotten by others. But if it be practicable, the responsibility will henceforth rest on some individual to it. Who are those individuals?

Proceeding that there is now on one employed in improve the education among this interesting people. The college at Malacca is indeed doing something for the Chinese youth there, but we are not aware that it is any way at the improvement of the prevailing system of education in China generally, or at training up teachers for the purpose of making it a primary object worthy to employ the best energies of the Government at least, to save one half of the time spent in learning many myriads of Chinese youth and to give such an amount of instruction to the myriads of immortal minds, as the introduction of the system which we have suggested, would, we think, be sure to accomplish. Alas, where is the man to do it? Every foreigner in the country acquainted with the language, is engaged in important business which he cannot consistently leave; except perhaps some few who are retired. And these, we fear, all have their attention directed to other objects, which they will be unwilling to abandon. We therefore can never, to recommend this subject to their serious consideration. Perhaps they will feel that it is too important to be left to men who can be procured in England or America to do it. But if no one is found among them, who will give his undivided time and attention to this object, we should be lost in sending for teachers who will be unable to fulfil the high purpose of giving a new and vastly better education to the empire of China, and with a devotion to the cause of the salvation of men,—a devotion which will surmount every difficulty and discouragement, and be a certain and ultimate triumphant success, and of the blessing of

British sovereignty in India: a Sermon preached at the Bombay Scottish Missionary Society; Novem-ber 1841.
By the Rev. John Wilson.

7 things respecting the relations of the western nation, which we wish to say, and to reiterate until they are fully understood. Not long ago, we are credibly informed, the subject was gravely discussed in one of the large assemblies, by learned ecclesiastics, whether they should not

mediately appoint a bishop to Canton in China. We have letters before us, which show that there are not a few even in Europe, who know but little more of some countries of the east, than they do of their own. So long as this ignorance remains, it is vain to expect that the people of Christendom will ever comprehend the full magnitude of the work which God in his providence seems calling on them to perform. With respect to India, the position in which it stands, politically considered, imposes peculiar claims on the people and government of Great Britain; and we have seldom if ever seen those claims urged with greater force than in the discourse before us. It is inscribed to the right honorable sir Robert Grant, governor of Bombay, and is founded on Isaiah xlv, 1, 2, 3, 4, 6, 13. In elucidation of the text, the preacher briefly considers the divine dealings with Cyrus, and their actual results; and, with a view to an application, traces certain analogies and comparisons between the elevation of the Medo-Persian monarch and the British acquisition of sovereignty in India, pointing out the corresponding duties which thence originate. The following are extracts.

"It appears, from the universal record of history that India, from time immemorial, has been conceived to be a country boundless in its wealth and luxuries; and consequently it has been an object of envy and of covetousness, to the different nations of the earth. Darius Hystaspes, on receiving a report of it from Seytax of Caryandra, who had navigated the Indus, was fired with the lust of its riches, and aimlessly conquered its northern provinces. It was in order to get possession of it, and to wield its resources, and not from any national vocation, or from any philanthropic desire to benefit its inhabitants, that the Macedonian hero urged his forces to its north-western borders; and he experienced the greatest disappointment, when, from the discouragement of his troops, and the opposition of its then powerful princes, he prepared to abandon it, and surrendered his partial acquisitions to one of his generals. The mixed Bactrians, from the love of its riches, encroached on some of its most valuable territories, and, as appears from discoveries in antiquities which have been lately made, settled in it for several centuries. If the Romans, Egyptians, Venetians, Genoese, and others were, in after times, content to satisfy themselves with the profits of its trade, it was because they had not power adequate to its subjugation. The love of gain, more than the dictates of the Koran respecting the overthrow of infidels, urged the Mussalmáns to their conquests in this region of the world, and the final establishment of their empire. The Portuguese, the first of the European powers who discovered the passage by the Cape, though in the first instance they aimed at the commerce of the East, which they sought to engross, soon panted for territory, and proceeded unjustly to acquire

The Dutch were their close imitators in this respect, for it was early observed of them, that they here paid ten times more attention to revenue than to trade.

"The English, alone, be it observed, at the commencement of their enterprize, disclaimed, and that sincerely, all idea of conquest.

erally content, as a nation, with the commercial factored associations, and the gains which resulted from them. At these factories, and to avenge insults which had been done against them, that they first took up arms. When victorious of a large portion of the country, they did not even give their own name; and protests and remonstrances against the use of it, by the foreign servants of the Company, who were made, perhaps, in a few cases, deservedly, of gross injustice, were made by its Directors, and by the British nation. The British power and influence, however, increased and extended. The breaking of engagements and treaties, and the formation by them of suspicious confederations, viewed as justifying aggressions upon them, and these unsuccessful. The influence of the other European nations brought to bear against the British, formidable though it appeared to be, was ineffectual to restrain them, and was only weakened so as to cease to be a matter of the least consequence in the wars which were here carried on, comparatively few of our countrymen or of the natives were lost. The sons of Bharata flocked to our standard, and faithfully and valiantly formed the body of our armies, and its own wealth was the result of the arrangements of Providence have been such, that we have acquired sovereignty without any fixed design on our part; and we have merely to trade at a few ports, now cease, this very year, our commercial transactions on the public account, and find ourselves in possession of a greater part of the territory, and wielding over it, an influence little less potent than that of law. A handful of people, from a small island in the western part of the continent of the sons of Bharata, and of a few monarchs, whose achievements, though seen by us only in the tradition of national vanity and crafty imposture, are admitted to be those of mighty men of renown. In this land, I have no hesitation in declaring, is the history of the world. It surpasses in wonder that of Babylon, the various stages of which, remarkable though they be, we can trace and understand. It surpasses the conquests of Alexander, who overthrew the empire established by Cyrus; for he marched rather than marched his predatory troops through savage countries, than brought them under a regular government, and himself had to turn his face to his home after he had conquered. It surpasses all that Rome, the mistress of the world, in her most glorious days accomplished; for in no such short space of time did she ever subdue ninety millions of people, and she never moves without glutting themselves on the carcasses of multitudes of slain. It surpasses that of the fanatic Genghis Khan, though impelled to the field by the promise of a reward of heaven, as the reward of their valor, occupied twenty years in subjugating a population of less, at the highest

computation, than sixty millions. It surpasses that which issued in the establishment of the great Moghul; for, by slow advances was it procured, and at no period did it appear very secure, and it was impaired by the Maràthàs at the time of its greatest glory. It is a success so unexpected, and brought about by so great a concurrence of events and interpositions, that even the most undevout when reflecting upon it, must ascribe it to God himself. 'The Lord most high is terrible; he is a great King over all the earth. He hath subdued the people under us, and the nations under our feet.'

"And for what purpose, let me now ask, has God conferred upon us the sovereignty of this great country? Is it merely that we consume, or export, its wealth, find situations of honor and respectability for a portion of Britain's youth, and afford protection and security to our private trade? Is there an individual within these walls, so selfish in his feelings, so little skilled in general history, and so limited in his views of the Divine arrangements, as to answer this question in the affirmative? I believe that there is not one. I believe that all of you would spurn away the idea, that such remarkable interpositions as have been made in our behalf, are intended by the all-wise Disposer of events, to have their termination in our personal and national, secular aggrandizement. I believe that all of you will not only admit, but readily declare, that it is for this country's weal that it hath been given to us; and that considering, on the one hand, its amazing extent, and its teeming population, and its present wants and necessities; and on the other, the infinitely precious blessings which we hold in possession, and which we have it in our power to bestow, there is a responsibility resting upon us in connection with it, so great that it transcends our calculation. I more than fear, however, that the facts which we admit, and the declarations which we make, have not only been long overlooked and withheld by us; but that even now they are very far indeed from being properly felt and acted upon.

"Cyrus had no sooner conquered Babylon than, heathen though he was, he made some acknowledgment of the Lord God of Israel. Our first act, after acquiring territory in India, however, was not that of confessing God before the heathen who had been subdued under us. We showed no care to awaken their curiosity, and to lead them to inquire into the nature of Christian principle and practice; but we followed a line of conduct more calculated to confirm them in their error, than to induce them to seek deliverance. They did not see a Christian ministry of any amount, and of any approvable devotedness, seeking the conversion and improvement of our countrymen; and they did not witness the worship of God at the different stations in our public assemblies, and in temples reared to the honor of Jehovah. They did not even, for long time, know that we had a God distinct from their own vanities, that he made to us a revelation of his will, that he demanded our homage, or that, in his unsearchable wisdom and grace, he had opened a way for the salvation of our souls. Instead of saying, like Cyrus, "He is the God who is in Jerusalem," we did not even—to our everlasting shame be it spoken—preserve neutrality in reference to

ns and delusions. In many instances, we thoughtlessly, endowed their idols and their temples; ratified; took part in their idolatrous rites and processions, dances and revclries; dignified them with military; and by levying taxes, participated in their unholy their gods at the commencement of our official suffered to be dedicated to them the records of our s of justice, and employed Bráhmans to pray to them, nem, that they might send us rain and fruitful seasons. nces, we *did* these things, do I say? In many places, reat extent we still *do* them.

r his conquest of Babylon, granted deliverance from us bondage to God's exiled servants. We, after the dia, granted full toleration to proselytism under every, however extravagant, absurd, and immoral, but deninity, that system of eternal truth, to which alone our ted for all its greatness, and all its preëminence, and essed to one another to be the sole foundation of hope he world to come. Instead of generously throwing the lion over the ministers of God's word, commissioned s to call upon India's inhabitants to forsake their false o idols, for the worship of Him who made the earth, nd the fountains of water, and to abandon their foolish pilgrimages, and penances, and other mistaken works ne righteousness of the Son of God from heaven; we ccess to these shores, or forced them to retire into for; after they came, or sadly restrained and discounte. their operations. We did all this with a show of outraged all the history of man, and which unblush-facts palpable as the sun in the meridian firmament. , in despite of the innumerable *devas* and *devasthâns*, gold and silver, and brass, and stone, and wood,' to be it the country and which, if collected together, would ials and inhabitants of the largest cities of the world; of the funeral piles consuming thousands of helplless e rolling cars of Moloch crushing hundreds of wretcht orgies so abominable that they defy description, e so lax, that with regard to many particulars it canished from a lustful license, we told the world that : so religious, virtuous, and happy, that they did not ; and, at another, in despite of all the native churches, uestorians of Syria, and the Danes and Germans, in hey were so firmly bound by the immovable chain of leeply sunk in the ocean of error, delusion, and vice, could not reach them. At one time, we maintained were so skilful philosophers, and transcendent metacacute masters of logic, that they could defeat in ar-professors of our universities; and at another time, meeting a missionary on the arena of discussion they

ould raise up armies, and engage our troops in the field. At one
 e, we urged that missionaries would be so indiscreet and so regard-
 s of their own success in their work, that they would wantonly out-
 e the prejudices of the natives, and sacrifice their own lives in a
 dless storm of popular fury; and at another, that they would pro-
 d so peaceably, and quietly, and sneakingly, and jesuitically, to
 rk, that they would win the heart of the population, and wield their
 uence against the established government. At one time, we insisted
 t science must of necessity precede Christianity, and prepare the
 y for her progress; and at another, that Christianity would precede
 ence, and instead of viewing her as a handmaid, as she was wont
 do, would prove so illiberal that she would not even allow her to fol-
 y in her train. At one time, we maintained that the effect of edu-
 ion would be that of divorcing the affections of the instructed from
 ir teachers and their institutions, and qualifying them for rousing
 nation to a successful resistance of them; and, at another, that its
 ect would be that of exhibiting the instructed as a privileged and
 ored class, who, instead of being respected by their countrymen,
 d permitted to wield over them an effective influence, would excite
 ir jealousy, and engender opposition, and even persecution. No
 ory, however absurd, we left to be invented. No occurrence, how-
 er undeniable, we refrained from perverting.

“Cyrus set apart a large portion of the revenues of his state for
 support of true religion among the Jews. After a great deal of
 cussion, our parliament voted a single lakh of rupees, a sum bear-
 g no proportion to our income, to be given as a donation for the
 omotion of general education amongst the many millions of our sub-
 ts, who minister to our comfort and affluence. We, the represen-
 tives of the British nation in India, instead of applying this grant
 olly to the diffusion of a knowledge of the literature and science of
 e west, as, we must suppose, was intended employed most of it in
 support of colleges for teaching pensioned students the elements
 the “sacred,” and not neglected, Sanskrit and Arabic languages,
 d inculcating through them the immoral precepts of the Vedas and
 rānas, the aphorisms of dreamy and obsolete legislators, and the
 scriptions of quack-doctors, and alchemists, who died in the ardent
 rch for the philosopher’s stone; or in printing oriental books to fill
 shelves of a learned and curious, but illiberal and unphilanthro-
 , confederacy of English and French antiquarians. It is only
 hin these few months, that this misappropriation has to any extent
 n testified against, and it is only within these few weeks that
 ps have been taken to restrict and ultimately to suppress it.

“It is in a spirit of heaviness, my brethren, and with a view to
 ociate our regrets and complaints with regard to the past, with
 e vigorous efforts to amend our ways and to redeem the time
 ich is to come, and not to indulge a spirit of vain censoriousness,
 t I have alluded to these melancholy circumstances. While I
 ict my soul in the remembrance of them, I bless God that a bright-
 day has now begun to dawn upon this land, even the day of its

tion. It is a matter of sincere congratulation, that the blessing of God upon the enlightened and Christian advocates, and Buchanans, and Wilberforces, and the supplicants of our countrymen at home, a Christian ministry though still inadequate, has been provided for the sons of Scotland here sojourning. Our religion, though far more prominent as it ought to be, is now a matter of public concern to our numerous heathen neighbors, and as far as the professors is concerned, is undoubtedly on the increase. At present, there are some true disciples of Jesus, who are distinguished by their life and conversation, and who devote themselves to the promotion of Christian philanthropy. The order has been issued by the authorities at home, and has already been partially executed, "That in all matters relating to their temples, their festivals, their religious practices, and their ceremonies, our native subjects be left entirely to themselves." The most unnatural and horrid rites, as that of Sati, have been abolished by law; and measures are in operation, which, it is believed, will end in the complete suppression of infanticide, that is, a crime scarcely equaled in the black catalogue of human iniquities. The source of protection and supply to the natives, so long fed by misapplied endowment, and guarded by a despotic authority, and inconsiderate custom, is drying up; and the British government, preparing for the kings of the east, the appointed agents for its destruction, to make the assault upon it. None who are concerned with the welfare of India, are denied the right of residing in its extensive boundaries. The fullest liberty of preaching the Gospel, is now granted to the missionary of the cross. He is to go forth, and his voice and proclaim a Saviour's love and pardon, and glorifying grace to listening multitudes from the Himalaya on the north, to the cape of Comorin on the south. He is to strive to bring them to make him afraid; and, as long as he confines himself to a timid and evasive argument, he may expose every system of error and superstition, prevalent in the land; and he may freely disperse the seeds of life, so that the various tribes may read in their hearts the wonderful works of God. He may open thousands of hearts, and have them speedily filled to overflowing, and unfold the truths of the doctrine, and inculcate every precept revealed by

ART. V. *Flora Cochinchinensis: sistens plantas in regno Cochinchina nascentes. Quibus accedunt aliæ observatæ in Sinenso imperto, &c.*

A Flora of Cochinchina, containing descriptions of the plants growing in the kingdom of Cochinchina, to which are added others observed in the empire of China, the east coast of Africa, and in various places in India; arranged according to the sexual system of Linnæus; being the work of John de Loureiro, fellow of the Royal Academy of Sciences in Lisbon, and formerly a preacher of the Catholic faith in Cochinchina, and there a professor of mathematics and physic in the royal palaces. Printed in Lisbon, 1790, 2 volumes 4to, pp. 744.

THE BOTANY of the Chinese empire is a subject to which we have drawn the attention of our readers on a former occasion, when we presented a paper written by Dr. Livingston of the East India company's medical service; in which he exhibited some parts of the unexplored field there is in China for the examination of the student of nature, and the facilities enjoyed at Canton for purchasing native plants of the Chinese florists. Reference has also been made to the subject in other pages of the Repository. It will, however, need no labored argument to show conclusively that the botany of China, and indeed, all the other departments of its natural history, can be disapproved upon most learnedly, while little or no real progress is made in elucidating and applying them to the arts of life. Any one who will take the trouble to examine what has already been said on this subject, will be convinced that the confined situation of foreigners precludes nearly every attempt to make new acquisitions; and by putting us up as the Chinese do, they shut out from themselves all the advantages which might arise from the scientific application of the mineral and vegetable treasures this great empire contains, to the purposes of common life. And in botany especially is close and repeated observation indispensable before certainty can be obtained, and conclusions drawn that can be relied upon. As well might a man who had never moved beyond the precincts of Madrid, undertake to describe the plants of France from drawings and descriptions, as that persons should write upon the vegetable productions of China from what can be gleaned out of foreign authors. We know the existence of the varnish tree, the cotton tree, the tallow tree, the tea shrub, and many others, and that important products are obtained from them, and so did Matthew Ricci; and we now cannot boast of much greater knowledge than he and his companions had when obtained. To this day, it is a matter of dispute whether the green and black tea are species or varieties, although the leaf has been an article of commerce ever since the ninth century. During the long time that foreigners have traded to this port, there has been a succession of travelers and naturalists, like Osbeck, Toreen, Abel, and others, who have examined the plants growing about Canton and Macao, with a good degree of minuteness, much more so than in

l of this article.

duction of John de Loureiro, a Portuguese, formerly
chinchina. We have not been able to ascertain
life, except what he says of himself in the preface
1 was printed at the expense of the Royal Academy
Loureiro's own superintendence; and, as it justly
ated to that body. In his dedication, he observes
ears he had been endeavoring to get the book print-
demy undertook it. Due respect is paid to those
him in the study of Flora in the unexplored regions

the Indian archipelago, and countries adjacent, among whom Arcias' work on the spices, and Rumphius' Herbarium Amboiense afforded him much assistance. Speaking of the neglect this science experienced, he says: 'But I know not by what fate it has happened, that our predecessors, to whom neither talents nor opportunity were wanting, neglecting to follow the example already set them by their countrymen, have scarcely made an acquaintance with botanical science. From which cause great loss has arisen, inasmuch as we have been in a manner deprived of valuable treasures contained in the vegetable kingdom, while other nations have been deriving benefit from them. But this will not always continue, because opportunity will arrive, if the powers above favor, to change the untoward into fortunate and prosperous circumstances.' After a proper portion of flattery is applied to those who needed it, Loureiro thus inscribes his inscription: 'It will not be in my power to contribute stones, metals, and more precious things towards the erection of the temple (the temple of science), yet I will not be entirely an idle and useless member. From my stores, such as they are, I offer you this Flora of Cochinchina. Among its treasures you will find wood fit for building, colors to adorn, food and medicines to recruit the laborers who spend their strength in the completion of the work, and devote it to the public good.'

Our author then proceeds, in an address to the candid and studious reader, to give some account of his residence in Cochinchina, the cause and manner of his collecting the materials for his Flora, with an eulogy on the system of Linnæus. Speaking of his residence in that kingdom, which, according to him, extends from 18° of north latitude, comprising Tsiampa and part of eastern Camboja, and stretches southwards more than nine degrees to the gulf of Siam, he says: 'During the thirty-six years I resided in that country, I had time to examine into the mysteries of nature peculiar to those regions; and, as leisure and aid were wanting, diligence and industry were my only assistants. I first went thither as an evangelist and preacher, to announce to them the common Creator of all, and the Savior Jesus Christ. But when heathen superstition opposed too hard, and the laws of the kingdom forbade Europeans setting foot there, my work was of service to me, as by it I obtained permission to remain, and to labor as far as prudence, fortitude, and charity would allow: prudence, lest imbued with too much zeal, I should seem rashly to despise the laws of the king, while at the same time by attending to those sciences, which were able to please him the more, I could secure his favor the more firmly: fortitude, by bearing in a foreign country all those evils, which not unfrequently occur in one's own: and charity, since by becoming all things to all men and by a regard of private advantage and gain, I could relieve the wants of others; more especially by practicing the medical art, according to the divine injunction, "heal the sick who are in that place;" since I distributed medicines gratis to all who solicited me, both converts and infidels. Thus by the favor of God, and the popular

g, it was not difficult for me to obtain permission in the country, nay the king even appointed me professor of mathematics and medicine in his own palace. But in I was not at liberty to promulgate the doctrines of the y acting cautiously and secretly, these designs could

ng thus circumstanced, I was almost overwhelmed by who came to me, many of them desiring to be instructors of the Catholic religion, but the greatest number ave their bodily maladies healed. For curing all these ses, I was not able to obtain any necessary articles nor if I had been able, could I have paid for the being the case, I began to consider whether I could the *materia medica* indigenous to Cochinchina, and by ke what was in that country supply the place of the things from Europe. This was the beginning and mmencing the science of botany.

nt of the want of teachers and authors my progress was from Dioscorides, nor his commentator Laguna, nor Fournefort, whose botanical works I had successively d I obtain so much light, as to distinguish clearly India; many of which, both genera and species, are in y different from those found in Europe. At length, af- e delay, I obtained the works of the illustrious Linnæus, it to me by Thomas Riddell, the captain of an English nt man, to whose kindness I owe much. From these ined a knowledge of the doctrines and terminology of immediately I saw how much this system excelled the r greatly it aids the tyro when other props are wanting. gardens and the green houses of princes, which are pe, were much desired in Cochinchina, that I might plants with these and thus easily know what difference i the two. The wild plants of Cochinchina, are nume- eek them in the highest mountains and extensive jun- ded with much toil and oftentimes with danger. * * *

the system of Linnæus comprising ample materials, ed sufficient for my medical use. I have carefully characters, properties, and habits of all those plants

I knew either from European, Chinese, or native hich I judged useless in the practice of medicine I ed. But yet, since the number of these latter daily curred to me that it would not be useless to collect and as well as the others; it would be increasing the innæus, and be useful in future, although it might or at present. Thenceforward I collected all indiscrim- laced them in my collection. * * * From these and ants, preserved by me and again examined, is this ; nor yet do I suppose it to be complete; for many sought for in remote forests, and, though growing

spontaneously and rarely in Cochinchina, I could not obtain, and therefore deem that but about the fourth part of the entire Flora is described.

"During a three years' residence at Canton, I examined many Chinese plants, which for money were brought to me by a Chinese rustic, for Europeans are not permitted to wander about the suburbs of the city. This native, not altogether ignorant of Botany, was in the habit of collecting beautiful plants to sell for medicinal uses. He would also tell me the names in the local dialect of Canton, yet I do not place much confidence in them; for when urged to give the name, we may suppose that if the true one did not occur to him he would substitute an arbitrary term, which is the practice of the Chinese lest they show their ignorance. But the names of those plants which are used in medicine or which serve for purposes of luxury are more correct, as they are generally taken from Chinese books, and expressed in the universal language of China used by the learned throughout the empire.

"When returning from China to Portugal, I was compelled to stop at the island of Mozambique in eastern Africa, in about 15 degrees of S. latitude, where for three months I had opportunity to prosecute my botanical studies, collecting and describing rare plants from the neighboring continent of Africa. I have also got together a few others from different parts of India, where I have been; namely Cambaja, Tsiampa, Bengal, Malabar, Sumatra, and elsewhere, some of which I have inserted in their proper places in the Flora."

Such were the advantages which were enjoyed by Loureiro, during his long residence in the east, for collecting the materials of his work. He has described and named one hundred and eighty-four new genera and more than three hundred new species. In his very full description of the plants, he has inserted their height and appearance; the uses to which they can be applied, and what parts are employed; their medical virtues, as he himself ascertained, and as used by the natives of the country; the mode in which they are cultivated; and any other circumstances he thought important. The names of the most common plants are given in the Cochinchinese and Chinese languages, and a few in the Malay. His Flora contains, however, only a small part of what there is in these countries to reward examination and industry. The field is too large for one or even a few to investigate, too interesting to be neglected longer, and too promising to suppose it will remain long unexplored. We hope the industry of Loureiro and others who have succeeded him in these pursuits will find imitators, till all the productions of the Chinese empire are as well known as those of any part of Europe.

M. Diard, a French naturalist, has spent some years in Cochinchina, where we believe he is still residing: and if, as he hoped, he has been permitted to visit different parts of the country, we may reasonably look for valuable results from his labors.

Relations of Great Britain with China: policy hitherto and suggestions respecting future measures; case of the Opium.

It is our hope that we are that, if the government and people of Great Britain are fully informed both of the policy hitherto maintained by the British Government in this country, and the footing on which the British Government here stand, they would immediately adopt measures which would improve the relations between the two nations, we welcome every opportunity to afford the desired information. Such a work has now come into our hands: it is entitled, 'Address to the people of Great Britain, explanatory of our commercial relations with the United States, and of the course of policy by which it may be rendered an unbounded field for British commerce.' It was written by a gentleman who visited China for purposes connected with commerce; and who, with the advantage of personal observation, may reasonably be supposed to have formed a more candid and dispassionate judgment, than could have been expected of one writing under the smart of the injuries which he has received. The local readers will have no difficulty in identifying the author of the Address with the leader of two expeditions undertaken in 1842, to gain information respecting the cultivation of the Opium in the province of Fuhkeën. We wish he had put his own name to the Address, and that it were generally known to those who read it, that it was derived from the most authentic sources of information. It is also to be remarked, that for many years he has resided in the United States, part of the time engaged in commerce, and a part of the time in the service of the government.

It is to be seen so great a number of facts, in so small a volume (not more than a hundred and twenty octavo pages,) all tending to improve the intercourse with China, as are thrown together in the Address. To those who wish for information on this subject, we recommend its perusal. If those who 'visit' China, or who return from the west after a long 'residence' here, will only in a candid manner tell the truth, and nothing but the truth, although they may not tell the whole truth, they will merit the praise of their countrymen and generations. But while we would encourage authors who are competent, we would never by any means encourage those who are not so. Several productions, some great in number, and some intended to 'throw light on China,' have come forth to the public in the last two or three years, which were more fit for the

flames than the press. The only fault which we find with the author of the Address is, that he has not generally given his readers any references to the sources from whence he derived his facts. So far as we know, however, except on a few minor points, the work is throughout perfectly correct; and in some instances the reality of what *has been* and *is* here, is portrayed more faithfully than in any other book that ever came to our notice. For instance, speaking of the state of society, he says;

“There is in China every gradation of society that is met with in Europe; and, though there are certain privileges exclusively pertaining to the members of the Imperial family and the functionaries of government, wealth is distributed also among the private gentry, as well as among a very numerous and enterprising mercantile community; nor are the manufacturers and artisans denied the reward of ingenuity and industry. Money, indeed, is not often in China withdrawn from circulation for the purpose of being hoarded; in fact, the habits of the Chinese are not parsimonious. Though the most actively industrious race of beings in the world, they are sensual and luxurious. Unlike the priest-ridden Hindu, the son of Han pays [comparatively] but few taxes to the gods. Births, marriages, and funerals, are in this country indeed, as elsewhere, made occasions of expense, but it is only at the death of a parent, when the property of the deceased furnishes the means, that institutions of a religious character are attended with any very considerable cost. Official rapacity renders the accumulation of wealth a dangerous experiment, while filial duty imposes on children the charge of maintaining their parents, and thus the Chinese are more distinguished by industry and enterprise in acquiring wealth, than by parsimony in the use of it. With this general inclination to spend, and means of indulgence in the hands of so many members of the community, there is no want of commercial activity in bringing from abroad such objects of luxury as their own country cannot supply. Mercantile speculation, indeed, accords well with the gambling disposition very generally prevalent among this people. The factors of the East India company, writing to their employers in the year 1622, inform them in the quaint style of the day, that, “concerning the trade of China, three things are especially made known unto the world. The one is the abundance of trade it affordeth. The second is, that they admit no strangers into their country. The third is, that trade is as life unto the vulgar, which, in remote parts, they will seek and accommodate with hazard of all they have.” The interesting and instructive narratives of Lindsay and Gutzlaff prove, that, after the lapse of two hundred years, those *three things* are, at the present hour, as strikingly characteristic of the nation as they ever were.”

With equal accuracy he remarks that, “neither the East India Company, nor any other merchants, have been permitted, correctly speaking, to trade with *China*. Their dealings have been conducted with about a dozen individuals, whose residence, indeed, is in this country, but who ought to be considered rather in the light of slaves to the officers of the local government, than, as merchants. The experiment cannot be regarded as fairly made, till the trader can legitimately pursue the natural liberty of trafficking where, with whom, and in what objects of commerce, may best suit his interest; secure from all molestation so long as he offends against no rational law of the country, and sure of redress should wrong be offered to him.”

Further, after showing that isolation from all the world, the antisocial

ards other nations, so far from being a fundamental principle of political ethics, is, on the contrary, at direct variance with the authorities on which their political creed is avowedly based. The visitor thus proceeds,—

of doctrine, which would exclude the Chinese from the society of nations, and would divest them of all claims to the protection of international law, distributed as are the gifts of nature over the several regions of the globe, only by the interchange of commodities that the inhabitants of all countries severally have their due share of the bounty prepared for them. If, therefore, industry, are entitled to participate in the common stock of the world, could be any government which should, as China has been seen to do, capriciously set itself against the general good, in opposition to the rights of its own subjects as well as the demands of its neighbors, it would be a claim to their consideration and forbearance. It must be a position so hostile to the general interests of the human race, as to be a *locus in hoc*, as the common wrong of mankind, and as such be common to all nations, that it cannot for a moment be forgotten, should the stipulations we are now about to be objected to, on the pretext of ancient custom being opposed to it. In the fourteenth century, the provinces of Chékeäng, Kwangtung were appointed for the reception of foreign ships. At that time, ships were allowed to go to other ports were allowed to do so, on giving a bond for prohibited articles. This also is a precedent which must be observed, where antiquity stands for reason."

In the following several pages with preliminary remarks, like those which are now quoted, our author takes a retrospective view of Europe with China from the arrival of the Portuguese in the sixteenth century to the present time. The Portuguese erected forts, laid claim to the coast, and treated the natives as if they had been the sovereigns of the country. The Dutch who followed them, "too closely imitated the example of the Portuguese, and for a long time the English found themselves excluded from the ports of China. At length, however, captain Weddell, in 1793, visited the Chinese waters; and after being grossly insulted by the Chinese authorities, dismantled the forts at the Bogue, proceeded to Canton, and obtained "a patent for free trade." In 1809, the supercargoes were put in confinement; and not long after, one was put in his own factory: heavy bribes were paid for their release. In 1810, the supercargo of Canton bamboozed a linguist, because the supercargoes refused to let a proclamation be pasted on their ships. At this time, both at Amoy and Canton, the foreign trade was treated by the government as a monopoly to a single privileged company. In 1813, also, fair promises were made, but they were not kept, and the supercargoes were compelled by force to receive goods which they had not contracted for.

Company's ships coming to Canton took the precaution of depositing a sum of money with the government till they had settled a specific sum for measurement. They also stipulated for liberty to trade with whom they pleased, and to employ their own linguists and servants. They were promised that all new customs and impositions; and had granted to them the right of punishing their own people if disorderly. It was also stipulated that their ships should not be stopped at the custom-houses, and that

they should be protected from all insults and impositions on the part of the natives. Such were the conditions on which we agreed to give the Chinese the benefit of our commerce, when it first assumed a regular form; and those stipulations were for some years required and acceded to on the arrival of each fleet. It is, therefore, a misapprehension of the real case, and one which may to some seem an error of great importance, to assume that the trade was sought only on one side. The facts we have stated show that the desire was mutual, and the conditions reciprocal; and the whole subsequent history of our connexion with China is compatible only with this view of the case. It is true that those covenants were, in the first instance, entered into with only subordinate officers without legal authority; but we shall soon see that they subsequently received the imperial sanction; and the only defect in this treaty of commerce arose from the inequality of the parties,—a despotic monarch being the contractor on one side, and the servants of a company of merchants, instead of their king, the parties on the other."

Irregular exactions, or downright extortions, soon came thick on the trade. "The year 1720 is memorable as having given birth to the first association in the shape of a cohong," which was formed under the auspices of the hoppo. The admiral was said to be connected with the cohong. The supercargoes refused to enter the port till this association was dissolved, and at the same time sought for the interference of the governor. He listened to their request, and "the conspiracy was thus defeated for a time," and the trade resumed. But soon the extortions became so great that they reached the ears of the emperor Yungching, "who in 1725 published the first tariff of duties, in the shape of a code, the strict observance of which was enjoined on the officers of all the custom-houses." The tariff, however, was utterly disregarded: this led to fresh efforts, on the part of the company, to renew the trade at Amoy and Chusan; but "heavy duties, arbitrary and haughty conduct towards the supercargoes, extortions and ruinous delays," were still the order of the day.

"Had a proper representation of those abuses been conveyed to the emperor, there can be little doubt that redress would have been obtained. The edict published at Amoy proved that the cabinet of that time was well disposed towards the promotion of foreign trade, and to the removal of any obstacles to its prosecution that were brought under their cognizance. The difficulty was to find means of communicating with the court on the subject of wrongs committed by the very parties who were the regular channels for the transmission of petitions. The officers might perhaps have been driven by the complaints of Chinese subjects to bring the conduct of foreigners before government, had violent resistance been offered under which individuals had suffered injury; but no one had courage to repeat the experiment made by the Ann, and those wrongs remained unknown to the government, and therefore passed unpunished. It would appear, however, that the supercargoes at Canton had succeeded in drawing the attention of the emperor to the recent ten per cent. duty, for it was revoked in 1736 by an edict of Keening, on the occasion of his accession, or rather his coronation at the conclusion of his minority.

"The governor of Canton, however took to himself the credit of the revocation, for which he demanded an *honorarium* of 30,000 taels, 'For my,' said he, 'should courtiers serve the English for nothing?' An advance of 6000 taels was made on bond to a merchant, on condition of his obtaining in like manner, the revocation of an imperial order, that all ships should land

To satiate to its full extent the avarice of overnment at Canton in succession from time to time,

would have required a far greater sacrifice than the most prosperous commerce could have repaid. But every thing that fell short of that measure of bribery, would serve only to add fuel to the flame. Whether or how far supercargoes acted on the Court's suggestion, does not appear. Certain it is, that the wrongs they complained of, so far from being redressed, grew daily more galling."

The conduct of Frederick Pigou, one of the supercargoes who suggested an embassy to Peking in 1761, is noticed by our Visitor in terms of approbation and commendation; and a curious fact stated on his authority, sufficiently illustrative of the necessity of having an European interpreter for the Chinese language attached to any mission to the court of Peking. "It is said that the king of Siam, in his triennial embassy to Peking, styles himself in his letter, *brother* to the emperor. His ambassador is a Siamese, but is under the direction of the Chinese, who make a *new* letter for him, wherein the king is called *tributary* to the emperor." It is remarkable that the same style from the prince regent, afterwards George the Fourth, was objected to in lord Amherst's embassy, and an alteration acceded to: "one of the many acts of vacillation which contributed to the failure of the embassy."

The conduct of the Court of the E. I. company, in promoting the acquisition of the Chinese language, is truly honorable. As early as 1753, they sent out two young men to study it here, at their expense. About this time, an attempt was made by their direction to renew the trade to the north. With this view a mission was sent from Canton, and Mr. Flint, who planned the mode in which it was to be conducted, was appointed secretary and linguist. The mission was favorably received both at Ningpo and Chusan; and many fair promises were made. But soon intrigues were set on foot by the authorities of Canton; "and 20,000 taels paid by them and the hong merchants to officers about the court at Peking," procured an edict from the emperor, confining the trade in future to the single port of Canton. The narrative of the transactions which followed, we quote in the word of the Address.

"Upon this, the governor of Ningpo informed Mr. Flint, that he and the English merchants must depart immediately, for they should no longer have liberty to purchase goods or even provisions, at that place. The unfavorable period of the monsoon was urged in vain, and Mr. Flint was forced to sea. Instead of beating to the southward, however, he bent his course to the mouth of the Pihho, where, by means of bribes, he succeeded in getting a petition brought to the notice of the emperor. A great officer, who had been general commandant of the city of Fuhchow foo, the provincial capital of Fuhkeên, was, in consequence, directed to proceed to Canton, in company with Mr. Flint, to inquire into the existence of the abuses alleged in the petition. This commissioner, joined with some of the local functionaries, formed a court of inquiry on the conduct of the hoppo; and, finding that there were real grounds for the charges proffered against him, had him dismissed from office. Several impositions were taken off; but the cumsha of 1950 taels and six per cent. duties were confirmed. The emperor at the same time directed that the vessels of foreigners should no longer be termed Devil's ships, but in future be designated as Western Ocean ships. Mr. Flint's success

se to much uneasiness in the breasts of the governor and Canton, who saw the danger to which they would be in case there were a road for carrying complaints to Peking to be left open. They found an opportunity of procuring at once their rest, and security for the future. Notwithstanding the impositions which restricted the privilege of foreign commerce to a single place, they were very imprudently again dispatched to Ningpo. His representation of his 'contumacious disobedience' was made and the governor of Canton obtained an order for his punishing narrative, given nearly in the words of Mr. Auber, in which mode in which this order was announced and

December, 1759, the governor desired to see Mr. Flint, who was on his mission, for the purpose of communicating to the superintendent's orders relating to the company's affairs. The superintendent accompanied him into the city, which was allowed. On arrival, the hong merchants proposed that the supercargoes should be present. It is surprising that this did not excite some suspicion. They merely said, that as it was on the company's summons, they must all be present. After some alterations, they were received by an officer at the first gate through two courts, with seeming complaisance from the superintendent. On coming to the gate of the inner court, their swords drawn, an unusual proceeding, which ought to have been a symptom of danger. They were then hurried on, by the presence of the governor, and, under pretence of compelling them to kneel after the Chinese manner, were at last thrown down. Being the supercargoes resolute in their resistance to those who desired their people to desist. He then desired Mr. Flint to admit to a paper which he said was the emperor's edict for the *Casa Breca*, near Macao, for three years; at the expiration, he was to return to England, never more to set foot in the same time intimated to him that the man who had been beheaded which Mr. Flint delivered at Teentsin, was to be beheaded *erously encouraging such a step!* This addition to the story elsewhere than in China; but there can be no doubt of the superintendent boastingly adverted to subsequent edicts, as an instance of leniency with which the errors of foreigners are treated, commensurate of punishment awarded to those natives who are found abetting in the transgression of the laws."

of punishment was rigorously executed on Mr. Flint, in close confinement until November 1762. In the month of June, the Court determined to send out a "special mission," and the ship *Royal George*, was chosen. This gentleman was directed to maintain his dignity as a representative of Great Britain by dropping the style of *captain* and *secretary*; and "by falsely representing himself as brother private secretary." See Auber's China, p. 174. Mr. Flint did nothing. The supercargoes were directed by the superintendent to pay constant attention to the hong and take the opportunity to give umbrage to the government. The local authorities were to give them the same in their glory. In a letter to his Britannic majesty, the superintendent commanded the king to take Mr. Flint in safe custody, affirming that all the foreigners

of the said nation, drenched with the waves of imperial favor, "should leap for joy and turn upwards to us for civilization." So in kindness, when his majesty's frigate, the *Argo*, came up the river to refit, his excellency the "*Isontock*," after four months' time was wasted in threatening to drive the supercargoes from the country and to bamboo the hong merchants and send them into banishment, condescended to measure the king's ship! Such courtesy and kindness were the natural results of attentive obedience to the "mandarin merchants" and to the "grand hoppo."

In 1771, the dissolution of the cohong was purchased "at the cost of 100,000 taels paid by a hong merchant on account of the company, who made good the money." This was effected by the governor's edict of the 13th of February. In 1782, "the hong confederacy" was renewed. This was occasioned by an order from the emperor, in consequence of a demand made in person by captain Panton of his majesty's frigate *Sea-horse*, on the "*Isontock*," for certain private debts due from the Chinese to British subjects. Hence, by a tax on foreign commerce, originated the consoo fund. That tax, though the causes which led to it have long since ceased, is still regularly (we should say *irregularly*) imposed. Perhaps, if his excellency Tang, our present "*Isontock*," were suitably bribed, in the conciliatory manner of lord Anson and captain Panton, the obnoxious tax for the consoo fund, and other like impositions, might be removed. Or perhaps, if Heu Naetse, or some other Chinese reformer, would only memorialize the emperor, even the cohong might be again dissolved, and the old regulations of Kanghe, opening all the ports of the empire to foreign ships, be once more established.

We forbear to reiterate the repeated instances of homicide and "judicial murder," which are noticed by the Visitor, though in more than one instance 'the blood of innocent Englishmen' still cries out for redress. The case of Scott in 1773, and that of the gunner in 1784, cannot soon be forgotten; and the like, we trust, will never again occur. His remarks also on *man e* 'fierce barbarians,' supplied to foreigners generally, and on *hungmaou jin*, 'red-bristled men,' the common term used in Canton for Englishmen, we pass over without comment, though not without a wish that they should be dropped at once, and forever. Perhaps, we ought, *en passant*, to beg Mr. Aufer's pardon for using his favorite but unauthorised term, *Isontock*, instead of the correct one, *tsungtuh*, or governor.

The last part of the address is occupied with a view of some of the circumstances connected with the British embassies to Peking, and of some which have more recently transpired; and is concluded in the following terms.

"Common justice can be granted without any lowering of respect, even though the claim should be made by an envoy with an army and fleet as his escort; nor even though the imperial courtiers should screen the light of truth from his eyes till the arrival of the British envoy extraordinary with a few thousand followers at Peking, will it then be too late for him to perceive how grossly he has been deceived, and how worthy Englishmen are of being

the people of China. It is possible, indeed, that until the British envoy shall be able to explain matters in person, they developed to his majesty's sublime apprehension; but a cannot fail to make all things clear as day. Of course, till have been made equally manifest to the whole empire edicts published in the Peking gazette, and the conse- therefrom admitted under seal and signature, our envoy st be precluded from reëmbarking."

bjoins to his address a "rough sketch" of the seve- h should be required by an expedition to the court of ay advert to these on some future occasion; but have ow only briefly to state some additional facts respect- on, captain James Thomson, from London.

UNIVERSITY OF MICHIGAN LIBRARIES

y complying with conditions which would ill-become kingdom. It is said, however, that some presents found their way by means of the Jesuits to the foot one, and were graciously received by his majesty: must have been sent to France in return; of which, information.

ernaert received his commission here from his own in 1828; but at first the Chinese authorities refused as a king's officer. However, a train of events, were which soon induced them to change their policy. In war, the crew of the *Navigateur* was massacred off the influence of the Portuguese government and of the and gentlemen of other countries there, the case was before the Chinese authorities. On the 24th of January, perpetrators of that horrid deed were brought to trial on the 30th of the same month, seventeen of them punishment, while lighter penalties awaited their less

The goods of the malefactors were confiscated and of the property of the *Navigateur's* crew was re-wise sold. In the mean time, it became necessary consul to address the Chinese authorities; but, as in the lamented Napier, all his communications were own back upon him. At length, however, the ellency the governor of the two wide provinces, his; a president of the Board of War—saw fit to of procedure and to receive the communications of this, it is believed, 'he presumed to do' without sion from the emperor: nor can it be supposed r such, it being one of those minor points, which nment leaves to the management of its provincial the present day, the king's consul, on all govern-addressed by his proper title as consul, not as tae-is done also in all communications to the Nether-is is truly "according to propriety and reason," position to old custom. There is, however, one which is very characteristic of the Chinese: while oo, and others, receive communications from the ue form, they direct all their communications for merchants, who always are strictly charged, "to ers on the consul." It is plain, therefore, that this al, and by no means places the consul on the same s officers in other countries. He simply regarded head of his countrymen in China, from whom the e willing to receive petitions, and to whom they ers.

f the principal circumstances connected with the teur is briefly as follows. Our vouchers for these he declaration of Ludovico [erroneously called pan, as recorded in the Canton Register of April

18th, 1829, and, secondly, Chinese official documents which have been very obligingly put into our hands by the French consul; extracts from some of them have already been published in the Repository, but by far the greater part will be new to our readers.

The Navigator left Bordeaux in May 1827, for Manila, under the command of captain Saint Arroman. She reached Turon in October; and, in consequence of injury received at sea, was abandoned and sold to the Cochinchinese government. On the 15th of July 1826, captain Arroman, having chartered a Chinese junk, sailed for Macao. Twelve of his crew and one passenger were with him. There was on board the junk some cargo, belonging to them, consisting of wines, silks, clothes, &c., to the number of about 400 packages, and treasure to the amount of three or four thousand dollars. On the 4th of August, at about 4 o'clock in the morning, while off Macao, the people of the junk rose on the French, only one of whom escaped, and by the help of a native boat succeeded in reaching the Praya Grande at day light. This was the sailor, above named, Ludovico Mangiapan, on whose declaration the truth of these few facts chiefly depends.

According to the Chinese official documents, the junk "Lewyuen-yung," was fitted out at the port of Amoy, for her voyage by Lew Tszeshing, Le E, and Woo Kwan, partners in trade, and natives of Tunggan, one of the districts of Chinchew in the province of Fuh-keën. Two of the owners, Le E and Woo Kwan, with fifty-two others to assist in the management of the vessel, embarked together on the 8th day, 2d moon, 8th year of Taoukwang. On her return from Cochinchina, she had on board as passengers, besides capt. Arroman and his companions, thirteen native passengers who were returning to China. They left Turon on the 7th day, of the 8th moon. While on the voyage homewards, there was some disagreement about the management of the junk, which led to sharp altercation between the foreigners and Chinese. On the 23d day of the same moon, they arrived at the Grand Ladrone, off Macao; and twelve of the native passengers immediately went on shore. During the following night Woo Kwan, who was in command of the junk, supposing there was much treasure on board belonging to the French, formed the plan of killing them, and taking possession of it and their other effects. Twenty-two of the Chinese acceded to the plan; thirty-one dissented; among these was Le E, who, with three others, tried but in vain to dissuade their companions from the sanguinary purpose. Tsae Kung-shaou, the other native passenger, being asleep, was not privy to the plot; and several of those who were, but who refused to join the murderers, hid themselves in the hold of the junk. At about the fourth watch of the night (2 o'clock A.M.), when all the barbarians were sound asleep, Woo Kwan and his associates commenced the execution of their work: four of them at the first onset, shrunk back and withdrew and hid themselves; while the others, nineteen in number, with Woo Kwan at their head, completed the massacre. One of their own party was killed; and another severely wounded.

which were adopted for the apprehension of the recovery of the goods we need not give in detail. wo became informers; six escaped; and the others with Lew Tszeshing one of the owners of the junk, ers, were brought to trial at the public hall of the efore the chief local authorities. The sentence of ecoreded against forty-nine individuals as follows:

be cut to pieces, slow and ignominiously;
and others, to be decapitated and their heads exposed;
others, to be transported to Tartary for life;
others, to be banished from their native province for life;
wo informers, with two others, to be banished three years;
and Tsae Kungchaou, to be bamboosed.

statements are from an official paper, dated Taou- 4th moon, 13th day, issued by Le Hungpin, who of Canton. The execution of Woo Kwan and his noticed—all having suffered capital punishment l in the massacre on board the junk, and one who ded. The three, sentenced to be transported to ontiers of the empire, were of those who at first ot of Woo Kwan, but afterwards shrunk back: the d so, was not caught. Wang Ko and the others, tual banishment from their native province, were part in the massacre, and who each received only he booty. Le E, one of those to be banished three s one of the owners of the junk and endeavored dissuade Woo Kwan from his foul purpose, died in ot appear that Lew Tszeshing or Tsae Kungchaou h even a shadow of guilt.

oney and portions of the cargo which were delivered 29, together amounting to \$4,626, it was stated to t \$15,945, proceeds of the confiscated property, hands of the government of Fuhkeën, and should r the benefit of the families of the murdered crew. y was confiscated we do not know; it was suppos- competent judges in Canton, that the whole amount a \$150,000. It was well that a written pledge

UNIVERSITY OF MICHIGAN LIBRARIES

for the payment of at least a part of it, was secured in due time; otherwise, there is reason to believe, fair promises would have been of no avail. Claims, in order to have any force on the Chinese, must be "on record;" and then, unless the time and mode of payment be so written in the bond," it will be difficult to obtain them.

The promise for the payment of \$15,945 was fair, and fairly "on record;" but for six full years was the fulfilment of the promise delayed. The correspondence which took place in the mean time is curious. About once in two months, or six times a year, during the whole six years, the French consul addressed the government; and was often received fair promises in reply; one of which replies, as a sample of the whole, we will put "on record." It is dated, Canton, March 10th, 1834: Taoukwang, 14th year, 2d moon, 1st day. The translation of it is as follows:

Hwang, the Nanhae heñ, sends this communication in answer. On the 5th day of the 1st moon in the 14th year of Taoukwang (Feb. 23d,) I received a document from the Kwangchow foo. On opening it, I found that— On the 27th day of the 12th moon in the 13th year of Taoukwang (Feb. 27th,) he had received an official document from the acting nganchásze of Kwangtung, *Heu*, which, being opened, showed that—

On the 16th day of the 12th moon in the 13th year of Taoukwang (Jan. 5th,) the nganchásze had received an official document from the governor of the two Kwang provinces, *Loo*. It was as follows:

On the 8th day of the 12th moon in the 13th year of Taoukwang (Jan. 7th,) I received a communication from the governor of Fuhkëen and Chéang provinces, *Ching*,—as follows:

'On the 19th day of the 10th moon in the present year (November 30th) I received the following communication from your excellency.

'On the 14th day of the 9th moon in the 13th year of Taoukwang (Oct. 8th,) the French consul, Gernaert, residing at Canton for the control of men and ships of his nation trading to Canton, presented the following address:—[Here follows Mr. Gernaert's address of 26th Oct. 1833.]

'Having received it, I gave this public reply:—'On examination of the document, a copy of which was enclosed, it appears that the effects as above stated brought under confiscation, for repayment to the sufferers' families, were at an early period sold off by the Fuhkëen government, and the proceeds laid by. But they have not yet been forwarded. During the last winter, the nganchásze having made inquiry, wrote to hasten the remittance. But still the remittance has not been made. Wait till another express has been sent to urge the speedy remittance of the money. When it arrives, orders will immediately be issued to the hong merchants, to be enjoined on the said consul.' Besides issuing this order, which was pasted up publicly, I also again send a flying communication, requesting your examination of both the former communications and the present; and requesting that you will speedily take the aforesaid amount of confiscated money, and give strict orders respecting it, that with speed an officer be sent to Canton in charge of it, for the purpose of its being delivered for transmission to the said country. Pray do not suffer further delay. I request also that you will favor me with an answer on which I may act."

'This having reached me (the governor of Fuhkëen, &c.), on the receipt of it made investigation and find, that several communication have been received from your excellency's office urging the speedy remittance above named. Both the former acting governor Wei and myself have, from time to

time, give of an offic aforesaid, reigner, th of the suff the money been great have given they unite and then m money laid foreigner G families of 'It is bes mination h

to the nganchäsze of Fuhkeën, to make choice speedily of a department to take charge of the said foreign money laid up at Canton province, to be delivered to the said foreigner, to remit it to his country, for distribution among the families; no report has been made, nor any request presented for the same to be admitted. The principle of tenderness to foreigners has been observed. Having now received the above communication, I have directed the poochingsze and nganchäsze the following directions: 'that you select, according to the orders given, a trusty officer, to be sent for him to be sent to Canton in charge of the foreign money, for the purpose of having it delivered to the said foreigner, to be remitted to his country, for distribution among the families: and that this be done without any further delay.' I am dependent on me that I reply to you, requesting your ex-

amine me (the governor of Canton), I unite the circumstances, and issue full directions to you the nganchäsze, that at your request you, in conjunction with the poochingsze, give orders to the poochingsze to enjoin orders on the said nation's consul, that having done so, he may not oppose. [The nganchäsze adds,]

3, (the nganchäsze of Canton) I, on the receipt of it, in conjunction with the poochingsze, do also unite the circumstances, and issue full directions to you the Kwangchow foo, that at your immediate request you enjoin orders to the hong merchants, to enjoin orders on the said nation's consul, that he may have knowledge hereof. Oppose not.

3 Kwangckow foo was transmitted by him, and having done so, I, on the receipt of it, forthwith issue full directions to the hong merchants. When this reaches them, let them at their request enjoin orders on the said nation's consul, that having done so, he may act accordingly. Oppose not. A special order,

the said consul had long persevered in this course, urged upon another, until they numbered scarcely six, an answer came and money with it: but the sum \$15,945, not to mention the interest thereon not claimed, the money paid amounted to only leaving a balance of \$2,801.83 in the hands of the said consul; to make up this deficit, long arguments and minute discussions about the various rates of exchange, &c., &c., were had at the hand of the consul; but they did not liquidate the deficit. A renewed address in behalf of the king's government had its desired effect; and, within a few days, a promise has been made to Mr. Gernaert, that the said order shall be immediately laid before the govern-

ment. In the *Navigateur* there is a strange blending of light and shadow. We have here given only the fair side of the picture; of some of its darker shades, we refer our readers to the communications of R. I., page 371 in our last volume.

ART. VIII. *Opium: memorial to the emperor proposing to legalize the importation of it; some of the probable results of such a measure; translation of the memorial.*

THE official document of which we annex a translation has been a leading subject of conversation during the present month, among both the natives and the foreigners resident in Canton. It is a representation to the emperor from Heu Naetse, an officer of one of the local courts of Peking, in reference to the trade in opium, recommending its legalization on the ground of the impossibility of stopping it. The claim of Heu Naetse to be heard on this subject rests on his having been for some time commissioner of the salt agency in Canton, and for a short time, in 1834, acting judicial commissioner; in both which offices, as he himself states, he made it his special duty to inquire particularly into every thing of importance respecting the province. We have been informed, that, at the period when he was about to return to Peking, he addressed a foreign merchant residing in Canton, through the medium of one of the hong merchants, making very minute inquiries respecting the trade carried on at Lintin. The document has been sent down by the emperor to the provincial government of Canton, with instructions to deliberate and report thereon. Their opinion will probably be in favor of the trade; but it has not yet been given.

The points most worthy of notice in this document are, the spirit of change which pervades it, and the admissions made, that it would be wrong—nay, that it is impracticable—to cut off the foreign trade, that this branch of commerce is not unimportant as regards the revenue arising from it, and that it is the main, if not the sole, support of multitudes of the dwellers on the coast. It is pleasing to observe that how low a rate some, at least, of the emperor's ministers are disposed to hold 'matters of mere empty dignity.' But we hardly expected to find the 'paternal' Chinese government speaking with such contempt of its children, and approaching so nearly to the Malthusian principle of population, that it is for the general good of a closely peopled country to have its numbers thinned by any means whatever.

Unless a counter-memorial should induce the emperor to set aside the recommendations of Heu Naetse, backed, as we think they are, by at least one cabinet minister (Yuen Yuen), we may expect ere many months have passed, to see opium legally imported. What may be the consequences it is impossible to foresee. As long as the rapacious spirit of the local government, in all its branches, continues unrestrained, it is likely that the legal importations will be but small; that it will be found nearly as cheap to smuggle as to import legally; and since money, owing, to the unphilosophic notions of the Chinese respecting it, may be an article of clandestine exportation, even in a greater degree than it now is, it is likely that illegal traffic will, on

tion, be found the cheaper of the two. Opium, now be landed in Canton clandestinely at the rate of 5½ taels per pecul will, with legal duty of 5½ taels per pecul will, with legal duty of 5½ taels per pecul will, with legal duty of 5½ taels per pecul will, amount to about \$10, and it is not to be expected that the same sum will be expended on the numerous underlings who have hitherto been largely fed. Persons who will now for the first time begin to derive from. One result, it is hardly to be doubted, will be of the legalization of the trade; the vessels now at coast of China will soon be increased, since the vessels counteracted by native purchasers will be confined to the coast on landing the cargo: once on shore, it will be subject to seizure. And in this manner may we not expect a speedy opening of the ports of this empire?—We subjoin the memorial, and reply to it.

The vice-president of the sacrificial court, presents the memorial in regard to opium, to show that the more severe laws that are made, the more widely do the evils arising from it spread, and that it is right urgently to request, that a commission be appointed to examine the arrangements respecting it; to which end he begs your sacred majesty to cast a glance hereon, and to order a faithful investigation of the subject.

It is represented that opium was originally ranked among stimulants; it also checks excessive sensibilities, and prevents the evil effects of noxious vapors. In the time of the Le Shechin of the Ming dynasty, it is called *Afoo*. One who is long habituated to inhaling it, it becomes necessary to use it at regular intervals, and the habit of using it, is destructive of time, injurious to property, and yet it is a life. Of those who use it to great excess, the body wastes, the face sallow, the teeth decay, and the individuals themselves clearly see the evil effects of it, and abstain from it. It is indeed indispensably necessary to make laws and regulations in order to eradicate so vile a practice.

It is represented that there are three kinds of opium: one is called *black*, because of its color, and hence it is also called *black*; a second kind is called *white*, because it comes from Bengal; a third kind is called *red skin*, because it comes from Bombay; the third kind is called *red skin*, because it comes from Madras. These are places which belong to England. In the time of the Le Shechin, as well as previously, opium was inserted in the list of medicines, subject to a duty of three taels per pecul, and an additional charge of two taels four mace and one fen per pecul, and the name of charge per package. After this, in the first year of Keäking, those found guilty of using opium were subject only to the punishment of the pillory and were not liable to be transported in various degrees, and death after a certain time in prison. Yet the smokers of the drug

air to any island that may be selected as an entre-
 ve sea-going vessels can meet them there; it is
 cut off the trade. Of late years, the foreign vessels
 ports of Fuhkeën, Chëkeëng, Keängnan, Shan-
 tsin and Mantchouria, for the purpose of selling
 ough at once expelled by the local authorities, yet
 quantity sold by them was not small. Thus it
 h the commerce of Canton should be cut off, yet
 ble to prevent the clandestine introduction of mer-

ily increase of opium is owing to the negligence of
 g the interdicts? The laws and enactments are the
 tionate underlings and worthless vagrants employ
 es; and the more complete the laws are, the greater
 s are the bribes paid to the extortionate underlings,
 til are the schemes of such worthless vagrants. In
 oukwang, the governor of Kwangtung and Kwang-
 roceeded with all the rigor of the law against Ye
 f the opium establishment then at Macao. The
 hat foreigners having no one with whom to place
 oded to Lintin to sell it. This place is within the
 rovincial government, and has a free communication
 les. Here are constantly anchored seven or eight
 ch the opium is kept, and which are therefore call-
 æ.' At Canton there are brokers of the drug, who
 ' These pay the price of the drug into the hands of
 gers, who give them orders for the delivery of the
 eiving ships. There are carrying boats plying up
 r; and these are vulgarly called '*fast-crabs*' and
 s.' They are well-armed with guns and other
 manned with some scores of desperadoes, who ply
 7 were wings to fly with. All the custom-houses
 hich they pass are largely bribed. If they happen
 of the armed cruizing boats, they are so auda-
 nd slaughter and carnage ensue. The late gov-
 occasion, having directed the commodore Tsien
 arate with Teën Poo, the district magistrate of
 captured Leäng Heenneë with a boat containing
 nt of 14,000 catties. The number of men killed
 s amounted to several scores. He likewise inflicted
 aws on the criminals Yaoukow and Owkwon (both
 ers), and confiscated their property. This shows
 the enforcement of the laws is not wanting; and
 not be checked. The dread of the laws is not so
 f the common people, as is the anxious desire of
 s the to all manner of crafty devices; so that
 the law is rendered wholly ineffective.

both on the rivers and at sea, banditti, who, with
 under the orders of the government, and of being

sent to search after and prevent the smuggling of opium, seek opportunities for plundering. When I was lately placed in the service of your majesty as acting judicial commissioner at Canton, cases of this nature were very frequently reported. Out of these arose a still greater number of cases, in which money was extorted for the ransom of plundered property. Thus a countless number of innocent people were involved in suffering. All these wide-spread evils have arisen since the interdicts against opium were published.

It will be found on examination that the smokers of opium are idle, lazy vagarants, having no useful purpose before them, and are unworthy of regard, or even contempt. And though there are smokers to be found who have over-stepped the threshold of age, yet they do not attain to the long life of other men. But new births are daily increasing the population of the empire; and there is no cause to apprehend a diminution therein: while, on the other hand, we cannot adopt too great, or too early, precautions against the annual waste which is taking place of the resources, the very substance of China. Now to close our ports against [all trade] will not answer; and as the laws issued against opium are quite inoperative, the only method left is to revert to the former system, and to permit the barbarian merchants to import opium paying duty thereon as a medicine, and to require that, after having passed the custom-house, it shall be delivered to the hong merchants only in exchange for merchandise and no money be paid for it. The barbarians finding that the amount of duties to be paid on it, is less than what is now spent in bribes, will also gladly comply therein. Foreign money should be placed on the same footing with sycee silver, and the exportation of it should be equally prohibited. Offenders when caught should be punished by the entire destruction of the opium they may have, and the confiscation of the money that may be found with them.

With regard to officers, civil and military, and to the scholars and common soldiers, the first are called on to fulfill the duties of their rank and attend to the public good; the others, to cultivate their talents and become fit for public usefulness. None of these, therefore, must be permitted to contract a practice so bad, or to walk in a path which will lead only to the utter waste of their time and destruction of their property. If, however, the laws enacted against the practice be made too severe, the result will be mutual connivance. It becomes my duty, then, to request that it be enacted, that any officer, scholar, or soldier, found guilty of secretly smoking opium, shall be immediately dismissed from public employ, without being made liable to any other penalty. In this way, lenity will become in fact severity towards them. And further, that, if any superior or general officer be found guilty of knowingly and wilfully conniving at the practice among his subordinates, such officer shall be subjected to a court of inquiry. Lastly, that no regard be paid to the purchase and use of opium on the part of the people generally.

Does any suggest a doubt, that to remove the existing prohibitions will detract from the dignity of government? I would ask, if he is

pleasures of the table and of the nuptial couch may in to the injury of health? Nor are the invigorat- and *wootow* devoid of poisonous qualities: yet it heard that any one of these has been interdicted. al of the prohibitions refers only to the vulgar and those who have no official duties to perform. So of government, the scholars, and the military are no detriment to the dignity of government. And proposed importation and exchange of the drug for , more than ten millions of money will annually be wing out of the central land. On which side then ich the loss? It is evident at a glance. But if we c and delay to retrace our steps, foolishly paying r of mere empty dignity, I humbly apprehend that it is proved impossible to stop the importation of n be found that we have waited too long, that the rished, and their wealth departed. Should we r round, we shall find that reform comes too late. rrvant of no value, I have by your majesty's con- ceen raised from a subordinate censorship to various th at court and in the provinces; and filled on one f judicial office in the region south of the great gtung). Ten years spent in endeavors to make produced no fruit; and I find myself overwhelmed remorse. But with regard to the great advantages, any place where I have been, have never failed r inquiries. Seeing that the prohibitions now in n serve but to increase the prevalence of the evil, none found to represent the facts directly to your g assured that I am myself thoroughly acquainted e of things, I dare no longer forbear to let them y's ear. Prostrate I beg my august sovereign to ions to the governor and lieut.-governor of Kwang- the superintendent of maritime customs, that they te the character of the above statements, and that, really correct, they speedily prepare a list of o a change in the system, and present the same for l decision. Perchance this may be found adequate ing out of money, and to replenish the national xpressible awe and trembling fear I reverently ial and await your majesty's commands.

Document was received on the 2d of July, from the ninisters at Peking, addressed "to the governor of ng, and the lieutenant-governor of Kwangtung, to be enjoined also on the hoppo Wan."

of the 4th month (2th June 1836), the following given to us.

ice-president of the sacrificial court, has presented ard to opium, representing. that the more severe

the interdicts against it are made, so much the more widely do the evils arising from it spread; and that of late years, the barbarians, not daring openly to give it in barter for other commodities, have been in the habit of selling it clandestinely for money, thus occasioning an annual loss to the country estimated at above ten millions of taels. He therefore requests that a change be made in regard to it, again permitting it to be introduced and given in exchange for other commodities. Let T'ang Tingching deliberate with his colleagues on the subject, and then report to us. Let a copy of the original memorial be sent with this edict to T'ang Tingching and Ke Kung, who are to enjoin it also upon W'an. Respect this.'

"In obedience hereto, we, the ministers of the Grand Council, transmit the enclosed."

ART. IX. *Journal of Occurrences. Imperial envoys: insurrection in Kwangse; disturbances in the province of Szechuen; north-western Tartary; Keangsoo.*

THE *imperial envoys*, who reached Canton in May, have twice taken leave of the provincial officers and embarked in their boats for Peking; and twice they have been remanded by the emperor to investigate new cases. They are now in Canton. But as yet, we are in possession of too little information to enable us to make any satisfactory report respecting their investigations.

Insurrection in Kwangse. It is reported that a dispatch has just reached his excellency Tang, governor of Le'ang,—the 'two wide' provinces, Kwangtung and Kwangse,—the 'wide-east' and 'wide west'—respecting insurrectionary movements in the latter province.

Szechuen. The disturbances, which have from time to time been reported in this province, have been generally supposed to be of a trivial nature, but from a document incidentally referring to them it would seem that this is not the case. The disturbances have been chiefly occasioned by the wild tribes lying between that province and Tibet, and extending from thence southwards between A'sám and Yunnan. The only data we have for judging of the character of these disturbances is from a statement contained in the document above mentioned, that after they had been successful in driving back the barbarians and burning their strong holds, the financial commissioner (pooching sze) of Szechuen drew up a list of 55 civil and 350 military officers deserving of rewards; and even after the governor had reduced the number, there still remained on the list presented to the emperor, the names of above 30 civil and 200 military officers. The document which contains these statements is the result of an inquiry into the conduct of the financial commissioner, who had been accused of taking the power into his own hands, and unduly influencing the actions of the governor; of which charge he has been acquitted. Two imperial commissioners have been dispatched into this province, for what reason we do not learn.

North-western Tartary. The estimate of the military expences of these colonies for the year 1837 is 680,000 taels. What the amount of expences on the civil list is, does not appear.

Keangsoo The salt works in this province have been until lately under the direction of a distinct governor, of rank equal to a provincial lieutenant-governor. Having very much diminished in importance, the government of them was transferred to the governor of the three provinces Keangsoo, Nganhwuy, and Keangse. Under his care they have increased in importance, and value, and his excellency finding the trust a heavy one has requested a return to the former plan. This request however, his majesty has, with high commendations of the governor's character, refused.—Taoushoo has been at the head of the government many years, and was in the course of the last spring permitted to visit the imperial court for a season.

ean periodicals beyond the Ganges : Prince of Wales' te ; Malacca Observer ; Periodical Miscellany ; Sin- nicle ; Singapore Free Press ; Chronica de Macao ; parcial ; Canton Register ; Canton Press ; and Chi- ory.

ly a goodly list of periodicals ; and considering the f time, place, &c., in which they have originated, the nation which they collectively embody, the interest which is linked with them, it is easy to perceive how robably will, exert no inconsiderable influence on the ; eastern hemisphere. The chief object we have in sent article, is to bring these several works more dis- tice of such of our readers as are not already familiar ng thereby to increase their circulation and to procure tion which they merit. If the amount of original ts in history ; notices of new productions and discov- oral, vegetable, and animal kingdoms ; records of new the various branches of commerce and civil policy ; ting the manners, habits, customs, laws, and languages men and of nations hitherto very imperfectly known the civilized world ;—if the collected mass of inform- d kindred subjects, is to have weight in determining litery productions of this prolific age, our Ultragan- will not suffer by comparison with those of any other ld. On the conductors of these publications, great e devoted. Like sentinels, they occupy important nd on high ground. On every side wide fields for read out around them. The whole world of nature works of the Almighty, are open to their inspection.

But to portray faithfully the character of all these—delineate accurately the form and features, the actions and mental acquisitions of tribes thoroughly savage or only half-civilized; to gain complete command of many and very difficult dialects; to trace out and elucidate historical facts which transpired in times long gone by; to describe the geographical boundaries of states and empires, with all their varieties of climate, soil, and products—*hic labor, hoc opus est.*

The Prince of Wales' Island gazette is, we believe, the first periodical in the English language, which the traveler eastward finds after passing the Ganges. We have been very anxious to obtain complete files of this paper; but have succeeded in getting only of volume third, Nos. 27 to 52, from July 4th to December 26th, 1835. It is a large quarto of four pages, with three columns on each; and is "printed and published by William Cox, Beach street," Penang. From one of the numbers before us, and from the Singapore Free Press, it appears that a newspaper, called the "Prince of Wales' Island Gazette," was first published in that settlement in 1805, and continued till August 1827, a period of twenty-two years; when the government, 'from displeasure at some remarks relative to the Siamese treaty,' withdrew its accustomed patronage, and the proprietor, thinking he could not conduct the paper without that support, discontinued it. On the 22d of August, in the same year, appeared the first number of the "Penang Register and Miscellany." This was a weekly paper; and, according to the Singapore Free Press, "was conducted with considerable ability and industry. It entertained liberal views, and espoused popular interests; although the editor appears to have, in some measure, advocated the wisdom of imposing those restrictions to which the Indian Press was then subjected. It was doomed, however, to an ephemeral existence; and in the month of September 1828 expired under the frowns and threatened penalties of authority, the editor having been bold enough to publish, on a separate slip, certain paragraphs of his paper which the censor had destined to oblivion, being thus brought to feel, and perhaps to acknowledge, the evil effects of a system which he had done something to encourage." On the 25th of October 1828, came out the first number of a new weekly publication, called the "Government Gazette, Prince of Wales' Island, Singapore and Malacca." It arose under the immediate patronage of the government, and closed its short career on the 3d of July, 1830, "when the government, which had brought it into life, was abolished." On the 20th of July 1833, the first number of a second "Prince of Wales' Island Gazette," the one now before us, made its appearance.

Among the topics of local interest in those numbers of the Gazette which have reached us, piracies and temperance societies are conspicuous. In the number for December 26th, there is a prospectus of a society to be called "the Penang anti-mendicity and friend-in-need Society," wherein it is proposed, that a committee be appointed to inquire into every case, and to relieve, in such a way as may seem best, those who are truly needy, and thereby break up the mendicant

hinese Gleaner. See our second volume, page 186.
of the Observer took a very lively interest in the
Chinese. In the number for April 10th, 1827, page
following pertinent remarks:

ommunicating instruction amongst the Chinese is certain-
serious objections. When a boy enters school he must
curately a book called the classic of three characters, so
ry three characters form a complete sentence. After he
ainted with the sound and forms of these characters, he
r Books which are compilations of the sayings of Confucius
t of so much importance in the system that the sounds and
ell remembered before any attention is paid to the sense,
mpelled to repeat a book three or four times through, be-
its meaning. Some allowance ought to be made to this
, since there is nothing in the form of the character to indi-
: must be learnt entirely from the lips of another; but still
l too much time sacrificed to sound. Even where the un-
judgment are allowed to operate, it is very problematical
age results from so laborious an exercise of memory; but
encouraged to the prejudice of the understanding, conse-
nious to correct education must unavoidably ensue. The
regard which the Chinese pay to the sense of the authors
, in the first instance, is a capital defect in their system.
xious to fill the mind with ideas as to load the memory
wd the imagination with symbols. It is somewhat singu-
re are reputed for their sagacity in conducting pecuniary

ters, that no provision whatever is made in their schools for teaching the science of numbers; even their swan pwan is not taught the boys, their education comprising writing and reading only. Abstract science of any description has little or nothing to do with their education. It is not that their writings are devoid of abstruse subjects or that their language is incapable of expressing metaphysical ideas, but that they deem it more important to pay attention to things of a practical nature."

The Observer was ably conducted on liberal principles. Not only the cause of education, and the diffusion of useful knowledge, but the freedom of the press, and the abolition of slavery, were advocated in strong but temperate terms. The strenuous and unshrinking zeal with which the editor exposed the system of slavery—still prevailing in that settlement—"roused the particular resentment of government, which, to effect the suppression of the Observer, had recourse to a system of intimidation and other acts of petty tyranny as utterly contemptible as they were finally effective." The remarks on slavery excited some dissatisfaction also among the inhabitants of the settlement, who were personally interested in the case. Until the establishment of the Canton Register, Dr. Morrison was a constant contributor to the pages of the Observer. His communications consisted chiefly of notices of local occurrences and of extracts from the Peking Gazette. In the number for February 12th, 1828, there are some curious notices of "Chinese students," which we quote.

In modern times, there have been several in Europe; firstly, Dr. Hager, who perished, we believe, in most unsuccessful efforts to acquire patronage in England and France some twenty years ago. Secondly, Dr. Montucci, a stout persevering veteran in Chinese literature, who, after fighting hard with the English, retired to Prussia, spent his time and property on Chinese types, projected a Chinese dictionary, till the grave opened to invite him into which he abandoned his Chinese enterprise, renounced the dictionary, and returned to England all his materials for sale. Thirdly, M. Rémusat, *m. d.* of Paris, a scholar and a gentleman, who has edited beautifully some old translations of Chinese classics, new modelled; and has the merit of procuring in Paris a royal chair for a professor of Chinese. Rémusat has half a dozen pupils, whose names we do not know; one of them, S. Julien, has edited, under the patronage of the English banker, H. Drummond, esq. (a most benevolent man, and we hope a devout Christian), the works of Mencius. Fourthly, in Russia, the baron Schilling, patronised by his imperial majesty. Fifthly, the German Klaproth, a devoted literature-monger, who knows the Chinese and the contents of a great many books, and tries to live by his craft. Sixthly, Morrison, the Chinese lexicographer, a plodding genius, who professes to study utility in his several works. Seventhly, Marshman, the Indo-Chinese gleaner, whose *Clavis Sinica* and "*Lun-nee*" exhibit volubility and diffuseness. Eighthly, Davis, of China, known by a miscellaneous volume, containing specimens of the Chinese novel, drama, and proverb, neatly printed by Murray, Albemarle street. From this quarter we expect something more, ere long, on Chinese poetry.

We have omitted some names which ought to have taken precedence, because we apprehend they have abandoned the good cause. We mean sir Thomas Staunton, bart., well known in this department by his translation of the *Imperial Code of China*. Next, Mr. Manning many years resident in China, and a constant student of the Chinese language; but whose lucubrations still remain, it is said, (unwritten) in his own cranium; Chinese would say in his

is of a "intended work," to be called the Indo-
ory, and to be printed and published by subscription,
e Anglo-Chinese college, appeared in the Malacca
ember 29th, 1827. The following is the Prospectus.

f this nature are numerous and possessed of varied interest;
s reasonable to expect when a new one is announced, that
some claims to originality or novelty, if its projectors would
bation and patronage of an intelligent public. Every one
spectus of a new work doubtless has reasons which satisfy
robability of its meeting with a favorable reception, although
le to persuade others to view them exactly in the same light
hoosing subjects for the amusement or instruction of the
the notions are frequently formed respecting its taste; hence in
er undertakings experiment is the best criterion of merit.
ut feelings of diffidence, accompanied by the conviction of
' highly desirable, that proposals are now made for establish-
' be denominated the "Indo-Chinese Repository." The com-
formation that has yet been obtained respecting the Chinese,
he length of time during which Europeans have had inter-
s, seems in some measure to justify any attempt to increase
with that singular and ancient people. It is moreover an
the college to afford all possible information on the subject
: literature. The Repository will comprise original essays on
ilosophy, manners, customs, and general literature of the
ions, together with such local information as may be deemed
ng. It is particularly wished to develop the *mind* of China,
uch as possible the causes of that uniform mode of thinking
h the Chinese have adopted from time immemorial, and to
ertinaciously adhere in spite of changes and improvements
nformation of political nature, and of the present system of
ns in China, it is hoped, will be from time to time procur-
tional interest to the work. As this people are possessed of
rtion of ancient literature, translations will be given of such
omposition as appear calculated to interest and gratify the
sist in investigating the causes of those revolutions which
s in the government, and the changes which may in other
en experienced.
s to ascertain how far their system of political economy is de-
mental thralldom in which the mass of the people have been
d; and what peculiar causes have contributed to that ascen-
minds of their subjects, which the government at present

possess. The rites and ceremonies of the Chinese, whether civil or religious, public or private, will claim our attentive consideration.

"The projectors of this work will deem it their duty to use all possible means for acquiring information illustrative of the manners, customs, &c., of other countries. The plan embraces the natural and moral phenomena of the kingdoms of Siam, Cochinchina, Japan, &c. It is also wished to investigate the history of the Malays, and collect whatever is interesting or curious respecting them. There is danger indeed of proposing more than may be actually realized; but the prospect of enlarging the establishment under the auspices of which the present periodical is to be published, warrant the hope that persons may ere long be employed, who will turn their sole attention to the languages of the countries around us. In the mean time, the utmost endeavors shall be used to obtain assistance from those gentlemen whose situations or opportunities afford them the means of imparting the requisite knowledge. Communications will be thankfully received in any department of oriental literature. Government having evinced a laudable desire to promote inquiry into the intellectual and moral state of neighboring nations, it is hoped a publication of this nature will meet with their encouragement.

"The Repository will contain occasional notices and reviews of such works as seem to bear upon its peculiar object. It will comprise sixty octavo pages closely printed on English paper, price one Spanish dollar. The profits, if any, after the expenses of printing, paper, &c., are defrayed, will be given to the funds of the Anglo-Chinese college. It is intended to commence the periodical as soon as a sufficient number of subscribers is obtained; and to issue the numbers on the first week of January, April, July, and October, respectively. Application may be made to the superintendents of the college, and to the Editor of the Observer, who will furnish subscribers with copies according to their directions, until agents for that purpose be procured."

The intended work never appeared. However, we are induced to hope that the original design of the Indo-Chinese Repository, which was quite like that of the Indo-Chinese Gleaner, will at length be carried into effect. This we are led to expect from the prospectus of a Magazine, to be called the Periodical Miscellany and Juvenile Instructor, which has recently come to hand, and in which we find the first part of that issued in 1827, copied verbatim. The new prospectus is dated Malacca, April 18th, 1836; and, after repeating the first paragraph of the former one, quoted above, thus proceeds:

"It may be affirmed with truth, that there never was an age when so much was doing for the advancement of the Redeemer's kingdom, and for the general good of mankind, as the present: so extensive is the effort to diffuse abroad the knowledge of the Lord Jesus Christ, and so various are the plans fraught with benevolence to man, that none, who bears the name of Christian, should remain an uninterested spectator; much less should any one be ignorant of what is doing. And yet there is no little danger of being both uninterested with, and ignorant of, what is doing, unless the mind be frequently brought in contact with the varied objects of importance, which engage the attention of the Christian world. In order to accomplish this purpose, as well as to supply a source of profitable reading and interesting instruction to our little community, proposals are now made for establishing a Magazine to be denominated the Periodical Miscellany and Juvenile Instructor; to contain, among other matter, subjects of the following nature.

nation concerning various plans of benevolence in different ; matters of local interest; modern improvements, calculations of interests of mankind; miscellanea, respecting the various parts of the Malayan Peninsula, and the islands of the Eastern Archipelago; and occasional papers of the East, particularly those spoken of *ultra Ganges*. The Editor is aware of the great difficulty of conducting a periodical, so as to prove interesting and useful: but he has been encouraged by the support of friends, in the discharge of his editorial duties to the work.—Those persons who may be willing to send more or fewer copies, can send their names to the Editor, and those friends who may feel disposed to contribute to the periodical, may send their contributions to the same place, addressed to the Editor. The next Periodical Miscellany will consist of twenty-four octavo numbers; and will be published on the 5th day of every month: the first will be issued on the 5th of June 1836.”

The *Chronicle and Commercial Register* is the next paper to notice. For several years it was published in Singapore, and printed on a quarto sheet; but in 1830, it was extended in scale and was issued weekly. Number 22d, 1827, is the earliest one which we have seen to that date the paper was published regularly once a week. It must have been commenced early in the year 1826.

The *Singapore Free Press*, however, it is now nearly four years since the *Chronicle* was first published. In the last number to hand, that of the 2d ultimo, the Editor says, “We are happy to fulfill our promise of publishing the *Singapore Free Press* paper. That it has not been *our* fault we assure our subscribers believing, and that it will not be *theirs* in consequence of our humble exertions we are equally certain, if the success of the present year of one third in addition to the number of subscribers be a standard of their approbation and

the success of the *Singapore Free Press*, *Mercantile Advertiser* paper, appeared on the 8th of October, 1835; the intention of which having been previously announced to the public in Singapore, in the form of a prospectus.

It is our wish to possess all the advantages for which it is intended, and to be free from the restrictions imposed by authority, but at the same time to be exempt from the exclusive influence of mere individual or party influence. A monopoly of publication, when abused, is equally injurious with a monopoly of trade, and is opposed to all those interests which a really free press is intended to promote. We have lately witnessed the unjust exercise of such a monopoly; and the establishment of this paper will, it is believed, be a great benefit to the colony. Those benefits which can only be fully enjoyed where there are no restraints except such as are imposed by candor and justice. In conformity with these principles the first number of the *Free Press* will be issued as soon as a printing apparatus, having been ordered from Calcutta, can be brought into operation. It is our wish to delineate the exact plan on which a newspaper settlement shall be conducted; but the following is offered as the matter which it is intended to contain; namely:

"Intelligence connected with the interests of this Colony, and its general commercial relations; also, notices of the government, natural history, productions, &c., of the neighboring native states; with a list of the imports and exports, remarks on the state of the market, and a copious Price Current. It shall be printed on Europe paper of the same size as the Singapore Chronicle, the price to be \$4½ per quarter, or if paid in advance, \$16 per annum. The conducting of the paper has been undertaken by a gentleman of considerable experience as an Editor, who has secured the assistance of several contributors; and their united efforts will, it is hoped, render the Singapore Free Press acceptable to the public."

By the united, and sometimes conflicting, efforts of the Chronicle and Free Press, the local occurrences and interests of Singapore are pretty fully and fairly represented. The editors of both papers seem well pleased with the support they respectively receive from their friends and correspondents, who are on their part, we doubt not, equally well satisfied. We marked several paragraphs in each paper, which we intended to extract, but the space allowed for this article forbids our doing so.

The *Chronica de Macao*, the commencement of which we have put "on record," holds on its course prosperously and has now reached No. 14 of its second volume. Like the Singapore Chronicle and the Canton Register, the *Chronica de Macao* has drawn forth a worthy competitor; by which, as in the case of the two others, it is likely to be stimulated and spurred on in its career. We like to see fair and honorable competition; and if we judge rightly, there is ground enough, and that which ought to be occupied, to employ the best efforts of both papers. So far removed as Macao is from the more busy and spirit-stirring scenes of Europe, it would not be strange if some of its inhabitants, in regard to general information and the most recent enterprises and improvements of the age, should not keep pace with those born and bred in the happiest regions of the earth. To provide against this, by the wide and speedy diffusion of knowledge, by inducing the members of society each and all to read and think and judge for themselves, there are perhaps no better means than periodical papers. Perfect liberty of conscience and freedom of the press, we long to see as fully recognized and as well secured throughout the east, as they now are in any countries of the west. Let the truth, the whole truth, and nothing but the truth, be published, freely, boldly, widely, and it will triumph; it will unveil the mysteries of iniquity; it will break asunder the bonds of tyranny; it will bring consolation to the oppressed; establish and strengthen every lawful rule and authority; and hasten the good time, when all the dwellers on the face of the whole earth, enlightened and renewed by Jehovah's truth, shall worship him as their God and Father, and honor and love each other as brethren.

The *Macaista Imparcial*, the competitor of the *Chronica* mentioned above, is a semi-weekly newspaper; the first number of which was published June 9th of this year. On religious topics, a few paragraphs have appeared in the *Macaista*, upon which some of our readers may expect us to animadvert. This we chose not to do; though

by no means be regarded as approbation of them. Our object better, we think, by striving to let our country become controversialists, because others declare "k and oil" possess infallibility. In due time we shall receive the reward that is meet. The following is the *Macaista Imparcial*.

Periodicals are not in the number of those works which give vitality to their authors, yet the nature of their being, resembling lightning, is such as to instruct the people, to spin, to lay open the conduct of governments, to originate the saying, 'that metal when melted so mortal as when founded into types;' and hence too, the activity of the press became so dreaded, that laws were proposed to suppress its abuses; but when conformed to the laws, and confined to what they prescribe, there can be no doubt respecting the utility of the press to human society, in politics, in commerce, and in all else that is within the limited sphere of a single sheet.

The invention of the press, that excellent contrivance of human genius, discovered in the 15th century; for by it there was caused a revolution equal to that occasioned in politics by the discovery of a new world. It owes its first existence, in 1440, to John Gensfleisch, and its perfection, in Mayence, to John Faust and Peter Schaeffer. There have been some who questioned, whether this valuable invention, capable of producing error and truth, has not been as injurious to the world. To solve this problem, as a clever author has proposed, it is necessary to bring under notice all books, and to analyze the contents of the press, minutely discussing all the thoughts and opinions of all the writers of every nation, and age, since books have been printed, in short, to put together and review all that is true or false, sound, reasonable or absurd, in those works, which by means of the press are spread throughout the universe. This being an impossible task, let us, without troubling ourselves about the details, at once grant that we ought to be satisfied with the fruits derived from it. True it is, that more than once the press has been used to corrupt men's habits and to propagate error among the people; equally certain it is that through its medium, useful knowledge has been extended to both the nearest and the most remote nations; it has been spread abroad, strengthened, and reason has been kindled by its rays in the fields of science and art.

Our journals before the foreigners in Canton issued their's; and forth a new one. Perchance it may not merit such a reception as that edited by Balbi, nor be so well received by the public, not less different than their physiognomy; yet we are confident of a favorable reception from the public, resting our hopes on the promise we maintain in our paper, our faithful notice of the occurrences, as well as of the arrival and departure of the principal articles of commerce, together with the news which we shall publish on every Monday and Thursday, to contribute to render a paper, not connected with any other business, respectable. All that is uninteresting to the public, and tend to agitate quarrels (as anonymous correspondence) we find no room in this paper. We dedicate it solely to the use of the letter of Pelican says, '*Pela Ley e pela Grey*.'

So we hope that all these expectations and promises, respecting impartiality and truth, may be fully realized.

How many periodicals Macao may have had in former time we have not the means of ascertaining: however, single numbers of two have fallen in our way; the first is, "A Abelha da China," No 54, September 27th, 1823; the other is the "Gazetta de Macao," No. 1, January 3d, 1824.

The Canton Register, the oldest newspaper in this place, has now reached No. 31 of its ninth volume. A few short extracts will afford those of our readers, who may not see the Register, a more correct idea of its manner and sentiments than any remarks we can make. There are two minor points, however, to which it may be proper here to advert. One is the style of writing Chinese names: we would not write William Waterhouse in one word thus, *Williamwaterhouse*; although it would be quite as correct, for ought we can see, as to write *Tungtingching*, instead of *Tang Tingching*. The Chinese place the surname first, the reverse of the English mode. Quoting from the Penny Magazine, without correcting its errors, is the others point we have to notice. As it is generally known that the Editor of the Register has long been acquainted with the Chinese and their language, whatever goes forth to the world in his paper, respecting them, will be received as worthy of all credit. At first, we supposed he intended the quotations should be regarded, like the allusion to Howqua's property, as "mere jokes." If so, they are indeed, "amazingly prodigious." The square pagodas or *taas*, surrounded with urns of bronze; flag-staffs used as telegraphs; the bridge 5940 feet long and 104 broad; the immense number of others thrown from mountain to mountain, with beams laid from cliff to cliff; the 1400 stone beams all alike 2 paces long and 2 broad; the celebrated city, the ancient capital of southern China, having 12,000 bridges; these and a multitude of other similar "facts" are prodigious, aye "amazingly prodigious." We will not at present, however, undertake to deny them, though we have no more idea that they are true, than that the forts at the Rogue are in strength equal to those of Gibraltar. The Editor of the Register, we trust, will pardon us for these remarks on his paper, rather on the errors of the Penny Magazine, and bid its conductors to beware of what they publish respecting the interior of the "celestial empire."

The three paragraphs which we subjoin, taken quite at random, are fair specimens of the usual style of the paper. They need no comment farther than the remark, that the second one was occasioned by an edict against the Vincennes, belonging to the government of the United States, ordering her to "go home."

"In commencing another volume with a new year, our grateful feelings lead us to express our heartfelt thanks to the foreign community of Canton for their encouragement of our humble efforts; we hope, indeed, that the time is not very distant, when we shall have the pleasing task of combining the native with the foreign community in our expression of thanks for their liberal patronage of the Canton Register and General Price Current. In fact, the last publication is already taken by one native. The Canton Register is now in the 9th year of its existence; but alas, its early and great supporter, Morrison the sinologue, is no longer here, to inform the public, in its pages,

new-year's day of the Chinese which they call *yuen-tan*
 sely at the *tsze she*, or beginning of the day, after mid-
 r bodies in perfumed water, put on their best clothes,
 ie, worship the gods and fire off crackers. The family
 ey then go to worship the gods in the temple. At day-
 hers, wives, sons and daughters, and the domestic ser-
 ve with those, congratulate each other on the new-year.
 e days, visits of rejoicing are made to all relations
 re mutually returned, and they invite each other to
 the *chun fau*, "the wine of spring." All business is

stopped for several days, and all abandon themselves to pleasure in the way they like best. From the *yuen-tan* to the 5th of the moon, lucky days are chosen to suspend flower-lanterns on the houses and temples, at which ceremony the heat and clamor are great. If partnerships are to be dissolved or servants discharged, it is done in the first moon. On the *yuen-tan*, a little rain, or a north, a west or an east-north wind (N.E.), are all happy prognostics; but a south wind is deemed unlucky. An easterly wind brings rain, and a north wind, cold weather; the cold is an indication of the warmth of the ensuing spring season. On the first day of the year, they begin weighing water and continue weighing for twelve successive days. If the water is heavy, there will be much rain, if light, the season will be dry. The customs of the people—says our Chinese informant—are so numerous, that it is impossible to describe them all." *Vol. 9, No. 7, p. 26.*

The Canton Press was commenced in September, 1835; and its first and second numbers, on their appearance, were duly noticed in our pages. It has now reached No. 47 of its first volume. Like the Register, it is accompanied by a Price Current, and occupied chiefly with topics more or less connected with commerce. Tuesday is the publication day for the Register; and Saturday for the Press. In order that this paper also may speak for itself, we will give two or three quotations. In his paper for Saturday, February 6th, the Editor says;

"The editorship of this paper has changed hands, of which circumstance we avail ourselves of the earliest opportunity to give information to our readers; and as a kind of programme may be expected, as to the principles on which the paper will in future be conducted, we proceed to lay it before the public.

"It is our belief that the free trade with China, being open to all, we should allow it gradually to encroach upon a great many of the regulations which the Chinese have hitherto more or less strictly enforced in order to prevent any connection with foreigners not absolutely necessary to the purposes of commerce. Our intercourse which the Chinese is already, though it is only two years since the company's monopoly ceased to exist, much more extensive than it has hitherto been, owing to a greater number of vessels visiting both Whampoa and Lintin; and there being no surveillance on the part of the British to keep up a monopoly, the opportunities offered to the Chinese to evade the regulations of the *cohong* are much more frequent than before, and the Chinese are speculative enough to avail themselves of them, and to carry on an extensive trade, against the oppressive laws of the country, aided in so doing by the corrupted revenue officers, who seem to hold their offices on such precarious terms, that being liable to be turned off at any time, they are determined to "make hay whilst the sun shines," and this illicit trade gives them ample opportunities. It is to be supposed that a nation, agricultural, manufacturing and commercial, each in an eminent degree, and on that account more advanced in civilization than any other Asiatic people, will soon, if they do not already see that the many restrictions on their intercourse with foreigners, imposed by a despotic government, and enforced by a set of officers as venal as possible, cannot tend to its own advancement; and as the intercourse of the Chinese with foreign nations is becoming every day more frequent, and in consequence offers more difficulty to the government to prevent or at least restrict it as hitherto, they will become bolder in their evasions of the oppressive laws, and will make common cause with the foreigners and perhaps ultimately entirely throw off the yoke under which they labor for the benefit of their Tartar oppressors. Thus we may see within a short time, that our intercourse with the Chinese will be on a much better footing, by the simple but active means of self-interest, than it could possibly be

 one apparent."

y and uninterrupted intercourse with the Chinese is con-
 wn that the free trade system has worked well, but it
 hat it were relieved from the shackles which now oppress
 ape of immense duties in England; partly, in company's
 teas; and partly, in the shape of the East India com-
 tee here. In a former paper we have already observed
 such of which the bulk of teas, shipped to England con-
 veyed amounts to 300, but generally to 200 per cent. on
 on very few of the finest qualities of tea only the duty is
 es. It is true that the consumption, owing to the much
 ick the importer now sells, though the duty be about the
 us already increased a little, but there can be doubt that
 it to double its present quantity, were the duties the same
 ut 100 per cent. on the sale price, as they were during
 poly. The present high duties alone would have lessened
 ader expected to make, as the importation exceeded con-
 sumption, but the great cause of fall of prices and abstinence
 England, is the still undisposed of stock of the East India
 ne end of last year amounted to upwards of twenty-five
 nd which might, according to the East India directors'
 ther partly or at once thrown upon the market, thereby
 their will, and disheartening capitalists from laying out

their funds in tea speculations. The importer can therefore only sell for immediate consumption, on account of the unsettled state of the market from the above cause, and he being unwilling or unable to prolong his risk under such circumstances, presses the sale of his teas, and must submit to heavy losses.

"The shipping engaged in the tea trade under the monopoly, averaged about 28,000 tons per annum, and employed about twenty-four or twenty-six ships. During the first year of the free trade ending on the 31st of March, sixty-seven ships loaded at Whampoa, registering 34,962 tons, and during the second, no less than eighty-three ships of 41,934 tons register, thus shewing an increase of shipping upon the monopoly trade of 10,166 tons average during the first two years. In these none of the ships carrying British manufactures or eastern produce to China, and discharging at Macao and Lintin, without coming to Whampoa, are included; and these likewise have been much more numerous, during the last two years than before, nor are the country ships with cotton from Bombay, Calcutta, and Madras counted.

"The exports of teas to England since the trade was thrown open (23d April 1834,) up to the present moment, have amounted to lbs. 96,797,320; and those in the last season only up to the present time to lbs. 45,731,196, or lbs. 1,946,665 less than in the season before last; nor is it probable that before the new crop comes in, any more will go to England, since few teas are now in the market, and no ship laid on. The average price of the last season's teas, taking the Canton Commercial Price Current as guide, we find to be, a fraction more than 24 taels per pecul, producing 823,616 taels, or \$11,480,636, or at the exchange of 4s. 10d. £2,774,487. This proves with how much more vigor the free traders have entered into the trade, than was shown under the company, when the capital employed in purchases of tea in the year 1827-28, did not exceed £1,981,419, or near one million less than what is now engaged in the trade. The purchase amount in the last season of tea for the British market, was nearly as much as the proceeds of the annual sales of the company's teas, including their enormous profits as we find them to have amounted in 1830 to £3,024,138 only.

"Surely the British government, seeing what an immense capital is employed by its subjects in carrying on a trade from which the treasury derives so great a revenue, the duties on tea amounting to nearly one in every fourteen pounds of the whole revenue of Great Britain, ought to do something inwards removing the difficulties which now prevent this trade from becoming as flourishing as it might be, and lower the rate of duties, by which the revenue would probably, not only not be prejudiced, but even benefited as an increase of consumption must necessarily be the consequence."

Twelve dollars per annum may seem a high price for a weekly paper, like the Canton Register, or Press; but when their necessary expenses are brought into the account, it will be seen that neither of these papers can at present be afforded for a less sum, or even for so small a one, as that at which they are now sold. The expenses of the two papers, with their respective price currents, must be nearly the same in each case, and cannot be far from the following estimate, per month:

Interest on original capital, say \$2000.....	20.00
Wear and tear of machinery, repairs, &c.....	20.00
Rent of house, office, &c.....	50.00
Pressmen, and coolies.....	15.00
Lamps, oil, &c.....	10.00
Compositors' wages, more or less, say.....	100.00
Paper for printing and writing.....	10.00

225, multiplied by 12—\$2700 per annum, we add editorial services, the total of \$4700 will somewhat be of either of these papers. The subscription list of are credibly informed, shows that about 280 copies are sent from the office—to the Straits of Malacca, to the presidencies, and to several of the chief commercial Britain and in the United States; and about 325 Current are issued weekly from the office of the copy per annum. But several copies of the Register Current are sent gratuitously or in exchange for we suppose that two hundred and seventy-five of one, and \$5 for the other, per annum, giving a \$4675 will fully equal, perhaps exceed, the actual members of the Canton Register and General Price circulation of the Canton Press, and its "Commercial they having been commenced within the last twelve still less. This statement does not include re-iseiments, &c.; and though not minutely accurate, price of these publications is as low as the cir-ue case will allow. Moreover, the *situation* of an journal in Canton is by no means the most agree-imagined. Cut off from all civilized society except y of 'bachelors' like himself; having no intercourse inhabitants at their homes in their social relations, their public institutions or courts of justice; without patches, besides those which, and frequently at very me from beyond sea; watched and guarded as an ly animal by the servants of the police; confined "thirteen factories," except on a few special occa-alth's sake he is allowed to go abroad and be called one he meets; with no earthly security for his per-beyond the good-will of a time-serving magistracy; and the feelings of his best friends by telling too of the truth; never secure from being harassed, flattered, and cajoled; sometimes called 'able' and enounced as the mere 'tool of a party; in these task of an Editor, as such, however important in s truly "an ungracious one," and ought not to be l in estimating the cost of a public journal.

Our readers so long with remarks respecting the those concerning the Repository shall be brief. there were printed 400 copies; of the second, 400; of the fourth, 1000; and thus far one thousand of mber of pages in the 1st, was 512; of the 2d, 576; 4th, each, 584; giving a total of 2256 closely as: each volume has been accompanied with an of the first and second volumes was \$6 a copy, e of the subsequent ones has been only half that .st, no copies remain on hand; of the 2d, there are

13; of the third, 219; and of the fourth, 500. The present circulation in China is 200 copies; in Manila, 15; in Sandwich Islands, 13; in Singapore, 18; in Malacca, 6; in Penang, 6; in Batavia, 21; in Siam, 4; in Sydney, New South Wales, 6; in Burmah, 3; in Bengal, Nipál, and A'sám, 7; in Ceylon, 2; in Bombay, 11; in Cape Town, South Africa, 4; in Hamburg, 5; in England, 40; in America, 154 copies; this gives a total of 515 now sent out from the office monthly; about one fifth of these, however, are sent gratuitously to public Institutions, Journals, &c.

Hereafter, as hitherto, so long as it shall be our duty to conduct the Repository, we will endeavor to lay before our readers, from month to month, the most valuable information we can collect. In the course of our work, we have already noticed a great variety of subjects, but have exhausted none; while a multitude, and many of them of great importance, remain wholly untouched. A great deal more information, and that which is more definite, showing more accurately and minutely what the Chinese government and people are in every respect, is greatly needed, especially at the present time when the nations of Christendom are *beginning* to think on their relations with this empire. We hope the Repository, in due time, will embody all the most important narratives and facts, worthy of being placed on record, respecting the jurisprudence of the Chinese, their systems of education, domestic habits, social intercourse, public and private manners, religious and superstitious rites, history, arts, &c. Surely the time must come, soon we hope, when, the condition of this empire and the character and wants of its inhabitants being much more accurately known than they now are, the nations of Christendom, banded together to keep the peace of the world, each preferring each in honor, and all acting in regard to all on the golden rule—will rise in that true simplicity and dignity which ought to characterize the children of the King of kings, and strive together to elevate the Chinese to a high rank in the great family circle of enlightened and friendly nations.

P. S. Since writing the foregoing, new demands have been received for the Repository, not only for back volumes, but also for the present; these demands will increase the circulation to more than 800 copies, monthly.

ART. II. *Siamese History; notices continued, giving an account of the Siamese wars during the year 905 of their era, or the year 1535, A. D.* By a Correspondent.

SIAMESE ERA, 905. The king of Pegu remarked, 'formerly I marched to Siam with 30,000 men, and proceeded even to the vicinity of the city wall, to a place called Lumpli, and nobody came forth to molest

forces were too small for a protracted siege; and if I en times the number, I shall then doubtless succeed in With this design, he levied 300,000 troops, 700 elephants; gave his viceroy charge of the advance body; Prome was to command the right and left wings of the governor of Bassein, the rear. On Sunday, the waxing of the 3d moon, in the afternoon, the king and all his insignia of military glory, mounted on a male named the 'Earth Leveller,' caparisoned with royal magnificence being all drawn up with the utmost order and flying, and every thing in readiness, at a propitious hour an astrologer struck the mighty gong, whereupon, with powerful and delightful music, the march from Pegu began, and vigorously continued for seven days, till they reached Ama (Martaban) by way of Samí. At that time, a messenger named Káyachontapuri, saying that the guards had gained the city of Choia, that the Peguan king had, by a march of 100 miles, reached Muktama and there remained.—The prince Maudang caused all the families of Trichatwa and the surrounding country to move for safety to the city, and sent word to Pitsahon that the Peguan army should enter Siam, prince Thamma-phet to meet all the forces of the north, and intercept them.

Phayá Chakri to pitch a camp at Sumpli with 15,000 men in red jackets and red caps. The dragon prince (Phayá) sent a priest in the wat which is called the golden mountain to leave the priesthood and erected fortifications for the defence of the flotilla, extending from the wat of the golden mountain to the side of the jungle Pún. All the people begged him to erect a wall outside of the works for the further protection of the city, and hence called the canal of the dragon prince (Phayá) the dragon prince's canal. The nobleman Mahásená raised fortifications with 10,000 men (or the village of flowers,) having a thick battlement. His men wore green jackets and caps. The Phra-phet with 10,000 troops, established himself at Champá. His men wore red jackets and black caps. All manner of works were made with great vigor. The king of Pegu passing on the 4th moon, pitched the first division of his army at Prome at a new town called Mekhámyong: that under the viceroy at Bassein in the plains of Brachhét.

On the next morning, the 6th of the waxing moon 4th month, the king of Siam, Akrapat designed to march out and try the strength of his army in the plains of the golden mountain. He, therefore, to queen, arrayed in the habiliments of war, and two eunuchs, Kwan and Mahinto rájá, mounted their respective elephants. At a propitious moment, as notified by the royal astrologer, drums, and trumpets made the welkin resound, as a signal; whereupon the king commenced his movements,

taking with him his two sons. The elephants rushed on with fury bearing each a man armed with a musket mounted on his neck, while the foot soldiers marched on with swords, shields, spears, and guns, in rear and front, on both the right and left. The trampling of men and elephants made a noise like an earthquake. They continued their march to Kókphayá. When the Peguans saw this, they conveyed intelligence of all to their sovereign. He replied, 'without doubt, it must be Maná Chakrapat coming forth to have an elephant fight;' and he ordered his men to set themselves in array. Then mounting his elephant, with 10,000 men armed with swords, in company with the governor of Prome, with 1,500 men armed with swords in each hand, he marched forth into the midst of the plain fronting the Siamese army, at the distance of 100 *sen*. While he was waiting for some happy omen, he ordered his men to engage in all manner of boisterous sports and dancing. The king gazed and saw the sun blazing without cloud or mist in the sky; regarding this as a favorable omen, he rode his elephant in front of his army, and caused the drums to beat, the trumpets to be blown, &c., with deafening noise, directing his forces to make a furious onset upon the army of Mahá Chakrapat, who ordered his men to open to the right and left, rush forward with boisterous shouts, pursue, transfix, cut, slash in every direction, till they plunged forward as though leaping through the sky. On both sides many fell dead, and others rolling in the anguish of their wounds till they almost filled the plain. Mahá Chakrapat pushed forwards his elephant so furiously that his life was seriously endangered. His queen, seeing this, hastened to rescue him, when the governor of Prome rushed forward, and with his royal sword made a gash in the queen's shoulder, passing down to her breast, and she died upon the neck of her elephant. Rániesawan and Mahinterát advanced to receive the corpse of their royal mother, and bore it away to the city. The Siamese perished in great numbers. The king removed his queen's relics to the royal gardens.

The next morning, the Peguan viceroy attacked Sún-ton Song-kram's fort; its garrison resisted from morning till night, but when the Peguans were reinforced, it was compelled to yield with great loss. The next morning, the king of Pegu mounted on an elephant painted red, marched his army into the fields of Sumpli, ordering his foot soldiers to march behind the clumps of trees on both side of the plain. Here halting his elephant, he pointed with his finger towards the entrenchments of Phayá Chakri, requiring his cavalry, to the amount of 500, to advance upon it. Phayá Chakri came forth to the contest. When the Peguan army behind the trees, beheld this, they rushed forth, and slew on every side, pursuing the Siamese close to the fort, and occasioning dreadful carnage; Phayá Chakri and his remaining forces fled across the country to the capital, and the Peguans took his camp, and returned to the king's division, four-fifths of the cavalry bearing each a head of the enemy. The king had building erected, in which he gave a feast to all who brought heads for three days, during which, those who brought none were to remain

determined to convey heavy ordinance in boats, and Peguan forts; the effects of which were such that the Phutlau, where they remained three days. Thence by the three sacred Bannyan trees, to Phaniat, at the ices. While Phayá Rám was firing a heavy gun to uans, the reaction of the gun upset his vessel, but the immense limb of a tree which fell near his majesty's inmates of a fort, called Maháchai, assailed the Peguans, that they failed in every attempt to gain the capital, and his tents. When news of the Peguan monarch's ad-Siyuthia reached Thammarát (governor of Pitsanulok) an army of 50,000 men from Pitsanulok, Sawankha-Pichai, and Pichit, and marched to Chaiyanátpuri, orts, and sent messengers to obtain news from Singa-messengers, when they saw the multitudes of the Pe-but were pursued, two men taken, and brought to the who smiled at the intelligence they brought, ordered shaved, and then sent back to their master, with the they were coming to intercept the Peguans, the rait to receive them, if they were not coming, the o in pursuit of them. At this news, Thammarát, rge the Peguan army was? The messenger replied, he exterior encampment, but it seemed large enough of Phutlau. The Siamese governor after complain-ity of getting intelligence in war that might be de-sured by all his officers, that the Peguan monarch is strict adherence to truth: still, for greater security, e forces of Sawankhalok and Sukhotai, amounting o Indopuri, there to make observations.

he third of the waining of the 4th moon, the Peguan order, very early in the morning, attacked the fort of men resisted most valiantly. The viceroy was very t was not immediately taken, and riding up in front t about three *sen*, he proclaimed to his officers, that ce the fort, at once, he would cut off all their heads, ensings. Being thus intimidated, they rushed for-d carried the fort with serious carnage: but Mahase- fled by a canal, and reached wat mayeng with great viceroy returned, and told the king all he had done.

began to be in great want of provisions, foraging out, but returned without success, and the Peguans retreating. They could hope for the procuring of ig by the way they came for they had destroyed v passed along: "besides," says the king, "I have Tammarát does not ~~come~~ dawn, I will go up and

he Siamese, to be the name of a place on the north-east of

attack him ; he has plenty of provisions and his army must give way before us at the first onset, and his provisions will fall into our hands." The people praised his decision as the wisest possible. He expected, that as he proceeded to attack Thammarát, Mahá Chakrápat would pursue him in the rear, and that he would therefore have two armies to contend with. He therefore collected detachments belonging to Bassein, Lakeung, Siriam, Toungó, and Sittoung, of each 30,000, in all 150,000; appointed the governor of Prome commander, and ordered him, if he met the forces of Thammarát to attack and rout them at once. If he let them escape for one night, the heads of all the officers of the detachment would be taken instead of those of the expected captives. The Peguan viceroy was appointed to command the forces that remained, and if the Siamese forces should assail them in the rear, the viceroy must employ some stratagem to seize more or less of their officers and bring them to the king of Pegu on penalty of life. Every arrangement was then made for withdrawing from the Siamese territories, within three days.

When the Siamese monarch heard that Phayá Thammarát, had collected his forces, sent 20,000 to Indapuri, and was himself at Chaiyanápuri with 50,000, he was delighted with the intelligence, supposing that the enemy were now fairly hemmed in by him, and had no way of escape, except by flight to Káyachontapuri. Súnton Songkram maintained that his Peguan majesty was too able, skilful, and had too strong an army for such a measure, inasmuch as in his advances he had destroyed all the provisions of that province. Hence he inferred he would proceed, attack Phayá Thammarát and seize his provisions. The king of Siam differed in his opinion, and ordered Sunton Songkram to take 5000 men and waylay the Peguans on the road to Káyachontapuri. Notwithstanding, lest the suggestion might prove true, his majesty ordered his two sons Rámesawan and Mahinterát to pursue the Peguan army towards Chaiyanót. Both these sons were taken and conveyed to the Peguan camp. When their father received intelligence of it, he was greatly dispirited, but framed a fulsome and yet a supplicating address to the Peguan monarch, and begged him to restore his children. He released them, and sent them back to their father to request that their father would give him a couple of royal male elephants. They returned and told their father that their offense in suffering themselves to be taken deserved death, but begged he would pardon them once. He graciously forgave them. They then mentioned the Peguan monarch's request, which after some demur was granted, but the Peguans and Burmans could not manage the elephants, which occasioned serious disturbances throughout the camp, and were therefore returned. The Peguan forces were then withdrawn and returned home by way of Kampengpet. The king of Siam then established the cities, Sákhn, Nontapuri and Nakhonchaisi, and threw down the walls of Lóppuri, Návok, and Phannapuri. Here end the occurrences of this year.

ary skill and power of the Chinese; actual state of forts, and arms; description of the forts on the coast; army and navy of China; modes of warfare; defensive arms, &c., &c. From a Correspondent.

ably, at the present day no more infallible a criterion of the advancement of societies than the proficiency attained in "the murderous art," the perfection and improvements for mutual destruction, and the skill with which they are learned to use them. Paradoxical as may appear the result, this very perfection and systematic simplification of the art has a direct effect in humanising mankind, by bringing it under a mere calculation, and of which history proves the truth. Formerly, warfare has ever been that of man to man, when each fought personally for victory, and each personal strength and skill of each was shown out, and each fought personally for victory, and civilization advanced, and war grew into a science, infinitely less prized; and discipline became the object of study, and who relied on his own skill, in the direction of large armies, as the means of victory. The introduction of the consequent relinquishment of defensive armor, was a grand step; and the world has, in latter times, seemed almost lost with not so much effusion of blood as formerly satisfied the commander of a moderate sized army in the object, in civilized countries, has now become that of measuring the 'glory' by the number the slaughter. The object, in civilized countries, has now become organizing and disorganizing the opposing power, in lieu of measuring the 'glory' by the number the slaughter. It is no means problematical that, some few years hence, the improvements of war will be so perfected as to make the world itself a play for even kings to play at; as utter extermination of both parties engaging. The recent improvement of adaptation to the purposes of war, as in steam-ships, the invention of Mr. Topli's dreadful *pacificator* (of which a French *double* is announced, and which propels at a radius extent of near two miles,—the first idea of which may probably be given to the first baron Napier or Worcester), with the still greater improvements that we look for in a few years, will, we have no doubt, help us to reap at all the lessons of the sage, the treatises of the legislator, have tried in vain to effect—the blessing we desire; when, indeed, the sword shall be turned into a scythe, and the falchion the scythe.

These are correct, and we believe them to be so; and if admitted; the celestial empire will be found in the

lowest state of civilization, yet more in arms than arts. We shall now make some inquiry as to the advancement of the Chinese in the destructive science; and respecting their weapons, means of defense, &c. The march of improvement in these has been as assiduously excluded from this "inner land," as in other things of a more pacific kind; and as the Chinese were in this respect in the thirteenth century, so we find them now; at least, the change is so trifling as to be hardly worth noticing. Morrison, in his *View of China*,* gives the year 1275 as the time of the invention of powder and guns; and, as the powder is, to the present hour, of very inferior kind, and the cannon as bad as it is possible to be, with even moderate security to those serving them, the probability is that neither have much improved since their first invention. We, of course, do not include in this censure the guns cast by the Jesuits, Schaal, Verbiest, and others, for the emperors; and probably, some pieces cast, of late, near Canton, may quoted as improvements, in form and manufacture; † but in the main, the remark holds good. The Chinese powder is usually coarse grained, and of uneven size; apparently, also, from the noisome smell which it leaves after firing, abounding in sulphur; it seems to be easily affected by the atmosphere, to decompose rapidly, and to leave black stain and moisture on paper when fired. For these reasons, we can understand the want of expansive force which has been noticed by all who have witnessed the discharge of Chinese artillery. At the passage of the Bogue, by his Britannic majesty's ships *Andromache* and *Imogene*, few of the shot had impetus enough to go through both bulwarks, though fired at a very short distance, sometimes not more than a cable's length; while many fell off harmless from the bends of the ship; and many fell short; some almost tumbling out of the mouth of the guns. It has been asserted that the government does not manufacture the powder for the forts and troops, leaving this to the care of the soldiers, or officers, who are allowed for it in their pay; but, whether this is the case or not, the fact of the miserable quality of the Chinese gunpowder is indisputable.

* (A. D. 1275.) Fire machines in war were used in ancient times, but not with powder. What were called *paou*, were machines for throwing stones. They could throw them from 100 to 200 paces. Fire-engines commenced during this dynasty, amongst the Tartars. Lime and sulphur (they say) were enclosed in paper, and when thrown into ditches that surrounded the walls of towns, exploded upon coming in contact with water, and annoyed the besiegers. Wei Shing made engines for throwing stones, in which he used powder. His powder was made of sulphur and willow charcoal. These, it is said, were the commencement of the powder and guns used in later ages.

At the commencement of the Ming dynasty (1366), they had 'fire-chariots,' 'fire-umbrellas,' and guns, which they called the great general, the second, and the third general, &c. At the beginning of the dynasty, they had only a kind of musket called *shin-ke-ho-tseäng*. The guns and muskets of the Franks (or Europeans), all appeared afterwards. Lead bullets were first introduced in the forty-third year of Keäking (1563). Muskets were introduced during the reign of Keätsing. Japanese entered the country, and with their muskets were taken. The Japanese thus taken were ordered to teach the Chinese.

† In a report to the emperor, the governor of the province states that of these guns ten burst at the first fire, the number cast being fifty-nine.

which are to be seen in the forts on the Canton river, be taken as the best which they have, except the Jesuits, are worthy of the powder which is used for Portuguese or Dutch pieces, of every age, length; and not a few of them so old and honey-combed

Of marine cannon, properly so called, they have aboard the junks being field or battering pieces, as the native cannon are cast; and are, we believe, the bore not drilled smooth, as in European guns; which they rest are mere blocks of wood, or solid iron, the gun is lashed down with rattans; so that it must fire any but point blank shots, and very difficult to an object, except that immediately in front of the gun. The forts about the Bogue are furnished with a sort of armament, the gross inefficiency of which admitted the escape of the two corvettes in 1834, which were blown into the air, at once, had the forts been efficiently worked.

which we hear so much, are however, formidable positions; the passage between the starboard and larboard is short three quarters of a mile; and vessels drawing more than 12 feet being compelled to pass under the guns of that on the *Andromache* and *Imogene*, it will be recollected, with light northerly airs, and against an ebb tide; to the fire of the forts, often a raking one, for an hour; yet they received little if any damage, and in both day's engagements. The Chinese idea of a fort is confined to the erection of a plain wall, generally of granite slabs and *chunam*; and is of greater thickness where the guns are placed, becoming thinner as it rises, and ending in battlements, on a common wall the lookout men, on the top of the main wall, can be seen; however, seems made of the battlements, which are

At the back of the forts it seems to be the object to be as steep as possible, up the face of which a solid wall, of granite is run, joining nearly at the top, so as to give it the appearance of a great stone "pound." Along this part there are no openings, but to prevent the gunners being pounced upon. It seems probable that the original model of these forts is to be found in the Portuguese one of the *barra*, the nature of the ground suggested this form, and the Chinese have copied it. Some of the forts in the Canton passage, and one at Anunghoy (the old Bogue) are of a larboard shape, and look much more formidable than these mount two tiers of guns—as, in fact, do *now* since the forcing of the Bogue in 1834. That one situated on the western side of the entrance of the river is more like a regular fort; an upper tier, with a

different face, so as to make a cross fire with the lower tier and Anunghoy, having been added lately, apparently by some better engineer than the Chinese are likely to possess. The back passage, and that to the westward of Tiger island, are now defended by forts or batteries, *à fleur de l'eau*; and probably now altogether not less than 250 to 300 pieces of cannon may be contained in the whole of the defences of the Bogue. The guns of some of the old forts are so badly placed that, if the powder possessed the strength of that used in foreign countries, the fire would tell on each other.

From the Bogue to Whampoa, there is no defence—but, on the forks of a cross, the opposite points of two islands dividing the stream of the river into two channels, which meet again, the lower ones at Whampoa, the others two miles below Canton, there are two "forts," on flat marshy land; one of which, known as "Howqua's folly," was built after the visit of the Alceste to Whampoa; and the other one, higher up, scarcely completed, was commenced about six months ago. This is built of granite, pierced for about thirty guns, in a semicircular form; and commanding the course of the river from Howqua's fort, as also the two parts of the river which it divides. It is a long half mile from its neighbor, one of whose sides (it being of a square shape,) it could batter down, while the compliment was returned into it from nine guns (always supposing Chinese shot to travel half a mile), in case of any craft or boats forcing a way up. Howqua's fort or folly, as it is called, is so placed as to be, in fact, useless; as a position could be taken up, on two of its angles, by boats, which might batter it down unharmed; and even in case of boats pulling up to storm, the height of the guns from the water would render them innocuous. The forts, as they are in courtesy called, in the immediate neighborhood of Canton, as the "French and Dutch folies," &c., are in such a wretched state as to be scarcely worth naming, except as they might be made *points d'appui* against the city of Canton if attacked by an invading power, as they command the city and are easily assailable from the water. Had admiral Drury been aware of this, Great Britain might have been spared one of many signal disgraces in this country.

We have given this detailed description of the several forts near Canton as, from all that we hear and read of those in other parts of the empire, these may be looked on as *chef d'œuvres*, and models for imitation. It will be seen that they are but samples of fortification in its infant state; without fosses, bastions, glacis, or counter defences of any kind; being, in fact, but such lines as the engineers of a disciplined army would throw up, as temporary defences and to cover their guns, in the course of a single night. The river forts are open at all points; and none of them could stand the fire of a heavy ship, assisted by a storming party, or tirailleurs on shore, who could always find excellent posts in the rear or flank. out of the reach of the guns of the forts. Not the least noticeable point is that the gate is invariably placed in the side; the direct approach, if not quite open, commanded by at most one or two guns, and without ditch, drawbridge, portcullis,

ut a few inches of plank in the inner and outer doors ; thicker here than at other parts, a small court being may be commanded from the top of the wall by match-

an judge of the effective state of these forts, we should be, in general, except on extraordinary occasions, as of lord Napier, the very worst imaginable. Many ay recollect the capture of Howqua's fort in 1832, at officer and men were surprised, by a single piratical taken some offense at the garrison. It is true that, nsiderable body of troops has been stationed to work e Bogue ; but we are convinced that a *coup de main* one of them in ten minutes, and that, before the pas- stes, a body of fifty armed men might have walked, d out of all the forts.

tive military strength, the Chinese seem to have no city gates, where it is considered that a strong and l is always kept, foreigners, who go from curiosity to opposition more than from a coolie-looking man, r of breeches, a fan, and perhaps a rattan whip. The gnerns to deliver petitions as always a signal for a mus- y, who come in, one by one, undressed, unarmed, half asleep ; while piles of brown felt caps, and heaps ig red and yellow long jackets, bearing the character large scale, before and behind, are brought through ie adornment of the heroes of the hour ; hy and bye, officer, generally the largest sized man that can bows, sheaves of arrows, and rusty swords, make show ; evidently got up for the nonce to astonish arbarians," who might, did they please, be in the go- before the guard could awake from their slumbers, courage with their uniform.

roof of the inefficiency of this guard is the fact of the ates at early hours during winter, frequently as early vent the irruptions of banditti ; who, nevertheless, of- getting into the city, unopposed, and undisturbed, ole streets ; of which many instances may be read of the Canton Register. Those who accompanied xpedition to the city gate, in December last, to in- of the officer of the "Faorie Queene," can bear th of the above account ; the swords then produced at the soldiers could scarcely draw them : the only aded by them was one of the soldiers who received from the back hand of the hero who stood before want of discipline, and the same carelessness, ap- e of Gutzlaff's and Lindsay's voyage up the north- even, if possible, things seem yet worse ; among o sort, a display of the military is described, where inc was attempted, but so badly executed, that the

soldiers themselves joined in the laugh set up by the foreigners, who were present, witnessing their manœuvres. See also the rest of the voyages of Gutzlaff on the coast of China *passim*.

While such would appear to be the actual state of the soldiery, it will seem strange to many that the accounts of the two unhappy embassies teem with statements of the high discipline and fine appearance of the soldiers among whom they passed; but, even supposing that neither of the writers of the works, published since, labored under a delusion, (and of this, particularly of Mr. Ellis, in the last embassy, few can doubt,) the frequent accounts of the drawing out of bodies of troops in all the cities as they passed, strikes the reader as a mere trick to dazzle or mystify the foreigners, and to impress them with high ideas of the number and power of the troops;* any great body of men looks imposing, especially when in uniform; and it is far from improbable that the Chinese supreme government gave orders to all the governors of provinces and cities, in the route of the embassy, to make as great a display as possible; in like manner as commanders of forts obtain a capitulation and the honors of war by exhibiting to the flag of truce an appearance of plenty and force, while starvation and weakness reign in the garrison. The constant firings at night, so much spoken of in Lord Amherst's return voyage through China, go to bear out this.

It may be true, that some of the Tartar troops yet retain something of the warlike spirit which enabled so few of them to overrun this vast empire; though, even against this, come the constant complaints of the emperors, from Keënlung downwards, as to the falling off of the military ardor, and the lessened dexterity in the use of their peculiar weapons, the bow and the sword.† These complaints are often now to be found in the Peking gazettes; and it is but a short time since the viceroy of Canton, in a proclamation, stated the same fact, ordering the frequent exercise of the troops, to repair this great error. The falling off of the Tartar spirit is, in fact, in accordance with all that we are taught by the history of human nature; and the same result has invariably attended, within a few generations, the descendants of the conquerors of every soil, when once domesticated

“ At every military post and every town of note along the river, troops were drawn out while the yachts carrying the embassy were passing.....After the salutes were over, the gandy dresses or uniforms of the soldiers, worn upon extraordinary occasions, together with their arms, were said to be deposited in the storehouse of the station, until they should again be wanted: in the interval, the men assume not always a military, but often the common habit of the people; and are occupied in manufactures or the cultivation of the land. Staunton's Embassy, vol. 2, p. 74.

† Du reste, on y remarque bien moins de discipline que dans les troupes modernes de l'Europe, moins d'esprit militaire, et, sans contredit, moins de courage. Elles ont eu d'ailleurs peu occasion de l'exercer depuis la dernière invasion des Tartares. Ceux-ci ne sont plus eux-mêmes ce qu'ils furent autrefois; l'éducation qu'ils reçoivent aujourd'hui a dû contribuer à les amollir. On ne met sous les yeux des jeunes Chinois que des livres de morale; on ne leur parle que de lois et de politique; ils voient partout peu d'égards pour l'état militaire ceux qui l'embrassent, ne le font souvent que par l'impuissance de pouvoir prendre tout autre parti. Il leur manque ce qui mène aux grands progrès dans tous les genres, l'émulation. Grosier, *Descr de la Chine*, Vol 5, p. 18.

gamated with, the conquered. So far has this been that the emperor has frequently reprov'd in public Tartar tribes, for forgetting, not alone their military in their language, which it has ever been the policy to preserve unmixed and uncorrupted.

Inefficiency of the Chinese military force to repress any king in any part of the empire has, of late, become common; and in the many insurrections, within the last century on the northwest frontier of the empire, as also in many on the islands of Formosa and Hainan, and the hills on Hoonan, Kwangse, and Kwangtung, the Chinese treachery and gold have effected what arms failed in the hands of the leaders of the disaffected to submission. In the war of 1832, so great was the demand for, or the necessity, that the Tartar troops, who should always remain in the emperor's own troops, were sent off; and, even then, raised by the government did not reach, it is said, more than 6,000. If these statements be correct, and they are of the mark, what becomes of the immense paper money the Chinese are said to be able to collect? During the rebellion in Canton, it was notorious that men were sent off as soldiers to intimidate the foreigners; cowards were recognized discarded cow-keepers, broom-makers and shoe-makers, and other riffraff innumerable. They had recourse to such shifts, and which dresses its garments, in imitation of tiger's skins, to terrify its appearance and cries, can have but small pretensions to military skill. We had also a curious proof of the state of the Chinese soldiers at that time. The gang which had it in its view to blockade and starve the unfortunate lord Napier, to blockade and starve the cowardly fiendlike plan for conquering him, were busy at night, in smoking and gambling on the pavement stones, spread out at full length, in the indecent manner used by the Chinese.

They regard the Chinese as powerless on land, except in the case of a king from great numbers; but it may be fairly doubted, whether any real strength could be looked for. In all respects the cultivator of the soil is so driven down to a state that he has no care as to who is, for the time, governor of the country; in fact, he has nothing to lose: for his own sake, will not attempt to harass him, and he is to be got, and on whose exertions mainly depend the taxes on the soil; it is for this reason that serfs and slaves are so common, regardless of all changes and conquests; the system, as we call it, is confined to a mere love of the soil they have been brought up, and does not extend to govern the country, any more than it does to the benefit of them or their village. This is the secret of the

rapid overrunning of large eastern empires, immediately a heavy blow is struck at the chief of the state; or that the defending army is defeated. The only opponents are military, and nobility, or wealthy men of the state; some struggling for life and place; others for their possessions; while the peaceful laborer lives on in utter disregard of the struggle, and indifference as to the side to which victory may incline. The repeated conquest of China, India, and Persia, may prove this sufficiently; and the conquest of this country (apparently, if we may judge from the elements of changes already apparent, now not far off,) will be effected with less difficulty than at any former time; so relaxed and powerless seems the military force of the empire.

If, however, this be predicted of the land force, what words can convey an adequate idea of the monstrous burlesque which the imperial navy presents to our astonished gaze? Powerless beyond the power of description or ridicule to portray, yet set forth with all the braggadocio and pretence for which the Chinese are so famous, the marine of this vast empire presents a state of things unparalleled among even the most savage states or islands that we know of: and we query much if a couple of New Zealand war canoes would not be an overmatch for all the force that could be brought against them. It has been seen that a whole imperial fleet has, more than once, "knocked head" to a single unarmed merchantman, manned by Lascars; and the miserable equivocations to which admirals and governors of large provinces have had recourse, to get rid of so formidable a visitor, are as well known as the valor with which they have fired at the ship, when sailing away four or five miles from them; or the civility with which the intruder has, against the emperor's most positive and repeated orders, been treated while remaining in the port or bay, where her avocations or pleasure may have led her. It will be seen, that the fact of the absolute weakness of the marine is now well known to the emperor; and all his governors of sea-board provinces have avowed the impossibility of preventing the visit of a "barbarian" or "demon" ship. It is not many years since the inhabitants of the sea-coast were ordered to withdraw, a day's journey inland, as the only means of preventing the irruptions of a ladrone fleet; and we have seen that, twenty-five years back, a pirate kept this and the next province in check; stopped the trade, and ravaged all parts of the coast and country, near the river side, with the most daring audacity, and in perfect security; till, after a long course of horrors and violence, he and his chief companions were bought off, by a free pardon and high governmental appointments, the retention of all their treasures and forgiveness of all their followers. So unchecked were these men, that they often came up the Canton river, careless of the forts, and laughing at the edicts and mandarins, so near to the provincial city that the report of their guns was even heard in it. They reaped the crops of the villagers, plundered granaries, levied black mail, and put to death all the mandarins whom they caught; yet were they triumphant and unharmed, for years; and, as we have said, were eventually bought off, by the government which they had outraged and defied.

same course as was pursued by Kanghe (in 1684) the pirate Ching Kihshwang, the grandson of the famed whose family had for forty years put the power of emperors of China at defiance, and laughed it to scorn : is considered his submission, that we find it stated by, that "the multitude was called together by governor the tonsure of the pirate chief and his party." this family was originally a servant to a foreigner at sea, it is believed, been in Europe, or India. It must be this buying off of the pirates was when the Tartars came of conquest, and when all China had been reduced to their power at sea, this man's son, Koxinga, kept the Dutch, from which he had ejected the Dutch, to Batavia, given by the previous dynasty, in exchange for the Dutch they had established themselves on, and which they were not power to wrest from them. He succeeded, by convincing the Dutch, whose ships had gone to Batavia, to evacuate the fort Zelandia, and retire from the Dutch his grandson's surrendering to the Tartar emperor, Chinese empire. It will be thus seen that the same policy which the Chinese empire is now, such has been for centuries; and, as all foreign improvements seem to be, seems little doubt but that it will be permanent. These war ships (junks) are large unwieldy looking masses of sails, wooden anchors, rattan cables, a considerable weight of stems, no stern posts, enormously high sterns of gold and paintings, considerably weakened too by the weight of the monstrous rudder can be hoisted up and down with a dether; immense quarter galleries, and look-out galleries; generally drawing but little water, flat floored, broad, with large goggle eyes in the bows; and, as the Goede Vrouw, looming particularly large is the appearance of a celestial "first rate."—few of them 50 tons, and the generality are armed with but two guns, as we have before observed, are on solid beds, and are useless, save in the smoothest water. We have never, seen six guns in a large war junk, on special occasions which were stationed in front of the Praya Graning the business of the late lord Napier, had each junk two; two of which, taking the whole width of the field pieces, which, had they been fired, must have sunk the junk, or gone, with the recoil, over the gangway the crew is composed of forty to sixty men, according as they are designed to act against their own countrymen. Lances, pikes, and a few swords, but plenty of muskets up the armament. The smaller craft are not so large, being built partly on the model of some foreign vessels. Chinese acknowledge, the same as used in the hong-shing smuggling boats; these are neat in their appearance,

pull from ten to sixty oars, and go very fast; they are armed with one or two small swivels, two, three, or four pounders, and the usual and favorite weapons of the Chinese, lances and stones; over the sides of the boats, as they pull, are hang shields of rattans painted into a caricature of a tiger's face, with which to protect themselves in case of attack. We have also, in some of these seen, occasionally, something approaching to boarding nettings; but their speed is what is chiefly relied on. To convey to the mind of a stranger the ridiculous excess of the inutility of the naval establishment of China, would, we are well aware, be impossible; could it even be rendered, it would not be more credible; helplessness and cowardice are the chief, we may say the only points; but carried to such an extreme as would appear impossible to all who have not visited the country.

Nor again, judging from what we know of the campaigns of late years, are the Chinese armies much more to be dreaded than their fleets. We have now before us multitudes of instances in which small bodies of insurrectionists have kept head against the imperial troops for periods that amaze us: the emperor, in almost every case, being obliged to urge, threaten, and force the governor to take the business properly in hand; and yet, notwithstanding all this, partial rebellions are protracted for indefinite terms, and are generally only got under, at last, by bribery and conciliation. The Chinese army, large as it is sometimes made to look on paper, exists but in name; the soldiers, who are stationed from generation to generation in the same town, unless called out on actual service, naturally prefer taking their pay and going on with their peaceful avocations, or luxuriating in the *dolce far niente*, the supreme bliss of a Chinese, to undergoing the dangers of the tented field; and what the soldiers want in courage and efficiency the officers by no means make up in skill: nor is the total absence of a good commissariat, and the difficulty of transporting supplies, or *munitions de guerre* as *de bouche*, with the want of all medical or surgical aid, much calculated to stir up the dormant courage of the sons of Han.

The Chinese tactics are as puerile as most of their other ancient disquisitions, whether on morals, philosophy, government: a collection of pompous, trite, and meaningless common places forms but a poor school for soldiers; yet, in the most famous treatises on the military art, held, as all the old books, in bigoted esteem by the Chinese, we find nothing better. Sententious nothings, and merry andrew tricks and distortions, are all that we find as theoretical and practical soldiery, in these admired treatises; to depart from or impugn which, would, in the eyes of the Chinese, be little short of sacrilege.

We have now open before us their books on the art of war, as collected by the Jesuit missionaries, and which form a compendium of military skill. From the "exercises," we take, almost at random, the following, which is a good sample of the whole; and which will convey no bad idea of the absurdities, yet held in reverence, and which have been approved of the Tartar Chinese emperors.

made about the wars which have been carried on during the last few years; proving that military skill is confined to their books, but that, among the living Chinese, it is but a dead letter.

The principal weapons of the Chinese are the bow, the match-lock, the sword, and the lance or pike: the use in armies of cannon, except of a small size, is, we think, but of unfrequent occurrence; the difficulty of transport of such unwieldy weapons over the bad or narrow roads, or over hills and rivers, must be greater than the gain in efficiency: we read, it is true, of Kanghe having cannon of light kind cast by the Jesuits, in order to punish some hill borderers who had rebelled; and Keönlung had them taken against the Meaoutsze in his intended war of extermination: we also know that small pieces are used, on the backs of dromedaries, in the northwest and desert frontier; but, as constant and powerful aids to an army, the cannon of the Chinese cannot be regarded. We have never read or heard of any thing approaching to the light and handy field pieces of the western world; nor, from what in Macartney is described as the effect of the exhibition of those sent from England, is it possible that, even at Peking, any idea was to that time entertained of the existence of such. The shot is not well made, and, as the guns are of various sizes, we apprehend that no great care can be taken to give each its own; loose and small bullets and pieces of iron are used, as well as stones, which are often fired as balls. Of shells, we believe, the Chinese have no idea: we find mention made of hollow masses of iron, filled up with powder and pieces of iron, being used to harass an advancing army, by burying them in the ground, where it is expected the next night's encampment may be made; but, as weapons of active annoyance, the Chinese have yet to learn their use. It is a pity that the lesson had not been given at the attack on the Bogue forts, whose shape and situation are admirably suited to the purpose: the explosion of the first shell would have been the signal for an evacuation *en masse*. The Chinese use common rockets to set on fire houses, tents, &c. and some were fired at admiral Drury's boats, in his half-and-half attempt to reach Canton.

The matchlocks are ill-made weapons; most of their bullets, iron; and the bayonet, unknown. Flint-locks, carbines, pistols, and all the other tribes of fire-arms, are not in use. The bow is generally of the strength of forty to eighty catties; the string silk; the arrows are well made, feathered, and with iron or steel barbed points. This is doubtless, the most efficient of their arms; and, as Macartney was told, "is held the highest in estimation." The swords are of two kinds, straight, heavy, double pointed (not unlike the Roman sword), of about two feet in length; or somewhat longer, bent in the form of a scybre; the handles of both are plain and unguarded. Those which we have seen, are, in general, heavy weapons, of rather rough make, and poor finish, and of but ordinary metal; far inferior, in all respects to those used by foreigners. Daggers and knives do not seem used for the purpose of war. The pike or lance is used of every possible variety of form; the shaft from ten to fourteen feet long, of bamboo or

are like a halberd, a Lochaber axe, a scythe on a half moon with the curve inward or outward, and the edge; but the whole of them probably used more for defense than in the field. The defensive armor is iron helmet, and quilted dress of the Tartar, which, "seems to have the inconvenience, without the advantage." Double swords, so called, are sometimes used: each longer than a large dagger; their inside surfaces are that when placed in contact, they lie close to each other, a single scabbard: the blades are wide at the hilt, and narrow towards the points. When unsheathed for battle the warrior brandishes one of these blades in each

hand. I have gone through the subject which we sat down to discuss, though we were well aware that the military force of the Chinese empire was much overrated, we rise astonished at the utter imbecility, which we find the various works of the Chinese have all agreed in attributing to it. It seems indeed that the whole fabric does not fall asunder of itself: of this we are sure; that, at the first vigorous and well directed blow, the empire will totter to its base; and it is by no means probable that the secret societies, which we look on as embodying the strength, and whose object notoriously is the extinction of the empire from the Chinese empire, will before many years be able to wish.

We have avowed ourselves, to war, as a principle, we do not see its horrors brought here by any of the civilized nations of the western world; nor in fact, do we think it at all likely, that the Chinese will be the object, and this is by no means probable, that the Chinese will be so and politic as they are, would ever allow matters to be brought to such hard blows. We are strongly of opinion that many nations will come over without seeing some interference, in one way or another, from many foreign nations which trade is gradually increasing their immediate contact with China. The United States have sent an envoy, more than once, to the neighbouring courts of Siam; and we sincerely hope that the experiment will be made. A proper interference would, probably, prevent the empire which may else be drawn on the Chinese empire of its rulers. The evil day may be put off; but it will not be avoided; if a treaty of commerce be not effected, the interests of both the native and foreign powers may at last be brought under control. Is it wise to wait till quarrels of a long standing are brought out of misunderstandings? We think not; and we are of avoiding the consequences of a recourse to the arms, that we deem the arrangement of a commercial treaty between the nations trading with China. Of what may be said of kings and ministers, the just grounds of war, but that a nation nursing itself, like the Chinese, as a nation, and treating as inferiors all other nations,

most far its superiors in civilization, resources, courage, arts and arms, seems to us so much of an anomaly that we cannot contemplate its long duration, when the scales shall have fallen from the eyes of the "barbarian" nations, who for so many years, have, in ignorance, bowed the knee to a power which, as to efficient strength, is no more than the shadow of a shade.

[Our correspondent is entitled to our best thanks for the very faithful manner, as we think, in which he has described the military skill and power of the Chinese. We fully agree with him that is it the "duty" of western governments to arrange matters with the Chinese, and that speedily, in order to prevent an appeal to the "*ultima ratio regum*."—It is proper to state here that, his paper was in hand before the arrival of the recent pamphlets on China.—*Corrigenda*. On page 165, for Topli's, read Toplis'; p. 166, for Keäking, Keätsing; p. 167, for horses-hoe, horse-shoe; and p. 168, for d'appin, d' appui.]

ART. IV. *Correspondence with the Chinese government; two letters from the foreign merchants, addressed to the governor and hopo, with the replies of their excellencies to the second letter.*

THERE is an old Chinese maxim to this effect, When you enter a country inquire what prohibitions are there in force. The late governor Loo, in one of his edicts addressed to foreigners, said, "Obey and remain, disobey and depart; there are no two ways." It is unquestionably our duty to know the laws, and to obey them, so far as we can with a conscience void of offence towards God and man. Unrighteous laws we may not obey; neither emperor, king, parliament, senate, nor council, has a right to make us worship wood or stone, or to cause us to steal, murder, defraud, covet, or do any evil thing. We have, then, not only a right, but it is our duty, to inquire into the character of the laws which we are called on to obey. Although, according to governor Loo, there are no two ways, yet we conceive that, without either *acquiescing* in bad laws or *departing* from the country, there is a way open to foreigners, namely that of *remonstrance*. There have been, and may still be, those who deny the existence of this right, even where the regulations are most notoriously evil and relate solely to the foreigners. "It belongs," say they, "only to the authorities to concern themselves with the regulations of the state; foreigners have no right to intermeddle with such matters; and if they do not like the regulations of the country, let them stay at home." Much as we love peace, and would pursue only the things that make for peace, we cannot approve of this theory: *homo sum, humani nihil a me alienum puto*. It is generally conceded, we believe, that the laws of China, respecting intercourse with foreigners, are hostile both to its true interests and to theirs. They engender pride, self-sufficiency, strife, deceit, hatred, and the like; they are at variance with

mony that "He hath made of one blood all the nations
 etard industry; prevent the diffusion of useful know-
 od has purposes of mercy in extending here the gov-
 ney go as far as human laws can go to prevent their
 inst laws pregnant with such evils, possess we not,
 foreigners, the right of remonstrance? If so, then
 meddle with the buying and selling and kidnapping
 d sons, nor plead their cause wherever her influence
 here any so heartless as to deny to her this right?
 ept those who enjoy the wages of that foul traffic.
 o put on record in our pages, as we do below, the
 etween the foreign merchants and the local authori-
 tariff. It will be seen, indeed, that it has produced
 in correcting abuses; but it goes to establish the
 ighners writing and asking for the correction of se-
 embarrass their commerce. We rejoice at this, be-
 z, foreigners assume the right of standing on the
 and requiring the government to do them justice.
 government has refused to grant their request, still we
 eigners will either obey or depart; nor can we urge
 ainst right and reason. But we would urge them still
 a government the existing evils, and to remonstrate
 l that in a tone and spirit that shall cause us ere long
 d extortion quailing before the demands of truth,
 nity. We do not now touch the questions, to what
 nstances shall be carried, and what obligations rest
 Christian governments to second the efforts of their
 l intercourse, and only *honorable* intercourse, with
 ons. The pamphlets that have recently appeared
 one of which we noticed in our last, show that in-
 d we sincerely hope it will not cease until duty
 ed. There are those who think that the spirit of
 itself change laws and customs, and of itself effect
 in the relations of China with other nations. We
 the mighty influence of this spirit; but it is, we
 believe that the spirit of trade, whose freedom is
 , can change the heart of China. She is antisocial
 er, and we look in vain for any relinquishment of
 part. Much is predicted from the contemplated
 o opium. It is argued that the free trade has for-
 boon. And what has it obtained? Is it any thing
 hich to extend her exclusive system? Is the bring-
 ithin the purview of her noble company of hong
 to freedom? True, the emperor does herein con-
 st keep from his subjects an article which they *will*
 anges his position and gives it to them in his own
 nd, for aught we can see, China remains China
 mean to be understood as saying, that freedom of
 f foreigners does not afford more ground of hope of

free intercourse with China than the monopolizing system of our late E. I. company. But we conceive that it will effect this by awakening and extending interest in regard to China, and eventually causing right efforts to be made from right and effectual quarters, rather than by any inherent power of its own to change the attitude of the Chinese authorities towards foreigners. We protest against the idea that the change of foreign relations with China is to wait the slow and uncertain issue of connivances with those petty authorities, who are reckless of shame and all regard to justice. And does any one pretend that the changes which it is presumed will flow from this one-sided free trade system, can ever flow in any other channel than in connection with these connivances? We see not how; and, till we do see, we advocate *remonstrance, honest remonstrance, EFFECTUAL GOVERNMENTAL REMONSTRANCE*, until foreigners shall stand in the view of China, as clothed in the attributes of children of one common Father; and all the rights, which nature and nature's God gives us, of free intercourse, can be exercised in a way that does not beggar us of all self-respect. In every remonstrance three things are to be premised; the case must be palpably just and important; it must be stated in clear and respectful language; and then urged with a resolution that will hold on — and hold on — and never let go.

The first of the following series of documents was addressed to the governor Tāng in April last; and another of the same tenor was at the same time addressed to the late hoppo Pāng.

The answers of both these officers were in the tone of haughty disregard and vain assumption, so usual with Chinese authorities. One thing, however, seemed to bear the character of a concession; the hong merchants shortly afterwards sent a list of the various charges to which the principal cotton and woollen manufactures that are imported are liable; and though the aggregate of the charges on each article as stated therein is somewhat greater than the average of what has usually been paid, it was yet regarded as an advantage to have obtained an *official* statement, a thing which had always before been peremptorily refused. On the other hand, a flaw in the Chinese tariff, which had been beneficial to foreigners, was remedied, by rendering longcloths of a greater length than 40 yards subject thereafter to pay double duty.

Under the impression that the having procured an official statement of the charges on a few articles was an advantage gained, a second letter was addressed last July, to the governor, and duplicate of it to the hoppo Wān. The answers of their excellencies are given below, marked No. 3 and 4. These are also in the usual style of Chinese documents, and while they grant no relief to the petitioners, another advantage which these have hitherto enjoyed, that of passing grey longcloths of every quality at the same rate as coarse white ones, is taken from them.

Thus, changes which will benefit themselves, whether right or wrong, are easily made by the authorities, irrespective of the will of the great emperor; but to make any changes in favor of foreigners, "it is

use regulations, once established, change not. And us, until the powers that be here, know that the will be reached with remonstrances, in the tone and she assumes when she awakes to accomplish the

No 1.

to the governor of Kwangtung and Kwangsoo.

represent to your excellency, that, for some years past, we have exported large quantities of cotton and woollen manufactures for duties on which have been punctually paid. Of late, however, the duties has been attended with much vexatious discussions and the hong merchants and linguists, not only from the manner in which the goods are classed and measured, but also from the manner at which the duties are charged, such discussion, and which give occasion to it, arising, in a great measure, from our failure to observe the duties established by the government. In such discussions, which not only involve loss of time, but are also the result of the good understanding that in a business point of view between ourselves and the hong merchants, we solicit that you will cause us to be furnished, for our future guidance, with an inventory of the duties payable on manufactured and other goods imported

and that the difficulties complained of are unknown to you, by placing them before you, as we now do, they will be remedied into, and remedied. We have the honor, &c. (Twenty-three firms and individuals.)

No. 2.

to the governor of Kwangtung and Kwangsoo.

In your excellency's reply to our representation on the duties, we have been furnished by the cohong with a tariff of duties on woolen and cotton manufactures, the scale of which fixes duties less than were previously demanded. Your excellency will observe that a change has of late years taken place in the imports of woolen manufactures; the consequence has been a great reduction in duties, especially on cotton goods; longcloths, which twenty years ago cost \$12 per piece of forty yards, being now worth only \$5 per piece, the qualities having declined in the same proportion. Thus the duties now levied, and we solicit that your excellency will cause the matter to be inquired into, and some relief afforded. The duties of first quality is stated, in the tariff just received, at about 44 cents on those of second quality at about 44 cents per piece, and length duties are ordered hereafter to be levied, on yard pieces, as lately allowed.

In all to your excellency's notice the high duties levied on camlets, which amount nearly to a prohibition; thus preventing them, as well as opening the door to smuggling and the want of a large revenue.

We beg your excellency's attention to the subject of goods in the present state, occasioned by ships meeting with bad weather on the coast, and would pray that an allowance may be made in the duties, to compensate the injury the goods may appear to have sustained.

We beg leave to state to your excellency, that it frequently happens that goods received by us are, from unsuitableness to the market, or from being unsaleable, excepting at a heavy loss on the original cost; we would solicit that we be allowed to export them without

being required to pay export duties, and that the duties paid on import be also allowed us back. To guard against evasion or advantage being taken of this indulgence, we submit, that, upon the arrival of goods the realization of which may appear doubtful, they be deposited in some special warehouse under the custody of the government and cohong; and that a reasonable time be afforded for endeavoring to effect sales—say nine or twelve months from the date of their being warehoused; at the expiration of which period it would be imperative upon us, falling a sale, to export them.

We would likewise beg permission to point out to your excellency that differences frequently arise in fixing the quality of cotton longcloths for the first and second grades of duty; and that the cohong have suggested that to obviate this in future, we send to your excellency's office a piece of each description as formerly imported; that they may receive an official stamp, and afterwards be deposited at the consoo-house for reference when needful. We accordingly send your excellency a piece of each quality, the difference between which is easily distinguishable.

The dimensions of cotton handkerchiefs are also frequently a source of vexatious discussion, and we would, therefore, solicit your excellency to cause us to be furnished with the standard size on which the first and second class of duties are to be levied; and, in order to enable us to make true comparison of the Chinese government measures with our own, we pray that we may be furnished, through the cohong, with a measuring rod, to represent the imperial covid under which duties are levied on goods chargeable by length.

Having as yet received only the scale of the duties on a few articles of our import, we would respectfully request that we be furnished with a general tariff of duties payable on all foreign imports; and that an official copy be also deposited in the consoo-house for reference at all times.

We take the liberty of placing these matters before your excellency in the full confidence that they will have your favorable consideration; grounded, as we are willing to hope they will be found, on strict justice and equity. And we would also take leave to point out to your excellency that a defined regulation for the levying of import duties on foreign trade, which is every year becoming more extensive, will be the surest means of continuing a good understanding, and facilitating our commercial operations with the cohong.

(Signed by twenty-three firms and individuals.)

No. 3.

Reply of governor T'ang to the second letter of the foreigners at Canton.

T'ang, governor of Kwangtung and Kwangse, &c., &c., issues this proclamation in reply to the English foreign merchants, Fox and others.

On a former occasion, the said foreign merchants presented a petition at my office, which I, at the time plainly answered. I also addressed a communication to the hoppo, and received from him the following reply.

"Hereafter the goods brought by foreign merchants ought to be regulated according to the measure and quality of the company's imports. There is a marked difference as regards fineness in the qualities of the first and second classes of cotton piece goods; or if, perchance, any of second quality be rather finer than usual, so as to resemble that of first quality, it is nevertheless to be regarded when examined as really of second quality, and to be assessed accordingly. At the same time, the said foreign merchants must make true reports, nor may they represent as of second, what is really of first quality. Of longcloths, one hundred covids are to be regarded as the dimensions of one piece, and two hundred covids as constituting two pieces. Broad cloths, long ells, camlets, &c., are to be fairly and equally measured, so as to obtain the consent of all. In regard to the proclaimed tariff of duties and the legal measure, they have already been given."

as been already made known, in order that obedience might

another petition has been presented, making a series of
 seven points. I have examined the subject, and give the

The tariff of custom-house duties has been fixed, after
 1, by the supreme Board of Revenue, and has been published
 by the GREAT EMPEROR. It is to be reverently and for ever

How can any presume to hope, that, because of late
 duties have been reduced, or because the high rate of duties
 on, a reduction will therefore be made in the fixed amount
 for goods not whether goods be damaged or not, they are to be
 goods which they are found to be. The regulations contain

admitting a reduction on account of damage. As to the market

 attention in reference to assessments. I hope also that your

official edict your decision on this point, and that you will
 give hereof.

the above, as also a foreign petition in Chinese, from
 merchants of England and of other nations, of the same
 to the governor; I, the hoppo, have examined, and give the

UNIVERSITY OF MICHIGAN LIBRARIES

All duties levied upon foreign imported goods are fixed in respectful obedience to the tariff, which was established by imperial authority, and was published the supreme Board of Revenue. Heretofore foreign merchants coming for commercial purposes to Canton have always obediently paid these, nor has there ever been any discussion respecting them. How is it possible that the importation and exportation of goods should be left to the will of individuals, or that any increase or diminution of duties should be unauthorizably made, in accordance merely with the varying qualities or the fluctuating value of commodities? With respect to smuggling, and defrauding of the revenue, explicit rules exist: why should the prevention of goods being imported, when occasioned by high duties on them, lead to the offense of smuggling? Since the said foreigners have dared to embody such a statement in their petition, they must have had reference to something actually existing. Let the hong merchants question them authoritatively and minutely on this point, in order to furnish *data* whereon to investigate the matter legally.

In reference to the request that, if, when goods are imported the price be found unsuitable, permission may be given to reexport the same and to receive back the import duty already paid; I answer, that, as soon as any duties are paid, the sum is immediately entered in a ruled book furnished by the Board of Revenue, and the amount of duties received is from time to time stated, and the money forwarded to Peking. How can such a principle be admitted as to give back the duty because the article may be unsuitable for sale? This request is evidently attributable to the said foreigners' ignorance of the rules and statutes of the celestial empire and to their own vain and inflated expectations. It needs no consideration. In regard to the published tariff of duties, and the declared legal measure of the Board, the late hoppo Päng has already given an answer on these points. Why do the said foreigners again annoy with needless requests? But in reference to vessels which, while sailing on the high seas, may have had their cargoes injured by the violence of the winds and waves; the said foreigners may, whenever a case of this nature occurs, represent it at the time, and it shall then be taken into consideration whether there be any call for compassion to be shown, and to what extent. It is unnecessary, to make fixed rules respecting this matter.

In regard to the musters of different qualities of longcloths presented for examination with the request that they may be stamped and placed in the consoo-house to be referred to at any time; I answer, that there are diversities of quality, both in bleached and unbleached longcloths; but the said foreigners very commonly pass the unbleached longcloths as all of second quality, or even as being all coarse. This cannot but lead to confusion in the classification. They must of course, therefore, present musters of the different qualities of unbleached longcloths also. Then only can the evils of overreaching and contention be avoided.

Let the hong merchants meet together and consult as to what is allowable and what is not so in the above particulars. They must pay special attention to these points,—to fix the various qualities of goods; to state the differences in their dimensions and weights, and in the duties applicable thereto; and to remove entirely all confusion and the evil practices connected with it. They must with earnestness and assiduity impress on the foreigners these things, that they may implicitly obey the enactments of government, and may cease to render themselves offensive by whining complaints. In compliance with the reply given by the governor, immediately take this subject into consideration, and report on it; and let there not to be the least connivance or delay. Let this receive the most earnest attention. A special order.

Taoukwang, 16th year, 6th moon, 18th day. (31st July, 1836.)

As in the former reports, only a few of the cases presented will be detailed. The first I shall mention occurred during my visit to Macao.

No. 1284. Lan Alin, aged 54, had been affected with an ulcerated tumor upon the crown of his head twenty-two years. Hearing that I was to visit Macao, he requested his friends here to prevail on me to see him when I arrived there. Several applications of the kind were made, and in this instance I consented. When I saw him, the tumor was in a bad condition, and the appearance of soon putting on a malignant character. At times, according to the statement of the patient, who appeared to be a sensible man, it had bled to the amount of twelve or fourteen ounces. With the concurring advice and assistance of my friend, Dr. Colledge, on the 21st of June the tumor was extirpated. I saw it dressed while I remained, and on leaving Macao, Dr. Colledge kindly took the care of it. In about two weeks he wrote, "your patient is quite well, and in fine health has left, and I have seen no more of him." He has since sent by his son his "ten thousand thanks."

On my return to Canton, on the last day of May, I had the satisfaction to find the young woman, Yeäng she, who was wounded by a fall in a thunder storm, quite out of danger from the injury received. The side of the neck that had been perforated by the bamboo was perfectly healed. The discharge from the fractured clavicle

at the time, the patient being very irregular in coming, but it had not entirely ceased, when at her own discretion she resumed her visits. On inquiring for her some weeks had gone to visit her friends in the country.

Fungus Hæmatodes of the eye. Yat Akwang, of the age of 4 years, entered the hospital May 4th, and was under medical treatment. The disease commenced several months before, between the sclerótica and cornea, and gradually increased till the whole eye was protruded. When the child came to the hospital, a large protrusion was seen in the situation of the left eye, and the least irritated. The child inclined his head to the opposite side, and was feeble. The father was told that it could not then be removed, might return on the first of June, and if circumstanced so as to require extirpation, would extirpate it. Early in June he returned. The tumor had grown rapidly, and the protruded eye which was at the level of the cheek as low as the mouth, was six or seven times its former size. The fate of the child, if the tumor was not removed, was evident. The father wished it removed, and, being advised that it might prove fatal, said it was better for his child to have it removed in such a condition. The possibility of its returning, if not proved unsuccessful, being also explained, the operation was performed. On the 26th, the eye was extirpated. In this case, it was possible the eye itself might be diseased with a fungus. I proceeded with the operation, and found the whole was diseased. Without much force the eye was detached from the surrounding parts, and the tumor below the globe of the eye. The little child endured the operation with much fortitude. The hemorrhage was not checked, inflammation succeeded, yet on the third day after the operation, he recovered for the life of the child; but on the 9th day, the child died, and the lids fell in and the child's appetite and prospects were flattering. However, the appearance of the tumor at its section, being diseased and presenting in some places a soft substance, like the cerumen of the ear, rendered the operation difficult. Before leaving, the little boy had become blind.

He has since returned, and to my deep regret his recovery is to be momentary. The fungus has returned to its former size, and that in less than three months.

Case of Pang she, mentioned in a former report, recurred on the 4th of May. She had neglected all my advice for the sake of her health, and her abdomen had become more enlarged than in the first instance. Being the close of the year, and the medicines for the coming month, I had told her to return in June; she returned accordingly, but her extreme heat and warm weather made me hesitate to repeat the operation. It was evident that it was the only chance of prolonging her life; her pulse was 144; her skin was hot and dry, with a great thirst, and a ration difficult, when on the 26th of June I again

performed the operation. Three gallons and two and a half pints of dark fluid, similar to the former, was abstracted, making the aggregate of about six gallons. She was immediately relieved of most of her former symptoms; her pulse the day following was 95. She rapidly recovered her health, and was discharged on the 8th of July. I am confident she could not have lived two days longer without this interposition. On the 28th, she reported herself and had improved very much during twenty days' absence.

No. 1500. July 8th. Chin Aying, a little girl of thirteen years of age. She had been incommoded by three sarcomatous tumors situated together, between the shoulders and above the spine. The three were in close contact, and as it were formed one, four inches in breadth and three in depth. On the 14th. they were extirpated. The largest of the cluster was firmly united to one of the spinous processes by a semi-cartilaginous or bony union. The whole tumor was a very hard and almost horny substance. Judging from the rapid growth of the last year, it must soon have become a cumbersome load. No unpleasant consequences have followed the removal of it, and the wound is kindly healing up by granulations.

No. 446. The case of Akæe is mentioned in the first report, under date of December 27th, 1835. About three months subsequent to the removal of the original tumor, as she was walking by the river side, a coolie, carelessly passing by, thrust the end of the bamboo, with which he carried his burden, against the superciliary ridge of the right temple, from which the tumor had been removed. When she came to the hospital about a month after the accident, there was considerable tumefaction above the eye. It being the close of that term, she was directed to remain at home until the first of June; at which time the tumor had attained the magnitude of the former one, though not exactly the same shape, and others previously on the side of her face were enlarged. The new one was altogether of a different character from the former. It had the appearance of a spongy mass, and was bounded on the left by an exostosis from the superciliary process one eighth of an inch deep, and one inch and a half long at its base, forming an irregular perpendicular ridge; the tumor grew rapidly and was fast tending to suppuration: the general health was affected, and death seemed probable and that speedily, unless its progress could be arrested by a surgical operation, while the heat of midsummer not a little increased the hazard of such a measure. After repeated consultations with Dr. Cox and Mr. Jardine, who had assisted in the former instance, it was resolved to embrace the first favorable day for the operation. On the 21st of July, the operation was performed. On the first incision being made, a large quantity of greenish fluid gushed out from cells of disorganized matter. Two elliptical incisions from the middle of the forehead down the cheek to a level with the ear were first made, and then a third from the middle of the first incision back upon the side of the head to a point five inches above the ear. The whole cyst was completely dissected out upon the temple, and even portions of the pericranium were removed, showing distinctly the bloody appearance of the cranium caused by the confusion of the

nors above the ear were all removed, and what on on was supposed to be the parotid gland and its were sarcomatous tumors, occupying their situations; moved, together with a tumor lying deep in the l'here was a loss of about sixteen ounces of blood. ith of the weather rendering it necessary to dress on the following day there was found considerable the eye, which finally suppurated. The incisions ealed in the same kind manner as before, and but 1 that took place beneath the integuments, would he same rapidity. The exostosis has not advanced s at the operation. The constitution suffered much ormer instance, but she has very much regained he flesh she had lost, and now looks forward to the ng home in a few days, with the hope of enjoying rom the grave.

he same general character as mentioned in the former etailed, but it is unnecessary. I have often been ght inconvenience experienced by cataract patients; infrequent consequence of the operation, and usution is very slight. When the patient lives at a is it inconvenient to be long absent from home, I cases, couched the cataracts in both eyes at the with equal success as in cases of a single eye. An years old, was brought from a distant part of the blind but lame. I found that she had broken the ne eleven months before, and had a cataract in each rtunity of her friends I was prevailed upon against erate upon her eyes. I did so, and found the lenses on took place, sight was restored to a considerable orption was still going on, when after a few weeks alth than before.

his brief report by subjoining a translation of some fa szeyay (in the first report called *Matszeuh*), y to the Chefoo, as they will serve to illustrate the hich he and other patients entertain respecting translation is by Mr. Morrison, to whose kindness bligations. It has been put into verse by a friend. style is a necessary consequence of faithfulness The old gentleman's gratitude has ever seemed n dismissed from the hospital, he requested leave d take "my likeness that he might bow down " He had previously intimated his intention of he painting of course was refused, but his ode was with some marks of formality; first he sent a ser-of presents; then a friend, who was equipped for ted the ode and a gilt fan with a quotation from inese poets, elegantly transcribed upon it by a y, relating to the same subject. The ode, pre-urks of his own, is as follows.

Doctor Parker is a native of America, one of the nations of the western ocean. He is of good and wealthy family, loves virtue, and takes pleasure in distributing to the necessities of others: he is moreover very skilful in the medical art. In the ninth month of the year *Yihwe*, he crossed the seas, and came to Canton, where he opened an institution in which to exercise gratuitously his medical talents. Hundreds of patients daily sought relief from his hands. Sparing neither expense nor toil, from morning to evening, he exercised the tenderest compassion towards the sick and miserable.

I had then lost the sight of my left eye, seven years, and the right eye had sympathized with it nearly half that period. No means used proved beneficial; no physician had been able to bring me relief. In the eleventh month of the year above named, my friend Muh Keashaou introduced me to Doctor Parker, by whom I was directed to convey my bedding to his hospital. I there made my dormitory in a third story, where he visited me night and morning. First he administered a medicine in powder, the effects of which, as a cathartic, continued three days. He then performed an operation on the eye with a silver needle, after which he closed up the eye with a piece of cloth. In five days, when this was removed, a few rays of light found entrance, and in ten days I was able to distinguish perfectly. He then operated on the right eye, in like manner. I had been with him nearly a month when, the year drawing to a close, business compelled me to take leave. On leaving, I wished to present an offering of thanks; but he peremptorily refused it, saying, "return, and give thanks to heaven and earth: what merit have I?" So devoid was he of boasting. Compare this his conduct, with that of many physicians of celebrity. How often do they demand heavy fees, and dose you for months together, and after all fail to benefit. Or how often, if they afford even a partial benefit, do they trumpet forth their own merits, and demand costly acknowledgments! But this doctor, heals men at his own cost, and though perfectly successful, ascribes all to heaven, and absolutely refuses to receive any acknowledgment. How far beyond those of the common order of physicians are his character and rank! Ah, such men are difficult to find. The following hasty lines I have penned, and dedicate them to him.

A fluid, darksome and opaque, long time had dimmed my sight.
For seven revalving weary years one eye was lost to light;
The other, darkened by a film, during three years saw no day, [ray.
High heaven's bright and gladd'ning light could not pierce it with its

Long, long, I sought the hoped relief, but still I sought in vain,
My treasures, lavished in the search, bought no relief from pain;
Till, at length, I thought my garments I must either pawn or sell,
And plenty in my house I feared was never more to dwell.

Then loudly did I ask, for what cause such pain I bore,—
For transgressions in a former life unatoned for before?
But again came the reflection, how, of yore, oft, men of worth,
For slight errors bad borne suff'ring great as drew my sorrow forth.

"And shall not one," said I then, "whose worth is but as nought,
"Bear patiently, as heaven's gift, what it ordains?" The thought
Was scarce completely formed, when of a friend the footsteps fell
On my threshold, and I breathed a hope he had words of joy to tell.

"I have heard," the friend who enter'd said, "there is come to us of late
"A native of the 'flower'd flags' far off and foreign state;
"O'er tens of thousand miles of sea to the inner land he's come;
"His hope and aim to heal men's pain, he leaves his native home."

th, this man I sought, this gen'rous doctor found ;
 heart, he's kind and good ; for, high up from the ground,
 to which he came, at morn, at eve, at night,—
 't vain were I to try his kindness to rescite.

gentine, he pierced the cradle of the tear ;
 It ! Soo Tungpo's words rung threat'ning in my ear :
 mist," the poet says, "take heed you do not shake ;"
 ear rung in my ear) "how if it chance to break."

his needle pierced : the drad, the sting, the pain,
 ase, and that the cup of sorrow I most drain :
 m'ry faithful showed the work of fell disease,
 rbs of sight were dark, and deprived of ease.

ght : if now, indeed, were to find relief :
 much to bear the pain, to bear the present grief.
 of kindness, which I heard, sunk deep into my soul,
 ear I gave myself to the foreigner's control.

e sought the lens, and quickly from it drew
 darksome fluid, whose effects so well I knew ;
 e soon clear'd the lens, and then my eyes he bound,
 water, sweet as is the dew to thirsty ground.

lay I, prostrate, still ; no food then could I eat,
 d were stretch'd as though th' approach of death to meet ;
 astray—mind ill at ease—away from home and wife,
 hat by a thread was hung my precious life.

r, no food had I, and nothing did I feel ;
 now, pain, nor hope, nor thought of woe or weal ;
 y life seemed gone, when sudden, in my pain,
 ray—one glimmering ray, I see, live again !

isions of the night, he who dreams a fearful dream,
 b, uprushing comes, one restored to day's bright beam,
 dness and surprise, with joy, with keen delight,
 kindred crowd around, I hail the blessed light :

art, with heaving breast, with feelings flowing o'er,
 me quick to him who can the sight restore !"
 ut he forbade ; and, forcing me to rise,
 bend not the knee ;" then pointing to the skies :—

he, "the workman's tool, another's is the hand ;
 ut, and in his sight, men, feeble, helpless, stand :
 to cultivate, and never thou forget
 work of future good thy life is spared thee yct !"

en of my thanks, he refused ; nor would he take
 ey seemed as dust ; 'tis but for virtue's sake
 ne. His skill divine I ever must adore,
 rance of his name till life's last day is o'er.

in these brief words, this learned doctor's praise,
 rth deserve that I should tablets to him raise.—

ly a month in the hospital, I penned also the following
 stated the thing which I saw and heard while there,
 successful practice.

[A translation of the lines here alluded to by the old gentleman, and also of the quotation from Soo Tungpoo, may be given in a subsequent number.— What he says, of my calling on him to give thanks to earth, of my rich family, &c., is to be received with due allowance as Chinese embellishment.]

ART. VI. *Journal of Occurrences. Peking; Hoonan; destructive gale in the Chinese sea; extracts from the Canton Court Circular.*

AGAIN we find ourselves limited to a much narrower space, for noticing passing occurrences, than we could wish. Rumors, here, are always afloat, but none at present which we need to notice. The state of public affairs throughout the empire, so far as we know, is tranquil; the fruits; of the earth, during the past season, have generally been plentiful; and health continues to be enjoyed. The final decision of the emperor, on the memorial of Hen Naetse, is not yet known in Canton.

Peking. The indignation of his majesty has been roused by the unprincipled and corrupt conduct of some of his high ministers, including two princes of the blood. His anger is directed against their conduct in general; the particular case which has excited it, is, that they passed, at a grand military examination, an individual wholly incapable of performing the military exercise require. "Have we," exclaims his majesty, "directed the government of the people for sixteen years, and can none of our princes and great ministers yet see that all we seek for is comprehended in the one word, truth?" His majesty then proceeds to command the degradation of the several offenders, and adds: "In these punishments we manifest an unusual degree of tenderness. Let all our princes and ministers be roused thereby to greater diligence and faithfulness, and let them not fear to incur hatred or reproach for doing well. Let them not fail to pay regard to those high desires which occasion these reiterated and earnest instructions."

Hoonan. The disturbances in this province are stated by the governor of Hoonan to be at an end. No details are given of what took place, beyond those which have already appeared in our number for May last.

The severe gale, which is noticed below, in the Court Circular of the 1st instant, was very destructive to the shipping in the Chinese seas. The bark *Susana*, belonging to Macao; and the *Admiral Buyskes*, a Spanish ship, were lost, with a part of their crews. Two or three other ships, we fear, will have to be placed on the same list; we refer particularly to the *Hormasjee Bomanjee*, *Hamoody*, and the *Margaret Graham*.

Extracts from the Canton Court Circular. June 26th. The governor and Lt.-governor were offered incense in the temple of the god of war. Fung Yaoutsoo presented a report respecting the vaccination of children at the foundling hospital.

June 29th. The two principal, and four inferior envoys took leave, about to return to Peking. Twenty-nine criminals were recaptured.

June 28th. Twelve persons, arrested for murder, were sent to the magistrate of Tungkwan for trial.

July 3rd. The envoys returned to Canton, having received a dispatch from the emperor directing them to do so, for the examination of a new case, in which the late magistrate of Heängshan is to be put on trial.

July 15th. The envoys again left Canton. Three military officers were brought to the city for trial. The chelieñ of Nanhæ reported that, "during the preceding night [4 o'clock this morning], a fire broke out in Hinglung street; ten [more than twenty] shops were burned down, six torn away, and the fire then extinguished." The execution of capital punishment was reported.

July 24th. The imperial envoys again returned, having received another dispatch, requiring them to examine a new case. Capital execution reported.

July 29th. The envoys took leave of the governor and Lt.-governor. The execution of capital punishment, was reported.

August 1st. The "river magistrate" reported that, at 8 o'clock last evening a "fierce gale" arose and raged till this evening: no boats nor lives were lost.

August 22d. Lcäng, the new commissioner in the salt department, received the seals of office.

THE
ESE REPOSITORY.

V. — SEPTEMBER, 1836. — No. 5.

ical and descriptive account of China; its ancient history, language, literature, religion, government, manners and social state; intercourse with Europe in the most ancient ages; missions and embassies to the imperial courts; and foreign commerce; directions to navigators; chronology and astronomy; survey of its geography, history, and zoology. By Hugh Murray, F. R. S. E.; Peter Gordon, esq.; captain Thomas Lynn; and John Wallace, F. R. S. E., professor of mathematics in the University of Edinburgh; and Gilbert Burnett, esq., late professor of Mathematics in King's College, London. With a map and thirty-six engravings. In three volumes. Edinburgh; Oliver and Boyd; and Simpkin, Marshall, & Co., 1836. CCCXXXVI.

of his engravings, from an original drawing preserved in the collection, Mr. Murray says, "in order to show the Chinese vessels, a few have been altered according to other drawings of the same collection; in other respects they are exact." Again, with reference to another plate, he says, "in some degree a composition from several of the drawings sent home by lord Macartney's embassy, so as to represent the most prominent features which usually distinguish Chinese mountains." These remarks of the Author, respecting the liberty of altering the objects of natural or artificial history, are intended to characterize the whole of his first volume, and if we have yet seen, they would give the reader a correct and adequate idea of his work. Mr. Murray's well-earned reputation, and the names of his learned coadjutors, whose names appear on the title of the book, led us to expect an accurate and complete description of the Chinese empire. We expected to find a good work, and of a prominent place among the volumes of the

Edinburgh Cabinet Library. We have long wished that a correct account of what China is, together with a brief history of what it has been, might be given to the public; and when it was announced that Mr. Murray had undertaken this task, we anticipated, as many others did, that the desideratum would be supplied. Such were the expectations and feelings with which we opened his first volume; but a perusal of the first page, convinced us that our expectations were not to be realized; and every successive page, to the end of the volume, only served to confirm us in this opinion. Many parts of the work are totally wrong; and many others are mere "composition:" the author's facts, "collected from various sources," are thrown together like the objects in his engravings, often presenting descriptions of scenes, which have no existence except in imagination, and which have more than once reminded us of the lines of the poet:

Humano capiti cervicem pictor equinam
 Jungere si velit, et varias inducere plumas
 Undique collatis membris, ut turpiter atrum
 Desinat in pisces mulier formosa superne;
 Spectatum admissi risum teneatis, amici?

The author having before him, as he says, "ample materials" for compiling "a satisfactory account of China," the "historical inquirer" had a right to expect from his pen, what Mr. Murray declares has not hitherto existed, "a complete and connected view" of the history, learning, commerce, and statistics of this "immense sovereignty." How far the study of "China, vol. I," is likely "to throw an important light" on the world, we will show in the sequel, having first laid before our readers the author's preface, which fully explains the plan of the work. The preface is dated March, 1836, at which time the volume was published; the second volume was to appear in April, and the third in May following. We here introduce the preface entire.

"The importance and interest attached to the subject of this work appear to be now fully appreciated by the public. China, from the antiquity of its origin, its early progress in arts and civilization, and the very peculiar form which its institutions have assumed, exhibits an aspect differing from that of every other empire, ancient or modern. Its story is that of the largest portion of mankind that have ever been united under one political and social system. Recent events also have opened to Britain prospects of vastly extended intercourse; so that the wall of separation which has so long stood between the two nations is soon likely to be, in a great measure, broken down.

"These considerations have induced us to assign to the history, learning, commerce, and statistics of that immense sovereignty a larger space than usual, and to bestow upon them the most careful research. To this task we were further urged, by reflecting that there does not, so far as we know, exist at present any channel by which the historical inquirer can obtain a complete and connected view of them. Successive missionaries, indeed, in the course of two centuries, have transmitted to Europe many important communications; but these, from their very magnitude, are nearly inaccessible to the ordinary reader. The General History, for example, in thirteen large quarto volumes, and the Miscellaneous Memoirs in sixteen, encumbered with much irrelevant matter, present a mass which few will be inclined to penetrate. subt, have been lately made from Chinese writers, which considerably our knowledge of that nation ; yet none of them suited to European taste. Du Halde alone attempted to present in a convenient form the very valuable records of which he had the volumes are now, in a great degree, superseded by further formation.

Never, there has not hitherto been any single work in which a full account of China might be found, those above mentioned, with the ample materials for accomplishing such an undertaking. In view of these advantages, the author has made every exertion to compass such a view of the history, productions, and social state of this great empire, as will at once amuse and instruct the reader.

A survey of the aspect and natural features of the country, presented in a neat and concise manner, from the voluminous work of Mailla; and other writers, is given in a separate outline of Chinese history. Without entering into a detail of the events, he has sought to exhibit the advances made in civilization, the most memorable events that distinguished the success and their downfall. He then adverts to the knowledge of the Greeks and Romans relative to China ; on which subject he has thrown additional light, by tracing an early navigation, and the existence of an ancient trade in tea. The first volume is occupied by the transactions of the modern times, their attempts to open a commercial intercourse ; their success, and the reception which they severally met with at the

second volume is chiefly devoted to inquiries still more important, relative to the nature, religion, government, industry, manners, and social state.

Recourse has been had to the most authentic sources of information, so pains have been spared to illustrate subjects so interesting, so imperfectly understood. There is added a succinct account of the intercourse from the earliest period to which the lights

are now, after a condensed view of all that is known respecting the empire, its foreign commerce, particularly with our own

This subject so extremely important at the present time, is discussed by Mr. Peter Gordon and Mr. John Crawley, a gentleman who has established a well-merited reputation for his "Indian Archipelago," and by his account of the embassies to Siam, and Cochinchina. In the discharge of his official duties, as well as when governor of Singapore, he has been particularly diligent in the duties of collecting information, which he has here presented in a characteristic activity and intelligence.

It is of great importance to introduce directions relative to the navigation, corresponding to those in our work on British India. This was first performed by captain Lynn, an officer long employed by the East India Company, and afterwards as examiner of their nautical tables and other works display a thorough acquaintance with the scientific principles of his profession, but also with the winds and channels to which he here supplies a guide. In the manner for which we are indebted to him, he communicated the information, who liberally allowed the use of his valuable col-

lections in astronomy, though they appear not to have at any time been applied to the use in China, present some striking peculiarities. The

ment of these sciences, embracing their history and actual condition, has contributed by professor Wallace, whose distinguished attainments are a sufficient guarantee, that it will be found both interesting and satisfactory. The natural history of those vast provinces is the branch which remained longest in a state of imperfection, an inconvenience resulting from the strict prohibition imposed upon the intercourse of Europeans. Of late, however, the exertions of the British residents at Canton have procured from the interior numerous specimens, many of which now adorn our museums and galleries. To Mr. Reeves, particularly, the scientific world is indebted for these important advantages; and his friendly communications have been found of essential service in the composition of this division of the present work. The chapter on geology and mineralogy, which has been prepared with particular attention, will be found to contain many interesting facts, and to present as full a view of these branches of knowledge as could be obtained in the present limited state of our acquaintance with the central parts of China.

Botany, a subject of the highest importance, has been treated by Gilbert Smeaton, esq., the late professor of that science in King's College. In composing it he enjoyed an unreserved communication with Mr. Reeves, and had access to all the materials in possession of the honorable Company.

With regard to zoology, it may be stated, that the observations which have been given, are enriched with some elegant engravings of animals characteristic of the Chinese empire.

The author has pleasure in expressing his obligations to sir Charles Clive, for the liberality with which he admitted him to the museum and library of the East India Company. His acknowledgments are likewise particularly due to Dr. Horsfield, not only for the obliging manner in which he facilitated his access to those collections, but for the aid afforded by him in procuring information from other quarters.

The map of China has been carefully engraved from a drawing by Mr. G. Smeaton, who had the advantage of inspecting all the materials in the possession of captain Horsburgh. It has been greatly improved by means of a chart of the eastern coast prepared with great labor and from the most accurate surveys by that eminent hydrographer.

The cuts, amounting to thirty-six, executed by Jackson in his best style, almost entirely taken from original drawings never before engraved. The splendid collections possessed by the Company were liberally submitted to the inspection of the Author. Some valuable subjects have also been obtained by the publishers from Canton as well as from private individuals; all of them, it is hoped, will be found well calculated not only to embellish but to illustrate the work."

Greater promise than is here held out, no reader could ever wish to have fulfilled. The promise, however, is not greater than will justify the disappointment of those who expect to find "a complete and connected view" of the Chinese empire. We will not attempt to remark on the vagueness and ambiguity of the Author in the opening paragraph, where he tells his reader, that, "Generally speaking, the great kingdoms of Asia extend along its southern border, chiefly on the shores of the Indian ocean, and are bounded on the north by the snowy peaks and pastoral wilds of Tartary;" while, "China, on the contrary, is situated on the Pacific at the eastern extremity of the Asiatic continent, and in the same latitude with the most elevated parts of its central mountains." We likewise pass over similar descriptions in other parts of the work. But what is to be thought of the en-

whether,

prove that China is not, as "has often been regarded? Who ever believed it to be one vast plain? old books about China, it is said that tea grows on so inaccessible that monkeys are trained to pluck the them down to their masters. Many other wonderful and, of which we may say with truth, that the more the more readily they have been believed. But these are trials for authentic history; and the time for their tests of fact, we supposed, was over and gone.

We regretted that the Author looked at China, as he does, through the magnifying glass which some of the writers presented to him, forgetting the circumstances under which. If we deprive Chinese scenery of the false colorings which writers have thrown around it, and of the errors which have added, we shall find the whole eighteen provinces nearly the whole of their extent, to be moderately fertile places highly productive, capable of amply remunerating the laborer; but not producing fruits so spontaneously to induce its inhabitants to sink into slothful inactivity. The country thickly populated, and every advantage secured to it by the great rivers which rise in the elevated parts of Asia, and by the smaller ones which spring from the mountains. We shall find many fertile agricultural districts with villages of every size; and we shall see collected together in large cities natives from many of the provinces. We shall behold the crowded population often struggling to obtain a livelihood, to bring under cultivation and repay their toil, and to redeem land from the water which it has lost. Such a country is a rich picture in itself, it is a fine one. "Those immense ridges which traverse the eastern part "clothed to the very summit with luxuriant forests," particularly the tallow and the camphor; "the most fertile example, which overspread that highest and most fertile which crosses the southern provinces," affording fuel for building "to the northern districts;" and above all, Yunnan, and Fuhkeën, "covered with plantations, and an immense number of bridges, immense triumphal arches, hills covered with cities on the waters,"—all these we did not expect, for at least the hundredth time, in the Edinburgh.

We are surprised and regret that Mr. Murray should fill his pages with facts "as those contained in the following sentences. "The indigenous vegetation has been everywhere the same, but the highest mountains have been leveled down to their tops; cities have been built upon them, and a wall erected along their summits. They are placed upon a vast scale all the industrial arts, and manufacturing." And again, he tells us of chains of

mountains, which, "in some places, where the great rivers have forced a passage through them," are "shattered into very irregular forms;" but are, he adds, "in general, covered with verdure and cultivation, and adorned with triumphal arches, pagodas, and other fanciful structures, and are thus made to exhibit a gay and smiling aspect peculiar to themselves."

It is often difficult, and sometimes quite impossible, for us to ascertain from what sources Mr. Murray drew his information; and we are astonished to find no allusions to the valuable works of Rémusat and Klapproth; while at the foot of many a page are marshaled old Mendoza, Purchas' Pilgrims, and a long list of other like worthy veterans.

In the first chapter of our author's work, which he says, contains a "general view of China," and occupies twelve pages, there is not, in our humble opinion, even one paragraph, long or short, so free from errors or defects as to be in any tolerable degree fit for the press. It is strange, it is passing strange, that any one should venture to publish such a work under the name of history; and how Mr. Murray could allow it to go out into the wide world, with his sanction; we cannot understand. Excepting the preface, there is nothing in the work worthy of such a mind as Mr. Murray's; indeed, we can hardly conceive it to be his own work; it is more like the production of a giddy school-boy, or of some young aspirant, than of a grave historian. The author talks of "China," of this "immense sovereignty," of this "vast empire," most apparently without having any definite idea of what he would fain describe. It does not even appear from any thing we can find in the book, if we except the map, whether he intended that his "general view of China," should embrace the whole empire, or only the eighteen provinces. The description of the mountains, plains, rivers, lakes, &c., affords no adequate idea of the actual state or appearance of the country.

The second chapter, occupies thirty-three pages, and contains the "ancient history of China;" the third, in sixty-seven pages, gives us the "modern history of China;" thus, in one hundred duodecimo pages, the reader has *the promise of* "a complete and connected" history of this vast empire. The first and second paragraphs of the second chapter will show how well this promise is fulfilled: we quote them entire.

"The history of China, long entirely unconnected with the western nations, has excited less of our attention than that of countries with which we have maintained a closer intercourse. It possesses, nevertheless, a deep and in some respects even a peculiar interest. It includes an almost uninterrupted series of annals for upwards of 4000 years, commencing at an era coeval with the rise of the Egyptian and Assyrian monarchies. Nor do these memorials, like those of Europe, exhibit alternate ages of greatness and decline, of refinement and barbarism; they present a vast empire ascending, by gradual steps, from the first rude elements of the social state, to a very considerable pitch of civilization and improvement. No other records, except such as are contained in the Sacred Volume, give an account of human society at so early a stage.

ers to have been an object of peculiar attention to the and sages at a remote period. Regular arrangements the authority of the state, for transmitting public events in the literary tribunal, or rather board, called Hanlin departments,—the qualification of whose members are determined by examination,—is exclusively devoted to the composition of the national annals. They are written in the first instance on loose sheets introduced through an aperture into an official bureau,* and are sent to the sovereign by express orders from the government. Being thus prepared for the government, they are not destined for general perusal. In the reigns of such care is taken to secure impartiality, that the records of a monarch's reign are never reduced into an historical shape, till he has died, and the throne has passed to another dynasty. When a monarch seems to have obtained credit, it is nevertheless difficult for a royal family would thus anticipate its own extinction, and forward with some hope of perpetuity. It, however, usually happens that the founder of a new race, having no motive to conceal the truth which he has preceded, and finding, probably, in the conduct of the monarch, a good ground for having wrested the sceptre from him, has not hesitated to sanction the publication. It appears certain too, that the records cannot be tampered with, and are never seen even by the monarch. The author mentions one instance of the request being made, and being resolutely resisted by the board, who urged that there was no demand."

These maps are fair specimens of the whole "history of modern China." Passing over the first, without attempting to correct errors, we will examine the second, sentence by sentence.

It appears to have been an object of peculiar attention to the monarchs and sages at a remote period." What is meant by a remote period, he does not specify, nor ascertain. We suppose he must have referred to the monarchs and sages who lived anterior to Confucius, persons who have lived since then have been called sages. If such were the author's meaning, he would have said a negative, and said, "history appears not to have been an object of peculiar attention," &c. Until the monarchs ascended the throne, none of the imperial rulers, or sages, gave any "peculiar attention" to the writing or preservation of historical works.

"Regular arrangements were made, under the government, for transmitting [the record of] public events. When were these arrangements made? By whom made, and what were they? These questions we leave to those who are able to answer them.

"In the literary tribunal, or rather board, called Hanlin departments,—the qualifications of whose members are determined by a minute examination,—is exclusively devoted to the composition of the national annals." Here the Author

generale de la Chine (13 vols. 4to, Paris 1777). Pref.

evidently leaps from "a remote period" to the present time. But how and why does he convert the imperial academy, the Hanlin yuen, into a literary tribunal or rather board? And why does he say that "one of the chief departments" of the academy, "or rather board," as he would have it, "is devoted to the composition of the national annals," whereas only a subordinate branch, the *kwōshe kwān*, is entrusted with that work?

Fourth sentence. "They (the national annals) are written in the first instance on loose sheets, which are introduced through an aperture into an official bureau, never opened except by express orders from the sovereign." This may be true; if so, however, it is very unlike the method of writing and preserving historical papers, generally prevalent among the Chinese: Grosier's work, to which our author refers for proof of this statement, is not always correct; and we doubt if it be so on the point in question.

Fifth sentence. The national annals, "being thus prepared originally by the government, are not destined for general perusal." How correct it is to say that the annals "are *not* destined for general perusal" will appear in the sequel. Lest the reader should be led to suppose that the annals were "thus prepared" by the government at "a remote period," as Mr. Murray intimates, it should be borne in mind that the Hanlin yuen is a modern institution, having had its origin long subsequent to the period at which our author commences his modern history.

Sixth sentence. "But, according to Grosier, such care is taken to secure impartiality, that the events of an emperor's reign are never reduced into an historical shape, till all his descendants have died, and the throne has passed to another dynasty." This is a specimen of Grosier's work; and it would be sufficiently contradicted by the fourth sentence above, *if* that were correct: for, as the histories of China, which are prepared by the government, are usually mere annals, if "the literary tribunal" were exclusively devoted to their composition and to placing them in "an official bureau," there would be produced something very nearly approximating to "an historical shape." But, be this as it may, Grosier's account is refuted by the facts that the events which occurred during the reign of Teënming, Tsungti, Shunche, Kanghe, and Yungching, monarchs of the present dynasty, have been "reduced into an historical shape," printed in sixteen quarto volumes, which are now for sale in this city; and also, we presume, in all the principal cities throughout the empire, though it is not published with the emperor's "sanction." A copy of this work is now lying before us, along with Mr. Murray's "complete and connected" history of ancient and modern China.

Seventh sentence. "Though this statement seems to have obtained credit, it is nevertheless difficult to believe that a royal family would thus anticipate its own extinction, and not rather look forward with some hope of perpetuity." It is "difficult to believe," truly; and there must be no lack of "credit" too, if it can be obtained for such statements.

“ It, however, usually happens that the founder having no motive to conceal the actions of the one and finding, probably, in the conduct of the rulers good grounds for wresting the sceptre from them, does not sanction the publication.” This is a very “ prohibitive cause” which induced “ the Chinese monarchs in a late period,” to give their “ peculiar attention” to the matter, usually happens that the “ writer “ of a new ” work finds no adequate means, or “ no motive,” for determining the works “ which preceded, and finding, probably, that certain publishers “ with whom ” he is acquainted, believing he will be amply remunerated, “ becomes the publication.” *The publication of what ?*

“ It appears certain too, that these records cannot be tampered with, and are never seen even by the emperor “ these records ” are to be tampered with or not, more certain than that the emperors of China have “ tribunals;” and if Mr. Murray will take the trouble to peruse the pages of the Peking gazette he will there find the fact. The emperor frequently peruses, and repeats to his government.

“ The history mentions one instance of the reason why it was successfully resisted by the board, and was no precedent of a similar demand.” Thus we see the will of the one man, who is supreme in everything, controls the powers without control, and who is clothed with the authority of deity and styled the “ son of heaven,”—even successfully resisted. However, it is by no means the absolute repose of the emperor, absolute as he is, should be ; nor is there any reason to doubt that there is no precedent of a similar demand,” because there could be no objection, since it is the undisputed prerogative of his majesty to examine the records whenever he pleases.

Mr. Murray say, in commencing his next paragraph, *let it be confessed, hang over the remoter eras of the history* when we sat down to the perusal of his book, it was our custom to mark every sentence and paragraph which appeared incorrect, in order to notice some of the most important errors in a review ; but we soon found that the procedure was more laborious and space than either our readers or ourselves could afford to give to an object. The last part of the book, though it is sometimes grossly erroneous. However, we are of opinion, that it contains many things that are true and many which are new : but, unfortunately, it too often happens that the new are not true, while those which are true are not new. We close our brief notice of “ China vol. I,” and what “ new light ” is to be thrown on the world by the volumes II and III.

ART. II. *Notices of Modern China: the influence of foreign commerce considered, first in connection with European nations, and then with those conterminous with this empire.* By R. I.

It was stated in a former part of these "Notices," that a principal cause of the stability and integrity of the Chinese empire, is its isolated locality and the peculiar language which debars communication with other large empires; and that this accidental position has established *isolation* as a principle of safety to its government. It must not be, however, supposed that the Chinese government has been always able to maintain this seclusion. The empire has been exposed to intercourse with other nations both by commerce and by conquest, and has indeed shown no disinclination to the former, when unattended by danger of the latter.

"It is remarkable," say Robertson,* "that the discoveries of the ancients were made chiefly by land; those of the moderns are carried on by sea. The progress of conquest led to the former, that of commerce to the latter. It is a judicious observation of Strabo," he continues, "that the conquest of Alexander the Great made known the east, those of the Romans opened the west, and those of Mithridates, king of Pontus, the north." This remark is true, as regards the first part of the sentence; but, with deference to both the above named historians, we must give precedent to commerce, before arms, in nearly all discoveries, whether ancient or modern. The silks of China had probably found their way to Tyre long before Alexander arrived there in his career of conquest. In any event, the Phœnicians and Massilians traded in the tin of Cornwall two centuries before Cæsar's descent on Britain; and Jason & Co. had laid in an investment of wool in the Euxine, long before Mithridates lived. The English East India company in modern times, is of itself a confirmation of our position. It is the wealth of commerce, in truth, which both whets the appetite of conquest and furnishes the means to pursue it. But commerce may also claim a priority of merit beyond mere discovery. "The great conclusion, so interesting and important for human nature and its history, becomes in a manner forced upon us,—the first seats of commerce were also the first seats of civilization. Exchange of merchandise led to exchange of ideas, and by this mutual friction was first kindled the sacred flame of humanity."† So it has been and will be with China.

Considering plunder to be the stimulant to conquest, we are tempted to doubt the truth of the wealth and prosperity of ancient China, when we find the Huns, the Turks, and the Mongols, who had alter-

History of America, vol. 1, note 7.

† Heeren's Reflections on the Politics, &c., of the ancient nations of Africa vol. 1. page 475

petty states of Kathay, abandon the contest to pour the rest of Asia, and of Europe. But about the king of Tsin formed the little principalities of Kaïre; "the pearls and merchandise of foreigners are."* Two centuries later, "in the time of Hwante, (Egypt or Arabia,) and other nations, came by the sea with tribute; and from this time trade was carried on at Canton."† Then it was that the Heung entered into Kathay and held more or less of the country, during several succeeding ages. In the meantime, Snji, although torn by civil war and dissension, was free from foreign conquest; and here foreign commerce flourished, no doubt civilization, until the Tartars were expelled from the empire also.

The Arabian travelers,‡ that in the ninth century, brought all the ships of the Arabs. "A Mohammedan, "is appointed judge (*query*, consul) over the Arabian trade by the authority of the emperor of China, and he settles the disputes of the Mohammedans who resort to those parts. The Arabian trade thither are in no way dissatisfied with his decisions are just and equitable and conformable. This was the result of peaceful times; but the reign of the emperor was afterwards interrupted, according to the Chinese, by a rebellion, when Canfu was taken by the Tartars, and the sacrifice of the whole population which ensued, says the Chinese, perished one hundred and thirty thousand Mohammedans, and Parsees, who were there on occasion of their passage is worthy of remark as being, so far as the Chinese are concerned, an instance of the murder of peaceful traders in the country by the imperial government, but during an age of peace.

The Chinese had shown no disinclination to trade with the Arabian sea when there was then no disinclination, because no fear of the Tartars. But six centuries before, the great wall of China was built in the north to check the incursions of hostile forces of the Mohammedan travelers, a jealousy of foreigners was formed in the south. "When the ambassadors of Malay (bordering on China,) says one of them, "enter the country of the Chinese, they are usually watched, and never once allowed to survey the country, lest they should form the design of conquering it, a difficult task for them, because of their great numbers. The Chinese are divided from China only by mountains and rivers. The Chinese, therefore, had found good reason for their exclusion of foreigners, it does not appear that they ever permitted their entrance into the country for peaceable purposes. The Chinese, who was sent ambassador to the Great Khan

* See page 47. † Morrison's Chronology, p. 45.
‡ See Harris' collection of voyages.

of the Mongols about A. D. 1253, tells us: "the Nestorians inhabit fifteen cities of Kathay, and have a bishop there in a city called Segin." (Seganfoo in Shense.)

We pause here to remark, that the apostles of religion, who should be essentially ministers of peace, here in China, as elsewhere, were the first followers in the train of commerce, where they have not preceded it, and have always been in advance of conquest. The Nestorians probably accompanied the caravans, which must have traded at a very early period between China and the western nations; and they propagated their religion in Tartary and Kathay, in the first ages of Christianity. We have already seen that Mussulmen, Jews, and Parsees had long found their way into China, where no conquerors of their creed have yet set foot. The Mongol conqueror of China, Kublai khan, so far from being averse to foreigners, invited the Polos to his capital in Shanse,* and afterwards sent them back to Europe, accompanied by one of his officers, on a mission to the see of Rome, to bring back with them missionaries, holy oil, &c. Marco Polo, who became subsequently an officer of the empire, speaks of Nestorians, Christians, Saracens, and Mohammedans, as living in several places in China, both north and south of the Yangtze. The latter country, by the way, he calls Manji, (Manee,) which according to Dr. Morrison,† means "savage barbarian." This term barbarian was used equally by the southern people in speaking of the northern, and in preceding ages most likely by every petty tribe with respect to every other state, as it is applied by the whole empire to this day, to all countries beyond China.

The Mongol dynasty was driven from the throne, towards the latter part of the fourteenth century by the Ming, a Chinese family. The last were exposed equally, however, to the attacks of the Tartars, throughout their whole dynasty, and their jealousy of foreign conquest was further excited by frequent descents upon the east coast by the Japanese. They did not refuse, nevertheless, to admit the Portuguese to their ports to trade, about the middle of the dynasty, notwithstanding the outrageous proceedings of Simon de Andrade, one of the first Portuguese commandants who visited China. It was under this dynasty too, that Macao was given to the Chinese; and that the first Jesuit missionaries appeared in the country; and were received and honored at court.

To the Ming succeeded the present Mantchou dynasty, under the first emperors of which the Roman Catholic missionaries gained considerable influence in the empire, and the western European nations began to trade with China.

We have given this short sketch of the intercourse of foreigners with China, because the policy of the government has been constantly confounded with the temper of the people, which has been supposed to be averse from foreigners and from commerce. Even the committee of the houses of parliament on the East India company's charter,

to take a mass of evidence, to prove that the people, were impelled by self-interest, and willing with whomsoever they could gain profit. Upon this has also been based the position, that nations striking forcibly through this seclusion of the Chinese family of the world; whereas the restriction upon them does exist, is simply the policy of the government, which might possibly soon cease to exist; which we have never acted upon, and which we shall presently show we never intend to preserve; supposing it, as we do, to be a policy, which the Chinese government in its present political knowledge can pursue. We have seen that the first discoveries, by Europeans at all events, in which it has contributed to the civilization, as far as it goes; and would make a deduction from the foregoing seems difficult to escape; that the foreigners who trade with this empire, should forbear, as far as possible, their fears.

The English in China points especially to the different reception of the embassies of Macartney and Amoy, which may be attributed, in part perhaps, to the personal influence of the monarchs Keenlung, and Keeking, who received them, and had nothing to do with the character of the people. However, that in former days a viceroy of Canton, when for some months he held office, invited the chief British to nine several conferences, gave and accepted, that his predecessor, and even imperial commissioner of the highest rank, admitted the select committee of the British factory to personal audiences, acts of courtesy which have been quite unknown for several years past; we may therefore attribute the conduct of the government and its officers towards the foreigners by their fears of the power of the British government, rather than by general aversion.

Of the massacre of foreigners during a rebellion, we may attribute the aversion to them, for all the Chinese of the empire at the same time. The only wonder is that the aversion of the foreigners in Canton, has not oftener provoked the mob. The truth is, that the foreigners are not so much oppressed in person and in property, than the natives are themselves, and are not so much oppressed by the governmental officers, and by the government, as our previous Notices will show. The foreign policy of which we speak, for the sake of the empire, so far as its pride and nature will permit, is a policy of justice, of just, or at all events, of serious grounds, of a policy to avoid collision with their governments. This is another principle of conduct for foreign traders and merchants. See previous Notices, p. 135: see also *Canton Register*, March.

in China, which is, that if instead of taking the good along with the evils of a despotic government, they endeavour by outrage to insult that government and weaken its control over its own people, they jeopardize their own property, and use their growing strength to pull down the edifice of the Philistines on their own heads.

We have said that the apostles of religion have in China, as elsewhere, been the first followers in the steps of commerce, which is only to say in another way that commerce introduces civilization amongst the people with whom it prevails; for religion (meaning Christianity) is as we have observed elsewhere,* the summary of all civilization.

It may be said that the march of improvement through this or any other means, has been too slow in China; to which we reply that its progress has been slow all over the world, but that its progress has been greatly accelerated in Europe in the last century especially amongst nations whom we shall presently show to be contemporaneous with China, and therefore likely to accelerate the march of improvement by every contact. The pressure of civilization was until two centuries ago, perhaps from China, outwards; it is now from other countries into China.

Commerce has, at the same time its evils, as well as its advantages, and it is through the first sometimes, as when it introduces war and pestilence into a country, for instance, that Providence works the greatest changes in the habits of a people. Its abuses may be made to work out a political even as well as a moral good. An instance of this is exemplified in the opium trade in China, which in its intoxicating progress we have seen to have opened the way for the circulation of religious tracts, much farther than the ordinary progress of legitimate trade; and its political influence in the Chinese government may be estimated by the memorial respecting it already given in this work.† It has forced the Chinese government itself to admit the progress of commerce is irresistible.

The inferences which we have already drawn for the guidance of individual foreigners in China, may, with some additions arising out of the subsequent observations, be thus restated for the benefit of their governments, viz :

1st. That governments which are desirous of extending their relations with China by peaceable means, should on the ground of policy, as well as of justice, take all possible pains to disarm this power of unnecessary fears.

2d. That whilst they trust to commerce to pioneer the road of communication with the country, they should contribute, by every peaceful means, to introduce intellectual and moral improvement into the country in the train of commerce, both to facilitate its own operations, and to furnish it with a safe starting place for future discoveries.

be obliged to make him. The same system occurs at present, without doubt with its consequent corruption, as well at Maemae ching at Canton, and other parts of the empire. "It is remarkable," says Pallas, "that there were no women in the Chinese town, but females in the Russian town recompensed the Chinese for the gratification." We have here the same policy of the Chinese government operating precisely in contrary ways at Maemae ching and Canton; at the latter place, it is the foreigners who are deprived of their liberties.

The late Padre L'Amiot tells us in a note to his translation* of a Chinese statistical account of Tartary, that at the period of the arrival of Lord Macartney's embassy at the court of Peking, the first minister of the empire was on the Russian frontier, acting as commissioner for the settlement of the boundary lines of the two empires. "The Russians were accused," says the Padre, "of having advanced far along a river. After many debates, there was a kind of arrangement, but it appears that the Russians did not retire, and, *ex a refero*, this affair was not in the Peking gazette." Former notices in this work, recount many irruptions and insurrections amongst the barbarous tribes within the Chinese frontier and on the borders, as mentioned by the Peking gazette; but the writer has nowhere met with a case of aggression by foreigners over the Russian frontier, which may either be accounted for upon the Padre's insinuation, or we may attribute it to the moderation of Russia. Judging the Russian power however, by what we know of its career in Asia Minor about the Caspian and Aral sea, we will venture to infer that it threatens encroachment upon China by the same fatality, which we well presently see urges on the British upon another frontier of the empire.

The Peking gazette does not hesitate to confess to disturbances on its southern frontier, as has been previously shown,† having little fear from its tributaries Cohinchina and Burmah; yet it is in this quarter perhaps, that events are preparing by the ordinary operations of commerce which are likely to influence the destinies of China at the future day, more than most of her causes of apprehension; but this commerce is urged on by British enterprise, through the British provinces which approach the empire on this side. Martaban, one of the most fertile, lies about the mouth of the river, Thalein, which takes its rise in Yunnan. A scientific expedition dispatched by the supreme government of India, has lately explored this river; and Dr. Richardson, who also ascended it, apparently on a political mission, met at Suway a Chinese caravan from Yunnan, and arranged with the merchants of it, that they should proceed down the river next year, to Sulmein. It is more than probable that the Chinese will fail to perform their agreement in the first instance; but the circumstance may be improved hereafter into a continued intercourse.

* See vol. 5, page 49

on the Brahmapútra, could be speedily marched across the intervening country to the banks of the greatest river of China, which would conduct them through the very centre of the celestial empire to the ocean."

"The tea-tree," adds the same work in another part, "grows wild all over the Singpho country, as also on all the hills in that part of the country, and is in general use by the natives as a wholesome beverage."—The Bengal government is, it is understood, about to attempt the introduction of the cultivation and preparation of this shrub into the country by means of the Chinese. There is no conceivable reason why the manufacture of tea should not succeed in its native country, except the expense attending it. If the government is willing, however, to make a pecuniary sacrifice, if it be necessary, for the sake of benefiting the country hereafter, we may expect to see a Chinese colony established in A'sám or its tributary states, who will speedily carry on an active trade with their countrymen in Yunnan. One of the governors of Canton, Yuen Yuen, we believe, in one of his edicts respecting foreigners said, that they were only to be curbed by *tea reins*, alluding to the necessity which he supposed them to lie under of procuring tea, for which they could submit to any thing. It seems not impossible that tea reins may be used hereafter to procure greater concessions from the haughty government of China than it has yielded already to a more ignoble influence, the smuggling trade in opium.

It may be said, that if any advantages are to be derived hereafter in this quarter, they will be attributable to the Burmese campaign. This may be true; but looking to the influence which is now quietly being gained over the Shan tribes by the British officers in A'sám, and the strength of those tribes, as stated in the before quoted works, we argue, that the same advantages might have been acquired by less costly and more worthy means without the Burmese campaign; that mild treatment and patient but firm control over the mountaineers who were in immediate contact with our possessions, might have united them in an opposition to their oppressors, the Burmese, and been a sufficient check upon that people; or that if, at the worst, it became absolutely necessary to invade Ava, that the task had been rendered infinitely less expensive and bloody, by first securing the coöperation of the honest and hardy mountaineers.

Following the Chinese boundary westward from A'sám, we find that government in control of a territory, which extends over twenty degrees of longitude, and which is only separated by the Himalaya chain of mountains from countries of equal extent, controlled similarly by the British. Tibet, upon the northern side, is indeed, ruled nominally by the Lama hierarchy at Lassa, but it is really directed, especially in its foreign policy, by the Chinese resident there. He is understood to nominate or appoint the Garpons or officers of government, who superintend and guard the various passes through the mountains, and one of his assistants presides at the great mart at Gartope, near the western extremity of Tibet.

the mountains, we have the Nipalese territory to pay tribute to China; but is actually under British government, and controlled by the British.

The policy of the supreme government, over this principality, wisely allows the Nipalese to govern in his own Chinese fashion. The British accordingly restricted to a limited space, and until lately, if not now, have been excluded from the country; these are very much the foreigners in Canton complain of.

In the state lie the British districts of Kemaon in immediate contact with Tibet, with its subjects of the British government in the passes in the mountains. Beyond the Kemaon district and the river Sutlej, where they still exercise power, lie a number of little independent states which exercise the power of life and death, but they all pay tribute to the British government in their relations with each other and with the governor general's agent at Deyrah Doon. The British mountaineers who people these states carry their trade through the valley of the Sutlej and the Kumaon with Seb and Gartope, and some of them are stationed in one quarter and Lassa in another, appointed from the latter place are stationed there to prevent the passage of Europeans through the passes under the Asiatic subjects of those same states, as elsewhere in the Chinese dominions, the policy of the Chinese authorities enables enterprising states to evade the restrictions, as Moorcraft, Gerard, and others have done; and our knowledge of Tibet will not be of much use in this way. Upon all these matters, the British are generally silent as about Russian affairs; its policy, perhaps, as its narrations.

The Russian and British powers are hemming the Chinese possessions in two nearly parallel lines, pressing upon the provinces of China herefore, the advantages of its former isolation must decrease the resistance of its isolating policy. It is possible as with the Chinese to avert the collision and energy of the European governments, and their religion as well as sound policy, until certain that the collision will be to their advantage as well as to theirs, either of them, as little, to make an

immediate impression upon the Chinese empire, and a too precipitate attempt, if such a thing were to be thought of, might only retard the events which are peaceably promoting the trade of all the countries. Whenever the present dynasty of China wears out, and there is no reason to suppose that it will be immortal more than those which preceded it, it is more than probable, that the empire will rend into Tartar and Chinese kingdoms. Each will probably seek for foreign aid against the other, and the contest for political influence now going on in other parts of Asia, between Russia and the western European states, may then be removed to Chira. Any advantage to be obtained in this or a similar commotion in the Chinese empire, will fall to the foreign power which has contributed most in the interim to develop the intellectual and moral capabilities of the Chinese, and taught them previously to confide in and respect the moderate and moral dignity of the people, whose physical aid they may then invite.

The above speculation is presented merely as one of many accidents which may at some future day call for European interference with China, and be turned to advantage by the power which is prepared to avail of them; but ages are but as days in Asiatic history, and it is impossible to predict the time when any change may occur. The present emperor of China, if less energetic, seems to be as just and as attentive to the business of the empire, as any of his race. But although of middle age, he is reported to be prematurely old, his heir presumptive is a child, the mother said to be one of the cleverest of her sex, and her father by adoption a minister of state—contingences, any one of which is sufficient to revolutionize a despotic government. What are the elements of change amongst the people, may be gathered from our previous "Notices."

ART. III. *Description of Manipúr: its situation, productions, government, language, and religion; with some account of the adjoining tribes.*

From an unpublished Report recently made to the Indian government by captain Pemberton, late joint commissioner in Manipúr, from which extracts are made in the Calcutta Christian Observer, as well as from other Indian publications, we have derived our information respecting this state. The Report describes the great chain of mountains which forms a barrier on the east along the whole extent of the Bengal presidency. From the southeast of the valley of A'sám in N. lat. 26° 30', and E. long. 95°, this chain runs a course generally south, having Manipúr and Burmah on the east, and on the west Káchár, Khásiya, and A'rácán, till it terminates at cape Negrais

t of the latter province, and the southeastern cape ngal, in latitude 16° north. In the northern part, rd from Jynteah, this range increases in height till it nd of the valley of A'sam; thus far being under and farther on, more or less directly so. This part to 8000 feet in its greatest height, while farther 00 feet, and the vallies lie at an elevation from 2500 the sea. From the east of A sam this range is divid- s directly on into China, into the provinces of Yun- ; another in the latitude of Sadiya meets a branch tains from the north; and a third divides into the anges which border the Irawa dí on each side, from outh. "Every part of this mountainous country l," observes captain Jenkins, "presents nearly a l structure, being almost entirely composed of clay here nearly of the same appearance, very much ggraded, so much so as to be seldom visible in mass, with a deep coat of soil and luxurious vegetation st hills."

Manipúr lies between this great chain on the west, ; mountains on the east; this latter range is west of, the Kyendyen, or Ningthí river, which is the chief the Ira'wa dí, and unites with it below Ava. It is valley about sixty miles in length, lying between latitude; at an elevation of 3000 feet above the sea. es not exceed 30,000, or 40,000, but being a united e, "they exercise rule over all the hill tribes from on one side, and from Ká'chár to Burmah on the y is well watered by the numerous streams from ersect each other in every direction, and by means tion of the fields is accomplished with but little re of the valley are numerous small lakes of fresh unined, which, with all the streams and the water ut a single outlet. This is at the southeast corner, t there must be a slope from north to south; for if ights the aspect is that of a perfect level. From f and other Europeans, major Grant celebrates the nate. 'The natives of Manipúr,' he observes, 'are and robust race he had seen in any part of India. lvided into the dry and rainy; the former lasts May, during which, the weather is generally clear ; almost constant frost at night for the two winter or never is snow seen. In the rainy season, the ent, but the quantity is not great. The only grain care is rice, but this grows of a superior quality, rly double of what the same extent of ground in Tobacco, Indigo, sugar-cane, and the like, grow cotton, and camphor are cultivated on the hills; imulus of a good market, none of them except

otton is raised to an amount beyond the supply of the people. 'The cultivation of fruits is neglected and left to chance, so that though they might be grown in great variety, yet at present few of them attain to great perfection.'

In the royal genealogical roll of Manipúr kings, we find a series of rājás from near the time of the Christian era down to A. D. 1819, when the reigning rājá was expelled from his dominions by the ambitious Burmans. About 1824, the British reinstated his brother Sambhír Singh, in his dominions, which he retained till his death in 1834. His son is yet a child, and the government is in the hands of a regency. From the account of captain Gordon, the government appears to be framed after the true Chinese paternal model; the idea that of a large family; the rājá is the head or father, the royal connections the members, the chiefs the stewards, and the people are the servants. The latter are, indeed, divided into several classes, but all are designed in some way or other to minister to the wants or state of the royal family. Some provide grain, others salt, others cloth, others silk, others grass, others earthen pots, &c., &c. Every one has his duty, and every duty has its agent; each class has its *sirdars*, who after deducting their own allowances and the shares for other men in power, hand over the remainder to the head steward, who, in case it be not already cash, sells the surplus for his own and master's benefit. All these classes, however, are termed tributaries, are deemed inferior, rarely give personal attendance, and if they go on military expeditions generally act as porters. The next great division of the people give attendance at the rate of ten days in forty. Of these, the most numerous are the seapoys, then the horsemen, spearmen, messengers, house-builders, doctors, barbers, and in short, every description of people needed for the police or for the defense of the country. The rājá has the power of degrading any one to a disreputable rank, or of elevating to a higher; and when we farther remember that no man here can resign in disgust, but must continue through life to be in some way or other a servant of government, we perceive the power of the rājá, for good or evil, is unusually great. The whole people look up to their government not only as the source of honor and emolument, but also as the authority on which all in every grade depend for the rank they hold in society, and to which they look as their model of manners, fashions, and religious observances.

It was the command and example of a prince of Manipúr, which first introduced Hinduism into the country. About the year 1780, an image of Govindah was publicly consecrated with much ceremony at Manipúr, by the grandfather of the present rājá. This was the first national profession of that faith, though its votaries had previously been resident there. At the same time a proclamation was issued by the rājá stating that, in order to avert the recurrence of such calamities as then oppressed them, (the invasions of the Burmans,) he wholly gave over his country to this celestial proprietor, henceforward holding the government in his name. rated, to whom was entrusted the presumptive a'já positively enjoined that no descendant of his, on of these images, should ever be raised to the ice the possession of them was a fruitful source of his sons, up to the accession of Gambhír Singh,

encement of the present century Hinduism has [anipúr, and the Brahmins now form a very influ- the late rájá they obtained almost unlimited sway, in the erection of temples at their sacred place, nt all the money received from the British gov- e late war. Much of that influence terminated rájá ; and though the practices and doctrines of t rigidly enforced, there are such exceptions as rading superstition is received in form rather than t observance is called genteel, while eating aning any other rule is termed vulgar. Aged people laily bathing inconvenient, wholly give up the sys- , and yet live respected in their families. Many the religion prevalent before the adoption of Hin- cticed, and they have a regular set of priests and cted with the latter system.

s though a more favorable time than the present for introducing the knowledge of the English lan- hristian religion. The influence of the Brahmins e death of the late rájá ; the Bengálí is a foreign d but by the court and the Brahmins ; while in ooks have been written, and none printed. This s distinct from any of the Indian stock, and being ted, for some time to come the people must be stores of another language. That this must be the led opinion of captain Gordon, the political agent, nself the warm friend of improvements and of hu- ent Manipúrí alphabet is derived from the Bengálí perfectly expressed, while by the adoption of the if not also of the English language, more books culation in one year than all that exist at present. ptain Gordon is exerting all his influence : he has in adapting the Romanizing system of India to is now preparing a dictionary in English, Bengálí, he use of the people, in which he uses the Roman

guardian of the young chief have agreed that the ward shall be conducted under the superintendence And the work has already been begun. An in- r, brought up at the Chitpur school, has been pro- joint expense of the British and Manipúr govern- room has been built in which the young rájá With him are associated the sons of the regent,

and perhaps a few other of the nobility, who with wise foresight are preparing to be the companions of their future chief. The Brahmans, it appears, had previously exerted all their influence to prevent the rájá commencing the study of English, but entirely failed. "All obstacles," captain Gordon observes, "founded on ignorance and bigotry may be considered as removed; for none here dare cavil against a system of education which has been adopted by their prince, and the children of him who now holds the reins of government." The inferior and dependent hill tribes take their tone from the dominant valley, and witnessing there the benefits of knowledge and improvements will seek the same means of civilization for themselves. In this light, the small extent of the population of Manipúr is regarded as an advantage; for two or three dozen schools would educate the whole nation: 'then,' as the Chinese would say, 'the nation being educated, civilization follows; civilization following, the neighboring tribes behold and seek it; the neighboring tribes seeking it, knowledge is universally diffused and all is peace.' Such are the views of ardent and intelligent persons regarding this small but important state. No missionary has yet been sent to make known the gospel there, but we are assured that such would be cordially welcomed by captain Gordon, if as a preliminary step it were his avowed object to give instruction in the English language.

The brief extracts from captain Pemberton's report, as given in the Calcutta Christian Observer, are the chief source of the information we possess relative to the numerous and various tribes inhabiting the great mountain range before described. The principal of these are the Maráms, who occupy the tract between A'sám and Manipúr; next the Kupuís, or Nágas, who reside on the several ranges of hills between Káchár and Manipúr; then the Khongjuís, better known as Kukís, Kuchangs, and Kusi, stretching from the southern border of the valley to the northern limit of A'rácán; and beyond these are the Khyens, between that province and Ava; and the Kárens, who reside on the inferior heights overlooking the low lands of Bassein. Besides these which are more important, are several others of inferior note principally dependent on Manipúr, such as the Maráms, Tankúls, Koms, Changsels, Chírus, Anals, Purams, Muiyols, Mansángs, Marings, and Lúhuppas. On the east, the Maráms are bordered by the Lúhuppas, on the south by Manipúr, and on the west by the Káchárese. The villages of all the principal clans are large and populous, some of them numbering more than a thousand houses each, and capable of bringing into the field three or four hundred men. Their cultivation, which is chiefly rice and cotton, is most extensive; their herds of cattle are numerous, and they are in appearance, stature, and courage very superior to any other tribes with which we are acquainted, except the Lúhuppas, whom they much resemble.

All these tribes are so far civilized that they have become permanent cultivators of the soil, live in regular villages, under a sort of patriarchal government, which checks their fierceness sufficiently

al compact. Some of these communities ac-
 rity of one chieftain, as the head of the tribe ;
 by becoming tributaries to some more powerful
 mission extends only to sending the quota of
 nount authority in any exigency. The tribes
 Bengal, and Ava, carry on a limited traffic with
 the belt between Tripura and the valley of the
 cupied by clans which have little or no inter-
 and neighbors, and of whose existence we are
 he warfare among them annually forces some
 on the southern borders of Manipúr. So far
 ame system of exterminating warfare prevails
 ibes of these mountains, and even exists between
 es. In such a state of society no improvements
 welcomed ; and hence we find that they pursue
 course of employment, in the season of cultivat-
 timber and tilling the ground ; and when the
 her resigning themselves to the feast and the
 w marauding expeditions against their weaker

, west, and east of the Manipúr valley, are said
 f the characteristic features of the Tartar, and
 ; with elevated foreheads, guttural dialects, and
 e contrary the Kukís, or southern tribes, are
 istinguished for the extreme softness of their
 ss of their language. But their exterior mild-
 ferocity of character, and with some of the
 ns of savage life. The practice of "taking
 g them ; and plunder is less their object in
 quisition of heads. These are considered es-
 rformance of the funeral rites of their village
 n them they undertake long and difficult jour-
 many days by the paths that communicate
 s, and from thence spring on the unwary trav-
 an instant, and again plunge into the forest
 me, bearing their bloody booty. Among the
 e expeditions establishes a claim to the highest
 in confer ; and their approaches are made with
 yell of death is almost always the first intima-
 e of their danger. During the lifetime of the
 these scenes were frequently enacted in the
 border of his territory, by the Kukís occupy-
 f the Bárák river ; and though their aggress-
 e degree checked, they are still far from being

habit the plains and mountains in the south-
 are divided into twelve principal tribes, of
 isa appears to be the head. The authority of
 tend over nineteen clans, or *gaum*, thirteen

of which with himself have tendered their submission to the British authorities. This chief resides at the town of Bisa, and his own tribe amounts to about 10,000 men. Besides furnishing a small contingent of soldiers, his chief duty consists in giving immediate information to the British authorities of any thing calculated to excite apprehension. A constant communication seems to be kept up between the Singphos within the British frontiers, and those beyond and in the Burman territory. North of the Singphos are the Bor Khamptis, who occupy the mountainous region interposed between the eastern extremity of A'sám and the valley of the Ira'wádi. They are succeeded by the Mishmis, occupying the mountainous country from the northeast of A'sám to the extreme eastern source of the Bramhaputra. Sadiya, is the principal seat of the Khamptis in the British territories, and the villages of the district are said to extend not more than six miles from the town; the rest of the country is covered with a dense forest, in which herds of elephants roam undisturbed. At this post are stationed two companies of the A s a m light infantry, under command of a British officer, with two gunboats, each carrying a twelve pound cannonade. This force is considered quite sufficient to overawe the restless tribes around, and check their lawless depredations, as well as to guard against the doubtful fidelity of the Singpho, Mútak, and Khamptí allies.

In conclusion we may adopt the words of the Observer in reference to the east and northern frontiers: 'the philanthropist, and the Christian will see how vast and how interesting is the prospect which opens before him. The Singphos and Khamptís may share in the labors of the infant mission at Sadiya; the Míkirs and Khasiyas will enjoy the exertions of the Serampore missionaries; and a pleasing prospect of intellectual improvement is already opening in Manipúr.' These things are, indeed, encouraging, and matter of thanksgiving to God; but for the supply of the many friendly tribes now accessible to Christian missionaries, and in some parts already preöccupied by the teachers of Hinduism, how inadequate are the means which are now employed!

ART. IV. *Relations between the United States of America and China: consuls at Canton; narrative of the Empress, the first American ship which visited this port; trial of Terranova; treatment of national ships.*

MR. SNOW, father of the present incumbent, was appointed consul at Canton near the close of the last century — probably in 1798; previous to which time no agent from the government of the United States ever resided in this country. The successors to Mr. Snow

ur; namely, Mr. Carrington, Mr. Wilcox, Mr. J. H. e present consul, Mr. P. W. Snow. Mr. Grosvenor, resided in this country while he held the office of al duties, however, were performed by an agent till gency was resigned, and the flag-staff taken down. fter the arrival of the new consul, the flag-staff was flag hoisted. Whatever may be the authority, which China have over their countrymen, their influence reference to the local functionaries, differ scarcely of the other foreign residents. In cases of diffie government usually look to the consuls as the the respective nations to which they belong; but it e in them any authority or rank that can give them the lowest officers of the celestial empire. Indeed, stand the idea which the Chinese entertain of govty, there is none under heaven, which is legal and pt that which emanates from the "one man," who sovereign on earth. Hence arises the extreme reluctance to use any official titles, when speaking of perwho do not belong to their own country. And hence, hets which they always seem fond of applying to of the "central flowery land." And, until the govntendom see fit to put themselves in free and friendly th the rulers of China, consuls here must remain present anomalous position, and forego the courtes to them as the representatives of independent and ments.

commencement of the American commerce with been published an interesting letter from Samuel who was at the head of the "office of foreign af-ton, when the first voyage was made to China. It rk, 19th of May, 1785: we give it entire. See lso the North American Review for October, 1834 st vessel that has been fitted out by the inhabitants es of America, for essaying a commerce with those hina, being, by the favor of heaven, safe returned omes my duty to communicate to you, for the inthens of the country, an account of the reception met with, and the respect with which their flag has at distant region; especially as some circumstances ich had a tendency to attract the attention of the e people, of whom they have hitherto had very con- which served, in a peculiar manner, to place the ore conspicuous point of view than has commonly duction of other nations into that ancient and ex-

ployed on this occasion is about three hundred and 1, built in America, and equipped with forty-three e command of John Green, esq. The subscriber

had the honor of being appointed agent for their commerce, by the gentlemen, at whose risk this first experiment has been undertaken. On the 22d of February, 1784, the ship sailed from New York, and arrived on the 21st of March at St. Jago, the principal of the Cape de Verd islands. Having paid our respects to the Portuguese viceroy, and with his permission taken such refreshments as were necessary, we left those islands on the 27th, and pursued our voyage. After a pleasant passage, in which nothing extraordinary occurred, we came to anchor in the straits of Sunda, on the 18th July. It was no small addition to our happiness on this occasion, to meet there two ships belonging to our good allies, the French. The commodore, Monsieur D'Ordelin, and his officers, welcomed us in the most affectionate manner; and as his own ship was immediately bound to Canton, gave us invitation to go in company with him. This friendly offer we most cheerfully accepted; and the commodore furnished us with his signals by day and night, and added such instructions for our passage through the Chinese sea, as would have been exceedingly beneficial, had any unfortunate accident occasioned our separation. Happily we pursued our route together. On our arrival at the island of Macao, the French consul for China, Monsieur Vieillard, with some other gentlemen of his nation, came on board to congratulate and welcome us to that part of the world, and kindly undertook the introduction of the Americans to the Portuguese governor. The little time we were there, was entirely taken up by the good offices of the consul, the gentlemen of his nation, and those of the Swedes and Imperialists, who still remained at Macao. The other Europeans had repaired to Canton. Three days afterwards, we finished our outward bound voyage. Previous to coming to anchor, we saluted the shipping in the river with thirteen guns, which were answered by the several commodores of the European nations, each of whom sent an officer to compliment us on our arrival. These visits were returned by the captain and supercargoes in the afternoon, who were again saluted by the respective ships, as they finished their visit. When the French sent their officers to congratulate us, they added to the obligations we were already under to them, by furnishing men, boats, and anchors, to assist us in coming to safe and convenient moorings. Nor did their good offices stop here. They furnished us with part of their own banksall, and insisted further, that until we were settled, we should take up our quarters with them at Canton.

"The day of our arrival at Canton, and the two following days, we were visited by the Chinese merchants, and the chiefs and gentlemen of the several European establishments. The Chinese themselves were very indulgent toward us, though ours being the first American ship that ever visited China, it was some time before they could fully comprehend the distinction between Englishmen and us. They styled us the new people; and when by the map we conveyed to them an idea of the extent of our country, with its present and increasing population, they were highly pleased at the prospect of so considerable a market for the productions of theirs.

of the Europeans at Canton is so well known, as to unnecessary. The good understanding commonly between them and the Chinese was, in some degree, interferences, of which, as they were extraordinary in led to a more full investigation of the American charities than might otherwise have taken place, I will, mention, give a particular account.

at Canton is, at all times, extremely strict, and the are circumscribed within very narrow limits. The ed, with concern, some circumstances which they attachment on their rights. On this consideration, to apply for redress to the hoppo, who is the head of the company, the next time he should visit the shipping. He was attended from every nation, and I was desired to We met the hoppo on board an English ship, and complaint were soon after removed.

occurrence, of which I beg leave to take notice, at was commonly called the Canton war, which productive of very serious consequences. On the 17th, an English ship, in saluting some company who was at anchor, killed a Chinese, and wounded two others, in a boat alongside. It is a maxim of the Chinese law, never to shed blood; in pursuance of which, they denounce the offender as a murderer. To give up this poor man was to condemn him to death. Humanity pleaded powerfully against the repeated conferences between the English and the Chinese, who declared themselves satisfied, and the affair was finally settled. Notwithstanding this, on the morning of the 27th, the supercargo of the ship was engaged in his business, thrown into a sedan chair, hurriedly committed to prison. Such an outrage on the part of the Chinese, produced a general alarm; and the Europeans unanimously ordered their boats, with armed men, from the shipping, for their own defence and their property, until the matter should be brought to a conclusion. The boats accordingly came, and ours were the first; one of which was fired on and a man wounded. The Chinese men-of-war drawn up opposite to ours, and the Chinese men-of-war drawn up opposite to ours.

The Europeans demanded the restoration of Mr. Morrison, who had been confined in the prison. The Chinese refused, until the gunner should be given up, and the troops of the province were collecting in the city of Canton; the Chinese servants were ordered to leave the factories; the gates of the suburbs were closed; the trade was at an end; the naval force was increased; and the appearance of war. To what extremities matters were carried, had not a negotiation taken place, no doubt. The Chinese asked a conference with all the nations. A deputation, in which I was included for America (fooyuen), who is the head magistrate at Canton,

with the principal officers of the province. After setting forth, by an interpreter, the power of the emperor, and his own determination to support the laws, he demanded that the gunner should be given up within three days; declaring that he should have an impartial examination before their tribunal, and if it appeared that the affair was accidental, he should be released unhurt. In the mean time, he gave permission for the trade, excepting that of the English, to go on as usual; and dismissed us with a present of two pieces of silk to each, as a mark of his friendly disposition. The other nations, one after another, sent away their boats, under protection of a Chinese flag, and pursued their business as before. The English were obliged to submit; the gunner was given up; Mr. Smith was released; and the English, after being forced to ask pardon of the magistracy of Canton, in the presence of the other nations, had their commerce restored. On this occasion, I am happy that we were the last who sent off our boat, which was not disgraced by a Chinese flag; nor did she go until the English themselves thanked us for our concurrence with them, and advised to the sending her away. After peace was restored, the chief and four English gentlemen visited the several nations, among whom we were included, and thanked them for their assistance. The gunner remained with the Chinese,—his fate undetermined.

“Notwithstanding the treatment we received from all parties was perfectly civil and respectful, yet it was with peculiar satisfaction that we experienced, on every occasion, from our good allies the French, the most flattering and substantial proofs of their friendship. If,’ said they, ‘we have in any instance been serviceable to you, we are happy; and we desire nothing more ardently than further opportunities to convince you of our affection.’ The harmony maintained between them and us was particularly noticed by the English, who, more than once, observed that it was matter of astonishment to them, that the descendants of Britons should so soon divest themselves of prejudices, which they had thought to be not only hereditary, but inherent in our nature.

“We left Canton the 27th December, and on our return refreshed at the Cape of Good Hope, where we found a most friendly reception. After remaining there five days, we sailed for America, and arrived in this port on the 11th instant.

“To every lover of his country, as well as those more immediately concerned in commerce, it must be a pleasing reflection, that a communication is thus happily opened between us and the extremity of the globe; and it adds very sensibly to the pleasure of this reflection, that the voyage has been performed in so short a space of time, and attended with the loss of only one man. To captain Green and his officers every commendation is due, for their unwearied and successful endeavors in bringing it to this most fortunate issue, which fully justifies the confidence reposed in them, by the gentlemen concerned in the enterprise.

“Permit me, Sir, to accompany this letter with the two pieces of silk, presented to me by the Fuen of Canton, as a mark of his good

is the American nation. In that view, I consider myself honored in being charged with this testimony of the Chinese for a people who may, in few years, proceed with the subjects of that empire, under advantages superior, to those enjoyed by any other nation whatever. so be," &c.

My, in former numbers, given some account of the trial of Francis Terranova. The following is extracted from the Review for January, 1835; it was drawn up in Canton on the occurrence of the unhappy events which are narrated Saturday, October 6th 1821.

On the 6th of October, 1821, the committee of the American Consulate, to whom Captain Cowpland, of the ship Emily, applied for advice and direction for the government of his country in the case of Francis Terranova, received a communication from a committee of the hong merchants of the following tenor: "The viceroy of this province had issued orders to detain on board that ship the next morning, and there to try the said man for the crime of which he was accused; and to accede to the propositions previously made, that a fair and impartial trial, and that both American and Chinese should be examined; at the same time refusing to allow to the Rev. Robert Morrison to attend as interpreter of his being attached to the British factory, and to refuse not to allow the interference of those attached to any other nation. These things having been communicated to Captain Cowpland, who was then at Whampoa with his ship, he, in the name of the committee, as there was not time to receive his advice, was necessary to be on board, proceeded directly to the ship the next morning, Saturday, Oct. 6th, assembled on board, previously to the arrival of the Pon-ue. They had been prepared in the most suitable manner, and on board. Arms of every kind had been removed, and the vessel, (with the exception of the prisoner, who was kept in a separate room, guarded by two American officers,) were fore-castle, which they did not leave during the day. The witnesses attended at the trial.

At ten o'clock in the morning, as the Pon-ue's boat, attended by several Chinese men-of-war's boats approached the ship, Captain Cowpland, with the linguist Cowqua, joined him, and came on board with him. Captain Cowpland immediately went on board the Pon-ue, and was required by the hong merchants there to deliver up the prisoner, and go with him on board the Pon-ue, agreeably to the Chinese criminal practice, and to face the prisoner. Captain Cowpland hesitated to comply with this demand, as it was substantially a surrender of the prisoner, and a trial by confession. Howqua, however, pledged himself, that if the money had been performed, Terranova, should be delivered up on board the ship, and no further opposition to this demand

was made. Howqua then required that the prisoner should be handcuffed, which was promptly refused. Captain Cowpland having pledged himself for the safe-keeping of the prisoner till after his trial, and the Chinese having agreed to leave Terranova in his custody, he refused to put him in irons, on the ground that no prisoner is thus confined in America, during the progress of his trial. As they had chosen to try the accused on board an American ship, they must permit him to be treated as an American prisoner, till the conditions conceded to by them had been complied with; that is, till he had a fair and impartial trial. Should he be found guilty, they would then have a right to secure him, as they pleased. On this explanation, the demand was waved, Terranova himself having promised to demean himself peaceably. Captain Cowpland accompanied the prisoner into the Pon-ue's boat, still lying alongside, and after remaining there a short time, they were sent back by the Pon-ue, to the Emily.

"In a few moments, a number of Chinese officers of the suite of the Pon-ue, came aboard, bearing the insignia of that magistrate. They were received by the eight hong merchants, who had already been on board more than an hour, viz: Howqua, Mowqua, Chonqua, Pacqua, Mengqua, Consequa, Gowqua, and Poonqua. The Pon-ue himself soon came on board, bringing with him all the witnesses on the part of the government, and a considerable retinue. As soon as he was seated, the linguist made out and handed to him a list of the names of the committee, noting those who had not yet arrived. This committee consisted of twelve or fifteen of the most respectable American merchants at Canton.

"Pacqua, the security merchant of the Emily, and Cowqua the linguist, being called, fell on their hands and knees, to hear the demands of the Pon-ue, of which the Americans could get no interpretation. Captain Cowpland was next called. The question asked him, whether Pacqua was his security merchant, and Cowqua his linguist, being answered in the affirmative, he was required to bring forward the prisoner. This was done. Terranova approached the table at which the Pon-ue sat, the fatal jar with which he is accused having struck the woman, and is supposed to have caused her death, was placed before him on the deck, together with the hat she wore at the time. He was questioned whether he knew the jar, whether it belonged to him, or to the ship. He replied with perfect composure and firmness that it was the same jar which he had handed the woman, at the time that he gave her a mace to pay for the fruit she was to put into it; showing by signs the manner in which he had handed it to the boat. The Pon-ue showed much irritation at any attempt at explanation, and Howqua and the linguist, although repeatedly urged those assisting the prisoner, evidently did not translate the half of what was urged in his defense. Whenever either of them attempted explanation, he was silenced by the Pon-ue. Without hearing what the prisoner wished to state in his defense, the Pon-ue called the government witnesses, stating that all he now wished of Terranova was to identify him,—to have him acknowledge himself the seamen

ing with the woman, and that the jar was the same. The Pon-ue urged much the same considerations (be gathered from the limited abilities of the linguist interpreter,) as he had urged on the inquest; and it to every unprejudiced mind, that he had prejudged the only come on board to receive his victim.

These appearances tended greatly to discourage the hope that the trial, the Americans present could not in silence subscribe of faith on the part of the mandarins, after having complied with all that had been required of them, and they called their witnesses examined. The Chinese witnesses called, the American withdrew, (such being the usage usual,) but not without the assurance, and in the full execution request should be granted. The only witnesses on the part of the government, were the husband of Ko woman belonging to the hoppo boat attached to the children, apparently between the ages of seven and ten. These witnesses approached the Pon-ue's table on their knees, never raising their eyes. When the woman looked up, and point out which was the man, although her seaman near, the linguist was obliged to put his hand on her shoulder, to enable her to say, he is the man. She gave the account of the affair, in which she was constantly prompted by the child. This circumstance was objected to on behalf of the Pon-ue, and the linguist was desired to make known the truth to the Pon-ue, but he refused to do so. The linguist then translated into English of the woman's evidence. It was as she was well known to speak better English than Howqua, she ought to be allowed to repeat her own evidence, for the benefit of the Americans, in order, that if the Chinese version, the falsity might be exposed. She, and on her commencing a few words in English,

The Americans were accordingly obliged to submit to a translation made by the linguist. As soon as it was called on Howqua, in the most solemn manner, to faithfully interpret what they had to bring forward as evidence, to this first and most material witness, which they would be sufficient, in any court of justice in America, to establish the evidence. She had just stated, that, from the hoppo boat the Emily, she had seen the jar thrown. She saw the husband of Ko Leäng she; saw her fall into the water; saw her more; and knows that this is the very man who was proved in contradiction to this evidence, that one of the two boats at the time, it was impossible for her to see what passed, the ship being between the two boats; and on the noon of the day on which the event happened, and in the morning she had stated to captain Cowpland, in the presence of the other American captains, (who took it down in writing), and the paper was forthcoming,) that she knew

dered these last suggestions of so much importance, with several of the other hong merchants, went down oat, to communicate their substance to him. Be-urn, the linguist was put in chains on the Emily's merchants, having returned, required that captain take the man to Canton for a further trial, or put ong, till another and higher mandarin should be

ordered to adjudge the case. This was refused by the Americans, on the ground that the Chinese had their option to try the man at Canton or on board the *Emily*. They had chosen the latter, and there we now required, that the trial should be closed. This being communicated to the Pon-ue, he was heard high in words with Howqua, who returned to the ship with the same demand, which he had just made, and to which the same answer was returned. We gave as our ultimatum, that they should come on board on their own responsibility and take out the prisoner, and the ship's colors should be struck. To this we steadily adhered.

"This conference lasted several hours. The Chinese persisted in refusing to take the man, and the Americans refusing voluntarily to surrender him. At length, the Pon-ue's patience being exhausted, he having sat in his boat more than three hours, he went on board the ship and took Pacqua out in chains, commanding him, with the other hong merchants, to follow him to the city, there to lay the whole affair before the viceroy."

Here ends the account of the "mock trial." It needs no comments from us. The fate of the unhappy sailor is well known. How the *Pwanyu* (or Pon-ue) knew in his heart the man was guilty, it is not easy to understand. When it is said, "God would punish him," we suppose the linguist used the word *jos* as a translation of the *Pwanyu's* words for the gods of his nation.

The manner in which the Chinese government is affected by the arrival of national ships, and the conduct which on such occasions it exhibits towards "men from afar," is very clearly exhibited in the following edict from Wän, the imperial commissioner of maritime customs at this port. The arrival of the *Peacock* and *Enterprise* was noticed in our number for May last. Among those who went on shore at Macao, were lieutenant commandant A. S. Campbell, and Edmund Roberts, esq., diplomatic agent of the United States: the first deceased on the 3d of June, and the latter on the 12th of the same month. It is much to be regretted that proper measures are not adopted to disabuse the Chinese mind, relative to the designs of foreign governments. It would not be difficult, in a case like the one which we here notice, to make the officers of government understand the truth: to do so is practicable; and in a high degree desirable, as it would aid greatly in preparing the way for opening a friendly intercourse with this great empire. The following is the edict above alluded to.

Wän, overseer of his majesty's gardens, by imperial authority superintendent of the maritime customs of Kwangtung, &c., issues this order to the hong merchants, for their instruction. The deputy officers at the custom-house in Macao have sent up to me the following report:

The pilots Chang Yuhfang and Yang Yungtae have sent in a report to us, stating that,

On the 13th of the 4th month of the 16th year of Taoukwang, two American ships of war, the *Peacock* and *Enterprise* arrived in company, and anchored off the Nine Islands. We went immediately and inquired the reason of their doing so; whereupon the captains of the two ships made the following declaration:

oft America to visit other ports; and on account of contrary
ether to anchor for a little time; there is no other reason for

this declaration, it is proper that we report the same, and also
atement of the number of men and arms on board these ships:
; in the Enterprise are 60 men, 10 cannon, 50 muskets, 50
of powder, and 500 balls; in the Peacock are 190 men, 22
s, 100 swords, 800 cattles of powder, and 800 balls.

unt given to me; whereupon I, as acting ensign examined
cock has three masts; is about 140 cubits long; 30 across
a each side of her hull are twelve port-holes, eleven of which

are furnished with cannon: I ascertained also, that the *Enterprise* has two masts; is about 70 cubits long; 20 wide; and that on each of her sides are 5 cannon. At present, both ships are quietly at anchor. As duty requires, I make this statement.

The above, having come before me the acting colonel, I find well authenticated; and on personal examination do not ascertain any thing differing therefrom. However, since the designs of the barbarians are incomprehensible, I immediately gave orders to the cruisers to keep up a strict guard; I likewise sent letters to the civil authorities, desiring that they might take measures to hasten the departure of the ships, and not permit them to sail about here and there at pleasure; and that if the ships should move at all, they must speedily report the same. These particulars respecting the two American ships of war, I report for your examination.

The foregoing, coming before me the admiral, I find to be authentic. On examination, it appears that the ships of war belonging to foreign barbarians, all annually arrive during and after the sixth month, and then as convoys for the merchantmen trading to Canton; but now two American ships of war, one large and one small, have just at this time unexpectedly arrived; and although the pilots, after a clear examination, have made a well authenticated report, that the ships, having sailed for other countries, on account of contrary winds, have anchored only for a little time; still, when thoroughly investigated, it is difficult to believe this. Besides sending orders to the military stations in Heängshan, and Tapäng, directing the officers to exert all their energy to keep up a strict guard, and likewise directing all the soldiers and officers in the forts to be vigilant, and have every thing in readiness for action—besides, returning an answer to major Chaou Keënching, requiring him to command those who are on duty instantly to report every thing they hear; to forbid the small boats to go near them, either to receive or to give any thing; and to urge the said ships of war immediately to depart, and not allow them to remain and create disturbances—and besides, also, ordering the cruisers to keep the ships of war quiet by maintaining a strict guard around them;—besides doing all these things, I send this communication for your inspection.

Such was the report from the admiral. On the same day, the acting colonel on the Heängshan station, major Chaou Keënching, sent up a report, the same as that given above. All these on examination, were found well attested. Besides giving replies, requiring strict guard to be maintained, I find on examination that the late colonel Tsün, of Heängshan, who obtained a furlough on account of the death of his parents, has been succeeded by a naval officer, Hwuy Changyauou, who had already been raised to the rank of colonel: this is on record. Hwuy Changyauou has likewise reported the arrival of the American ships of war. It is of the utmost importance that a strict guard should be maintained. Accordingly, orders have been given to Hwuy Changyauou, to those in command of the central, left, and right divisions of the maritime forces, and to the military officers at Tapäng, and to those in the forts at Tahoo (on Tiger island), Hwangtang, Chinyuen, Weiyuen, Shakeö, and Takeö; to be constantly in readiness for action, endeavoring to ascertain whether those barbarian ships of war have indeed come from America or have been driven here from some other province; to maintain on every side a strict guard against them, endeavoring to hasten their departure and not permitting them to move from place to place at pleasure, and when they go to sea, to observe closely which way they steer their course; and, if they should approach the mouth of the river, to be aware of it, and prevent their entering, not permitting them to advance one single step within the mouth of the river, which would involve serious consequences; and, if they should sail to the eastward, to send up a report thereof swift as the wind, that I may quickly send a dispatch to the authorities of Fuhkeën. There must be no remissness in any quarter. I likewise have sent communications to the judicial and financial commissioners of the province, that they may confer together on the subject, and issue suitable directions to all their subalterns: and, moreover, I now transmit this document for your excellency's inspection and guidance.

Such are the documents which have been received at my office. On examination, I find that, as the two ships of war are not here for the purposes of

not be permitted to move from place to place and anchor
 se, thereby creating disturbances. But since many of the
 ave gone to Macao to live in the barbarian factory for the

undertaken by Mr. Lukas Monton, and the Rev. Mr. Ba-
 of the Rhenish missionary society. Mr. Monton is a
 e islands of the Indian Archipelago, and has been for
 cted with the mission at Batavia, under the direction of
 st, who has kindly sent us in manuscript a full account of
 eo. The journal of the voyage confirms the account
 s in our last volume: see page 498. The voyagers left
 May, 1836, on board an Arabian vessel; and, after visit-
 the eastern shore of Java, they sailed for Banjer-masin,
 ate in the month of June, and when Mr. Berenstein was
 illness. However, he was soon well again, and able to
 of his mission. In the mean time, Mr. Monton engaged
 Christian books. A few extracts, which may serve as
 le journal, are all that our limits will admit. The voy-
 Banjer-masin for Java on the 1st of August.

they comfortably settled, than Mr. Monton appli-
 or permission to distribute books; and the Lord,
 in his hands, inclined him not only to comply with
 give some wholesome advice regarding his conduct
 serving that our religion was not to be spread by
 persuasion, and that it became us rather to suffer
 ause than to inflict it on others. Upon this, a be-
 with the Chinese, because they were few in num-
 e so familiar with the Malay language and the
 at they could read and write them better than their
 e were, however, struck with the circumstance of
 ted to the people, and said in their simplicity, that

wonderful events portended the near approach of the judgment
 on returning to his lodgings, a number of Chinese came to
 Monton for books. One rich and influential man, of the
 Bola, desired much to be acquainted with our religion; say-
 ing, if he could be convinced of the truth of Christianity he
 would become a Christian. At Bola's invitation Mr. Monton went
 to his house, where he found a number of Chinese, as well as Malays
 and Arabs, with their priests, assembled. Bola then said, that he had
 called all these together, that by listening to their different ac-
 counts he might judge where the truth lay; for, the Malay priests had
 previously informed him that, unless he became a Mohammedan he
 could not enter heaven, and he now wished to know whether or not
 this was true. Mr. Monton then asked wherefore all these people
 were assembled? They replied, to hear some accounts of the books
 which had been brought. He then began to discourse to them from a
 book which he held in his hand, and continued till the house became
 so crowded, on which account he asked them to adjourn to the
 river, where he continued his discourse with them from three to
 five o'clock in the evening. All the Chinese declared that this ap-
 pointed them the right way, because it revealed to them the love
 of God, and was accompanied by the free gift of books,
 whereas the Arab and Malay priests would never let them have a
 book without paying for it, nor give them any instruction unless they
 first offered alms to the clergy. To all this, the Mohammedans made
 no objection, but returned to their houses apparently ashamed.
 On the 5th July, Mr. Monton went to the Malay campong that was
 the residence of the authority of the sultan, where he found the people still more
 desirous to hear; and able to read and understand the books; but the
 language was difficult, and was obliged to go from one house to another
 in boats; the market was held on the water in boats; and the
 people were not men but women. On seeing this, he thought it
 necessary to distribute books there, and was about to move off to
 the middle of the river, when a man came after him in a small boat,
 to borrow a book; Mr. M. gave him one, and desired him to read it, and
 as he was reading a woman came to hear, who also asked for a book,
 and immediately read it aloud. Upon this, the whole mass of women
 in small boats, asking for books, and pressed so close upon the
 boat that he was afraid of sinking, while prahu was pressing
 upon him. He therefore told his boatman to row hard, in order to
 get away, but the women seized his prahu and would not let him
 go until he had satisfied their demand for books. After this, he
 went alongside a large prahu, and getting on board, he divided the
 books among the assembled crowd, till they were all gone.
 On the 8th, a minister of the sultan called and asked Mr. Monton
 to go to his house, and hold a conference on religious subjects,
 which he did, and answered their knotty and captious questions by
 referring to the Scriptures, and bringing the word of God to bear on
 their arts and consciences. Thus, numbers came from day to day
 to inquire on religious subjects, and to ask for books, who were sup-
 plied as far as the stock would permit. Various persons also came to

g the rest, a Malay priest, who tried every means to tributor of tracts in his talk, but was answered by mercy and grace of God, as displayed in the gracious Savior, so opposite to the encroaching and oppressed by Mohammed.

uly, three piratical chiefs called. These men were ut of a fierce aspect, with red eyes and firm manner, ry decided tone; they were natives of Borneo, and in extensive piracies over the whole Indian Archi-coasts of Java, Sumatra, and the Malayan peninsula, islands in the vicinity. The principal chief was and had his residence at Pulo Laut, on the southeast This island was high and fertile, peopled by several who had under them a number of Malays and Java- en taken from the various prahus captured by them. oyed as slaves, or were sold to others, sometimes for id sometimes for a bundle of black sugar; while clever were employed in manufacturing guns and with other warlike implements. These three piratical ad this information, had come to Banjer-masin with ig to the Dutch government, which they themselves lo, but to which their king was averse.

July, the travelers set off from Banjer-masin for the yaks, on board a prahu with thirteen men, and the ed at the village of Marabaän. There they distribut- l the next day proceeded on their journey, and about ening arrived at the borders of the Dayak country. of the 16th, they entered some of the Dayak huts, on of the chief, named Raden Tuah, who requested he wanted to learn to read, in order to understand us: they then went about in their boat from one among the Dayaks, who were very glad to receive to their discourse on divine things, saying: This e, and suits us better than the teaching of the Mo- i we do not understand. Those of the Dayaks : Malay language well, appeared perfectly astonish- d the missionaries speak of God and Christ, and nd seemed as men just awaking from sleep: on ou follow this religion, they replied with one voice

Amongst the Dayaks were some Malays who the view of persuading the Dayaks to become d in some instances they had been successful. One had joined their party, but he was generally scorn- ayaks, for his corrupt moral character, and for his ife and children. The missionaries, however, told ion of Jesus by no means required such conduct, s to do good to all, and especially to those of our d that next year they would return and teach the i; to this they all assented.

On the 17th of July, the travelers proceeded further up the river to the Great Dayak at a village called Pangkah, where they were received into the house of a chief named Seaji. In this house were a number of chambers, but their host gave them the middle hall to sleep in, because it was the post of honor among the Dayaks. They spoke to those assembled on the things of God, and were listened to with attention, but when they told them that in another year they would come and live among them, the Dayaks appeared extremely happy, and the chief expressed a wish to become a Christian. On the next morning the travelers pursued their journey, accompanied by the chief, above named, to act as interpreter. Thus they went on, stopping at all the houses on the sides of the river, and speaking to the people of the things of God, till in the evening of the 18th they arrived at the village of Gohang, where resided a Dayak chief, named Raden Anam rájá Panghulu, who received them joyfully.

On the next day, they went to the village of another chief, named Paü Bunga Laut, and returned with him to the village of the former chief. Here a number of chiefs and people were assembled, who desired to know wherefore the travelers were come amongst the Dayaks. They replied, that their object in coming was to proclaim good news from God to their brethren the Dayaks. With this, the rájá Panghulu appeared pleased, but Pati Bunga Laut did not seem so well disposed towards them. Upon this, Mr. Monton expatiated on the doctrines of the gospel, until the heart of Pati Bunga Laut appeared to be inclined towards them: the two chiefs then wished to enter into a covenant with the missionaries, because they said, the Lord must surely be with them, as many strangers had come to their country, but never any brought such divine instruction with them as what they now heard. They wished, therefore, to establish a fraternal agreement with the missionaries, on condition that the missionaries should teach them the way of God. The travelers replied, that if the Dayaks became the disciples of Christ, they would be constituted the brethren of Christians without any formal compact.

The Dayaks, however, insisted that the travelers should enter into a compact, according to the custom of the country, by means of blood. The missionaries were startled at this, thinking that the Dayaks meant to murder them, and committed themselves to their heavenly Father, praying that whether living or dying they might lie at the feet of their Savior. It appears, however, that it is the custom of the Dayaks, when they enter unto a covenant with any, to draw a little blood from each other's arms, and having mixed it with water to drink it together. Mr. Barenstein having agreed to do this, they took off their coats, and two officers came forward with small knives to take a little blood out of each of the travelers' arms, as well as out of those of the two chiefs; this being mixed together in four glasses of liquor, they drank severally from each others glasses; after which they joined hands and kissed each other; then the people came forward and made obeisance to them, as the friends of the Dayak kings, crying out with a loud voice, Let us be friends and brethren forever, and may God help the Dayaks

nowledge of God from the missionaries. The two Brethren, be not afraid to dwell with us, for we will defend you, and die ourselves ere you be slain. God be witness, that this is true.

Religious Intelligence : Batavia ; operations of the mission ; distribution of tracts ; enterprise of Siamese and practice of Dr. Bradley among the Siamese, &c.

article, respecting the voyage to Borneo, we extracted of the mission at Batavia, for the year 1835: the report by Mr. Medhurst and Mr. William Young, jun. The operations, sustained in connection with the mission, and numbers of the Repository, were continued through some of the public services, during Mr. Medina.—The operations of the press have gone on the whole number of works printed, by lithography, xylography, were 24,645 copies, amounting to 1,830,656 number of copies sent out from the depository, were in various languages, as the Chinese, Malay, French, &c.; and had a very wide circulation, from Canton in China to the extremities of Java.

Under date of July 25th, 1836, Mr. Johnson, a missionary, writes: "Much of the time since our arrival in deed, been in the midst of trials and perplexity, sickness and death, and without any certain dwelling-place. In 1835, we buried two children. * * * Since our changed our residence no less than seven or eight times having been expelled by order of government constructed with much expense of time and money; Mary, at the time lying at the point of death, expiring. * * * Within the last two years, with some success, I have distributed about 14,000 tracts. Here is a vast field for tract distribution. A great number of vessels usually visit here from different ports of China."

One of the missionaries to the Siamese at Bangkok visited his family, and taken from them their young-

Under date of July 22d, Mr. R. writes: "While trading here is yearly diminishing, the European trade is increasing. Three years ago, only three or four vessels were seen here, and that but once or twice; and these mostly Arabian vessels under English flag; and these mostly Arabian vessels under English flag, not uncommon to see two, three, or four during almost the year. Nor are the Siamese asleep; they are very active and enterprising, especially in ship-building. During the

Suang Nae Sit, son of the prahklang, built an elegant ship European model, which has been sailing for some time. He is now superintending the building of two large ships of war, at Bangkok. Prince Chow Fah has also completed a large vessel, and sent down the river a few days ago; and which we have surpassed in neatness and elegance. We have heard that the king has ordered no more *junks* to be built, but that all his vessels are to be after the European model." Application had been made to the king for a place to erect the printing press, and the prahklang has obtained a favorable answer, intimating however, that it might be better if at all the "white faces" should live together.

Letters of D. B. Bradley, M. D. we have interesting accounts of his medical practice in Bangkok. While there is much to be learned and trying, we fully agree with him that there is also much to be done and encouragement for the friends of the Siamese mission. On the 8th of June 1836, Dr. B. says: "on my return from Bangkok I quickly set myself about fitting up another dispensary. For this purpose I purchased a floating house on the Meinam, the great river of Bangkok. My location possesses the great advantages of being airy, cool, cleanly, and movable. In case the government should become jealous, and command me to move off to another place, I shall have none of the trouble, as before, of packing up much considerable loss, and turning off my 800 patients on an empty stomach. It will only be necessary to loose from my house and float away with my patients on board if I please, quietly and without treating them. Thus the Lord has overruled the consequence of my expulsion last autumn greatly to my advantage. Notwithstanding this particular, but in many others relating to our mission, all things have been made to work together for our good. For many years we have had, on an average, about 100 patients daily, and often as many as 200, at midday. They consist of Siamese, Chinese, Burmans, Malays, Laos, Malays, and Portuguese. I spend about three hours daily in treating them, beside the time spent in preparing medicine, and visiting the sick in the families of the king, princes, and nobles, which is not a little.

In the hospital, males and females are separate, and treated on different sides of the dispensary but at the same time. A Chinese doctor administers to the males, and a native female to those of her own sex.

Mrs. B. sits between the two departments, and directs the work in fulfilling my prescriptions. She has considerable time for conversation with the females on religious subjects. My patients bring their papers to the assistants, and they to Mrs. B. to interpret. For the most part, I perform a variety of surgical operations, frequently such as are of considerable consequence, as the cure of cataract, excision of pterygium, cutting off immovable tumors, opening jaws that have been perfectly fastened together by adhesion of the sides of the cheeks, opening nostrils closed by small pox, removal of tumors, amputation of limbs, extractions, &c., &c.

"On the other hand, on the much of who ma dience we are we trust among glory. sion of and in h

particular pains are taken to call as many together as possible. Our floating chapel is generally very full that day; and Mr. Robinson preaches to the Siamese, to a good degree of interest in what they hear. The audience is from all parts of Bangkok and the country. Although not excited by any special seriousness in our hearers, yet the Lord is by these and other means preparing his way, and that he will soon appear among them in his power, is steadily and judiciously engaged in the super-vincing church in this city, in studying Chinese, Malay, and sick."

A letter, dated July 23d, Dr. Bradley, after saying he had completed the operations in his hospital, adds: "I have secured a place for the establishment of the Siamese department. The land belongs to the prahklang. I have not yet completed the bargain, but hope to do so after long negotiation. As I shall rent it of the prime minister for four years, it will be more stable than any other situation. It is in Bangkok, opposite the city wall, where Mr. Robinson is soon to build each a house, and as soon as possible to erect an office and chapel." We understand that a location has been found for the erection of a Tuff's power press, in Bangkok.

is at Singapore: the Second Report of the Singapore Commission, 1835-36; printed at the office of the Singapore

ough of recent origin, are in a prosperous state, and attract many students and scholars. At present, there are of boys English, Portuguese, Armenians, Malays, and Chinese. The English department, 14 in the Tamul, and 13 in the Chinese, however, are not the only schools in the city. The missionaries of both English and American societies have established Chinese and Malay schools in different parts of the island, which are well attended, being near the dwellings of the students. In the last volume, page 524, some account is given of the Chinese department, which is mentioned in one of the two paragraphs that we extract from the Report before us, and which will give some idea of the views and purposes of the directors of the department. The following are the two paragraphs.

The position of Singapore as a place where a beneficial commerce is carried on by Europeans with the traders of the Indian Archipelago is often set forth; but to a philanthropic mind, the island presents an extensive field for operations of a higher order; the introduction of civilization and the religion of truth to the masses of natives who have either settled here permanently or who come and return for purposes of commerce. Placed at the extremity of the British dominions in the east, and in the midst of

memorial of Hsu Nactse, recommending to his majesty to allow opium through the custom-house of Canton, so as to prevent exportation of silver, was dispatched to Peking on the 7th provincial officers. It is rumored that there will be a "strong" to this "new measure."

ing "longcloths," came out from the office of the hoppo, or was going to press: we introduce it here as supplemented in that number, page 183. It was issued in consultation from the long merchants, at the instance, we believe, of the government. It is as follows.

al appointment superintendent of maritime customs in the province, &c., &c., in reply.

his petition is to request, that unbleached longcloths may be sold at a rate as coarse white longcloths. It sets forth, that, if distinguished as to quality, the low price which the former bear in the market causes losses on the part of the said foreigners. This appears to be a regulation, but in a case which relates to the established regulations of course to examine the quality of commodities, and act in accordance with the regulations. In regard to the two pieces of bleached longcloth which the petitioners wait, and the pieces shall be officially stamped: a communication also shall be addressed to the government may be duly placed on record.—16th year of Taoukwang, [August, 27th, 1836.]

A curious case of theft has taken place in Peking, the office of the magistrates having been broken into at night, and the great seal of the government a month after its loss, both the thief and seal were discovered only after repeated searches; when it was at length found in the kitchen oven, used in the north for the purpose of heating the rooms. The immediate occasion of the theft is represented to be a loss which the thief had been engaged in the outer court of the office; expected to gain by the mere theft of the seal, unless he took the seal along with it, does not appear.

The two envoys who were lately at Canton have been dismissed, his majesty being displeased with the manner in which the investigation of the last case that was submitted to them, was conducted before the investigation was concluded. Two other envoys, president of the Board of Office, and Keying, president of the Board of Revenue, were to leave Peking in August last; and, after concluding their journey to Hoonan and Keängse, will continue their journey to Canton. The second time the case above referred to. It is a case of theft, committed by the son of a district magistrate in his father's office, and reported by an officer at the capital.

Hoonan. The governor of Kwangtung and Kwangse has been the occasion of several vagrant priests of suspicious character, who were recognized the leader of the late insurrection in Hoonan. The governor was traveling, as a priest of Budha, through Kwangse, and crossed over into Tungking. Several other principal offenders in Hoonan and the emperor is not a little indignant, that, in a comparable case, Hoonan, so many should have been suffered to escape for a long time. The disturbances would appear to have been quieted, as the governor of that province, as well as the governor of Kwangtung, to examine into the rise and progress of the insurrection. The disturbances were excited. Either the police is very effective, or the people are very feebly united, else these wide-spreading insurrections so readily suppressed as we see these disturbances are as usual attributed to religious sects, among which, before seen, Romanism, is included. It is easy, therefore, to see the jealousy with which the government views the circulation of reports regarding them as a cover merely to political projects of

Tseäng, who has been for several years lieutenant-governor of the province, always been earnest in his endeavors to hinder the visits of

Journal of Occurrences.

the coast of that province, has just been appointed to the govern-
ment and Chékeäng. He is commanded to proceed to Peking im-
mediately to receive the imperial instructions.

We give the following translation of an imperial edict, as showing
the policy of the Chinese government towards its subjects of another race
and religion. "The Mohammedan prince, Isaac, was lately holding an
ambassy at Peking; and the climate not agreeing with him, we expressed our
wishes that he should return to his home, for the recovery of his health. Kwo-
reported that the prince is quite recovered, and requests the gift of
a carriage. This is highly gratifying to us; but as the prince is now up-
wards of age, it is probable that the toil of a long journey, and the
change of the climate will overcome him. He is not therefore re-
solved to go to Peking, but is permitted to remain at home. We would thus
show our regard we bear towards our Mohammedan servants."

The governor of the "two broad provinces" has applied for a
subsidy to be placed at interest, the annual sum accruing from it to be
applied to the extraordinary expenses of the fortifications of the Bogue and
the other ports. The estimate of what will be annually required, for the pur-
suing the military in working the guns for reviews, and for presents
to perform the exercise well, is 6700 taels. To produce this annual
sum has been made of 50,000 taels (the amount of the property of two
years ago, confiscated to government about two years ago,) to be
sold, at ten per cent. The remainder is to be paid from a branch of
the revenue in which some reductions have lately been made. Actual
expenses are directed to be returned annually. The governor
has also applied for the purpose of inspecting these and the other fortifications
of the various branches of this river, and to review the troops.

the Canton Court Circular. The execution of capital punish-
ment on the 26th ultimo to the 22d instant, is reported to have taken place
in several instances. The number of thieves, robbers, and other disturbers of
the peace, who have been caught and handed over to the proper authori-
ties, in the mean time, has been unusually large. Reports of these, and
of the execution of the law, fill up the Circulars before us; other occurrences, in which the
law is concerned, find no place in this courtly paper: one or two of which,
we here noticed. Early in the month, a person reported to one of
the magistrates of police, that in a certain shop near the foreign factories, boxes
of contraband goods: deputies were accordingly sent to seize the
goods. In mistake they entered the wrong shop, and rudely commenced
at this the people of the shop and their neighbors were incensed,
and the deputies bound. It was not long before the cheheên and the
deputies were released. The next day the case came before the
authorities, and the master of the shop and his principal supporters
who had been taken into custody, were released on the plea that
the deputies were unauthorised persons in disguise,—a thing which
is not allowed. Another more recent affray has occurred, in which the parties,
of different clans, took the field with swords, spears, and arrows;
many were lost; but the particulars we have not yet ascertained.

The governor and lieutenant-governor went early in the morning
to pay obeisance in the temple of the god of war. N.B. This is repeated every
year or less ceremony during the month.

A Chin Alae, a tattooed criminal was seized and delivered over to
the authorities at Nanhae.

On the 10th day of the 8th month of the 16th year of the reign
of the Emperor Taoukwang, is the anniversary of his majesty's birth-day, who
was born on the 20th, 1782. All the provincial officers, both great and small,
attended in the collegiate hall, and there in order to pay their obeisance to their
superior.

A messenger arrived from the lieutenant-governor of Fuhkeên, having
business to transact in Peking. The messenger requested an interview with the governor
of the province, we understand, is a Lascar seaman; but by whom and
on what part of the coast of Fuhkeên, does not appear.

CHINESE REPOSITORY.

V. — OCTOBER, 1836. — No. 6.

intercourse between China and Christendom; with the present state of the relations of Great Britain and China, by J. Matheson, H. H. Lindsay, sir G. T. Goddard, and a Resident in China.

than the permanent establishment of free and friendly intercourse between China and the western nations will satisfy the age. The present state of international relations, in at least, is "utterly intolerable;" and in all respects improvements, beneficial and desirable to all who are affected. The great number of publications respecting China have come from the press during the present year, and are beginning to think on their relations with this country in inquiries which are now abroad in the west concerning nations, are, we think, the sure precursors of the friends of improvement, if they will so contend that recklessness which is too apt to characterize us have nothing to fear. We need not have ruin in our form; nor need we think or act as though natural or permitted of Heaven that they may be passively endured by us. When ourselves or others are visited it is right to regard them as occasions which demand our powers in trying to remove or surmount them. How much is, much may be done for the improvement of man and the dark abode of the savage may be progressively transferred to the home of the refined and virtuous; and wherever circumstances placed, it is always our duty to exert ourselves as we find opportunity to effect this. Our power, we believe, is to be diligently exerted to the cultivation of China and its relations with other nations. We would exercise a spirit of conquest or revenge (if

there be such) we cannot coincide, nor can we with those whose dread of impetuosity makes them, if not³ in theory yet in practice, conservatives of existing abuses.

We do not think with an esteemed correspondent in our last number, that our line of obligation in accomplishing the desired changes, is measurable by the progress of commerce, nor, because its abuses have been by a wise Providence overruled for good, that therefore we may wait on their continuance and expect to see the fulfilment of our wishes. The circulation of tracts may have been extended somewhat by means of the opium trade; but this fact is no good reason for our waiting for improvements that follow only in the wake of commerce; and though hereafter, its "intoxicating progress" should still be overruled to work much political change, yet, surely, we may not *therefore* rest in the possession of *such* means to effect moral good. Commerce has done and is doing much for the benefit of mankind, and every proper means should be used to extend its benefits. But that an intercourse which self-interest seeks, when connected as it is in China with illegal and demoralizing courses, is all that the wisdom and energy of Christendom should endeavor to establish or is capable of effecting, is a sentiment to which we cannot give our assent. Nor do we think it right to sleep on, until we can witness the "irresistible effects" of the "lava-like progress" of the two great "conterminous" powers on the north and west of China. Are we warranted to expect that the "energy" which emits the lava will by and by prompt to check it? It may be that the influence of "religion as well as sound policy" should be exerted to avert "collision" until *happiness* can be secured to the "*conquered*;" but the "foresight" requisite for this is an acquirement so rarely found that we cannot build our hope upon it. In short, while we deprecate "a too precipitate attempt" to improve our intercourse with the people of this empire, we cannot recommend waiting for the results of the present system of commercial intercourse, and for we know not what events of "external pressure" and "internal commotion." Our voice is and it must be to the *moral powers* of Christendom (whose governments are or ought to be the repositories of such powers,) to *attempt* the amelioration of the condition of China. For accomplishing this end, a free and friendly intercourse is a great desideratum; and we firmly believe, that if they will "attempt great things," with a right spirit, in a right way; and for a good end, they may expect great and most beneficial results.

In making the foregoing remarks, we are not to be regarded as being either belligerent or pacific, in reference to any parties which may be supposed to divide in opinion our community. Truth is our object, and we trust our pages show that we are not partisans, but we do wish and hope and desire to bear a humble part in labors to concentrate the *energies of all* in just and generous efforts to improve the condition of China. **THIS IS DUTY.** And we hail with satisfaction every effort to remove that ignorance of the character and circumstances of this people which must be felt to be signal among the difficulties embarrassing our path, in the institution of measures for

object of a more intimate connection of China with the several writers named at the head of this article are the public with this design, and with claims which here gives them to be heard: the facts and opinions advanced are worthy of being placed "on record;" limits will allow, we do this in their own words. The following, though brief, are intended to show the spirit and object of each writer.

Position and prospects of the British trade with China; outline of some leading occurrences in its past history. By Esq., of the firm of Jardine, Matheson & Co. of Canton: Smith, Elder & Co., Cornhill, booksellers to their

of Mr. Matheson's pamphlet is occupied with a brief of the circumstances attending the king's commission 14, and of the principles upon which the policy of the company was based: he then proceeds to consider the state of affairs, and to offer some remarks on the policy which would be adopted, of which the following paragraphs

and, the emperor of China has an unquestionable right to refuse us intercourse with his dominions; to impose such conditions as he may think fit; and that where no treaty exists, nothing can be demanded from, at any time he pleases, withdrawing, restraining, or refusing such permission. Such observations as these are, quite beside the real question now in dispute; which is, whether the original rights of China, as an independent nation, have been done, or refused to do, in the first instance, whether the rights of China, *now*; whether her own acts have diminished and limited those rights, and imposed upon her obligations, and subjected her to certain liabilities, from principles of justice,—of the law of nations,—forbid her to do so.

Therefore, we are to discard all principles of right reason, and the construction of the rights and liabilities existing between us and her, we have abundant evidence to show that China has imposed upon herself—the obligation of continuing open to trade with her, on fair and reasonable terms. 'there is *no treaty*, and in the absence of a treaty, there is not any such obligation as that spoken of.' It is true that the emperor has solemnly and in so many words agreed to the terms of a treaty with the two nations; that the emperor chooses now to reject the terms of the treaty. Surely, however, we are warranted in drawing an analogy to another regulation of our municipal law, the reasonableness and utility,—*e.g.* a right of way over another's land, which after a certain number of years' use, becomes a right, an indefeasible right to the enjoyment of that land is supported by the supposition of an original deed of conveyance; the trade which the emperors of China

have suffered to be carried on for nearly a couple of centuries, may be reasonably presumed to have had its origin in a treaty—even of the most explicit and formal description. Let it be borne in mind again and again, that the advantages of this trade are not all on one side, but reciprocal, and have been acknowledged to be so, by China. It is mere trifling to talk of her being now at liberty to disregard the law of nations, on the ground of her having never designed to recognize it. She has been long too far committed by her conduct towards this country. We have already seen that in 1678 she invited us to settle a factory at Canton; the emperor has himself personally, and repeatedly through his viceroy, sanctioned our intercourse, and even laid down the terms on which it might be carried on. In 1715, the supercargoes stipulated for eight articles or conditions, according to which the trade might be carried on with China, and which were deliberately and solemnly conceded." pp. 41, 43.

"Is, then, the trade of China to be continued, and on terms consistent with the honor of the British nation? If the voice of Great Britain answer this question in the affirmative, a very different tone and style of policy must be forthwith assumed, from that which has hitherto so unfortunately been adopted. Great as are the sacrifices we have made to secure this valuable trade, long as we have carried it on, important as are the relations and responsibilities it has entailed upon us, we should forfeit for ever our character in the society of nations, whose eyes are upon our movements in this matter, were we, on light grounds, now to succumb to the Chinese, to be bullied and terrified by their absurd swagger and airs of intimidation, into a surrender of our just and hard-earned rights and privileges. At the present moment these considerations press upon us with uncommon force. Having seen fit recently to alter altogether our system of commercial intercourse with China, a measure which must be presumed to have been thoroughly and wisely considered before it was adopted, we shall become the laughing-stock of the world, if the direct effect of our elaborate legislation be, either to shut us out altogether from China, or place our intercourse upon an infinitely more precarious, oppressive, and ignominious footing than ever, as will infallibly be the result, if we be not now fully alive to the nature of our claims upon China, and prepared to assert them with resolution and vigor. Is there any one who doubts the justice of these observations? Let him meditate upon a recent illustration of their truth,—the melancholy and most humiliating reception and fate of lord Napier!" pp. 50, 51.

"The emperor of China, by ratifying the acts of the local authorities in their outrageous treatment of lord Napier, has rendered himself responsible for such treatment; it has "become a public concern, and the injured party is to consider *the nation* as the real author of the injury, of which the citizen was only the instrument." Surely we should be able to show, before proceeding to such extremities, that we have "ineffectually demanded justice, or that we have every reason to believe that it would be in vain for us to demand it."

used," says Vattel, "in several ways: first, by a denial or by a refusal to hear your complaints or subjects, or to admit them to establish their rights in your tribunals." If this latter be, in the opinion of an impartial observer, on international law, of itself a sufficient cause for letters of marque and reprisals,—what abundant cause would there be for the same measures, in the accumulated wrongs and injuries which have already heaped, and still threaten to heap, upon Great Britain!" p. 67.

As in the year 1815, we find the president of the Select Committee on Canton—Mr. Elphinstone,—thus indicating, to the British Government, the most advisable course then to pursue, in order of which we have now even far greater cause to complain, it appears to me no mode so likely to prevent these consequences (i. e. an entire stoppage of the trade with the Chinese governments.) * * * Following up this suggestion, and subsequent experience, carefully considering the peculiar position of affairs at the present conjuncture, that his majesty's government would act wisely in the suggestions of the present Canton merchants: who humbly suggest, "That his majesty would be pleased to grant powers to such person of suitable rank, discretion, and diplomacy, as his majesty in his wisdom might think fit and trusted with such authority: and that he should be stationed at a convenient station on the eastern coast of the capital of the country as might be found most convenient for the service of his majesty's ships of the line, attended by a sufficient force, which, they are of opinion, need not consist of frigates, and three or four armed vessels of light draft, and one steam vessel, all fully manned;" and that he might be in a position to demand the reparations and concessions which he might demand. Scarcely any additional expense, if that could be an affair as this, need be incurred by this country, in the course of policy; since the costly establishment which, by the exclusion of their ships from Canton, we are now maintaining (and which they are obliged to exercise) at Macao,—may be great. Our Indian squadron, already in commission, might be ordered to cruise as a fleet of observation along the coasts of China, or of lying at some of the Indian ports, which are usually friendly to their crews. If the occasion should not be met in the first instance, the service of a special plenipotentiary might be charged with a letter from our emperor, referring to the manner in which lord Amoy had received and treated, as a reason for desiring a communication to his imperial majesty, with a view to come to an understanding on this painful subject, as well as on the grievances from which he is suffering." pp. 73, 75.

“ If, finally, his majesty should see fit to adopt the above suggestion, there remains one observation—already alluded to—to be most respectfully pressed upon the attention of ministers; that our plenipotentiary should be clothed with sufficient powers to enforce, if necessary, the assertion of our rights. It is an acknowledged maxim in all negotiations, that the surest preventive of war is an unequivocal manifestation of our being neither unable nor unprepared, on its becoming necessary, to resort to it. The moment our negotiator lets it be perceived that he is precluded by his instructions from adopting such a course, whether to protect the rights of our merchants, or vindicate the respect due to his official character, he may be assured that all his arguments will prove unavailing, and can tend only to betray his weakness; while, it is equally certain that the acute policy of the Chinese will, at the very outset, be invariably exerted to make him develop under what instructions he is acting; what are the limits to his sufferance, and what the extent of his powers to retaliate in case of insult or injury. This they will soon bring to light, by such a studied system of privation and disrespect, as shall compel him to show his strength, if he have any, or wanting this, to flounder through a course of alternate opposition and unavoidable submission, which cannot do otherwise than end in his defeat.” p. 78.

2. *Letter to the right honorable viscount Palmerston, on British relations with China.* By H. Hamilton Lindsay, (late of the honorable East India Company's service in China,) author of the “Report of the Amherst's voyage to the northeast coast of China.” Third edition; pp. 19. London: Saunders and Otley, Conduit street: 1836.

Mr. Lindsay, after remarking that it must be apparent to all “that our affairs can hardly be allowed to remain in the anomalous state in which they are now placed,” asks, what is to be done? and having pointed out some of the difficulties of the case adds:

“I have considered the subject deeply, and feel convinced that there are but two modes of acting that can now be adopted with any appearance of consistency. The first method which I should suggest is by a direct armed interference to demand redress for past injuries, and security for the future. The second, the withdrawal of all political relations from a country which obstinately refuses to acknowledge such without insult. The mode of proceeding in the first alternative I will hereafter detail. In the second, I would suggest the withdrawal, at once, of all his majesty's commissioners, and that a person of no pretensions should be sent out as agent for the customs, whose sole duties should consist in registering ships' papers, and countersigning manifests. This mode of procedure will be highly embarrassing to the Chinese authorities, who are most anxious to see some recognized chief at Canton for the purpose, as they term it, of “managing and controlling all affairs of the English nation;” and on the very first difficulty or dispute which occurs, they will most anxiously inquire, why no such authority exists. Our reply then is obvious: “It is your own fault; for, when we sent one to you, you treated him with insult; and it is incompatible with the dignity of England

native of her sovereign should be subject to such chief will, therefore, be sent until you promise him on and treatment.'” p. 4.

Let us for me to enter at length here on the various grievances which we labor in China, and which must be removed in order to realize the advantages which a really free trade system offers. I will merely recapitulate a few which appear most prominent. 1. The use of opprobrious epithets both in proclamations issued by the government, imputing to the Chinese the most atrocious and revolting crimes and profligacy of the most atrocious and revolting kind. 2. The undefined state of the duties,—the real being in fact tenfold the nominal. 3. The interdiction to hire Chinese labor, and the consequent insecurity of property, or to trade legally with the Chinese merchants. 4. The exorbitant port charges, which prevent small ships from trading legally at Canton. 5. The restriction to trade anywhere but at Canton, being the port best adapted for extending our commerce, for the fact that the staple articles of export, tea, and silk, are produced in the northern provinces at a heavy expense, while the charges of conveying our woollens to the north, form a heavy barrier to any great increase in their consumption. 6. The law enforced relative to homicides. All the comparatively small grievances under which we labor, which are, however, unnecessary, would vanish the moment we should be able to claim to be respected by the Chinese, instead of being treated, as we are most deservedly at present.—What, then, is the force requisite to coerce the Chinese empire, with a population of millions of inhabitants? In my opinion, by combining a small force with judicious policy, a comparatively small naval force would be all that was requisite. I would wish to see an ambassador from England to act in conjunction with the admiral stationed at the purpose of demanding redress for injuries, and negotiating a commercial treaty on a liberal basis. A small force to compel submission would consist of one frigate, two large frigates, six corvettes, and three or four gunboats, having on board a land force of about six hundred men, with artillery, in order to protect any land operation which may be necessary. The greater portion of this force is already in the East, and might be made available but with little expense.” p. 11.

If these proceedings would, within a very short period, remove all vestiges of a naval force along the coast of China, it would be in our power thousands of native merchant vessels. The East presents facilities for such operations beyond any other part of the world, being studded with numerous islands, in many of which, on the main land, are long, narrow bays with deep harbors, in which any number of vessels might be deposited, and the crews of a single man-of-war or armed merchant vessel. If such depots might be formed, the vessels moored there, would be attended with the exception of a few men in each to take

UNIVERSITY OF MICHIGAN LIBRARY

care of their property, and then would be the time freely to circulate printed papers, recapitulating the grievances we had to complain of, the demands we made, and stating that the moment they were granted peace would be restored, and all the junks in our possession would be liberated, safe and uninjured. This would have the double good effect of proving that our moderation was equal to our success, and would render every person directly or indirectly interested in the Chinese property in our power, an advocate for the expediency of granting our claims. A lithographic press, of which there are several in China, would form a valuable auxiliary on board the flag-ship. I need hardly say that I would recommend the kindest and most lenient conduct towards all the fishermen and inhabitants of the coast, and that all provisions required should be punctually and liberally paid for. By these means, confidence would soon be established, and the Chinese would flock to us from all quarters, bringing abundant supplies of every article we might stand in need of. I will even go so far as to say, that I fully believe trade to a very considerable extent might be carried on throughout the whole period of hostile operations, by granting passes to such Chinese vessels as were ready to embark in it." pp. 16, 17.

3. *Remarks on the British relations with China, and the proposed plans for improving them.* By sir George Thomas Staunton, bart. pp. 43. London: Edmund Lloyd, Harley-street; and Simpkin and Marshall, stationers'-street court. 1836.

The chief object of these remarks is to rebut those offered by Mr. Lindsay. What he promises to show respecting "a very highly colored or absolutely false translation," we here omit, because its insertion, with the remarks which the case demands, would require much more space than the present article will allow. Hereafter, in due time, we will return to this topic, and may then be able to show that the translations in question are neither "absolutely false" nor "very highly colored:" perchance we may show more than this, for our object will be to exhibit fully, by quotations from a variety of standard authors, the true meaning of the terms in dispute. After a few preliminary observations, sir George thus proceeds:

"It may be as well, however, just to notice cursorily, in this place, the six topics of grievance adverted to by Mr. Lindsay.—p. 11. 1. "Opprobrious epithets." It must be obvious that these must be wholly unworthy of notice as a matter of formal complaint, except so far as they may be introduced into official documents; and I think I shall be able to show, hereafter, that the most prominent instances of offensive language imputed to such documents, are to be ascribed either to a very highly colored or absolutely false translation. 2, "Undefined state of duties;" 3, "interdiction to hire warehouses, or trade with any but the hong merchants;" 4, "exorbitant port charges;" 5, "prohibition to trade any where but at Canton." There can be no question but that these are all points upon which the system of our trade with the Chinese might be altered vastly for the better; that it would be perfectly natural and reasonable, on our part, to endeavor

the Chinese government such additional privileges and through the medium of amicable negotiation, provided any being voluntarily conceded. But to denominate "ances," which would justify the employment of an "ence" for their "redress," appears to me an utter language, and to be wholly inconsistent with any inter-law of nations, with which I am acquainted. 6. "ns enforced relative to homicides." These, I am to concede, are a grievance, a very serious grievance. vs, as especially applied, and endeavored to be enforced-icide committed by foreigners, are not only *unjust*, *intolerable*. The demand of blood for blood, in all eference to circumstances, whether palliative or even doubtedly an intolerable grievance. But are there tending the fair and equitable adjustment of this 13, 14.

believe it possible that our government can for a more first of Mr. Lindsay's proposals; but I do hope that at deference which is due to his knowledge and expecting the second. Nothing certainly can be more or just in principle, than the maxim which Mr. Lind-(p. 4.) "that we ought to hold no political relation which refuses to acknowledge such, without insult." ing the principle of this maxim strictly in view that lord Macartney, and lord Amherst, if they have not mmercial interests in China, as much as was wished ve at least avoided doing that serious permanent interests which must have resulted from an opposite lid not indeed scrupulously criticise the wording of criptions on the banners of their boats, but they ped all demands tending to national degradation in ld be in any degree implicated as consenting parties, it by so doing they would not only have not promoted had in view, but have given a most dangerous en- the encroachments and oppressive spirit of the local anton, and have thus crippled our commerce as much ve tarnished our national honor.

think it possible that a third mission, if sent to China, r this is not the place to detail, might, in very skillful ar of those difficulties which obstructed the former d rendered all negotiation impossible, and that our ight be preserved at the same time that our national o promoted; but I am very far indeed from recommend-eriment should be tried. It would not only require ader, but it would be necessary that he should have ence and coöperation, if called upon, of that British munity at Canton, for whose interests he was to g aside the risk of an ambassador being named, who good quality except that peculiar one, of fitness for

his office—what possible chance would he have of advancing peaceably in the slow but sure steps of ordinary negotiation, while the majority of the British community at Canton, sympathizing, as I believe they at present do, in the belligerent views of Mr. Lindsay, would be impatient to cut at once with the sword the Gordian knot of his diplomacy?

“There are one or two other points in Mr. Lindsay’s pamphlet which seem to require some notice. Although he is an advocate for naval hostilities on a large scale, he especially provides that “he would on no account advocate the taking possession of the smallest island on the coast.” (p. 3.) No man certainly would advocate such a measure, except as an *ultima ratio*; but when we consider how many islands there are upon the coast, over which the Chinese government exercises no one act of jurisdiction, and which might easily be taken possession of with the entire consent and good-will of the inhabitants, if there be any; and when we further recollect that the original occupation of the island of Macao by the Portuguese was precisely an act of this description, and not the result of any previous authentic cession by the Chinese authorities, as pretended, it does seem an excessive and inconsistent degree of scrupulousness so carefully to disclaim any such intention, especially when something of the kind must have been anticipated when speaking (p. 10,) of forming depots among the numerous islands, where the crews of the captured vessels might be landed. Mr. Lindsay objects to the occupation of an island, because “such a measure would have quite a contrary effect from forwarding that extension of purely commercial intercourse, which would be so advantageous to both countries, and might also lead to consequences of which it would be impossible to foretell the result.” (p. 8.) Very likely; but these are the very reasons why the scheme of a squadron, having sea and land forces on board, for the purposes of embargo and blockade, is also objected to. It is only in order to avoid direct hostilities, even as an *ultima ratio*, and under the circumstance of the British commerce having been driven altogether from the continent of China, that I ventured to suggest (in the resolutions which I moved in the house of commons,) that, instead of endeavoring to regain our position on the continent by force, we should endeavor to establish our trade “on some insular position on the coast, where (being out of the limits of Chinese jurisdiction,) it might be carried on beyond the reach of acts of molestation and oppression.” From this proposition thus qualified, I confess, I see no reason to shrink.” pp. 31, 35.

4. *Remarks on the late lord Napier’s mission to Canton; in reference to the present state of our relations with China.* By James Goddard, esq., late of Canton. pp. 21. London. 1836.

The writer of these remarks first alludes to the circumstances under which lord Napier “came to Canton,” and then adds:

“As regards personal considerations, no one perhaps could have been selected better qualified than lord Napier for the important office of chief superintendent of trade: he seemed to combine in his

ree of firmness and pliancy, of dignity and affability, unite the suffrages of those whose interests he had to influence the Chinese government, if they were to be ll. But in the struggle which he had to make in order nself on an equality with the authorities at Canton, he numerous difficulties, which in relation to the Chinese vershadowed his influence.

s had been united with him, as his majesty's chief members of the company's factory, a *melee* totally ine Chinese, who looked upon the company's servants as of the hong merchants, which hong merchants are in humbleness and submission before the local author- . Yet, in defiance of Chinese prejudices, these dis- ls were blended together in the superintendents of free ad also been established, before lord Napier's arrival, nittee, which was composed of another portion of the unts; so that to the eyes of the Chinese there was the rely of mutation, and not of radical change; for al- nopoly was abolished, and the company had not the t or connexion with free trade, yet they thus contrived t as large a portion of their retainers, as if they had sses, in reality, the whole administration of the Brit- ith that country." *pp.* 4, 5.

ance of eight of the company's servants in high offi- not only gave scope for this inference, but it furnished l hope, to the Chinese authorities, that if they could Napier, they would then be able to preserve the *status* ad conduct matters as heretofore. Indeed, so natural is this inference, that even Europeans fell into the same Napier soon became sensible of the equivocal situation placed; and a Chamber of Commerce suggested itself institution likely to combine the commercial body, in rformation he might repose confidence, and whose est in the policy that it might be necessary to pursue, e that their opinions would not be advanced without d consideration when he might find it necessary to To this object, therefore, he directed his attention s: he called a public meeting, and, among other ended this to their particular attention, handing them : a paper of hints for their information and guidance; e so, he left them to pursue their own plans with re- consequence, rules and regulations were drawn up indence of a committee, which only required the ernal meeting; all parties seemed to contribute their nmon object, and lord Napier appeared to have estab- nity beyond what could have been reasonably expected.

was in progress, and his lordship was endeavoring atural supports around him, the contention with the to thicken; each person began to entertain notions

of his own: all the varieties of fear and apprehension, of hope and confidence, took place; some appeared to be frightened at the shadow of a shade, and others assumed a confidence which saw neither hazard nor danger. It would be difficult, and perhaps injudicious, to pronounce an opinion of the justice or folly of the views entertained on either side. pp. 5, 6.

"The determination and vigor with which lord Napier conducted the contest, shook for a time the resolution of the Chinese authorities, and an evident relaxation of their high tone took place: subordinate officers were appointed to hold an interview with his lordship, in order to obtain some insight into the nature and object of his mission, steps evidently of a yielding character. p. 8.

"On finding, however, that all direct communication with the Chinese authorities was still withheld, lord Napier adopted a plan which appears to have brought him nearer to an equality with them than any steps that had yet been taken. He publicly replied to the viceroy's and officers' edicts, adopting their own language and phraseology, as far as could be done with propriety. By this act they found their conduct about to be exposed to the body of the people, and their own proclamations met by those of equal publicity, their falsehoods detected, and the barriers which they had set up overturned. Had circumstances not prevented, or rather had lord Napier's sickness not overtaken him so rapidly, the operation of this system judiciously conducted would probably have overruled all obstacles." p. 10.

"So much with regard to the trade at Canton. As respects the extension of our intercourse with the eastern coast of China, we apprehend this can only be brought about by keeping up a constant communication with various ports by the ingress and egress of our ships of war. In an object of great commercial importance, promising to open to us the means and mode of supplying nations supposed to comprise a third of the population of the globe, with our arts and manufactures, cannot a few ships of war be spared, as well for the better protection of our merchantmen in the China seas, as to endeavor to slip between the Chinese and their prejudices by frequently visiting their ports with demonstrations of friendly intentions? It may be caviled at as a paradox, how ships of war are to be employed with friendly intentions: but the object is, to establish a social intercourse, to interchange communications, be they ever so frivolous, to show the Chinese by tranquil and judicious visits, that the ships are only ships of war *in name*. Will it be said that the gallant commanders and officers, when understanding the character of their mission, are not equal to carry it into effect? The only answer that can fairly be made is, that if they are not, they will be found wanting for the first time, and to belie their national character of being as social in peace as brave in war. This would not interfere with, or exclude, our merchants from taking *their* part and exercising their "thrifty assiduity" for the extension of trade,—and by their conjoint efforts, the Chinese may be moulded into something like a social and international body." pp. 17, 18.

Intercourse with China. By a Resident in China. pp. 58.
Suter, 19, Cheapside. 1836.

In a note, "to the British merchants and manufacturers who trade with Eastern Asia," the Resident remarks: "I am fully aware, that in the present state of foreign intercourse, a residence there does nothing more than supply the market, to which to bring the speculations that are hazardous and speculations that are indulged, in reference to that end, from claiming your attention on *this* ground, to the end, as expressed in the following pages. If they be not commended by their own propriety, nothing else should commend them to the public, in a sincere desire to contribute to the adoption, on the part of government, of the wisest policy toward China: and I address them to you, in the hope that powerful coöperation will be given towards the success of that policy, in throwing open to commerce, to civilization, that mighty empire."

In the present of the case,—as it respects the Chinese government, the merchants, the foreign residents, and so forth,—occurs in the course of this pamphlet; then, after remarking that "we aim at free intercourse with every part of the Chinese empire," the writer goes on to speak of the agency requisite to effect this end. He thinks the government should "choose a pacific policy on grounds of expediency, humility, and generosity," and that political action to the erection of a consulate at Canton, and the naval armament for the protection of trade;" and in a strain of remarks, from which we make as copious extracts as the limits will allow: he says:

"I do not confine the action of the British government upon such narrow limits, did I not think there is another appropriate agency which may be relied on, to give the full and religious liberty to the whole eastern world. It is to the influence of the classes to which these remarks are addressed, I refer. In this matter their instrumentality must be the chief, and on them, the sacrifice should fall. Let us for a moment consider the nature and force of this agency, and also for one of those that should be immediately submitted to, and cheerfully accepted. I am aware that the private efforts of a body of manufacturers, when compared with the power of government, are undervalued, or perhaps despised. If any regard in the agency of these classes in eastern Asia, employed through the medium of the Christian missionary, let me present to you the testimony of the late able governor-general of British India, publicly just before his return home. They will find in him a statesman looking away from the joint agency of government and the church establishment, and reposing "his hopes on the civilization of British India, on the humble, pious, permanent." The power which the Christian missionary exercises in the civilization of pagan nations, does not however need

to be explained here. Nor as to the facilities and coöperation which the merchant and manufacturer can afford him, need I say more than this. They can take under their care, the man who offers himself as the agent of their benevolence, convey him to the scene of his labors, and assure him a welcome there. They can cheer him on in his self-denying course. They can give him access to the precise spots where he is most desirous to exert his influence; and their concurrent testimony to his integrity and usefulness, can be given for him at home and abroad, above the suspicion of favor or fear. In doing all this, they compromise no commercial object. On the contrary, they identify themselves with a cause noble in itself, and the success of which is sure. These facilities must come from them alone: but in the general labor and burden of providing the means of instruction in civil and religious truth for the people of Eastern Asia, their countrymen of all classes may share. There is, however, *one* sacrifice already referred to, which falls on the merchant alone. I allude, of course, to the sacrifice on his part, of all gain accruing from the sale of injurious articles—for instance, from the opium trade.

“As to this traffic, it is not too much to say, that the Chinese government derives stronger justification from it, in its exclusion of foreigners, than from any other source. It is this trade which throws such deep discredit on our character, and such suspicion on our intercourse. It is this lamentable traffic which gives a color of benevolence to the Chinese edicts, which restrict and brand us. Is it then unreasonable to express a hope that patriotism, benevolence, and desire of free communication, will put an end to a trade, so injurious to the character of the nation, so opposite to the spirit of doing good, and so fatal to every expectation of a better intercourse? Whenever this sacrifice shall be made, these facilities furnished, and the great associations of this country for the diffusion of useful and Christian knowledge, come forward in the cause of Eastern Asia, then will the prospect of amelioration there be more cheering, than if government had pledged itself to the same purposes, and commissioned a fleet and an army to redeem its word. May it not be expected that all this will be done without delay? The merchant calls on government to make expensive preparations, to expose valuable lives, for the extension of trade. Will he, can he, then, refuse one sacrifice on his part; costly perhaps, but paying back in honor, all that it involves in point of cost. Let him also say to himself,—“the age of monopoly has passed away, shall the monopoly of Christian liberty and happiness be maintained?” Let the manufacturer too remember that the products of the mill and the workshop are scattered throughout the east, and say to *himself*, the diffusion of our peculiar blessings must not be any longer restrained.

“The individual who is sharing the direction and rejoicing in the success of our benevolent societies, must find in Eastern Asia, an object of more than common regard. He will remark that these countries abound, above all others, in the object of *his* Christian charity, in benighted *men*. He will rejoice in the reasonable hope, that those

o remarkable as the great scenes of human probation, e still more distinguished as the scenes of the display race. It will be seen, from the strain of these remarks, is to recommend a mixed commercial and benevolent best instrument of those ameliorations in Eastern Asia, e desired by every merchant and every philanthropist. asking *shorter work* with every thing which opposes our to batter it down. But where ignorance, distrust, pre-barism are the obstacles in the way, the best mode of them is to change them into intelligence, confidence, team. This is the mode of proceeding which I would commend.

en go on and trace the operation of this mixed agency, civilized races of the islands, and next on the comparative continental nations of the east. To the first of these ern population, commerce comes and presents them de of objects, useful, agreeable,—suited to their conditions. All these are offered to the savage as things which s, not by an act of violence as he has been used, but in he fruits of his peaceful labor. As soon as this is ap, as far as this influences him, so far he is transformed.) industrious, peaceable man. The trade of plunder, forsaken. The spirit of *rapine* gives way to the spirit d notwithstanding Dr. Southey's opinion to the blessed exchange. Alas! that Christian merchants ingled injuries with these blessings:—that they should ed to the Malay, or the Polynesian, the weapon with boldened to attempt anew the life of his enemies, or ly fatal to his own. But the sacrifice of these miserable not any longer refuse. They will make this sacrifice nobler views. If not, they will make it of necessity, opinion comes to bear on this agency, as it has on the th irresistible force."

will trace the immediate operation of the agency in ina, as the controlling nation of the eastern continent. ple of China must be taught more than they ever yet signs and character, more of each other's rights, and e owe each other. They must be bound together by hose fine cords of public opinion and enlightened sym- ary impressions from one end of the empire to the etrical quickness and force. They must have light on cts of national obligation and intercourse. They will strength and their way. They will soon observe that rous enough (near 400 millions), and that on any point cur, they must be strong. They will be prepared then oreign intercourse on a liberal and firm basis, and at to enter on a course of domestic and general reform. ent may cling to its distrusts and its abuses still, but will put a period to them all."

“British merchants and manufacturers have a direct *interest* in this subject, and a more valuable one than they are aware of. The regions of the world now in question, have great resources. They are undeveloped, it is true. We cannot tell how much they can produce, and exchange and consume. Instead of making large promises, let me give a quotation only. It will serve to remind us that we have a double interest here; that the more we give to Eastern Asia, the more shall we receive. A mercantile writer says, “I will not tell statesmen what they should do; nor Christians what it is their duty to do; but as a merchant, I will say, were the trade with Eastern Asia conveyed to me in perpetuity, the diffusion of knowledge and the support of Christian missions there, are the measures to which I should feel directed, by a regard to pecuniary interests.” To this testimony I add my sincere Amen.”

“Again, this subject should be looked at by the British merchant and manufacturer as a matter of *character* also. We have been told by some (who should have spoken more kindly,) of “manufacturing greediness,” and of “the rapacious short-sighted spirit of trade.” And do these charges lie at our doors? Will we consent to be branded with marks like these? If not, how shall they be repelled? I would answer—by identifying our professions with the advancing happiness of the whole world. Especially, as the rule of personal exertion, let the countries with which we are most nearly connected, receive a proportionate share of our benevolent and Christian regard. The charge of greedy, short-sighted avarice will not cleave to those whose agency is the honored instrument, under Providence, of conveying blessings to distant, neglected tribes and nations. *Their* characters will be safe, and the blessings of Him who maketh rich and addeth no sorrow therewith, will also be theirs. This matter of character has distinct claims to the merchant’s attention, inasmuch as he is the representative of his nation in foreign lands.*”

* I cannot but take this opportunity of reminding the British merchant of the duty of introducing the temperance system into all vessels navigating the eastern seas. The perfect practicability of this system is fully proved. It is practiced by one of the ablest English houses engaged in the China trade.

The American ships resorting to those seas are, almost without exception, navigated with *no spirit on board*. In the longer and more hazardous voyages in pursuit of the whale, the great majority of the Americans have *no spirit on board*. Why are we so slow to follow a system so nobly and so successfully begun? It is a sad thing, that so many of our merchants still contend for this old abuse. They libel the British sailor, when they say he needs a glass of grog to give him courage or strength. He needs no such assistance to raise him above weakness and fear. These enemies of the British sailor tell us, moreover, that his reformation is hopeless: that he always will be a profane, thoughtless, drunken, profligate man. Alas! it is true, that many of the older sailors are too far gone. But here, prevention is more valuable than cure. The temperance system will save the young sailor, who now drinks his glass in the presence of his shipmates, because he fears their sneer; and is thus, in the course of one long voyage, dragged a struggling victim to the drunkard’s doom.

How long shall this vile system be endured? Does “manufacturing greediness” sacrifice nobler victims than these? Will not the press of this country take up his subject, and, for one thing, close its columns against governmental contracts for rum?

sources of the richest and most extensive regions at her hand may not fear the loss of a market on the Black Elbe, or the Rhine. She can bend her influence to time when "the spear shall be cut asunder, and the in the fire." The commerce which she has fostered, and valuable connexions, will help her to disarm, for sh and mad passions that engender war. Let the agri- s look at the late instance of her mediation, in prevent- trife. Let them observe what interwoven commercial done here, and imagine what they will do, by their h in times to come, and answer, if there be not in this thing as cheering, as they ever anticipate from the roved drainage, or the use of bone manure. I hope it d that the Providence which has made this nation the revealed truth, has also marked her out, by her insular arrow boundaries, manufacturing skill, and naval superi- osten instrument for diffusing it through the earth. No) we find these qualifications combined. This is the hich this country has set before her, and recreant to honor, glory, she must be if she stop short or turn r, then, lay aside every weight, and run with ardor looking to this hope—that the labor borne in this ng speedy and rich returns; and that when Eastern ised to equal refinement, skill, and prosperity, and her no longer, then other compensations for her in- all be given to her, under the rewarding blessing

urn to a short consideration of the general results expected from a pure exercise of our power, as practi- ent men, on Eastern Asia. The weakness of the , now leaves them at the mercy, not of the emperor ry provincial officer, from a governor of provinces, y magistrate of the poorest heën. With no means of tion, they cannot make known their wishes or suf- other, or join in any determination to acquire new less old wrongs. But when something is done to rass of mind, the case will be changed. On the very ublic opinion, their domestic condition will begin to ll no longer be emphatically true, of every place of , that "iniquity is there." Nothing short of this can remove the evils which press upon the foreign oing this we may confidently rejoice. But it will do will unshackle the industry, the enterprise, the inven- ple, and engage all these energies in the work of vast resources of their favored territories. It needs use and heavy are the fetters which Chinese industry have worn. It is equally true that the genius of that systematically repressed. They have been misdirect- o look backward instead of forward; taught to seek

their standards, their patterns, in a remote antiquity. No wonder they have not got on.

“Leaving, to a further page, the moral and religious changes which will succeed, let us follow the course of this reform, as it passes the boundaries of China, and carries its blessings to the farthest coasts and islands of the east. The Chinese will then become the great agents of this reform. Already their power extends from the Pacific almost to the Caspian sea. It is established over Tibet. Besides this, their influence is felt, politically or commercially, in Cochinchina, Siam, the Malayan Peninsula, and in many of the principal islands to the southeast. This mercantile influence, (leaving the political out of view,) has been acquired without the aid, nay, against the will, and under the interdict of their government. It has been acquired by personal enterprise, sagacity, and industry, in spite of deficient geographical and nautical knowledge, and the dangers arising out of the character of the Malayan race. What then may we not expect from these characteristics when Christianity has exalted them, when British intercourse has supplied this knowledge, and made property and life secure, when a reformed government shall encourage what it has so long opposed? Under these circumstances, Chinese emigration *must* overflow the countries to the south and southeast; filling them with a population, having the best elements of national character, and excelling in all the arts of peace. And every one who has even sailed by those lovely islands, as they rise from the bed of the ocean, clothed with the richest robe that nature ever wore,—so verdant, luxuriant, fragrant, yet silent and unimproved, because there is no safety there,—is prepared to rejoice in the prospect, that they will one day come under the influence of the mild, intelligent, and Christianized Chinese.

“I will conclude this pamphlet with a few remarks, already promised, on the moral and religious changes to be expected, happily, in the condition of the inhabitants of Eastern Asia. It is not possible perhaps to get, much less to give, a good idea of the condition of the Malayan races in these respects. If, however, the tree may be judged by its fruits, we have, in the degraded, perfidious, desperate character of these islanders, a guide to their faith. It is however certain, that these lawless men are themselves the slaves of cruel and puerile superstitions. The Dayak, who qualifies himself for every important act or event of life by a fresh murder, is an example of the one; the Tagalo soldier, who sees, as he stands sentry on a lonely part of the walls of Manila, the goblins of his fancy leering at him through the embrasures, or lifting in sport the heavy cannon from their carriages, is an example of the other. Where but in Christianity shall we find a power that can regenerate the monster, and liberate the slave of these superstitions? In the gradual working of the measures we have recommended, all this, and much more, we promise shall be accomplished. Again, as respects the people of China: Are they learned? Christianity will give them purer precepts and a better example than have come down to them from their venerable master. It

too the futurity, which Confucius never attempted to pe-
ny will find life and immortality brought to light in the
hey followers of Laou Keun? Their fruitless search after
er's stone, after some recipe for endless life, may be given
re the waters of life, which a man may drink and live
e they Budhists? The Bible will show them the folly
neir idolatry. It will bring them the doctrines of grace,
ir silly scale of merits and demerits; and the rest that
the people of God, in exchange for the stupid abstrac-
a. Perhaps those who have never witnessed idol-worship
difficult to realize its tendency, or the grounds of the
ciations against idolatry. But let them go and stand in
sence of hideous images, perhaps of gigantic size, bru-
and cruel, unfeeling expression, and see divine honors
nd they will then want no further assistance to conceive
s, how fatal must be its influence, on the character
of the worshiper. Let them remember too, that man
hat he might be the intelligent beholder of his Creator's
the voluntary instrument of his praises for ever, and
can, a grosser crime, a deeper degradation, than that
ze the image of the blessed God into an impersonation
, vile, and loathsome attribute. Yet this is the degra-
guilt of the millions of idolaters in China. How
n, may we call on British Christians, to cooperate in
store them to the noble purposes for which they were
which pure and perfect happiness will be their portion
ardently and how often should we all lift up to God
e prayer of Moses: "I beseech thee, shew me thy
is this prayer is granted to us, day by day; as we are
ok, again and again, on his uncreated beauty; how
e conspire with love and pity to urge us to the work
a known throughout the earth, whom we have seen
' and atog ther o ely." See page 26, &c.

*Report of the governor of Kwangtung and Kwangse and
governor of Kwangtung, in reference to the proposal
the importation of opium. Sept. 7th, 1836.*

edience to the imperial will, jointly deliberated on the
aling the regulations now in force in regard to the
opium, and of permitting it to be sold in barter for
ies; and we herein present a draft of regulations, that
hed, comprising nine sections, on which we humbly
red majesty to cast a glance.

On the 19th day of the 5th month (2d July), we received a letter from the grand council of ministers, inclosing the following imperial edict dated the 29th day of the 4th month. (12th June.) "Heu Naetse," &c. &c. [See Rep. p. 143.]

Beholding our august sovereign's tender solicitude for the livelihood of the people on this remote frontier, and the anxious desire manifested to remove all evils, we, as on bended knee we perused the edict, were deeply affected, and bowed in profound reverence. We immediately transmitted the edict to the superintendent of maritime customs, your majesty's minister Wán, and also read in council the copy forwarded to us of the original memorial. While we ourselves gave the subject our joint and careful consideration, we at the same time directed the two commissioners (of finance and justice) to discuss it thoroughly and faithfully. These officers, the financial commissioner, Atsingah, and the judicial commissioner, Wang Tsinglëen, have now laid before us the result of their joint deliberations, and we have considered their suggestions. We are humbly of opinion, that in framing regulations it is of the first importance to suit them to the circumstances of the times; and that to govern well, it is essential in the first place to remove existing evils. But if in removing one evil, an evil of greater extent is produced, it then becomes the more imperative to make a speedy change suited to the circumstances of the occasion.

Now in regard to opium, it is an article brought into the central empire from the lands of the far-distant barbarians, and has been imported during a long course of years. In the reigns of Yung-ching and Keënlung, it was included in the tariff of maritime duties, under the head of medicinal drugs, and there was then no regulation against purchasing it, or inhaling it. But in the 4th year of Keaking (1799) the then governor of this province, Keihking, of the imperial kindred, regarding it as a subject of deep regret, that the vile dirt of foreign countries should be received in exchange for the commodities and the money of the empire, and fearing lest the practice of smoking opium should spread among all the people of the inner land, to the waste of their time and the destruction of their property, presented a memorial, requesting that the sale of the drug should be prohibited, and that offenders should be made amenable to punishment. This punishment has been gradually increased to transportation, and death by strangling. The law is by no means deficient in severity. But the people are not so much influenced by the fear of the laws, as by the desire of gain. Hence, from the time that the prohibition was passed, the crafty schemes and devices of evil men have daily multiplied. On the one hand, receiving ships are anchored in the entrances from the outer seas. On the other hand, brokers, called melters, are everywhere established in the inner land. Then again 'fast crabs' and 'scrambling dragons'—as the boats are called—are fitted out for clandestine commerce: and lastly, vagabonds, pretending authority to search, have under this pretext indulged their own unruly desires. Thus, what was at first a common

esteem in the market, either for smoking or eating, and erate price, has with the increase in the severity of the increased demand, and been clandestinely and largely nually drawing away from the pecuniary resources of d, while it has done nothing to enrich it.

Majesty's ministers, having examined the original memo- considered the details therein contained respecting the evils l, regard the whole as true and accurate. The request for the prohibitions and change in the system, and a return r plan of laying a duty on opium, is also such as the s of the times render necessary; and it is our duty to Majesty's sanction thereof. In case of such sanction, any o in the course of trade may bring opium, must be per- port and pass it at the custom-house, paying the duty on the maritime tariff of Keenlung, and must deliver merchants, in the same manner as long-ells, camlets, s, bartered for native commodities, but on no account landestinely for money. If this plan be faithfully and ed into effect, the tens of millions of precious money ually ooze out of the empire will be saved, the source ill be purified, and the stream itself may be eventually ount of duties being less onerous than what is now transgressions of the laws, regulating the revenue, will elves; the present evil practices of transporting con- by deceit and violence will be suppressed without ef- urther quarrels and litigations now arising therefrom ether with the crimes of worthless vagrants, will be loreover, if the governmental officers, the literati, and s still restrained by regulations, and not suffered to ; and if offenders among these classes be immediately the public service; while those of the people who rug and smoke it, are not at all interfered with, all that those who indulge their depraved appetites are their own self-sacrificing folly, persons who are in- king among the capped and belted men of rank and if in this way shame be once aroused, strenuous ex- improvement will be the result,—for the principles of ded in shame and remorse.

truly said in the original memorial, will the dignity of at all lowered by the proposed measure. Should your n the epeal, it will in truth be attended with advan- e arrangements of the government and the wellbeing But in passing regulations on the subject, it is of great t every thing should be maturely considered, and that be rendered perfect and complete; and it is of the quence that effectual measures should be taken to pre- ation of sycee silver. If the regulations be in any way consequence will be that in a few years fresh evils will pread abroad: such is not the right way to accomplish

UNIVERSITY OF TORONTO LIBRARY

the purpose in view. We have, therefore, fully discussed the subject together, and have also in concert with the financial and judicial commissioners examined and considered it in all its bearings, and after oft-repeated deliberations, have determined upon nine regulations which we have drawn up, and of which we present a fair copy for your majesty's perusal. The result of our deliberations, made in obedience to the imperial mandate, we now jointly lay before the throne, humbly imploring our august sovereign to instruct us if our representations be correct or not, and to direct the appropriate board to revise them.

The following are the regulations which we have drawn up in reference to the change of system called for in regard to the importation of opium, and which we reverently present for your majesty's perusal.

1. The whole amount of opium imported must be paid for in merchandise: here must be no deception. The object in repealing the interdict on opium, is to prevent the loss of specie occasioned by the sale of the drug for money. When opium is brought in foreign vessels, therefore, the security and senior merchants must be held responsible for the following arrangements being carried into effect: the value of the opium must be correctly fixed; an amount of native commodities of equal value must be apportioned; and the two amounts must be exchanged in full. No purchase may be made for money-payments. The productions of the celestial empire are rich, abundant, and in universal demand; its commodities, are many-fold more than those of foreign barbarians, so that in an exchange of commodities the gain and not the loss must be on its side. But should it at any time perchance occur, that the quantities imported were somewhat greater than the amount of native commodities required, so that an exact balance could not be struck, while it were necessary for foreign ships immediately to return; in such case, the whole amount of duties having been paid through the security merchant, and the barter of commodities having been made, the surplus opium not yet bartered may be laid up in the merchants' warehouses, and an account of it, taken under the inspection both of the security and foreign merchant, may be registered in the office of the superintendent of customs. Then the opium may be sold as opportunities occur; and when the whole has been disposed of, the hong merchant and the consignee of the opium may jointly report that it is so, and have the register canceled. When the foreign merchant returns to Canton, he must receive payment for the opium thus sold, in some merchantable commodity; he may not be allowed to give the value a pecuniary designation, and under cover of this receive payment in money. Some substantial and opulent senior merchants must be strictly required to watch over the enforcement of these regulations. And when a foreign ship is about leaving, the security and senior merchants must sign a bond that she carries away no sycee silver on board of her, which bond must be delivered into the hands of government. If they know of any clandestine purchases being made for money-payments, or of any money having been paid, they should be required immediately to report the facts, and the parties should be severely punished, and the opium confiscated and

ment; or, if it have been already delivered to the purchase should be recovered from the latter and forfeited to the crown. If the senior and security merchants be found guilty of complicity in such offenses, they also should be severely

naval cruising vessels, and all the officers and men of the stations, should be required diligently to watch the entrances and passages of rivers; but at the same time, to confine their operations to the coast, and should not be allowed to go out to sea-ward, and under any pretext to cause annoyance. Even though the interdiction on private trade there is yet cause to fear that the mercantile people and those who search for gain are, as it were, bewitched, will still continue to purchase it, so that the silver will continue to ooze out. The naval-cruising vessels, and all those who are attached to the custom-house should be required to search diligently and faithfully whenever any silver shall be made of silver being smuggled out, and it should be forthwith seized, and the offending parties apprehended, and the whole amount of money so taken, with the value of the vessel and boat, should be given as a reward to the captors, to encourage their exertions, and thus to destroy smuggling. If silver is exported, there is necessarily a place where, and a way by which it is carried out: that place must be near the foreign coast, and the way must be through the important passages and entrances. It is only needful then to watch faithfully at such points, and to stop the export of silver may be stopped without difficulty, if the smugglers once get out into the open roads, and do not themselves abroad in various places and there leave it difficult to find them. If the soldiers, or vagabond soldiers, frame pretexts for cruising about in search of silver, they can they not effect any good, but they may also give rise to disturbances, attended with evil consequences of no small importance. They should therefore, be strictly prohibited so

as to foreign money, the old regulation, allowing three per cent to be added, should be continued; and to prevent any fraud, the amount of the money imported should be given (by each ship) to the merchants, and formerly, much foreign money was brought to Canton in order to purchase commodities in excess of those allowed, and to pay the necessary expenses of the vessel. Whenever the imported goods were in larger quantity than allowed, there was then a surplus of foreign money, of which it was not have been reasonable, under such circumstances, to allow the exportation. In the 23d year of Keaking, (1818,) the government of maritime customs, Ah, finding that the bar-ter of foreign money without any limit or restriction, had become a great nuisance, and a communication to the then governor of this province, Yuen, in which it was decided to limit the exportation by three tenths (of the surplus of imports), allowing the

remainder to be lent to any other foreigner to enable him to purchase goods, to pay the duties, &c. This has continued to be the rule down to the present time. Now it is probable, that sometimes, when opium is imported in not very large quantities, money will also be imported with it, for the purpose of paying the price of goods in excess of what may be purchased by barter. It will be right in such cases to conform to the existing regulation. But the amount of foreign money so imported in foreign ships, may vary considerably. If the balance be 100,000 dollars or upwards, it will then be very well to permit the exportation of 30,000 dollars; but if the balance should exceed 200,000 dollars, a further limit to the permission to reëxport becomes necessary. We deem it our duty, therefore, to request, that hereafter, when the surplus of silver imported, does not considerably exceed 100,000, permission be still given to reëxport three tenths of that surplus; but if it amounts to 200,000 dollars, whether the merchandise brought with it consist of opium, or of any other goods, that the permission to reëxport in that case be limited to 50,000 on each ship. This amount should not be exceeded. With respect to the examination and report made by the security merchant, on a ship's arrival, of the total amount of silver imported by her, this examination and report should still be required, in order that, the expenditure of the vessel having been deducted therefrom, the proportion to be reëxported may be accurately calculated. A senior merchant also should be required faithfully to join the security merchant in the investigation. If the officers of the customs make feigned examinations and false reports, they should be subjected to severe punishment; and if the senior and other merchants connive at any illegality, they also should be punished.

4. The traffic in opium must be conducted on the same principle as other foreign commodities; it is unnecessary to place it under a separate department. The first principle of commerce is, to adopt those measures which will yield the greatest possible amount of gain. Each one has his own method of doing this, and what one rejects another may seek for; nor it is possible to bring all to one opinion. Now if the importation of opium be permitted, as formerly, and it become an article of commerce, as a medicinal drug, the traffic in it will no wise differ from the traffic in other articles of commerce; and if a special department be created for it, there is reason to fear that monopolizing and underhand practices will gradually result therefrom. It is right therefore to let the foreign merchants make their own election, and engage what hong merchants they will to pass their cargoes at the custom-house and pay their duties for them. To establish one general department for the purpose is unnecessary. By this arrangement crafty individuals may be prevented from taking advantage and extorting exorbitant profits, and benefit may accrue to both the foreign and the hong merchants.

5. The amount of duties should be continued the same as formerly; no increase is called for; and all extortionate demands, and illegal fees should be interdicted. In the tariff of maritime customs

Opium is rated at a duty of three taels per hundred catty; we must add ten per cent. or three mace, for loss in transit, and fee per package, according to the value of the cargo. In addition to these, there are made of public and legal fees, eight candareens six mace. There are three kinds of opium, the 'black earth,' the 'red earth,' and the 'red skinned,' differing in value, yet the principle may be the same on all. These arrangements are founded on the principle that if the duty be heavy it will be evaded, and a loss will ensue; whereas if it be light, all will prefer security; and that if a fixed charge be imposed, the officers will be unable to intermeddle. The same clear views were held by our predecessors, when they established the duty; and it will be well to conform to the amount of duty fixed, without any addition. But there is reason to fear that when the duties are first taken off, the servants of the custom-house, for their private gains, may under various pretexts lay on illegal duties, or by their exactions what as a legal duty is light; and in every sight of the principle that they are to show kindness to the merchant. If this take place, the natural result too will be that the means of legal importation will be avoided, and contraband trade clandestinely will be resorted to. Perspicuous regulations should therefore be issued, making it generally known that the real duty, not the smallest fraction is to be exacted, and that offenders shall be answerable to the law against the servants of the custom-house receiving money under false pretext. The duty should be fixed on the drug. It is a settled principle of political economy that when prices are very low, there is a tendency to rise, and a tendency to fall. Prices then depend on the supply and demand of any article, and the demand that exists for it they cannot be limited by enactments to any fixed amount. If the prohibition of opium be repealed, it will not be long before the price will begin to fall, and force men who buy at a high price, to sell at a low price. Besides, it is common to men to prize things of high value, and to underrate those of less worth. When therefore opium is prohibited, and classed among rarities, every one had to indulge in over-reaching desires of gain; but when the prohibitions are withdrawn, and opium universally admitted, it becomes a common medicinal drug, easily to be obtained.

The gem, when in the casket prized,
When common is despised !'

Opium, if left to itself, will fall from day to day; where the value is fixed, great difficulty will be found in procuring it at the rate which it is rated. It is reasonable and right therefore that the price should be allowed to fluctuate, according to the circumstances of the market, and not to fix any rate.

When the vessels of every province, when carrying opium, are required to have sealed manifests from the custom-house of the port, and the existing regulations of commerce, all commanders

of coasting vessels, without exception, are required, whenever they have purchased any foreign goods, to apply at the chief custom-house at Canton, and obtain a sealed manifest, stating the amount of each kind of goods, so as to prevent any clandestine purchases. They are also to be provided from thence with a communication addressed to the authorities in every province and at all sea-ports, calling on them to search closely; and if they find any foreign goods, not having the stamp of the Canton custom-house on them, to regard such goods as smuggled, to try the offenders according to law, and to confiscate both vessel and cargo. The law on this point is most precise. Now when the interdict on opium is repealed, it will become an article of ordinary traffic, like any other foreign commodity, and subject therefore to the same regulations. All commanders of coasting vessels, wishing to purchase opium, should therefore be required to report their wishes to the hong merchants, bringing goods to barter for it, and should then apply at the custom-house for a manifest, and for a communication from the superintendent of customs to the authorities in all the provinces as aforesaid. Thus there being documents for reference, both in this and the sea-board provinces, the native coasting vessels may be prevented from having any clandestine dealings with the foreign ships at sea, and from smuggling away silver.

8. The strict prohibitions existing against the cultivation of the poppy, among the people, may be in some measure relaxed. Opium possesses soothing properties, but is powerful in its effects. Its soothing properties render it a luxury, greatly esteemed; but its powerful effects are such as readily to induce disease. The accounts given of the manner in which it is prepared among the foreigners are various; but in all probability it is not unmixed with things of poisonous quality. It is said that of late years, it has been clandestinely prepared by natives, by merely boiling down the juicy matter from the poppy; and that thus prepared, it possesses milder properties, and is less injurious, without losing its soothing influence. To shut out the importation of it by foreigners, there is no better plan than to sanction the cultivation and preparation of it in the empire. It would seem right therefore to relax, in some measure, the existing severe prohibitions, and to dispense with the close scrutiny now called for to hinder its cultivation. If it be apprehended, that the simple people may leave the stem and stay of life to amuse themselves with the twigs and branches thereby injuring the interests of agriculture, it is only necessary to issue perspicuous orders, requiring them to confine the cultivation of the poppy to the tops of hills and mounds, and other unoccupied spots of ground, and on no account to introduce it into their grain-fields, to the injury of that on which their subsistence depends.

9. All officers, scholars, and soldiers should be strictly prohibited and disallowed the smoking of opium. We find in the original memorial of Heu Naetse, the vice-president of the sacrificial court, the following observations: "It will be found on examination that the smokers of opium are idle, lazy vagrants, having no useful purpose before

igh some smokers are to be found who have overstepped
 of age, yet they do not attain to the long life of other
 births daily increase the population of the empire,

 resident at Lassa, in order to restrain the incursions of
 to Tibet. This country borders also upon the Seik
 e chiefs of which, Golab Singh of Jamún, a depend-

Ranjit Singh, has lately invaded it and levied contributions. Croft visited Leh the capital, several years ago, from other European travelers, baron Hügel and Mr. Vigne, entered it from Cashmír, along the valley of the Indus in situated. The death of Ranjít Singh, ruler of Lahore, is anticipated, without the supposition being added, that it will approach of the British to the banks of the Indus. The Cashmír will become then of course a British province, a channel will be opened for British commerce into the west. Ladákh will follow in due course; into which another, the Shyúk, is said to flow to the Indus from the north to take its rise in the (Tsung ling or) Kara Korum mountain-separate Ladákh from Yárkand.

On the Chinese frontier westward from Ladákh, we find the states of Iskárdo, Gilgit, Gunjót, Chitral, &c. Iskárdo is said to be eight marches northeast from the city of Yárkand, also been invaded by the Seiks from that valley,⁹ who have been driven back: but they succeeded in subduing the neighboring principality of Kathái, which was before independent shah, the present ruler of Iskárdo, is in friendly correspondence with the British political agent at Ludiána. A high road, leading from Iskárdo to Yárkand in Chinese Turkestan, is frequented by merchants travel in caravans. The rulers of these mountains, as well as their people, are Tájiks, that is, the aboriginal of the country before it was overrun by the Túrki or Tartars; but they have been converted to the Shíah sect of the Mohammedans, and they receive their religious education from the Persians. This circumstance is favorable to China, inasmuch as it is probable an alliance between these states and the more Mohammedan countries in the west and north, which follow the same creed. Chitral is, however, subject to the mir of Kúndúz, an Usbeck, but the mass of his population are Tájiks.

There is a small town of 1500 inhabitants in the valley of the Panj, given a conqueror to Budakshan, and some of the mountains of Wakhan, Shughnan, Hissar, &c., which lie about the mountains which separate Chinese Turkestan from Maweralnehar (Afghanistan). The mir of Kúndúz is an Usbeck, as is also the ruler of Hissar, but their subjects are chiefly Tájiks, and in the mountain states both prince and people are of the latter race. The mir of Pamer in the mountains between Budakshan and Kashgar is inhabited by Kirghís. Besides Kúndúz, the two principal mountain states in the neighborhood of the Chinese possessions in the west are Bokhára, including its provinces of Samarkand and Kokan.

Kokan⁵ may be said to include all Turkestan (not counting the states of the north) since they are the two most influential of its states. These are the Chinese countries, and the greater part of their subjects, are Mohammedans of the Súnite sect. Their slaves, who cultivate the land, are mostly Persians, captured and sold by

of the desert; and those Persians are all Shíahs, who do not consider as true believers. The connexion according to Burnes, with China, Cabúl, and Turkey and all of them have sent an ambassador. The bazars of Kashgár, which continues,⁶ are supplied with European merchandise by the caravan from Russia, and also with British fabrics by the native trade from India. The Russian government is supposed to be exerting every nerve, since the time of Paul, to force a change in the direction; whilst the English commerce, with very little aid from the part of its government, has widely extended, so that the Russian merchant discovers a formidable rival in the direction of his trade." A considerable trade is also carried on with the other countries of Mawerátnehar to Cashgár, and the various European commodities among others find their way to the coast chiefly for tea.

It is carried on by the natives of Budakshan, who, as Burnes,⁷ "praise the equity of the Chinese, and the facilitating matters of commerce with them; they lay a duty on all traders, which is very moderate." Timkowsky mentions the duties at Auksú, except for the Cashmírians, who are exempt, on account of their extensive commerce.

Kashgár is the next considerable country on the western frontier of Chinese Turkestan, is bounded on the north by the Russian provinces of Orenburg and Tomsk, and thus we complete the reign of the Russian powers around the Chinese frontier. There are the nomadic tribes of Kussaks, Kalmuks, and Kirghís, the latter inhabiting the mountains bordering on the Chinese territories, who are under the half subjection only to one or other of the powers on the frontier. They are all tribes of the same Türkish stock who have overrun these countries and established themselves there; they have all been converted to Mohammedanism except

and also Ferghána, was the patrimony of Báber, the Monarch of Hindostan. His father was khan of Kokan, but in 1755 his kingdom by an irruption of Usbeck Tartars in 1755 were themselves ejected from their own country by the intervention of Russia. Báber seized upon Cabúl, whence he advanced upon India; thus affording a striking instance of the influence which urge on Asiatic governments to conquest. We owe the present moment to Russia, because that country is in immediate possession of Kokan, which we shall presently see to have been lately ceded to China, with a strong suspicion frequently expressed in the journals, although perhaps quite unfounded, that the territory was ceded by Russian emissaries.

It is to Klaproth,⁸ the Russian new boundary, about the limits of their possession of a tract of country of 220,000 square miles quite unknown to the rest of Europe; this boundary was the Blue river; but a recent report⁹ says that the Russians have ceded it and have erected forts on the Kokan side. Ano-

UNIVERSITY OF TORONTO LIBRARY

ort,¹⁰ makes them to have aggressed upon the Chinese territory in another quarter, and arrived at Ele, the capital of Kiangsi.* This is coupled with the intelligence that the chief of the English has informed the emperor of China, that the English are constructing a road to Kanhgri, which is situated near Ispitte. This is as far as the road is concerned, which the British resident at Kanhgri has caused to be made in the valley of the Sutlej, through the valley of one of the British tributaries, and that Kanhgri is a Seik country lying on the opposite bank of the Sutlej, and Ispitte, a country bordering the frontier. These reports show the attention which is paid to the movements of foreign powers, and the English road may serve to test the degree of truth to be attached to them.

may terminate our notice of the Mohammedan states bordering the west of China by recounting, after Burnes, the forces which the principal powers could bring to act against their neighbors. Kokan is stated to contain about 100,000 inhabitants (speaking of the capital), and the amir of Bokhára may be able, on an emergency, to bring 50,000 horse into the field: he has no infantry. The amir of Bokhára¹¹ may rule over a territory of about a million of souls, and his military force is estimated at about 100,000 horse, 4,000 foot, and 41 pieces of artillery, besides a kind of militia of about 50,000 horse, drawn from all the provinces and the amir levies: the city of the amir of Bokhára contains about 130,000 inhabitants. The mir of Kúndúz musters¹² about 20,000 horse and 100 pieces of artillery, on of which is a thirty-six pounder.

Having given the foregoing sketch of the countries which border the west of China, we proceed to collect a few facts relative to those provinces themselves, preparatory to as full an account of the late rebellion there as our materials will permit; which will afford the best means to judge of the amount of danger to which the Chinese are exposed in this part of their territory and of the means to avert it.

Under the present dynasty on the throne of China, Kansuh an original province of the empire, has been made to extend from the pass of Kwan (kwan) in the great wall, westward to Hami, a desert space of about 1000 *le* (250 miles). This last place, however, along with several other places, were in 1827,¹⁴ placed under the presidency of the amir of Oroumtchi; which is again supervised by a kind of viceroy-general of Soungaria at Ele. The eight Mohammedan provinces of Turkestan appear to form as many residencies, of which the amir of Kashgar formerly Kashgar, but in 1831,¹⁵ the seat of the residency was moved to Yárkand. The details of the changes in the govern-

The writer of these notices has no wish to join in the popular clamor of the day against the Russian ambition: he believes that no strong government of a country can be maintained on another with a comparatively weaker government, especially when the former is in very different stages of civilization can or will long maintain the same boundaries. Thus the United States of America must be prepared to encroach upon the Indian territory and upon the Texas. France has followed a similar career in Africa; Russia and England will continue to advance in Asia, as they have done and are doing.

his time, are not very clearly given; but it would seem that the governments of Yárkand, Oroumtchi, and Ele, have separate territories and their respective residencies, something analogous to the provinces of British India, and that the governor-general of the empire has supreme command in cases of emergency, such as insurrection. He has also¹⁶ a kind of council of officers, such as tsan-tsan, ta-chin (assisting and advising), and the ta-chin (minister for transacting), who seem, however, to be Chinese. There are altogether thirty-four residents,¹⁷ who are generally, great men. They are all Mantchou Tartars, there are also Mohammedan kans¹⁸ and begs in situations of trust under control of the resident, in the way perhaps in which natives are employed in British India.

The salary of the governor-general at Ele was raised in 1827 from 1000 taels. That of his council from 1000 to 1500. The station of Kourkharaúsú (probably a station on the Russian frontier) was raised from 400 taels instead of 400 as before. The salary of the governor of Yárkand was increased¹⁴ from 1500 to 1700; that of the governor of Ele from 700, to 900.

A census of the population of the Chinese empire taken in 1790, of the frontier tribes under the government of Kansuh contains the following particulars: Ele and its dependencies 69,644; Tourfan and its dependencies 69,644. The population of Ele in 1790, was divided as follows, according to the census of 1790,²⁰ which would seem to infer that the same census was taken on both occasions, so far as regards this dependency:

of Ele, soldiers of different tribes.....	10,640
of which the Eleuths.....	3,155
shepherds.....	25,595
of Ele, 6000 families (they are estimated at 20,356) perhaps equal to.....	30,000
families.....	290
transported (Chi. Rep., vol. 4, p. 368)....	244
	—————69,924

It is not without reason to be supposed that the population of Ele might have increased between 1790 and the present time. But this is not the case, as is shown by the omission in the census of 1813 as given above; for we find that the population of Chinese Turkestan, at that time, was 161,770, which specifies the population of Ele, assigns the number of souls to seven of the Mohammedan districts.

.....	5,390
.....	1,898
.....	24,607
.....	3,258
.....	66,413
.....	15,574
.....	44,630
	—————161,770

It is doubtful whether some of these sums do not refer to the cities only, and others to the districts. The reports which Burnes¹ collected gives to Yárkand 50,000 souls; but the Mohammedan families alone are afterwards estimated at 12,000 families. Another account² rates the population at 30,000 families, upon the authority of a Chinese census. The same discrepancy is found in the accounts of the other places, which throws entire discredit upon the whole of them. We find equal difficulty with regard to the military force which was stationed in these provinces before the war. It was reported to Burnes³ that the troops were recruited from the Túnganí tribes of Mohammedans; whereas the report given to Mr. Wathen, which we have before quoted,⁴ states that the soldiers are partly Chinese and partly Mautchou or Mongol, and not Túnganí, adding that the Chinese are afraid of the latter, which we shall presently see to be probable: the reports refer very likely, to different periods of history. A Chinese statistical account,⁵ not of recent date, of these countries places under the governor-general at Ele twelve civil and forty to fifty military officers, amongst whom were thirty che-wei (imperial guards) and 3,600 Mautchou soldiers, besides irregular troops under 128 officers, distributed throughout the country. We find by the Peking gazette,⁶ that the troops at Ele were increased in 1831, after the rebellion, to 6,700 men, to which the governor requested an accession of two hundred muskets, but was refused.

There are thirty eight military posts on the road from the great wall to Oroumtchi,⁷ with relays of horses for carrying expresses, &c., which were found insufficient during the war, and a request was made to the emperor to increase the number both of men and horses. The usual journey, is said⁸ to exceed five months, but an express may be sent in thirty-five days, and even in fifteen or twenty days on a great emergency. Oortungs or stages where there are relays of horses are erected every eight or ten miles, and at each of these stages there are piles of wood which are directed to be set on fire on the intelligence of the rising or invasion of the Mohammedans, and by these means intelligence has been sent from Yárkand to Peking in six days. The Peking gazette⁹ states an express to have been received from the seat of war during the rebellion, which traveled 800 *le* (about 200 miles) a day, and another performed the journey in twenty-seven days.¹⁰ This last fact is the most probable, the point of departure being Kashgar, which is given at 11925 *le* from Peking, unless that the communication was made by fires.

The following are given as the relative distances of several of the places before spoken of, taking Yárkand generally as the centre; thence to Peking, five months' journey (Burnes); to Ele, forty marches north (B.); to Ladákh, the number of actual marches is twenty-eight, and seven days are employed in passing the mountains of Kara Korum (B.), the distance is about 260 miles (H.);¹¹ to Bokhára, by the valley of the Sirr, forty-five days (B.); to Aksoú, twenty days; to Hami, 6060 *le* (Canton Register, 4th July, 1831); to Kashgar 105 miles and thence to Semipolatinsk forty days, about 750 miles (H.). The

s in a day's march varies from eight to twenty-five, the country is more or less mountainous.

natives nor the Chinese appear to have any general title the Mohanmedan colonies. They are called Kash-Chinese Turkestan, &c., by foreigners, none of which is very appropriate. They have also been called Jagat Khan's country, to whom this country fell as his porter's death, and he included all the eight Mohanmedan some of the surrounding countries, in one kingdom. It remained in this family, with some interruptions, until the Eleuths of Soungaria in 1683. When Kaldan, the Eleuths were subdued by Keenlung, he made Turkestan to the Chinese, and finally annexed it to the Chinese empire of Ele, in 1759.

It is always, however, to have been a khan or chief under the title of a title of honor implying sacredness, who had a nominal government of these countries on account of which the people bore towards him. It does not appear how the family is derived, unless from an account apparently given by the Chinese,³⁰ which makes Chin-ko-urh, one of them, the Mantchou of the red standard, related to the imperial family, which seems inconsistent with his Moslem faith, the subsequent assertion that Ele was the seat of his government carried on warfare with the Chinese and was either conveyed to Ele, where he was detained until he died. His sons, Púlatun and Hotsechun, whom Keenlung reprobated over the eight cities:³¹ they both rebelled, however, and fled from the country. One of them apparently fled to the west and was put to death by the mir of that country, to please the Chinese or to avert their displeasure. The other was the son of both left sons. Abdallah (Ohpootohale in Chinese) said to the emperor, "should," said the present emperor² in one of his edicts, "I have been destroyed also, but the then reigning emperor spared him on account of his youth, and spared his life, although he was devoted to domestic slavery under great officers of state. The 10th year of my reign," continues his majesty, "I liberated him in consequence of his having lived long in slavery and old age, and placed him and his family under the white standards, and gave him employment."

As published after the rebellion of Jehangír (Changki-hang), who was grandson of Púlatun, whose father appears to have taken refuge with the khan of Kohan, where Jehangír was chiefly to have lived. Moorecroft speaks³² of him as being under the protection of Omar, khan of Kokan in 1822.

ART. IV. *Hospital for seamen: first report of the British Seaman's Hospital Society in China; with the general rules of the institution.*

[It is with much pleasure that we present to our distant readers the "first Report of the British Seaman's Hospital in China." The report did not reach us in time for our last number; we now give it entire, excepting only the list of subscriptions and donations. The object is worthy of every attention; and we trust it will receive ample support; and we should rejoice to see the like liberal provision made for a Seaman's Chapel in China.]

THIS Institution originated under the auspices of the late lord Napier, his majesty's chief superintendent, soon after the opening of the British free trade with China, and was only abandoned for a time on his lordship's being obliged to quit Canton. It was again brought forward at the requisition of his majesty's superintendents, addressed to James Matheson, esq., who was requested to convene a meeting of British subjects resident in Canton, which was held accordingly on the 23d of February, 1835. Mr. Matheson opened the meeting by stating the necessity of the proposed establishment, and the means at command to defray the requisite expenses, arising from the following sources, viz.: a sum of about \$1000 already subscribed; the amount which captains and owners of ships may be expected to contribute; and a sum equal to the amount subscribed by individuals, which his majesty's superintendents are authorized by act of parliament, and have offered, to pay. Mr. Matheson also stated that, in order to avail themselves of the offer made by his majesty's superintendents, it was necessary to adhere to the regulation pointed out in the said act of parliament, viz., "That any subscriber of £3 3s. should have a vote in the selection of a committee who were to manage the concerns of the hospital."

Messrs. Jardine, Matheson & Co. were constituted treasurers, and the following gentlemen chosen members of a committee, to consider the best mode of carrying into effect the objects of the institution, viz., W. Jardine, esq., chairman, R. Turner, esq., F. Pestonjee, esq., J. R. Reeves, esq., W. Blenkin, esq.

of their instructions, the committee drew up rules and its management, which were submitted to, and approved at a meeting of subscribers, held on the 12th June, received the sanction of his majesty's superintendents. The principal object to be accomplished, appeared to be to send, at Whampoa, of a vessel to receive from the ships' crews as required medical aid; and the attention of the committee was directed to the purchase of a suitable vessel, and a sum of money at their disposal for that purpose. They regret to find that their endeavors have proved ineffectual, on account of the want of means to procure a vessel of sufficient capacity. The committee have now three vessels in view, any one of which will answer the purpose, and they feel confident, that the desired means has only to be made public to insure its successful and continued subscriptions. In the interim, the measure was adopted to place medical assistance on board the reach of such vessels as were at the time in China; and the orders of the assistant surgeon to the commission were, in a proper manner, offered gratuitously to the institution by his superintendents.

The ships of Lintin and Kumsing Moon were likely to contain a large number of vessels during the summer months, Mr. Anderson being stationed at whichever place they were anchored, and has attended them from the commencement till this time; while the senior surgeon to the commission, afforded his assistance in the cases which have occurred at Macao. At both places, a large number of patients have come under treatment. Mr. Colledge attended and twelve, during the months of May, June, and July of the present year; and last season, as many as seventy-five came under Mr. Anderson's care.

The subject of the establishment of a hospital ship at Whampoa has been discussed on the minds of the committee, and if a doubt existed on the subject, it would have been entirely removed by the extract of a letter from Mr. Colledge, who, from his extensive knowledge of the diseases prevalent there, must be considered the best authority in such case.

The committee called upon for any opinion by the committee, but they preferred this opportunity of offering a few remarks. They must bear in mind, that almost all the subjects they are to be assisted, are young men, or men in the prime of life in Europe, full of health and vigor, and that the diseases which come to in Whampoa reach, during the months of July, August, and October, are of a highly inflammatory character, on the part of the medical practitioner, prompt and energetic measures; as in many cases, an hour's loss of opportunity of using appropriate means will render the cures tedious, and sometimes, perhaps, place life in imminent danger; whereas a judicious regimen, combined with other antiphlogistic means will at once repel the formidable attack, and enable the patient to return to

his duty in as many days as it would otherwise be weeks. When cases occur which have passed over the first symptoms unchecked, I shall, provided the committee or surgeons send them to me, do my best for their restoration; but I would repeat, that as almost all the cases are inflammatory, no time should be lost in treating them, and that the distance between Whampoa and Macao must preclude my seeing patients under incipient symptoms."

The annexed list of donations and subscriptions amounts to \$9,028; which includes \$4510, contributed on behalf of the British government by his majesty's superintendents, and will be augmented to the extent of any further sums subscribed by the public. The expenses incurred amount to \$539.41, leaving \$8488.59 in the hands of the treasurers.

The committee have only to state in conclusion, that the main object of the institution in placing a hospital ship at Whampoa, will be carried into effect with the least possible delay. As a temporary arrangement, they have obtained the services of Mr. Johnstone, surgeon of the "Earl Balcarras," during her stay in port, to visit all vessels requiring medical attendance at that anchorage. Mr. Anderson will remain at Lintin or Kumsing Moon, and Mr. Colledge will continue his services to any cases occurring at Macao. For the future support of the hospital, they rely upon the charitable feelings of the community; and feel satisfied that the call in aid of an establishment, which the experience of two seasons has shown to be so much wanted, will not be made in vain.

Canton, Sep. 22d, 1836.

W. BLENKIN.

Secretary *pro tem.* to the committee.

General Rules for the British Seaman's Hospital in China, submitted by the committee to a general meeting of subscribers, held on the 12th, June 1835.

No. 1. Every British subject so far as the funds of the institution will permit, either seamen, or other persons not being seamen, who shall be considered by the managing committee to be indigent, shall be entitled to receive medical aid and relief *gratis* from the hospital upon the following conditions. N. B. It is to be understood that the medical aid and relief is to be taken to include medical advice and attention, medicines, lodging, and hospital linen and clothing.

No. 2. Every British subject presenting himself as a claimant for relief, shall be examined by the surgeon of the institution, and if it shall appear to him to be necessary to receive the said person at the hospital, his name and the date of his entrance shall be duly entered in a book, to be called the book of entries and discharges.

No. 3. Any British subject, not being a seaman, who shall be received into the hospital, shall be reported to the superintendents, who will take orders to provide for his sustenance in the hospital, and his future disposal according to law, as soon as he shall be in a fit state to be discharged.

No. 4. If the person received by the surgeon shall belong to any British ship or vessel, and shall be presented for relief by the com-

commanding officer, the said commander or commanding officer shall send an acknowledgment (forms to be provided) to the expense of the patient's sustenance from that date until his discharge shall be defrayed by the ship, the said rate of sum not exceeding fifty cents per diem.

The person claiming relief shall belong to a ship on which no surgeon shall be embarked, and shall not be present on board, and if the said commander or commanding officer refuse to sign the aforesaid acknowledgment, the surgeon on board shall nevertheless, if he see fit upon medical grounds, receive the patient for treatment, reporting the whole circumstance to the managing committee without delay.

The consignee of any ship or vessel, belonging to which the patient shall be receiving treatment in the hospital, who shall not be recovered to be discharged at the period of her departure, shall be obliged to pay to the managing committee, on behalf of the captain of the said ship or vessel, to reimburse the institution for the expenses incurred for the continued support and sustenance of the patient until finally discharged from the hospital; when if no acknowledgment of the case shall be reported to his majesty's superintendents, the managing committee shall not be able to protect the patient in the institution by causing the required acknowledgment to be signed, the matter is to be reported to the superintendents, in which case further steps may be taken as the urgency of the case may require.

Officers and seamen belonging to foreign ships or vessels, who may need medical care and relief, and who are presented to the managing committee, shall be entitled to the same relief as British subjects, upon condition that an acknowledgment for the payment of seventy-five cents per diem be entered by the commanding officers and consignees, for the charge of the patient until discharged from the hospital.

The managing committee shall at any time be full and sickness is to be reported to the surgeon of the institution shall report the circumstances to the managing committee who shall have authority, if the state permit, to hire the whole or part of any ship lying at anchor, to make a temporary additional lodging, and adequate arrangements for the complete disposal of the medical officer.

The surgeon is to be considered the chief executive officer of the institution, and all persons under his care are to be called upon to obey him in that capacity, as in that of the medical officer, and all regulations for the internal management of the hospital shall be subject to the sanction of the managing committee before they are established.

All requisitions for stores, medicines, &c., are to be submitted to the managing committee and receive his sanction before they can be acted upon.

of men has affixed the venerable appellation of philo-
sophers to individuals of sects of the most absurd tenets—for in-
company with a pretended practice of the most un-
rigid austerities, sufficed to secure the name of philo-
sophers, who in reality were the most absurd
greatest hypocrites, and the most useless members of
society. Their pompous and subtle argumentations, and impudent and
displays of wit, now a days, among a certain class of men,
obscure the literary merit of a scribbler and dignify him with the title
of philosopher, who notwithstanding his uselessness is a dangerous
society. It is indeed a sad misfortune that some, by at-
tempting, as if tired of their task, play the sceptic and intro-
duce a tissue of absurdities, embellished with the most
attractive literary decoration. Who that is not fortified
with a knowledge of untying the intricate knots of sophistry, will
not be seduced and allured by the erudite works of the atheist, who if
he abused their transcendent talents, could now be compar-
ed to massive golden mountains sustaining on their tower-
ing bright pharos of reason.

The fear of becoming poor is destructive of happiness; the fear of becoming poor is
the fear of becoming poorer; the suspicious fear of hav-
ing been detected, causes greater uneasiness than detection itself.

Every man is so subject to err, that there is scarcely one
of them, who has not erred in some of his hypotheses or theo-
retic must expect to be criticized; and the keen detector
is so apt to err; and to err in correcting error shows how
and how limited his penetration, and understanding, an
display of which sometimes secures to him from his fel-
low the title of *divine*, and the honor of an apotheosis. It is
in the path of self-confidence that discomfiture advances.

ART. VI. *Literary Notices*: 1. *The Chinese, a general description of the empire of China and its inhabitants*, by J. F. Davis, esq., F. R. S., &c.; 2. *The New Monthly Magazine*; 3. *The Foreign Quarterly Review*; 4. *The Asiatic Journal*; 5. *The London Literary Gazette*; 6. *The Scottish Christian Herald*.

TAKING it all in all, and judging from a hasty glance over the leading topics of Mr. Davis' new work, we think we shall not have to "eat our words," if we pronounce it the best account of the Chinese empire and its inhabitants, which has ever appeared in the English language. In the first place, it is of very moderate dimensions, being comprised in two volumes of about 450 pages each. It comes forth also with very moderate pretensions, not promising in the beginning what is not given in the sequel. Moreover, it is throughout free from that extravagance, so characteristic of most of the works on China hitherto given to the public. Mr. Davis has taken from the Chinese that factitious character, which most writers have labored hard to provide for them. He has not, indeed, given us all that we hoped for from his pen; he has often stopped short in a narrative or discussion, where we expected he would go on to the end of his subject; he has made some personal allusions which ill befit the page of history; and in some instances he has, we think, expressed opinions, respecting the religion and manners of the people, which cannot be supported by facts, when the topics in question are fully canvassed. Yet, these things notwithstanding, the work contains a great amount of valuable information: it is such an one as we shall delight to review, which we intend to do as soon as we can obtain the second and third volumes of Mr. Murray's "China."

2. *The New Monthly Magazine*, for May 1836, contains a "critical" notice of the works of Mr. Davis and Mr. Murray. The opinions put forth in it differ from those which we have presumed to express; but whether these or those are the more correct, we leave for the reader to judge. The following is the notice:

"It is singular that the two works relative to China should have issued from the press within a month of each other. "The Account of China" forms part of the "Edinburgh Cabinet Library;" and is worthy of a series which has heretofore maintained a very high character. The compilation is from the pens of several eminent writers; they have judiciously selected the more useful and interesting details of various travelers, and have produced a work, the accuracy of which may be relied on, upon all material points. In value and importance, however, it must yield to that of Mr. Davis, who has been for above twenty years a resident in the country he describes, and where he held a high official situation:—to his own practical experience in all matters relating to the empire, he has added much from

and has supplied us with that which we have long — a perfect picture of its condition, its laws, its customs, its cities, and explained in a manner the most clear the relations which subsist between it and England, modes of rendering them amicable and advantageous

ign Quarterly Review, No. 32, January 1836, contains "antiquarian researches concerning the 'antiquarian researches' appears that now, through Young, Champollion, Wilk and Klaproth, we possess a sufficiently well-ascertained in the *phonetic* alphabet for interpreting the names of Egyptian inscriptions; that Tattam's projected dictionary to throw equal light on the common or *demotic* language (oral or written); while we have made a very extensive our knowledge of the symbols constituting the *hieroglyphic* more so, of the *hieratic* or the conventional language used by the priests, in which the grammatical forms of words have been expressed phonetically,—in other words, as phonetical representatives of sound. Moreover, we owe chiefly by the merit of Rossellini, complete materials for the study of that magnificent race of sovereigns, entitled "the eighteenth dynasty," during the reign of which, "all the most momentous events connected with the human race appear to have occurred." In the thirteenth century, three peculiar classes of colonization took place in the world; by the expulsion of the shepherds, of the house of the Argive family. Railroads and steam engines have lately been introduced into the world, and we have yet to recover the knowledge of the *hieroglyphic*, known to the Pharaohs of the eighteenth dynasty. The monuments of Karnac, as well as the stone of Abydos, prove that the history of Manetho, who avers that a portion of his history was copied from that written by Thoth (Enoch) before the Christian era, is of other prospective, being a prophetic history of the future of the world.

In the article before us, the writer of it asks, who were the contemporary nations, with whom the kings of the eighteenth century are represented, on the monuments of the Pharaohs? Is the proof that India was among those nations? Is the communication with it a source of Egyptian wealth, the Indian animals and products introduced in the expeditions? Was there a double communication with India? The thrice opened canal of the Pharaoh's extending to the neighborhood of Cairo to the Red Sea; the other by an artificial canal or railroad extending across the desert from Karnac to the Indian coast. Are the *Chinese* among the captives there? Further, the "Egyptographer" says, "it is well known to every student of the Chinese language, that the original elementary hieroglyphics of the Chinese resembled the Chinese characters: a *mouth*, for instance, was depicted as a mouth with lines as in Egypt. But a mouth now in China is re-

presented by four straight lines, and all the original imitative symbols the Chinese are broken up in the same manner and for the same purpose. That purpose was to classify the symbols in the Chinese dictionary; it was the only course left with regard to a symbolic language, while the dictionary of an alphabetic or phonetic language naturally follows the order of the alphabet. The Chinese symbols are arranged in classes to the number of two hundred and seventeen, according to the number of straight strokes which they contain: that, therefore, which we have taken for our instance, originally consisting of two curved lines, now comes under the class of four strokes. Each more might be added as to the Chinese mode of classifying, their dictionaries, the combined symbols of combined words. But we have said enough for our purpose. The point at which we aim is to show a desideratum. Had the learned colleges of Egypt a similar mode of classifying their symbols in dictionaries to that of the Chinese?" So says the reviewer; and we have only to add, that this arrangement of the Chinese symbols into 'two hundred and seventeen' classes according to the number of 'straight strokes,' which they contain, is new to us, not being found in any of the native dictionaries which have ever fallen in our way.

1. *The Asiatic Journal* for January 1836, contains a notice of Mr. Hutinaun's work, which, according to the reviewer, is "in one respect, that of being an account of a voyage round the world performed by a single man,—the most extraordinary book ever published." The work is in four volumes and favorably noticed. Among the advertisements, this number of the *Journal* are two which we quote.

1st. *Seih sze twan e heau heö kung.* Mr. William Hutinaun respectfully announces, that he gives lessons in the Chinese language on reasonable terms, which may be obtained of him at No. 20 Belford street; or of Messrs. Allen & Co., booksellers to the honorable East India company, Leadenhall street.

Rémusat has published a translation of this novel under the title *Les Deux Cousines.*

The numbers of the *Journal* for April and May last contain articles on the British relations with China. We do not know who are the authors of that work, but we are sorry to find them still so much in the dark with regard to the state of affairs in China, and particular-

For example, in the number for April, they aver that, from China of the honorable East India Company is yet but in part removed), the British and other foreigners placed in a very uncomfortable and helpless conversation, and some others like it, have been duly noted in the Register and the Press, and we may pass by them without further remark.

The number for May contains some harsh remarks on the style in which the documents have been translated, and refers to those during lord Napier's residence in Canton. We do not object to the style in which many translations of Chinese papers have been given to the public; but had the conductors of the Journal considered the circumstances under which the documents, to which they were translated, they would have spared their censures, and the meaning was fully given; and the translations were as true to the spirit of the originals as they could have been drawn out in the most polished style.

The "a version in decent English" given in the Journal is not that "version" which differs essentially from the letter and the original. The Chinese are often, we admit, good

There was no want of false statement in government, and no need of their being made more erroneous.

Not denying the 'accuracy' of that version, when on a former occasion, is, that we supposed no body would venture to curate; and surely no one, at all acquainted with the Chinese, could read it, "decent English" though it was and imagine that he was uttering forth such sentiments as he is therein made to utter, being strongly tempted to smile: if we treated it with the same lenity it merited, we beg pardon for so doing.

The Journal is not correct in the remark respecting "the proprietors" under which our work is published. More proprietors or editor have any desire to engage in such matters. Our object is not to conceal or pervert the truth, but to ascertain and divulge it. False and extravagant accounts of China have gone forth in sufficient numbers to the public, and ought to be corrected; and we will endeavor to do so as far as we are able to offer. We wish to know, and to show others, the actual condition of this country and its internal relations with other countries. This is our object, and we endeavor to keep ourselves free from the "sin of partiality," while we will use equal endeavors to be faithful to the public, in our world our monthly Repository. Whether the contributors to the Asiatic Journal in London, are better qualified than the contributors to the Repository in Canton, to determine what subjects are fit to be inserted in our pages, we leave with our readers to judge.

The *Literary Gazette*, for April 19th, 1836, gives us a fair specimen of the spirit and sentiment which ought to be deprecated: the writer says;

“According to the last accounts from Canton, the second officer of the *Fairy Queen*, having been despatched from her anchorage in a sailing-boat, with his letters, &c., to that city, was, under some pretence or other, seized by the Chinese authorities, his correspondence retained, and himself put in chains, thrown into prison, and otherwise ill-treated. The British superintendents having no influence with these insolent oppressors, the principal merchants could only prepare a petition, paying for his release, which they were permitted to leave at the city gate! What a sequel to our review of Mr. Matheson’s pamphlet a fortnight ago! The next British petition should be sent further into Canton, and in the shape of bombs and bullets. We will be sworn, they would be infinitely more efficacious in procuring redress and justice, and establishing the future intercourse on bases more suited to the character of a great and greatly insulted nation.”

This statement is incorrect in one point: the officer was not seized by the Chinese authorities, nor was he thrown into prison. See our last volume, page 436.

6. *The Scottish Christian Herald*, (in eight numbers,) for March and April, 1836, has found its way to China. In matter and manner it is a good work, and may be read with pleasure and profit. We are glad to see that the “religious and moral aspect” of China is deemed worthy of consideration; and though the “picture” it gives of infanticide is extravagant, yet the general tenor of the remarks is quite correct, as is evinced by one sentence, which we quote. “The religion and mythology of the Chinese,” says Mr. Bonar, the writer of the article in question, “is a dark and cheerless system, blending, with anomalous incongruity, atheism and the lowest kinds of polytheism. Their creed presents no proper object of reverence, hope, confidence, or love; affords no balm for the troubles of the mind, no support, under the ills of life, no hope for the future; their highest prospect is annihilation, or a change by transmigration to the body of some other being in creation.”

ART. VII. *Religious Intelligence: arrival of missionaries in the Indian Archipelago; access to Tibet and China through Burmah; distribution of books among Chinese, Cochinchinese, and Malays, at Singapore.*

RECENT letters from Batavia inform us of the death, on the 9th of August, of Mrs. Lockwood, the eldest daughter of the Rev. Mr. Medhurst. “Death in her case had no sting; it was but the show of death; a gentle passage from time, to eternity.” By the same letters we have the pleasing intelligence of the arrival of seven Christian missionaries; some from Germany and others from America: three from Germany, are to join Mr. Barnstein and proceed to Borneo; (an

 commenced in Syria. A convention of missionaries

from different missions in the Levant met recently at Smyrna, to determine upon the site of a seminary for the Greeks. One will soon be commenced among the Nestorians of Persia; and another in the Mahratta country; and one on a large scale at Singapore. The last, we hope, with the smiles of heaven, to make a better seminary for our purpose, than any of the boasted schools of antiquity would have been. And as our enterprise advances, seminaries must rise in Java, Sumatra, Celebes, Borneo, Siam, in different parts of China, and in many other countries; for in this way only, can a native agency be expected to supersede the necessity of foreign labor. Let these institutions be founded, reared, and instructed in prayer, and stand by faith in the Son of God; and in them let our native agency be thoroughly instructed. We prefer quality to quantity; efficiency to numbers; a few able men to a greater number of indifferent laborers.***

"Your civil relations will demand very careful attention. It is incumbent on the missionary to adopt the country to which he goes as his own. This you will do, for Christ's sake. The government of the country, whether Christian, Moslem, or Pagan, will be your government; the people, your people; their interests, yours. In this, making no improper sacrifice of patriotism, you will only yield yourselves to the influence of a higher principle as denizens of Zion. The gospel and the church of God belong of right and alike to all nations. In Christ Jesus, there is neither Jew nor Greek, barbarian, Scythian, bond nor free, but all are one in him.—The committee, however, must caution you to avoid forming connections with the government of the country in which you shall become established. As far as possible, shun official intercourse with it, except when demanded by your safety, or required by the laws. Do not aim to attract the attention of the government. But if brought before kings and rulers for the gospel's sake, declare plainly your object and manner of life, without disguise or subterfuge. What the Holy Ghost will give you in that hour to say, will be the truth, and nothing but the truth, both in matter and manner."

2. *Access to Tibet and China through Burmah*, is thus portrayed by a member of the Burman mission, on a tour up the Iráwadí:

"Visited Meaday, a considerable village six miles above Ummerapoor. This is a Chinese mart. Large caravans come in from the province of Yunnan during the cold season, and exchange their goods for the productions of this country. I had an opportunity of seeing the Chinese as they are in their own country. Their dress is intended to shield them against cold, and in this they resemble the Shans, as well as in their general features, except that the Chinese are a size larger, and are inclined to be portly, like the Germans. They are more negligent in their dress and filthy in their persons than the Burmans. The most prominent trait in the expression of the countenance is dulness, combined with self-satisfaction. They have nothing of that lofty, consequential air, that marks so prominently the Burman character, and yet they appear to be equally proud and self-satisfied. I found many Chinese able to speak Burman, though no one that

As near as I could learn, their spoken language is from that spoken at Canton and the eastern provinces; the written language is the same throughout the whole empire. I endeavored to ascertain what intercourse they had with ourselves, particularly Tibet; and I found a considerable communication with Lassa, the capital of the Tibetans, but was not able to ascertain any thing more. The distance to some of the nearest cities is not, probably, more than two hundred miles, as a journey from Ava to Bomau is in twelve days. Bomau, the most northern city, is said to be but two or three days' journey

from the day of triumph to the church of God, when her sons were enabled to make their way up the Irrawaddy into Tibet and to proclaim the redemption of Christ. Prayerful dependence on the promises of God, will no doubt be succeeded with the recovery of those hitherto inaccessible countries. As the door is now open for preaching and printing the word of life, if we will only occupy Ava faithfully a few years, we are enabled to plant a branch of the mission in Bomau, on the borders of China and Tibet. Let a press be established in Ava, as the most effectual means of enlightening the natives, securing the confidence, of governmental men; and let the gospel be preached faithfully to all classes of the natives. A missionary be placed in Ava or Ummerapoor, to learn the Burman language, and also two of our best Burman assistants be employed incessantly between Ava and Bomau, preaching and distributing tracts. All this is practicable and vastly desirable when we consider the end to be obtained, we ought to bear the risk of ease, and health, and even life itself. These regions have never been trodden by the messengers of peace, might and glory to God."

Distribution of Christian tracts and other useful books, in Ava, Siam, Cochinchinese, Malays, &c., who either visit, or are settled in the European settlements at the straits of Malacca, is deserving of every possible encouragement. Like all works of charity, it is to be recommended; for while it serves to disabuse and elevate the minds of the Europeans in the eyes of the natives, it accomplishes the most noble object of putting within their reach a fund of knowledge which when rightly improved is profitable alike for the life of the present and for that which is to come. We should rejoice to see that there are any members who can read, through the medium of the Malay, and also every junk that visits those islands, supplied with a complete copy of the Scriptures, but with a large number of Christian tracts and other useful books. Against the effect of this, there are no objections; while a thousand arguments urge to the speedy execution of measures requisite to the attainment of this desirable object. A brief extract from a manuscript before us will show how such books are received:

“Singapore April 7th, began again my visits to the harbor. As Mr. A. wished to go with me to the Malay prahus from Borneo, I took only a few Chinese books. While we were conversing with the Malays, some Chinese, who were trading with them, asked for books: I gave them a few and told them they might have one or two more; but I found afterwards that they had helped themselves to about one half of all I had with me. * * * On the 18th, the last junks we visited were from Cochinchina, where the language is entirely different from the Chinese; but the people can read the Chinese language, though we could converse with them only by signs and by pointing to certain passages in the books.”

ART. VIII. *Journal of Occurrences. Papers respecting the trade in opium and tea; shipping at Whampoa; seamen in Canton; the brig Fairy; imperial envoys; military reviews; fires and fire-engines.*

PROCLAMATIONS, edicts, manifestoes, &c., have been the order of the day during the month. On a preceding page we have given the Report of the chief provincial authorities respecting the importation of opium: it seems probable, judging from all that we can learn, that the question whether it shall or shall not be introduced is undergoing a thorough revision, and new and strange inquiries are on foot both here and at Peking. What will be the result of them, we will not venture even to guess.

Early in the month, “on a lucky day,” there came out from the merchants of Fuhkeñ, who trade in the Bohea (Woo-e) teas, a manifesto—stating that they must have three tenths of the stipulated value of their teas paid within five days after the contracts are made, and the remainder within the current year, excepting three tenths, which must also be liquidated on or before the second day of the second month in the year ensuing: if any one of their number fails to comply with these conditions he forfeits 1000 taels; and if any of the hong merchants, who buy of them, fails to make payment in due time, he is not to be furnished with musters of new teas.

The hoppo has issued an edict forbidding the ships at Whampoa to remain below their usual anchorage; and another, forbidding seamen to go on shore when passing up or down the river, or to roam far from the factories in Canton.

The fate of the brig Fairy, captain McKay, remains in suspense: a vessel has been dispatched to search for her crew, with orders to proceed, if necessary, to the governor at Fuhchow foo.

The two imperial envoys, mentioned in our last number, are hourly expected at Canton: four subordinates, we hear, have been dispatched hither from Peking to watch the conduct of their superiors.

Governor Täng returned on the 22d instant, from reviewing the military in some of the neighboring departments of the province. It is reported that while at the Bogue, exercising the troops in the forts, a number of his new pieces of cannon burst, and caused the death of several of those who were working them.

Three or four fires have occurred in the city during the month; these, together with the return of the north winds, have drawn forth a long series of admonitory edicts, warning the people to guard against the out-breaking of fires.

In a late number of the Canton Court Circular, the arrival of an official agent from Hoonan, is announced; he has come hither to procure fire-engines for that province.

WINE REPOSITORY.

V.—NOVEMBER, 1836.—No. 7.

Intemperance: the term defined; remarks on the nature of distilled and fermented liquors; with statements of the extent of intemperance, and the progress of reform, in various parts of the world.

It is the proper use of things beneficial, with abstinence and moderation. Distilled and fermented liquors, always contain a certain quantity of poison, as is evident both from their effects and from their history. They have been adjudged by the concurrent testimony of the most enlightened and virtuous men of every age and nation, to be hurtful. Indeed, so numerous are the evils which result from their use, that, in the opinion of thousands of learned and philanthropic men, entire abstinence, except for medicinal purposes, is not only a matter of prudence but of duty. By a careful investigation of their effects in this position, it is believed, can be made perfectly satisfactory to every mind that will contemplate the matter in a candid and fair manner. A passing glance at it, will show that the limits and the object of our Journal will

be to illustrate the salutary principle, be it remembered, is not the product of nature, but the result of a chemical process. It does not resemble any of the living works of God. It is the product of the artificial work of man's device. This power of intoxication, which is contained in a substance which produces it, is obtained only from the action of water by *vinous fermentation*. In this way a new substance, containing 13.04 parts of hydrogen, 52.17 carbon, and 34.79 oxygen, is formed, and is a most subtle and diffusive poison. This alcohol may be obtained from fermented liquor in three ways:—by placing the liquor under a receiver and exhausting the alcohol, at a temperature of about 70 degrees, will rise:

secondly, by means of the subacetate or sugar of lead, the mucilaginous parts of the liquor may be precipitated; and then taking off the water that remains, by the means of the subcarbonate of potassa: and thirdly, by the common mode of distillation. It is a mistake to suppose that there is alcohol in all vegetable substances, whereas it is *only formed* by vinous fermentation. According to Chinese historians, the art of distillation was known in this country at a very early period; but there is no proof that alcohol was ever extracted from fermented liquor, till about eight or nine hundred years ago: this was first done in Arabia, from whence the name, alcohol, is derived.

The proportion of alcohol in distilled and fermented liquors, has been ascertained by Professor Brande as exhibited in the following

TABLE.

1. Brandy	53.39	19. Malaga	18.94	Average	12.08

The effects of these liquors on the human system have been very carefully observed and described by a great number of faithful and

nesses, under almost every variety of circumstances. of a few of these we will here introduce.

Cooper has stated, that he never suffered spirits to be in- sidering them to be *evil spirits*; and if the poor could live, the dropsies, and the shattered nervous systems seen, as the consequence of drinking, they would be *rits* and *poisons* are synonymous terms.

maintained that men in all the situations and pursuits of without than with spiritous liquors; and that there are one or two cases in which they can be used without

declared that the use of these liquors ought to be entirely, on account of their tendency, even when taken in induce disease, premature old age, and death.

said that of all the evils of human life, no cause of wide a range, or so large a share, as the use of spiri-

hat ardent spirit contains a narcotic stimulant, always chol as its basis. When drunk, this is absorbed into circulates through the lungs, and is exhaled through the vels containing the circulating blood of these organs; o, but the vessels of the brain are loaded with it. He a man who died in a state of intoxication. The ope- formed a few hours after death. In the two cavities of lateral ventricles, was found the usual quantity of limpid n we smelled it," continues the Dr., "the odor of the distinctly visible; and when we applied a candle to a oon, it actually burned blue—the lambent blue flame, of the poison, playing on the surface of the spoon, for "

imony from thousands of witnesses can be adduced, all the deadly effects of intoxicating liquor. The evi- point is perfectly conclusive. Why then is such liquor se it is a "mocker." The nature of alcohol is such effect on the human system is a quickening of action, ndamental law of our nature, is a source of pleasure; nt *momentary* pleasure, men mistake for *real* good. It re energies of the system to an inordinate degree, which staken for an augment of real strength, though neces- l by a relapse with permanent injury. Thus because t pleasure and sometimes seems to increase strength, ereby created to use it. It sometimes also *seems* to e and poverty; and even to increase riches and other gs. Thus it is a mocker, and a deceiver.

may understand some of the reasons which induce those, use alcoholic liquor, to continue the practice and to in- tity. By the use of this poison, the system is over-ex- omes deranged; and having been over-worked, without gth communicated, it is of course weakened, and must

good and evil, or the instinctive sense which God gave man, had not perverted,—you forced upon him. Not a dog will permit him to take it; nor can the power of a dog digest it. Much less can that of a man. Take the arm, the foot, or the head of the man who drinks that blood, and you have alcohol." Not a blood-vessel, not a thread of the smallest nerve in the whole system, escapes its influence. It enters the organs of the system, which prepare the delicate food for her offspring, and hardens the brain, producing a great variety of other formidable and fatal diseases. It is one of the ways in which it leads to misery and death.

From the fact that alcohol is not beneficial as an article of diet, it is natural to suppose it must be hurtful. All the organs of the system, as much labor to perform as is consistent with permanent action, when they have nothing to dispose of but food and drink. The Creator of our bodies, has evidently designed every organ and every member of the system as much as can perform in the proper disposal of suitable diet, and they will remain permanently healthy, and preserve life to the end.

If, then, we withhold from them a suitable portion of their diet which they require, we shall lessen their strength; and if we add to them that which is not nourishing, and thus over-labor, we shall of necessity produce premature decay. The use of alcohol produces both these effects; it lessens the labor, and increases the labor, of the system. And the use of this poison, even the nourishment which the system receives is deteriorated. Thus by a three-fold process it leads to death.

As to the effects of alcohol on the morals of mankind? In a 7 years' observation judge Hale declared, "that if all the murders, and manslaughters, and burglaries, and robberies, and fornications, and adulteries, and other great crimes, which had been committed within that time, were divided into four parts, four of them would be found to have been the result of intemperance." The testimony of the honorable William Wirt, a general of the United States, is of the like tenor: "I say he, "for more than forty years a close observer of the manners in various parts of the United States, and I know that intemperance will bear a moment's comparison with intemperance. I can say, as has been often said, that this single vice produced more vice, crime, poverty, and wretchedness in domestic and social, than all other ills, which scourge us. In truth, it is scarcely possible to meet with misery in any country, which will not be found on examination to be the result, directly or indirectly, from the excessive use of ar-
* * * This deadly poison paralyses the arm, the brain, the heart. All the best affections, all the energies of the mind, wither and die. The man becomes a maniac, and is locked up

in a hospital, or imbrues his hands in the blood of his wife and children, and is sent to the gallows or doomed to the penitentiary; or, if he escapes these consequences, he becomes a walking pestilence on the earth, miserable in himself, and loathsome to all who behold him. How often do we see, too, whole families contaminated by the vicious example of the parents; husbands and wives and daughters and sons, all drunkards and furies: sometimes wives murdering their husbands; at others, husbands their wives; and worst of all, if worse can be in such a group of horrors, children murdering their parents. But below this grade of crime, how much is there of unseen and untold misery, throughout our otherwise happy land, proceeding from this fatal cause alone. I am persuaded that if we could have a statistical survey and report of the affairs of all the unhappy families and individuals, with the causes of their miseries annexed, we should find nine cases out of ten, if not a still greater proportion, resulting from the use of ardent spirits alone."

With such appalling evils rising on every side from the use of distilled and fermented liquors, it is not surprising that the friends of humanity took the alarm, and set themselves about the work of reform. As a sequel to the foregoing remarks, we will here add a few facts, showing the present state of reform in different parts of the world.

The people of the United States of America were the first, so far as we have been able to ascertain, to enlist in the systematic work of reform. Voluntary associations, traveling agents, and the wide circulation of printed documents, have been the chief means hitherto employed in this arduous and benevolent enterprise. It has ever been a capital object, with those who have taken the lead in these measures, to exhibit the evils of using alcoholic liquor on the one hand, and the benefits of total abstinence on the other. The first temperance society, established on the principle of entire abstinence, in the United States was formed at Moreau, in the county of Saratoga, New York, July 25th, 1808. Doctor B. J. Clark first suggested the plan. The American Temperance Society was formed in Boston, on the 10th of January 1826; of this society the honorable Marcus Morton was the first president. Not long ago, it was estimated that the use of fermented liquors, in the United States, caused a direct and an indirect expense to the people of \$120,000,000 annually; filled the poor-houses with 150,000 paupers; the jails and penitentiaries with 95,000 criminals; raised up an army of 300,000 sots; and sent annually 30,000 of the inhabitants to a dishonorable grave. Such were, it is believed, the facts. Already, in the work of reform, more than 8,000 temperance societies are formed; more than 2,000,000 persons have ceased to use intoxicating liquors; more than 3,000 distilleries have been stopped; more than 8,000 merchants have ceased to traffic in ardent spirits; more than 1,200 vessels are afloat in which they are not used; more than 10,000 drunkards have ceased to use intoxicating drink; and pauperism, crime, sickness, insanity, and premature deaths, have been diminished in like proportion.

opean temperance society was established in 1829, by G. W. Carr and others, at New Ross; in the south of Ireland were soon formed in the north of that island, and on the 3d of June, 1834, J. S. Buckingham, chairman of a committee on this subject, stated in the house of commons that above 400 temperance societies had been formed in an equal number in Scotland. In a letter dated Sheffield, 1835, the same gentleman says, "The cause of temperance has advanced more rapidly in Britain, within the last ten years preceding. The number of societies has increased and the number of members increased in a still greater ratio."

Above all, the two extremes of society, the very rich and the very poor, have been brought to think very anxiously on the subject. Until lately, it has occupied the attention of the middle classes.

In Europe the subject of temperance has been nobly championed. The crown prince of Sweden not long ago, presided at a meeting held in his capital; openly declared himself in favor of temperance societies; and issued a proclamation, calling on all classes of his people to this subject. A document, "Temperance and Political Economy, discussed with reference to Sweden," was prepared in 216 closely printed octavo pages, and addressed to the representatives of that nation. The document stated that they had, in a population of about 2,000,000 less than 170,000 distilleries; and consume annually 45,078,427 gallons of distilled liquor; at an expense to the consumers of 62,177,636 rix dollars. "This quantity and the writer, "passes annually down Swedish throats, which the first physicians and physiologists of all countries regard as containing not a single particle of nutritious substance. According to more recent accounts from Sweden the cause of intemperance has begun to excite attention, and to action, in Denmark and Finland. From the latter gentleman thus writes, "The effects of drinking brandy are not only with the vulgar, but also with the people and not with hearers only, but even with priests." From the same gentleman writes, that the publications on the subject of temperance have already been translated into three languages, the English, the German, and the Finnish; and that they are circulated throughout the vast empire, even to the borders of Persia and China.

In the north and south, in India, in Burmah, in Penang, and in some of the islands of the Pacific, this subject has many friends and able advocates. From Burmah one gentleman writes, "Man, woman, and child should wage unceasing war against the habit of drinking. * * * Let every one who loves sobriety, health, peace at home, or peace abroad, a clear conscience, and a happy life, come out openly on the side of total abstinence. This is the only wise or safe course." Says a writer, in the Christian Observer for last May, 'we do not view the

UNIVERSITY OF TORONTO

temperance question as one purely religious: the evils which intemperance generates are of a physical nature, and are opposed to the public health and morals. In its train we see murder, theft, slander, hatred, treachery; in a word, every distress.'

Lieutenant Burns, when travelling through the desert of the Túrkmuns to Bokhára, in the summer of 1832, incidentally remarked, "I found that abstinence from wine and spirits proved rather salutary than otherwise; and I doubt if we could have undergone the vicissitudes of climate, had we used such stimulants." Still more recently, in a public address at Liverpool, the chairman of the parliamentary committee, mentioned above, said, "He had passed through Egypt, and Palestine, and Mesopotamia and Arabia; and afterwards settled in India, where he lived six years; in the course of these journeys, he passed twice to India, and back again by land; and traveled not less than 30,000 miles: he visited the cities of Cairo, Damascus, Aleppo, Ispahan, &c., and in his tours, had seen, it was supposed, more than 3,000,000 people. Of course he had had a very extensive opportunity to witness the different habits of men; and he had never known them to be in any respect, benefited by the use of strong drink. Nor had he ever known any people who had adopted the use of it, among whom it had not been, in proportion to that use, detrimental."

Here we close, for the present, our citation of testimonies on this momentous question. They might be multiplied to any extent; but those already adduced clearly prove two things; that wherever intoxicating liquors have been used as a drink they have been injurious; and so palpably so that, wherever the whole truth in regard to their nature and effects has been duly considered, great numbers of intelligent, enterprising, and reflecting men, have come out voluntarily and declared themselves the advocates of entire abstinence, and supported their principles by their practice.

Note. It was our intention, when we commenced this article, to give some account of distilleries and the use of alcoholic drink among the Chinese; but the information collected on this subject must be postponed. The works on which we have chiefly depended, in writing the preceding pages, are the various publications of the English and American Temperance Societies, and the speech of Mr. Buckingham delivered in the house of commons. We have frequently quoted verbatim without the formalities of double commas; but are not aware, however, of having advanced any sentiments or statements, for which we are not willing to be held responsible. We have long avowed ourselves the friends of temperance; but we frankly confess that before the present re-investigation of the subject, we never understood, as we now do, how the use of distilled and fermented liquors, under all ordinary circumstances, whether taken in large quantities or small, cannot but be injurious to the human system.

marks on the opium trade with China: to which is preface by archdeacon Dealtry; dated, Calcutta, 1836. 12mo. pp. 21. Printed at the Church Mission Row.

It came to hand while we were writing the preceding article, it here as kindred to that; and though evidently designed for government of British India, it may not be deemed unworthy of those who reside in this country, nor by any who are interested in the trade in opium is of such magnitude, and its use so extensive, that either the traffickers, or the consumers can be viewed with indifference. While three classes, the traffickers, and the consumers—are alike concerned in the evils which fall chiefly on the latter class. With respect to the morality, the morality is to be determined by a fair examination of the nature and extent of which are to be ascertained by an appeal to the public mind as we are, it is not easy to collect, at once, such an array of facts and arguments requisite in such cases to sway public opinion. If there are any persons interested with this trade, as the writer of the "Remarks" affirms, let them come forward with evidence that shall serve to remove or check the trade, and prove themselves public benefactors. On this subject, and all other subjects of the same nature, it is the bounden duty (if we rightly judge) of every citizen to be duly impressed with this view of the subject, it will be our duty, as there is opportunity, to make known the true state of the case, and the success of this design, we now submit to our readers the entire contents of the archdeacon's "Preface" in its proper place.]

Some remarks on the opium trade were sent anonymously. The author is unknown to me. He wished me to make whatever use of them I thought proper, his own object being simply to serve the interests of the country, and not to see res both in a temporal and moral point of view. The subject of the opium trade, I confess, is entirely new to me; but the evils as set forth in the 'marks' are so palpable and so obviously destructive of the health and happiness of the country, that at present I feel I cannot better subserve the interests of the country, and the object he has in view, than by publishing his own observations just as they have come to hand, with scarce alteration. In mentioning the subject to a friend who is well acquainted with the trade, and in which are exposed, he observed, that if "I felt as strongly as you do, if I had seen a public opium den, or 'hell,' as it is commonly termed, I should require no other inducement to aid me in the way to forward the writer's object." The question is, 'how far the opium trade may be abolished or lessened?' Let every man who is interested in the trade, and feels rightly on the subject, use it for this purpose, let the merchants who traffic in this 'man-destroying merchandize,' be reminded of their responsibility to God and abandon it: let the press which, when its nature comes before them, generally adopts the right side, be animated with becoming spirit and vigor: and let the ministers of the sanctuary be constantly as one of the abominations for which the land is cursed.

T. DEALTRY,

Archdeacon.

gust 11th, 1836.

These brief observations are thrown together with a view to draw the attention to a very important subject, than with any other view: more in the hope of awakening men's doubts and inquiries into the propriety of engaging in this trade, than of settling these questions by producing at once all procurable evidence of its immorality.

It is not by one effort, or by twenty, that truth can prevail with men when their self-interest, love of gain, or other base passions, oppose. The principle, *non vi sed sæpe cadendo*, is never more apparent than in cases of this nature. The writer, therefore, has no other hope at present than of awakening some attention to a point too long neglected; and shall not be surprized, though he will feel grieved, if even in this hope he be disappointed. When powerful patronage, general example, rooted custom, and the love of lucre, are all arrayed together in the cause of vice, the battle of truth against such a host must be a long and arduous combat. Even when the champions of truth are both able and willing, how long may they be unsuccessful in their attempt to obtain so much as a patient hearing! Their arguments, if at length listened to, may be wilfully distorted, however sound; may be ridiculed, however unanswerable. Upon abstract subjects, most men will not reason at all. Of those who do reason at times, how few are always able to reason correctly! Of those few who *are* able to reason correctly, how many fail to do so because of secret biases, prejudices, and partialities! Of those who both *can*, and *will*, reason correctly, in spite of prejudice and bias, how small indeed the number! And yet it is with them, and with them only, that the truth dwells. And when this handful of truth-lovers is winnowed from the mass, how long, oh how long may it be before their moral influence can affect the judgment of the rest, or win even a numerical majority! The efforts of truth's champions also may very often prove ill-timed or misplaced, and display more zeal than discretion: the most eloquent arguments may often fall worse than lifeless by resembling dominie Reichmann's pathetic but premature appeal to his little scholar's feelings "as husbands and fathers."

Alas! indeed then for truth, on whatever ground she fight, if the failures of her advocates against such difficulties as these, should prevent her own final victory. But they cannot: these failures may retard her success, but only make her own sober triumph more glorious, when, goddess-like, she descends into the arena of man's conscience. The positive certainty that truth is superior to error, and must sooner or later overcome it, animates the weakest in her cause. And it is with this confidence alone, and not relying on his own strength, that the writer of these few pages would now attempt to awaken general attention to a subject really of prodigious importance, and of an interest intensely painful. It is a subject which he believes has never met with any thing at all like the consideration due to it upon every ground—social, moral, political. He is not aware that the question, *Is the opium trade moral or immoral?* has ever been put so seriously as it ought, before the government and commercial communities of India engaged in it. Whatever feeble doubts may have been entertained by some minds, whatever decided objections may have been felt and expressed by a few others, there is no appearance of any suitable effort having ever been made, or ever proposed, in order to bring these conscientious doubts to a general issue; or to maintain and hold up these objections to universal exam-

just and true. But the magnitude of the subject efforts. And if a very few remarks, purposely brief, be said purposely inconclusive, for he would fain stimulate by a show of weakness, rather than be fled from and of an inglorious field, to which the enemy would return, (moved off,) if these brief observations but prompt one to one suspicion of guilt, excite one effort on the part of the benevolent, to trace to its very source a torrent of the worst desolations of war or of famine, are, he verily able in comparison: if such may be the result of these efforts will feel thrice-blessed in his humble endeavor to

first notice briefly the facts, which are sufficiently well-known and often forgotten, as to the effects of opium on the minds of those who indulge in it. And he will then examine the questions arising from this view, *How far a man in health may use opium as a stimulant?* and, *If he be not justifying himself, how far he can be justified in contributing to, or, its use by others?*

As to the effects of opium on the human frame. The intoxicating properties, of opium, differ in their nature from those of alcohol. In some respects, the effects of the one are also different. They both agree however in this, that they stimulate the nervous system to an unnatural degree, and are unfit for use when such a state of bodily illness already exists as to make a stimulus of this nature subservient to the restorative functions disordered. They both agree in this, that the pleasurable sense of excitement attending their indulgence, is followed by a relaxation of the system and an undue depression of the physical and mental powers, when the excitement is over. It is in this, as a consequence, that the oftener they are used, for the sake of this pleasurable sense of excitement, the more is the quantity used, in order to keep up that same excitement; so that if once the appetite is formed, *constantly indulgence* is necessary and almost inevitable; and not only is yielded to unconsciously of this increase. The craving for it is insensibly the man's standard for estimating what he may suppose) safely indulge in. They both agree in this, that the digestive organs, predispose to most other diseases, and materially shorten the term of life. They both agree in this, that they stupify and derange the intellectual powers, and that the seasons of depression are quite as far below healthy as those of alternate excitement are beyond. And on account of mental suffering to which both lead, one is fain to say that fiction can paint nothing of horror half so horrible. It is in this, that they utterly corrupt the moral sense, deprive the appetite the reins of reason, deprave and brutalize the mind, close all the avenues to conscience, and make their victim to every temptation that presents itself.

but one point of difference, between the intoxication of
 s and that of opium, deserving of particular attention here.
 the tenfold force with which every argument against the
 lies to the latter. There is no slavery on earth to name
 ndage into which opium casts its victim. There is scarce-
 wn instance of escape from its toils, when once they
 enveloped a man. We need not appeal to the highly-
 ratives of personal experience on the subject, which have
 come before the public: they rather invite distrust than
 y the exaggeration of their poetical style. But the fact is
 rious to be questioned for one moment, that there is in
 indulged, a fatal fascination, which needs almost super-
 ers of self-denial, and also capacity for the endurance of
 rcome.

ation of opium is on this account more deadly, by many
 in its less tyrannous rival. In other respects, above men-
 e is generally a more rapid, and a more permanent, influ-
 d by opium than by ardent spirits; an influence so directly
 all human happiness whatever, that if the fact were not
 eyes, we might well doubt the cunning of the arch-fiend
 recommend to one son of Adam the use of such an instru-
 -destruction.

s sketch be at all correct, it may almost seem unnecessary
 proposed, "How far a man in health is justified in using
 stimulant?"

tion however is not useless: for some people may say,
 ere is a *risk*, in smoking opium, that the indulgence may
 itual; but there are frequent instances where this risk is
 ere men have only occasionally indulged, but have never
 h regular smokers as to bring on any of those fatal effects

nsidering this argument of "my learned friends opposite,"
 it understand, since we are about to discuss a question
 what is the standard of right and wrong which we both
 e. If we appeal to different laws, we may differ from
 yet each be right in his own eyes. If you appeal to the
 eral custom, I will allow that it fully sanctions the opium
 British Indian government promotes and encourages the
 mercantile community at large engages in it; not a voice
 ised against it, (except "a faint and hesitating" whisper
 to the sin of *smuggling*, on which all governments have
 nsibility;) and if general opinion and custom are to de-
 right and the wrong of the thing, I must at once confess
 it is given in favor of the traffic. But I do not acknow-
 ribunal in a case of morals. The only true and safe
 s to be obtained from the source whence we obtain all our
 of duty, personal or social—the Word of God. If we be
 ed Christians, this is the only standard that will *satisfy*
 : *we know* it, and it alone, to be absolutely infallible; and

numbered also, that on points of morals there it no obscuration of Holy Writ, no possibility of misinterpretation, whatever for the cavil and the sneer that often bring about of 'warping Scripture,' and 'garbling quotations to suit particular views.' This fact must be strongly re we go a step further. The ten commandments are sun; nor are the many moral precepts that flow from Holy Writ, a whit less intelligible. Nothing, therefore, conclusive than the judgment which this authority will be case, be that judgment favorable or unfavorable. dly appeal to it.

pect the Bible to make mention of opium and of the ng station, by name. The sins of gambling, and of it condemned in the Bible by name; nevertheless we be condemned. The Bible condemns *drunkenness* in s, and in such awful terms, that I presume it is unne- te the passages. You allow this; but you reply, that and drunkenness, far from it; you only plead for that f opium which produces a gentle stimulus and no more. ever was a ruined debauchee, who became such by a who fell into an irretrievable habit of intoxication in a y other process whatever than by that which you are , viz., the use of a gentle stimulus at first, I might me respect, to your argument. But when the fact is all drunkards have been by this very snare lured to hen you are made aware, on evidence which cannot that it is not only the natural, and the probable, but e almost inevitable consequence of using a gentle sti- to use a very powerful stimulus at last, you must pur- all the laws of logic and common sense, I charge you of those consequences of which you have been distinctly but perhaps you do not feel the force of this argument. ere is a temptation in smoking a first pipe; but you ou do indeed resist the temptation successfully, you are geable with breach of the law. Is there then no breach i *entering into temptation*? Are you in the habit of ord's prayer, and of saying, "Lead us not into tempta- us from evil," without meaning what you say? If so, n rise from uttering this prayer, and deliberately *enter- tion*, which you confess exists in the case supposed, are rs an *impious farce*?

ns not the temptation, invites the crime; the crime is ; law of God says, "Thou shalt not steal." Does not ker permit his depraved appetite to steal away his rea-, his peace of mind, his bodily rest, his time, his money, his life or the next? The crime is *murder*; and the rs, "Thou shalt not kill?" But the opium-smoker is rmined of suicides, for he pursues his self-destruction nself, I may say, but that only proves the fatal despera-

of his case more strongly,) perhaps for some years together. Or-
y suicides effect their object more speedily; but the opium-smo-
qually succeeds in cutting short his days in the land of the
: I might go on, but I purposely abstain. I hope I have sug-
d enough at least to prove that it is very far from certain that
-smoking is consistent with morality. I hope it may be serious-
bted whether it can harmlessly be indulged, even in the slight-
ssible degree. I hope a suspicion may be awakened that all
f opium, except under medical prescription, is an abuse of it;
tter abstinence from it, is the only moderation; and the smallest
gence whatever, intemperance. If such doubts be once awaken-
conscientious man will not smoke opium till they are allayed.
ill examine the question as one in morals; and he will not rest
he has applied to the case before him, all those precepts of
rance, sobriety, self-denial, spiritual-mindedness, love to God,
regard for his glory "in *all* things," patience, meekness, indus-
harly—which the Bible contains, and which, under God's bless-
cannot fail to convince him that he is, as an opium-smoker, guilt-
disobedience to them all.

. If this be the case, as I must assume to be now admitted,
remains to consider, the question, *How far a man is justified*
contributing to, and encouraging, the use of opium by others?
would think that "Do to others as you would have others do to
and "Love thy neighbor as thyself," might settle this question
enough. But strange to say, the great majority of those engaged
opium trade, admit in a measure the evils it creates, but jus-
their participation in the profits of the commerce, upon some such
ids as follow; "If I don't trade others will; so the evil will be
me, and I may as well profit by it as my neighbor. Really (he
nues) I pity the poor creatures who are so bent on ruining them-
; but what can I do to help them? They *will* have opium in
of every thing; and all that I can do is to promote any general
s for their moral enlightenment which may teach them the dan-
f their ways: meanwhile, it is preaching to the winds, to attempt
est the taste for opium; and so I may as well trade in it as not,
times are changed. But, indeed, I can't see that though I do
nem what we both know to be poison, I am therefore responsible
eir guilt or folly in using it. I have sins enough of my own to
er for, without bearing other people's. They know what they
oing as well as I do; their very government tells them opium is
cious; the fault therefore is theirs, not mine," &c. It is only
me unconnected remarks of this nature, that one can meet or
old of that incoherent train of fallacious excuses with which the
ience of a man (very amiable and respectable perhaps as a
er of society) flatters itself, when strong self-interest warps the
ment. There is nothing like argument in all that is said, and
cannot grapple with it to overthrow it. Cowper's well-known
, "Pity for poor Africans," beginning (if I remember rightly)
" I own I am shocked at the purchase of slaves,"

ole of it in the only way possible, i. e. by holding 'the native absurdity, to utter ridicule. If the thing be , what language can make it more plain, that if it be lge in opium one's self, it is equally murder to give it ke: that if treason be a crime, the man who furnishes ator as well/as he who uses them: that the perpetuat- raging, and engaging in a trade which promotes idle- overty, misery, crime, madness, despair, and death, complice with the guilty principals in that tremendous

reason closer, if you please. For what purpose do you pium to China? Is it with a wish to sell it and receive return? You answer, "Yes. It is my only object." e that there is no chance of attaining your object, is of the demand which exists for opium for the pur- g, which demand you gratify, and thereby secure your ourse, I know that that demand exists, or I should not to China." Is it your wish then to gratify that de- out doing so, you cannot obtain returns for your opium? ndifferent whether the wretched opium-smoker, be ot; I have nothing to do with that; I would rather rew the opium overboard, if they would only pay me, I know the drug does them harm." You appear un- er my question directly. Is it your wish to sell your ' You cannot do so but for this demand, it must our wish that this demand should exist? "Why, I allow that it is." And you will continue to entertain to take pleasure, for the sake of the gain, in gratifying lthough you are warned that the smoking of opium ceivable vice and misery? "I neither create that vice r do I at all desire it. I only wish for my fair profit" You may not desire to promote vice and misery for lease their very existence would give you: few men as. But it seems nevertheless quite certain, on your ;, that though you do not desire to promote crime and or their own sake alone, you nevertheless do, upon the that they should exist; for this their existence is an tion, and indispensable concomitant, of that demand h you readily admit to be agreeable to you as favoring ale of your stock. You do not desire to promote vice hemselves considered, but you actually prefer the in- oth, rather than forego your commercial gains! an of the name of Benjamin Weald was convicted of mer through the head, having been hired to do so for d no spite at the poor farmer—never saw him before in ather pitied the man than otherwise. He would have iving the £150 without shooting the man; but his em- a that was impossible, and for his compunctious visit- nce, they were all thrown away, for the man's life they

UNIVERSITY OF TORONTO

would have, if not by his hand, by some one's else. So Weald took the 'commercial gains,' preferring on the whole that blood should be shed, and by his hand, rather than these commercial gains to go another. Was he, or was he not, a murderer? The most astonishing fallacy which the advocates of the opium trade use as a palliative to their consciences, is that if they do not trade, others will. The Court of Directors use this excuse in writing to the Bengal government (vide extracts from India state papers in the D. U. K. Almanac for 1830), and confess, that so repugnant are their feelings to the opium trade, they would gladly, "in compassion to mankind," put a total end to the consumption of opium if they could. But they cannot do this, and as opium will be grown somewhere or other, and will be largely consumed in spite of all their benevolent wishes, they can only do as they do, &c.

I am not going into any examination of the general political question that seems here to arise. I merely adduce this as an instance of the ready use which men can make of a fallacy, so gross, so palpable, so apparent, that it can scarcely be exposed more distinctly than it exposes itself. In a periodical publication now before me, the fallacy is drawn out to the full length of its absurdities, and the general principle involved in it is seen to be this: 'wherever there is sufficient ground for believing that a given injury will be done to the community by somebody or other, it then ceases to be a moral wrong for any one to inflict that injury.' If this be sound morality, whether personal or political, judge ye!

I leave the question here. I wish I could utter one warning whisper that could be attended to. I wish that ministers of the gospel, especially those at the seat of government, would work the problem out for themselves, and having brought it to a point, would step forward with the boldness that becomes them, and drag down this hideous national sin from the place where she sits in state; expose her more than Duessa-like foulness and deformity; and warn all, high and low, of the guilt that attaches to every individual who knows the law, "as he hath opportunity to do good unto all men," and yet directly disobeys that command by countenancing a trade which has been more instrumental in killing souls and bodies than any curse ever inflicted on a people. We have no such access to China as enables us to render a full statistical account of the desolation spread there by opium. It would be of comparatively little use if we had; for at the rate at which the trade is now advancing, statistics are utterly distanced long before they could be properly compiled. The importation of opium into China is increasing in ratio which doubles it in nearly four years! It amounted in value last year to not much less than *four crores of rupees*! [About \$19,230,769.] Notwithstanding the rapid progress in the increasing supply, the demand more than keeps pace with it; and there is every probability, unless some direct interference of Providence mercifully thwart the natural course of events, that both will go on increasing in an increasing ratio until "ruin stand aghast" at its own awful doings. Our sin in growing and encouraging the

is, indeed, one of the darkest that ever invoked the
 ost high God upon a people. Where are the preach-
 pel, where is the spirit of common humanity fled, that
 I till this moment exist unrebuked? Oh what a wail
 ld awaken your remorse and compassion, could the
 of one poor opium-victim reach your soul! Think then
 ns who have already thus perished, and then ask your-
 is this to continue and no man in a Christian land
 ow long is a British government to be seen drawing
 this source, *admitting the misery, and excusing itself*
by a fallacy the most contemptible and insulting even to
 ? How long is a whole community of British iner-
 content with *earning the price of blood, because if they*
will in their stead?

Seou Heö, or Primary Lessons: translation of Part
respecting the relative duties, 1st between father and son;
are added brief explanatory notes.

The Primary Lessons, was given in the second number
 e; and with it the plan of the whole work, as divided
 rts, chapters, and sections. The first part of Book First,
 he principles of education," was divided into thirteen
 t second, on which we now enter, contains one hundred
 tions, in six chapters. To those who are desirous of
 et ideas of Chinese character, we recommend the care-
 the works containing the principles and maxims upon
 haracter is formed. Such a work is the *Seou Heö*,
 posed almost entirely of select passages from the writings
 nd worthies of antiquity. In addition to the perusal
 s, there should be the most careful observation of con-
 r to see how far the habits and manners of the people
 he prescribed rules. In the subjoined translation, we
 red to retain something of the Chinese idiom, though
 tly at the expense of a good English style.

BOOK FIRST.

Part ii. Respecting relative duties.

When Mencius said, "The academies, colleges, universi-
 tic schools, established to promote education, were all
 elucidate the relative duties." Having examined the
 of the sages, and scanned the records of the worthies,
 led this treatise for the instruction of youth.

Note. According to a commentator on this passage, the academies, colleges, and public schools, here spoken of, did not all exist at the same time, though they all afforded about the same advantages for learning: the public schools (heau) flourished under the Heä dynasty; the colleges (seu), under the Yin or Shang; and the academies (tseäng), under the Chow dynasty: these were established in villages throughout the country. The universities were national establishments, and continued the same during the three dynasties, namely, from about 2100 to 250 B. C. We would here put the reader on his guard against forming too high an opinion of these schools: we are not yet able to say definitely what advantages they did afford, or describe the manner in which they were conducted; but we have no idea that even the colleges were superior to the common schools of the present day.

Chapter 1st. Affection between father and son.

SECTION I.

In the Domestic Rules, it is said, "Men in serving their parents, at the first cock-crowing, must all wash their hands; rinse their mouth; comb their hair; bind it together with a net; fasten it with a bodkin, forming it into a tuft; brush off the dust; put on the hat, tying the strings, ornamented with tassels; also the waistcoat, frock, and girdle, with the note-sticks placed in it, and the indispensables attached on the right and left; bind on the greaves; and put on the shoes, tying up the strings. Wives must serve their husband's father and mother, as their own; at the first cock-crowing, they must wash their hands; rinse their mouth; comb their hair; bind it together with a net; fasten it with a bodkin, forming it into a tuft; put on their frocks and girdles, with the indispensables attached on the right and left; fasten on their bags of perfumery; put on and tie up their shoes. Then go to the chamber of their father and mother, and father-in-law and mother-in-law, and having entered, in a low and placid tone, they must inquire whether their dress is too warm or too cool; if the parents have pain or itching, themselves must respectfully press or rub (the part affected); and if they enter or leave the room, themselves either going before or following, must respectfully support them. In bringing the apparatus for washing, the younger must present the bowl; the elder, the water, begging them to pour it out and wash; and after they have washed, hand to them the towel. In asking and respectfully presenting what they wish to eat, they must cheer them by their mild manner; and must wait till their father and mother, and father-in-law and mother-in-law have eaten, and then retire. Boys and girls, who have not arrived at the age of manhood and womanhood, at the first cock-crowing must wash their hands; rinse their mouth; comb their hair; bind it together with a net; and form it into a tuft; brush off the dust; tie on their bags, having them well supplied with perfumery: then hasten at early dawn to see their parents, and inquire if they have eaten and drunk; if they have, they must immediately retire; but if not, then they must assist their superiors in seeing that every thing is duly made ready."

Note. The articles and style of dress, here prescribed, differ in some respects from those of the present day; but the rules and forms, in the main,

changed, and are regarded now as formerly, as the only true te. But we suspect that much of the personal attention, so by the ancient sages and worthies, is performed by proxy or her in these degenerate times. The "note-sticks" were boo, horn, or ivory, about two or three inches wide, and twelve they are often to be seen in theatrical exhibitions on the

SECTION II.

domestics, both male and female, at the first cock-crow— their hands; rinse the mouth; and dress; collect the mats; sprinkle with water, and sweep, the inner and outer, and the open court: and arrange the seats; each according to their appropriate duties."

This section, together with the one preceding and the two which follow, are selected from one and the same part of the Book of *My Tseih*, which, in a former number we translated *Rules for the Domestic Rules* is evidently a more suitable phrase, since the provisions are not confined to the nursery, but extend equally to the whole household.

SECTION III.

When the father and mother, or father-in-law and mother-in-law sit down, the children must respectfully offer them a chair in the way which it shall face; when they wish to sleep, the children must bring them a couch, and ask in what direction to place it. (When the parents arise, after sleeping,) they must offer them an easy chair to sit upon; and the children must bring them a couch on which they may recline, with a mat and bed; hang up the clothes; put the pillows in a case; and rolling up the mat, put it into a cloth bag. The mats, beds, pillows, and couch, of the father and mother-in-law and mother-in-law, must not be removed from their place. The parents' staff and shoes must be treated with respect and not rudely handled; their vessels for rice, water, and wine, when emptied, must not be used (by the children); nor must they presume to eat or to drink, except of that which is offered to them.

SECTION IV.

When the children in the apartments of the father and mother, or mother-in-law, are called, they must answer promptly; and in advancing and retiring, or moving round, they must be respectful and sedate. In ascending the steps of the hall, and in going out of the door of their apartments, and in coming back, they must not presume to gulp up, or cough, or sneeze, to yawn or stretch, to stand inclined or to spit or blow the nose. If cold, they must not put on more clothes; nor to scratch themselves, if they are itching; if not engaged in archery, they must not make noise, nor, unless fording a stream, raise their clothes; nor must their garments be seen. If the parents' dress is stained

with saliva or mucus, they must wipe it away ; if their cap and girdle are soiled with dirt, beg leave to cleanse them with soap-suds ; and this they must do if any part of their dress is stained ; if their garments are torn or rent, they must thread a needle and beg leave to mend them : the younger serving the elder, and the inferior the superior, must all suit their conduct to the occasion.

SECTION V.

In the Illustrations of Duties, are the following maxims : " It is the duty of every son, in winter to warm, and in summer to cool (his parents' bed) ; in the evening to wish them rest, and in the morning to inquire after their health ; when going out, to announce it to his parents ; and on returning to go into their presence ; his walks abroad must always be through the same places ; he must have some settled occupation ; and never call himself an old man."

Note. The commentator, remarking on this last phrase, says, 'if the son calls himself an old man, his parents will be reminded that they are much older ; this is an unpleasant thought ; therefore, if he would keep the minds of his parents quiet, he must not call himself an old man.'

SECTION VI.

The Book of Odes says ; " Dutiful children, who possess strong natural affection, will have a mild temper ; and possessing a mild temper, their countenance will be pleasant ; and possessing a pleasant countenance, their manners will be complaisant. The dutiful child will be most careful and most attentive, like a person holding a gem or bearing a full vessel, who is afraid of dropping the one or over-setting the other. A lofty demeanor and stern gravity are not required in serving parents."

SECTION VII.

In the Illustrations of Duties are the following rules : " Children must not occupy the principal place in the house ; nor seat themselves on the middle seat ; nor walk in the middle of the way ; nor stand in the middle of the door. In providing entertainments, they must not limit the amount of food ; nor at the sacrifices, go among the images. If their parents are silent, they must listen to them ; and watch them, even when they do not move. They must not ascend high places ; nor approach steep precipices ; nor may they indulge in slander or ridicule."

SECTION VIII.

" While their father and mother are living," said Confucius, " children ought not to travel far away from them ; and whenever they go out on short excursions, it must always be in a well-known course."

Note. This and similar precepts of the ancient sages are made the basis, on which the Chinese rest their arguments against going to distant countries.

SECTION IX.

The Illustrations of Duties contains this maxim : " While their father and mother are alive, children must not pledge themselves to their friends so as to put their own lives in jeopardy."

seems to be a reference here to a usage, which is prevalent, of becoming "sworn friends." The Triad Society and others usually, we believe, banded together on this principle, that will die for each other, if circumstances require. The reason children should not thus pledge themselves, is that their bodies are the property of their parents: one commentator says, that it is not right to die for a friend, even after one's parents are dead, (because we are to receive and preserve the body as the gift of our parents.)

SECTION X.

of Rites it is said; "While their father and mother are alive, children must not presume to do as they please; nor do they have property as their own: thus showing the people the difference between superiors and inferiors. So long as their father and mother are alive, things to the value of a carriage or a horse, must not be given away to their friends or be presented to their superiors by children; in this way the people are taught that they must not do as they please."

SECTION XI.

of Obligations of Duties it is said; "The man and wife who are respectful must not (presuming on the affection of the parents) obey or slight their commands. If, therefore, their parents give them food and drink, though they have no wish for it, they must eat and then wait their parents' pleasure. If their parents give them clothes, though they wish them not, they must put them on, as before. And if they are charged with the execution of any business, and other persons are directed by their parents to assist them, they must yield though it be against their own wishes; and they are sworn to instruct the persons assisting them for a little while, and then take the work again into their own hands."

SECTION XII.

of Rites and Obligations of Duties it is said; "The man and wife may not reserve for their own private use any property, such as land, animals or utensils; nor presume (without leave of their parents) to lend or give away any thing. If presents are made to the wife, she must take and offer them to her father-in-law; and if they accept them, she should rejoice in them; if they decline to accept them; but if they will not allow her to take them, she must lay them by for the use of her father-in-law and mother-in-law. If she have any property of her own to whom she would give some of the presents, she must give them to them of her mother-in-law; and if they are granted, she must give them away."

SECTION XIII.

of Obligations of Duties has this maxim: "When the father or mother calls him, he must answer and rise without delay."

SECTION XIV.

Among the rules to be observed by the scholar when visiting, are the following: "In conversing with an official person of high rank, he should observe first his face, then his bosom, and then again his face. He should never deviate from this; and towards every one should always exhibit the same conduct. But when conversing with his father, he may give more freedom to his eyes, though he must not raise them above his face, nor drop them below his girdle. And when the parent is not speaking, if he is standing up, the son must watch his feet and if he is sitting down look at his knees.

Note. By watching the countenance, says the commentator, the scholar may ascertain the proper time to address the officer whom he is visiting; and by observing his bosom, he may discern what emotions are produced by his address; and by looking again at his face, he may know whether his address is acceptable. By looking at his feet, the son will know when his father is about to walk; and by watching his knees, he will see when he is about to rise.

SECTION XV.

The Book of Rites says; "When the father calls, his son must answer promptly without delay; he must drop whatever work he has in hand; or if he is eating and has food in his mouth, he must spit it out, and run quickly. If the son, who has aged parents, goes away from the house, it must not be now to this place and then to that; nor must he delay his return beyond the proper time; nor retain an undisturbed countenance, when his parents are afflicted with sickness." These are some of the rules for the dutiful child. Such a child, after the decease of his father, cannot bear to read the books where the traces of his hand are still preserved; nor when his mother is no more, can he bear to drink from the cup, on which are retained the traces of her breath.

SECTION XVI.

According to the Domestic Rules, "The slaves and the children and grandchildren of one's father and mother, though born of concubines, and tenderly beloved, he must always treat with respect, even after the decease of his parents. Or if he has two concubines, one beloved by his father and mother, and the other by himself, he must not put them on an equality in regard to their dress, or food, or domestic duties; and he must continue this course of behavior towards them, even though his father and mother are dead."

SECTION XVII.

"Though a son fondly loves his wife, yet if she is not liked by his father and mother, he must divorce her. But if he himself does not like her, and his father and mother say to him, "she serves us kindly," then he must treat her as his wife, as long he lives."

SECTION XVIII.

The philosopher Tsäng said, "The dutiful child in serving his parents, gives joy to their hearts, and never opposes their purposes; his

ing to their ears, and his conduct to their eyes; in the
 shes them repose, and in the morning inquires after their
 a willing heart, always supplying them with food. Ac-
 at his parents love, he loves; what they respect, he re-
 will do this even in regard to dogs and horses: and
 re, then, with respect to men!"

SECTION XIX.

ng are contained in the Domestic Rules: "The mother-
 death of her father-in-law, retires from her place at the
 family; but in all matters regarding sacrifices and the
 of guests, the wife of the first-born son [who succeeds to
 ated by the mother-in-law,] must request her pleasure;
 for wives must ask the pleasure of the principal one.
 : latter is charged with any business by her husband's
 other, she must not be negligent, nor behave haughtily
 inferior wives. These, in like manner when charged
 , must not presume to claim equality with the principal
 walk, sit, or give commands with her. None of the wives,
 : bidden to go to their own apartments, must presume to
 e are any affairs to which they wish to attend, whether
 or small, they must ask permission of their father-in-
 er-in-law."

SECTION XX.

ns of the family must respectfully serve the chief of the
 wife; though honored and rich, they must not, on that
 me on entering his dwelling to behave proudly towards
 id although they have a great number of chariots and
 ey must dispense with these when they go to his house.
 y, presuming on the superior rank and riches, exalt
 ove any of the other members of the family."

family of China, (including all of the same surname who have
 1 the same ancestor,) may very properly be designated by the
 each family, or clan, as thus defined, the eldest living first-
 ct line, from the original founder of the family, is the head or
 1, and has always the appropriate designation *tsungtsze*; and
 of *tsungfoo*. In each distinct male branch of the clan the
 ther born of the wife, or concubine, is styled *tehtsze*; all the
 d *shootsze*. The first-born son is also called *chungtsze*; and
foo, "the principal wife," in contradistinction to the wives
 s, who are called *keasfoo*, "inferior wives." According to
 e sons born of the *tse* or wife, are styled *tehtsze*; while all
 e *tse* or concubines are called *shootsze*.

SECTION XXI.

opher Tsäng said, "If your father and mother love you,
 e not forgetful of their kindness. If they dislike you,
 harbor no resentment. If they are in error, then strive
 m, without giving offense."

SECTION XXII.

The following precepts are contained in the Domestic Rules: "When his parents are in error, the son with a humble spirit, pleasing countenance, and gentle tone, must point it out to them. If they do not receive his reproof, he must strive more and more to be dutiful and respectful towards them till they are pleased, and then he must again point out their error. But if he does not succeed in pleasing them, it is better that he should continue to reiterate reproof, than permit them to do injury to the whole department, district, village, or neighborhood. And if the parents, irritated and displeased, chastise their son till the blood flows from him, even then he must not dare to harbor the least resentment; but, on the contrary, should treat them with increased respect and dutifulness."

Note. A neighborhood, says the commentator, contained 25 families; a village, 500; a district, 2,500; and a department, 12,500 families.

SECTION XXIII.

In the Illustrations of Duties it is written, "If a son, in performing his duty to his parents, has thrice endeavored to correct them, without their listening to him, then weeping and lamenting he must still follow them."

SECTION XXIV.

"The dutiful son, who has arrived at the age of manhood, when his father and mother are afflicted with sickness, will neglect to comb his hair; he will not be formal in walking; nor use levity in his conversation. Music will afford him no charms; his food will lose its relish; he will drink but little wine: will not indulge in loud laughter, nor in noisy expressions of anger. And as soon as his parents recover from their sickness, he will resume his wonted manner."

SECTION XXV.

"The faithful minister, whose prince is sick and requires medicine, will first taste of it himself; when the parents need medicine, the son will first try it himself. And they will not take the medicine of one who has not been a successful practitioner for a long time."

SECTION XXVI.

Confucius said, "Watch the inclination of the child while his father is living; and after the father's death, mark his conduct; and if for three years (from that date) he does not deviate from the ways of his father, he may then be regarded as a dutiful son."

SECTION XXVII.

In the Domestic Rules it is said, "Although your father and mother are dead, if you propose to yourself any good work, only reflect how it will make their names illustrious, and your purpose will be fixed. So if you propose to do what is not good, only consider how it will disgrace the names of your father and mother, and you will desist from your purpose."

SECTION XXVIII.

ficial Rules it is written, "In the time of hoar frosts the dutiful son, as he walks over them, will have a heart ancholy, that he will not heed the cold. And in spring, amid the rains and dews, his heart will bound with ugh he were about to behold his departed parents."

efers to the vernal and autumnal sacrifices, which are offered leparted parents. In autumn, the dutiful son, moved by the ll nature around him is wrapped, thinks how his parents like the leaf; fearing that they too will soon be forgotten, y to do them reverence and to offer them the appointed sacri- s insensible to the inclemency of the weather. So in spring, ll things around him bursting into life fills him with expect- ems to see his sleeping parents revive.

SECTION XXIX.

ficial Institutes it is prescribed, "The husband and go in person to oversee the sacrifices, that every thing, le and female departments of the household, may be "

are several grades of sacrifices, each allotted to persons of ln the grand national sacrifices, the prince takes the lead, as- isters, who are aided by their ladies. In the ancestral tem- : chieftain takes the lead, and oversees all the preparations rtment of the clan, assisted by the whole body of sons; while nsort, as overseer in her department, is aided by all the ladies is only in the preparation of the sacrifices, utensils, &c., that "ladies of the ministers," and others of inferior rank, are any part.

SECTION XXX.

man, when the time for offering sacrifices arrives, will l superintend them; and if prevented from so doing, suitable person to act in his stead."

SECTION XXXI.

to the Sacrificial Rules, "Having put away all anxie- mind, and abstained from animal food and wine, the e time of fasting, must call to mind the circumstances residence, their pleasant conversation, their disposition ther with their joys and their pleasures; and on the / will appear to him in vision. On the day of sacrifice, s the ancestral hall with his heart alive with expecta- behold his parents sitting in their appropriate places; l in the ceremonies, and going in and out of the hall, : and reverence, he will hear their well-known voices; res from the place, listening, with long-drawn breath, eir mournful sigh. It was thus the ancient kings re- urents, always kept their forms before their eyes; and voice always sounding in their ears; having the incli- sires of their hearts never out of mind. When most

UNIVERSITY OF MICHIGAN LIBRARY

ardently beloved, the appearance (of the parents) will be retained; and when most deeply respected, their forms will be recollected: and when this is the case, how can the son fail to do them reverence!"

SECTION XXXII.

In the Illustrations of Duties it is said, "The good man, though poor, will never sell the implements of sacrifice; though cold, he will not put on his sacrificial robes; and if building a house, he will not cut down the trees which grow over the graves of his ancestors."

SECTION XXXIII.

In the Royal Institutes it is written, "The minister of state must not borrow utensils for the sacrificial rites; and if he has them not already prepared, he must not have any made for his own use, till those required for sacrificial purposes are prepared."

Note. To do otherwise than this, would show a want of respect to the manes of his ancestors and the gods of his country.

SECTION XXXIV.

Confucius, in conversation with the philosopher Tsäng, said, "To preserve from all injury the body and its members, which we have received from our father and mother, is the commencement of filial duty. And to elevate ourselves to high rank by a good course of conduct, so as by transmitting an illustrious name to posterity to reflect honor on our ancestors, is the ultimate aim of filial duty. Thus it commences in serving our parents; is continued by serving our prince; and is completed by elevating ourselves to high rank. He who loves his parents, will not hate other people; and he who respects his parents, will not treat others with neglect: and when love and respect are carried to perfection in serving his parents, then his excellent conduct will afford instruction to all the people of the empire: such is the filial duty required in the son of heaven. When those in high stations are humble, they are not endangered by exaltation; and regulated by the rules of propriety and carefully maintaining the laws, nothing will be wasted, though they have all things in abundance; and conducting in this manner, they will preserve the altars of their country and maintain peace among their people: such is the filial duty required of nobles. Those who do not put on robes, which are unsanctioned by the ancient kings; who presume not to speak, except in accordance with the rules they prescribed; nor to act, unless in conformity to their virtuous example—those who thus demean themselves will preserve the temples of their ancestors: such is the course of filial duty incumbent on ministers of state. To serve the prince with filial duty, is fidelity; and to wait on superiors with respect, is submission; and when fidelity and submission are preserved entire by those who serve their superiors, then they will be able to maintain the sacrifices due to their ancestors. Such is the course of filial duty to be maintained by the literati. To observe the revolving seasons and distinguish the diversities of soil; to guard well the body, and to practice economy—in order that they may provide for their parents,—is

al duty among the people. Hence, from the son of common people, no one can escape calamity, if he is y to his parents."

conversation of Confucius with his pupil, the philosopher part of the treatise on Filial Duty, published in our last vo-aseology there, however, differs somewhat from that in the

SECTION XXXV.

aid, "Your parents gave you existence, and there is r than to form a link in the line of ancestry: both rents have watched over you, and there is no favor : not to love your parents, therefore, while you place on others, is the perversion of virtue; and to disre-nts, while you honor other men, is the perversion of

SECTION XXXVI.

ildren, in serving their parents, always show them the and take the highest delight in supporting them; with sickness, their grief is extreme; and they mourn at their death; and when sacrificing to them, they do it rofound reverence. Being good proficients in these , then children can perform their whole duty to their over, such men are not proud if they are placed in high disorderly, if in low ones; nor contentious, if they are quals. But if those in high stations are haughty, they ruction on themselves; if those in low ones are disor-ll bring down punishment on their own heads; and if equals contend, they will involve themselves in bloody refore unless men will avoid these three evils, they can led as dutiful children, even though they should daily ee best of animals for the support of their parents."

imals here alluded to, are the ox, the sheep, and the swine. latter is by far the most common article of food among the eighborhood; beef and mutto are used only in very limited

But there are several g in fact, *thirteen* kinds of punishment.

Modern China: the late rebellion in Turkes- gir (Changkihurh); origin of the rebel- war; &c. By R. I.

account of the rebellion in Chinese Turkes- of whom we spoke in our last number, was It would seem that he had made frequent atrimony before that of 1826, which we are ch proved fatal to all the family. "The rebel h," said the emperor in one of his edicts in ered the frontier and created disturbance;" nk conferred in 1831 upon the family of a suffered death rather than submit to the bt the result of one of Jehangir's attempts. however, for the insurrection among the h it is necessary to enquire into, in order to he warfare which ensued.

Many of the banished from t even received int ple treated the women, and usur case by a repor rebellion: "the of exactions under t shih, which is s officially in 1826 had to govern, a occasion, when s had put one of the him of his peaco other similar mar. tistical work⁶ in⁷ 30th year of Kei peror, by his grac he sent 400 soldie quarters, to culti scribed above are they are quite su eyes for redress to who is described, hearts to himself. the first overt act sion⁸ of Jehangir towns of Kokan, s ed by the reducti rebellion seems to l the end of Augus had contained a the northwest fro borderers had bee the report upon th jan was still at I was withdrawn to heard of the dep: loose, and the kio tion of the peopl Kara Khatái, and country. Accord Kashgar, where l declared in his fi whom were sacrific or blew himself t was announced t means nothing m⁹ ported by Burnes.

Chinese officers employed in Turkestan,³ had been their own country for misconduct, and convicts were into the public offices as secretaries, &c. These people Muselminn with contempt, took possession of their raptured lands. This is admitted to have been the port⁴ of the commanding officer at Kashgar after the officers," he says, "constantly oppressed the people by the pretext of public service." The resident of Wooshih situated between Auksú and Kashgar, was blamed⁵ for "ignorance of the dispositions of the people he, and for improper severity towards them." On one some horses had been stolen, the resident, it appeared, the chiefs (khans or begs) in custody, and deprived cock's feather until the horses should be restored; and marks of caprice or violence appear. A Chinese stationer informs us that Wooshih was totally destroyed in the Keenlung, on account of a revolt, after which the em- race, gave it the name of "Endless Tranquillity;" and 1000 families and 500 Mohammedan families there, from other cultivate the land. Such acts of oppression as are de- are not likely to have been confined to Wooshih, and sufficient to account for the Muselminn turning their backs towards Jehangír, the descendant of their khojans, bed,⁷ moreover, as having the tact of attaching men's self. There is some contradiction in the accounts of act of insurrection; but it began probably by an inva- gir with a body of Kirghís from Indajan, one of the n, seconded by the khan of that country, and encourag- lution of the Chinese troops there. The news of the s to have been promulgated in the Peking Gazette about 1826;⁹ for a Gazette¹⁰ of only a few days before a recommendation to reduce the military stations on frontier, as certain recent assaults and inroads of the been discontinued. This is perhaps a confirmation of n the subject made to Mr. Wade,¹¹ that, "when the kho- at Indajan, the Chinese force stationed on the frontier towards the Kara Khatái country. When the khojan departure of these troops, the ruler of Indajan let him khojan sent a man to Kashgar to ascertain the disposi- people; they replied that the Chinese force had gone to and he had only to come and possess himself of the whole according to their invitation, the khojan marched towards re he no sooner made his appearance, than the people is favor and rose against the Chinese, about 8000 of crificed to their fury. The amban or Chinese govern- self up." The story then goes on to say that the event ed to the emperor by means of lighted balloons, which ; more probably than the lighted beacons of wood, re- nes.

A report in Canton¹³ about the time was, that the rebels took every city they attacked, and gained every battle they fought. Hence the Mohammedan cities, although very strong, having Jehangír's friends inside, fell as soon as they were attacked. In one day four submitted. A passage in an imperial proclamation after the war, from which we have already quoted,¹⁴ confirms the above report. "During the sixth year (of Taoukwang), he (Jehangír) formed a coalition with the Poolootih Mohammedans, and usurped the frontiers."

Another account¹⁴ of the origin of the war, which professes to be extracted from a Chinese manuscript, varies the story, especially by making it appear that Jehangír had been living in Chinese Turkestan shortly before this invasion, which we subsequently find to be confirmed. After some preliminary observations, it proceeds to narrate, that in 1825, when the Chinese authorities endeavored to seize Jehangír, they pursued him to the border of the Poolootih Kirghís; but failing to take him, they seized one of the natives and put him to death instead, which aroused the Pruths in favor of Jehangír. The resident of Kashgar seized Chang's son and put him to death in the beginning of 1826, upon which Chang (Jehangír) assembled his followers and attacked Kashgar, but was repulsed. The resident *tseäng* pursued him, but was wounded in the face, and he sent two officers with troops, to continue the pursuit. They surrounded him but he made his escape in the night. The Muselminn now arose in his favor; the resident ordered 250 men to his relief from Yingkeshur, 140 *le* to the southward of Kashgar, but they were completely cut up on the road, and the garrisons shut up in their respective towns. One commandant of the fortified towns reported: "if the Muselminn attack this city, I will defend it till death." Another writes: "this orphan city has neither troops nor provisions; it is impossible to defend it; I can only collect our thinned troops and shut the gates." These accounts were known in Peking in the beginning of September, and they mark well the unexpectedness and rapidity of the rebellion. Reports received a few days later returned the names of two of the principal military officers at Kashgar, who had been killed. The emperor upon receipt of these advices, immediately appointed¹⁵ Changling commander-in-chief and governor general of Ele, and Yang Yuchun and Woolungah members of his council and generals of divisions; but the imperial signal was given to Changling, with full power of life and death, and discretion to act in all cases. The two generals are stated to have had each 5500 men under them.

Changling was at the time fifth minister of state, and it is said to have been the fourth time only,¹⁵ within the last two hundred years, that a person of such high rank had been sent on a similar service. He is now the first or prime minister of the empire. (See Chinese Repository vol. 4, p. 475.)

The next step was to provide the ways and means, and the requisite force. The Peking Board of Revenue in one of its documents¹⁶ stated, that 30,000 Tartar troops were to be sent to the seat of war, and recommended at the same time that attention should be paid to

iat. In another Gazette,⁹ we find the emperor ordering s of repute to appear before him, from whom to choose with the army, and ordering 20,000 men, apparently un- of Yang Yuchun,¹⁷ to advance from Kansuh and Shense, dry from the river Amour. For the latter troops, 2000 were ordered to be prepared at the Taling river to re- jaded animals; but the officer stationed there report- d only 1500 good horses, but he had selected 500 good e up the deficiency: 2000 convicts¹ from Ele, were to the army on its march. An imperial order was also ropriately, to restrain the troops from robbing or distressing the line of march; that the soldiers who plundered were l, and the officers who allowed it reported. A part of ards (see Chinese Repository vol. 4, p. 187) were also ngah's division, who, according to his report, got the onvicts and were the very first to offend, even before h.¹⁹ The conduct of some of the officers was, he said, nd un-officer like. Presuming on their station about person, they insulted the civil officers, and kicked and ody about them. One of them, at the end of a day's ; to complain of the mess, went into the kitchen, beat set to work to boil his own rice, which did not besem e same officer went the next day to the local magistrate from him the price of a mule. Another flogged a ma- dant, for not providing him with separate quarters, and price of a saddle, which he said, he had lost. The ge- l them, and hoped that his majesty would confirm the the spirit they manifested in Kansuh, would be worse in

xpenses of the army were reported⁹ in Canton at 70,000 entitled only to partial credit; but we find that extra- is were resorted to, to raise supplies. The Canton e 30th October 1826 announced, that the governor and d arranged that, the governmental officers above the n were to contribute for this purpose 400,000 taels; the 400,000; and the hong merchants 600,000. A sale of overnment was resorted to, as has already been noticed¹ which produced six millions of taels. The Board of directed¹⁷ to forward from Shense and Kansuh such be ready, and to order four millions of taels from the s. Two millions in addition to the four were afterward ansuh.² The emperor ordered²³ a bounty of four taels te soldier who went to the war, and a sum, not men- ranslation, to the officers. In consequence of their suf- old, ten taels were subsequently advanced²² to each man t with clothing, &c.

y pay of a private cavalry soldier appears to have been one tael, one mace; which we find increased in 1829, to taels 1.45. We learn on the same occasion that at

this last period there were upwards of 10,000 Mantchou troops stationed in Turkestan. We gather too²² that of these troops, 1800 men and officers were stationed at Wooshih, who required for their "salt and vegetables," as their pay and allowances are called, 38,000 taels annually, about twenty-one taels each man, which allowing for the officers, greater pay agrees well with the prior amount. The officer who makes a report to this effect, adds: that when an intercalary moon occurs, he shall require 2500 taels more, and for all the necessary sums he requests leave to draw on Kansuh.

The following ammunition was ordered²³ for 2000 men, viz: gun-powder 13,000 catties (of 1½ pounds each avoird.); powder for the pan 750 catties; balls 11,250; matches 12,000. In a late engagement, it is said, the troops expended all their ammunition, and the commanding officer lost his life in leading his troops on to the charge. Their articles of ammunition seem²⁴ to have been spoiled on their way from Peking to Kansuh, and it was afterwards found better to manufacture them at the latter place.

One of the imperial documents in the Peking Gazette informs us that grain was abundant in Tartary, but the transport very expensive; 10,000 camels were required²⁵ for this purpose, of which apparently 6000 were now ordered, which cost thirty-two taels each. A greater number of these animals were lost²⁶ afterwards in crossing the desert of Cobi, as well as horses and mules, for want of water and provender. The commander-in-chief in reporting it, requested that the emperor would not require those in charge to replace them. After the war, the emperor ordered²⁷ that the camels supplied by the Mungkú khans should be restored to them. The number, it appears, then amounted to 14,787, of which 290 perished from fatigue and want between Kopúto and Oroumtchi. The idea of making those who had charge of them pay for them is again alluded to, but abandoned. On occasion²⁸ of 800 of the camels being presented by the Mongol chiefs in 1827, it is stated that their complement of horses is 20,000.

As the success of the expedition was said²⁹ to depend entirely on cavalry, the government determined in this war to find the provender, instead of allowing five candareens a day for that purpose for each horse, as appears to have been done before. Accounts³⁰ from Hami spoke of the horses, intended for the expedition, as being (hundreds of them) so emaciated and sickly as to be entirely useless and not worth pasture. 2000 bullocks and some milch cows were also ordered³¹ from Ele to Oroumtchi, for the use of the army; but 123 died in the same way, and the rest became useless. Camels were ordered to replace them.

Many of the above facts will be found more intelligible on reference to the accounts of the Chinese commissariat in vol. 4, p. 280 of this work, and to that of the office for superintending the rearing of horses, at page 182 of the same volume. The system of breeding horses and camels for the public service, is more fully detailed by Timkowsky. (Vol. 1, p. 200.)

We return now to the events of the campaign, of which it is, however, impossible to gather a collected narration from our imperfect

can only mention the facts as they present themselves, solve occasional repetition and inversion of dates; but to multiply them in order that they may correct one may be well to premise, that the Peking Gazettes have for describing battles that were never fought, and for victories that were never gained,"²⁸ as was confessed by Kanghe and Keäking.

Gazette of October 1826^s contains the following bulletin Yang Yuchun respectfully states to his imperial majesty, "For victories over the rebels for the consolation of his sacred father the 1st of the 9th moon (October 20th 1826), I arrived at I received letters from Chang Tsing and Falingah, saying the south of the river Hwanpashih to the southwards of rebels had posted themselves with a design of opposing our army the 21st (November 9th), they had gone westward along the burnt Chahalakih, and had plundered the village

with Pahapoo took under their command the imperial detachment, also Tourgoth and Mungkü forces, and then in the course of the river in pursuit. Having arrived at the mouth they divided themselves into two branches to oppose the enemy. At a shallow part of the river, the imperial forces crossed, armed with muskets and cannon from the rebel banditti. The troops with impetuous courage rushed straight forwards, and simultaneously sent forth musket-balls and arrows, which killed three hundred of the rebels.

Forty were taken alive. The rebel banditti retired, crossed the river, and fled to the southward. The governmental troops as far as the great Mohammedan village, where they killed upwards of a hundred persons, and seized cattle innumerable to the rebels. Unexpectedly, another division of rebels crossed the river. They were opposed by Kihurhpakih, being weak and few were unable to withstand the shock of the rebels dispersed. Other parties of the rebels either surrounded our troops, or to cut off communication. When these accounts I was much alarmed, and extremely anxious for the defence of Auksú. Here the general sent such orders, and such forces, as not only saved the place, but completely destroyed the rebel party, three hundred of whom were put to the sword. None escaped for the moment. The pursuers decapitated the bodies of the fallen enemy, eventually overtook those hundred of whom were dismounted and killed; on examining the dead bodies, it was believed that one of the slain was a rebel party. Some of the prisoners were examined and

communications with Kashgar seems to have been cut off by Auksú. The resident was shut up in the city with his troops and besieged for nearly two months. An imperial edict in these circumstances of its fall and confirms in part the ac-

counts we have already given of the origin of the war. The edict was addressed to one of the principal Boards in Peking; and is as follows :

“King Tseäng, the commandant in Ele, was twice sent to Kashgar to examine into the rebellious conduct of Changkihurh. He managed the affair so unskillfully that he was unable to penetrate to the bottom of it, and consequently to transmit to us a correct statement. We have thought upon his daily conduct in Ele, which has hitherto been distinguished by diligence and attention in the discharge of his duties : in consideration of which he was afterwards appointed resident of Kashgar. Six months elapsed before he inquired into or made any report of the real circumstances of Changkihurh, then wandering without his post, at the expiration of which time the rebels actually became possessors of the city. It now appears, according to the statements of Chang Ting and others, that the rebels surrounded and attacked Kashgar, upon which King Tseäng led out his troops and opposed them to the utmost of his power. In about two months the rebels dug a subterraneous passage to the city, and by that means entered it. Afterwards the imperial troops attacked them and killed many persons. But although all the ammunition of the imperial army was expended and the resident's resources entirely destroyed, he determined to sacrifice his life for his country, by maintaining his position till death. We weep over him, and deeply commiserate his fate. We command you to confer upon him the posthumous title of ‘guardian of the prince’ during his minority. We command the Board to consult and decide upon the manner in which our favor shall be extended, and inform us of the result. It is farther our royal pleasure to command you to introduce the resident's eldest son at court, and allow his family to return to the capital, after a hundred days of mourning are completed. We likewise command the governors of the four provinces, Kansuh, Shense, Honan, and Cheile to appoint officers to take charge of his family, and also to show our abundant liberality by rewarding them with a thousand taels of silver.”

A Peking Gazette of December 1826, contains a report by Changling of a victory over a division of 3000 of the rebels near Aukú; but it is not quite clear that it is not the same, although differing in some particulars, as that already reported by Yang Yuchun. “The rebels,” he says, “opposed for a time the imperial troops; but they were out-maneuvred and thrown into confusion. Hoochaou, an adjutant, went from the ranks, and killed several of the rebels in personal combat, upon which the troops advanced and killed the larger half of the enemy. The rest fled, but were pursued and cut to pieces. Seventy men were afterwards taken prisoners and fifty two women were found. Five leaders were discovered amongst the slain, whose heads were cut off by the conquerors and carried away. A great number of muskets, horses, cows, and sheep were taken.” A subsequent dispatch says,¹⁹ that the prisoners confirmed the report of a number of the rebel leaders having fallen in the battle of Aukú, who had come from Yarkand and other places. It is probable that after this, the

sted the operations on both sides. The Peking Gazette speaks of the soldiers suffering from cold, and later read that the snow had terminated the first year's cam-

Obstruction of the lacrymal duct. Lew Akong, aged 47, came to the hospital on the 11th July, with an obstruction of the duct of the left eye. Opened the sack, for a few days with lint, injected it with sol. sulph. cupri., and then removed the stilet, which was worn for about six weeks. The discharge ceased, it was removed. The aperture soon healed, and the eye is completely restored. Two other persons have been treated at the hospital, and are now under the same treatment for the same affection.

Sarcomatous tumor. Leäng Ashing, aged 27, an artisan, came to the hospital August 5th, having an enormous tumor upon the right side of his face, extending from near a line

UNIVERSITY OF MICHIGAN LIBRARY

with the zygomatic process superiorly, to two inches below the submaxillary inferiorly, and from an inch behind the ear, and standing about four or five inches from the side of the face. It was 18½ inches in circumference. It had been growing for more than ten years; by the application of cauterly, (the moxa is commonly used,) it had been converted into a loathsome ulcer at its apex. Though deep-seated, it appeared practicable to remove it. The patient's constitution had not then suffered much, and there seemed no objections to delaying the operation till cool weather should return. At the expiration of more than two months, the man came back, and to my great surprize the healthy countenance had given place to the sallow and cadaverous expression of one fast verging to the grave. The tumor had become exceedingly fetid, and so decayed internally as to admit a probe three or four inches in different directions. After the system had been braced up for a short time by a course of tonic treatment, the patient was apprized of his situation, the certainty of a speedy death if left alone, the possible unfortunate termination if extirpated, and the encouraging prospect that he might live for years if he submitted to the operation. He referred it to our discretion. Himself and his brother gave a writing, certifying that they requested the removal of the tumor, and if successful should rejoice; but if otherwise, it was *teñ che ming*. 'the will of heaven,' or fate, and no blame would be incurred by the operator. On the 8d of November, assisted by Drs. R. H. Cox and J. Cullen, and W. Jardine, esq., the tumor was extirpated successfully, in about nine minutes. Some portions of the masseter and buccinator muscles were divided, also numerous small arteries, but two of which required a ligature. It weighed twenty-five ounces avoirdupois, and was fast tending to mortification. Some days previous, his bowels had been regulated, and twenty minutes before the operation, twenty-five drops of laudanum were given. During the incisions through the integuments and the dissecting out of the tumor he did not move a muscle, change a feature of his countenance, or draw one long breath, so that apprehensions were even entertained that he was insensible; but if spoken to he answered deliberately and correctly. Subsequently he informed me he was sensible of all that was done, but putting his arms across each other, he said, "I determined not to move." In passing the sutures near the ear, he started involuntarily a few times. On raising him up to change his bloody clothes, he began to faint and was threatened with spasms, but soon recovered as he was laid down, and carb. amm. applied to his nose, and wine and water administered. After being put to bed, he complained of thirst. There was some oozing of blood from the wound. At 3 P. M., pulse was 120, its average for some days before. Treatment: in the evening, the patient took congee and chamomile tea. Pill. hyd. grs. x, and pulv. Dov. grs. v. At 9 o'clock, pulse 96. Patient complained of a swelling on the side of the neck; and I found that some blood had settled beneath the platysma myoides, and on pressure that there was emphysema. Applied a spirit lotion over the part.

Disease of the alveola process, &c. Chang she, aged ; Her case is introduced, not so much on account of

the disease as of the patient. On the 10th of October, an officer sent his compliments and desired me to see his wife who had an affection of the face, intimating also that it would be most agreeable to meet me in a boat. The hour was appointed, and the next morning a servant of the hoppo came to wait on me. A splendid boat had been provided in front of the foreign factories, with carpets and brilliant chandeliers, tea, sweetmeats, &c., &c., every thing in due order, for the occasion. An officer of high rank stood at the door. Stepping upon the boat, a servant took the umbrella from my hand, and held it over my head. The officer and his wife were each accompanied by three or four personal servants, male and female, who seemed to be regarded as friends, and members of their family, beside other supernumeraries. He was an active and apparently intelligent man. Hearing the emperor's name mentioned, enquiry was made to know why, and I was informed that my patient was of *imperial blood*. Her female attendants were all of Tartar descent. It immediately occurred that her features resembled the likeness I had previously seen of Taoukwang. Her dress was splendid. Her head was decorated with flowers, and abundance of gold. Ornament of various kinds were suspended about her person, among which were some superb specimens of crystalized rose quarts. No rouge was upon her face, and her feet were of natural size. The females that attended her were not much inferior to her in the richness and elegance of their persons and dress. For six months this lady had suffered much pain in the lower jaw. The face was swollen, and an abscess of the alveola process was formed. Several of the teeth were loose. Two of the lower double teeth were extracted, which afforded her immediate partial relief. She complained of rigors that occurred at 12 o'clock every night. The symptoms have been palliated and she was once reported convalescent, but soon after had a relapse. She is still under treatment, the nature of her disease being explained and she apprised from my first seeing her that it would require time to effect a cure.

No. 1992. Anomalous. Wang Le she, aged 49, a native of the province of Chihle and wife of the chefoo of Kochow foo, who is a member of the Hanlin college at Peking; she came to the hospital on the 18th of October. Once a beautiful woman, she is now a most unpleasant looking object, apparently from the mal-practice of a Chinese physician. She states, that originally she had a turning in of the eyelashes. The physician applied a split piece of bamboo, nipping up a portion of the skin of the upper lid, and letting it remain on, till the portion sloughed off. When in a sloughing condition, he applied a medicine which acted as a poison, and the new disease, thus created, extended to the nose, over the whole face, upon the top of the head, to the left ear, and under the chin, and was still in progress when she came to the hospital. The nose was reduced nearly to a level with the face and its septum destroyed, uniting both nostrils in one. The lips partook of the disease and were no longer able to cover her teeth. The crown of the head was covered with one large scab,

ft ear. The lungs were affected, and without cough, and constantly. The edge of the eyelids with the hairs iterated and adhered to the ball of the eye; there was rnalny for the tears. The discharge from the surround-upon the cornea, and came off like scales; still she was light. The patient could turn her eyes as far as the the lids would allow. The treatment commenced with a l and rhubarb, and after that, 5 grains of the compound synth was administered daily for some days. Emollient applied to the head, ear, and chin: poultices made of ere also applied over the eyes at night. On changing the parts were well cleansed with casteel soap, and warm at, gave a lotion of the solution of sulphate of copper (4 ce), and the red precipitate and citrine ointment were y applied. Under this treatment, on the 5th November, quite arrested; the head and ears threw off the scab, with glistening skin beneath. The bone has not been af- have been repeatedly applied over the lungs, tincture of re of squills, and wine of antimony, have been adminis- . She expectorates less than formerly, and her whole much improved. She now remains in the hospital, and to have the eyelids detached from the globe of one secretions can be restored, there is a prospect of con- vement of her vision. A son, twenty-one years old, ied her, had long been afflicted with an extensive ulcer of his foot. Of this he has a prospect of a speedy and

Amputation at the shoulder joint. Absorption of the enlargement of the arm. Po Ashing, aged 23, entered the 3d of November. Six years since, he fell from broke the humerus of the left arm, half way from he shoulder, the lower portion passing upwards and nion so far took place as to render the arm service- 6ths since, in a crowd at a "sing song," it was again hat time, according to his statement, the arm gradual- till it had attained its present enormous size. Beside he weight of it drew him quite one side; at several d ready to burst; the skin was bright and glistening, passing over it were numerous and much enlarged. oublet if its containing fluid, and though no pulsation prehensions were entertained that the tumor might ismal nature. November 14th, assisted by Messrs. dine, and Bonsall, I punctured the arm, supposing might contain pus, and that the necessity of amputa- ided; yet prepared, if disappointed in this, to remove pening the abscess, a dark greenish fluid escaped, e force, but soon became darker and more bloody. were first discharged, but the character of the fluid e. In the hope that the blood was from some

small vein divided by the incision, and that there was deep-seated pus, the lancet was reëntered nearly its whole length; but the same discharge continued with a greater proportion of venous blood: thirty-two ounces in all were discharged, and the aperture closed. All were agreed that the only chance of life was in the removal of the arm; but the exhaustion of the patient and absence of his father induced us to postpone the operation till the next day, unless subsequent symptoms forbade. At 3 o'clock P. M., it appeared that the tumor, which had been diminished by opening it, had attained more than its former size, and supposing that the vein which had been opened was emptying itself into the tumor, and that there could be no safe delay, the operation would have been performed immediately but for the absence of the patient's friends. The next morning (Nov. 15th), the circumference was still but thirty inches; the integument having reached its maximum of distention, it appeared as though the fluid was insinuating itself beneath the integument about the shoulder joint, increasing the difficulty and hazard of the amputation. It proved, however, to be mere tumefaction. The father and friends of the patient had come, and given the agreement usual in cases liable to fatal terminations; and the patient had recovered very much from his previous exhaustion.

At 11 A. M., the gentlemen present the preceding day were ready, and all things were prepared for the amputation. The patient was seated in a chair supported around the waist by a sheet; the tourniquet was applied, also the subclavian artery secured by an assistant; a single flap was formed as recommended by Liston, the extent of the disease not admitting the use of the catlin as practiced by Cooper. With a large scalpel, two incisions were made commencing on either side of the acromion process, and meeting at the origin of the deltoid muscle, which was immediately dissected up: the capsular ligament divided, the head of the humerus turned out of the socket, and another stroke of the knife upwards dissevered the arm from the body. A gush of blood pointed out the axillary artery which was readily secured. The time did not exceed a minute from the application of the scalpel till the arm was laid upon the floor; the patient was then put upon a bed, and the pressure upon the artery removed. An excellent flap was formed, and dressings were applied as usual. Afterwards the patient threw up the brandy and water and other medicines.

The best representation of the arm after amputation, so far as shape is concerned, is that of a large ham of bacon. It weighed sixteen cabbies, equal to 21½ pounds. Opening the arm at the place where it was punctured the preceding day, a dark coffee-colored fluid gushed out. There were eight or ten ounces of coagulated blood in the cavity first opened, which was bounded by a cyst that formed the walls of others. It resembled cerus membrane. Opening other cavities, there was a similar discharge and a quantity of matter resembling putrid crassamentum, of a light and purplish color, or like the disorganized lungs of persons who have died of pulmonary consumption. Some of the cysts contained nearly half a pint of fluid, &c. Traced the

from the axilla to the forearm, and also the veins. They were small, about one tenth of an inch in diameter, and their branches also small. The radial nerve was considerably exposed, the bone was *entirely absorbed*, except an inch of each end from these small portions a few spicula of bones projected from the head of the humerus it appeared, till we discovered the whole bone, as if nature had formed a new joint and a cavity within the head of the humerus. There were no abscesses in matter, but the abscesses collectively were surrounded on the back of the arm by a firm cartilaginous wall like the osseous, with tendinous fibres passing in every direction like the ligament. The muscles were much diseased, and their tendons were stiff and of cartilage, which near the elbow, was three or four times the thickness. From the elbow downward, the muscles of the forearm were oedematous, and considerable adipose substance was present under the integument. All who were present pronounced it the most remarkable they had ever seen. The first Chinese, so far as I know, who has ever voluntarily consented to the amputation of a limb.

P. M., the patient having awoken from sleep, asked what Congee was given. The expression of his countenance was cheerful, spoke with a natural voice, complained of cold, though the room was of a good temperature, the skin feeling natural, with a slight redness upon the forehead. Not much oozing from the wound, the pain, and he was quiet: his pulse was 126. With the evening, I watched all night with the patient. At 1 o'clock he wished to know if he might eat chicken. He occasionally fell asleep, and when awake, spoke of his arm as if it were his own. From four till five o'clock, he slept quietly, and made no complaint, though there were some febrile symptoms, and his pulse was 110 and the skin dry. At 6 o'clock sponged his body with water and oil of Castor oil. Pulse from 4 o'clock 110: bowels moved once during the day, and all the symptoms became more favorable. On the 18th, the wound was dressed and found to be united, nearly the whole length of the incisions. Most of the dressings were removed. On the 21st, the dressings were changed, the remaining sutures slipped, and the wound had the appearance of a large open sore. Patient walks his room, his general health is strengthening, and his strength fast restoring. His gratitude, and that of his family, are deep and sincere.—In this place I desire to express my acknowledgments to Drs. R. H. Cox, J. Cullen, and W. Jardine, esq., who have afforded me their able counsel and assistance. I should not think it my own feelings not to acknowledge the untiring interest of Dr. Cox has taken in the operations of the hospital during the course of his assistance upon each day for operations, and his kindness toward than that of *doing good*.

which it is possible to become the occasion of hurrying to the invisible world, and that in a moment, is leaving behind him but a fair hope of possibly retarding his exit to

Literary Notices : 1, *Madras Journal of Literature and Art*, 2, *an Historical Sketch of the Portuguese Settlements in the East Indies*, by sir Andrew Ljungstedt.

press is steadily and rapidly increasing its power and influence thereby an assurance that ere long the wants and interests of that country will be fully made known. The number of the Journal before us [No. 12, July 1836,] is replete with interesting information : it is "published under the auspices of the Madras Literary and Auxiliary Royal Asiatic Society," edited by the Rev. Mr. G. G. G. of the Asiatic department, and contains 240 octavo pages. It contains a full account of the customs and practices of the murderers called *Battaks*, and a most remarkable chapter in the history of the human race, in which the murderous fraternity seems to extend throughout India, and the proceedings are unparalleled : "one man alone has given rise to the murders of upwards of nine hundred individuals, and his children, that he was engaged in." See art. vii. The purpose soon to give a summary of this account. The number of the Journal, contains some valuable remarks on the language, origin, &c., of the *Battaks* in Sumatra. Mr. Newbold (one of the writers of the remarks,) says, that sir Andrew appears to have been misinformed when he described the *Battaks* as being "one extensive nation," whereas "the fact is, that the *Battaks* consist of many tribes, under as many chiefs, inhabiting, principally that part of Sumatra which lies between Achin and the Dutch empire of Menangcabowe." Their population is "between one and two millions." Their alphabet, consists of nineteen letters, "which in power resemble those of the *Búrgis*, and the *Jávans*." According to Marsden, it is written from the left to right; and according to Dr. Marsden, from the bottom to the top. Lieutenant N. inclines to the latter opinion, that the "characters are written, generally, in a direction opposite to that of the Chinese, from bottom to top : an analogy to the *Tagála*, or *Philippine* characters." He says, that at the language is supposed to be one of the most ancient, and, "if we may credit the *Battacks* themselves, it is one of all other languages prevalent in that vast island." The remarks of lieutenant Newbold, and from the alphabet and characters to which they refer, the Rev. W. Taylor, the author of the "*Oriental Historical Manuscripts*," has been of the opinion that, "perhaps, the *Battas* may be descendants of the *Thists*, who were, several centuries ago, driven from Sumatra, especially from peninsular India, by Braminical persecution." Taylor gives his reasons for this conjecture; but we do not quote them. He says, moreover, it appears that the *Battak* are of the same race as the *Battas*. Authentic information, touching the

literature, language, laws, manners and customs, &c., of the Battaks, is indeed "a great desideratum in the history of Eastern Asia."

2. *An Historical Sketch of the Portuguese settlements in China; and of the Roman Catholic church and mission in China.* By sir Andrew Ljungstedt, knight of the Swedish royal order Waza. With a supplementary chapter containing a description of the city of Canton, republished from the Chinese Repository. Boston: James Munroe & Co., 1836. pp. 356.

The "contributions" of which this work is composed have been noticed in former volumes of the Repository. The book forms a very valuable addition to the history of Eastern Asia. The Author of it in a prefatory note thus speaks: "Placing an implicit confidence in the judgment of enlightened friends, who were pleased to think that the two Historical Contributions, concerning the Portuguese settlements in China, principally of Macao, distributed (in 1832, and 1834) among them for the purpose of gratifying general inquisitiveness, might be of some public utility, I resolved to revise my Essays, correct mistakes, enlarge the view, and connect occurrences in a natural series of chronology. That the size of the little work may not swell by extraneous digressions, nor by my own individual reflections, all my exertions have been confined within the limits of simple and faithful narration of facts, leaving to the reader his right to exercise, at discretion, the faculties of his own intellect on the subjects under consideration. They are examined under distinct heads, and in chapters, that any inquirer may satisfy his curiosity by referring to the place alluded to, and decide on their relative merit."

The prospectus of the work was published in our third volume. See page 533. The net proceeds of the book were devoted by the Author to the support of a free school in Sweden. Not many months after the publication of his prospectus, we received the following sad intelligence in a note from Macao: "J. G. Ullman is very sorry to inform you of the decease of his very worthy friend, sir Andrew Ljungstedt on the 10th of November (1835) at 10 o'clock in the morning: aged 76 years, 6 months, and 17 days." The aged man took a great interest in the free school, which was established by himself; and it was his ardent wish that his "little book" might do something for its support: that wish we trust will be realized.

ART. VII. *Memorial of the Glasgow East India Association to the Right Honorable Lord Viscount Palmerston, secretary of state for foreign affairs, &c.*

DURING the current year, several memorials have been presented to the British government, from different parts of England and Scotland, most earnestly requesting that "immediate and energe-

may be adopted for the extension and protection with the Chinese. We are heartily glad to see such and we hope they will be continued, and the memoriated, until they produce their desired effect. One of s from the people of Glasgow, which has been noticed in the Register and Canton Press during this month, is an en of the whole. We have not space, nor is it ne- te it entire. After adverting very briefly to the pre- of affairs in China, the memorialists set forth "the vileges" which they desire to have secured to the ritish empire, in the following summary.

communication with the supreme government at Peking, as against the oppression of its subordinate authorities: also authorities at Canton, as a protection against the inferior s and merchants.
nton, not only for the individual merchant but for his wife

adiction to at least the extent of securing proper discipline r own ships.

gn residents in China should be regarded as with- l governmental laws, it is difficult to understand: ct: for while the Chinese government have adopt- that it is right to control them without laws, no fords any protection to the residents here. While ition of affairs, we do not wonder that British sub- t in their memorials. With propriety, the people —and there are millions who might well join them

rialists beg humbly to represent to your lordship e of things which ought not to be allowed to con- a minor trade, much less with one of such impor- not only to the individuals concerned, whether as merchants, or ship owners; though in all these nterest claims the most serious attention; but to ally, in respect to the article of tea so universally e had nowhere else, to the revenue which could ill so valuable an item, and to India both in its reve- ce. Your memorialists, and others concerned in the persons the most deeply interested in preserving ons with China, but they cannot conceal form your themselves, that every aggression on the part of the

Chinese only emboldens them to grosser acts of outrage and injustice, that our tame acquiescence in the fate of his majesty's representative, lord Napier, has brought the British name into contempt—and that further attacks may certainly be looked for, which, if now unprovided against, will issue in the most disastrous consequences.”

ART. VIII. *Journal of Occurrences. Fires in Canton; seizure of incendiaries; review of juvenile troops; order for changing caps; imperial envoys; offensive proclamation; expulsion of foreigners; Kumsing Moon; Lintin; crew of the brig Fairy.*

FIRES were very frequent, in various parts of the city and suburbs, during the first part of the month. Shameen, a place of ill fame, notorious for fires, has been burnt through and through; once in the day-time, and once in the night; on the latter occasion, many of the unhappy inmates of the boats perished; and others were kidnapped. The loss of property was small.

Several *incendiaries* have been seized, and dealt with according to the tenor of the laws, which sometimes, when the accused is found guilty, require death.

A *review of juvenile troops* took place on the military arena east of the city, early in the morning of the 27th instant. The scene, as described to us, was novel: the lads, from five to ten years of age, forty in number, all accoutred like true sons of Mars, and furnished with light matchlocks, were drawn up in eight squads, under the *pá ke*, or eight banners, and in presence of the Tartar commandant. After performing various manœuvres, and firing several rounds of blank cartridges to the great amusement of crowds of spectators, the young heroes were dismissed, “each rewarded with a great round dollar.”

An order has been published by the lieutenant-governor, directing that the *summer-cap be exchanged for the warm winter-cap*. The change was to take place on the 3d instant. The order was intended only for the governmental people.

The *imperial envoys*, long expected, have not yet arrived. It is reported, on good authority, that one of them has been recalled to the capital.

The “*offensive proclamation*,” so often and justly complained of, has been recently pasted up within the enclosure before the consoo house; and there it remains for all eyes to gaze at. It is published in the name of the governor and the hoppo; and dated the 4th instant.

An *expulsion of several foreigners* from Canton is to take place on, or before the 7th proximo, and that of the whole foreign community, at some indefinite future time;—*else* their excellencies, the governor, lieutenant-governor, and hoppo, must “eat their own words;” there are no two ways: for they have put forth an edict, declaring that foreigners cannot be allowed to remain in Canton long after the departure of their ships, nor even in Macao beyond a convenient season of the following year (after the departure of their ships); and further, that nine individuals, whose names they mention, must, within half a month from the date of their edict (Nov. 23d, 1836,) “hastily pack up their effects and remove from the provincial city;” in default of which “their houses are to be sea ed up.” Such are their orders; and “they are on record.”

Kumsing Moon, in consequence of a representation to the governor from a deputation of the gentry of that vicinity, is to be henceforth forever closed against foreign vessels. This too is “on record.”

The *fleet at Lintin*, moreover, is to be annihilated, all the “scramuling-dragons” and “fast-crabs” laid up, and the smugglers themselves hunted out and exterminated.

At a distance all this fulmination may look terrific; but here, hitherto, it has appeared to be no more than a shower of rockets in a mild summer's evening.

The *crew of the brig Fairy* has not yet been rescued; nor the fate of the brig ascertained; though every possible effort to effect both objects has been made on the part of her owners.

NESE REPOSITORY.

when the coasts of this country were far more open to
rise than they have been during the past century;
ray be not distant when they will be so again.

outline of the Chinese coast has long been well known
eing delineated, with a considerable degree of accura-
s drawn up by the Jesuits. The useful surveys of cap-
d Maughan, between 1810 and 1816, and the observa-
ring the embassies of Macartney and Amherst, have
ainted with much of the southern coast, and with the
in the north. But if we except these, and the surveys

made in the early period of our intercourse with China, we must allow that we have hitherto remained almost wholly ignorant of the many fine harbors which the coasts and islands of Fuhkeän and Chekeäng afford, and even of the few celebrated ports which enrich by their trade the other maritime provinces. Within the last few years, our knowledge has been considerably increased by the voyages of the Lord Amherst in 1831, and of several other ships, in part before, but chiefly since that time.

The coast of China, at all times, has been noted for the number and daring of the pirates who infest it. Foreign ships, when in distress and disabled, have often been attacked and plundered by these pirates, whom the government of the country is unable to repress or punish. Nor are instances wanting of their openly attacking foreign vessels, even when not disabled. Keeping in view numerous melancholy facts confirmatory of these assertions, and beholding the extent of the trade of England and America with China, it seems passing strange, that neither of those great naval powers have yet taken any measures for the protection of their people in this country. In the Mediteranean, on the coast of South America, in the West Indies, in the Indian seas, and in other places, it is thought necessary to have squadrons constantly cruising; while on the coast and in the seas of China, where a most valuable trade is carried on, under circumstances of great exposure, not a single vessel of either nation has ever yet been stationed. We are led to make these remarks, because we think that were three or four ships, English and American, to be constantly stationed here, they might profitably employ much of their time in visiting and surveying various parts of the coast, showing themselves in every port, as they claim the right to do in all other quarters of the world; thus gradually forming an acquaintance with the Chinese, and, by manly conduct, convincing them that they are, as they profess to be, for protection and not for rapine. In this way, at little, if any, additional cost (for it will not, probably, be necessary to put any more vessels in commission for the purpose), protection may be afforded; geographical science may be greatly advanced; and, without any direct political aim, our national intercourse with the people and government of China and the neighboring countries may receive material assistance. Moreover, national vessels thus employed, and attended by one or two small steam-boats would furnish an easy and ready mode of communicating with Peking, whenever such a course should be necessary.

But these reflections have led us, unconsciously, away from the subject before us: we must return, and enter into some details respecting the coast of China. First we will take a general survey, and will then notice in order all the principal places, and give such information as we can collect respecting each.

It has been remarked that China (confining the name to the eighteen provinces, or China proper,) is of circular form, having but a few interruptions, arising from projections and indentations. Its limits on the east and south are almost everywhere washed by the sea, and are

to its northern and western boundaries, which are with Mongol Tartary and Tibet. Looking at the coast from view its few irregularities of gulfs and promontories would say that the form of China is octagonal, rather than that the coast forms one half of the whole figure, with nearly equal sides. Starting from the mouth of the river of Cochinchina, which forms the limit between the Chinese and Cochinchinese empires, if we draw a line of latitude, in the direction of E. by N., with a slight curve, it will pass over the whole southern coast, excluding the bay of Luychow; which stretching southward is separated by a narrow strait from the island of Hainan. The point, at which this line will terminate, we may draw about six degrees and a quarter in a N. E. direction, to the limit of the province Fuhkeën. This line will cut all the islands of Fuhkeën, and will terminate at a small island marked in some maps as the Lesan islands. A third line, one degree and a half drawn due north, from the northern point of the embouchure of the Yangtze, will run along the whole coast, except the headland south of the river opening into the bay between the islands Chusan and Tsungming. A fourth line, seven degrees and a half, drawn from the mouth of the river of the Amoy, in the direction of N. N. W., will cut the promontory at its widest part, running nearly parallel with the coast, at a short distance off shore. From the termination of this line, the gulf of Chihle runs up northeastward to the narrow peninsula called the Prince Regent's sword and is bounded by the islands of Chihle and Mantchouria, about three degrees; meeting it about two degrees from its northern ex-

tent is well adapted to mark four different divisions of the coast. The first includes a portion, some part of which has been explored in a long time, and respecting which ample details are to be found in Horsburgh's Indian Directory. From the second to this portion we may reckon Hainan: to the east of the bay of Teënpih; with the islands Hailingshan, Há-shan, the river of Canton, &c. The portion comprised in the third line is that now frequented by the vessels engaged in the trade, including, among others, the island Namoa, the rich ports of Chaouchow foo, the ports and bays of Quemoy or Kimmoon, Yungning or Chimmo, Chinchow, Fuhchow foo, &c. To these we must add the bay of Formosa, and the harbor of the Pánghoo or Pescadore. The fourth line, after passing for some distance by a point to us, cuts through the centre of the Chusan group, in it the rich ports of Ningpo, Chapoo (the port of Ningpo) and Shanghai, the port of the whole province of Cheang. The fourth line touches but one known place, Teëntsin; there are several good anchorages on the southern coast

of the promontory of Shantung; on its northern coast, Weihai wei and Tanchow foo; and on the coast of Leaoutung, in Mantchouria, Kingehow and Kaechow. We will take up each of these divisions by itself, designating them severally, as the southern, southeastern, eastern, and northeastern lines of coast. Following this arrangement we will commence with

The southern line of coast. The most western portion of the Chinese coast is the mouth of Annan (or Ngannan) keang, at the northern extremity of the gulf of Tunking, or Tonking. This gulf was frequented by European ships, trading with Tungking, about a century and a half since; but the trade has long been discontinued, and only scanty information is extant as to the navigation of the gulf; the little that is known has been collected together by Horsburgh. The gulf is about 35 leagues wide, having the coast of Tungking on the west, that of Cochinchina proper on the southwest, with the promontory of Luychow and the island Hainan on the east, being open to the southeast. The western and northern coasts are said to be fronted by shoals and reefs, some of them projecting a great distance from the main land. A few streams flow into the gulf, from the province Kwangtung; and at the mouth of one of these is situated the chief city of the department Leénchow foo, in lat. $21^{\circ} 38' 54''$, lon. $37^{\circ} 29' 40''$ W. of Peking. From the difficulty that we find in gaining any information respecting this place, we infer that its trade cannot be considerable; and that it is probably carried on, for the most part, with Tungking and Cochinchina. Kinchow is the chief town of the district of the same name, and is situated on the river Kin, a few miles from its mouth in lat. $21^{\circ} 54' N$. The western coast of the promontory of Luychow is quite unknown. The strait that separates Hainan from the promontory is frequented by junks, and has, on its southern shore, Keungchow foo, the capital of Hainan and a place of considerable trade, situated at the mouth of the Lemoo or Limou. This river rises in the centre of the island, and running through a course of above a hundred miles, in a northeast direction, discharges itself into the strait, opposite to the southern coast of Luychow. The Hainan strait is intricate, and by native pilots is said to be unsafe for large vessels, being lined by sands and breakers. Keungchow foo is represented as a good harbor: it is in lat. $20^{\circ} 2' 26''$, lon. $6^{\circ} 40' 20''$ W. of Peking. The harbor of Keungchow is much frequented by Chinese junks, and some of them are supposed to be not less than 400 tons burden.

Hainan is a mountainous island, having however many level inland districts which are well cultivated, and on which are produced several tropical fruits that do not grow on the main land, in particular the areca or betel nut: the coasts produce cocoa nuts; and sponges of a very inferior quality are sometimes collected by the fishermen. The mountains are covered with thick forests, the resort of the aboriginal inhabitants, a race similar, it is said, to the mountaineers of Kwangue and Kweichow. Though nominally subject to the Chinese, the aborigines are so far independent that, in 1831, they were able to defy for

a large force led against them by the governor oferson. The Chinese inhabitants are chiefly descended from Fuhkeën, and are spoken of by Gutzlaff, during where he met many of them, in terms of high praise. nitors, they are a commercial race, traveling to all countries. The island extends 55 leagues in a N.E. on, and is about 35 leagues in breadth. Its northern coasts are little known, but are said to be lined extending 6 or 7 leagues from the shore. The coast id southeast is bold, and may be approached very ep water near to the headlands. There are several he south coast, affording good shelter from the north. These have been partially surveyed by captain Ross, from Horsburgh we derive almost the whole of the respecting them.—We purposely omit details of value igator, since Horsburgh's Directory must be in every d there have been no late visitors to furnish us with information. In all these harbors, there seems to be tting free supplies of good fresh water.

it-chew) is the chief town of the southern part of the rated a little way up the river, which falls into the bay ame, in lat. $18^{\circ} 21' 36''$ N., lon. $7^{\circ} 44'$ W. of Peking. ribed as having "some islets in it, and moderate depths ut exposed to S. and S. W. winds." The town is on of the river, which runs into the bay in a westerly eeding eastward, we pass Sychew (Sechow) bay, dishill with a pagoda on it, and exposed to southerly and

UNIVERSITY OF MICHIGAN LIBRARY

natives very inoffensive. The island abounds with wood fit for fuel, but none of the timber seems durable, or proper for ship-building."

Lingshwuy (Lieong soy), or Tungtse Point, variously named from two towns in its neighborhood, is distant about 24 miles from Galong bay, in lat. $18^{\circ} 22' 30''$ N., lon. 110° E. The intervening coast is a continued curve forming a considerable concavity, and having the town of Tungtse on the west, and that of Lingshwuy on the north. The latter is a place of some trade, situated near the head of a small lagoon, which is entered by a narrow and very shoal channel from the anchorage near Lingshwuy Point. This anchorage is very much exposed, and is safe only in the northerly monsoon. The surrounding country is well cultivated, forming a beautiful plain, with high land in the background. From this point, the eastern coast becomes more level, the high mountainous land being visible only in the distance. The land is better cultivated than on the south, and produces great numbers of cocoa nuts; from hence probably the coir is procured, of which Chinese ropes are chiefly made.

About ten miles E. by N. from Lingshwuy Point, is Teënfung, a cluster of large rocks, which, from one of them being higher and whiter than the others, has acquired the name of Sail Rock. It is thus mentioned in Gutzlaff's first journal: "on the 10th of July, we saw Teënfung, a high and rugged rock. The joy of the sailors was extreme, this being the first object of their native country, which they espied. Teënfung is about three or four leagues distant from Hainan." Beyond this, no place of shelter is met with on the east coast of the island, with the exception of a bay on the west side of Tinhosa island, in latitude $18^{\circ} 40'$ N., longitude $110^{\circ} 29'$ E., or $3^{\circ} 15'$ W. from the Grand Ladrone. In the neighborhood of this island is Manchow, or Wanchow, (the chief town of the district,) of which an account is given us by Mr. J. R., a gentleman, supercargo, in the East India company's service, who was wrecked on the coast in a typhon, in the course of a voyage from Macao to Cochinchina, in 1819. He reached the land about twenty miles S. E. from Wanchow. "The whole coast," he says, "as far as the eye could ascertain, was lined by a most dangerous reef of rocks, mostly high out of the water, and extending one league from the shore." Proceeding along the coast, if the weather be calm, we find ourselves sailing among fishing boats and stakes, until we have passed the island of False Tinhosa, the high mountain Tung'an, the Taya islands and Hainan Head; the last in latitude 20° N., and longitude $110^{\circ} 57'$ E.

Before finally leaving Hainan, we cannot refrain from subjoining a few remarks from captain Ross. "From my own observations (he says) when we were near the shore, and from the information of a very good Chinese pilot we had on board the Antelope in 1810, it appears that the East coast of Hainan does not afford any place of safety for a ship to anchor in, and the bottom was in many places mixed with coral rock. * * * In the few communications we had with the people of Hainan, they were found to be civil, and ready enough to part with refreshments when the mandarins were not present; but

ter appeared, they proved just as arbitrary and rapacious on the coast of China. From what I observed to believe that a number of bullocks may be obtained they appeared to be plentiful, though small. There are fishing boats belonging to Hainan, that are built of a heavy wood (instead of the fir of which the Chinese use), and that sail fast: many of them every year go on for two months, and navigate to seven or eight hundred miles home, to collect the *bicho de mar*, and procure dried fish fins, which they find amongst the numerous shoals that are in the southeast part of the China sea. Their departure is in March, when they visit the northern bank, and two of their crew and a few jars of fresh water, they visit some of the large shoals that are nearly in the vicinity, and continue to fish until the early part of June, when they pick up their small parties and their collections. We were told of these fishing boats when we were about the shoals of Hainan.

Between Hainan Head and Teënpih heën, forming the southern promontory of Luichow, is unknown to us. Chikong, frequented by the Fuhkeën junks on the northern side nearly opposite to Keungchow. Chetingfow, which is the name of Nowchow, probably from one of the neighboring mountains on one side of an estuary, into which flows a river of the same name, and some inferior streams. Several miles up the estuary is Hwachow, and still further the city Kaouchow. The point of the estuary is situated the town of Woochuen, which possesses a good but small harbor. Nowchow is desolate, as a small port, dangerous to enter; but when in distress it affords shelter. He adds that it was a rendezvous of the pirates, the *Maria*, a Portuguese ship, went into the place for captured by them. It is in lat. $20^{\circ} 58' N.$, long. $110^{\circ} 10'$. The trade between Fuhkeën and places west of Teënpih is of a very trifling nature, consisting chiefly of coarse sugar of cocoa nuts, ground nuts, and some other fruits, for which the people of Fuhkeën give in exchange their manufactures. The timber of Hainan is in great demand by the emperor; but some of the finer kinds are sent to Canton, and wrought into articles of luxury and taste. Teënpih, at which we now arrive, consists almost entirely of salt, manufactured by evaporation on the mud flats of the coast wholly dry at low water.

Teënpih (or Tienpak) was at one time, we believe, frequented by vessels as a place of trade; and is said to be, even here, a more hospitable reception may be met with, than is afforded at the ports of the south coast of China. The usual anchorage for vessels is under the hilly islands which lie off the bay of Teënpih. The Chinese harbor is nearer to the town, which lies at the mouth of the bay, and can be reached only at high water, in

boats, through canals intersecting the muddy flats by which the bay is filled up. The bay is surrounded by high land on the north, east, and south: a rivulet flows into it on the northwest, and wears for itself a channel, which affords depth of water sufficient for Chinese junks. Taefung keö, the outermost island in the roads, is in lat. $21^{\circ} 22' 30''$ N., long. $111^{\circ} 13'$ E. The town is walled, and is the residence of a magistrate: it is of considerable extent. Leaving Teenpih, we pass by a few unimportant islands till we reach

Haelingshan (or Huiling san): this is an island of considerable size, separated by a narrow channel from the main land on the north; having on the west a safe, but confined, harbor; and on the north-east an extensive shoal bay that has not yet been explored. The harbor of Haelingshan is formed by a high point of land called Mount Look-out and two small islands called Mamee chow, on the south; by other high land on the island, it is sheltered from easterly and N.E. winds, and by distant high land on the main, from westerly winds. Haelingshan is high and mountainous, but with some well cultivated places. One elevated peak is named Sugar-loaf hill. The main land in the neighborhood is mostly low, with high land seen in the distance. We now begin to perceive our proximity to the river of Canton; and are entering upon the extensive archipelago, which lying off the embouchures of this river, is frequently the resort of pirates, and for the most part inhabited by a class of people ready at any time to lay aside their peaceful occupations for the sake of plunder. In this neighborhood it is not difficult to procure a pilot, or to forward any letters to Canton. There has been more than one overland journey from Haelingshan to Canton, performed by shipwrecked Europeans; but from the constraint exercised upon them, they have gained but little information. The cases of the "Bee," captain Warden, and of the boat's crew of the "Argyle," are fresh in the memory of most of our readers.

The islands which extend from Ta-ou to the river of Canton form an almost unbroken chain, running nearly parallel for some distance with the coast of the main land, and separated therefrom by a channel, in some parts open and clear, in others nearly closed up by islands. Setting sail from the harbor of Haelingshan, and passing among several little islands—the Mandarin's Cap, Quoin, Tywok, and others—we leave on our left the bluff headland of Ta-ou, with its bay and fortified village, and enter the channel, which we have mentioned, on the north of Háchune, Heächuen or False St. John's. As soon as we have taken a cursory survey of this channel we will return and continue our course on the outside of this and the other islands.

Soon after entering the channel, we find on our left the town of Wangkaou sze, the residence of a civil magistrate. A little further, and nearly due north from Shangeluen or St. John's island, is the military town of Kwanghae wei, a place at which the Jesuits missionaries formerly, on some occasions, landed, at a time when their entrance into the country received the sanction of the government.

The high land which rises on the north and east shelters the bay on those sides. There is no harbor on the eastern side of the island.

About fourteen miles east from the S.W. point of Háchune is the south end of St. John's. Between these two, lies a group of islets called the Five Islands, which are the only interruption in a passage, free from all hidden dangers, and having from five to six fathoms water, on a soft ground. St. John's, or Sam João, received its name from its first visitors the Portuguese, by a slight change of the Chinese name, Shang Chuen. It is also called Sanshan, or as first written by Matthew Ricci, Sancian. The island is in length five leagues, N.N.E. and S.S.W., and, in coming from the east, appears as if separated in the middle, whence it has often been supposed to consist of two islands. There are several bays on its N.W. and western sides. That of Sanchowtang on the N.W., appears to have been the one usually frequented by the Portuguese traders, and is the place where St. Francis Xavier was interred. It was then called Tamáo, that is, according to Portuguese pronunciation Tángao, or Ta'aou, the great bay. The Portuguese first traded here in 1517. In 1521 they were expelled. They afterwards returned; but before 1542 they appear to have almost deserted it for Lampaçao, to the eastward. It was in 1552 that St. Francis Xavier died here.* Leaving the navigator to draw information respecting the other bays, and respecting the neighboring small islands, from Horsburgh, we will pass by Tykam, Coucock (which affords anchorage and shelter from N. and N.E. winds), Tymong, Tyloo, and Sanchow, or Santsaou, until we reach the island Wongkum, Hwangkin, or Montanha. Between this and Santsaou is the entrance to the Broadway, which we have before mentioned. Here we look in vain for the particular island, which, under the name of Lampaçao (Langpihisaou), was once, for several years, the residence of many Portuguese merchants.† None of the islands lying outside, between St. John's and the Montanha, afford sufficient shelter against all winds; and we must therefore seek for it within the entrance of the Broadway. It is strange that a place, where, in 1560, there were said to have been 500 or 600 Portuguese constantly dwelling, should now be entirely lost to the recollection of men living no further from it than Macao. The island was occupied by the Portuguese in 1542; in 1554 the trade was concentrated there; in 1557, Macao began to rise into notice; and 1560 is the latest date at which we find any mention made of Lampaçao; but it was then, apparently, a flourishing place.

The Broadway has sufficient depth to admit a large ship a considerable way up; and may therefore be useful in a gale to vessels that have parted from their anchors. The Montanha, Mackarera and the Lappa islands, with part of Heängshan, bound it eastward: Santsaou and several other islands, westward. All these islands are elevated.

We must pass rapidly through the well known harbors, and among the islands, in the estuary or gulf of the Canton river. With Tyloo

† See Historical Sketch, p. 9.

our left, as we enter from the southward, we have on east and Little Ladrone, and Pootoy; and further east, southward, Kypoong (Kepang), or the Ass's ears, station. Other islands of minor importance we omit to Ladrone, from its height and position is the standard islets entering by this passage. A navigable channel reat from the Little Ladrone. North of the last is 100), on the eastern side of which is a cove, where pany's large ships, drawing 21½ feet, on one occasion n in safety. Potoe, or Passage island, is a flat sloping ly in mid-channel, bearing N.W. by N. from the Lit-amcock (Sankeó) is a high island nearly opposite to astern side of the entrance. Facing it on the west, omee, and Ke-king and Typa quebrada (names of two ame island, the first is the east, the other the middle, th the Montanha and Mackarera, surround the Typa e anchorage is shallow, the bottom being soft mud: it the eastward, Apomee being on the south, and on the north: and the anchorage lies between the d and Mackarera, looking northward on Macao. Ma-wholly open and undefended. The inner harbor of w, and the approach to it still more so; but it affords mall vessels. The entrance to it is round the south The vessels lie very near the town, which is on the the opposite side is the Lappa or Padre island, called Tuymeen shan, where the Portuguese were formerly ide, but which is now inhabited only by some vil-, who are always ready to assault and rob stran-he Portuguese, whenever they suppose it can be done

in (Kinsing mun) is a fine bay on the eastern side of ad, about twelve miles north of Macao, from whence ed over land. It is defended by the high land of he south and west; on the north by a bar, over which ery light draft can pass; and on the east by the island , near to which the ships anchor, it being the only hat is not very shoal. The entrance is deep, close to re; but the approach is rather shallow.

age is on the southwest side of that island which , and is safe only during the northerly monsoon. From ; the opium laden vessels, which anchor there during ths, repair to Kumsing Moon, which is distant about e westward. Vessels sometimes anchor, after March e north side of Lintin.

· Bocca Tigris (in Chinese Hoo mun), the entrance ng or Pearl River, which flows by the city of Canton, y called the Canton river, is about 30 miles N. N. W. e pass the forts of Chuenpe and Anunghae separated n the right, and those of Tycocktow, Wangtong, and

Teafoo, on the left; and, safely piloted over the second and first bars, we find that we have exchanged the dreary barrenness of the coast, for an undulating, well cultivated, and closely peopled country. Having sailed nearly twenty miles up the river, we cast anchor at Whampoa, from which Canton is distant only about ten or twelve miles W. by N. We must now return to Lintin.

Proceeding in a S. E. direction from Lintin, we pass through the safe anchorage named Urmstou's harbor, on Toonkoo, and enter the anchorage of Kapshwuy (Capsing, or Cupsi) Moon, at the N.E. end of Lantao, having the high main land on the north, with several small islands westward, and having on the east only a very narrow and curving channel, between Lantao and the main. Till within two or three years past, the opium laden vessels used to anchor here from July till October, for shelter against typhons; but it was found an inconvenient place, the high land around screening it from the wind, and the under currents, called *chow chow* water, often detaining vessels without motion for many hours. Just after passing out of Kapshwuy Moon, towards the northeast, there is a bay protected by the island Chungyue on the south, which affords good anchorage, is perfectly land-locked, and was the principal rendezvous of the pirates in the early part of this century. It was examined by a party of English and American gentlemen last year, and pronounced to be one of the safest harbors in the world.

Lantao, in Chinese called Taseu, or Taeyu, 'large island,' is about fifteen miles in length, extending N.E. by E., and S.W. by W., and in its greatest breadth about five and a half miles. It is in some parts well peopled, and a fort has been erected on it, under the apprehension that the English desired to possess it. The peak of Lantao is the loftiest summit in the neighborhood; but foreigners have never yet been permitted to ascend to the top. The island forms the northern bound of the Lantao or Lema passage, the entrance for vessels from the eastward. The islands Lamma and Hongkong also lie to the north of this passage; while on the south are Chungchow, Lafsamee, Chichow, Lingting, and the Lemas, the easternmost islands of that archipelago through which we have been sailing ever since we left Haelingshan.

Passing out of the Kapshwuy Moon by the narrow channel, which we have mentioned, to the east of it we find ourselves a few miles north of the eastern or Lantao passage, by which we may at once communicate through the Lamma channel. On the west of this is Lantao, with several islets, and on the east are Hongkong and Lamma. North of Hongkong is a passage between it and the main, called Lye Moon (Le-e mun), with good depth of water close to the Hongkong shore, and perfect shelter on all sides. Here are several good anchorages. At the bottom of a bay on the opposite main is a town called Cowloon (or Kewlung): and a river is said to discharge itself here, a statement, the correctness of which we are disposed to doubt.

On the S. W. side of Hongkong, and between it and Lamma, are several small bays, fit for anchorage, one of which, named Heäng-

has given name to the island. Tytam (Taetan or s in a bay on the S.E. side of the island, having the s protection to the eastward, other parts of the island V., and several small islands off the entrance of the . It is roomy and free from danger.

n (Tatung mun) is a passage between the east side of a bluff point on the main land, off which is a small Tamtoo. It leads from the southward into the Lye orth of Hongkong. A little northward of the bluff point which will afford shelter during a gale. Taking a fresh hence we bend our course northward, with but a little d now trending in that direction, and enter Mir's y (Tapäng hae). This is a deep bay, of which the ore is but a few miles to the N.E. of Cowloon. The f Tapäng is not in this bay (to which it gives name), : side of a narrow piece of land by which this bay is : deeper gulf to the eastward. Mir's Bay affords good ts eastern shore, and shelter from all winds except l. S.W. and south.

e promontory which separates Mir's Bay from the ad- inlet, we pass Single island and Tooneang on the island on the east, and enter the gulf. On the left, y the promontory, is the town and harbor of Tapäng or he right, beneath an elevated point of land named Fo- fortified town of Pinghae, and a bay with a fine sandy larlem's or Pinghae Bay. At the bottom of the gulf are es, and an inlet called Fanlo keäng, at the head of rn is situated. This last cannot be approached, the shoal. Tapäng harbor yields to small vessels perfect o large ones protection from southerly winds. Har- s protection against a northern or N.E. gale; but can- ed safe in a typhon.

ded Fokai Point, we approach another bay, shoal per part. This is the bay of Hunghae, in the district pertaining to the department Hwuychow foo. It is h. On the east side is a town, Taeshame, or Tysam- er in a village named Makung. The anchorage in eshame is confined and the entrance shoal. Salt is a large quantities by evaporation.

ern side of Hunghae bay, distant 19 miles S. 42° E. it, and 49 miles eastward of the great Lema is a large med by the Chinese Taesingchan, and by foreigners . This name is often, from ignorance, written Pedro ñetimes also Pedro Branca.

Taeshame, we stand off a little from the coast to avoid here line the shore. The sandy and sterile appear- st is still almost everywhere retained. After a course les, we enter the bay of Kheeseak (Keësheih or Ke- on our left Shalung Point, with another headland, a

little to the northward; and on our right the rocky islets Seekat and Tungkat, and the fort and city of Keésheih called by Horsburgh Hieche tchin. This is a naval station; and here is a fleet of war junks, under the command of a vice-admiral. The bay has good anchorage, affording shelter from westerly and northerly winds, and from the N.E. monsoon.

Leaving Keésheih, we proceed along a sandy and hilly coast, turning a little to the northward of east. A point named Wootang (Ootong) projects a little from the otherwise unbroken beach, and on it is a fort. Beyond this, the coast curves slightly, and we find ourselves in the bay of Cupchee or Keatsze, if to so slight a curvature we can apply the name of bay. An arm of a river here disembogues, and on its banks, a short distance up, stands the town of Keatsze. "Cupchee," says Mr. Lindsay, when visiting it in the Lord Amherst, "is a walled town of some magnitude, and the river admits the entrance of large junks. Three war-junks of the largest size were lying here. * * * The general appearance of the coast (he adds) is barren and arid in the extreme. Little or no rice is cultivated; but the ground yields wheat, Barbadoes millet, various kinds of vegetables, and sugar cane. One of the principal productions appears to be salt, which is made by the evaporation of sea-water. Numerous salt-pans are to be seen in the vicinity of all the towns along the coast; they are laid out in plots of about 50 feet square, and paved with small red stones, which give them a neat appearance."

Beyond Keatsze, as we approach Breaker Point, we find an extensive sandy beach, slightly curved. At the deepest part, a small stream falls into the sea. On the left bank of it, a little way up, is Shintseuen, a large town, with numerous fishing boats. A few miles further on, in lat. $22^{\circ} 56' 45''$ N., long. $116^{\circ} 31' 30''$ E., is a low and rocky point, having within it some hummocks of black rock and red sand. The distance is about 23 miles from Keatsze, and nearly 50 from the Great Lema. This is Breaker Point. "The coast for several miles is here," says Mr. Lindsay, "one continued mass of sand; two hills of peculiar appearance, and nearly 400 feet high, were half covered with the sand, which looks like drifted snow."

A foul wind, and a heavy swell, with the rapid current running round Breaker Point, here retard our progress. At length, we weather the point, and forthwith bend our course to the northeast, passing by the cities Chinghae and Haemun, till we arrive at the Cape of Good Hope—so named, not from any similarity of appearance between it and the celebrated cape, but from similar expectations here indulged by the wearied navigator. Here we will rest, venturing to subjoin a word respecting the passage from the Lema to this place, trusting that on this and on all other points our nautical friends will oblige us with their corrections of whatever may be erroneous, and with their contributions, in wherever they have the means of supplying our defects. "The wind," a friend assures us, "blows for not less than nine months *down* the coast of Kwangtung province. A vessel coming out of the Lema channel, when such is

t always, if possible, to work up within about twenty
re. Repeated trials have proved the correctness of
r whenever ships have stretched out far to seaward,
acks, they have always had to encounter so much
and more heavy sea, that, their progress being wholly
ve found, when again fetching the coast, that they had

trial and execution; conclusion of the rebellion, &c.*

ar from the account of the first campaign in Chinese
en in our last notices, that the warfare was confined to
he country and the imperial troops. In the campaign
bout to describe, it will be seen that the empire was
ed from Kokan, and that the Chinese troops in their
eir own frontier, although the Chinese accounts, no
direct admission of the first fact, while they speak only
of the second. We learn it distinctly from the natives
selves, by means of accounts collected from some of
Wathen, the Persian secretary at Bombay; by Mr.
tical agent at Ludiána; and also by the information
rnes.

st gentleman we learn' that, after Jehangír's irruption,
of Kokan also, being irritated at the bad treatment
[ohammedan subjects of the Chinese, advanced with
ashgar, surprised the Chinese general in his canton-
t place, and cut up the Chinese army. The khojan
got possession of the city and fort of Kashgar; subse-
n's cavalry overrun the whole of Chinese Tartary, and
of Yárkand, Auksú, and Khoten. Jehangír, however,
us of the khan, and suspicious of treachery, drew off his
therly direction, and a large Chinese force advancing,
lew to his own country. The rebel was eventually
hinese, sent to the emperor, and cut to pieces in his
envoy was then sent to Peking (which the Usbecks
negotiate peace, which was made on condition of the
of Kashgar being subjected to the rule of a deputy of
matters of religion, the khan being allowed a share in
es, and binding himself to keep the Kirghís in subjec-
ist the Chinese in case of any insurrection in Chinese
future; ever since which time, the two governments

UNIVERSITY OF MICHIGAN LIBRARY

have been on the best terms, and a reciprocal interchange of presents takes place. The Chinese are said to keep a force of about 20,000 infantry in their Mohammedan possessions, of which 10,000 are stationed at Kashgar.

Two pilgrims stated, in a subsequent account, that, on getting back to Kokan, "our khan had just returned from his campaign in Chinese Tartary,¹ whither he had gone to assist the khojan Jehangír. Our prince in some degree failed in his expedition owing to Jehangír's not joining him cordially." A subsequent report,² by the same gentleman, estimates the khan's force at 8000 horse, with which he attacked Kashgar, in conjunction with Jehangír's troops, and carried it by storm. Khojan Jehangír then marched to Yárkand, where also he was well received by the inhabitants. The Chinese after sustaining several defeats abandoned the country. Encouraged by his success, the khojan then proceeded to Khoten and expelled the Chinese from that province. Whenever he made his appearance, the Chinese either gave way, or resisting were put to the sword. Thus Jehangír acquired possession of the whole country, which remained in his hands for five or six months; but abusing his power, he tyrannized over the people, and oppressed them. He became in consequence disliked, and was not supported by the inhabitants in opposition to the Chinese, who returned with an army estimated at about 60,000 men, besides many Kalmuk horse.

Being unable to check their progress, the khojan retired to the mountains, and his Kirghís and Andajan allies retired to their own countries, carrying away with them property of immense value, of which on the approach of the Chinese they had plundered the inhabitants. Shortly afterwards Ishak, khojan of Kashgar, being jealous of Jehangír, betrayed him into the hands of the Chinese general at Auksú. For the service which Ishak had rendered, he received from the Chinese the office and title of wang or prince of Kashgar. The real cause of the defeat of Jehangír was, that the Usbecks of Chinese Tartary were divided into two tribes, the Ak Tak, to which he belonged, who are of the Nagsh-bandi sect, and the Kura Tak, who are Kadaries, and who never cordially joined the other. Khojan Ishak was the chief of the latter. Sometime subsequent to his being appointed governor of Kashgar, he was called to Peking, and never heard of after. It is supposed that the Chinese were afraid of his influence, and that he was got rid of by poison. Mr. Wade's account agrees generally with the foregoing. He says,³ that the population of Kashgar, Yárkand, and Kokhan, consists of two tribes; the one is called Agh-taghlag, and the other Karataghlag, (the white and black capped Mahommedans of the Chinese), when the Chinese troops arrived from the recovery of Yárkand, the Aghtaghlags were all on the side of the khojan; in revenge of their adherence to whom, the Chinese authorities slew all their males, gave their females and children to their own countrymen, and sent them into distant parts of China. Of the Karataghlag, such as favored the khojan were killed, and the rest set at liberty. The information gathered by Burnes in his Travels in

such to the same effect. He reports the Chinese seen 70,000 men.' "A great portion of the soldiers have large matchlocks, each of which was borne by two

now with the Chinese account of the same events, as known, which will be found to corroborate the above principal circumstances.

After the first campaign, seems to have been employed in endeavoring to gain over the rebels. A report by the Peking Gazette of February 22d, 1827, informs us,⁵ that Khoten had induced the rebels to give up four of their leaders and to put one hundred of their followers to death. They had an altar, dedicated to the heroes who had died during the four leaders to death before it, as a propitiation to the fallen warriors; which the emperor approved of, and to those who delivered up the rebel chiefs. By a subsequent we learn,⁶ that Changling proposed to put the grand army on the 26th of Feb. It was to advance in separate divisions later, a victory is announced. "After the preceding operations," says our authority, "in which, by the official account, 40,000 and 50,000 were slain or made prisoners, the rebels collected the *ashes* of his army, to the amount of more than 100,000, who ranged themselves on the mountains, in the form of a wall near the village of Wapatih." Changling divided his army into wings also, and advanced. The rebels maintained a position which they were attacked vigorously with musquetry. They then kept up a fire with the wind in their favor. The Chinese then dashed through the smoke to attack, but Changling's 'tyger battalion,' which repulsed and threw them back.

The rebels then brought forward⁷ a reserve of troops in *garments*; but they were met by a body of troops from the north, and put to the rout. Between 20,000 and 30,000 were slain, with some of the principal leaders.—We omitted, in our account of the population of Chinese Turkestan, to notice that Mr. Meadows gives⁸ to the Khoten territory a population of 700,000 who pay tribute. We must believe this in order to give credit to the Chinese returns of killed and prisoners, even when we consider the Kokan contingent, to which the red-coated soldiers belonged.

The victory at Wapatih was followed by two other victories on the part of the imperialists, according to the Peking Gazette of the 25th of Feb. The first took place at Yangouspatih, when the Jehangirites and their army with 50,000 men, and also harassed them. They gave way, however, after a fire of musquetry and then made a determined stand again the next day at Shakang. The Chinese then divided and attacked them on two different quarters, and routed them. Upwards of 10,000 were slain and 10,000 taken prisoners; a great number of horses, cattle, and camels were captured. Three days after the foregoing dispatches,

another arrived at Peking, containing an account of a third victory. Notwithstanding their former losses, the enemy are now described⁸ to have upwards of 100,000 men, who had collected at Shapootour, and posted themselves advantageously on the bank of a rivulet, whence they made sudden attacks with their cavalry, whilst they kept up a fire of musquetry and cannon. The imperial troops kept up an equally hot fire, whilst some crossed the river and attacked the enemy sword in hand. One of their leaders, Sihtepaurhte beat the drum (the signal to advance, the gong sounds the retreat), and made a desperate resistance. The imperial cavalry was ordered to charge in detachments cross-wise into the enemy's ranks, and break their line. Spears and arrows fell like rain. Pechung, a horseman in armour, killed Sihtepaurhte with an arrow, when the rebels fell into confusion and were dispersed. The cavalry pursued them thirty *le*, to the banks of the river Kwán. They had there a few thousand men in reserve, who were attacked and routed. Two thousand cavalry and infantry, stationed on the west of the river, charged to support the others; but a tremendous fire from our (the imperial) cannon defeated and routed them. The killed and prisoners of the enemy were not less than 40,000 or 50,000 men, besides arms and horses innumerable, that were captured. No mention is made of the loss of the emperor's troops, but a report, on the subject from the governor's office in Canton, says the translator, makes the killed 20,000 men!

The emperor praised the commander-in-chief and generals of division highly, and bestowed rewards of a purple bridle and the order of kungyay (dukedom) on Changling, and the title "guardian of the heir-apparent on the two next in command." To the inferior officers he gave the Tartar title patooloo, with such epithets as brave, valiant, enterprising, &c., along with presents of archery, thumb-rings, swords, &c. The subsequent accounts⁹ of the battle state that all the Mohammedan villages and their inhabitants along the course of the Yangtama river were afterwards exterminated by the imperial troops.

Rumors in Canton affirmed¹⁰ that, after this, his majesty's forces sustained a defeat, which seems not improbable by the tenor of the account in the Peking Gazette of the 1st June.¹⁰ Subsequently to Jehangír's adherents in Khoten being given up by their brother Mohammedans, he placed, it is admitted, 1500 men in ambush, who cut off and destroyed a few Chinese and Mohammedans. General Yang Fung upon this advanced to attack the same or another party of rebels, who were drawn up at Pelamun, and beat the drum, and met the attack, opening at the same time a fire of small arms and cannon. Yang Fung ordered his cavalry to charge, and at the same time sent a party of troops to attack the enemy in the rear. At this moment a rebel leader on horseback, clad in a garment of variegated colors, was seen to advance, holding a red flag in his hand, which he waved as a signal to his followers to come on. The imperial troops advanced boldly to the charge, when suddenly another chieftain, holding a flag and followed by five or six hundred horse, dashed out from behind a sand-hill, when musquetry and arrows blended, swords and spears met each

ntchou (Kirin) troops now rushed to the fight. One but two of the officers seized the party-colored leader I brought him off. The imperialists, upon this, pushed rebels fled in confusion. They were pursued to the city *te*, and 4,300 were slain, and 1600 taken prisoners. y, the pikih (beg) of Khoten came out with 1000 dered the place to the emperor's commander. In this Gazette, there were taken cannon, colors, spears, musd bullets, unnumbered; and powder in great quantity.

in the variegated garments, spoken of above, was most r of the Kokan contingent. "The Usbecks," says ght to appear before their kings in a mottled garment adrus, made of the brightest colors, which would be y but the Usbeck." We do not find what became of f, unless it be the same,¹¹ named Koosootookih (called io was shortly put to the slow and ignominious death n of his brothers, and twenty-five followers at Woo- y are said to have first rose in rebellion. Koosootoo- ife, and four children, of the Púlútih tribe, were sent Ele. "Such punishments," says the emperor, "glori- e laws of the land and cheer men's hearts."

Pelamun seems to have been the last affair of impor- king Gazette, of the 1st July, mentions¹² that Yárkand on the approach of the grand army, through the ourman, a member of the imperial blood, and had den of the principal rebels, and one hundred and sixty seized. General Yang Yuchun put these men to an ath on the cross.

appear at this time whether Kashgar had surrendered or not, but a rebel named Chohour is said¹³ to have y to collect the remains of his party, and offer despe- to a party sent against him by Yang Yuchun; but they yed. The emperor issued his commands, on the 27th he army to be withdrawn from Turkestan, leaving only ; principal cities. He takes occasion to affirm¹⁴ that ,000 rebels had been slain during the war, and many a prisoners.

collected for the use of the army were ordered¹⁴ to be ed price to the Tartar tribes, to save the expense of back; and the commissariat on the frontier applied aels,¹⁵ to bring back the army. Changling was also to Peking, and to deliver up the seal of his extraordi- in, upon which was engraved "the general appointed id wide a dread of the imperial power."

Jehangir had escaped. So far before as the 12th May, sty had complained in the Gazette¹⁰ upon this subject. e said, a large force under the command of generals ng Yuchun and Woolungah, for the extermination of was no difficult matter for them to take towns; but to

catch the rebel Jehangir was the object which could alone restore peace to those regions and manifest the just punishment of heaven. This day, continues the emperor, an express has been received stating that Yungkishaurh was vigorously besieged by his troops, but no certain information was gained of Jehangir. The generals, he adds, have not imitated my diligence, or they would not have been so remiss. It is right for me to punish them. Let the purple bridle be taken from Changling, and the lately conferred titles from the others.

Jehangir was reported¹⁵ to have escaped into Yingkihurh, a foreign country, whither the troops had followed him; but some time afterwards all intention of pursuing him beyond the frontier was nominally abandoned,¹⁶ and an army of observation was proposed to be kept at Kashgar to watch him. Every means was, no doubt, taken to gain information of the rebel chieftain's movements, and we learn¹⁷ that on one occasion the khojan Ishak captured four Eleuths and a rebel spy from whom some intimation of Jehangir's movements was gained. Their information¹⁷ seems to have been correct, for, on the 9th of March an express, which had traveled 800 *le* a day, reached Peking to announce Jehangir's capture. In the month of February, says the emperor in his proclamation¹⁸ on the occasion, the rebel formed a coalition with many of the Púlúti Khirgis and entered the frontier; but he was opposed by 400 of the black-capped Mohammedans and retreated again beyond the frontier. General Yang Fung pursued him to a mountain, where he pressed upon him and killed 200 of his men. Jehangir charged at the head of 300 cavalry, but was attacked by an ambuscade in the rear and all his followers killed but about thirty, who ascended the mountain. An officer named Hoo Chaou pursued him at first on horseback, but as the mountain was high and slippery, and the rebels had quitted their horses, he dismounted likewise and pursuing on foot killed five of the rebels. The rest rolled down the mountain and escaped, except ten who stood by Jehangir. Yung Fung with a large party now pressed on him on one side and Hoo Chaou on the other, and the latter seized him with eight of his followers, after Jehangir had attempted in despair to cut his own throat.

In the excess of his joy at this event, the emperor created Changling an hereditary kung (duke). "I bestow upon him," he continues, "the right to wear a precious stone on the top of his cap, and a round (instead of a square) dragon-badger on his breast and back; and restore to him the rank 'great statesman in the imperial presence.' I confer upon him the right to use a purple bridle; to wear a double-eyed peacock's feather, and I loosen from my own girdle two purses to bestow upon him, and an archer's white gem-ring from my own thumb. I give also a white gem-feather-tube for his cap; a white stone symbol of felicity and prosperity for his sash; and a pair of yellow-bordered, coral-studded purses, together with four smaller ones to hang there." Honors were also bestowed upon the other officers, and upon the black-capped Musselminn who assisted at the capture. The emperor issued, moreover, a thanksgiving manifesto¹⁹ on the occasion, as follows:

the tripod of our dynasty was firmly established, his has often displayed, gloriously, spiritual and divine, the commander-in-chief, reported last year, when ited insurrection, and the rebels advanced as far as our troops attacked them, a gale of wind suddenly the air with flying sand and dust. Then the rebels saw a red flame illuminating the heavens, and they were taken prisoners. On another occasion, whilst Chang-g on the imperial forces at Hwan river, the rebels up during a whole night, till a violent tempest arose, s availed themselves of, and dashed in among the re-innumerable multitude of them were taken, and had off. The next morning the rebels all confessed, that midst of a red flame, large horses and tall men, with te utterly unable to contend; and hence they were

All these manifestations have proceeded from our d relying on the spiritual Majesty, and glorious pow-who silently plucked away the rebels' spirits; and ize alive the monster of wickedness (Changkihur), and quilize the frontiers. It is therefore right to increase tion to Kwante, in the hope of ensuring his protection ility of the people to tens and hundreds of thousand of y order the Board of Ceremonies, to prepare a few e the title of Kwante as an expression of gratitude for f this god. Respect this."

r Keäking laid claim to a similar manifestation of favor during the rebellion in 1813.—His majesty now tion to the punishment of Jehangir. The only observa-find respecting his personal condition is that, when ode upon a grey horse, wore a blue goldthread silk ts which were made of leather. He was immediately ng.

f the previous year, which has been already quoted in ír's genealogy, was now directed expressly to the Mus-ting to inform them, that the order for the seizure of cle, and all his family, was in consequence of their being 1, and both of them descended from rebels, and that it 1 other Mohammedans who might be peaceable and pective occupations. Peking for interment, and his family restored to the White Mongol standard, to which had been attached before the rebellion.

Jehangir's wife and two other women, with an old man of his family, were at this time²⁹ living with the Haou Han tribe of Kirghis, who were ordered to deliver them up. A nephew who had been sent³⁰ the year before by the pihkih (beg) of the Haou Han, under charge of a servant, to join his uncle Jehangir at Kashgar, was captured by the Chinese. The servant was ordered by the emperor to be detained until after Jehangir's arrival, to give testimony to his identity, and then to be decapitated. The nephew being under twelve years of age, was to be confined until he attained his sixteenth year, when further orders would be given about him. The youth may very likely be Pipakih, whose death is mentioned at the same time with that of Abdalah.

In the meanwhile Jehangir was on his way to Peking. Yang-Yuchun, who was now governor-general of Shense and Kansuh, reported³¹ in June, that the prisoner had reached the frontier of his province, and that he had behaved well so far, and was preparing his dress in order to appear before the emperor. He arrived at the capital on the 25th, as appears by an edict of the emperor in which his majesty proceeds to say:³² "I devoutly look up and implore the help of heaven, and the protection of my ancestors. To-day I have descended to the gate, received the prisoner, performed the rites, and I am filled with consolation and with profound awe." He then goes on to confer on Changling the title of guardian of the prince, with the privilege to wear a three-eyed peacock's feather. He also bestowed honors and rewards to the nobles and officers of Peking, and gave half a month's pay to the soldiers. The following day the great ministers of state and the military council assembled to try the prisoner, and the emperor examined him in person. We have unfortunately no authentic account of the examination, but it was rumored that the emperor said to him: "your ancestors received many favors from our imperial house but were ungrateful, and you also have ceased to be thankful in daring to excite a rebellion." Jehangir answered, "I am not a rebel. The eight Mohammedan cities were the residence of my forefathers, I merely endeavored to recover them: how can this be called rebellion." He was found guilty, as may be supposed, and sentenced to the slow and ignominious death, and his head exposed to the public. "Let the sons of these officers, let the assistant ministers of state," says the emperor, on the occasion, "the presidents of the Boards and the imperial attendants &c., go and witness the execution. King Tse'ing, who killed himself when Kashgar fell, and general Woolungah, who died in the ranks," (we shall presently see that he was only missing) "when surrounded by the rebels, both owed their deaths to Jehangir. Our hair stands on end to think of his destroying our great officers. I command that the sons of these two officers go to witness the execution, to give expansion to the indignation which has accumulated in their breasts, and let the rebel's heart be torn out and given to them, to sacrifice it at the tombs of their fathers and thus

thful spirits." The execution is reported to have immediately, but we have no further account of it. Later we have a long imperial manifesto of thanks and rewards, which commences by setting forth the duty of former emperors in not exterminating the whole world. It then goes on to give an account of the rebellion, unfortunately is not translated entirely, in the most classical style, says the reporter, that the language admits. Then comes the expression of gratitude by adoration and sacrifice to heaven and the square earth; to holy ancestors; to the mountains and rivers; to the mountains and rivers; to the hills and valleys; to the empress dowager, &c. The five and four great rivers of China are to be sacrificed to in commemoration. Also the tombs of the emperors of all dynasties, and to Confucius in his native province.

The tombs of ancient emperors and kings are to be sought out by the governors of provinces; the deceased parents of military officers are to receive titles of honor; generals who have fought for their country, are to be promoted to higher ranks; students at the national college are to have their names inscribed on the tablets. All the military in Peking, whether Tartar or Chinese, are to receive a month's extra pay; all who were blameable when the grand army passed through the provinces, if not guilty of plundering the public stores, are to be pardoned; troops at Kashgar who owe money for clothing, are to be pardoned to repay it; wounded and old soldiers are to be pardoned; soldiers, who can no longer serve, may get a release from the army and receive the pay. All offenses not capital, are to be pardoned. Tartar soldiers who have deserted are to be pardoned, if they did not carry off their arms and horses, and are to be repaired at the expense of government; hos- tages, widows, orphans, and childless old men, are to be pardoned.

The emperor closes with language of gratulation, declaring that by the occurrence of these events, happiness throughout the universe is diffused, and that the news be published in such a way that the canopy of heaven may hear. "Oh how pleasant," says the emperor, "the blessing of peace and tranquillity which has descended from on high! The glories of the empire are diffused throughout the universe. I inherit the splendors which the illustrious ancestors originated. I have received an ocean of felicity from the triad of the impartial powers, heaven, earth,

and the hero who had procured the emperor all this felicity, have been at this time upwards of sixty-six years of age," says the emperor, "and honored. The emperor ordered him to be met, on his return to Peking, at the bridge of Lookow and conducted in a palanquin, where a banquet was to be conferred upon him in the light and splendor, where a prince is usually nominated

successor to the throne. He was shortly afterwards appointed³⁰ secretary of state for the frontiers.

The second in command during the war, Yang Yuchun, had an image of Budha sent³¹ to him on attaining his 70th year, with an inscription written by the emperor himself, to place over his gate, and the words 'prosperity and longevity' to adorn his hall, together with a Tartar necklace of beads and pieces of silk, &c. The inscription states that he had served three emperors with diligence. Similar presents were sent to his wife. Upon receiving these things, the old people laid them upon an altar, and burning incense upon it and kneeling with their faces towards the palace, *ko-towed* the emperor.³² And similar honors were also conferred on general Yang Fung on attaining his 60th year.³³

Buttons and peacock's feathers, as marks of rank of the fifth, sixth, and seventh orders, had been bestowed³¹ very freely by the Chinese commanders upon the Mohammedans during the war, of their own authority. The residents were now ordered to examine into the title to wear these honors, and to report the same to the Board of Rites. The buttons were ordered to be connived at, but the feathers were to be plucked from the caps of those who were not authorized to wear them. At the suggestion³¹ of the governor in 1830, a button of the fifth order and a peacock's feather were bestowed upon the officers in command at the thirteen stations on the frontiers, but they were to be taken away on their leaving their stations. Many of these honors were subsequently bestowed³² upon the Mussulminn begs by the emperor, at the suggestion of Nayenching, who had succeeded Changling as commissioner. On a similar recommendation³⁵ a button of the sixth rank, and a peacock's feather, were given the following year to a chief of one of the Búriat tribes, who had exerted himself against Jehangír

Having rewarded the meritorious, his majesty proceeds to punish the offending officers. Two, one of whom belonged to the imperial kindred, whose misconduct led to the loss of Kashgar, were tried³ at Peking in 1827, and sentenced to decapitation. The emperor ordered one into solitary confinement in a house, and the other into a prison until the autumnal assize.

General Woolungah, who was supposed to be dead at the time of Jehangír's execution, if there be no mistake in the name, was perhaps captured only, for he now appears³⁶ again in Peking. He declared to the emperor that his sickness, which had prevented his being present at Jehangír's capture, had also cost him the merit of planning it, which Changling had usurped. It was he, he said, who proposed to push the cavalry beyond the frontier, and engaged the black-capped Mohammedans to assist in the pursuit. The emperor sided, however, with Changling, and degraded Woolungah for defamation to the rank of colonel in the imperial guards: his son also was superseded and banished from the precincts of the palace. He appears to have acted afterwards, however, as resident at Khoten, for we find him superseded there the following year.³⁷

tion of Changling,³⁰ his majesty confiscated the lands and houses of a great many of the families of Auk-sü, created in the rebellion. Eighty-one estates, four hundred, and fifty-seven fruit-gardens, were ordered to money applied to rebuild the walls of the town. The walls also were rebuilt,³¹ and the town extended by means of property. New cantonments near the principal city were ordered to be built³² by the same means.

The eight cities were even changed. Thus Wooshih, seen to have been named by Keënlung "endless treason," now baptized 'Foolwa,' "soothed and converted," and others. Some Chinese, who had assumed³³ the Moslem dress, their tails and married Mussulman women, were punished, though no law existed against it. The emperor ordered laws to be put in force to punish all similar offenses in future.

For punishing and preventing, his majesty endeavored to repair the damage done by the war and prevent the recurrence of the evils which it had caused. The usual levies of grain on the eight cities were reduced³⁴ to 7, on which occasion the emperor regretted the destruction of the gardens and houses, which the war had caused. The emperor was concerned in the destruction of the gardens, that a part of the tribute of the eight cities consists of goldthread stuffs, &c., which is sent annually by an officer to Peking. The tribute of grain from the eight cities amounted³⁵ in 1829 to 16,200 catties of copper from the eight cities, which had been worked by the troops since the labor was now found to be less productive, than that of the country. The tribute of cloth also was remitted³⁶ to Khoten in 1827. Changling, before he was aware of the necessity of a supply to carry on the barter with the Kussaks and the Kirghis, and cattle, which had increased considerably in that country, had already supplied 20,000 pieces of cloth of its own manufacture. The governor now recommended that the cloth should not be remitted in consequence of the remission of tribute, lest it should be a disadvantage to the contributors to whom it was sent; he proposed that it should be added to the credit of next year's tribute.

The edict of October 1828³⁷ contains an imperial order to be sent to the Kirghis, carried on heretofore with the Kirghis at the frontier beyond Ele; because it was considered necessary to prevent the recurrence of the Kirghis's rebellion. The quantity of tea taken thither for supplying the military and inhabitants of Orountchi, which is usually smuggled across the frontier, is stated to have increased to three hundred thousand catties. Governmental officers were therefore appointed to supply the military and to have the control of the residents. The smuggling trade was chiefly by the Kirghis of Gantseihyen, through whom the Kirghis had organized his rebellion. Such of these people as were allowed to remain there, but not those of other tribes, nor apparently among themselves: those

who had been there less time than ten years, were ordered to move out of the country.

This interdict seems to have been extended⁴⁰ to Turkestan as well as Soungaria,³⁹ and indeed to all the countries beyond the Keäyu Pass,⁴¹ and barriers were erected at eight different places on the frontier to prevent the ingress and egress of the traders, and the military employed in the same object. Several officers were shortly afterwards degraded³⁸ for admitting a foreign trader into one of the towns. Some Pülütih Tartars were also detected³⁵ in bartering piece-goods and goldthread for tea, and banished into China. The tea belonging to Kussak wang (king as he is called by the translator) named Keängcho, was also seized,⁴² and he sent his son Pokihle to beg it back. The resident referred the case to the emperor, who was pleased to restore it to the wang in consideration of his respectful conduct, and the son was allowed to take back the tea, but an escort was sent to watch him over the border. Especial attention is, however, called to the Antseyen, who are on no account to be permitted to trade. The only exception to the interdiction, was⁴⁴ in favor of the Haou Han tribe of Pülütih, the same with whom Jehangir took refuge. They were allowed to trade at one place only, where two hundred soldiers were stationed, and the traffic was to be confined to barter, and the prices of every thing fixed by authority. If either Chinese or Mohammedans were found to be buying goods with money, the property was to be confiscated, and the parties punished. It may be supposed that these absurd regulations did not last long. Chalungah who succeeded Nayenching at Ele, reported³¹ in 1830 that the tea remained on hand, and the horses and sheep to be bartered for it did not come in, and the honges were consequently abandoned, as we shall see presently. The imperial duty on the goods⁴⁷ had always been one thirtieth part, but the Chinese residents had been in the habit of remitting the duty in part or altogether, they were now ordered to exact it rigorously.

To enforce the new regulations and maintain the peace of the country, 6,500 additional troops had been left in Chinese Turkestan after the war,⁴⁷ with the intention of withdrawing 2,000 at the end of three years, and 2,000 more after five years. On Nayenching representing, in 1830, that the Mussulminn tribes both within and without the frontier were tranquil and happy, the troops were ordered to be withdrawn at shorter periods. The emperor required an account from the officers at Ele, of the state of affairs at the close of every year. Every newly appointed officer was to report the information he had acquired, within three months after his arrival; and every military officer in a separate command was allowed to communicate privately with the emperor, without consulting with or informing his brother officers, especially when he reported upon those who extorted money from the people. The governor had already admitted⁴¹ that previously to the late rebellion, the officers of government had continually distressed the people by their exactions. He recommended on the same occasion that the taxes and fees in the public courts should be reduced,

ror allowed, and he also sanctioned a series of appeals up to the resident, and once a year finally to the su-Peking; but care was to be taken that the complaints the appellant be punished for false accusation.

2830-2831-2832-2833-2834-2835-2836-2837-2838-2839-2840-2841-2842-2843-2844-2845-2846-2847-2848-2849-2850-2851-2852-2853-2854-2855-2856-2857-2858-2859-2860-2861-2862-2863-2864-2865-2866-2867-2868-2869-2870-2871-2872-2873-2874-2875-2876-2877-2878-2879-2880-2881-2882-2883-2884-2885-2886-2887-2888-2889-2890-2891-2892-2893-2894-2895-2896-2897-2898-2899-2900-2901-2902-2903-2904-2905-2906-2907-2908-2909-2910-2911-2912-2913-2914-2915-2916-2917-2918-2919-2920-2921-2922-2923-2924-2925-2926-2927-2928-2929-2930-2931-2932-2933-2934-2935-2936-2937-2938-2939-2940-2941-2942-2943-2944-2945-2946-2947-2948-2949-2950-2951-2952-2953-2954-2955-2956-2957-2958-2959-2960-2961-2962-2963-2964-2965-2966-2967-2968-2969-2970-2971-2972-2973-2974-2975-2976-2977-2978-2979-2980-2981-2982-2983-2984-2985-2986-2987-2988-2989-2990-2991-2992-2993-2994-2995-2996-2997-2998-2999-3000-3001-3002-3003-3004-3005-3006-3007-3008-3009-3010-3011-3012-3013-3014-3015-3016-3017-3018-3019-3020-3021-3022-3023-3024-3025-3026-3027-3028-3029-3030-3031-3032-3033-3034-3035-3036-3037-3038-3039-3040-3041-3042-3043-3044-3045-3046-3047-3048-3049-3050-3051-3052-3053-3054-3055-3056-3057-3058-3059-3060-3061-3062-3063-3064-3065-3066-3067-3068-3069-3070-3071-3072-3073-3074-3075-3076-3077-3078-3079-3080-3081-3082-3083-3084-3085-3086-3087-3088-3089-3090-3091-3092-3093-3094-3095-3096-3097-3098-3099-3100-3101-3102-3103-3104-3105-3106-3107-3108-3109-3110-3111-3112-3113-3114-3115-3116-3117-3118-3119-3120-3121-3122-3123-3124-3125-3126-3127-3128-3129-3130-3131-3132-3133-3134-3135-3136-3137-3138-3139-3140-3141-3142-3143-3144-3145-3146-3147-3148-3149-3150-3151-3152-3153-3154-3155-3156-3157-3158-3159-3160-3161-3162-3163-3164-3165-3166-3167-3168-3169-3170-3171-3172-3173-3174-3175-3176-3177-3178-3179-3180-3181-3182-3183-3184-3185-3186-3187-3188-3189-3190-3191-3192-3193-3194-3195-3196-3197-3198-3199-3200-3201-3202-3203-3204-3205-3206-3207-3208-3209-3210-3211-3212-3213-3214-3215-3216-3217-3218-3219-3220-3221-3222-3223-3224-3225-3226-3227-3228-3229-3230-3231-3232-3233-3234-3235-3236-3237-3238-3239-3240-3241-3242-3243-3244-3245-3246-3247-3248-3249-3250-3251-3252-3253-3254-3255-3256-3257-3258-3259-3260-3261-3262-3263-3264-3265-3266-3267-3268-3269-3270-3271-3272-3273-3274-3275-3276-3277-3278-3279-3280-3281-3282-3283-3284-3285-3286-3287-3288-3289-3290-3291-3292-3293-3294-3295-3296-3297-3298-3299-3300-3301-3302-3303-3304-3305-3306-3307-3308-3309-3310-3311-3312-3313-3314-3315-3316-3317-3318-3319-3320-3321-3322-3323-3324-3325-3326-3327-3328-3329-3330-3331-3332-3333-3334-3335-3336-3337-3338-3339-3340-3341-3342-3343-3344-3345-3346-3347-3348-3349-3350-3351-3352-3353-3354-3355-3356-3357-3358-3359-3360-3361-3362-3363-3364-3365-3366-3367-3368-3369-3370-3371-3372-3373-3374-3375-3376-3377-3378-3379-3380-3381-3382-3383-3384-3385-3386-3387-3388-3389-3390-3391-3392-3393-3394-3395-3396-3397-3398-3399-3400-3401-3402-3403-3404-3405-3406-3407-3408-3409-3410-3411-3412-3413-3414-3415-3416-3417-3418-3419-3420-3421-3422-3423-3424-3425-3426-3427-3428-3429-3430-3431-3432-3433-3434-3435-3436-3437-3438-3439-3440-3441-3442-3443-3444-3445-3446-3447-3448-3449-3450-3451-3452-3453-3454-3455-3456-3457-3458-3459-3460-3461-3462-3463-3464-3465-3466-3467-3468-3469-3470-3471-3472-3473-3474-3475-3476-3477-3478-3479-3480-3481-3482-3483-3484-3485-3486-3487-3488-3489-3490-3491-3492-3493-3494-3495-3496-3497-3498-3499-3500-3501-3502-3503-3504-3505-3506-3507-3508-3509-3510-3511-3512-3513-3514-3515-3516-3517-3518-3519-3520-3521-3522-3523-3524-3525-3526-3527-3528-3529-3530-3531-3532-3533-3534-3535-3536-3537-3538-3539-3540-3541-3542-3543-3544-3545-3546-3547-3548-3549-3550-3551-3552-3553-3554-3555-3556-3557-3558-3559-3560-3561-3562-3563-3564-3565-3566-3567-3568-3569-3570-3571-3572-3573-3574-3575-3576-3577-3578-3579-3580-3581-3582-3583-3584-3585-3586-3587-3588-3589-3590-3591-3592-3593-3594-3595-3596-3597-3598-3599-3600-3601-3602-3603-3604-3605-3606-3607-3608-3609-3610-3611-3612-3613-3614-3615-3616-3617-3618-3619-3620-3621-3622-3623-3624-3625-3626-3627-3628-3629-3630-3631-3632-3633-3634-3635-3636-3637-3638-3639-3640-3641-3642-3643-3644-3645-3646-3647-3648-3649-3650-3651-3652-3653-3654-3655-3656-3657-3658-3659-3660-3661-3662-3663-3664-3665-3666-3667-3668-3669-3670-3671-3672-3673-3674-3675-3676-3677-3678-3679-3680-3681-3682-3683-3684-3685-3686-3687-3688-3689-3690-3691-3692-3693-3694-3695-3696-3697-3698-3699-3700-3701-3702-3703-3704-3705-3706-3707-3708-3709-3710-3711-3712-3713-3714-3715-3716-3717-3718-3719-3720-3721-3722-3723-3724-3725-3726-3727-3728-3729-3730-3731-3732-3733-3734-3735-3736-3737-3738-3739-3740-3741-3742-3743-3744-3745-3746-3747-3748-3749-3750-3751-3752-3753-3754-3755-3756-3757-3758-3759-3760-3761-3762-3763-3764-3765-3766-3767-3768-3769-3770-3771-3772-3773-3774-3775-3776-3777-3778-3779-3780-3781-3782-3783-3784-3785-3786-3787-3788-3789-3790-3791-3792-3793-3794-3795-3796-3797-3798-3799-3800-3801-3802-3803-3804-3805-3806-3807-3808-3809-3810-3811-3812-3813-3814-3815-3816-3817-3818-3819-3820-3821-3822-3823-3824-3825-3826-3827-3828-3829-3830-3831-3832-3833-3834-3835-3836-3837-3838-3839-3840-3841-3842-3843-3844-3845-3846-3847-3848-3849-3850-3851-3852-3853-3854-3855-3856-3857-3858-3859-3860-3861-3862-3863-3864-3865-3866-3867-3868-3869-3870-3871-3872-3873-3874-3875-3876-3877-3878-3879-3880-3881-3882-3883-3884-3885-3886-3887-3888-3889-3890-3891-3892-3893-3894-3895-3896-3897-3898-3899-3900-3901-3902-3903-3904-3905-3906-3907-3908-3909-3910-3911-3912-3913-3914-3915-3916-3917-3918-3919-3920-3921-3922-3923-3924-3925-3926-3927-3928-3929-3930-3931-3932-3933-3934-3935-3936-3937-3938-3939-3940-3941-3942-3943-3944-3945-3946-3947-3948-3949-3950-3951-3952-3953-3954-3955-3956-3957-3958-3959-3960-3961-3962-3963-3964-3965-3966-3967-3968-3969-3970-3971-3972-3973-3974-3975-3976-3977-3978-3979-3980-3981-3982-3983-3984-3985-3986-

or allowed, and he also sanctioned a series of appeals to the resident, and once a year finally to the suking; but care was to be taken that the complainants be punished for false accusation.

The foregoing measures of pacification and the inflicted upon the Mohammedans, their spirit was there was another attempt at rebellion in 1830,⁴² but been speedily put down, by the apprehension and re of the ringleaders. A few months latter, Chalungah e had seized a band of robbers who had been ening the public granaries and treasuries, and stealing ported convict was at the head of it, who had before r robbing the Akemuh (office of the tribute gatherer ad escaped the law. He had now planned to burn r to rob it, but his intention got wind and a soldier him, who discovered that his designs were deeper, t rebellion. He was immediately seized, but we hear The information must have been true, for the sol- to have the first vacant command of 1000 men, and and officers of the city, who had neglected to get ation of it, were ordered to be tried by the Criminal

s affair was reported⁴³ in the Peking Gazette of the 0, in the shape of a report from Chalungah, which Kashgar in twenty-seven days, to announce an irrup- yen Kirghis, the same tribe whose trade was stop- said to inhabit a country about 150 miles northwest or the 23d of October, says the reporter, the Gazette's rs and appointments in reference to this insavio. dered off again to take the chief command in Tur- gah and Yang Fung as his council.⁴⁴ Yang Yuehun powers granted him, and two millions of taels placed dilitate the passage of the army across the desert

of the 10th of November contains the substance of Peichang, who seems to have been the superior resi- and Khoten. He says that a party of insurgents of 0 in number, had arisen and assailed the villages; his militia, consisting, beside his soldiers, of traders, victs, and repulsed the 10,000, with a loss to them of and 50 or 60 prisoners. He attributed his success quets and portable guns. On the 28th of the same or complains⁴⁷ grievously of Yungngan who had been all the troops he could from Ele and the neighboring ed to meet the insurgents or invaders. Instead of to say that the enemy were in great force, and he prudent to confine himself to the defence of Auksú, tly to Soungaria, and await a reinforcement. The ady given an order for Yungngan to be sent under

homes, but to be there under the supervision of the y. The campaign appears to have terminated here, air way to Turkestan were consequently recalled.⁵⁴ ho had been instructed to inquire into the cause of ade his report,⁵³ and attributed it to the expulsion of the rs and the interdiction of the export of tea and rhu- icking. Upon receipt of this report, the emperor de- hing from his title of 'guardian of the heir apparent,' im of the peacock's feather and the purple bridle; and moreover to a court-martial, which sentenced him to m the service. We have already shown that these same eceived the imperial sanction, and the honors,⁵⁴ men- ad some of them been bestowed upon him in conse- emperor's approval of those measures. It seems to of the government to sacrifice an officer whenever its n unduly excited, or its measures unattended with

nt of the effects of Nayenching's restriction of trade 1 vol. 1, p. 383 of this work, where it is affirmed, how- did not originate with him. According to a statement merchant there given, it appears, that he himself had s of 2,000,000 catties of tea through his hand, annually, 00 taels duty to government, which had entirely ceas- eration of the law. The trade with the Búriats was eclared⁵⁵ to be free from all imposts whatsoever. The rkand a few years later, required further powers to en- ish the Chinese traders who cheated the foreigners; ing foreigners is a more serious matter to the state, than ating another.⁵⁶

rought Yungnagan, who was Nayenching's son, and the under him to a court-martial, and sentenced⁵⁷ him to eal to the emperor, who confirmed the general's sen- oned the officers who acted under his orders. Seven part in the rebellion were executed⁵⁸ the following year, ilies given as slaves to those Mohammedans who re- their allegiance.

ants of Kashgar and Yungkishaur were unable to pay grain for 1831 in consequence of the calamities of war, used.⁵⁹ Several regulations were made for the better f those colonies, which we have before mentioned; that of the removal of the principal residency from irkand; but it was omitted to be mentioned that it has stored to Kashgar⁶⁰ on account of its being a greater for the surrounding foreigners. Changling returned to is the end of 1832. He seems to have been ill assured of of the western provinces; for before leaving he had re- 000 taels to be deposited in Shense,⁶⁰ to meet the exigen- y, for which the only occasion seemed to be, another of horse banditti, as they are styled, who killed some

Mohamedan begs and their followers, who ventured to attack them. He also required stronger garrisons, and additional civil officers in some of the cities, particularly Wooshe and Auksú. His precautions were not without reason, for, besides the above attempt at invasion, another insurrection broke out at Khoten, in 1832,⁵¹ and an attempt was made to take the city. Two of the begs had received honors from the emperor, and their servants who refused to join the rebels, were put to death, and continued, says the resident Peihchang's report, to rail at their murderers as long as they had breath.⁵² The leader of the rebels, Mawakih and his accomplices, amounting altogether to twenty persons, were put to a slow and ignominious death, and their heads sent all round the Khoten territory, 'to illustrate the law of the land.'

This is the last attempt at insurrection in Chinese Turkestan, as far as our information goes. The country suffered severely no doubt, during its previous struggles, and we find⁵³ that it was unable to pay its contributions during the years 1832, 1833, and 1834, and incurred a large debt to the imperial exchequer. We find also on the same occasion, that Yárkand had previously been accustomed to supply 40,000 taels annually to defray the deficiencies of the mountainous and barren districts of Ele and Tarbagatai. In confirmation⁵⁴ of this account of part of those districts, we have the resident at Wooleyasoo, a place near the Altai mountains, soliciting, in 1831, a supply of rice, wheat, flour, tea, and cloth from Kooching, which is between the former station and Ele, on account of the severity of the climate and shortness of the summer, which unfit it to supply its own food by agriculture. The emperor ordered 100 camels to be employed to convey the requisite necessaries, but at the same time desired that the value of the articles should be deducted from the soldiers' pay.

The taxes for 1835 in Turkestan, were ordered to be levied with increased severity.⁵⁴ The amount for the military expenses of these colonies for 1837 has been estimated at 680,000 taels. The sums required at Kashgar in 1829,⁵⁵ were stated at 96,933 taels only, at Yárkand 27,079, and for the other towns 6,000 to 10,000 each, but this may be for their internal expenses only.

Of the personages mentioned in the preceding narrative, the fates of Changling, Nayenching, and his son Yungngan will be found in vol. iv. of this work, page 66. Chalungah, who was resident at Kashgar at the time of the Antseyen invasion of 1830, was adjudged⁵⁶ afterwards to have done great injury by his rash and precipitate conduct. Instead of attending to the advices and remonstrances of Ishak and Tass'ah, two Mohammedans of high rank, he sent out his small force to oppose the large body (as is now admitted) of invaders, in consequence of which his troops were entirely cut up. Being enabled, however, with the assistance of the inhabitants, to defend the city for three whole months, he might, says the emperor, have escaped any punishment but degradation, had he not accused Ishak of entertaining treasonable designs.

re of the accusation, Ishak was deprived of his titles, g of the second class and *akim beg*; and Changling investigate the accusation. Changling adjudged him to blame, and condemned Chalungah to death for having march by a false accusation. Ishak was accordingly further honors conferred on himself and sons. Chaeved until the next year, but finally we presume, parfind⁶⁷ him second in command at Moukden in the 36.

same who is stated in Mr. Wathen's report, to have fir, and to have been shortly after called to Peking, i of again. He will be found in another part of this returned lately to his own country, after holding at Peking, and to be allowed to continue at home, f sixty years of age.

marks on the Opium trade, being a reply to those sitory for November, first published by archdeacon lcutta August 11th 1836.

ed an 'attack,' it is right to give the defense also. We ur Correspondent that, if opium "is solely a hateful poi- be discontinued with the traffic. Hence the subject ought examined, that the whole truth of the case may appear and n civil government, so in regimen, if there are "abuses," ; and we reëcho the sentiment, "carry through the prin.

ciple with an equal hand;" only let it be done temperately, promptly, and effectually. On this great subject—temperance—much remains to be developed. In the case to which our Correspondent alludes, it has been affirmed that the wine which Pharaoh drank was the pure juice of the grape, free from alcohol: that used at the marriage-feast, may have been the same kind. It is a well-authenticated fact, we believe, that such wine was common; and it is equally certain that strong wines were often, if not generally, diluted with water, when used by the Greeks, the Romans, and the Hebrews. But this is not the place to discuss these points: we merely allude to them here as subjects of interesting inquiry, closely connected with the question in debate. The defense came to us in the following epistolary form.]

To the Editor of the Chinese Repository.

Sir,—An article appeared in your last number condemnatory of those engaged in the culture of opium, and of those supplying the Chinese with this luxury. The attack of archdeacon Dealtry on a produce of India which provides the government (perhaps in the least oppressive way to the subject) with means to pay his, and such like salaries as his, is beyond doubt, not a selfish argument. How far it is expedient, or necessary, for morals to put down opium will be the subject of this letter. The attack might have come *at a fitter* moment than when the emperor of China was fulminating his edicts on this subject against individuals, and to which his celestial majesty and his viceroys have been pleased to shut their eyes for the last twenty years as entirely on *this side* of Asia, as the Church of England has on the *other side* of Asia: still, if it is true that opium is solely a hateful poison, and those who deal in it are poisoners, truth will prevail, and it will be put down. If on the other hand—and this is the opinion here argued for—opium is a useful soother, a *harmless* luxury, and a precious medicine, *except to those who abuse it*, then opium will increase, and its merchants be freed from an unjust prejudice, and truth prevail!

First then, as in '*much abused wine*,' it is here asserted that, the many enjoy a healthful luxury, the few abusers are supplied with a horrid poison: if so, are the prudent *many* to give up an enjoyment suited to their tastes, habits, much-caused by the danger of show as an outlet to wealth under this arbitrary government, for the sake of saving the *minority*, the abusers? That is, the respectable majority are to give up their tastes for the sake of a reprobate minority. Let us see how far this is supported by figures:—

All those who know China are aware that what might be called an inveterate dram-drinker, that is an habitually intoxicated smoker, uses the weight of one tael per day of boiled purified opium.

The annual supply to China may be taken at—

Bengal	-	-	-	-	-	16,000
Bombay	-	-	-	-	-	16,000
Turkey	-	-	-	-	-	2,000

————— total 34,000 chests.

In Bengal chests, a ball of Patna gives, one with another, 23 taels of the smokeable drug: 40 balls to a chest give 920 taels; a chest of Malwa or Turkey will produce more in proportion to its weight;

chests being considerably heavier, an average of 60 taels of the smokeable matter per chest may be taken: this, on the total annual supply of 34,000 chests, gives of smokeable drug: divide this by 365, being the year's you have of *victimized* smokers 912,000. The lowest place the population of China at 300,000,000; therefore, not more than one person in 326 touches this luxury. Experience and observation show us that many millions of participate in opium; so each million, using it as a ration-article of luxury and hospitality, reduces most certainly of *victimized smokers*,—who in fact, are few, compare many sober and well regulated families that present a distant neighbor visiting them, as yeomen in England: since did a bottle of wine,—such an article not again on a table till the next visitor came: allow also for the invalid, who use it as a medicine and a solace, as our

my view of opium. If it is disproved, and no stimulus the stern voice of utility of the present age, let it be in opinion will it, be it so. But do not stop; carry through though Noah planted the first vine after the flood; drank its juice and prospered; and though our Savior use of it at the marriage-feast—carry through the in equal hand. Depopulate the Rhine. Lay the vine-branch waste! Abolish tobacco in Virginia, and inhibit the growth of barley in Norfolk:—because a few attend the gin palaces in England, and smoke all in and elsewhere. When the public are prepared for cure, I shall not petition for the white poppy of India exception.

There says: “yet if the desire for tobacco induces the man and the fearless sailor to brave the perils of the sea, commodity, it is not without its use in the moral world.”; if a desire to get this luxury tends to produce the economy, and the never-ceasing industry of this great we see around us—is it without its moral use? As to the skilful carriers of this commodity to China, not a said.

Who in his crusade against opium, forgets a principle, or lost sight of by him, has been acknowledged and acted by most civilized governments of Europe—France and it is this, that in administration of any article likely to excite passions to crime, the dealers in it should be kept as much as possible respectable, but even under the petty license: so in France, as to gaming houses: so in wine houses and gin palaces: yet seeing this clear benefit of the churchdeacon without the shadow of a chance of stopping opium, whether he is wrong or right in his tirade against the present dealers in it, up to *odium and infamy*:

thus throwing its supply into the hands of desperadoes, pirates, and marauders, instead of a body of capitalists, not participating certainly in what they carry, but in fact supplying an important branch of the Indian revenue safely and peaceably.

I leave the matter to the judgment of your distant readers, and I do so confidently. Were the appeal to be made to those here, as many participate in the profits, it might be considered a partial one. The safe test of experience has shown that sovereigns and moralists are powerless against a pervading taste of a whole people. The proclamations of Elizabeth of England did not put down hops. The blast and counter blasts, are only to be found in the library of the curious collector of books, but tobacco is cultivated and used all over the world more extensively than any other luxury. Mohammed by prohibiting wine only forced drunkards to use rakee, and opium: he was powerless to stop intoxication. What Temperance Societies may yet accomplish remains to be seen.

Very faithfully,

A READER.

Canton, 10th December, 1836.

ART. IV. Suggestions for the formation of a Medical Missionary Society, offered to the consideration of all Christian nations, more especially to the kindred nations of England and the United States of America.

VIEWING with peculiar interest the good effects that seem likely to be produced by medical practice among the Chinese, especially as tending to bring about a more social and friendly intercourse between them and foreigners, as well as to diffuse the arts and sciences of Europe and America, and in the end introduce the gospel of our Savior in place of the pitiable superstitions by which their minds are now governed, we have resolved to attempt the foundation of a society to be called the "Medical Missionary Society in China."

The objects we have in view in the foundation of a Society of this description are: 1st, That those who shall come out as medical missionaries to China, may find here those to whom they can apply for assistance and information, on their first arrival in the country. 2d, That by this means their services may be made immediately available; while, at the same time, they may be put in the way of learning the language for the purpose of fitting themselves to practice in parts of the country to which foreigners have not hitherto gained free access. 3d, We do not propose to *appoint* individuals to the work, but to receive and assist the medical men who shall be sent out by Societies formed for the purpose either in England or America. Being acquainted with the peculiarities of the case, our especial desire is to draw attention to the selection of men of suitable qualifications. 4th, We therefore propose to receive any sums of money which may be given

bject, and to disburse them as shall be deemed expedient. When the *Society* be formed, so that the labors of those who are shall not be retarded.

Subscribing fifty dollars, or upwards, in one payment, or ten dollars annually, for members for life; or fifteen dollars annually, for a period of their subscriptions.

In illustration of our views, we would here premise, that in the execution of the object contemplated, those who engage in it

shall receive no pecuniary remuneration: the work throughout shall appear to be, one of *disinterested benevolence*. It is in

the men who shall conduct the institution be not of the same profession, and conciliating in their manners and temperaments, but *judicious* men—men thoroughly imbued with *pure piety*, ready to endure hardships, and to sacrifice themselves, so that they may commend the gospel of our Lord and Saviour in its introduction among the millions of this vast and yet, 'mysterious' and idolatrous empire—men willing to bear the loss of all things for joys that await those who *for* good on earth.

As the *Ophthalmic Hospital* already established, other hospitals are equally needed, and each would fully occupy the time of a medical person. Among these may be mentioned, a *Department*, for the treatment of cases requiring the services of the surgeon, as the removal of tumors, cure of ulcers, fractures and dislocated limbs, and the like.

for the Ear. A vast amount of good may be effected in the cure of affections of this organ, which perhaps are as numerous as in any other, or even more so. The man who shall publish a treatise, accompanied by a statement of facts that shall correct the erroneous practice of barbers who introduce a sharp cutting instrument into the ear, by which violence is frequently done to this organ, will deserve well of the Chinese nation, for it is a

for Cutaneous Affections. In no country in the world is this class more numerous and aggravated; and added to the misfortune of being thus afflicted, if the disease of the sufferer is malignant and contagious, he is liable to be deprived of his life, or immured during the remainder of life.

for Diseases of Females. Daily experience has demonstrated that diseases are very numerous, and in some instances exceedingly dangerous, and but little understood by Chinese physicians. The facts have demonstrated that the seclusion of the upper classes of Chinese females, does not prevent them from applying to foreign practitioners with the hope of relief from calamities.

for the Diseases of Children. An inconceivable amount of suffering is endured by children in China, which in many cases might be avoided, but for the ignorance of parents and want of medical aid and advice. The merchants from distant provinces,

who trade at Canton, are often attended by members of their families, and frequently have brought their children for medical treatment. We cannot suppose the fond parent will remain insensible to the obligations of gratitude when he returns to his own home, or fail to speak there of the *excluded foreigner* who has gratuitously restored his child to the blessings of health. We conceive there cannot be a more direct avenue to influence than will be presented in this department, and the impression may be far more enduring than that made in almost any other way; for while in the case of the aged, who receive medicine from the foreigner, the remembrance may quickly depart with them; it may be otherwise in respect to the babe and the youth, who are, by the hand of charity, rescued from a premature grave, or from diseases which uncontrolled might extend through life.

Regarding it desirable that these several departments be established as soon as Providence shall prepare the way, and the men and means are provided, we would also recommend to Societies, while they are sending out medical persons, not to neglect to encourage pious and well-disposed young men to accompany them, with a view to becoming dressers and apothecaries, and to render themselves useful in the supervision of the internal concerns of the hospitals. Here it may be proper to repeat, and with the utmost emphasis, that all who engage in this work should be *JUDICIOUS men, thoroughly imbued with the spirit of TRUE PIETY, willing to endure hardships and to sacrifice personal comforts*

We cannot close these suggestions without adverting to one idea, though this is not the place to enlarge upon it. It is affecting to contemplate this empire, embracing three hundred and sixty millions of souls, where almost all the light of true science is unknown, where Chistianity has *scarcely* shed one genial ray, and where the theories concerning matter and mind, creation and providence, are woefully destitute of truth; it is deeply affecting to see the multitudes who are here suffering under maladies, from which the hand of charity is able to relieve them. Now we know indeed, that it is the 'glorious gospel of the blessed God' only that can set free the human mind, and that it is only when enlightened in the true knowledge of God that man is rendered capable of rising to his true intellectual elevation; but while we take care to give this truth the high place which it ought ever to hold, we should beware of depreciating other truth. All truth is of God; the introduction of medical truth into China, would be the demolition of much error.

In the vast conflict which is to revolutionize the intellectual and moral world we may not underrate the value of any weapon. As a means then to waken the dormant mind of China, may we not place a high value upon medical truth, and seek its introduction with good hope of its becoming the handmaid of religious truth? If an inquiry after truth upon any subject is elicited, is there not a great point gained? And that inquiry after medical truth may be provoked, there is good reason to expect: for, exclusive as China is, in all her systems, she cannot exclude disease, nor shut her people up from the desire

not then the finger of Providence point clearly to one would take with the people of China, directing us to action of the remedies for sin itself, by the same door we convey those which are designed to mitigate or cure? Although medical truth cannot restore the sick to the favor of God; yet perchance, the spirit of inquiry awakened, will not sleep till it inquires after the source whence who comes with the blessings of health may prove ready to point to the Lamb of God. At any rate, this open door; let us enter it. Loathsome disease, in form, has uttered her cry for relief from every corner we have heard it, and would and must essay its healing. Worketh not may wait for other doors. None can deny the efficacy of charity that worketh no ill, and our duty to walk in and imperative.

Confidently rely on the aid of the pious and benevolent instrument of this great work, and when the millions which the mighty empire shall feel the influence of true religion, when the light of Christianity shall take the place of paganism, which now envelopes them, then will be a spiritual sense, the prophecy of Isaiah: "The blind shall be opened, and the ears of the deaf be opened; the lame shall leap as an hart, and the tongue shall sing."

Ed.) T. R. Colledge, P. Parker, and E. C. Bridgman.
New York, 5th, 1836.

Proceedings relative to the formation of the Morrison Education Society; including the Constitution, names of the members, with remarks explanatory of the object, of the same.

Officers of this society, elected on the 9th ultimo, for the current year, are: Dent esq., President; Thomas Fox, esq., Vice-president; Thomas Fox, esq., Treasurer; Rev. E. C. Bridgman, Corresponding Secretary; Robt. Morrison, esq., Recording Secretary. A pamphlet has just published (the title of which stands at the head of this volume here, somewhat abridged; and we fondly hope that the object of the Society is made known, it will receive the aid and support of the friends of China.

The lamented death of the Rev. Robert Morrison, D. D., in August 1834, a paper containing some suggestions for the formation of an association, to be called the MORRISON EDUCATION SOCIETY, was circulated among the foreign residents in China. It was dated the 26th January, 1835. On the 24th of the following month seventy-two signatures having been obtained, and the names collected, a Provisional Committee—consisting of six

George B. Robinson, bart., Messrs. William Jardine, David W. C. Olyphant, Lancelot Dent, J. Robert Morrison, and the Rev. E. C. Bridgman — was formed for the purpose of ascertaining the best method of carrying into effect the proposed plan of education. At the request of this Committee, Messrs. Jardine, Matheson & Co. engaged to act as Treasurers, and Mr. Bridgman, as Corresponding Secretary, until a Board of Trustees should be formed. A circular was immediately issued, from which the following is an extract.

“If we except the pastors and teachers who visited Formosa with the Dutch, about two centuries ago, Dr. Morrison was the first Protestant missionary who ever reached the Chinese empire. Chiefly by his labors the Sacred Scriptures have been translated into the Chinese language, and a foundation laid for diffusing, among one fourth of the human family, that true religion which is one day to pervade the whole earth. Though his chief object was to benefit the people of China, yet the good which he has conferred on others, especially on those who speak the English language, demands of them a tribute of grateful acknowledgment, and urges them to “go and do likewise.” As a knowledge of the Chinese language has been of great advantage to foreigners, so an acquaintance with the English will be of equal or greater advantage to the people of this empire. For the purpose of conveying this benefit to the Chinese, and of aiding the work which Dr. Morrison commenced, it is proposed to erect, in an institution characteristic of the object to which he devoted his life, a testimonial more enduring than marble or brass, to be called the “Morrison Education Society.” The object of this institution shall be to establish and support schools in China, in which native youth shall be taught, in connection with their own, to read and write the English language; and through this medium, to bring within their reach all the varied learning of the western world. The Bible and books on Christianity shall be read in the schools. Already a Chinese, educated at the Anglo-Chinese college in Malacca, has been advanced to the station of governmental interpreter at Peking. And our posterity, if not ourselves, may see the Chinese, at no very distant day, not only visiting Europe and America, for commercial, literary, and political purposes; but, having thrown away their antipathies, their superstitions, and their idolatries, joining with the multitudes of Christendom in acknowledging and worshiping the true God.

“As the small contributions which our limited community in China can be expected to afford, must be utterly inadequate to the object in view, we look to the enlightened and liberal in other countries to cooperate with us.”

In the hope of obtaining the aid and counsel of friends in Europe and America, and of increasing the list of subscribers and the amount of donations, measures for organizing the Society were deferred till the 28th of September 1836, when, notice having been given, a public meeting was convened at No. 2 American Hong.

Mr. Dent, as chairman of the Provisional Committee, having called the meeting to order, it was proposed by Mr. Bell, seconded by Cap-

It was carried unanimously, that Mr. Fox take the chair, as appointed secretary to the meeting.

At the several meetings of the Provisional Committee, a Constitution, with an Address, drawn up by Mr. Bridgman, of the views of the Committee, were then read.

In the minutes, it appeared that the sum of \$5977, including the amount in the hands of the Treasurers; and that a library of 700 volumes of books, on scientific, literary, and other subjects, was presented to the Society: about 700 were from T. R. Fox, 600 from J. R. Reeves, esq.; the others from Messrs. Fox, and A. S. Keating.

The proposed Constitution, after a few amendments, was accepted; and the meeting, on the motion of Mr. Jardine, seconded by Mr. Dent, adjourned to the next election of officers.

On the 10th of October the meeting, in consequence of many members being absent from Canton, was adjourned two weeks.

On the 10th of November 1836, Messrs. Fox, Lindsay, Innes, Olyphant, Molten, Wetmore, Dent, Slade, Sampson, Jardine, Hine, Messrs. Bridgman, Parker and Stevens, having met for the purpose of a general meeting; Mr. Fox resumed the chair, and the Rev. Mr. Fox appointed secretary.

At the preceding meetings, together with the Constitution read; and after some corrections, the whole were accepted and approved. The Constitution being now approved, the Society proceeded to the choice of officers by ballot; and was ordered that the minutes of the Provisional Committee of the two general meetings, be referred to the next meeting in view to the publication of a summary of the same, and the Constitution of the Society; a unanimous vote was given for Mr. Fox, for his services as chairman, was then passed, and the meeting adjourned *sine die*.

CONSTITUTION.

This Institution shall be designated the "Morrison Education Society."

The Object of this Society shall be to improve and promote the Education of the Chinese by schools and other means.

Any individual donor of a sum not smaller than \$25, or a sum of not less than \$10, may become a Member of the Society, and vote at its general meetings; voting by proxy will be allowed, provided the proxy is necessarily absent from the place of meeting, provided a letter of authority for specific measures, written before the meeting, has been given.

Money may be raised by subscriptions, donations, and so forth, and shall be under the direction of the Trustees.

The business of the Society shall be managed by a Board of Trustees, consisting of not less than five, and not more than seven, in number, resident in China, who shall be chosen at the next general meeting of the Society, to be holden annually on the 10th day of September.

ART. 6. The Trustees shall be (1) a President, (2) a Vice-president, (3) a Treasurer, (4) a Corresponding Secretary, and (5) a Recording Secretary.

ART. 7. For the transaction of business, the Trustees shall meet on the third Wednesday in January, April, July, and October, respectively, and oftener if necessary; three of their number shall constitute a quorum.

ART. 8. It shall be the duty of the President to preside at the meetings of the Society, and of the Trustees, and perform such other duties as are appropriate to his office.

ART. 9. It shall be the duty of the Vice-president, when the President is absent, to act in his place; if both are absent, the Treasurer shall preside.

ART. 10. It shall be the duty of the Treasurer to keep safely all the money of the Society, with a fair account of all that is received and expended; to make out annually a statement of the receipts and payments, and of the condition of the funds, for the information of the Society, to be published in their annual report; and to perform such other acts as are appropriate to his office. The accounts shall be audited by persons appointed for that purpose by the Society, at the general meeting for the choice of officers.

ART. 11. It shall be the duty of the Corresponding Secretary to act as the General Agent of the Society, in carrying into effect such measures as the Trustees shall adopt and direct, in conducting the correspondence, in selecting scholars, teachers, books, and so forth; and further, it shall be his duty to keep a full and accurate record of all his correspondence and proceedings, which shall be kept with the records of the Society; and to prepare an annual report, which, after it has been submitted to the Trustees, and approved by them, he shall read at the general meeting; and when approved by the Society, shall superintend its publication.

ART. 12. It shall be the duty of the Recording Secretary, to keep full and accurate minutes of all the meetings of the Society and of the Trustees, and to act in concert with the Corresponding Secretary in selecting scholars, teachers, books, &c., and in preparing the annual report.

ART. 13. At any General Meeting of the Society, these articles may be altered, new ones added, or such regulations, and by-laws adopted, as the meeting may deem proper; provided one month's notice of the proposed amendment or addition has been given, provided also, that it has received the unanimous sanction of the Trustees; failing which, it shall not pass until carried at a second general meeting, convened at an interval of a month; and further, provided always that for the proposed amendment or addition, at least two thirds of the members resident at the place of meeting give their vote.

BY-LAWS—Section 1: *Scholars.*

1. Chinese youth of any age, of either sex, and in or out of China, may be received under the patronage of the Society; also schools, conducted in a manner approved of by the Trustees.

rer practicable, young children, six, eight, or ten years preferred.

re advice of the Trustees, and the approbation of the Guardians of children, they may be sent to the Straits of India, Europe, or America, for the purpose of completing

1. sary, children may receive their whole support — board, s, tuition, &c., from the Society; but no reward or pre- er be given, excepting money or articles expressly that purpose by the donors, unless by a special vote of

Teachers.

und Masters from Europe or America, or both, shall be anently, so far as the means of the Society will allow. Masters, of good character and acquirements, may also

Books.

hool Books for teaching the children reading, writing, ography, and other sciences, shall always be the best ained, both in the English and Chinese languages.

holars shall be furnished with the Bible, and with the aids to understand it, which are usually afforded in ls of Christendom; but the reception of it's doctrines est for the admission of scholars.

oks belonging to the Society shall form a public library, he "Library of the Morrison Education Society."

rary shall be under the immediate control of the Trus- l take all suitable measures in their power to make it the foreign residents and visitors; provided they do this purpose a sum greater than would be necessary f the Library were it not open to the Public, it being or the sake of having such a Library, the foreign resi- ady to bear a part of the expenses.

or the regulation of the Library, sanctioned by the be published, with a Catalogue of the Books, and a e be placed in the hands of all those who are admitted s of the Society and the Library.

Its explanatory of the Object of the Society.

f the "Morrison Education Society," in commencing which they are now charged, would seek first of all f His Providence, whose favor is requisite to give suc- ty to their incipient operations. If this Institution be ed, thousands and millions may enjoy its benefits, and be continued down to the latest times.

s will here briefly state the outline of the plan they e.

ll obtain as speedily as practicable a Tutor from the and will seek for one who is young, enterprising, well

acquainted with the business of Education, and who is himself desirous of making it the great object of his life.

2. From the British and Foreign School Society, they will endeavor to procure whatever aid and counsel that excellent and noble Institution may be pleased to afford. It is hoped that at least one Tutor from England may be early associated with a coadjutor from America.

3. They will take measures to ascertain the actual state of education in China, by inquiring how many of the whole population, male and female, are able to read and write; the age at which they commence learning; the manner in which, and the length of time, they are instructed; the expenses for tuition, books, &c.

4. The same inquiries will be instituted respecting the Chinese who have emigrated from their country, and are residents in the Indian Archipelago, and elsewhere.

5. In the mean time the Trustees will not neglect to render immediate assistance, whenever and wherever suitable youth and opportunities are presented.

6. Further, they deem it to be a part of their duty to endeavor to increase the number of subscribers, the amount of donations, and the catalogue of books. They will individually receive any such acquisitions to the Society; and do hereby jointly authorise that donations be received by

Messrs. A. L. JOHNSTON & Co., Singapore;
 Messrs. LYALL, MATHESON & Co., Calcutta;
 Messrs. MACVICAR, BURN & Co., Bombay;
 W. A. HANKEY, esq., London;
 FREDERICK LEO, esq., Paris;
 Messrs. TALBOT OLYPHANT & Co., New York.

The following paragraphs are abridged extracts from the Address read at the first Public Meeting of the Society, convened on the 28th of October, 1836.

EDUCATION, when properly conducted, embraces the three great branches of physical, intellectual, and moral culture. And wherever these are wanting, or are in any degree defective, there, in the same degree, education will be deficient or neglected.

The helpless condition of man as he comes into the world, and his whole career from the cradle to the grave, show how much care and culture are requisite, not only that muscular strength and symmetry may be developed, but that the mind and affections of the heart may be directed to proper objects and rightly disciplined. But while no being is so dependent as the child in infancy, nowhere else, nor by any other means, are a nation's destinies so easily and so permanently affected as in the early education of its successive generations of youth.

Only give us the opportunity, with ample means, to educate an entire generation of men, and as surely as the laws which govern mind remain the same from age to age, so surely will we effect greater

ral, social, and national character, than were ever yet given time by any military or naval power, or by the most thrifty commerce, or by any or all other means

In whose hands, under Divine Providence, are now Europe, or America, or of this Empire? Almost entirely in the hands of those who belong to a single generation, a few years ago were controlled in all they said, ordered, by the few who were charged with the direction of the nation.

To neglect to provide for the body, it is much more to neglect for the immortal mind. The proper course in this matter is very plain, even when guided only by the laws of nature and of providence; but since our pathway is illuminated by the oracles of divine truth, can we doubt that knowledge and man rise in the scale of being, ordinarily, in proportion as he is rightly educated? On this point we have of unerring wisdom: *Train up a child in the way of the Lord, and when he is old he will not depart from it.*

The object contemplated by this Society is the establishment of schools, in which Chinese youth shall be taught to read and write the English language in connection with the Chinese, by which means shall be brought within their reach all the advantages for their becoming wise, industrious, sober, and virtuous members of society, fitted in their respective stations of life to perform the duties which they owe to themselves, their kindred, and their God.

As we now possess so little knowledge of the modes of education prevalent, affords a strong reason for one of the measures we would recommend to this Society, as one of its primary attentions, one which may influence all its subsequent operations, which cannot be attained by individual efforts. The measure which we allude to, is a thorough investigation of the whole system of education which now obtains among the Chinese throughout the empire.

It is highly desirable that we ascertain accurately the circumstances of the case, in order to give a right direction to the measures which this Society could furnish an accurate and complete present system of education — so as to show all its excellencies, it would accomplish a great work. A system of this kind is indispensable; and the more extension it receives, the better we shall be prepared to accomplish the great object we have in view. We want of research, or rather the want of the results of the first and greatest difficulties, which meet us in the progress of our new undertaking.

As we have a map of Europe and of China as they were fifteen years ago, laid before us, each country accurately marked and shaded according to its respective advances in knowledge and civilization, we suppose the advantage, in many respects at least, is in favor of China; but since that period, what has happened of events in the particulars under consideration? Eu-

rope has advanced steadily in improvements, and knowledge has increased more rapidly than in any other equal period of the world's history. Arts, sciences, literature, and pure religion, have, in some measure as they ought, gone hand in hand; and, with many reforms in both religion and politics, are now progressing far more rapidly than ever. The rights and the duties of men, too, are better understood now than formerly; and their necessities and comforts, both for body and mind, are much more justly regarded and more amply provided for. But in China, the men of these times look back to those long gone by, and—very justly—sigh for what then was: for, in very many particulars, during this long lapse of time, not only have no improvements been made; but, on the contrary, the movement has been retrograde. Knowledge has decreased; and the men of the present generation are unequal to those who occupied the stage a thousand years ago. And why is this? Has the human mind reached its utmost limits? Can nothing more be done, on the score of improvement, than has already been accomplished? Or rather, are not the *means* here radically defective, or wrongly employed, for intellectual and moral culture?

These brief remarks are quite sufficient to show that there is in China an almost unbounded scope for improvement in all the various departments of liberal education; they show that there is a great demand for those aids and those improvements in education, which the members of this Society wish and design to afford. Can this design be effected? Can these aids be afforded? Can these improvements be introduced? Doubtless they can—effectually and completely, though not immediately, nor without encountering many and great difficulties. But, adopting Chinese phraseology, the work must be begun; when it is once begun, it must be carried on; and when carried on, education will be extended; and by the extension of education, all the people of the empire will be benefited; and thus, eventually, our work will be accomplished.

But, without the aids of Chinese logic, we need not hesitate to pronounce the design of this Society to be as practicable, as it is desirable. And believing it to be thus, and at the same time enjoying many of the benefits of that instruction which we would communicate to others, and for the want of which they are strangers to the richest blessings of this life and of the life to come, need we, shall we hesitate to prosecute our design? Considering the circumstances in which we are placed, and the character which we would sustain as a community of enlightened and philanthropic men, we are strongly obligated to do good, as we have opportunity, to the people among whom we reside. The Chinese are our *neighbors*; and one common Father giveth alike both to them and to us life, and all its blessings.

Here then we may join our humble efforts in endeavoring to communicate to others the treasures of knowledge. To some extent, the requisite means for accomplishing this are in our power; and were there no impediments in our way, arising from the peculiar character

this government, we could immediately bring scores, of these poor children into well-conducted schools, and to act their part among the best subjects of this empire: more than this; by laying before them the rich treasures of science, they may become both the teachers and the pupils: whatever things are true, lovely, and of good report; and if deeds of virtue, or acts of charity, worthy of praise, so they may first learn and then teach to others.

It is highly desirable to procure from Europe and America some young men, to become the perfect masters of the Chinese language; who, with the spirit and enterprise of a Peste-caster, will at once come to China, learn the language, examine their books, investigate their modes of teaching, and apply their whole strength to the work. At first, most of them will be occupied in acquiring knowledge; but in the mean-while, some may be placed under their care, and be trained up to be the teachers of others, who in their turn would be enabled to discharge of the same duties. By proceeding in this manner, we may expect to see the most salutary results—forming a new era of China, the commencement of a new era, when happier times, than those enjoyed during the reign of the late Emperor, shall dawn on the millions of this great

Obituary of Captain James' Horsburgh; with a notice of the measures adopted by the foreign community in Canton for the erection of light-houses commemorative of his labors.

This is the only obituary we are able to give of this eminent man. "They who go down to the sea in ships—who do not eat waters, these see the works of the Lord and his power: deep"—is the appropriate motto of his great and incomparable work, in which the labors of his life are described by his own hand. Those "directions for sailing to and from the East Indies, China, New Holland, Cape of Good Hope, Brazil, &c. to the most convenient ports, compiled chiefly from original journals at sea, and from observations and remarks, made during the late Captain's experience, navigating those seas," are his best and most valuable legacy, his brightest earthly glory. To record the labors of the India Directory, the man who has done so much to open the highway of nations, is the greatest tribute we can pay to his memory. We admire his works; we lament his death; and we artfully reëcho the sentiments, which have at once sprung forth from every part of our community.

The following remarks, signed Nauticus, we introduce with much pleasure, knowing that they come from one, than whom no other person is more worthy, or better qualified to speak, on the points under consideration. He says:—

“The press in Canton with disinterested zeal has most ably advocated the endeavor to keep alive the memory of Captain James Horsburgh, by some work of public utility—emblem of his labors in the cause of science and navigation. *Finis coronat opus*. If you would give the subject a place in your pages, it would be of essential service in not only strengthening and confirming the efforts of your contemporaries generally, but particularly in America, where the name of Horsburgh is justly appreciated: of this a strong earnest is shown in the ready and generous manner in which the cause has been adopted by her citizens now residents in Canton. It has been assigned as a reason why no edition of the Directory has been published in America, that the press there held such a work sacred to the objects and emoluments of the author. Truly therefore may America be called his friend.

“It is much to be regretted that no materials have been given, in any of the periodicals yet arrived here, to assist you in giving interest to what can now be known of him chiefly in his wonderful work. I knew him only through many conversations at the India House, and occasional chance-meetings; but I never left him without a strong and increased impression of respect drawn from his kind and willing manner of conveying any information requested of him, and especially from that single-mindedness, which seemed to form a marked feature in his character. I have it from a friend, an old resident here and one of his great admirers, that he came to this country quarter master in one of the Company's ships, the *Cirenceter*, captain Thomas Robinson, and that in the same ship he went home as a passenger at the same commander's table. So that “he came in at the hawsehole, and went out at the cabin window.” The ascent of the ladder, not infrequently makes the climber grow giddy at the top. Not so with Horsburgh. The manner in which he bore his rise added one more to the sum of his merits, in lieu of detracting from their number. The motto he has chosen for his great work, may show how his mind was imbued. I deal no farther with this than to point out to you an excellence which, beyond any other, I am sure, will give him a claim on your respect. His habits seemed to be all of the most simple and industrious kind; and I think I have heard him say, not many years before his death, that he walked every day to his home in the country, some four miles from the India House. This spirit of perseverance, even in small things, may be cited as cause and effect of that unwearied diligence, that laborious research, and above all, that ardent, even jealous love of truth, which enabled him to benefit the world by one of the most valuable and useful productions ever issued from the press. There is almost a spirit of adventure manifested in the recital of his own remarks, which might have justified the adoption of another seaman's motto, Falconer, omitting allusion to the catastrophe. He seems

with a prophetic eye to his future fame, and to have dangers which beset his track, in order to make the risks himself sources of safety to others. This may be shown in groundings and striking recorded of his ship, the *ullum quod tetigit non ornavit*, has been said in praise of eminence; of Horsburgh it might be paraphrased, *monstravit non tetigit*—so many were his collisions *langers*.

n the subject of a light-house, as being considered by t calculated memento to honor the name. It would be on any work more cosmopolitan in its nature—a great n recording services given to the world at large; nor any plan be found more akin to the nature of those server erected it would be hailed with thanks by all steered ray; and in proportion to the stress of the need, would de to the name, which in death, as in life, has ever nan's guide. The follower of Zoroaster might suppose friend to tenant the light hung out for his direction, ie would take a religious interest in rendering the fire Bombay was his home in the east, and we may hope ections in that quarter will show in what estimation he the princely subscribers to all objects of public utility

of the light-house or houses (for I hope there will be e left to future decision. The paramount object now world's attention to the question, and to swell the list of

To this, Mr. Editor, you will give essential aid if you cause. Should the Straits of Malacca be selected, or hin their government, the East India Company, whose t Horsburgh was, will with their accustomed bounty dity and take on themselves, no doubt, the charge of

In short, at home and abroad, we hope there may be ersal alliance, and that all will concur in honoring him ich benefitted them.

I am &c.,

NAUTICUS."

ly space to add, that public meetings have been held; f correspondence appointed; and something more than collected, in Canton. The Committee consists of the lemen, namely, W. Jardine, L. Dent, Captain J. Hine, re, J. H. Astell, M. J. S. Van Basel, Thos. Fox, Fram- and Wm. Haylett, honorary secretary; they have sent r, which has appeared in the Canton Register and the , both of which papers give the subject their entire apedra Branca, at the entrance of Singapore Straits, has s the site for one of a series of light-houses, which it is along rise in the Eastern seas.

ART. VII. *Journal of Occurrences. Arrival of an imperial envoy; seizure and imprisonment of smugglers; the expulsion of foreigners postponed; execution of pirates; state of local affairs.*

CHOO SZEYEN, the long expected envoy from Peking, made his entrance into Canton on the 17th instant, with the usual formalities, and has taken up his residence in the collegiate hall, where, it is said, he is joined by Soolfangah, the Tartar commandant of the city. We have not been able, hitherto, to learn any thing of the character or history of the envoy, farther than what we mentioned in a former number. In his person he is described as being tall, stout, grave, aged, with a long beard. It is rumored that he has to investigate eight subjects: 1st, a case of homicide in the district Tungkwan; 2d, one of bribery and embezzlement in Heängshan; 3d, one supposed to be connected with murder in T'ên-pih (Tienpak) on the southern coast; the 4th is the trial of Yang Chaou, a notorious leader of the police in Canton, who is suspected of extortion; the 5th is the smuggling of opium and sycee; the 6th is the condition of the soldiery; the 7th is the situation of the foreign shipping; and the 8th is a charge of bribery against one of the late envoys. Such is the rumor.—Keying, who left Peking in August last, in company with Choo Szeyen, has been recalled to answer to charges of misdemeanor in the management of the imperial household, of which he was recently controller.

Seizure and imprisonment of smugglers. On the 11th instant, governor Täng, admiral Wän, and the hoppo, sent up to Peking a joint memorial concerning the seizure of two boats and fourteen men, captured while engaged in smuggling. The first boat with four men was empty; but the seizure led the way for the capture of the second boat, on the 27th ultimo, with nine men and 19,800 taels of sycee. The names of these men and the places of their residence are given. Under torture they confessed they had been engaged in the contraband trade, and gave the names of their accomplices. The case is reported in detail for his majesty's scrutiny. Han Shaouking, the gallant colonel who was deputed to wait on lord Napier, is reported as the chief manager in the seizures. The 19,800 taels have been distributed among the captors. It is said, the government has a long list of suspected persons for whom search is now being made. A partner in one of the new hong's has been seized, and very harshly beaten. By his friends, it is feared he will be sent to the cold country. The smugglers, it is supposed, will be decapitated.

The expulsion of foreigners from Canton, which was to take place early this month, has been postponed. The regulations of the port, as sanctioned by the emperor, require all foreigners to leave the provincial city early in the summer; but that former practice, by slow degrees, has gone into disuse: this fact and a tender regard for those who come from far, are the ostensible reasons for postponing the execution of the edict of the 23d ult.

Ten pirates were executed recently in Canton, for having destroyed life and property on board a native vessel, not far from Macao, near the Nine islands. See the Canton Register of the 20th instant.

The present position of local affairs is very unsatisfactory, and cannot, we think, be long continued. A crisis must come. The present system is pregnant with evil. Appeals to the local authorities are of little avail. Under such circumstances, we do not wonder that even the "most pacific" desire—urge—demand, that those whose duty it is to regulate affairs of state will no longer keep themselves aloof from a work to which, sooner or later, they must come. It is high time to open a direct communication with the court at Peking. There is no time to be lost. Let the minds of the Chinese be disabused; let foreign commerce be freed from every thing illegal and unjust; and let the governments of the west, acting in concert, endeavor at once to gain access to the ear of "his august majesty," and solicit for themselves and for those over whom they rule, that respect and consideration which are due. Then peace, good-will, and prosperity, may here be enjoyed.

CHINESE REPOSITORY.

Vol. V.—JANUARY, 1837.—No. 9.

g merchants' Report on commerce; 1st, respecting the of sycee; 2d, the interchange of merchandise; 3d, prevent illegalities; and 4th, the transit of opium, sting trade in it.

es, which were designed for the present number, are deferred place to others of more immediate interest. In our number lished the memorial of Heu Naetse, with an imperial mandate, ief authorities of Canton to deliberate thereon and report in eport appeared in our number for October, and ought to have y the one which we here introduce. This was made some h of July last; we give it a place here, partly for its intrinsic mercial paper, and partly in order to render as complete as of papers which have come before the public, touching the [The following is the Report of the hong merchants.]

o the commands of his excellency the hoppo, to delibe- particulars, we now present for perusal the result of ons, arranged under [four] distinct heads.

received directions "to examine in regard to the fol- ent—contained in a memorial presented to the emperor py was previously transmitted), namely, 'that foreign e not openly take goods in barter for opium, but always sell it for sycee silver.' Now the exportation of sycee e remarked) has long been interdicted; and the said eily do not presume to contravene the regulations in e. Yet it may be difficult to aver, that not a single mmitted by them; and still more difficult would it be erable, that there are no traitorous natives who carry ne commerce."

eto, we the hong merchants would humbly represent, owing to the strictness of the governmental regulations s are prevented from openly taking goods in barter for

opium. In regard to sycee silver, we, every year, severally and voluntarily enter into bonds, that we will on no account aid and abet the foreigners in exporting it, which bonds are presented to your excellencies. How can we possibly contravene the regulations, and so render ourselves criminal? Yet it is indeed, as his excellency the hoppo says, difficult to stand answerable that there are no traitorous natives who carry on a clandestine commerce. To watch against such an illicit commerce is, however, beyond *our* power; and it therefore behoves us to request that the rule, in regard to seizures of smuggled commodities, may be brought into operation, this rule, namely, that the capturers shall be liberally rewarded. In pursuance of this, a certain proportion of all sycee silver, that may hereafter be captured, should be given for an encouragement to the capturers, and thus those who receive such rewards will be induced to exert themselves in an extraordinary degree; and the smugglers, knowing that such rewards are held out, will at once become intimidated.

Secondly. We received the following inquiries to direct our deliberations: "The foreign merchants have need of teas, rhubarb, cassia, sugar, silk, &c., which articles must have been heretofore kept in store by the hong merchants, so as to be in readiness to be exchanged for imported goods. Should the amount of imported commodities become hereafter too great, how can ware-house room be afforded, in order to retain such commodities for gradual sale? And can it be so arranged, that, when it is impossible to effect an immediate sale, and the foreign merchant finds himself unable to wait longer, he may be allowed to return home leaving his goods with the hong merchant to sell for him as opportunities offer, and on his return receiving such an amount of merchandise as is due to him in exchange? Let these questions be well considered."

In answer hereto, we would humbly point out, what has been hitherto the practice: On foreign vessels coming to Canton to trade, their cargoes are sent up to our hong; and then a list is given by each foreign merchant of the native commodities required in return, which commodities we purchase for them from the various dealers therein. We never keep a stock of each article on hand. And of late years our means have been very much reduced, so that often we are unable to pay in due season the duties accruing: how then can we possibly lay in a store of ready purchased articles? If it happen that too great a quantity of any article is introduced, so that it cannot be sold off at once, and the vessel is to sail immediately, the security merchant in that case applies to the foreigner for the amount of duties due, that he may pay them for him. The unsold goods remain in our hong; to be disposed of as opportunities offer; and when the foreign merchant returns to Canton, he then takes out the value thereof in native commodities. This is the way in which the trade has hitherto been conducted, and we would request that it may continue to be conducted in the usual manner.

Thirdly. We received directions to deliberate on the following questions: "Whether, if opium should be imported through the usual

ner commodities (the hong) any hong merchant being ad and enter it at the custom-house, it will not be found rd against illegalities in the trade? Whether it will requisite to make one of the most opulent of the senior on- sible,—namely, one in whom entire confidence can one in whom the foreigners habitually place implicit require him *alone* to enter the cargoes of opium for ex- ne custom-house, and to pay the duties; still, however, foreigner to sell it, at its market value, to whichever it he may choose, in order to prevent a monopoly? the hong merchants should not still be required to give uly, and to state the persons to whom they have sold aces whither it has been transported, and what amount er, sycee or foreign, has been given for it,—each sep- on to be reported at the time, and a monthly statement ; and presented at the offices of the governor and hop- o enable them to make their reports to the Board of

his, we would humbly notice some particulars of the h we have heretofore conducted our traffic with the e have indeed exchanged one commodity for another; n the value of the imports and exports has been unequal, s been paid, both by native and foreign merchants, to a foreign money. And when, in consequence of the f a country being saleable but to a very small extent, at sums of foreign money have been imported for the pur- sing a cargo, and no restriction has been placed on the f any remaining sum. Hence the "exportation of three eceived the sanction of government. Again, there are full cargoes are imported, while—in consequence of ative commodities being too high, or the commodities calculated for sale in the places from whence the ves- e exported cargoes are small. The surplus foreign eing greater in amount than the "exportable three ver exceeds that amount is either left here for the pur- goods, or is lent to other foreigners. This is a thing urrence. For instance, of the rice-laden ships which port, the largest bring cargoes of somewhat above amounting in value to but twenty or thirty thousand e smaller ones bring cargoes of, it may be, 5000 or 6000 ue of which is no more than ten thousand and odd dol- e same vessels return with export cargoes of the value hundred thousand dollars, or at least of from one to housand dollars. The money required to purchase therefore frequently borrowed from foreigners, who in money, in excess of that portion of the price of their s for which they have taken goods. This then is a

per cent of the excess of the value of the imports over that of

clear proof that, in the instance of rice-laden vessels, the unemployed balance possessed by other foreigners is borrowed, in order to purchase exports wherewith to send them back to their country.

Now, in reference to the question, at present under consideration, whether permission shall be given to import opium, paying a legal duty thereon, we have, as a provision in case that such permission should be given, inquired of the foreign merchants, if they can export goods to such an amount as to equal in value their importations of opium, so that they need not have any occasion for exporting money? Their answer was of the following tenor: "That it is right and proper that they should comply with the arrangement to take cargo in exchange for the proceeds of their opium; but that the ports to which they return are not all alike, and that our native commodities are not every where equally saleable; that were the merchants who bring opium to Canton to made their returns in merchandise purchased here, such merchandise would be unsaleable,—and therefore the arrangement that goods are to be taken in return for opium cannot be universally adopted; that, however, they can in such cases lend their money to other foreigners to purchase cargoes with, which will be the same thing as if the foreign merchants who import opium applied all the proceeds to the purchase of goods themselves; lastly, that, in case, they should be unable to lend out the whole of the proceeds, they are willing to act in accordance with the regulation hitherto existing; by which they are allowed to export in foreign money three tenths of the excess of imports over exports; but that to require each several ship to take export cargo in exchange for imports will, they really apprehend, be found inapplicable, injurious, and impracticable; on which account they deem it their duty to request that the regulation heretofore existing, as above mentioned, may continue in full force." We the hong merchants, would here suggest, that, although there be no duty charged on exported silver, yet as it is required to export at the custom-house the sums shipped, it will be impossible that any very considerable amount should be clandestinely exported. Whether such an arrangement in regard to the importation of opium, the grand question now under consideration, shall be adopted or not, must depend on your excellencies' decision.

It has been for a long time past the rule, when a vessel reaches Canton, to permit the foreigner himself to select the hong merchant who shall secure his vessel: this is left entirely to the will of the foreigner, and no compulsion may be exercised in the matter. All goods that are to be entered at the custom-house for examination and assessment are so entered by the security merchant, on application made by the foreigner; and the charges on the vessel, on entering the port and when discharging cargo, are also paid by the security merchant. But any of the hong merchants may have a portion of the cargo, and it is the rule, that the merchant who so receives cargo shall pay all the duties thereon into the treasury of the custom-house. In this way, there can be no monopolizing. Should opium be admitted for importation in the same manner as piece-goods, cotton, &c., the

a regard to the sale of it by hong merchants to minor transport of it from Canton to other places, should be as with regard to those commodities. Such as is other provinces by an over-land route should be entered and western custom-houses, where a pass should be obtained. And such as is transported by sea on board vessels should be entered outwards, at the chief custom-house the medium of the merchants of Fuhkeen and Chaowoo on these points being very precise, it seems need each separate transaction of sale, or to present any objections.

We received directions to deliberate carefully on this when opium is transported to other provinces for sale, the precautionary regulations which have been enacted for foreigners trading at Canton be put in practice, and be sent to the authorities in all the seaboard provinces, that whatever opium has not the stamp of the government it is to be regarded as smuggled, and both vessel and cargo confiscated, and the parties subjected to legal investigation if any vessels proceed to the receiving ships, which on the high seas to trade with them, should not the hong authorities be required to take measures against their so doing?"

I would humbly point out, that in the regulations enacted for checking foreigners engaged here in trade, there is the following passage: "In respect to all native trading vessels of every province they may be, any foreign goods that may be for shipment on them shall be entered at the chief custom-house at Canton, and there, having been stamped, a pass shall be granted, specifying in detail the amount of goods, and no clandestine transactions may be suffered to take place. Communications shall be sent to the authorities in all the provinces they may act in compliance with this regulation, and accordingly to the officers of the maritime custom-house to examine all trading vessels carrying cargoes of foreign goods, and if they find any articles not marked with the stamp of the chief custom-house, to regard such articles as smuggled, and to send the parties to a legal investigation and confiscation of both goods and vessel." These precautionary measures are sufficiently strong and would undoubtedly be acted on. But should any vessel, after her passage on the high seas, happen to traffic with the coast, it is indeed beyond our power to prevent it. It is therefore to request, that, as enacted in the above-named regulations, officers of all cruising vessels along the coast be held that they be directed, to cruise about in constant succession, should any traders approach a foreign ship to purchase opium, immediately to apprehend such traders, and send them to the coast; and lastly, that both the vessel and cargo of such vessels be confiscated, and the proceeds thereof given as a reward to the officers. We would also humbly request that an edict be

issued for the information of all native merchants, that they may know these things and be restrained by fear. At the same time we will continue earnestly to instruct and admonish the foreigners and make them understand that they must indeed bring their goods into port, and pay duty thereon, and must not, as heretofore, clandestinely sell them on the high seas. Thus may the amount of duties be increased.

ART. II. *Memorial of Choo Tsun on Opium: character of the trade in it: impolicy of sanctioning it; its baneful effects on the property and on the physical and moral character, of the people.*
Dated October, 1836.

CHOO TSUN, member of the council and of the Board of Rites, kneeling, presents the following memorial, wherein he suggests the propriety of increasing the severity of certain prohibitory enactments, with a view to maintain the dignity of the laws, and to remove a great evil from among the people: to this end he respectfully states his views on the subject, and earnestly intreats his sacred majesty to cast a glance thereon.

I would humbly point out, that wherever an evil exists it should be at once removed; and that the laws should never be suffered to fall into desuetude. Our government, having received from heaven, the gift of peace, has transmitted it for two centuries: this has afforded opportunity for the removal of evils from among the people. For governing the central nation, and for holding in submission all the surrounding barbarians, rules exist perfect in their nature, and well-fitted to attain their end. And in regard to opium, special enactments were passed for the prohibition of its use in the first year of Keaking (1796); and since then, memorials presented at various successive periods, have given rise to additional prohibitions, all which have been inserted in the code and the several tariffs. The laws, then, relating thereto are not wanting in severity; but there are those in office who, for want of energy, fail to carry them into execution. Hence the people's minds gradually become callous; and base desires, springing up among them, increase day by day and month by month, till their rank luxuriance has spread over the whole empire. These noisome weeds, having been long neglected, it has become impossible to eradicate. And those to whom this duty is intrusted are, as if hand-bound, wholly at a loss what to do.

When the foreign ships convey opium to the coast, it is impossible for them to sell it by retail. Hence there are at Canton, in the provincial city brokers, named 'melters.' These engage money-changers to arrange the price with the foreigners, and to obtain orders for them; with which orders they proceed to the receiving ships, and there the vile

id to them. This part of the transaction is notorious, and the boats which carry opium are easily discoverable. The boats which carry opium are called 'fast-crabs' and 'scrambling-dragons,' and are armed with guns and other weapons, and ply their oars as though they were wings. Their crews have all the over-throw and audacity of pirates. Shall such men be suffered to roam the surrounding seas according to their own will? Shall their conduct be passed over without investigation? The Governor Loo having, on one occasion, sent the Commissioner to coöperate with Teën Poo, the magistrate of the district, they seized a vessel belonging to Leäng Heⁿ-n carrying opium, and out of her they took 14,000 taels of opium. Punishment also was inflicted on the criminals, and on the two men, both of them opium-brokers. Hence it is evident that if the great officers in charge of the provinces do in fact comply with their civil and military subordinates, and if they earnestly search for the drug, and faithfully seize it when they find it, and punish the most criminal, and inflict upon them the punishment which they merit, it is, in this case, not impossible to attain the object. And if the officers are indeed active and strenuous in their duty, and make a point of inflicting punishment on offenders, however perverse and obstinate they may be, are they not fearless of the laws? No. The thing to be lamented is not the want of laws, but the want of maintaining the laws—the vigorous execution thereof, and suddenly exchanged for indolent laxity. It is represented that advantage is taken of the laws against opium by the dishonest underlings and worthless vagrants, to benefit themselves; but it is not known, then, that, where the government enforces the laws, it is necessarily an infraction of that law? And if the laws should sometimes be relaxed and become ineffectual, should they not on that account be abolished; any more than should the laws against robbery cease to eat because of diseased stoppage of the arteries, or should the laws against prostitution and gambling, treason, robbery, and other infractions of the laws, afforded occasions for extortioners and worthless vagrants to benefit themselves, and for the dishonest to amass wealth? Of these there have been many instances; and as any instance is discovered, punishment is inflicted; but none surely would contend, that the law, because it is not rendered ineffectual, should therefore be abrogated! It is forbidden to do wrong may be likened to the dykes which prevent the overflowing of water. If any one, then, urging that the laws are old, and therefore useless, we should have them abolished, what words could express the consequences of the abolition, and all-destroying overflow! Yet the provincials, who are the subject of opium, being perplexed and bewildered, and asking that a prohibition which does not *utterly* prohibit, and which does not effectually prevent, the importation of opium. Day and night I have meditated on this, and can give you my wisdom in the opinion.

It is said that the opium should be admitted, subject to a duty, the importers being required to give it into the hands of the hong merchants, in barter only for merchandise, without being allowed to sell it for money. And this is proposed as a means of preventing money from secretly oozing out of the country. But the English, by whom opium is sold, have been driven out to Lintin so long since as the first year of Taoukwang (1821), when the then governor of Kwangtung and Kwangse discovered and punished the warehousers of opium: so long have they been expelled, nor have they ever since imported it into Macao. Having once suppressed the trade and driven them away, shall we now again call upon them and invite them to return? This would be, indeed, a derogation from the true dignity of government. As to the proposition to give tea in exchange, and entirely to prohibit the exportation of even *foreign* silver, I apprehend that, if the tea should not be found sufficient, money will still be given in exchange for the drug. Besides, if it is in our power to prevent the exportation of dollars, why not also to prevent the importation of opium? And if we can but prevent the importation of opium, the exportation of dollars will then cease of itself, and the two offenses will both at once be stopped. Moreover, is it not better, by continuing the old enactments, to find even a partial remedy for the evil, than by a change of the laws to increase the importation still further? As to levying a duty on opium, the thing sounds so awkwardly, and reads so unbeseemingly, that such a duty ought surely not to be levied.

Again, it is said that the prohibitions against the planting of the poppy by natives should be relaxed; and that the direct consequences will be, daily diminution of the profits of foreigners, and in course of time the entire cessation of the trade without the aid of prohibitions. Is it, then, forgotten that it is natural to the common people to prize things heard of only by the ear, and to undervalue those which are before their eyes,—to pass by those things which are near at hand, and to seek after those which are afar off,—and, though they have a thing in their own land, yet to esteem more highly such as come to them from beyond the seas? Thus, in Keängsoo, Chêkeäng, Fuhkeän, and Kwangtung, they will not quietly be guided by the laws of the empire, but must needs make use of foreign money: and this foreign money, though of an inferior standard, is nevertheless exchanged by them at a higher rate than the native sycee silver, which is pure. And although money is cast in China after exactly the same pattern, under the names of Keängsoo pieces, Fuhkeän pieces, and native or Canton pieces, yet this money has not been able to gain currency among the people. Thus, also, the silk and cotton goods of China are not insufficient in quantity; and yet the broadcloths, and camlets, and cotton goods, of the barbarians from beyond the pale of the empire are in constant request. Taking men generally, the minds of all are equally unenlightened in this respect, so that all men prize what is strange, and undervalue whatever is in ordinary use.

From Fuhkeän, Kwangtung, Chêkeäng, Shangtung, Yunnan, and Kweichow, memorials have been presented by the censors and other

sting that prohibitions should be enacted against the the poppy, and against the preparation of opium ; but ly prohibited, the cultivation of it has not been really se places. Of any of those provinces, except Yunnan, me to speak ; but of that portion of the country I have r to say, that the poppy is cultivated all over the hills campaign, and that the quantity of opium annually pro- cannot be less than several thousand chests. And yet any diminution in the quantity of silver exported as n any previous period ; while, on the other hand, the tal in Yunnan is double in degree what it formerly was. is this to be ascribed ? To what but that the consu- ug are very many, and that those who are choice and egard to its quality, prefer always the foreign article ? r majesty's advisers who compare the drug to the dried acco plant are in error. The tobacco leaf does not nan constitution. The profit too arising from the sale mall, while that arising from opium is large. Besides, e cultivated on bare and barren ground, while the pop- h and fertile soil. If all the rich and fertile ground be ng the poppy ; and if the people, hoping for a large n, madly engage in its cultivation ; where will flax and ree be cultivated, or wheat and rye be planted ? To s way the water of the great fountain, requisite for the ood and raiment, and to lavish them upon the root ty and disaster spring forth, is an error which may be at of a physician, who, when treating a mere external l drive it inwards to the heart and centre of the body. a case be found impossible even to preserve *life*. And elds of Kwangtung, that produce their three crops given up for the cultivation of this noxious weed—those rison with which the unequal soil of all other parts of ot even to be mentioned ?

the matter,—the wide-spreading and baneful influence e regarded simply as injurious to property, is of inferior it when regarded as hurtful to the people, it demands onsideration : for in the *people* lies the very foundation

Property, it is true, is that on which the subsistence depends. Yet a deficiency of it may be supplied, ished people improved ; whereas it is beyond the power eans to save a people enervated by luxury. In the oosa we find the following passage : “ Opium was first outhsinne, which by some is said to be the same as Ka- a). The natives of this place were at the first spright- and being good soldiers, were always successful in e people called Hung-maou (Red-haired) came thither, ufactured opium, seduced some of the natives into the ng it ; from these the mania for it rapidly spread whole nation ; so that, in process of time, the natives

became feeble and enervated, submitted to the foreign rule, and ultimately were completely subjugated." Now the English are of the race of foreigners called Hung-maou. In introducing opium into this country, their purpose has been to weaken and enfeeble the central empire.* If not early aroused to a sense of our danger, we shall find ourselves, ere long, on the last step towards ruin.

The repeated instances, within a few years, of the barbarians in question having assumed an attitude of outrageous disobedience; and the stealthy entrance of their ships into the provinces of Fuhkeën, Chêkeäng, Keängnan, and Shantung, and even to Teëntsín,—to what motive are these to be attributed? I am truly unable to answer the inquiry. But, reverently perusing the sacred instructions of your majesty's all-wise progenitor, surnamed the Benevolent [Kanghe], I find the following remark by him, dated the 10th month of the 55th year of his reign (1717):—"There is cause for apprehension, lest, in centuries or millenniums to come, China may be endangered by collision with the various nations of the west, who come hither from beyond the seas." I look upwards and admiringly contemplate the gracious consideration of that all-wise progenitor, in taking thought for the concerns of barbarians beyond the empire, and giving the distant future a place in his divine and all-pervading foresight. And now, within a period of two centuries, we actually see the commencement of that danger which he apprehended. Though it is not practicable to put a sudden and entire stop to their commercial intercourse; yet the danger should be duly considered and provided against; the ports of the several provinces should be guarded with all strictness; and some chastisement should be administered, as a warning and foretaste of what may be anticipated.

Under date of the 23d year of Keäking (1818), your majesty's benevolent predecessor, surnamed the Profound, directing the governor of Canton to adopt measures to control and restrain the barbarians addressed him in the following terms: "The empire, in ruling and restraining the barbarians beyond its boundaries, gives to them always fixed rules and regulations. Upon those who are obedient, it lavishes its rich favors; but to be the rebellious and disordered it displays its terrors. Respecting the English trade at Canton, and the anchorage grounds of their merchant-ships and of their naval convoys, regula-

* The following remarks were written by a public Journalist in Calcutta at nearly the same moment Choo Tsun was preparing his memorial in Peking. Speaking of the "External Commerce of the Bengal Presidency," the writer says, "It has been increased by not less than a crore and a half of rupees; yet the pleasure of contemplating so large an increase of national prosperity is not without its alloy, for, the larger item belongs to the *pernicious article of opium*; of which the increase of export from Calcutta alone, in the past year, amounts to seventy lakhs of rupees. The amount contributed by this presidency to debase the morals, and destroy the mental and corporeal vigor of the Chinese nation, has now reached *two millions sterling*. One might almost fancy that trade arose out of some *preconceived plan for stupifying the Chinese, to pave the way for conquering the empire*, if we did not know how predominant the pecuniary passion is in modern nations." The Friend of India, vol. ii., No. 87 Aug. 25th, 1836

ing since been made. If the people, aforesaid, will not regulations, and will persist in opposition to the prohibitory the first step to be taken is, to impress earnestly upon the commands of government, and to display before them the favors and the terrors of the empire, in order to eradicate their minds all their covetous and ambitious schemes. If, however, they dare to continue in violent and outrageous opposition, to presume to pass over the allotted bounds, forbearance will cease, and a thundering fire from our cannon must be sent against them, to make them quake before the terror of our arms. The principle on which the 'far-traveled strangers are to be treated is: always, in the first instance, to employ reason as a means, and hereby to conquer them; and on no account to assume a harsh and vehement deportment towards them; but when ultimately necessary to resort to military force, then, on the contrary, to employ it in a weak and indecisive manner, lest the people whom it is exercised should see therein no cause for complaint. How clear and luminous are these admonitions, well calculated to be a rule to all generations!

At the majesty's accession to the throne, the maxim of your Majesty, that 'horsemanship and archery are the foundations of the empire,' has ever been carefully remembered. And hence the military governors, the commanders of the forces, and the officers have again and again been directed to pay the strictest attention to the discipline and exercise of the troops, and of the naval forces have been urged and required to create by their exertions invincible and powerful legions. With admiration I contemplate my Majesty's anxious care for imparting a military as well as a civil education, and am comforted as this anxiety is by the desire to establish on a firm foundation the foundations of the empire, and to hold in awe the barbarians on the border side. But while the stream of importation of opium flows on the one side, it is impossible to attain any certainty that none of the people do ever secretly inhale the drug. And if the campaign is not terminated by it, the baneful influence will work its way, and will be contracted beyond the power of reform. When times of desire for it come round, how can the victims—men whose hands are trembling, whose eyes are flowing with tears—be able in any way to attend to their proper exercises? Can such men form strong and powerful legions? Under such circumstances, the military will become alike unfit to advance, or in a retreat to defend their posts. Of this there is a striking instance in the campaign against the Yaou rebels, during the reign of our sovereign's reign (1832). In the army sent to quell the rebellion on that occasion, great numbers of the soldiers were infected with the disease; so that although their numerical force was large, and they possessed any strength to be found among them. It is to be feared, that when repealing the prohibitions, the people will be allowed to deal in and smoke the drug; and that none of the scholars, and the military, are to be allowed the

liberty. But this is bad casuistry. It is equal to the popular proverb, "shut a woman's ears, before you steal her ear-rings"—an absurdity. The officers, with all the scholars and the military, do not amount in number to more than one tenth of the whole population of the empire; and the other nine tenths are all the common people. The great majority of those who at present smoke opium are the relatives and dependents of the officers of government, whose example has extended the practice to the mercantile classes, and has gradually contaminated the inferior officers, the military, and the scholars. Those who do not smoke are the common people of the villages and hamlets. If then the officers, the scholars, and the military, alone, be prohibited smoking opium, while all the people are permitted to deal in and smoke it, this will be to give a full license to those of the people who already indulge in it, and to induce those who have never yet indulged in the habit to do so. And if it is even now to be feared that some will continue smokers in spite of all prohibitions, is it to be hoped that any will refrain when they are actually induced by the government to indulge in it?

Besides, if the people be at liberty to smoke opium, how shall the officers, the scholars, and the military be prevented? What! of the officers, the scholars, and the military, are there any that are born in civil or military situations, or that are born scholars, or soldiers? All certainly are raised up from the level of the common people. To take an instance: let a vacancy occur in a body of soldiers; it must necessarily be filled up by recruits from among the people. But the great majority of recruits are men of no character or respectability, and, if while they were among the common people they were smokers of opium, by what bands of law shall they be restrained when they become soldiers, after the habit has been already contracted, and has so taken hold of them that it is beyond their power to break it off? Such a policy was that referred to by Mencius, when he spoke of "entrapping the people." And if the officers, the scholars, and the military smoke the drug in the quiet of their own families, by what means is this to be discovered or prevented? Should an officer be unable to restrain himself, shall then his clerks, his followers, his domestic servants, have it in their power to make his failing their play-thing, and by the knowledge of his secret to hold his situation at their disposal? We dread falsehood and bribery, and yet we would thus widen the door to admit them. We are anxious to prevent the amassing of wealth by unlawful means, and yet by this policy we would ourselves increase opportunities for doing so. A father, in such a case, would no longer be able to reprove his son, an elder brother to restrain his junior, nor a master to rule his own household. Will not this policy, then, be every way calculated to stir up strife? Or if happily the thing should not run to this extreme, the consequences will yet be equally bad: secret enticement and mutual connivance will ensue, until the very commonness of the practice shall render it no longer a subject of surprise. From this I conclude, that to permit the *people* to deal in the drug and smoke it, at the same

officers, the scholars, and the military are to be prohibited it, will be found to be fraught with difficulties.

At present moment, throughout the empire, the minds of men are in great danger; the more foolish, being seduced by teachers, are sunk in vain superstitions and cannot be aroused; the more intelligent, being intoxicated by opium, are carried by a whirlpool, and are beyond recovery. Most thought ought for some plan by which to arouse and awaken the nation. While, however, the empire preserves and maintains plain and honest rustic will see what he has to fear and shun from evil; and the man of intelligence and cultivated mind will know what is wrong in himself, and will refrain from it. Though the laws be declared by some to be but waste, their unseen effects will be of no trifling nature. If, on the other hand, the prohibitions be suddenly repealed, and the law was a crime be no longer counted such by the government, all the dull clown and the mean among the people know what is still in itself wrong? In open day and with unobscured light, they will continue to use opium till they shall be accustomed to it, that eventually they will find it as indispensable daily meat and drink, and will inhale the noxious effect with indifference. When shame shall thus be entirely removed and fear removed wholly out of the way, the evil consequences will result to morality and to the minds of men will as little matter either few nor unimportant. As your majesty's minister, the laws of the empire, being in their existing state well adapted to their end, will not for any slight cause be changed. A proposal to alter the law on this subject having been made in the provinces, the instant effect has been, that crafty and villainous men have on all hands begun to raise their heads, and are gazing about, and pointing the finger, under the pretext that when once these prohibitions are repealed, thenceforth they may regard themselves free from every restraint and every cause of fear.

Assessing very poor abilities I have nevertheless had the honor to enjoy the favor of your sacred majesty, and have, within a few years, been raised through the several grades of the hierarchy to the presidency of various courts in the metropolis, to the honor of a seat in the Inner Council. I have been copiously favored with the rich dew of favors; yet have been unable to offer any token of gratitude; but if there is aught within the knowledge, I dare not to pass it by unnoticed. I feel it my duty to request that your majesty's commands may be proclaimed to the governors and lieut.-governors of all the provinces, requiring them to direct the local officers to redouble their efforts for the enforcement of the existing prohibition [against opium]; and to impress in the plainest and strictest manner, that all who are infected by the vile habit must return and become new men, and may not continue to walk in their former courses, strangers

to repentance and to reformation, they shall assuredly be subjected to the full penalty of the law, and shall not meet with the least indulgence,—and that on any found guilty of storing up or selling opium to the amount of 1000 cattles or upwards, the most severe punishment shall be inflicted. Thus happily the minds of men may be impressed with fear, and the report thereof, spreading over the seas (among foreigners) may even there produce reformation. Submitting to my sovereign my feeble and obscure views, I prostrate implore your sacred majesty to cast a glance on this my respectful memorial.

ART. III. *Memorial of Heu Kew against the admission of opium : scarcity and present value of silver ; its exportation caused by the opium trade ; plan of stopping it ; illegalities and violence of foreigners ; and the necessity of their being checked.*

HEU KEW sub-censor over the military department, kneeling, presents this memorial, to point out the increasing craftiness exercised by foreigners from beyond the seas, in their pursuit of gain, and the daily diminution of the resources of the empire ; on which subjects he respectfully offers his views, and requests that the imperial pleasure may be declared to the ministers of the court, commanding them maturely to consider what means shall be adopted to stay the gradual efflux of money, and to enrich the national resources.

Our dynasty has cherished and nurtured the people in peace and prosperity for two centuries. Within the four seas, wealth and opulence have reigned ; and the central empire has been enabled from her own resources to supply her own necessities. Westward, to the new territory of Turkestan, and southward, to Yunnan and Kwangtung, there is not a place whither her merchants may not go ; nor a spot where her treasures of silver do not circulate. In the reign of Keenlung the treasure was full and abounding, and even the cottage of the peasant enjoyed plenty. But, whereas a tael of pure silver then always passed for 1000 of the standard coin, an equal amount of fine silver now costs from 1400 to 1500 of the same coin. And this fine silver is daily lessening in quantity, and the price still rising from day to day, so that for want of it the officers of government and the people are both alike crippled. Some, in discussing this subject, represent that the change arises from the daily multiplication of births, in consequence of which money is daily more distributed, so that every day renders it in a greater degree inadequate. They forget that, if distributed over China alone, it may after distribution be regathered. But the true cause why silver has of late daily diminished in quantity is, that, having been clandestinely carried out beyond the seas, it has been impossible to gather it in again from the places of its distribution.

g to the information that I have obtained, the sale of the chief medium through which money is drained off, and the saas. In the first year of Keeking, the opium gners in Kwangtung did not exceed a few hundred chests. It has now increased to upwards of 20,000 chests. These are distinct kinds, the 'black-earth,' the 'white-skinned,' and 'black-skinned.' The price of earth chest is from 800 to 900 the best, and from 500 to 600 for the inferior quality. This chest is sold in the province of Kwangtung. With regard to the provinces, the vessels of which carry on illicit traffic with the foreign ship at Lintin, it is difficult to obtain any full and correct respecting them.

The amount annually lost to the country is about ten and some odd millions of money. The money thus lost was, at first, the foreign money which the foreigners had previously purchased goods; now it is the fine silver of the inner land, cast into a different form. Formerly the foreigners imported money, to purchase the goods of the country; but it now has all been carried back. For instance it was their practice to recast the foreign money, and any discovery should be made of their transaction; but they only carry away sycee silver. The ships which, as they are of various kinds, anchor at Whampoa, used formerly to be concealed in their holds. but in the first year of Taou-lung (1842), owing to a petition from one Yë Hangshoo, invested in the trade, and the hong merchants have always since then been obliged to sign bonds, that no foreign vessel which enters the port has any opium on board; and from that period, the foreign ships have all anchored at Lintin, only going in the month of every year (May or June) to the anchorage of the Moon, and in the 9th month (October) returning to Lintin. In the year (1835), the foreigners discovered that the anchorage of the Moon affords more perfect security: and since then they have moved their anchorage from Kapshwuy Moon to Kum-

The latter place is near to the villages Kepä and Tang-shan to the district of Heängshan; and the anchorage of the Moon is more inexpedient as it is for the people resident in those parts, and is the less convenient for such traitorous natives as are employed with the foreigners.

The method employed to take away money from the country is this; the names of the ships that have been to China some years ago, of which the captains do not exist, and the parties which are dead; and then to represent, that, at a time when the ship had deposited such an amount of money in the port, and that the applicant now wishes to carry it away, by the name of a party named. The hong merchants make artful use of this kind for the foreigners, and thus obtain permission for carrying away money. Another method is, to have money put on board in packages with merchandise.

It is since the suppression of the pirates in the reign of Keäking that opium has gradually blazed up into notice. At first the annual sale of it did not exceed in value a few millions; but of late it has risen to nearly twenty millions; and the increase and accumulation of the amount, from day to day and from month to month, is more than can be told. How can it be otherwise than that the silver of China is lessened, and rendered insufficient, even daily! But that it has gone to this length is altogether attributable to the conduct of the great officers of the above-named province, in times past—to their sloth and remissness, their fearfulness and timidity, their anxiety to show themselves liberal and indulgent,—by which they have been led to neglect obedience to the prohibitory enactments, and to fail in the strict enforcement of the precautionary regulations.

Our empire is wise and good in all its laws and statutes. Regulations have been enacted, in regard to the opening and working of mines, with a view to their entire preservation, because this silver, possessed in China, is not to be found native elsewhere. If then the exhaustible stores of this empire be taken, to fill up an abyss of barbarian nations that never can be filled, unless measures be speedily adopted to prevent it, our loss will, within ten years, amount to thousands of millions, and where will be the end of this continual out-pouring? Some reasoners on the subject say, 'Cut off entirely commercial intercourse, and sacrifice one million of duties to retain in the country twenty millions of money: the loss will be small, the gain great.' They forget that the various countries of the west have had commercial intercourse here for many years; and that in one day to put an entire stop to it would not only be derogatory to the high dignity of the celestial empire, but would also, we may fear, be productive of any but good results. Others say, 'Repeal the prohibitions against opium, let it be given in exchange for merchandise, and let a duty be levied upon it. Thus our money will be saved from waste, and the customs duties will be rendered more abundant, so that a double advantage will be gained.' These forget, that, since—even while the law tends to prohibit the drug, the fine silver is nevertheless drawn off, and opium abundantly imported—there is room to doubt whether merchandise will always be taken in exchange for the drug, when the sale of it shall be made public, and may be carried on with open eyes and unblushing boldness, and when the importation of it will consequently be greatly increased. A case in point is that of the ships bringing foreign rice to Canton: in consequence of a representation to the throne, these ships are freed from the tax called 'measurement charge,' only being required to take return cargoes of *merchandise*; and now the Spanish and other rice-laden ships have made it a practice to take their return in *specie*. From this we may see, that, whenever the prohibition of opium shall be repealed, an increase in the clandestine drawing off of silver will be an inevitable consequence.

Moreover, if the sale of the drug be not prohibited, neither can men be prevented from inhaling it. And if only the officers of government and the military be prohibited, these being all taken from

and common people, what ground will be found for any prohibition to rest upon? Besides, having a clear consequence is highly injurious to men, to permit it, notwithstanding the empire—nay, even to lay on it a duty—is incompatible with the yet uninjured dignity of the great celestial empire. In my humble view of the case, the of sycee silver to foreign regions, and the importation of opium is rightly interdicted. But local officers, having received orders, have not strenuously enforced them, and hence the result has produced the out-going of the other. If, in place of their failure strenuously to enforce them, these provisions were now repealed, this will be indeed to encourage the people, and to remove all fault from the local officers. How, when once this prohibition of opium is withdrawn, a verdict against the exportation of sycee silver be rendered cannot be so; for we shall then ourselves have removed

It were better that, instead of altering and changing the enactments, and utterly breaking down the barrier between them, the old established regulations should be diligently that correction be severely employed.

Between the inner land and the outer seas, a wide separation exists. Traitorous natives who sell the opium cannot alone, in any way, on the traffic with the foreign ships. To purchase opium there are brokers. To arrange all transactions, there are merchants. To give orders to be carried to the receiving officers from them the drug may be obtained, there are resident interpreters. And to ply to and fro for its conveyance, there are boats called 'crabs.' From the great Ladrone island, at the entrance of the seas, to Kumsing Moon, there are all along various naval stations. To bring in foreign vessels there are pilots appointed; it is not to be a difficult thing to keep a constant watch upon the coast, and even though from Fuhkeän and Chêkeäng, from the coast of Sae and Teentsin, vessels should repair directly to the coast to trade with them, yet, situated as their anchorage is, in the seas, what is there to prevent such vessels from being seized? And yet, of late years, there has been, only a few, namely during the late governor Loo's administration, a few, magistrates of the district of Heängshan, in conjunction with the naval force, captured one single boat laden with opium. In other portions, we have seen but little of seizures. The reason is that the men who are appointed to observe and watch for offenders pass over all things, and observe nothing.

Of old it has been a maxim, in reference to ruling a state, to deal closely with what is within, but to deal in general which is without,—first to govern one's self, and then to govern others. We must then, in the first place, establish laws for the punishment of offenses; and afterwards we must punish the traitorous natives who sell the drug, the hong men who manage the transactions, the brokers who purchase whole-

sale, the boat-people who convey the drug, and the naval officers who receive bribes; and, having with the utmost strictness discovered and apprehended these offenders, we must inflict on them the severest punishments of the law. In this way, the inhabitants of the inner land may be awed and purified.

The resident barbarians dwell separately in the foreign factories.

In the * * * * * and besides these there are, I apprehend, many others. The treatment of those within having been rendered severe, we may next turn to these resident foreigners, examine and apprehend them, and keep them in arrest; then acquaint them with the established regulations, and compel them, within a limited period, to cause all the receiving ships anchored at Lintin to return to their country:—they should be required also to write a letter to the king of their country, telling him that opium is a poison which has pervaded the inner land, to the material injury of the people; that the celestial empire has inflicted on all the traitorous natives who sold it the severest penalties; that with regard to themselves, the resident foreigners, the government taking into consideration that they are barbarians and aliens, forbears to pass sentence of death on them; but that if the opium-receiving ships will desist from coming to China, they shall be indulgently released and permitted to continue their commercial intercourse as usual; whereas, if they will again build receiving vessels and bring them hither to entice the natives, the commercial intercourse granted them in teas, silks, &c., shall assuredly be altogether interdicted, and on the resident foreigners of the said nation the laws shall be executed capitally. If commands be issued of this plain and energetic character, in language strong, and in sense becoming, though their nature be the most abject—that of a dog or a sheep, yet, having a care for their own lives, they will not fail to seek the gain, and to flee the danger.

Some think this mode of proceeding too severe, and fear lest it should give rise to a contest on our frontiers. Again and again I have revolved this subject in my mind, and reconsidered how that while in their own country no opium is smoked, the barbarians yet seek to poison therewith the people of the central flowery land; and that while they bring to us no foreign silver, they yet would take away our native coin; and I have therefore regarded them as undeserving that a single careful or anxious thought should be entertained on their behalf. Of late, the foreign vessels have presumed to make their way into every place, and to cruise about in the inner seas. Is it likely that in this they have no evil design of spying out our real strength, or weakness? If now they be left thus to go on from step to step, and their conduct be wholly passed over, the wealth of the land must daily waste away and be diminished. And, if when our people are worn out, and our wealth rendered insufficient, any difficulty should then, even by the slightest chance, as one in ten thousand, turn up, how, I would ask, shall it be warded off? Rather than to be utterly overthrown hereafter, it is better to exercise consideration and forethought.

et our possession of the right gives us such energy and t those barbarians will not dare to slight and contemn ent; nor (it may be hoped) have any longer the means of eir petty arts and devices.

is this as a subject of importance, I have given it the most estigation: and having formed my own views thereon, that I should delineate and clearly state them. To s to their correctness, or otherwise, it is my duty to your majesty's pleasure may be declared to the ministers requiring them with full purpose of heart to take into i these views. Laying them before your sacred majesty, mplore my sovereign to cast a glance upon them. A re- torial.

Supplementary Statement.

re, in regard to the residence of the foreign barbarians e prohibitory enactments are very full and clear. But I hat it has of late been usual for the barbarians to sit in sedans, and to hire natives to carry them: also to hire s for purposes of prostitution, who are called 'ta-fan.' eir merchant ships are not allowed by the regulations to r cargoes clandestinely at Macao; but of late it has ary for only those ships to make their anchorage at h have return cargoes of merchandise to take away; rs never enter the port, nor announce their arrival. l their finer and lighter goods, on board the boats call- from Kumsing Moon and other places, for sale. The avier goods, they unlawfully send in cargo boats direct use (in Chinese *Sta'*) at Macao; after which they call merchants to hire chop-boats to convey them to the , and exchange them for other goods,—thus not only asurement charge and duties, but also avoiding exami- part of the native authorities.

reme case is this:—at Macao, on the outside of the : Ditch-gate, are very numerous graves of the natives. month of the present year the foreigners made a wide elling entirely the graves. The sub-prefect stationed at ted this to his superiors; and, at his request, a deputy it the spot in concert with him, and to reprehend the hese, however, would not make acknowledgment of and when the officers sent men to repair the tombs, n their barbarian slaves, and beat the native police and wards a linguist was sent to admonish them authorita- en only they sent an address to the officer, seeking to

Such outrageous, overbearing, and lawless conduct om this, that the local officers thinking forbearance to iet policy, seek only to obtain present freedom from nd hence give occasion for being treated with slight

Macao is within the jurisdiction of the district Heangshan, and on all sides of it there are naval stations. For all its daily necessities, it is compelled to look up to us. The compradors employed by the foreigners there, are natives to whom permits are granted by the government. Should, therefore, the least insubordination be shown by the foreigners, there would be no difficulty in immediately having their lives in our hands. I have been told that a former magistrate of that district, named Pang Choo, on account of the pride and profligacy of these barbarians removed from among them all the native dealers and merchants, and allowed no commercial intercourse on the part of natives with them; till the barbarians, trembling with fear, were at once brought to order. This is yet in the recollection of the gentry of Heangshan. Since a district magistrate could effect thus much, would the barbarians dare even to move, if the great officers of the country would make a display of their power? Another instance occurs to me. The barbarians at Canton built a quay, outside the city, a work which went on for months without any hindrance being made to it. But when your majesty's minister Choo Kweiching was sent thither as lieutenant-governor, he went to the spot, set down his sedan there, and commanded the instant destruction of the work; and the barbarians, subdued by his unostentatious firmness, dared not even to utter a word. Again, the year before last, when Lord Napier brought ships of war up to Whampoa, your majesty's minister Loo Kwān, the governor, stationed the naval forces so as to present a close unbroken line of defense; and the barbarians were at once filled with dismay, repented their error, and requested a permit to leave the port. We see from these instances that the barbarians have never yet failed to succumb.

Now, to make ostentatious show of terrors is, it is true, calculated to ruin affairs: but to pass faults over in silence is, on the other hand, calculated to nourish depravity. If the old regulations be not rendered conspicuous, and the prohibitions be not strictly enforced, these barbarians will end with doing whatever they please, imagining that there is no limit to forbearance. The barbarians, pluming themselves on their great wealth, extensively practice bribery and corruption, and have many traitorous natives for their agents, and many of the police in combination with them. Hence, if a talented, intelligent, and determined officer were, in the first place, to punish severely the Chinese traitors, we may hope that he would thus be able at once to overwhelm the spirit of the barbarians.

This further exposition of my feeble and obscure views, it behoves me to add to my previous representation, and, prostrate, lay it before your sacred majesty, hoping that my sovereign will cast a glance thereon. A respectful memorial.

Imperial edict, referring the memorials of Choo Tsun and to the chief provincial officers of Canton; with brief on the present state of the question.

Choo Tsun has presented a memorial, requesting the revocation of the prohibitory enactments against opium may be. The sub-censor Heu Kew also has laid before us a representation of his views: and, in a supplementary statement, recommends to punish severely Chinese traitors.

Coming from the distant regions of barbarians, has pervaded the country with its baneful influence, and has been made a subject of severe prohibitory enactments. But, of late, there has been a change of opinion in regard to it, some requesting a change in the policy adopted, and others recommending the continuance of the prohibitions. It is highly important to consider the matter carefully in all its bearings, surveying at once the whole of the empire, so that such measures may be adopted as shall command force free from all failure.

Let his colleagues anxiously and carefully consult together, and recommend to search for, and with utmost strictness to expose those traitorous natives who sell the drug, the hong merchants who manage the transactions in it, the brokers who purchase it, the boat-men who are engaged in transporting it, and the officials who receive bribes; and having determined on the means in order to stop up the source of the evil, let them send a true and faithful report. Let them also carefully ascertain whether the circumstances stated by Heu Kew in his supplement, in reference to the foreigners from beyond the seas or not, whether such things as are mentioned therein have or have not been taken place. Copies of the several documents with sent to those officers for perusal; and this edict is given to Tang and Ke, who are to enjoin it also on Wan, the superintendent of maritime customs. Respect this.

In introducing the next two articles, a few remarks seem never to afford our distant readers, who may be interested in respecting the introduction of opium, a correct idea of its position. It can be shown by a series of imperial edicts during the last forty years, the government of China has endeavored to prevent both the introduction and the use of the drug. Recommended by the counselor Choo Tsun; who, furthermore, declared the quantity of opium annually produced in his native province cannot be less than several thousand chests. It is evident that, notwithstanding the prohibitions, the cultivation, and use, of opium, have for some years been increased. What has been the effect of those interdicts,

so often repeated since 1796, this is not the place to inquire; counselor Choo Tsun, however, is doubtless right in supposing that their revocation would be the cause of increasing the importation and the cultivation of opium, and consequently its use. But a different opinion has been advanced. Some time previous to the appearance of Heu Naetse's memorial, it was rumored that individuals, concerned in the administration of the government, deemed it politic to admit the drug through the custom-house, in order to benefit the revenue, to prevent smuggling, and to diminish the use of opium. But it remained for the vice-president of the sacrificial court, Heu Naetse, to take the lead in openly avowing these sentiments, and for the provincial government of Canton—governor Tang Tingching, lieutenant-governor Ke Kung, the chief commissioners of finance and justice Alsingah and Wang Tsingleen, and Wän the superintendent of maritime customs—to second them. While these local officers were engaged in drawing up their report, Choo Tsun and Heu Kew came forward (as it was expected some would do) on the opposite side of the question and in support of the existing prohibitions. The report of the governor and his colleagues had scarcely left Canton, when (October 16th,) the dispatch containing the mandate at the head of this article, and the preceding counter-memorials (art. ii. and iii.), was put into their hands. What report the "provincials" have sent up to the emperor in reply to this last edict we do not know. It is supposed by some, that the emperor has already entrusted the governor with discretionary power to admit it or not, and that his excellency, partly as a compliment to the court, and partly to screen himself from future animadversion, has referred back to Peking for express commands. Be this as it may, most vigorous efforts, as on some former occasions, are being made to stop the smuggling—not only of opium, but of other articles which, in consequence of high duties, have been "continually oozing out of the country." The amount of opium annually imported, and the manner of doing it, are tolerably well detailed in the memorials, though that brought from Turkey has been put to the account of Madras. The statements about casting money at Macao are false; and we doubt whether that respecting carrying it away, "by putting it in the same packages with merchandise," is correct: what the hong merchants may have done, "it is difficult for us to determine." We have omitted the names of the nine merchants specified in the memorial of Heu Kew, chiefly for two reasons; 1st, because it is not plain who were intended, some of the names having been applied to different parties by different individuals; and 2dly, because the list is a partial one, including some who have had but little to do with the trade, and omitting others who have been extensively engaged in it. Though many of the foreign residents have been concerned in the traffic, yet that there is in this community a strong feeling counter to it, is sufficiently evident from the fact, that the next two articles are from merchants who have long resided in Canton, and that (as we are assured on good authority,) the essay published by archdeacon Dealtry in Calcutta was written in China by a British merchant.

orks on the opium trade, contained in a letter written those of *A Reader*, published in the *Repository* for 1836. From a Correspondent.

ll perceive from this and the following article, that his failed to attract attention; how far they are refuted by the other Reader," and by those of "V. P. M." we leave it for readers to form each their own opinions: the following is [Correspondent.]

r of the Chinese Repository,
 ll-wisher to all free discussion, and convinced that g of both sides of a cause is the best way to arrive] at n, I have been glad to see that you have commenced to the merits of the opium trade. In this country, as re daring enough to attack this is sure to have arrayed powerful host of antagonists; for interest is a wakeful r impartiality is proved by your admission of what ense," the sophistry of which, as of much that has e subject, may be easily exposed. This I will endeavor

ffickers in this poison,—for such no one in possession can deny it to be, to state plainly that they deal in it iter of gain; and that, with them, this determination y consideration of right or wrong, then their premises : seen, and opposition or reasoning would be vain, since would be fruitless; but when, as now, the practice, nd necessarily felt to be so, is upheld by anxious so- is but right that it be exposed. I have looked in vain : letter of your Correspondent, "A Reader," for any rgment than that of the hired bravo, "I do not see ; any harm: if I did not take the profit, some one else, ned, would"—which may be broadly pronounced the us, false, and dangerous principle to morality that has ted. What! because some poor reprobate or outcast o embark in deeds of darkness, can that be quoted as rgment, for men, for gentlemen, whose wealth, or ing it, remove them from. at least, vulgar temptation? rgment! The main danger, from your Correspon- would appear to be, lest the supply of China with this e thrown into the hands of desperadoes, pirates, and ead of a body of capitalists:" a highly logical and ment, no doubt; and one that should, of course, satisfy ernment of the purity and kind care of the present pur- how and why it could be worse, were "the marau- orth, to be the carriers, it would puzzle all the Chinese to boot, to determine. Were not great capital, skill,

and enterprise embarked in this trade, it would never have arrived at its present magnitude; and this is, as far as I know, all the difference that the management of the trade *by gentlemen* has caused; and it may be questioned whether the Chinese could so accurately distinguish between these polite purveyors and "the desperadoes and marauders," as A Reader does. In what other light can they claim to appear? Constantly, avowedly, notoriously, in the practice of a trade, directly opposed to the laws of the empire; not less opposed to morality and propriety; the purveyors of a most powerful incentive to vice; a fierce moral destroying agent—on what has the opium merchant to plume himself, beyond his brother smuggler and law breaker, the contraband gin-importer into Great Britain? Nay, on some points, his unenlightened and despised *collaborateur* in the cause has the advantage, at any rate in the estimation of those engaged in these habits. The one risks his life—the other, shielding himself behind the corruption of the local officers, or the weakness of the marine, carries on deeds of unlawfulness, without even the risk or excitement of personal danger; and coolly comments on the injustice of the Chinese government in refusing the practice of international law and reciprocity to countries, whose subjects it knows only as engaged in constant and gross infraction of laws, the breaking of which affects the basis of all good government, the morals of the country. How can foreigners presume to hope for a patient or fair hearing, at Peking, so long as this charge can, with truth, be brought against them? Have they not themselves closed the doors; and yet now do they complain at the natural consequences of their own acts? It is well known to foreigners that there are, at Peking, in immediate communication with the emperor, men of talent to whom the miserable intrigues and falsehoods of the government of Canton can be as nothing, men who are patriots—Chinese patriots, that is,—not men whose knowledge is comprised on the routine of war and a ready practice of its horrors, but men whose earnest wish is to make their native country as peaceful and as happy as possible.

Contrast the opinion which such enlightened men must form of our genteel opium smugglers, with the picture which would be drawn by themselves, and let reason judge between the two.—The Chinese moralist or statesman, on one side, would look with correct and merited indignation on the "gain-seeking foreigner," resorting to his country, with a deadly drug, to poison the health and subvert the morality of a nation, to which he arrogantly claimed superiority. The foreigner, on the other side, would look down on the philosopher; tell him that he was a Christian, and an educated gentleman; and if this failed to convince, he might probably bother him with a half-understood and ill-applied quotation from Paley, about tobacco and fish. For the time, he would forget the pure and perfect morality inculcated by the Teacher of his religion;—"Thou shalt not do evil that good may come;" and "Do unto others as you would wish that they should do unto you;—and would, from time to time, indulge in tirades against the tyranny of the Chinese; and their aversions to allow the Europeans a residence amongst them; call on his government, to interfere,

h a state of things; prudently shutting his eyes to the n which foreigners must appear, to all sober-minded panders to one of the most vitiated, depraved, and s in the world.

icture. Suppose, by any chance, that Chinese junks into England, as a foreign and fashionable luxury, ring as arsenic, or corrosive sublimate—that, after became a rage—that thousands—that hundreds of it—and that its use was, in consequence of its bad ed. Suppose that, in opposition to the prohibition, ioned in the St. George's channel, with a constant ccasional trips to the isle of Wight, and the mouth of en the governmental officers were sufficiently atten- ty, at the former station, to prevent its introduction the consumption to increase annually, and to arouse government, and of those sound thinking men who and destruction from the rapid spread of an insidious, d dangerous habit. Suppose, in fact, that, *mutato* ich has been 'achieved here,' had been practiced. onservators of the public morals to be roused, at last, ate against its use and increase; and that, among the orth this destroyer, to prey on private happiness, and e or two pious and well-meaning *bonzes*, were to re- heir countrymen, "à la archdeacon Dealtry," on the conduct—how wonderfully consolatory to one party. le to the other, must be the remark of the well-dressed ed Chinese merchant: "Hai ya, my friend, do not dress and the crystal knob on my cap; do you not e read, and can quote, Confucius, Mencius, and all do you not see that the barbarians are passionately and that they will have it:—that they go so far as d can you, for one moment doubt that it would not or them if, instead of my bringing it, it were left to y, and uncertain supply, which low "men of no car- rd to bring? It is possible that the Chinese *lite*- have a translation of Paley; but I will answer that ne work, to extract from, quite as little to the pur- thus bewildered his adversary, by comparison and knock him down with a mass of figures showing, ion, made in happy and most utter ignorance of the re than one person in 279½ could manage to get cial and delightful drug.

ich a parade of figures now more than once; and, r worth the trouble, yet it may be as well to expose it involves. It is assumed that in China there are le, and that 33,320,000 taels of the smokeable ex- l yearly, making "of victimised smokers," as A s them, 912,000, at the rate of 365 taels each, or t per annum, 2½ pounds per month, ¾ of an ounce

per day; or $1\frac{1}{2}$ ounce per head for each and all of the immense population of China from the remotest parts of Tartary and Bokhara to the sea, besides the native poison, grown in the country, which is supposed to be not inconsiderable.* Of the 300,000,000 in China, &c., more than one half may be safely put down as children and youth; of the remainder, one half may be women; leaving, probably, not more than fifty millions of men: thus, supposing that *all the men in China* could and would use the drug, the number of the "victimised," 1 in 912, is brought to 1 in 150; and from this, an enormous deduction must be made for the aged, sick and poor, and for those too far removed from the head quarters of the importers and sea-board to be able to obtain it, at even enormous prices. It is, in fact, unlikely that it can as yet penetrate, in large quantities, much beyond the maritime provinces; and if only their population is taken, it will be seen that the ratio of "victimised smokers," will be prodigious; though, even allowing the validity of the argument, I can scarcely admire a defense resting solely on the fact that *a share* has been contaminated, and not *all!* This is much on the same principle as that of the girl who, being reproved for enriching the parish with a child, excused herself on the ground of its being "a very small one." The morality or immorality of the practice is unaffected by the extent to which it is carried—it is just or indefensible *per se*, whether it spreads over one village or ten; and not, as an arithmetical question, as to the number, within whose reach the drug is put.

The comparison of opium to wine is, I beg to say, mere "fudge," and the attempt at argument, thence deduced, no better than nonsense: but, even did the parallel hold, what would it prove? That because people in the western world poison themselves with wine, it is right and expedient that the Chinese should be poisoned with opium. A pretty corollary; and an equally sound deduction! As to 'depopulating the Rhine,' 'prohibiting barley,' &c., there would be no more use in doing all this, than there is in talking and writing about it. Barley and the grape are produced for the purpose of innocent enjoyment. Where is the man, so ignorant or audacious, as to say that he believes the same of opium? Such is the opinion entertained of it, *in all countries where it is used*, that he, who has once

* I am told, *au fait*, as to this, by Chinese, that it is but rarely that a man can be found who can consume a tael weight of prepared opium in twenty-four hours; and that, in any case, no one could long continue to do so. His death would prevent it. A mace weight is, it is said, a tolerably good allowance; and twice to thrice that quantity entitles one to the rank of a confirmed opium-smoker, "a hard goer," in fact. One mace will fill twelve pipes. This would bring down A Reader's estimate, say to 1 in 25 or 30. This amount of "excitement," to so sober a people, as the Chinese are admitted to be, appears to me terrific, especially if its use is nearly confined to only parts of the country. As to the effects of this drug on the Chinese, I would recommend "A Reader" to look at Gutzlaff's account of it, in his junk-voyage along the coast of China. He may there "sup full of its horrors." Or if he has not been in a public den of opium smokers, let him see a picture of a mad-house, as shown in one, before he apologises for it as a harmless or elegant diversion. The awful picture, in "Anastasius," of one of these dens in Turkey, is a correct one also of those which I have seen in this part of the world

by to the infatuation, is regarded as lost to society, his himself—he is looked on as a reprobate, a debauchee, ; and experience daily proves by the innumerable wrecks fatal habit marks on its page, the truth of the observations refer you for proof of this, to all the writers* on Asia, and other countries, where the habit prevails. You agree in the remark, above made. Does not our own confirm it? Who would have in his house a servant whom? Is not such a man a marked one, by his own coun-foreigners; and is he not looked down on, with pity or resequence? The Chinese, who may be allowed to know their own people, denounce the habit, as prejudicial and

When once it is indulged in, renunciation is all but and the appetite, “growing by what it feeds on,” increas-ature decay and death close the scene of dissipation This picture is by no means so agreeable a one to con-the fancy one of using it—being merely “a rational article of luxury and hospitality :” but, what it wants in gery, it makes up in truth. Ask any Chinese (who does rational and sociable thing,) what it is, and hear what you. Read the manly and vigorous representations of and others; see what an opinion these Chinese patriots amiable “article of luxury and hospitality;” and judge r lessons of wisdom and experience, and the cobweb ex-ers, “laying the flattering unction to their souls,” by at-make the wrong appear the better reason. What would : sober-minded Chinese think, were the sophistry of the this trade translated for him? Where would he find the led and high minded inhabitant of the far off countries? ie be made to comprehend that the believers in and prac-tistian morality advocated a trade so ruinous to his coun-the government of India, of an empire of 100 millions of mpelled the growth of it by unwilling ryots; and that, s being brought to China by “desperadoes, pirates, and it was purveyed by a body of capitalists, not participat- in what they carry, but in fact supplying an important e Indian revenue safely and peaceably;” that the Brit-ent, and orders, encouraged it; and that the agents in ere constantly residing at Canton, protected by the gov-ose laws they outraged; but monstrously indignant and their governments, if No. 2 longcloths is classed as No. 1, desperate villiany of some paltry custom-house servant. ht he say, “the old Books must be right—the foreign- o be governed by the same laws as the Chinese: they d by misrule; and who could deny the justice of a con- arrived at? And what could be the answer of an em-Peking, from a foreign power, sent to demand a commer-redress for any grievance, real or supposed, when taxed

with acts of his countrymen, towards China, by the supply of this life-consuming drug? It is a case that may occur.

We have not, as yet, however, raked out the real fallacy. Like most others, it hides itself, and shuns observation. The saving clause in the opium-smuggling profession is that it is, not a *vulgar* one. It is a wholesale trade. Sales are made in thousands of dollars' worth. The amount is gentlemanly. Single bales would be low. Sales by retail would be indefensible. The seller of a pipe or two, the poor pander to a depraved appetite, should be pursued by justice—for none of these can be gentlemen. That which, sold in chests, is commerce, and to be applauded, becomes vulgar and mean when doled out in small lots. Admirable logic! with which one may hug one's self, satisfied that it is nothing more than "supplying an important" "branch of the Indian revenue safely and peaceably." As Shakespeare has it:

Plate vice with gold,
And the strong lance of justice harmless breaks;
Clothe it in rags, a pigmy's sword doth pierce it.

Thus he who would shink with angry scorn from a comparison with the gin or tobacco-smugglers of England, or the salt-smuggler of India, advocates, as harmless and blameless, a traffic as illegal as they are, but hundred times more fatal; and this because he thinks that, not being himself the actual agent in the business, he has a right to acquit himself of all wrongful intention. He only gives a piece of paper, and receives dollars. The opium he does not see. It is made by the Indian government; and if he did not bring it, some one else would.

As to the assumed gentility of this trade, a few words may be added. A Reader insists on it that it is "a rational and sociable article of luxury and hospitality." Fine words, as old Cobbett would say. Highly sociable, doubtless, however we may question the rationality of two or more Chinese lying down on their backs, in open day, to inhale a smoke, nauseous and disgusting, which has the effect of stupefying and brutifying them, till their senses are restored by another "go" at "the social and rational." Fancy a costermonger doing the amiable to a fair one from Billingsgate, in the forenoon, in the shape of three halfporth of Booth's best, and you have a fair parallel to the sociability and rationality of A Reader's opium-consumers. If the purveyors of opium said nothing, or did they only defend the practice on the ground that it gave a profit, which they coveted, not much need be said; but sophistication is a bad substitute for truth. The trade may be a profitable one—it may be of importance to the Indian government, and to individuals—but to attempt a defense on the ground of its not having a dangerous and pernicious influence on health and morals, is to say what cannot be borne out, by fact or argument; and what all, who reason on the subject, cannot but feel to be an impotent attempt to defend what is, in itself, manifestly indefensible.

I am, sir, your humble servant,

ANOTHER READER.

Premium for an Essay on the Opium Trade, showing its commercial, political, and moral interests of the individuals connected therewith, and pointing out what they ought to pursue in regard to it.

They have been placed at our disposal, and are now offered as a premium on the trade in opium. The persons to whom they are to be transmitted for examination and awarding the premium, and the month in which they must be transmitted, will be named in our next number or March. As the subject to be discussed is one of great importance to the welfare of the two greatest empires in the world—the British and the Chinese—affecting their commerce, their governments, and their interests, it will, we hope, engage the attention of those who are able to do so. Whether the period shall be so extended as to allow the essays to be sent in from the west, in Europe and America, time to investigate the question; the persons whose essays shall be referred for examination to persons there, or to one in each of the places, are points about which we are desirous to be advised. The proposition made to you is contained in the following communication.]

—An abler pen than mine must do justice to the subject, the investigation of which has been now commenced in your Repository: I mean the trade in opium. But I cannot tendering some remarks in reference to such advocacy of opium as appeared in your last number. Your Correspondent remarks that opium was a real good to the *many* in China, and a bad one to a *few* “abusers of it.” Now is there another man who believes this? I pay no regard to A Reader’s falterings: I appeal to every man’s common sense upon the subject. Your Correspondent says, that the emperor and his viceroys, in twenty years, have shut their eyes to the subject. Is this true? if true, why shut their eyes? Was it to prevent their *armless* luxury? No, Mr. Editor, their eyes have been open to see, and their ears to hear, till they have tingled with shame in every corner of the land, against the baneful effects of opium in poison.” Hence that mighty stir, whose agitations have expelled some of us from our domicils in China; and the *picture of misery* which might well mantle our cheeks while passing to and from the hongs we are compelled to go there, crouching beneath his burden, the tortured man, entering for the iniquities into which our cupidity has led us, this is a “special edict.”

As A Reader, there is a principle acknowledged and avowed by the governments of France and England, which the Editor of the Calcutta article in his zeal has quite lost sight of,—it is, that the *houses*, and *gin-palaces*, and the like, should be by license lands of the respectable. I cannot enter upon the turpitude of parts of the “most civilized governments,” which “livelihood of evil. It has been supposed, that the object of these

governments is to avail of vice in order to obtain revenue. But your Correspondent charitably alleges that it is to keep the administration of evil in the hands of the respectable, and therefore infers it would be better to let the opium trade be where it is, than to shame the present smugglers of it from their employ, and so drive it into the hands of "desperadoes and marauders." I do not know how A Reader's associates will fancy his thus placing them in the "marauder's" chair, and that *without license*, except it be one to flee the country. But the amount of his plea is, "I acknowledge the trade in opium is an evil, but if I do not engage in it, others will;" and this, Mr. Editor, is the plea by which many—many in other respects highly valuable members of society, conceal from themselves their guiltiness before God and their own consciences. To this plea I would answer in the language of another; "If others will do it, let others do it; if this unprincipled traffic will be in the hands of unprincipled men, if it is not in our hands, THERE LET IT BE, where it should be. If I do it not, others will! Is this a correct principle of conduct? Is this the rule of heaven to direct the doings of man? Have I a right to do evil because other men will? Other men commit murder, have I a right to do it? Other men prey on unoffending Africa, and bear human sinews across the ocean to be sold, have I right to do it? Apologist for the trade in opium! will you participate with the traffickers in human flesh upon your own principle? Apply this excuse to the case of a bookseller. The question might be suggested whether it was a moral or immoral business, to deal in infidel, profligate, and obscene books. True, it might be alleged that they did evil, and only evil continually; it might be said that the love neither of God nor of man would prompt to it. He might be pointed to the fact that they *always* tended to corrupt the morals of youth, to blight the hopes of parents, fill up houses of infamy. But then he might with commendable coolness add, 'If I do not engage in it others will, it contributes to my livelihood, to the support of the press, to the promotion of business; and I am not responsible for *their* reading the books, nor for their desire for them. I am pursuing the way in which my fathers walked before me, and it is *my living, and I will do it.*' Now wherein does such a plea differ, from the apologist for the opium trade, when he says, "If I do not engage in it, others will." Alas! we have learned how to estimate its force in regard to slavery and obscenity; but we shrink from its application in regard to the 'intoxicating course' of opium."

I have done with A Reader's *arguments*; but I cannot, Mr. Editor, so leave the subject. I have seen much in your paper about the wrongs of foreigners in China, but little about the *wrongs of China* at their hands. With these you might fill your pages, and so you will as you go on in your investigation respecting opium. It is a serious subject, and with whatever doubting "ifs" you may affect to soften its unwelcome introduction to your pages, you know it is evil; evil of the deepest die, and you will not fail to speak of it as you ought. The hour has come, and there is no "fitter moment" for you to speak

Mr. Editor, let us seriously consider that it is not with us as a foreign community as it has been. We live upon the threshold of another era. In the enjoyment of a free trade with 'THE mother country,' we are brought nigher to those happy influences which constitute her a rich dispenser of blessings to the world, and not one of the least derivable from our greater freedom of intercourse with her, will be the consciousness of her more intimate inspection. Too far removed, hitherto, from the hallowing influences of Christianity, the distance, by means of steam-navigation and other improvements, is daily lessening, and our obligation to be guided by them becoming stronger and stronger. The spirit which has abolished slavery in Europe and is abolishing it in America, and the spirit which has given a death-blow to intemperance in America, and is fast extending its influence in Europe, is approaching us, and it is a spirit of might, for it is the spirit of truth, and she is destined to overcome all evil. Let us not be insensible to our new position, let us hear the call she makes upon us; and having done evil, let us do it no more. The times of ignorance, God has winked at, but now makes the path of duty plain and distinct. The fate of China is dependent upon the issues of foreign action upon her, not, seemingly of western *governments* but of western *merchants*: and their impulse will be as is their character. If this be so, affectingly solemn is our responsibility. If we are truly and consistently benevolent, we shall have a voice and an influence to effect the most salutary changes. But if otherwise, if our character must continue to be associated with opium and the smuggler, then has Christianity in us a difficulty to surmount more potent to nullify all her efforts, than all that the policy of the prince of darkness, has yet devised to hold China in chains. God forbid that he should *thus* conquer.

I would conclude, but the remarks of the Editor of the "Press" upon the Calcutta writer, have just been put into my hand, and they require a passing notice. The "Press" condemns and tries to ridicule your Calcutta article. He lauds the use of opium, as being as cheering to the countenance by a proper use, as a glass of wine. He then consistently wishes the opium trade with China might cease, because of the "*individual misery and crime*" it occasions, and then as consistently asserts that all its evils are overbalanced, by the general good it works on political economy! I have not time or tact, Mr. Editor, to enter the lists with the "Press" upon the effects of the cultivation and trade in opium upon British and China industry; but I hope some able hand will trace these, and who can doubt that the investigation would prove most beneficent in bringing to light the pernicious effects upon industry, when poison instead of apparel or other good things is exchanged for tea and silks, and in silencing with shame those who pretend that Christian governments, ships, and sailors, need to be sustained by "*individual misery and crime*" in China, and dishonor the all-wise Creator by supposing that the advance of his creature's prosperity is dependant upon the most unhallowed interchanges

Mr. Editor, in conclusion to propose a premium for the the opium trade, showing its effects on the commer- and moral interests of the nations and individuals con- ith, and pointing out the course they ought to pursue . A friend authorizes me to place £100 at your dis- purpose. And I offer you an extract illustrative, in may be said upon this subject.

of a nation consists of the wealth of all the individuals that re sources of the wealth are labor, land, and capital. The he produce of the two former; but as it may be used to in- re, it is considered by writers on political economy as one of ces of national wealth. Whatever lessens either of these, or ness when employed upon each other, lessens the wealth of apital may be employed in two ways; either to produce new ly to afford gratification, and in the production of that gratifi- onsumed, without replacing its value. The first may be called last expenditure. These will of course bear inverse propor- er. If the first be large, the last must be small, and vice versa. ange of the amount of wealth, capital will be increased by the enditure, and lessened by the increase of expenditure. Al- ner of dividing makes no difference with the present amount th, it makes a great difference with the future amount; as it y the sources of producing it, the means of an equal, or in- ction.

e, a man fond of noise and excited agreeably by the hearing- llar for gunpowder, and touches fire to it. He occasions an at amount of property. Although the powder-maker and the both have received their pay, if it has not benefited the man, ven a total loss; and if the sale of it was no more profitable ven been the sale of some useful article, it has been an entire umnity. And if by the explosion the man is burnt, partially n, is taken off for a time from business, and confined by sick- must have nurses, physicians, &c., the loss is still increased. r recovers fully his health, or reason, suffers in his social moral sensibility, becomes less faithful in the education of his hey are more exposed to temptation and ruin, and he is never r willing to be habitually employed in productive labor, the al to the amount of all these put together. And if his example n to spend, and to suffer in the same way, the loss is still fur- and so on, through all its effects.

though the powder-maker and the merchant have made enor- is does not prevent the loss to the community; any more than rofit of lottery gamblers, or counterfeiters of the public coin, o the community. Nor does it meet the case, to say that the changes hands. This is not true. The man who sold the profit of only a part even of the money which the other man le the buyer lost not only the whole, but vastly more. The iginal cost was only a small part of the loss to the buyer, and The merchant gained nothing of the time, and other numerous h the buyer lost; nor does he in any way remunerate the that loss.

at man, instead of buying the powder, had bought a pair of t the tanner and the shoemaker had gained in this case, what er and the merchant gained in the other; and that by the s, though they were finally worn out, the man gained twice as e for them; without any loss of health, or reason, social affec-

tion, or moral susceptibility; and without any of the consequent evils. Who cannot see that it would have increased his wealth, and that of the nation without injury to any, and have promoted the benefit of all.

"This illustrates the principle with regard to opium. A man buys a quantity of it, and smokes it; when he would be, as is the case with every man, in all respects better without it. It is to him an entire loss. The merchant may have made a profit of one quarter of the cost, but the buyer loses the whole; and he loses the time employed in obtaining and smoking it. He loses also, and the community loses, equal to all its deteriorating effects upon his body and mind, his children, and all who come under his influence. His labor becomes less productive. The capital of course produced by his labor is diminished; and thus the means are diminished of future reproduction. And by the increase of expenditure in proportion to the capital, it is still farther diminished, till to meet the increasingly disproportionate expenses, the whole is often taken, and the means of future reproduction are entirely exhausted. And as there is no seed to sow, there is of course no future harvest. This is but a simple history of what is taking place in thousands of cases continually; and of what is the tendency of the traffic in opium, from beginning to end. It lessens the productiveness of labor, and of course diminishes the amount of capital; while in proportion, it increases the expenditure, and thus in both ways is constantly exhausting the means of future reproduction. And this is the tendency, in all its bearings, in proportion to the quantity used. It is a palpable and gross violation of all correct principles of political economy; and from beginning to end, tends to diminish all the sources of national wealth."

In making the foregoing extracts I have only substituted opium for "ardent spirits." And if any advocates of man's best interests, either here, or in Europe, India or America (whether induced by your premium or not,) will follow opium from its forced production to place *revenue* in the pockets of the privileged few, to its consumption to debase the Christian name in China, and impoverish and enervate its people, who thus will fail to be what otherwise they might become, the most powerful sustainers of British industry and skill the world can offer, if any of these advocates will thus trace the origin and progress of opium and show its demoralizing and industry-destroying course in its true bearings, so that all may see and shun it, they will be rendering a service redundant with equal blessings to humanity with those which have followed the labors of philanthropists to eradicate slavery from the world. Through them, the slave-trade has become an abomination, and slavery will be so. May they pursue their untiring efforts, until as heavy a condemnation attends the pernicious distribution of opium.

I have extended my remarks, Mr. Editor, much beyond what I contemplated, and will close them, but without apology for their extension; for, when it is considered that the cause of my animadversions is as a wall of adamant between Christianity and 400 millions of mankind; and the destroyer of those mart^s of merchandise, without which western operatives may fail to be fed, how can we be silent? Let the friends of humanity and human industry look to it. Especially let England, who has washed her hands of slavery in the West, awaken to her other duty in the East, and give to a subject demanding her power and benevolence, her best specimens of the spirits of Wilberforce.

Yours, &c., V. P. M.

Report in reference to the Circulation of dollars in necessity of retaining them in the provinces; their standard objectionable; precautions against the export of sycee silver. August, 1836.

by the commissioners of finance and of justice in the angtung, to the heads of the provincial government, their excellencies, when replying to his majesty, will re- the use of foreign money be still sanctioned, as being position of foreign affairs here: but that all exchanges ine exportations of, sycee silver be disallowed.

ey is brought from the lands of the distant barbarians; ly necessary to the mercantile classes trading in all the y the coast, who, for their daily supplies of food and es, are dependent on the facility of exchanging this its general circulation. It is not, therefore, to be for a single moment. Its circulation, however, is con- vinces Keāngnan, Chōkeāng, Fuhkeēn, and Kwang- occasionally extend, in the course of trade, to adjoin- or this is a circumstance not wholly to be avoided), yet late much farther inland than a few hundred miles. inces lying northwards, the two provinces of ' the un and Hoopih), Szechuen, Yunnan, and Kweichow, s not at present circulate in any of them: and if per- specimens reach those places, they are prized merely or, if it be attempted to force them on the market, :changed only at a discount, and even then with dif- can it be supposed, therefore, that this money will read itself into universal circulation?

n this general view of the subject, we will turn to the made by the censor Shin Yung. In this representa- ses his apprehension that the low standard of foreign nder it difficult to be exchanged for sycee silver at a r rate; and on that account, he requests that the in- money may be made a subject of consideration. This n is doubtless the result of anxious attention to the nment, and serious regard for the interests of the peo- ments are not wanting in favor of the circulation of as regards the eastern and southern provinces. where foreign ships anchor are also the places where is scattered abroad. The supplies of provisions fur- comprise minute and multifarious details; their ex- numerous items of a very varied character; and many e paid by them, as the hire of labor, or the price of a day passes without money being used for one or purposes. It becomes, then, a matter, of necessity

that they should bring foreign money with them, to meet these various expences; and hence it happens that the market prices are regulated by dollars, it being found highly convenient to value goods by them. The people among themselves, also, gladly fall in with such an arrangement, finding it to be advantageous. From which it is clear that *the inhabitants of the coast* cannot well be deprived of the foreign money.

Again, native merchants, trading by sea along the coast, when they travel, carry their money with them. If these have to carry the governmental [copper] coin, the expense of so doing will be a heavy tax upon their small transactions: and if they carry gold or silver to sea with them, they have reason to fear lest they be found guilty of contravening the prohibitions of government. It is therefore a impossible for them to do otherwise than carry foreign money with them, it being necessary that they should have such money in order to make purchases. And hence it is evident that the *native mercantile classes* along the coast cannot dispense with the use of foreign money.

Further, as to the foreigners, they import foreign money into Canton as a medium in which to pay the prices of commodities purchased by them. The amount of such importations is variable and uncertain; and whatever balance they may have remaining is either employed, on perceiving an advantageous state of the market, in making additional purchases, or is spent in a more abundant and luxurious supply of the daily necessaries of life. For in the love of much money, and of good prices, the flowery people and barbarians are altogether like-minded. We see, then, lastly that the *foreign merchants* of other countries are likewise unable to dispense with the use of foreign money.

We are informed that there are silver mines in England, and America, and Spain. Although the pattern after which the money of each country is made differs, yet the degree of purity is nearly the same with all, being above ninety per cent. touch as compared with the sycee silver of China. We see, then, that though they be left to follow their own methods, yet the foreigners do not draw their materials from this country. And in commercial intercourse, so long as each holds its due place, the foreign money is the same as though it were issued from the mint of the palace itself.—Our empire is separated from the foreigners by ten thousand miles of sea, over which they cross to present things of value and to offer tribute: and for their doing this, established regulations exist. Since, then, to present themselves here, and to make offerings has been so long their practice, that time has rendered it equal to an ancient rule that they should do so,—what cause can there be for apprehension of any consequences that may arise from permitting them to bring such things as will be most advantageous and profitable to them? It is most truly said in his sacred majesty's edict, that the circulation of the foreign money in the east and south is not a thing merely of yesterday. The right mode of acting is, to establish *rules* and *limits*, so as to bring upon the same level the wishes both of our own people and of those from

the foreign money permitted to be circulated even to
es, it would not be productive of the slightest injury

jection to the use of foreign money is this, that with
paid to the weight of metal, or the degree of purity.
was formerly the case, also. But at a later period, as
ainst fraud, foreign money began to be stamped and
k the degree of purity,—and to be weighed, in order
quantity of metal. The money so stamped is in ge-
n in the markets, where it goes by the name of 'broken
en it is exchanged for sycee silver, about 3 or 4 taels
ded to make amends for the inferiority in touch. But
id Chêkeäng no money is in circulation but such as
new smooth face. At present the 'broken pieces' of
aid in exchange for new-faced money, pay a premium
3 or 7 taels per cent. And crafty dealers, having
vices for obtaining gain, raise the price still higher,
pply of this new-faced money is insufficient.—Of the
h the money circulates in Keängnan and Chêkeäng,
me, we are ignorant.

perial pleasure be declared in favor of the circula-
money, it ought to be required, in all the provinces,
be paid by weight, and that prices be no longer rated
f dollars; that foreign money, when exchanged for
ether such money be in broken pieces, or in whole
n, shall always pay a premium per cent. to make up
purity between it and sycee silver; and that foreign
ver be allowed, on the contrary, to bear a premium,
xchange for sycee silver. With regard to native coun-
terated pieces of money, the shroffs in the market-
pert in discovering and picking out such, that it is
ry to think for the people on this point, or to make
trictions with reference to it.

d weight of the silver being in this manner rendered
the crafty deceitful character of the foreigners will
r exercising itself in petty arts. But the importance of
e restrictions is such as to call, in a still greater degree,
—prohibitions, namely, of the exportation of sycee sil-
uty to request, that, in all future commercial dealings
chants, no persons be permitted to mix up sycee silver
of any balances due to such foreign merchants, or to
lver to them for their every-day use; that voluntary
his effect be filed by all the hong merchants, both the
s and the others; that, if any of these infringe this
be rendered liable to severe punishment by fine or
und that if any shopkeeper, or any other of the peo-
; such transgressor be made liable to a punishment
severe. The officers and men in charge of custom-
es, as well as those in command of naval vessels at

sea. should be required to keep guard in constant succession, the latter always cruising about. When the foreign ships are returning from hence, officers and men should be bound to search faithfully; and in case of their discovering and making seizure of any sycee silver, and sending the offenders to meet their trial, they should be rewarded by a gift of all the silver so seized. Should any dare to protect and wilfully connive at any transgression of the law, and should such connivance be discovered by the transgressor being elsewhere apprehended, inquiry ought to be made as to the places through which the transgressor had passed, and the officers and men at those places ought to be dealt with most severely. If regulations be made of this clear and determined nature, all will then be convinced that the purpose is to uphold them.

The luxuriance and splendor of this central nation are such, that its own native treasures are exhaustless, and it values not things of foreign and distant extraction. The would-be-clever arts of the outermost barbarians it reckons as nothing and of no worth. These arts can therefore be productive of no detriment to the policy of the government, while to the people they appear not unattended by some advantage. It is our duty, therefore, to request, that your excellencies will implore his majesty, of his heavenly favor, to sanction the continuance of foreign money in circulation in the sea-board provinces, its circulation being suitable to the position of foreign affairs, and convenient for the people. As in duty bound, we have consulted together, and lay before your excellencies the result, awaiting your decision as to the correctness or incorrectness thereof, preparatory to a full memorial to the emperor.

ART. VIII. *British relations with China; H. B. Majesty's Commission; and a memorial from the governor of Canton to the emperor, requesting permission for captain Charles Elliot to come to the provincial city.*

SINCE September 1834, no British authorities have resided at Canton. Having withdrawn from the provincial city to Macao, they there awaited the commands of the home government, as to the mode in which their future conduct should be regulated—whether any further efforts should be made by them to obtain a residence in Canton, or whether they should remain at some station outside the port. In the mean time, some changes have taken place in the commission; and at length, the long expected commands have been received. We are ignorant of the nature of those commands; but of the changes and steps consequent thereon, we will briefly give the details. In the middle of the last month it was reported in Canton that dispatches

received from the "Foreign Office," and shortly afterwards the Register and Press of Canton, addressed "To His Majesty's Subjects in China," the following :

OFFICIAL NOTICE.

have been received from the right honorable the secretary of foreign affairs, signifying the abolition of the office and salary of the superintendent of the trade of British subjects in China. His Majesty has been pleased to appoint captain Charles Elliot to the duties of chief of the commission, from this date. The superintendents of the trade of British subjects in China.

EDWARD ELMSLIE,

September 14th, 1836.

Secretary & treasurer."

By the above of these dispatches, Sir George B. Robinson bart. re-appoints the office of chief superintendent, and returns soon to England; Mr. Elliot (Mr. Astell having retired in the summer of 1836) to the office of chief superintendent, on the same salary as second; and A. R. Johnston, Esquire, as second superintendent, continues to receive the salary he had as third superintendent, superintendents being now reduced to two. The other superintendents continue as before, viz. Edward Elmslie, esquire, secretary; J. R. Morrison, esquire, Chinese secretary and interpreter; Charles Gutzlaff, joint interpreter; Rev. G. H. Chaplain; T. R. Colledge, esquire, surgeon; A. Anderson, assistant surgeon.

As the nature of these changes had transpired, it was not without consequence of an address from captain Elliot, through the hands of the hong merchants, an officer had been sent by the governor T'ang to Macao, accompanied by the senior hong merchants. Something of the character and immediate results of the measures thus commenced will be seen in the following memorial from the governor to the emperor. It is not without probability was probably forwarded about the 20th instant.

* * * * *

It was first permitted to the various nations of barbarians to trade with the empire to have commercial intercourse with the English trade has always been the greatest. Heretofore the trade of that nation's trade was in the hands of a Company, by which appointed chief, second, third, and fourth supercargoes went on board. All the foreign vessels of the Company successively came to China during the 7th and 8th months of each year; they changed their commodities, left the port in the course of the 9th month, and of the 1st and 2d months of the following year. At that time, the supercargoes forthwith requested passports to proceed to the port, and resided there, until the return of foreign vessels in the 8th months, when they again requested passports to return to their country, to transact their affairs. This is the way in which, in the past, these affairs were regulated. At a later period, the Company having been dissolved, no chief supercargo was sent,

and another person was directed to take the control of affairs.* Your majesty's minister Loo, the then governor, having represented this, received your majesty's commands 'immediately to direct the hong merchants, to desire the said private merchants to send a letter home to their country, calling for the renewed appointment of a chief supercargo, who should come to Canton, to direct commercial affairs, and thus should conform to the old enactments. Respect this.' In respectful obedience, hereto, directions were given as is on record.

"Now, in the 11th month of the present year, I your majesty's minister, have received from an English foreigner, Elliot, an address forwarded from Macao, to this effect: 'I have received dispatches from my government, specially appointing me to come to Canton for the general control of the merchants and seamen of my nation. Under present circumstances, there being very many ships in the port, and the merchants and seamen at Canton and Whampoa being very numerous, and many of them little acquainted with the laws of the celestial empire, I am apprehensive lest any difficulties should arise, and request permission, therefore, to proceed to Canton for the direction of affairs.' Observing that this foreigner, in his address, calls himself 'an officer from afar,' which appears to be the designation of a barbarian head-man, and not that of a chief supercargo, also that he does not plainly state, in his address, what rank he now holds from his own nation, whether the purpose of his coming is simply to apply himself to the control of the merchants and seamen, or if he is also to transact commercial business, and whether he has credentials from his government or not:—I immediately sent a deputy to Macao, whom I directed to proceed thither with speed, to take with him hong merchants, and, in conjunction with the local civil and military officers, to ascertain fully the truth on all these points. This having been done, the deputy and the others reported to me in the following terms: 'In obedience to the orders we received, we took with us the hong merchants, and questioned the foreigner Elliot on each point distinctly. His information was, that he, Elliot was an English officer of the fourth grade; that in the autumn of the 14th year of Taoukwang he came to China in a cruiser, as was at the time reported by the pilots; that he had remained two years in Macao, his business being to sign the papers of English merchant vessels; that now, the Company not having been reëstablished, and there being no chief supercargo, he had received his king's commands, through a letter from a great minister of the first rank, informing him that he is appointed to control the merchants and seamen,—not to control commerce; that he has credentials, commanding him to hold the direction of affairs at Canton; and that, in case of any disturbance, he alone is answerable. We also learned that the foreigner Elliot has

* There seems to be an error here; it should probably read "there was no person to take the control of affairs." In one or two other places we suspect there may be errors. The document is an unofficial one, and was kindly sent to us through a private channel. The officers had no interview with capt. Elliot, though in reporting that they "questioned" him they seem to say so.

him a wife, a child, and a retinue of four persons. On
and, that the foreign barbarians at Macao, and the fo-
its of his nation, all represented Elliot as a very quiet
man, and as having no ulterior object to effect.

It having come before me, I find that since the dissolu-
tion of the English Company a chief supercargo has not come hither ;
the ships' papers of foreign merchants returning home have
been signed by this foreigner, who has resided at Macao for that pur-
pose, and is represented to have quietly attended to his duty ; and that
the time ships are constantly and uninterruptedly arriving,
and the crews and seamen are indeed very numerous : it would be
useless to relax the unimportant restraints, in order to preserve
the peace. Now this foreigner has received credentials from
the government appointing him to the general control of merchants and
ships, and though he is not precisely the same as the chief supercargo
formerly appointed, yet the difference is but in name not in reality.

It is not a foreigner to hold the reins of foreigners, and if
anybody else were to interfere in any other manner, it would seem that an alteration
ought to be made ; and that he may be permitted to come to Canton
whenever he pleases, according to the same regulations under which the
other foreigners have hitherto acted. I have for the present com-
mended this foreigner to remain temporarily at Macao, waiting
for orders to be announced the facts to your majesty. If your ma-
jesty's assent be granted, I will then write to the superinten-
dent of the customs to issue a passport for his admission to Can-
ton. After he shall be required to change his residence from
Macao, and back again, according to the season, just as
former regulations ; and he shall not be allowed to overpass
the limits of the capital, so as gradually to effect a
conquest. Besides, I will command the local, civil and military
authorities to watch the hong merchants, from time to time truly to watch
his conduct ; and if he exceeds his duty and acts foolishly,
in connection with traitorous Chinese, with a view to twist the
private interests, he shall be immediately driven forth,
and banished to his country ; and thus the source of all illegalities
shall be put up.

It is my duty to lay this before your majesty, that the correctness or
injustice of my view may be determined ; and for this purpose I
submit these remarks, prostrate imploring your sacred
command and instruction. A respectful memorial."

This memorial may be expected in Canton during the
month of the year. In the mean time, two members of the commission,
secretary and interpreter and the assistant surgeon, will
having already arrived at the provincial city.

ART. IX. Foreign Residents in China: alphabetical list of persons; list of commercial houses and agents; to which are added a list of the Portuguese authorities in Macao, the names of foreign consuls, and of the hong merchants and linguists.

THE situation and extent of the foreign factories have been described in a former part of our work. (Vol. ii, p. 303.) It has been stated, also, that the residents are not allowed to bring their families with them to the provincial city. In the following list, therefore, it will be understood that the families which are named are at Macao, and that the merchants, agents, &c., are resident either there or in Canton, according to circumstances, and their pleasure. The old regulations of the port required all foreigners to leave Canton in the spring, and allowed them to return in the last part of the summer or in autumn. These regulations, however, have gone into disuse; and some of the residents now continue here during the whole year, while others pass to and from Macao several times in the course of the same period; European sail-boats, for the accommodation of passengers, running almost daily between the two places. Foreigners have established here within a few years several insurance offices; a chamber of commerce; three or four benevolent institutions; and three printing presses. They have also two chapels, one here and one in Macao, in which there is public worship every Sabbath day.

Note In this list, *ind* is put for India; *por* for Portuguese; *br* for British; *am* for American; *par* for Parsee; *sw* for Swiss; *dan* for Danish; *fr* for French; *pru* for Prussian; *du* for Dutch; *ger* for German. N. B. The list is intended to include the names of every foreigner in this part of China, excepting only Portuguese who reside permanently in Macao.

Names of the foreign residents.

The whole number of residents, whose names are included in the foregoing list, is 307; of whom 158 are English; 62, Parsees; 44, American; 28, Portuguese; 4, Indian; 3, Dutch; 2, Swiss; 2, Prussian; and 2, German; 1, Danish; 1, French. The number of families is 24. During the most busy part of the year the number of visitors, supercargoes &c., is nearly equal to that of the residents. The names of all the partners in many of the houses are given; but in a few instances we have not been able to obtain them. To readers abroad, it may be proper to remark that *hong* and *factory* are synonymous terms; and that each *hong* is divided into several houses, or suits of apartments, which are numbered. Sometimes a single 'commercial house' occupies two or more suits of apartments; but often two firms have to divide a single suit. Thus it will appear (as it in fact is) that the place where we dwell "is too strait for us."

ART. X. *Journal of Occurrences. The question of admitting opium undecided; smugglers siezed; fire in Yuenming Yuen; and deaths in Peking.*

FEB. 16th. The delay in publishing our number for January till now—when its last pages go to the press—still leaves us without any intelligence respecting the imperial pleasure on the memorials of Heu Naetse, Choo Tsun, and Heu Kew, to the admission of opium. We hear it rumored that a new proclamation is being prepared by the governor of Canton, the object of which is to forbid smuggling, and to drive away the receiving ships."

A boat engaged in smuggling was siezed on the 8th of February, and several thousand taels of silver and gold, and a piece of "yellow-dragon" cloth, such as is sacred to imperial use, were recovered.

In November last, a fire broke out in the palace at Yuenming Yuen, but was soon extinguished by the efforts of the servants and guard, who were led on by the principal officers.

Late Gazettes from Peking notice the demise of Yeihshaou the emperor's nephew, Meenmin one of his cousins, and of Hae Heung commander-in-chief of his majesty's forces in Chekeang. This "gallant officer" rose from the rank of a common soldier, and had served in Cochinchina, Yuunan, Kweichow, and Hoonan.

WESLEYAN REPOSITORY.

Vol. V.—FEBRUARY, 1837.—No. 10.

Remarks on re-opening the trade with the Southern Archipelago, describing the character and situation of those nations, and the advantages which a trade with them will yield to the government of China. By Luhchow of Fuhkeën.

The inhabitants of the Southern Archipelago are harmless; every one therefore ought to be removed, and our people allowed to trade freely with them. By adopting this course, the superabundance of foreign countries will supply the deficiencies of our country, and then delay its adoption for a single moment? The lieutenant Fuhkeën, some time ago, sent up a secret memorial to the government, intimating that the merchants trading by sea, will sell to foreigners to be employed in exporting rice, and thereby do injury to our country, or that they will be employed as pirates; he therefore requested that they might be prohibited from trading to sea, in order to prevent such consequences. Vague and ungrounded thoughts, contracted like the vision of one gazing at the bottom of a well? Self-named guardian of the empire, he intrudes his specious words on the notice of our sovereign. Our sacred majesty, deeply solicitous for the welfare of the country, thinking the least there might be some truth in the representations, presented before his ministers and people; for, being in doubt of the utility of what had been represented in the memorial, he desired some one, fully acquainted with the subject, who could furnish satisfactory information. But ministers, having never been possessed of such knowledge, while none of the people dared to contradict their sovereign. In this way the whole subject, from the beginning remained unexplained; and hence originated the embargo on commerce. It was not desired by his sacred majesty. Those who are acquainted with maritime affairs, are able to judge of what are hurtful, and the reverse. Of all foreign nations, the most numerous as the stars of heaven, and spread out like the men

on a chess-board—Corea is the nearest to our capital; and its inhabitants conform to our rights and laws. The most powerful nation on the east is Japan, beyond which there are no others. A little below Japan, are the islands of Lewchew, large and small, scattered over a space of five or six hundred miles. Further east, through the wide expanse of waters, no other nations are to be found. Of the numerous tribes inhabiting the Southern Archipelago, those of Luconia and Java are the most powerful. Those of Borneo, Malacca, Sumatra, and scores of other places, are weak and unimportant, and can never entertain any hostile intentions. Cochinchina and Tsiompa are almost conterminous with the provinces of Kwangtung and Kwangse. Kamboja, Ligore, Patini, and many other places, with Siam, are in the extreme southwest. On the west are the Europeans, a very strong and ferocious people, with whom no other foreigners are comparable. 'Europeans' is the general appellation of all the inhabitants of the western islands; and among these the English, the Spanish, the French, the Hollanders, the Portuguese (both in Europe and at Goa), are the most cruel and ferocious. They have strong ships, and do not fear the furious winds. Their guns, and other weapons, are superior to those of our country. In their dispositions, too, they are artful and subtle; they spy out every new place, and form designs of acquiring territory.

The Europeans, the Roman Catholics and the Japanese, are more to be dreaded than any other foreigners. Java originally belonged to the Malays; but the Europeans having opened a trade there, got possession of the country, and hence it became a rendezvous for their ships. Luconia, also, originally belonged to the Malays; but the Roman Catholics having introduced their religions, took possession of the country, and it became the emporium of their ships. In the reign of the Ming dynasty, the Japanese became turbulent, and greatly annoyed the people of Kwangtung, Fuhkeen, Chekeang, and Keangsoo; and to this day even the mentioning the name of the Japanese marauders fills them with fearful apprehensions. But from time immemorial, the inhabitants of the Southern Archipelago have never excited the slightest degree of alarm on our southern borders, having been engaged solely in commercial affairs and in an interchange of the necessaries of life.

At the present time, commerce with the Japanese is not interdicted; nor is that with the Europeans; and the Roman Catholics are spread throughout the empire, and at Macao in the province of Canton they even have a permanent settlement. Shall, then, only the weak and inoffensive inhabitants of the Southern Archipelago—with whom a lucrative trade may be carried on, unattended by any evil consequences—shall these only be interdicted? The population of Fuhkeen and Kwangtung is dense; but the land fit for agriculture is limited, and, not yielding sufficient supplies for the inhabitants, five or six tenths of them seek a livelihood in foreign commerce. Our own productions which have no importance or value at home, when exported become equal to precious gems. In the maritime provinces,

factures, not excepting even the needle work of our
ughters, which were annually exported, brought in return
ousands of silver and merchandise. The importance
merce is not small.

embargo was laid on the trade with the Southern Ar-
people of Fuhkeën had abundant supplies. And even
ands were idle, being out of employment, stimulated by
quiring riches, were induced to go abroad. Few then
home in want of food and clothing; and few were the
re occasioned by thefts and robberies. But since the
laid on, the interchange of every kind of merchandise
he people are daily more and more embarrassed; and
re employed in the useful arts, have to lament that they
mand for their work; while the merchants concerned
trade, sigh because no outlet is found for their traffic.
r the foreign service at an expense of four or five thou-
re dismantled and made fast to the desolate beach, there
eaten by worms. They are too large for the domestic
ffered for sale there is no one to purchase them. To
o in order to build small vessels, would be like hewing
o make a block, or like tearing to threads whole pieces
d work to make patches. It is painful to contemplate
of our commerce. Still there is hope that a brighter
and the clouds be dispelled, when perchance the re-
be removed, and commerce revived. But the damage
e sustained by destroying even a single vessel, will
pects of many families. Such calamities are affecting
g beyond expression. On account of the embargo on
ommercer multitudes of the inhabitants along the sea-
and unemployed. Those who are thoroughly acquaint-
as, and experienced in the business of the navigation,
to act as porters and bearers of burdens even so as to
ary sustenance, are in danger of being forced to become
er to obtain their daily food. The idle and unemployed
ter danger, and may go off in piratical bands to Formosa,
n open rebellion. A remarkable case of this kind oc-
l, when a band of insurgents on Formosa were led on
show.

will benefit both the people and the government, even
n a small degree, ought not to be neglected. On the
hatever is injurious alike to both, even though it be in
ossible degree, should be removed. Now, the embar-
thern commerce has injurious effects, while it is unat-
advantages. For it makes the rich, among those who
-board, poor; and the poor, idle. It forces the mechanic
iant out of their employments; and those who are un-
ompels to become pirates. Fuhkeen, having no silver
ely dependent on the foreign coin, which, if the em-
continued, will at length cease, and it will become

necessary to have recourse to a paper currency to supply the deficiency. Such evils are by no means to be disregarded. On the other hand, to open the trade with the Southern Archipelago will afford advantages, without giving rise to any evils. For then a lucrative interchange of commodities will be carried on abroad, while at home the existing calamities will gradually be removed. Our vast population will then have the means of supplying all the wants of life, and the amount of duties at the custom-houses will be increased. In this way the abundant products of the people will enrich the government. Surely, then, these advantages will not be inconsiderable.

As to what has been said about the ships engaged in this trade being sold to foreigners for the purpose of exporting rice, or being taken and employed as piratical vessels, it may be remarked, that hitherto nothing of the like has ever occurred. The largest of the ships engaged in foreign commerce cost seven or eight thousand dollars; the smallest cost two or three thousand. These ships, therefore, could not be sold for any very small sum. When merchants expend their property in building a vessel, it is with the hope that the money so invested will prove lucrative during many generations. And, if at any time they become tired of going to sea themselves, it is easy to charter them at a high rate. Who, then, would be willing to sell his ship? Besides, the foreign timber, is so much more substantial than ours, that it is always sought by our merchants for shipbuilding. For example, a spar for a mast, which abroad would not cost more than one or two hundred taels, at home costs more than three times that sum. The ships built by foreigners are also more strong than ours. When we use boards a few inches in width, they use whole timbers. And where our fastenings are a few inches, theirs are more than a foot long. Indeed, they would not accept one of our vessels as a present were it offered to them. How much less would they think of purchasing one at a high price!

In the provinces of Fuhkeën and Kwangtung, the rice is not abundant. In the former province the deficiency is very great, and nearly one half of the annual consumption is brought from Formosa, or from the neighboring provinces of Keängsoo and Chékeäng. Previous to the embargo on our commerce with the Southern Archipelago, rice was constantly brought from Luçonía to Amoy. Our importations from abroad were of no inconsiderable amount; while foreigners have in no instance been dependent upon us for a livelihood. And the merchants, who are engaged in foreign trade, are men of property and respectability; how could they ever think of entangling themselves in the net of the law? The space occupied in one of their ships with a pecul of goods yields them a freight of four or five taels, which is far above the value of the rice required to fill the same space. Surely, then, no one can be so foolish as to disregard, all profits, merely for the sake of transgressing the laws.

Nor have these vessels ever been taken and employed for piratical purposes. Those engaged in that traffic are mere coasters, which ply among the islands near the shore, seldom venturing out to sea

ghty or a hundred miles. With their small craft they have no object in going out further than this. Besides, and the strong gales, since they would have no place in shelter. But the merchantmen, employed in the fishing very large, go straight out to sea thousands of a piratical vessel would venture to follow them, fearing the winds and waves. If the pirates are prepared to depredations on the coast, there are many smaller vessels, belonging to Chêkeäng and Kwangtung, which they easily capture. Why, then, seek to encounter the ships of foreign trade? And should one, in any case, chance upon a piratical vessel would find herself so inferior in size, would be required to board her; and in the piratical vessel the number of men does not exceed twenty or thirty; in the other, it is never less than a hundred. It is useless to talk of fighting a battle against such odds. The merchantman, getting the upper hand, might at once run down and sink the pirate. Where, then, is any cause to fear that these vessels will be captured for piratical purposes?

At present our august sovereign, sitting securely on his throne, sees all nations reposing in tranquility, and all who have life, dwelling together as one family. And is it only the timid and submissive inhabitants of the Southern Archipelago who are to forbid our intercourse? If any minister, either at the capital or in the provinces, is aware of these things, he should present the case, where is his fidelity to his sovereign? Is he to neglect his country? His tender solicitude for those who come to him, is his regard for those about him? Or how does he seek to benefit the people of his own country? Though rude and deeply lament such a state of affairs as I have here

The preceding paper was written in 1724, the second year of the reign of the Kangxi Emperor. The embargo was repealed in 1727. The phrase 'allowed to trade' is translated 'allowed a free trade;' and of such a trade Luhchow has been the advocate, as multitudes of his countrymen now are. Some of the names of foreign countries, the ideas of the writer are sometimes instances he seems to have used Seyäng and Teénchooyong terms. The work from which the essay is taken is commonly called the *Yüeh-shü*, 12mo., and contains a collection of about 230 miscellaneous subjects respecting commercial, literary, political, and moral subjects.

Remarks on the euphorbiaceous plants: general character with a description of the *stillingia sebifera*, *acalypha* and the *jatropha curcas*. By G. Trudescant Lay.

These are a few botanical remarks to the readers of the Repository, and are intended to be advisable to regard the subjects of study as associated

together in families, not merely because this practice is agreeable to modern usage, but because plants when so considered become a hundred fold more interesting and instructive, than they can be when studied alone and apart from each other, however keen the perception, or experienced the judgment, of the examiner may be. Some of the Chinese writers take pains to show the beauty and cogent nature of those bonds that bind social communities together, when the members are viewed as springing from one great progenitor, like boughs and branches issuing from a single trunk. In a manner analogous to this, groups of plants shift into a most engaging and important light, if we consider the individual genera and species as bound and linked together by common marks of affinity and relationship. These marks of affinity are not always so fine and subtil that they can only be caught by the eye of an erudite botanist; on the contrary, they are often so well expressed and so obvious, that the glance of the common observer, when directed with a little attention, cannot fail to recognize them. Similitudes of structure in flowers and fruits sometimes run parallel with resemblances in use and property; in some families the herbage and the berries are wholesome and nutritious; in others the entire plant, from the root to the seed, contains juices of so active a character, that they become deleterious or salutary to animal life, according as they are managed with wisdom or misapplied by chance. Moreover, we find, by daily practice, that it is not only convenient and useful to view them as forming little assemblages, but that by this method botany, from being a mere accumulation of facts, is changed into a science, affords a logical training to the mind, and advances us a step further into the mysteries of creation, so that we behold its works with a clearer conception, and see something of that plan in which divine wisdom has arranged them.

These brief remarks will suffice for an introduction; to say a word or two in justification of the course pursued was due to the reader; to say much would be paying an indifferent compliment to his understanding. The materials shall be drawn from original sources, namely from the volume of nature herself whose pages we will turn over from time to time during our sojourn here, as relaxation and refreshment after more important duties. with a hope that the result will yield instruction and delight to others, and help in leading the mind from the trivial, and not always innocent, amusements of the world, to find pleasure in the handy works of God, and to rejoice amidst those hints of wisdom and goodness that are scattered over every one of them. To guide our fellow men to the acknowledgment of the Supreme Being, by taking them through the domains of his creation, will not be thought incompatible with this work; and to speak of herbs and trees that grow in China, will perhaps be one way among others of drawing the attention of our friends at home to the concerns of this vast and interesting portion of the globe. It is not proposed to wind up the consideration of one family in a single paper, nor immediately in sequel, but to resume the subject as opportunity offers, and observation presses the subjects upon our attention.

The principal genera that compose the family of euphorbi-
 ats may be mentioned, to aid the conception and assist
 with their appropriate uses. From the officinal euphorbia
 nt and active powder is obtained, formerly much in re-
 veterinary men, before the horse had the advantage of
 upon milder and more scientific principles. The *Palma*
cinus yields the Castor oil, and seems to have been the
 ened the head of the prophet Jonah, since the kiki of
 nd the kikiun of the Hebrews are essentially the same.
z manihot affords the Cassava meal or Tapioca, which
 impregnated with a deleterious juice; the *Dryandra* or
 wishes the Chinese cabinet maker with an oil for polish-
 the kernels of the *Stillingia* give out a sebaceous mat-
 s; and the juice of the *Siphonia* is converted into Caout-
 ian rubber; while the nut of the *Aleurites* once yielded
 Islanders means to alleviate the dimness of midnight.
 abound with a milky juice, which in drying turns to a
 d becomes adhesive. The flowers are frequently in clus-
 of different natures, as some bear fruit while others are
 fall off at a joint that seems to be one of the most curi-
 oisitics of the family.

Sebifera. The Tallow-tree of China. The leaves of
 of the Euphorbiaceous family resemble in shape and
 e of the aspen or *populus tremula*, but are smaller and
 expansion in the leaf-stalk so remarkable in that favorite
 ose who are not acquainted with the aspen we may say,
 s are rhomboidal, or like the diamond pane of glass in
 window. They are of a pale and delicate green, and
 ners of the rhombus or diamond rounded off. There is
 ght and elegant about its aspect, whether it meets you in
 form of a bush, or whether it rises to the height and
 of a tree. Nothing that might be taken as an emblem
 mption is to be found in this species. Sometimes in the
 of a weed, it roots under the shade of a hump of granite,
 elps to form a fence round an enclosure, and now and
 gs the doorway of a cottage in the imposing form of a
 il tree. It is the nature of some plants and trees to be
 r choice of soil, so that they can only be seen in parti-
 cular retired spots; but it seems to be the characteristic of
 mily to be in no wise scrupulous about either soil or
 they grow by the way-side, or among rubbish, or wher-
 d moisture can supply them with a modicum of nourish-
 is the cause of great variety in their appearance, so that
 ce before us, a person who has seen a handsome tree
 ia sebifera, is by no means prepared to recognize it when
 under a monumental stone in the guise of a neglected
 spikes of flowers, which terminate the branches, are thin
 d remind us of the barren flowers in some of the amenta-
 , such for example as the poplar and the aspen. Being

small and of a greenish yellow, they do not attract the eye at first, but when looked at with a love for nature there appears something extremely neat and interesting in their figure. Upon this spike the flowers are ranged in clusters, consisting of five, six, or more individuals. Each minute cluster is bosomed in a small involucre or ruff of about five leaves or sepals, and is adorned on each side with a little knob or kidney-shaped gland.

In order to see all this, the spike must be placed under a good working microscope, and the parts be attentively and leisurely separated from each other; if not, it will appear to consist of a number of small yellow points, with little reference to either order or symmetry. Each small flower has a jointed stalk or peduncle, and a minute cup with an enoded edge, which contains a pair of anthers supported by a little pillar in the centre. The pair of anthers fills the cup. The florets come up in succession, as is usual in spikes, heads, and corymbs, and break off at the remarkable joint just mentioned, to make room for their successors. The fruit is not a capsule as some call it, but a drupe, since in the strictness of botanical language, a fruit where a nut is surrounded with a fleshy covering is a drupe. This covering splits into three valves when the nuts are ripe, which turn back in the semblance of rays and expose the white nuts in their centre. The nuts have that additional vesture so note-worthy in the euphorbiaceous family, which in consistence and color resembles tallow, and burns freely when ignited, though held at a distance from the flame. The shell is hard and the nut oily, both of which kindle and burn with great readiness.

We may remark that each of the valves is composed of two small valves, a fact when taken by itself of no great importance, but by comparison we find it the case in other members of this family, so that it becomes one of the common marks of kindred, and consequently in a scientific point of view, a bond of union. We have touched upon some of the characteristics of a beautiful as well as a highly useful tree, and one that vouches for the goodness of the Creator, who, while he draws around us the curtain of night, that the burden may be taken from our eyes, has afforded to inventive man various means to lighten the gloom and cheer the melancholy of darkness.

The common way of obtaining the material for this light is, to put the ripe nuts into water, which, in the process of boiling, melts the sebaceous part, but gives it up when cool in the form of a crust floating upon its surface. This is to be sure an easy method, and one, like many other Chinese methods, that does not require much art of chemical skill to conduct it. And yet it contains a chemical fact, that water when heated will dissolve oily substances, which it will not do when cold.

Acalypha Indica. This is another specimen of the euphorbiaceous family, differing from the last inasmuch as it always bears the appearance of a weed. It grows among rubbish in neglected spots, and seems, to be a substitute for the nettle, which it very much resembles in habit, aspect, and smell. In India it is used as a vermifuge for

the leaves are sometimes stuck upon their tongues to tomach to action. A strong *decoction*, when introductory passage, is said to alleviate the ear-ache. Hence that, though vile and worthless in outward form, it is without its usefulness. It is not so congenial with our n to a dunghill when we want medicaments, as it is to dispensary; but were we certain of our knowledge, we nes do it with equal advantage. The stem is about two gzag, green, and scored with elevated lines, which are s, running down the surface. The leaves have long foot- te or egg-shaped, and terminate in a point or an acumen. pered at the base, or are in the usual phraseology cu- the edge is even, the rest of it being cut into teeth. The umerous, as each leaf has one at least. The regular s to be three to each leaf, for where only one or two are rudiments of the rest may be discovered. The spikes n or twelve fertile flowers, or rather clusters of flowers, ed involucre or cups, which have well marked veins edges. When held up between the eye and the light, a mber of pellucid dots will be seen, especially when the d by a good magnifier. The same observation is true , and shows that these involucre are only leaves under orm. Each involucre contains a perfect floret, and the ents of two or three others, which may be seen if the moved and the eye be assisted by a glass. The floret n exceedingly small calyx in three divisions, a three-c- oughened with hairs, and three styles or central threads, spectively divided into two stigmata, so that we have six h correspond with the six valves of the fruit whereof they nations. The Chinese, like Pythagoras and his followers, phasis upon the properties of numbers, and perhaps took : of this half real and half imaginary science from an f natural objects, where an adherence to a particular ten very striking. Thus in the present case, we have a ed capsule, three styles, which are subdivided so as to wice three; and apparently, if the scheme were perfect, we three spikes for one leaf, and three florets in each invo- Error is often founded in truth, and owes its ascendancy is of mankind and its durability, to the veracity that is mix- . (See Dictionary, at the character 易)

is end in a hammer-headed process, which appears of a

singular nature, and which, at the moment we are writing, does not seem very easy to determine. Analogy may hereafter perhaps tell us something about it. At some distance below this head, we find the barren florets, which are very small and easily broken off, at the point we presume, for the stalk or peduncle is so short that we can only guess at the truth of our supposition. Each floret consists of a calyx or cup with four divisions, and a bundle of stamens in its centre. These stamens present themselves as twisted threads, covered with powder or pollen, for the cells that contain it are separated from each other, and burst before the expansion of the flower. It is generally understood, among those who have but a little acquaintance with botany, that this pollen or yellow dust is necessary in order to perfect the seed; as the flowers that produce it in the *Acalypha* are placed above those that bear the fruit, it easily falls upon the places of its destination. Hence we find the spikes upright; had their situation been inverted, the object would have been effected by the pendent nature of the same. It is often curious to see how much wisdom is displayed in providing for the welfare of a weed, and how much instruction might thence be drawn to teach us that the Divine goodness is inexhaustible.

Jatropha curcas. There seems to be some confusion about the history, if not the identity, of this shrub. The individual which we take to be the *Jatropha curcas* of former writers differs from the *Jatropha*, inasmuch as the fertile flowers have a calyx as well as a five petalled corolla. The oil drawn from the root is used in the composition of varnish, and for other kindred purposes, by the cabinet-maker. Some have found by experience, that a small quantity of the nut will excite a burning taste in the mouth, and presently after pains in the stomach, with their sequelæ; while others, copying from each other with admired fidelity, represent these self-same nuts as wholesome, provided the skin and the germ or embryo be removed. When the writer of these observations had gathered a branch from a tree growing at Kumsing-moon, a Chinese took it from him and cast it down, fearing lest the enticing nuts should be mistaken for an edible fruit. Now all these discrepancies may easily be accounted for, by supposing that different persons saw different plants, alike in outward appearance, but differing widely in structure and quality. In the barren flowers, which grow in spreading clusters at the top of the branches, we find ten stamens or threads collected into a bundle in the centre of the cup: five of them are shorter than the other five, a circumstance that makes one of the essential characteristics in this genus. The anthers, as in most instances of this family, burst before the expansion of the corolla, so that the pollen is ready to escape at a moment's warning, as if it were looking out for an opportunity to taste the liberty of a free atmosphere. On the outside of the stamens are five oblong glandular bodies, which at first are yellow, and look like anthers without the workmanship of seam or cell. The corolla is cylindrical, short, and in five divisions, with an interior lined with hairs. Calyx in five uniform segments. In the fertile flowers,

s composed of five petals, ranged in close juxtaposition
 her, and resembling the barren flowers in form and color ;
 five deep segments, which might, without much impro-
 lled leaves. The fruit when ripe is of a yellow hue,
 about the size of a walnut, but of a rounder shape. This
 ipe is properly a drupe, as a fleshy interior contains three
 of them within a cell. The nuts are invested with a pe-
 ing of a spongy nature, which is very distinct when the
 . The leaves are large, wavy, and of a heart-shape, with
 ort lobes. If left alone it will attain to the consideration
 reading tree, with a deep green foliage, set off by clusters
 wers, or adorned by a lively yellow fruit. We forgot to
 its place that the joint may be found in the stalk of the
 ers, so that the family distinction, to which the Chinese
 uch importance, is here preserved. As a further illustra-
 family, we might refer to a Euphorbia and a Phyllanthus
 nd in our grassy enclosures at Macao. The Euphorbia
 gnized by the drop of pure white milk that oozes out
 em is broken, and the Phyllanthus by the minute white
 l the neat little seed vessels, that grow among the leaves.
 tern *Phyllanthus* intimates the close connection there is
 leaves and the flower, which the collector will find en-
 advantages of harmony and reciprocal affection. In the
 the stamens come one after another, and break off at the
 en referred to, leaving behind them a little cup whereon

The presence of this joint at once explains the nature
 escence, and teaches us that the stamens are, however
 ble of themselves, an entire flower, and that thus the ca-
 volucre, or general calyx corresponding to that described

ART. III. *Brief account of the Siamese Missionary Dispensary, at Bangkok, from August 8th, 1835 to October 5th, 1836. Under the superintendence of D. B. Bradley, M. D.*

[The brief account which we here introduce needs no commendation from us. We regard such papers, not only as valuable records of medical practice, in new situations and circumstances, but as affording many good illustrations of native character and manner. The "spotted" cases, mentioned by Dr. Bradley, are not confined to Siam.]

THE Siamese Missionary Dispensary was established in Bangkok on the 5th of August, 1835. It was at first located on the east bank of the Meinam, $1\frac{1}{2}$ mile below the city wall, in a part of Bangkok which is chiefly occupied by Chinese. It was near to the great Chinese bazaar. My associates, the Rev. Messrs. Johnson and Robinson, had obtained a lease of the ground, and had moved their families thither, a short time before I arrived. The Dispensary was opened in a lower room in one of their houses. For about two months, it was thronged chiefly by Chinese who lived in the neighborhood of the bazaar. Such was the crowd and the urgency of many of the cases, that it was utterly impossible to prevent our houses from becoming hospitals. If from a sense of duty to ourselves and families we were constrained to close our doors against the sick, they would still crowd into our verandahs, and thus cast themselves upon our compassion. The relatives and acquaintances of many, who were literally "all corruption," helpless and hopeless, brought them to our doors and there forsook them. Thus our abode was almost constantly the scene of the groaning, the dying, and the dead. Never can I forget the horrors that brooded about us at the time. Yet it was a salutary initiation into medical service in Bangkok. While everything possible was done to ameliorate the temporal condition of our patients, I also gave them Christian books, and set in operation a system of reading, by which it was hoped their minds would be benefited.

On the 5th of October, a decree from the rulers of Siam obliged me to break up my establishment, and seek another abode. The public are already aware of the principal reasons that called forth that decree, and therefore I will not repeat them. Suffice it to say, that they were so weighty, in the estimation of government, that the prospect of taking 600 miserable patients out of my hands (the great majority of whom were convalescent), and casting them upon a merciless community was not worthy of a thought. It was not until some time after my return from Chantabun, on the 21st of December following, whither I went for the benefit of my health, that the Dispensary was reëstablished in another part of the city. A floating house, which was purchased for a refuge for one of our families, about the time of our expulsion, was then converted into a Dispensary. A spot, sufficiently large for it to be moored upon, was rented in front of the

holic compound, on the the west bank of the Meinam, open the city wall, and 1¼ mile below the king's palace. While it is far removed from the great Chinese bazaar, than which it much needs a Dispensary, it has many advantages over its situation. It does not so much expose us to an overwhelming number of the sick. Its being on the great thoroughfare of Bangkok, renders it sufficiently accessible. The situation is pleasant and clean. It is a little removed from my dwelling-house, affording great relief to myself and family. And in the event of being ordered to move the establishment again, I shall only have to remove my moorings and float away with the tide. The house is a square, one story high, and raised above the surface of the water two feet by bamboos, which are laid under it horizontally. The walls are of teak boards, in the usual style of Siamese floating houses. In addition to this I have "a float," with a cover over it, moored in front of the house, and here the patients wait for treatment. Such is my present situation.

The number of patients, whose cases I have noted in my books, since the opening of the Dispensary, is 3650. To this number are added about 200 not noted, which would include my itinerant practice. It ought also to be stated that many have in the meantime applied for medical aid, whom I receive, either because they were but slightly ill, or because beyond the power of remedial agents. With but a very few exceptions, all the cases numbered were different individuals. The number is composed of nearly the following items. To wit, of

rate duration of all these cases collectively is about 9628
average duration of each individual case being about two
 $\frac{1}{6}$ of a year. More than half of the cases of ulcer and
were of many years standing. Two or three morbid
en presented, which deserve a separate notice.
ible spots. This disease is characterized by spots, va-
of an inch in diameter to the size of the two hands, scat-
order or any particular form on all parts of the body.

They are a shade or two lighter than the healthy surface, exhibit no eruption, are smooth as the natural parts, and destitute of feeling. They may be pinched and scarified in the roughest manner without giving the patient pain; and with this exception of pain, such treatment excites all the symptoms of irritation. They are as susceptible to vesicating and pustulating ointment as any part; but the blisters and pustules when produced give no pain, while those just around their circumference are exquisitely painful. The constitutional symptoms, accompanying them, are scarcely noticeable. But it is regarded by the natives as an alarming disease; chiefly from its being a precursor of the following.

2d. Inflammation and mortification of the hands and feet. This is characterized by periodical inflammation and sloughing of one or more of the fingers or toes. After repeated attacks of this kind, the disease gets hold of a joint, bares it in a small spot, and then dissolves by a slow and tormenting process one ligament after another, until the limb being deprived of all sustenance falls off. The bare stump, after a long time, heals over. In the mean time, the same process is going forward in another limb, or ulcers appear on the bottom of the feet, eating down to the tendons and bones, the sides of which become black and thick, and of the consistence of a horse's hoof, and may be pared off with as little feeling. While these are in progress, the foot is surprisingly contracted and distorted. It is often drawn up into a perfect clump, and this sometimes independent of the falling off of the toes. Thus, while all the toes may still exist or only one or two be missing, the foot of an adult is often not more than five or six inches in length; or the contraction may be only from the sides to the centre; and then the foot is not much more than half its usual width. Those affected with this disease suffer constant pain in the tendons and bones of the diseased limb; and are among the most wretched beings that come under my care. The constitutional symptoms, which at first are not conspicuous, at length assume a frightful aspect. The rheumatic pains extend through the whole frame. The patient has no rest day or night. The appetite also becomes depraved. The bowels become either excessively irritable or torpid; the eye-balls swell without active inflammation. The eyes become dull and watery, and the face full and flabby. The whole aspect is one of wretchedness unutterable. The Siamese name for this disease is *keruan*, which some one has rendered *leprosy*. This is surely incorrect. There is scarcely a symptom in it, by which it may claim a kin to the scaly diseases. It has seemed to me to be a little related to *elephantiasis Græcorum*. Hitherto I have not discovered any efficient plan of treating it.

3d. Pterygium. This disease, although common to all countries, is of uncommon frequency here, and assumes the rarest forms. It is characterized by a triangular bundle of flesh growing either from the inner, or outer, or both angles of the eye, and extending towards the sight. If not arrested in its growth, it passes over the pupil, involves the cornea in disease, and produces permanent blindness. I have seen

at were entirely ruined solely by this affection. Its peculiar feature is, that four pterygia often appear at the same time, one from each angle of the eyes. This disease is beyond the skill of the native doctors; but it is, in fact, one of the most difficult to cure. It is only necessary carefully to dissect off the membrane from the cornea, and direct the patient to wash his eyes with water.

The greater part of my practice has been surgical. Operations of almost daily occurrence at the Dispensary. The kinds will include the chief of them, *viz.*: Amputation of the fingers, and toes; excision of staphyloma and cancers; removal of a cataract, ectropium, entropium, pterygium, fistulæ; and several fistulous ulcers of almost every variety. The following cases will serve to illustrate much of my employment at the Dispensary the past year.

Duong, a Chinese from Paknam, aged 35 years, a slave, presented himself on the 28th August, 1835, with an ulcer on the forehead, over the left eye-brow, a part of which the tumor was eight inches in circumference at its base, and over the left eye two and a half inches. It was nearly spherical at the apex as at the base. It had been of six years' standing, and which involved a large part of it, had existed a year or more, and I attempted to heal the ulcer, but finding it inveterate, extirpation was the only proper treatment. The patient consented to the operation; a trial was now to be made. I had just before made a special effort to test my skill, and he had consented to see what I could do. The use of dissecting knives is not common to all the people about us. Now arose the thought, what untoward circumstance should occasion the death of the patient whom I proposed to operate, while under the knife? Would not the natives declare that I had murdered him? If such a report should reach the king's ear, what injury might he do to me, especially to the cause which I have espoused? Having weighed these considerations, I determined to go forward in the path of duty, and intrust all the consequences to God and Master.

The patient was seated in a chair with his head supported by my hands held by two men. Sitting down before him, I made a vertical incision, calculating to leave sufficient integuments to cover the wound. But one side of the ellipsis was found involved in the ulcer to be depended on for a covering. This embarrassed the operation a little. The patient soon complained that the cutting hurt him more than he expected. He struggled to get loose, and finally succeeded; but was nailed upon to let me proceed with the operation. When I cut off the skin I approached the base of the tumor, there was a gush of blood: the crowd of spectators was terrified; and they all screamed. It was now too late to yield a moment to his fears. More help was secured to hold him, and I proceed-

ed as I best could, amid an astounded multitude crowding upon me, the trembling anxieties of my assistants, and the horrible screams of the patient. In four or five minutes the tumor was thrown into the basin, attended by the hearty and boisterous congratulations of the spectators. The lips of the wound were then brought as near together as they could be, and there fastened with adhesive straps. Over these, a large lint was placed, with a compress and firm bandage to command the hæmorrhage. The patient manifested much gratitude with shame for his cowardice. He declared that the tumor was his property, and carried it home with him. On the third day the dressings were removed. The disease on one lip of the integuments had prevented adhesion by the first intention. By simple and daily dressings, however, it healed over in the course of a fortnight, when he returned to Paknam, so much altered in appearance that his most intimate friends were ready to question whether he were in truth the same man. In more favorable circumstances, the operation could have been performed with ease and without uproar. But in Bangkok this was impossible.

Case 2d. A Siamese, upwards of 50 years of age, with long curling locks (which is very repugnant to Siamese taste), a most scanty and filthy dress, a countenance much depressed, presented a fungus tumor on the bottom of the foot, as large as the double fist; it was lobulated, of a dark livid complexion, and horribly offensive. It was still more disgusting after I lifted up the sides, which rolled over and rested upon the sound parts, and were alive with maggots. The application of the oil of turpentine repulsed the formidable host with great fatality. Having encountered many a hard struggle with my strong repugnance to touch the offensive mass, I at length resolved upon giving the miserable man the best prospect of returning health, and determined to amputate the fungus. Having prepared the patient a few days by the use of alterative medicines, I then grappled the mass and cut it off. It was impossible to leave integuments to cover the wound, for there was not a particle of skin on the tumor. It had distinct black roots, which extended nearly to the bones. The mass when laid open, exhibited the appearance of a black and softened hoof. There was of necessity a great loss of blood in the operation. The tumor was supplied by innumerable small arteries, which streamed in all directions, and bid defiance to the tenaculum. The hæmorrhage however was assuaged by sprinkling on the part the powder of nutgalls, with the use of a compress and firm bandage. On the second or third day the dressing was removed. A lotion of nitric acid, fifty drops to the ounce of water, was applied daily, followed by the ung. hydr. oxid. Occasionally, this was exchanged for sulph. cupri., three grains to the ounce of water, and ung. hydr. mitius. The part healed surprisingly fast. On the sixth or eighth day, while the wound was yet unhealed, there appeared a tumor in the groin of the same leg, which quickly suppurated. Being lanced, it discharged a large quantity of black sanious matter. By injecting chloride of lime, and the external use of ung. hydr. fort., it gradually disappeared.

ient was attacked with obstinate diarrhœa; while at the e foot was doing well. When there remained only a of a thumb-nail, unhealed, the enteric irritation assumed vated form, and vomiting and death ensued. I consider ne of the most instructive I have had. I cannot divest impression, that had I opened an issue in the vicinity of e time the enteric irritation appeared, the patient might ved. A few days before his death, I determined to do prevented by his absence from the Dispensary.

A Siamese lad, aged fifteen years, from Yuthia; he was of id of peculiarly interesting appearance. He was affected w. In no respect, but that of the immovability of the jaw, e common lockjaw. The cheek of the left side adhered

A thick and hard band extended from the outer incisor last molares, which bound the jaws so closely together scarcely introduce a thin knife blade between the teeth. little open space on the right side, formed by an irregu-ooth, through which the boy received his sustenance. was caused by a sore which involved the angle of the extended backward on the inside of the cheek. It had e years' standing. I could think of no plan of treatment certainly benefit the patient as to divide the ligamentous ssect the lips and cheek from the gums, which I did with t was necessary to cut nearly through the cheek to divide nd. Immediately the lad could move the under jaw, but ifficulty. To prevent the divided parts growing together ws were wedged open with a piece of wood, and lint was wound. It was dressed daily, and the patient directed to lge out three or four times in the course of the day and

The wound healed in six or eight days. The patient en his mouth very comfortably, though there remained ess, which gradually disappeared while he continued to Dispensary.

A Siamese lad was brought by his father for a cure of the nostrils at the meatus. His face was much pitted by hich he had a year before. The healing of the pustules ostrils caused one to close entirely, and the other also, eption of a hole that would just admit a pin. When the the nostrils and attempted to expel the breath through d discover that the extent of adhesion was not more inch. The father was very desirous that I should apply ne that would cut a hole through. But I persuaded him d be much better to cut holes through at once with a dingly the operation was performed, with perfect success, lad was the most stubborn that I have ever seen. The re rallied by his cries, many of whom came to see what n. The first use the boy made of his nostrils, after I with-ife, was to snort with vengeance into my face To pre-rts closing again, a gum-elastic tube was put into each

nostril, and confined in its place by a narrow bandage. These were daily removed and the parts washed. At length, they were exchanged for sections of goosequills. After about twenty days the patient was discharged quite cured.

Case 5th. A Siamese priest, aged about thirty-six years, well formed and uncommonly good-looking, presented a nose stuffed entirely full with polypi. It was with much difficulty that he could talk. Air could not be forced through the nostrils. A probe passed readily around the masses of fungus. Having kept the patient a few days, chiefly to show him the futility of all local applications, which he was anxious that I should try, I at length obtained permission to extract the polypi with the forceps. The passages were so filled that I could not reach the peduncles of the polypi, but was obliged to take hold of the first I could reach, and thus bring them away by piecemeals. In this way I finally succeeded in grasping the roots and extracting them, to his great relief and joy. The hæmorrhage was but little, and the pain trifling.

Case 6th. A Chinese, between forty and fifty years of age, presented a fleshy tumor on the left eye-ball. It covered about half of the cornea, and extended far back on the external surface of the ball, crowding the lids an inch asunder, and precluded the possibility of closing them. The patient without an objection consented to an operation. But he became terribly frightened in the midst of it, and pleaded lustily that he might be excused, even when the tumor hung only by a small peduncle on the outer side. He finally fainted and fell on the floor, which circumstance gave me an opportunity, after he recovered a little, to finish the operation to my mind. The eye did well and cleared away rapidly, a few weeks after which the patient ceased to come to the Dispensary; I have not seen him since, but doubt not that he is cured.

Case 7th. A Siamese priest, upwards of sixty years of age, with a cataract in each eye. He was almost totally blind. With very little preparatory treatment, I proceeded to operate. On the introduction of the needle, one lens was found to be soft and the other hard. The soft one was therefore broken up and the hard one depressed, operating first with one hand and then with the other. A double blind was hung over both eyes, and the patient directed not to expose them to the light for any reason. Very little inflammation was induced. The soft cataract rapidly disappeared, and the hard one raised a little so that a part of it could be seen behind the pupil. Within three weeks the patient expressed great joy that he could see, walk alone, and distinguish persons without difficulty.

This case is a fair specimen of many of the same kind which I have had. But I ought also frankly to confess that I have often been foiled in my operations for cataract. Nevertheless, it does not now occur to me that any serious injury has resulted to any patient from such failures. The failures are probably attributable, 1st, to a want of skill in the operator; 2d, to a want of suitable assistants; and 3d, to a want of suitable accommodations for keeping the patients under daily

and under the watchful attention of careful and experienced attendants, am often thwarted in my plans of treatment by the obstinacy of the patients, and by their imprudence in diet. No matter how vigilantly I may charge them touching the caution they observe, no matter how strong the promises they make that they will observe all my directions, it affords no security that they will not neglect themselves for weeks after an operation, and then regret all the sad results, and offering for their excuse that they were too sick to come, or that their friends would not bring them to the dispensary, trials occur almost daily.

A Siamese lad, aged twelve years, the son of a man of good family, presented a staphyloma of the right eye. Not only was there a protrusion in the disease, but also the sclerotic. The protrusion beyond the natural boundaries of the eye was not less than half an inch. The lids were spread far asunder, and much conjunctival inflammation was produced by the constant efforts that were made to draw the lids together with the lid. The upper lid was also much protruded by the same process. The left eye had suffered violent inflammation, which was subdued and left it in a leucomatous state. There was a small semitransparent spot on the outer side of the pupil, through which the lad could see a little. All this disease was caused about a year before. The father, who is a remarkably affectionate parent, was much disappointed when assured, that there was no hope that the left eye would clear away a little. I gave him no encouragement that the right would be of any use. I assured him that, if he wished the staphylomatous eye to be removed and feel better, I would operate upon it, and that there was no prospect that it could be reduced to a natural size, and be free from inflammation. He cheered up and requested me to do my best for his darling child. Accordingly, when I had fixed the eye, I made an elliptical section from the most protuberant part of the staphyloma, calculating to leave the flaps large enough to form a natural opening. Only the aqueous humor was evacuated in the operation. The lids immediately closed and were covered by a bandage. The next day a small portion of the iris protruded, which was removed by the lunar caustic. The eye is now of a proper size. The inflammation entirely healed, and the thickened lid is fast improving. The pupil is clearing, and under the use of lunar caustic solution, and the eye, and ung. hydr. mitius, to the eye, pustulating ointment, and occasional mercurial aperients. The appearance of the eye is surprisingly improved, and the father is very thankful. I have performed many such operations with similar happy results. Patients, who are particularly grieved by any bodily blemish upon them, have been comforted by this operation. Staphyloma is a very frequent occurrence in Siam. I doubt not that thousands of cases even in Bangkok. But comparatively few are cured, because they generally understand that sight cannot be restored, and would judge that nine tenths of these cases are produced by the same cause, which is the case also of nine tenths of all the cases of

nebula, albugo, and leucoma, and entire loss of eyes, which are very numerous.

I might go on and fill volumes in describing my practice, but it is time to desist. The chief object in writing this communication is, to afford your readers some just impression of what may be done by a physician and surgeon in gaining the confidence of this people. The simple efforts, some of which I have detailed above, have produced a great excitement among the inhabitants of this country. The rumor thereof is not interrupted by distance, or jungle, or confusion of tongues. It has gone into all the kingdom, and I only fear that it swells rather than diminishes as it recedes from Bangkok. Successful surgical practice is far more striking to this people, than successful medical practice. One successful operation, for instance on the eye, is trumpeted more than the effects of a hundred cathartics and tonics. Nevertheless, this puerile ignorant people are disposed to give me great credit as a medical practitioner; and although I am constrained to believe that my medical, as well as my surgical, practice here, has been attended with much success, yet I desire to feel and to say, 'not unto me, but unto thy name, O Lord, belongs all the praise.'

The inquiry arises, how far has the practice been successful. It would be impossible to give a definite answer to this question, because I have not been able to collect data by which one could arrive at the truth. My patients being wholly at their own disposal, have very generally ceased to come to the Dispensary after they have got nearly well, and therefore I know not whether to pronounce them cured or not. They are, too, so accustomed to disease, that they seem to have no desire, or at least no thought, that they may ever be thoroughly healed. Generally the diseases, have yielded rapidly under treatment. Judging from the general improvement which has been witnessed, and from the reports received from many who have returned to their homes, I may say that, probably, three quarters of the whole number of the patients have been cured, and one half of the remainder benefited in a greater or less degree. A large proportion of cases have been of an aggravated character, especially those of ulcer, ophthalmia, syphilis, herpes, psoriasis, and rheumatism.

A large majority of the patients, I have been obliged to keep under my own care, from two to four weeks, and not a few from three to six months. Consequently the daily numbers have generally ranged from 70 to 150. The most of them are admitted only every other day. I devote the first three hours of every afternoon to receiving the sick, preferring this time of the day because then I feel the least disposed to study. Besides these three hours, I spend one hour early in the morning in overseeing my apothecary, who is an Indo-Portuguese woman. I have two native male assistants in the male department, and one native female assistant in the female department. These departments are entirely distinct, although they receive my attention at the same time. The lotions, ointments, pills, and powders, are all numbered, each kind beginning with No. 1. I have two tables, one in each department, from which the most of the medicines are dispensed. On

ns and ointments are arranged, so that my assistants
lity, although they cannot read the labels, in laying their
medicine prescribed, when they hear the number. The
, and drops are arranged on another table, at which I
prescriptions. Mrs. B. has the charge of directing
assistants. All the men take their seats, in the order
come, on my right hand; and the females, in the same
eft. The priests and a few of the higher classes are an
his rule. It being thought degrading for them to sit
non people, a different seat is assigned them. Hither-
t a book of records, the object of which is to collect

or the mode of treating their bodily diseases. But this
s of very small consequence, compared with the effort
to benefit their immortal minds. I daily open the services
sary with prayer, after which I spend ten or fifteen minutes
d expounding some portion of the Scriptures. Although
anguage as yet but stammeringly, I am happy to perceive
ith by this means is communicated to the understandings
people. Besides, this effort to speak daily, is found most
the score of acquiring the language. I ought also to
agency of the Rev. Mr. Robinson, who preaches to the
ry Sabbath day. He is generally favored with a very
nt audience. We suffer at present very much for the
stian books in the Siamese language. The few which
ues prepared more than a year ago, were long since dis-
d we are not yet ready to print others. To supply in some
eficiency, I allow my teacher to copy the commandments,
to all the Siamese patients, whom I request to give them
mong their neighbors. The Chinese, who come to the
are all supplied with tracts. On every Tuesday, either
Mrs. B., or both, hold a meeting for the instruction of the

females, at which they relate Scripture facts, and exhort their poor fellow-creatures to repentance and faith in Christ. For this purpose they retire with the females into a separate apartment, while I am engaged in giving similar instruction to the males without. Although we are not as yet cheered by any conversions to God, yet it is encouraging to know that the glorious tidings of salvation from sin have through our instrumentality, and that of our patients, circulated widely in this kingdom of darkness.

ART. IV. *Ophthalmic Hospital in Canton: the fifth quarterly report, for the term ending on the 4th of February, 1837.* By the REV. PETER PARKER, M. D.

THE lively interest in this institution, which its kind and benevolent friends have manifested, gives them a reasonable claim to know its progress and success. Though many of the diseases are similar to those already described, yet occurring in persons of different ranks in society, and from different and more remote parts of the empire, and exhibiting the increased influence of these efforts and the unabated confidence of the Chinese, they ought to be reported. The number received at the hospital is 2700; of these, 548 have been admitted during the last term. The following are the diseases presented during the quarter.

Nov. 21st. Sarcomatous tumor. Lo Wanshun, aged interesting woman, of the first society of her native village, twenty years afflicted with a large tumor upon the left side of the neck. It was situated below the ear, extending forward and down upon the side of the neck so as nearly to the angle of the jaw. As usual, the traces of the caustic and escharo-attive practitioners were seen upon it; and the patient had been lanced, and the hemorrhage in consequence with difficulty. After having attended to the general management, on the 15th December the tumor was successfully removed. She endured the operation with fortitude, characteristic of the Chinese; the loss of blood was considerable; she vomited but did not faint. She feared lest a large eschar might disfigure her face. The incision rather perpendicularly, from the ear towards the angle of the jaw, sufficient facial integument was preserved, to bring the wound up to the angle of the jaw. The wound healed with attention, and in ten days the dressing was wholly removed. She had nearly its natural appearance. Grateful and happy, she returned to her husband and family.

Nov. 21st. Congenital tumor. Wang Ke-king, aged 18, of a respectable tea broker, resident in Canton. The tumor is as follows:—It was observed at the birth of the child. The nates of the right side were unusually large, & a little later expressed it. The child did not attract particular attention till eight years old, when the preternatural enlargement had become conspicuous. Till within a few years the growth was gradual, but in the last four years its increase has been rapid, and it is now nearly equal to the weight of the man. It is suspended, apparently from the first of the false ribs on the back, the sides of the ilium, and nates. Its attachment covers a

surface of about a square foot. The tumor extends a little below the knees. Vertically, from the origin of its base above, to its attachment at the coccyx, it measures 4 feet and $3\frac{1}{2}$ inches. A line drawn directly around the tumor at its base, is 3 feet and $6\frac{1}{2}$ inches; from the spine of the ilium, round and below the pendent portion, to the same point on the opposite side, it is 4 feet. The weight is variously estimated from 60 to 100 pounds. When the man sits down, the tumor forms a circular cushion, which elevates him six inches or more in his chair. It is relaxed according as the weather is hot or cold. In the morning the skin is corrugated upon its surface. The color of the skin upon the tumor, and a few inches upon the back and down the thighs, is of a dark color, resembling a mole. There are masses somewhat distinct, which appear glandular. It is free from pain, and the young man has enjoyed good health. He is of a nervous temperament, all his motions quick, and very sensitive to the slightest touch. When he came to the hospital, there was a large sore, formed by lying upon the right hip, and the callous and dead skin resembled thick leather. At four or five points were issues formed by the native doctors, who had applied cautery with much accuracy, as if the particular place were essential.

The application of poultices soon removed the dead skin upon the thigh, and both the sore and the issues were readily healed. With the advice of several medical gentlemen, an incision, two inches long and half an inch deep, has been made into the tumor, to ascertain its character. The integument is distinct from the tumor. The substance of the mass resembles udder, cuts smooth, and is so dense as not to be lacerated with the handle of the scalpel. Very little blood came from the incision, and that was of a light delicate tinge. It appears to be of a lymphatic, rather than a sanguineous, character.

Of the feasibility and desirableness of removing the tumor, I have no further doubt, and am corroborated in the opinion by gentlemen, among whom are Scotch, English, and French, surgeons, who have examined the case, and in whose discrimination and judgment I have great confidence. Previous to the incision, the main objection to an operation, on the part of the patient and his friends, was the unwillingness of his wife; the removal now seems more formidable to the man himself. Whether it shall be attempted or not, depends upon him and his relations to determine.

No. 2261. Nov. 28th. Encysted tumor. Yu Foo, aged 26, is a native of Keangse, and son of the chefoo of Hwuychow. This interesting and intelligent scholar consulted me for a tumor of moderate but increasing size, upon the back of the neck. He was much pleased when told it could be easily removed. He was requested to come upon the next regular day for surgical operations. When extirpated it was found to contain one ounce of dark doughy concretion. The cyst was very strong, and lined with a great number of prominent papulæ upon its inner surface. In five days the wound was healed. A young man, competing with his fellow-students for literary honors, and striving for office in government, could well dispense

incumbrance as this tumor might ultimately have been the successful removal of it will doubtless be regarded as the father, desirous to see his son enjoying, like himself, power among his countrymen.

December 5th. Patient from Nanking. Chin Sheikkin, accompanied by his father, who said he had come a year or two months, and a distance of many thousand *le*, in the hope of obtaining benefit for his favorite son. It appeared that the father, who was in Canton a year ago, had carried to the intelligence of the institution of the foreigner, and from that information he was induced, as his last resort, to visit Canton. On seeing these particulars, and beholding the amiable and afflicted patient with deep regret little or no encouragement could be given. The patient had been afflicted for a number of years with rheumatism of nearly all his joints, terminating in general ankylosis. He could open his mouth sufficiently to take and receive his food. The shoulder-joints, knees, and wrists, were tolerably free, but the elbows, wrists, and fingers, were stiff. The left forearm, the radius was ankylosed at the elbow and wrist, and the ulna ankylosed at the wrist and rotated elbow. The hip-joints had only a slight motion forward and backward. Any motion beyond what is customary gave pain. The father was informed that it would require time to produce any perceptible impression upon the disease, and that partial relief was the most he could expect; under these circumstances he was advised to return home in a few times.

Dec. 5th. Hernia. Low She, aged 41, the mother of a daughter, had a large tumor between the umbilicus and the groin. There was a rupture in the linea alba about two inches in diameter, through which the transverse section of the colon could be seen distinctly under the integument. It caused great suffering. It was reduced, a compress fitted, and a bandage applied about the waist, which was ordered to wear. The patient has often been at the hospital since, and experiences but little inconvenience from the tumor before a serious evil.

Dec. 12th. Absorption of the vitreous humor. Chow, aged 60, from Kaouyaou, was perfectly blind in his left eye. The coats of the eye were natural; the cornea beautifully transparent, the pupil was preternaturally dilated, the lens was opaque and of a large size, and lay at the bottom of the eye. *The vitreous humor was entirely absorbed*, and limpid aqueous humor filled both chambers. There was no secretion of the pigmentum nigrum, the sclera of the ball was purely white, traversed by blood vessels of the color of arterial blood. No trace of the retina could be seen. The whole appearance of the eye was as beautiful as that of a normal eye.

It is surprizing that a cause could exist, sufficient to change internally, and not affect the external tunics.

Dec. 19th. Tumor with fungus. Han Amow, of Can-

ton, aged 12 years, had a tumor $2\frac{1}{2}$ inches in diameter, just above the acromion process of the left shoulder, and extending towards the neck. By the application of escharotics, a fungus had been produced, one fourth the size of the tumor, and like a tuft overhung the shoulder, and secreted an acrid discharge, which excoriated the arm. The child was corpulent, and his countenance sallow. At the first incision to extirpate the tumor, there was a slimy discharge, which excited the apprehension that it might communicate with the shoulder-joint, and that the synovial fluid was escaping. Fortunately, the secretion belonged to the tumor, and in fourteen days all was well. In laying the child upon the table for the first operation, it was discovered that there was another tumor upon the thigh, larger than the former. Having recovered from the first, the second was also extirpated. The operation was rendered tedious by the undefined character of the mass. There was no demarkation between the tumor and the surrounding adipose substance; the integument over it could be separated only by the knife. It appeared like a dense collection of gristly globules, increasing in hardness towards the centre. There was the same glutinous secretion as in the other, and in both instances there was considerable exudation of this during the process. The lad is now quite well.

No. 2474. Dec. 26th. A young lady from Nanking, Le Awoo, aged 19, eldest daughter of a silk merchant from Nanking, had suffered from infancy, from a disease of the left eye. At this time, a white spot, with a fleshy excrescence, covered the apex of the cornea; and the blood vessels were enlarged and passed over the cornea. The father was informed that the eye might, at least, be prevented from becoming worse, and perhaps the vision improved. He said he confided the case to my care; had he not confidence, he should not have applied.

By repeated applications of lunar caustic, the fleshy excrescence was destroyed; the blood vessels were divided at the union of the cornea and sclerotica; the general health was attended to, and after applying leeches to the temples, a blister was ordered. New granulations soon filled up the depression in the cornea made by the caustic. The blood vessels of the cornea became indistinct and the sight was improved, and at a little distance, a stranger could scarcely perceive that it differed from the other eye. Just before the close of the term, the father and two daughters came to take a final leave, bringing presents, which were declined, saying it was abundant reward, that the treatment of his daughter had been successful; but he would not take them away. The patient and her little sister, 13 years old, then came into the room, and a servant with a large crimson blanket. The first impression was, this is a part of the present. It was, however, spread at my feet, and the two young ladies knelt upon it. They were authoritatively told it was not required or permitted to "*kow tow*." They heeded it not, and though I took the eldest by the collar to prevent it, both succeeded in bringing their heads twice to the floor. This was done in the presence of a large assembly of

several Europeans. The father was dressed like an officer, later wore splendid silk gowns with the richest embroidery. The case of the young man from the same city was it is fortunate that the result should be so satisfactory in the young lady.

January 23d, 1837. Adhesion of the tarsi. Chua 14, of Nanhae, at seven years old, had the small-pox, in which the edges of the lids of the right eye united, small point, near each angle, completely concealing the pair of small curved scissors, the lids were separated, black eye, which had neither been seen nor been seen for years, was in a moment unhooded. This simple operation attracted spectators more than the successful treatment of half-moonary affections would have done. The case illustrates the force of surgical science.

January 23d. Pterygium and excrescence. Chin Hoo, Pwanyu, had pterygia upon both eyes. Besides four pterygia on the left eye, he had a dark excrescence larger than a kernel on the inside of its lower lid. These incumbrances had rendered useless the good eyes beneath them. This is an example of a disease very frequent here. One of the pterygia excrescence has been removed, and the patient was doing well at the end of the term.

Several cases of abdominal dropsy have been treated at term. From a woman, 43 years old, who had been 10 years, 7 gallons of limpid fluid were drawn off at one sitting, after a few days she was quite well. From another female, about 50 years of age, at a second operation, 6 gallons were taken. Her liver enlarged as to fill nearly one third of the abdomen. From another man, 5 gallons have also been taken away. As soon as the man that she had been relieved, her incredulous friends were convinced that what they had heard were true. The patient did not complain of the operation, but wept for joy when it was over, and her friends congratulating her. Two other dropsical cases were cured, each 6 gallons taken away. In one of them, after evacuation, four hard tumors were found, three inches in diameter, of a circular figure; they could be seen distinctly as the collapsed abdomen lay upon them, and were movable from side to side towards the diaphragm, but not below the umbilicus. The attachment was superiorly. The poor woman only lived till her son, about 25 years old, should be married. She had no desire of life! The same general treatment was related of the young woman in the first report, who has since been permanently cured.

A man who had his arm amputated, enjoys perfect health, and is happy, as though no misfortune had befallen him. In the report of the hospital, some remarks were made favoring the use of the tarsus for the cure of entropion, a practice which, from the experience it appears to do well, experience corrects. In many

instances, such is the peculiar curvature of the Chinese eyelid that the evil continues. There are no cilia to turn in upon the eye, but, in healing, the outer skin unites to the inner edge of the wound, and this, not being a mucous membrane, soon turns in upon the cornea, and is still a source of irritation. The present mode is, to make the same perpendicular incisions through the tarsi at the lower angle of the eye, avoiding the puncta, and then, with a pair of forceps, invented by T. R. Colledge Esq for the purpose, to take up a fold of the integument over the upper lid, and with curved scissors cut it out, leaving the fifth of an inch of skin next to the cilia, as the hairs are more effectually everted than when a wider portion remains. The operation is completed, by uniting the edge of the wound with three sutures, and applying adhesive strap. The second day after, the sutures are slipt, and in four or five days the patient is relieved. The forceps so convenient for this operation are made with curved blades, that fit to the convexity of the eye, and are as broad as the portion of skin to be removed, with a slight beard at each point of the crescent. A spiral spring holds fast the integument when seized.—The experience of a large number of cases enables me to speak favorably of the undiluted liquor plumbi, to prevent the return of pterygia, which is not an unfrequent occurrence. After the hemorrhage from the operation has ceased, and the eye is cleansed, one or two drops of this astringent should be applied to the fresh wound, taking especial care that it do not come upon the denuded portion of the cornea, as it leaves a permanent deposition. To prevent this accident, the eye should be fixed, and an assistant ready with a syringe, in case it be necessary, to wash it away before the deposition can form. For this improvement in the treatment of a very common disease, I am also indebted to the experience of my friend Mr. Colledge.

ART. V. *Edicts from the heads of the provincial government of Canton: 1st, Directing inquiries to be made respecting certain foreign merchants, reputed to be traders in opium; 2d, requiring the departure of the said foreigners within half a month; and 3d, extending the time fixed for their departure.*

THESE three extraordinary edicts have been mentioned in our journal of occurrences; but they deserve to be put "on record." They serve to illustrate the character of the government and the position of foreigners here, and afford curious matter of speculation for both the politician and the merchant. Had the second one been executed, not only would the property of many individuals have been seriously embarrassed, but even the revenue of a great empire might have been affected. The names of the persons mentioned in the edicts we omit, for reasons which were specified in our last number.

No. 1.

rnor of Kwangtung and Kwangre, Ke lieut.-governor
 , and Wan, superintendent of maritime customs, issue
 ds to the senior hong-merchants, requiring heirt full
 herewith.

ernor, lieut.-governor, and hoppo, have with deep hu-
 l an imperial decree, commanding us,

to the memorial of the sub-censor Heu Kew, respecting the
 s who deal in opium, the hong-merchants who arrange the
 : brokers who purchase wholesale, the boat-people who car-
 l the marines who, being bribed, connive at their doing so—
 sely, and strictly apprehend offenders in all these points, to
 e subject with full purpose of heart, to endeavor strenuously
 urce of the evil, and to report on the whole subject fully and
 pect this.”

the same time, received a copy of the sub-censor Heu
 al, in which we find the following passage :

ous natives who sell the opium cannot altogether carry on the
 foreign ships in their own persons. To purchase wholesale
 s. To arrange the transactions there are the hong-merchants.
 , and give orders to be carried to the receiving ships, that
 drug may be obtained, there are resident barbarians. The
 ians dwell severally in the foreign factories. In the Creek
 named * * , and who is nick-named the iron-headed old
 amed * * ; in the Paousun factory is one named * * ;
 * * ; and one named * * * ; in the Fungtae fac-
 ted * * * ; in the American factory is one named *
 pperial factory is one named * * * ; in the Spanish fac-
 ed * * ; and besides these, I apprehend there are many

observe, is an article respecting which imperial decrees
 atadly received, all commanding its prohibition, and
 if any foreign trading ship presume to come hither
 ch ship shall be immediately sent back, and not suffer-
 traffic with Canton. And Yuen, formerly governor of
 s, having taken up and investigated a case of four
Flat and others, in which opium had been brought into
 tfully received the imperial commands to inflict punish-
) presented a memorial, suggesting, that, on occasion
 ship entering the port, the senior merchants should be
 mine and enter into securities for her, each in succe-
 in concert with the several other security merchants,
 required to examine each vessel, and then to sign a
 ng that the foreigners on board such vessel do not
 n any opium. These voluntary bonds, given by the
 ants, are, according to the constant practice of the
 , continued for some time past, presented to the hoppo,
 are transmitted for preservation [in the governor's

ver, the foreigners are thus prevented from bringing
 a port, the receiving ships at Lintin bring the drug

hither, and dispose of it only the more contumeliously. But, were it not for the crafty and artful devices of the said merchants, the encouragements they hold out to bring it, their coöperation and connivance, together with the arrangements, which they make in order that they may divide the spoil, how could the foreigners have it in their power to carry into execution their petty designs? It is surely our bounden duty to inquire into this matter.

Forthwith, therefore, we issue these commands; on their reaching the said merchants, let them immediately ascertain if the before-named foreigners, * * * * *

* * * * * and * * * * *, do or do not severally reside in the Creek, Paoushun, Fungtae, American, Imperial, and Spanish factories; of what foreign nations they are; in what manner they continue stationary in this place, and store up and sell their opium; from what year they date their stay in Canton; from what year they date the commencement of their transactions in opium; what quantity of the drug they annually store up and dispose of; and whether they ordinarily insist on payment of the price of it in sycee silver. Let them particularly inquire on each of these points, and faithfully report to us, that we may thoroughly investigate the subject. Should the hong-merchants think practically to set aside the laws, and afford aid and coöperation by disguising the subject under false colors, they will find, we apprehend, their criminality too heavy for them to bear. Let them one and all maturely consider and weigh this subject; and, with trembling and earnest diligence, let them obey these our special commands.

Taoukwang, 16th year, 9th month, 19th day. (28th Oct., 1836.)

No. 2.

T'ung, governor of Kwangtung and Kwanse, Ke lieut.-governor of Kwangtung, and W'an superintendent of maritime customs, issue these commands to the hong-merchants, requiring their full acquaintance therewith.

We have received from the said hong-merchants a paper, purporting to be, 'A report made for our thorough investigation, in obedience to our commands, requiring them to ascertain the reasons why the foreign merchants, * * * and others, remain so long in Canton, instead of returning home according to the regulations.'

Having received it, we have again taken this case under our consideration. It is a case brought to our attention by an imperial decree, which we have respectfully received. The subject has been well and accurately laid open, in the statement of the original memorial: and how, in any way, can the fact of these foreign merchants, * * * and the others, having made their quarters in Canton for many years, be spoken of as without a cause!

In this report, it is represented, that the receiving ships being anchored in the outer seas, much of the smuggling carried on by traitorous dealers is conducted by means of sea-going vessels, from various parts, approaching the receiving ships, and purchasing from

as here represented, all such illegalities are committed. But how comes it, then, that the instances that have occurred of seizures have continually been within the precincts? And, even assuming the truth of their present assertions, the seizures outside are numerous, those in the capital only shows the rareness, not the entire want of which there being then some instances, consequently there must be some instances in the transactions are arranged, and individuals by whose understanding is brought about.—We the governor, and the hong, in our desire to preserve uninjured the interests of the said merchants, will not withhold maternal care and any pains in advising and guiding them. If they persist in their offenses themselves, their punishment shall be retributive; if they continue to report in this irrelevant manner, and persist in their course from the point, hereafter, when once discovery is made on their part, it will only remain for us to execute severely inflict the penalties thereof. And if they will not be deterred by the consequences, they will then be utterly without remedy against us.

Foreign merchants, * * * and the others, it is wholly untrue to assert their bare, proofless assertions, or at all to doubt, that their long residence in Canton does indeed arise from the necessity of the hongs, the business of which they have to transact, and the circumstance that not a month elapses without a trading vessel coming to Canton,—or whether it is not rather owing to their desire to see and observe the prices in the market in order to make a profit. For, granting the first assertion to be perfectly true, that day passes in which trade is interrupted, does it, therefore, justify these foreigners are free to remain, and are never to be expelled?

Or can such a principle as this be admitted? Hear what the governor, formerly sanctioned, says upon this point:

The governor, in consequence of its being impracticable for him at once to seize the merchandise, is unable to call in all his property, and his only resource is to remain in China, then he must, after the foreign merchant has departed the port, go and reside at Macao, and place his commodities in the hands of a hong merchant to be sold for him; which being done, the hong merchant is to pay him the whole price; and, in the following year, he is to send one of the ships of his nation to return home. If the hong and linguists suffer foreign merchants by degrees to take up their residence in Canton, they shall be severally subjected to strict invest-

ment, not only no permission for these foreign merchants to reside in Canton, but not even any law to permit their long continuance in Macao. Do the hong-merchants represent, that the trade in foreign goods needs the parties' own particular attention? For when are the several hongs for foreign trade established, and who are the hong-merchants? Are they, forsooth, established in such a manner that the laws may be twisted to serve their private interests, indeed, most unreasonable, that these men should thus

frame their mouths to make pretexts and work out excuses for the foreigners.

The sum of the matter is this: These foreigners are richly imbued with the cherishing and protecting favors of the celestial empire; they ought at once to pay implicit obedience to its laws and statutes, and in all their intercourse, conform to its regulations: thus only may they preserve to themselves the path of commercial intercourse with this country

At the present moment, the investigations, ordered by the court, are exceedingly strict. If then these foreigners do not bestir themselves and quickly return home, even though it be admitted that they are not residing in the country to sell what is contraband, and though it be granted that the hong-merchants do not combine with them and arrange their transactions, yet how can these last reconcile it even to their own minds, that they should suffer the said foreigners to remain here, daily exciting fresh suspicions. Moreover, we the governor, lieutenant-governor, and hoppo, hold the direction of this territory, and are bound to eradicate all that is evil, and to bring back to reason the depraved. In chastisements, we show no partiality or leniency; and, having received with reverence the imperia commands to investigate this matter, it the more behoves us to take anxious precautions on every side, equally toward those within and towards those from without the empire. Though it be said, in reward to what is past, indulgence should be shown, yet how can we neglect to pay prudent attention to the future consequences? We desire to impress it on the minds of all, early to look to themselves, and to consider these things long and seriously.

We now issue these commands. When they reach the said hong-merchants, let them immediately enjoin the same on the foreign merchants, * * *, * * *, * * *, as also on those who have resided but for a few years, or who have gone away and returned again, namely * * *, * * *, * * *, * * *, and * * *, desiring them, in obedience hereto, to settle with the utmost diligence their commercial affairs. They are indulgently allowed a period of half a month, in which to pack up their effects, and remove out of the provincial city, and either avail themselves of some expected ships, or of some vessels about to sail, to return to their country. They cannot be allowed to remain any longer. Should any of them be really unable to conclude their business in half a month, then they must go within that time to Macao; but even there, may remain only for a season: and all their goods and accounts they must put into the hands of the hong-merchants, the one to be disposed of, the other to be settled, in order that they may speedily return home with all their effects. Nor must they be allowed, by remaining long at Macao, to disobey the fixed regulations. If they dare to continue their stay, it will then be seen, that the said foreigners will not listen to kind language, that they are irreclaimably sunk in folly, and that they are truly such as the celestial empire will not tolerate. And when the effects of the law are visited on them, though they have a country to return to,

nd it impossible to escape thither. The factories in offered to remain shall also, in such case, be closed ; concerned in them shall be brought to investigation. not to decide carelessly. Let the said merchants thin three days, signed bonds, that the limited period observed, in order that we may be enabled, after ation of the subject, to report to his majesty. Let s, or delay obedience. A special order.
16th year, 10th month, 15th day. (23d Nov., 1836.)

No. 3.

or of Kwangtung and Kwangse, Ke lieut.-governor of d Wan superintendent of maritime customs, issue he hong-merchants, requiring their full acquaintance

rnor, &c., have received the subjoined report from erchants :—

ies' commands were received, directing us immediately to he foreign merchants, * * and others, that they are seve- the utmost diligence their commercial affairs ; that they are ad a period of half a month, in which to pack up their effects of the provincial city, after which they are either to avail re expected ships, or of some vessels on the point of sailing, country ; that they cannot be allowed longer to loiter about ; any of them be really unable to the conclude their business hey also must remove within the time prescribed, but may remain there for a season ; that, however, they must not be ing long at Macao to disobey the fixed regulations. On the ommands, we examined our documents, and found, that in we had already stated that there is no such person here as the exception therefore of him, we, in obedience to the ed, enjoined it on the said foreign merchants, * * and they should obey the same, should settle with the utmost ommercial affairs, should within the prescribed period of nove from Canton, and either return home, or go down to ; if there were any who really were unable to conclude their a month, they should place their merchandise and their ac- unds, that we might dispose of the one and settle the other also desired them to give us written bonds that they would s the limited period, in order that we might present the

one, we received from * * a note, stating, 'that as soon ded his sales and purchases, about the first month of next urn home.' We received also a note from * * , stat- determined to go home, and that at the end of this year, self of a vessel sailing hack to his country.' We also rem * * , * * , * * , * * , * * , and y, stating, 'that at present ships are arriving in great num- necessary that they should purchase cargoes for them before in ; and intreating a delay until such time as they have ales and purchases, when they will go down and reside at ; reported these answers, we received your excellencies to the effect, that the language of the several foreign mer-

chants bore marks of a desire to delay; and that they should therefore still be directed to move out of the provincial city, as before ordered, within the prescribed time. After we received these directions, we again enjoined the commands, and called on the foreigners to act in trembling obedience thereto.

"Having done this, we have now received a reply from * * *, still intreating 'that he may wait until he has concluded his sales and purchases, and that about the first month of the next year he will return to his country. From * * * we have also received a reply, still 'requesting that he may be allowed to clear up his accounts, and at the end of this year he will return home.' From * * * also we have received a reply, intreating 'that he may be allowed to stay until his commercial affairs are concluded; and then, in the third month of next year, he will return home.' * * * has replied to us: 'I am now conducting my mercantile transactions with the utmost diligence. I beg that I may stop till the first month of next year, when I will go down and reside at Macao.' * * * replied: 'Many ships to my consignment still remain anchored at Whampoa; and it is requisite yet to purchase silk, and teas, and other goods for exportion. The teas this year are reaching Canton later than is ordinarily the case. I intreat that I may be allowed to remain till I have purchased all the goods required, and till the ships have all left the port; and then, in the fourth month of next year, I will go down and reside at Macao.' From * * * and * * *, we have received answers, 'that they have now ships at Whampoa to their consignment; that they have to purchase silks, teas, and others goods for them to export; and that they intreat, therefore, they may be allowed to stop till they have completed all their purchases, when, in the third month of next year, they will go down and reside at Macao.' Lastly, * * * has replied, intreating 'that he may be allowed to complete his sales and purchases, when, at the end of this year, he will go down and reside at Macao.' These all having reached us, it is our duty to report the particulars, and ask if your excellencies will deign to grant the requests of the several foreign merchants, which must proceed wholly from your excellencies' grace and favor."

This report having come before us, we, the governor, lieutenant-governor, and hoppo, have again taken the subject into consideration. In the regulations there is no article permitting foreigners to abide in the provincial capital. Out of former chance-inadvertence has grown up a stay and continuance therein of several years' duration. It is, indeed, an infringement of the established enactments. Admit that these foreign merchants quietly attend to their commercial duties; grant that they and the hong-merchants are not mutually drawn into acts of depravity; yet suspicions have arisen, in the place of their stay, that they have taken their quarters here for the purpose of combining with natives to dispose of contraband goods; and the expression of these suspicions has ascended even to the ninth heaven (the imperial presence), and has called down from the great emperor strict orders to investigate the subject.

Now, having received the above detailed report, we, the governor, the lieutenant-governor, and the hoppo, look upwards, and would embody the extreme desire of the sacred intelligence to cherish strangers with tenderness. In seeking condescendingly to yield to the dispositions of foreigners, what need is there to be over-strict and harsh? But if the period be too long extended we shall not only be unable to find

it to his majesty; but also, by partiality and con-
l greatly derogate from the dignity of government.
re jointly deliberated and determined on our course
three merchants, * * , * * , and *
pleaded for a delay, at the same time purposing to re-
untry, may be allowed their requests, namely to re-
the end of this year, and in the first and third months

They may return at the periods they have named.
nts, * * and * * , also, who have requested
, and reside at Macao, are allowed to do so at the times
se of this year, and the first month of next year. But
re three merchants * * , * * , and * * ,
ving named a period for going home, seek to go and
, and yet ask to stop till the third and fourth months
re they go, manifest the most absurd and foolish con-
eir statements, however, it appears that they have yet
e, and they have need to purchase cargoes for them.
ill indulgently permit an extension of the period, pre-
f them the second month of next year, at which period
Macao. Between this date and the second month of
onths will elapse; and in that period they may tran-
airs; or if some do remain unfinished, yet they will be
acao their place of sojourn. We certainly will not per-
tension of this period, or opposition hereto. We the
eut.-governor, and the hoppo, are this day sending a
xpress, to inform the great emperor that periods have
re departure severally of the said foreigners; and on
we make any change.

hong merchants take signed bonds from the said fo-
s, severally, to observe this prescribed limit; and let
bonds for themselves, that they will not presume to
beyond the period prescribed: the hong merchants
sponsible for them in their property: and these bonds
er within three days. Let them not seek and hope
, as the said foreign merchants successively depart, let
occasion report the same, that examination may be
n the periods elapse they still linger and hesitate to go,
seen that these foreign merchants are bound up in the
wn private interests, and that they are minded to offer
pposition. We, the governor, lieutenant-governor, and hop-
formance of our duties, will not assume the slightest
coloring and vain pretext; nor will we show the least
d and consideration. We can only pursue our course
tenance of the laws; ruling well, on the one hand those
other those within, the empire's pale; and thus aim-
gloriously the majesty of heaven (the emperor). Say
were not forewarned. Tremblingly and attentively
A special edict.

, 16th year, 11th month, 6th day. (13th Dec., 1836.)

ART. VI. *Cultivation of the poppy, in Europe, China, and India; extent and quality of land so occupied; time and mode of culture; and the amount of population and capital engaged therein.*

THE *Papaver somniferum*, now so extensively cultivated for the purpose of obtaining its "inspissated juice," though probably a native of India, has been naturalized throughout almost every part of China and Europe. It was known in ancient times. Homer speaks of it under the name of *Μηλον*; and Virgil calls it *Cereale Papaver*, also *soporiferum*. Ovid makes the night to be crowned with it. In Hindústan it is called *post*; and by the Cingalese *albin atta*. The Japanese call it *kesi*, also *jeisoku*; and the Chinese, *yingsuh*. In modern Europe, it is the *garten-mohn* of the Germans; the *mak* of the Bohemians and Hungarians; and the *maczek* of the Poles. In the Linnean system, it belongs to the class polyandria, and order monogynia. It is an annual plant, with a glaucous colored stem, smooth, erect, and round; it seldom rises higher than five feet, has large, simple, obtuse, lobed and crenated leaves, embracing the stem, on which they are alternately placed; its flowers are large, terminal, and of a silver-grey, tinged with violet at the base.¹ In the wild plants the flowers are provided with only four petals; but in the double varieties the petals are very numerous, and vary in color from white to red and deep violet, with a hundred intervening shades. The capsules contain a great number of seeds.²

In Europe, the poppy is found as an ornamental plant in gardens; it is also extensively cultivated, but chiefly for the sake of the oil which is obtained from the seeds. The time of sowing is in autumn, and the crop is ready for harvesting in July or August following. The oil is used for culinary purposes.³

The greatest part of the opium used in Europe, as well as a part of that which finds its way to China, is produced in the Turkish empire. The process of cultivating the poppy and manufacturing the drug is very simple. When the poppies are fit for the harvest, the flower falls off, and the people, in the evening, go into the plantation, and with hooked knives make circular incisions round the capsules; from these there exudes a white milky juice, which, being exposed next day to the heat of the sun, concretes into a dark brown mass, and forms crude opium. On the next and several succeeding evenings they come and scrape this off, as long as the plant continues to exude it. This is called by the Turks *measlac*, and by the Greeks *ἴκτωρ*, which literally signifies juice, and hence the name opium. That sent to Europe is always adulterated. They boil down the poppy heads with other narcotic plants, and having inspissated the juice, wrap it up in poppy leaves, and so send the impure mass in cakes to the market. The pure *measlac* they generally keep for their own use, when they wish to make *kef*, i. e., enjoy "an undefinable sensation of

ordingly, when a Turk wishes to make *kef*, he takes opium; then adds a draught of water; and, throwing it in, is soon wrapt in Elysium.³

At times, the Chinese seem to have known but little of opium or its "inspissated juice." The latter they call *á-yeên*, and vulgarly *yápeên*. They say, however, that the origin of the name is not clear; "by some it is said, that *á*, in all languages, is the pronoun of the first person, and from its resemblance to the *fooyung* (*hibiscus mutabilis*), *áfooyung*, 'our hibiscus.'" The same author, who lives more than two centuries ago (yet here centuries past), gives the following account of the cultivation of the drug, which was formerly but little known. Those who have emigrated in modern times, say that it is the exuded juice of the opium poppy procured in the season when the poppy produces a green skin, with a large pointed instrument, in five places, being very careful, however, not to incise the integuments. This is done in the afternoon. The next day, when the juice has exuded, it is scraped off, with a bamboo, placed in earthen pots, and dried in the sun. We see the reason why the drug, when brought to the market, is in pieces of the pericarp mixed with it. Wang, in his *Yüeh-shan*, states, that it is procured from the red poppy, and that water must not be allowed to rest upon the heads, until the juice is obtained, by piercing their green skin, which is done at the decay of the flowers, in the 7th and 8th months. But (says the same author), the poppy having flowered and produced its seed in the 5th month, how can there be any green skinned heads in the 7th and 8th months? Perhaps, however, the period of the year in China may be different from that in our own country.⁴

At various times, the cultivation of the poppy has been greatly extended in China; and memorials to the emperor, requesting that laws might be enacted to prevent this, have been presented from various provinces, as Fuhkeên, Kwangtung, Chêkeäng, Shantung, Yun-nan, &c. One of these memorials will serve as a specimen, and afford some idea of the present mode and extent of the cultivation of the poppy and of manufacturing the drug in China.⁵ It was written in 1830, by a censor, named Shaou Ching-wei, of Chêkeäng. He names five departments, which together make about one half of the province: they lie contiguous to the coast, between the parallels of 27° 31' and 30° N. lat., and between 115° and 118° E. lon. E., of Peking. The following is the memorial. The censor, superintendent of roads, &c., &c., in the province of Chêkeäng, presents this memorial, in order to obtain leave to cultivate opium on the subject of which it treats.

Opium is a product of foreign countries, and at first was only included in the list of medicines. Subsequently, villainous and dishonest dealers introduced others to use it; and in this way the contaminating habit passed from one to another, till it has spread over the

whole country. It is, indeed, a *flowing poison* of no small influence. Traitorous natives have also, lately, engaged in planting the poppy and preparing the drug for sale. In Chêkeäng, my native province, the planters are the most numerous in the department Taechow foo; next to it, in the number of cultivators, are Ningpo foo, Shaouhing foo, Yenchow foo, and Wánchow foo. The mode of culture, as I have heard it described, is this; the seed of the poppy is sown in the 10th month of the year; in the 4th month of the following year, when the heads are formed, they are cut open and the white juice exudes. In this manner, may be obtained from one mow of land [about 6600 square feet] four or five cattles [$1\frac{1}{2}$ lbs. per catty], which is boiled down to the consistency of soft clay. The article thus obtained in Taechow foo, is called the Tae juice, i. e., the juice of Taechow. There are some also who obtain opium from species of the alcea and hibiscus; and hence it is named, the juice of the alcea, or of the hibiscus. These two kinds of opium are quite like that which is brought from beyond sea, and there are large companies of petty traffickers, who, going continually from place to place, sell the drug, and thus openly and knowingly violate the laws. If this now be considered a trivial matter, and is not interdicted, it will, eventually, become so general, that government will be afraid to interfere. The said people, like flocks of ducks, run after gain; for it is supposed that from an acre planted with poppies, ten times as much profit can be gained as from one planted with rice. The people, therefore, presuming that government will not issue strict prohibitions, go to the utmost excess, without the least fear; and around all the cities, villages, hamlets, and markets, belonging to the departments named above, every place is covered with poppies; and all the inhabitants, both men and women, old and young, are employed in the production and sale of opium. Thus, within less than ten years, the evil has spread over a large part of this province, not only bringing injury on the good, but greatly retarding the work of the husbandman.

“I have heard, also, that in the provinces of Fuhkeên, Kwangtung, and Yunnan, the people produce and sell opium; and hence the drug is called the juice of Fuhkeên, the juice of Kwangtung, &c., according to the province in which it is produced.

“Considering that your majesty has frequently issued interdicts against the introduction of foreign opium, in order to stop villainy and prevent calamity; that the people are in multitudes planting the poppy and selling the drug; and that, if this cannot be effectually stopped, there is reason to fear, lest the effects of the flowing poison, spreading over every province of the empire, will eventually become more ruinous than the effects of that brought from beyond sea; it is my bounden duty to request, that your majesty will be pleased to order the lieut.-governor of Chêkeäng, and the great officers of all the other provinces, carefully to examine the subject, and devise means for stopping the cultivation of the poppy and the production of opium, faithfully carrying into execution your majesty's commands. Then the sources of the evil will be effectually closed up, and the people

affluence. Whether my humble views are right or duty to lay them before your majesty."

extent of territory occupied with the poppy, and the attention and capital engaged in its cultivation and in the opium, are far greater than in any other part of the Benares, and Behar (Patna), are the chief localities; the chief of the drug, exported from India, bears one of the first ranking to the part of the country in which it was produced. One half of the whole product of India is obtained from the chiefs of Malwa are under British protection, and the soil is entirely beyond the Company's authority. The cultivation of the poppy, and the production of opium traffic in the drug is also free, excepting "transit duties" are levied upon it when passing through the British territory of it does, on its way to Bombay, from whence it is sent to China. But in Benares, Behar, and throughout all the territory within the Company's jurisdiction, the cultivation of the poppy, the reparation of the drug, and the traffic in it, until it is sold at public sale, and sold at auction for exportation, are under the authority of the Company.

Should an individual undertake the cultivation, and entered into engagements with the government to deliver the opium at the fixed rate, his property would be immediately seized, and the ryot compelled either to destroy his poppies, or for the faithful delivery of the product. Nay, as the late writer,⁸ "the growing of opium is compulsory on the ryot." Advances are made by government, through the ryots; and if a ryot refuses the advance, "the simple ryot is bound to give the rupees into his house; should he refuse, the ryots seize him, tie the advance up in his hands, and bind him into his house. The business being now settled, and no remedy, he applies himself as he may to the fulfilment of the contract."

Some lands, formerly occupied with other articles, are now devoted to the cultivation of poppies, which require a very superior soil in order to be brought to perfection.⁹ Hence, its cultivation has not extended to barren lands, but into those districts and villages where other plants, "grown from the soil," have been driven out before it. But though poppy cultivation has spread over a wide extent of territory, the cultivation has not been, rapidly on the increase. In 1821, in the district of Saran, belonging to the province of Behar, there were, according to the testimony of Mr. Kennedy (many years collector of opium and deputy opium agent in that district), between 15,000 bighas of land (about $\frac{1}{3}$ of an acre per bighah) then under cultivation. In 1829, the amount was nearly or quite doubled.¹⁰ And the increase, at the same time, had increased in a still greater degree. The yield of opium depends so much on the soil, the season, and the quantity of water, as the poppy. In some districts, a bighah yields no more, or rather less than 2 lbs. While in others, ten,

twelve, or more, times that amount is obtained. In the district of Sarun, the average was supposed to be five seers per bīgah.¹¹ Not only should the best soil be selected, and that which can be easily irrigated, but careful attention should be given to the plant, through every stage of its growth, in order to bring it to perfection. Owing to its structure, having a long slender stalk and a heavy head, it is easily destroyed.¹² Sometimes the finest crops, covering the ground with white flowers like drifted snow, promising abundant produce, have been in an hour utterly ruined by hail-storms. Also the state of atmosphere, and the course of the winds, during the time the juice is being collected, greatly affect the produce. The best quality, and the greatest quantity, are obtained, when, with a very gentle breath from the north west, there are heavy dews, and the juice exudes freely, and so thick that it will not fall to the ground.

The mode of cultivation pursued in the "Patna district," may afford a good idea of that which obtains in other places.¹³ The ryot, having selected a piece of ground, always preferring (*cæteris paribus*) that which is nearest his house, encloses it with a fence. He then, by repeated ploughings, makes it completely fine, and removes all the weeds and grass. Next he divides the field into two or more divisions, by small dikes of mould, running lengthways and crossways, according to the slope and nature of the ground. He afterwards divides the field into smaller squares, by other dikes leading from the principal ones. A pit, or sort of well, is dug about ten feet deep at one end of the field, from which, by a leathern bucket, water is raised into one of the principal dikes, and in this way it is carried to every part of the field, as required. This irrigation is necessary, because the cultivation is carried on in the dry weather. The seed is sown in November, and the juice is collected in February and March, during a period, usually, of about six weeks. Throughout the whole process, the ryot is assisted by his family and servants, both women and children. As soon as the plants spring up, the weeding and watering commence, and are continued till the poppies come to maturity. Perpendicular cuts or scratches are then made in the rind of the bulbous heads, with a muscle shell, found in all the tanks of the country. From these cuts the juice exudes, and is daily collected and delivered to the local officers.¹⁴ This is a very tedious process, requiring constant attention. When the poppies are exhausted, their color changes from green to white. The seeds contain no opium, and the labors of the season are now closed. The cultivator receives about $3\frac{1}{2}$ rupees (\$1.65) for each seer of the poppy-juice, which is required to be of a specified consistency.¹⁵ This must be such that a gomastah can take it out of the vessel in which it is brought for delivery by the ryot, and turn it over without its dropping off his hand: if it is not sufficiently dry to admit of this, it is either returned to the ryot for further evaporation, or an additional quantity must be delivered to make up the deficiency.

The lands under cultivation are measured every year,¹⁶ and their boundaries fixed, in order to prevent collision among those to whom they are assigned. The government annually enters into an en-

the cultivators, through an intermediate agency, con- following manner: there is, 1st, a collector, who is y, there are gomastahs, a superior class of men, both 1 caste; 3dly, sudder mattús, a respectable class of ly, village mattús, the principal villagers, a little su- ots; and 5thly, the ryots, the chief laborers in the opies.¹⁷ The "engagement," entered into with the us: when the poppy is ripe, and immediately before racting the juice, the gomastah and his establish- cuit of the country, and form, "by guess," a probable produce of each field.¹⁸ *He then makes the ryot gagement with him to deliver the quantity thus esti- much more as the field will yield, at the price ; if he fails to deliver the estimated quantity, and reason to suppose he has embezzled the deficiency, l by law to prosecute the ryot in the civil court for*

n India, for the last year, it is said, amounts to about The Malwa averages about 134 lbs. per chest; the The weight of a chest, however, varies; and is some- In Turkey, the product may be 2,000 or more chests, regard to China, we have only the testimony of the Tsun, respecting his native province, Yunnan. The s cultivated all over the hills and open campaign, and opium annually produced there cannot be less than chests.²⁰

egoing statements, derived chiefly from official docu- er will be able to form some opinion, as to the extent l the amount of population and capital, now devoted n of opium. Taking into the account, the whole of and India, it will be seen that, many thousands of ons of the inhabitants, are employed in the cultivation e preparation of the drug for market, the traffic in it, &c., are topics worthy of consideration, and may be quent numbers.

ART. VII. *Literary Notices*: 1, *Proceedings of the Royal Asiatic Society of Great Britain and Ireland, with regard to its literary researches in China*; 2, *the Periodical Miscellany and Juvenile Instructor, published at Malacca*; and 3, *the Sandwich Island Gazette and Journal of Commerce*.

SOME months have now elapsed since a document was put into our hands, containing extracts from the minutes of the committee of correspondence of the Royal Asiatic Society of Great Britain and Ireland. The document is dated London, June 30th 1835, and came accompanied by a note, containing the expression of a wish from the chairman of the said committee, that the "minutes" might be published in one of the periodicals of Canton. The minutes commence with an enumeration of the several publications and institutions, which, within a few years, have been originated and supported "by European and American residents at Canton and Macao." Allusion is then made to the "instructions which were given by the Royal Asiatic Society to the late lord Napier," on his departure from England, with regard to researches in China. After which, the chairman proceeded to remark on the extensive and happy influences likely to result from those institutions and publications which had been commenced. He then added, "that the exertions which are making by many Europeans and Americans at Canton and Macao are, considering the nature and variety of their own avocations, equally remarkable and praiseworthy. The Americans are heartily coöperating with Englishmen in diffusing amongst the Chinese a knowledge of the same language, the same religion, and the same improvements in arts and sciences. The most pious and the most zealous of the Christian missionaries are employed in acquiring a thorough knowledge of the manners and usages of the people, at the same time that they are translating the Scriptures into Chinese, and circulating the principles of Christianity in several parts of the country. Medical men, besides attending to the ordinary duties of their profession, are active in forming and superintending hospitals for the relief of the sick, as well Chinese, as Europeans and Americans. And British merchants, besides being engaged in their extensive trade, are bestowing, not only a portion of the gain, which they have acquired by their talents and their industry. but a portion of their time, which is of so much value to them in their extensive business, to the support and furtherance of these philanthropic establishments."

The chairman next mentioned the names of some individuals, connected with one of the societies, and then further added. "The part which these, as well as other gentlemen engaged in trade at Canton and Macao, have taken in the formation and support of this, and of the other societies which have been mentioned, show that the enlightened British and American merchants at Macao and Canton

most statesmanlike and liberal views with respect to the
 us improvement of the people of China : and that the
 ish trade, when unfettered by any restrictions, is the
 mode of introducing into every part of the world a
 arts, sciences, and civilization of Europe, and there-
 e prosperity and happiness of mankind."

f thanks had been passed by the committee for sun-
 received from China, "the minutes" conclude with
 ragraph.

Medical Miscellany and Juvenile Instructor : Malacca,

a monthly publication, in 8vo., each number con-
 sists of 12 pages. Owing to the number of copies first printed, not
 for all the subscribers, it became necessary to print
 a second issue of the early numbers; and it was only very recent-
 ly received a specimen of the work. The "Miscellany"
 was first published from June to December 1836, is now before us.
 The second part of the work may readily be gathered from its title-
 page, and might be rendered still more appropriate, by a slight
 change in the second part before the first. The main object
 of the work, in fact, to be the instruction and amusement
 of the Chinese. To effect this object, it is chiefly composed of brief
 papers on subjects of natural phi-
 losophy, fragments, and miscellanies, interspersed with a
 little of the literature, and manners and customs, of the Ultra-
 marines. Three articles have appeared on the Chinese lan-
 guage spoken in the dialects of Fuhkeën (or Hokkeën, as
 we pronounce it). They contain the germ of valuable matter,
 which has since suffered to grow into a ripe and beneficial fruit,
 though not treated too much in the manner of one writing in
 haste. We confess ourselves somewhat disappointed, also, in
 the want of information on the very interesting topic of Ultra-
 marines,—seven numbers of the Miscellany having appeared,
 containing several articles under this head, except the three on the
 subject above alluded to. Were we stationed, for a mo-
 ment at the doctor's elbow, we would gently hint to him the propriety
 of including the topics enumerated in his prospectus. (See our No.
 36, p. 151)

We are aware that time should be granted to an editor in this quarter of the world, to enable him to render his work such as he himself must wish it to be. But we are also sensible, from experience, that, amid numerous engagements, he is liable to forget promises made at the commencement of his undertaking. We feel confident, however, that, if his friends will do their part in contributing to his pages, the editor will gradually improve his work, and that the Periodical Miscellany will ere long become a valuable repository of interesting information, and a worthy successor to the Indo-chinese Gleaner, so ably conducted by Dr. Milne, amid numerous discouragements and difficulties, until his death in 1822.

3 *The Sandwich Island Gazette and Journal of Commerce*, is published at Honolulu, Oahu, every Saturday. S. D. Mackintosh, editor. Terms \$6 per annum. The first number appeared on the 30th July, 1836, with the sanction of his majesty, the king of the Sandwich Islands, then absent from Honolulu, expressed in the following note.

"To Stephen D. Mackintosh, Honolulu, Oahu,

I assent to the letter which you sent me. It affords me pleasure to see the works of other lands and things that are now. If I were there, I should very much desire to see. I have said to Kinau, make printing presses. My thought is ended. Love to you and Reynolds." *(Signed by the King.)*

A complete file of the Gazette, down to Jan. 14th, 1837, has come to hand; and the Repository will be sent "in exchange." As the editor requests that "foreign editors" will occasionally remark "on the existence of his humble journal," he ought, we think, to afford them more original matter, worthy of remark. We have been much disappointed in finding only here and there a fragment of intelligence respecting either the islands or their inhabitants. Many of the numbers, except the advertisements, might have been compiled as well in Liverpool or New-York, as at Honolulu. A hint to the wise is enough. And there being at the islands material and talent sufficient to fill columns of the Gazette and Journal every week, we hope that a share of the space hitherto occupied with old extracts will be enlivened with descriptions of native scenery, productions, character, and manners.

In the Gazette for January 7th, the death of the princess HARIETA NAHIENAENA, sister of the king, is noticed. She died at the palace of his majesty, Friday, December 30th, 1836.

A treaty, during the past year, has been formed between the United States and the government of the Sandwich Islands. The following articles, of agreement between Great Britain and the Sandwich Islands, signed at Honolulu, Oahu, Nov. 16th, 1836, we copy from the Gazette of the 19th of that month.

ART. I. English subjects shall be permitted to come with their vessels and property of whatever kind to the Sandwich Islands; they shall also be permitted to reside therein as long as they conform to the laws of these Islands, and to build houses and ware-houses for their merchandise, with the consent of the king; and good friendship shall continue between the subjects of both countries, Great Britain and the Sandwich Islands.

ART. II. English subjects resident at the Sandwich Islands are at liberty to go to their own country or elsewhere, either in their own or any other

dispose of their effects, enclosures, houses, &c., with the consent of the king, and take the value with them without any other order; the land, on which houses are built, is the property of the king; shall have no authority to destroy the houses, or in any way to molest the property of any British subject.

When an English subject dies on the Sandwich Islands his effects are to be searched or touched by any of the governors or chiefs, but not to be put into the hands of his executors or heirs if present, but if no heir appears, the consul or his agent shall be executor for the estate; and it shall be the duty of the governor of the place in all his power to compel the debtors to pay their debts to the executor, or, to the consul in case no heir or executor appears, and to inform the king of the death of every British subject leaving the Sandwich Islands.

(Signed) TAMEHAMEHA III.

ED. RUSSELL, capt. H. B. M.'s ship, ACTEON.

Journal of Occurrences. Trade in opium; delays in the establishment; the Yellow River; dismissal of officers; the trade; arrival of six Japanese in Canton.

Reports respecting the question of legalizing the trade in opium, are contradictory and unsatisfactory. Just after the final papers were sent to press, on the 16th instant, a dispatch was received from Peking, acknowledging the receipt of his memorial (dated on the 26th of January). The contents of the dispatch have not yet received an injunction on the governor and his colleagues to abstain from restraining the avaricious greediness of foreigners, and the exportation of fine silver.

Our reader must not be surprised at this heading. The Chinese post-establishment, for the convenience of the public; but not organized establishment for the conveyance of governmental business throughout the empire; and we have recently observed in the Gambia from several quarters, of the allotted period for conveyance from one place to another being exceeded. For this offense, where the horse districts delay has arisen, are always subjected to a court of law; and immediate offenders, the couriers, are punished by the local authorities; and are in general established at distances of from four to six days; and are supplied with horses for the use of the couriers, as well as the ranks, who may be travelling on missions of importance, require. This secondary use of the post-horses is sometimes taken by the relatives of subaltern officers, who, when the superiors of the ranks are travelling on public business, attach themselves to their retinue, travel from place to place, with merchandises, not only at the expense to themselves, but also in some measure free from examination-houses through which they pass. This has been carried to such an extent, according to a statement of one of the censors, the retinue of the Chinese mission including the carriers of goods and of baggage, between 4000 and 5000 men. This statement has called forth an edict from the emperor, addressed to the governors and lieutenant-governors of all the provinces, to stop this illegal practice. His majesty also directs, that on the Cochinchinese mission, which will be in the course of the

current year, the number of which their retinue is to consist is to be fixed before their journey from Kwangse to Peking is commenced.

The Yellow River. It appears from numerous cases of officers being rewarded, on several occasions in the course of last year, for their unremitting exertions, to restrain the Yellow River within its bounds, that the districts watered by its have recently been exposed to very imminent danger of inundation. It has often been remarked that the Yellow River is one of his celestial majesty's most troublesome subjects. And it appears, that the emperor seeks for more than human strength to keep it under control; and many temples to the river gods are endowed by government. A new one has lately been built, and his majesty was applied to for an inscription to place therein; in answer to which application, he promised to write one himself.

Dismissal. In a despotic government, the downfall from high favor to unqualified displeasure of their imperial masters is common among ministers. Yang Mingyang, late lieutenant-governor of Shense, is the son of Yang Yuchun, who, in concert with the present premier Changling, acquired a high reputation and great favor from the war in Turkestan, against prince Jehangir in 1826-28. He has held the government of Shense since 1831, and has borne a good reputation. He has, however, fallen under the imperial displeasure, and is suddenly dismissed from all official employment, on a charge of negligence, and partiality shown in the appointment to office of his fellow-townsmen.

Chinese slave trade. The Canton Register of the 28th instant contains a letter, addressed to the editor, respecting the "slave trade on the coast of China." The letter is signed by a "Coaster," and seems to have been written since the Chinese new-year, February 5th, 1827. We quote it entire.

"Dear Sir,—If the following facts are worth inserting in your columns, pray do so. On the 3d day of the first month, observed a small junk run close in shore on the beach, and also two sedan chairs; thought it was some governmental officer going to embark. Having some of the natives on board the barbarian ship, we asked them what was going on, and who all those people were. They replied that two or three gentlemen were going to Formosa with slaves, which they had bought prior to the new year. About 150 women and children, were embarked on board this small vessel, not exceeding 90 tons burthen. When they had all got on board, a barbarian officer (using the celestial term) went on board the junk to see how they were stowed away. The hold of the junk was divided into four parts; the aftermost was allotted to the gentlemen, and the other three parts to the women and children. Here they were, poor creatures! stowed very close? the greatest part of them being children from two years old and upwards, male and female; and several poor little urchins on deck, exposed to the cold winds. The officer took the hatch off to put them below; there was not one that would lay hold of them, and the stench was so great that he was obliged to place them on deck again. The price of the children varied from twenty to fifty dollars each; that of the elder women from thirty to eighty. One stout young woman, about nineteen years old, was offered for sale; they asked fifty dollars for her; the officer made no purchase, but let her take her chance in the new country. We asked some of the men how such a practice was allowed in such a country as theirs; the reply was: 'What can the poor people do who have no rice to give their children? It was much better to sell them for dollars than let them starve; and their parents want dollars for the new-year.' This abominable practice is carried on to a great extent. Slaves and free emigrants go over to Formosa from the Fuh-keñ coast in hordes; the numbers are incredible. The Chinese will soon have the island entirely under their sway; there are several new settlements on the northeast and east side of Formosa. The natives give battle sometimes, but invariably are obliged to retreat." Your's &c.

Six Japanese arrived in Canton on the 12th instant, from Lingshwuy, one of the districts of Hainan, whither they had been driven, and their vessel wrecked, near the close of last year. From Canton they expect soon to go to Chapoo in the province of Chêkeäng, there to embark in a vessel for their own country. Chapoo is the only port, we believe, at which the Japanese are allowed to trade. It is in 30° 37' N. lat.

CHINESE REPOSITORY.

.. V.—MARCH, 1837.—No. 11.

Orthography of the Chinese language: objections to parts tem proposed in the Repository for last May; and suggested. By a Correspondent.

Correspondent has not given us his name, nor in any way intimated his residence; but his allusions to the Fuhkeñ dialects of the Chinese render it unnecessary for us to go far beyond the Straits of Malacca for him. Wherever he may reside, we beg him to accept of our communication. We are anxious to meet the wishes of our correspondent, and of all others, who are interested in the study of the Chinese language, and it is pleasing to know that the number of such is fast increasing. In order, therefore, to afford our friends further opportunity to propose a new system of orthography, we have determined to postpone the publication of the present system, until it shall be so modified as to meet every reasonable objection. It is of so much importance, that we are unwilling to proceed until we have obtained the concurrent approbation of all those who are versed in the Chinese language.]

The system of orthography given in the Chinese Repository, has not been observed, that "a great advantage will be gained in the study of the Chinese language, by assimilating the orthography of Chinese to that of the Indo-Chinese nations." Doubtless, if this were done, it would be a desirable thing; but it does not seem practicable to carry the assimilation very far. The peculiarities of the Chinese language, and the vast extent to which they are spoken, render it difficult to find a mark that nothing of real simplicity and utility should be sacrificed to an object, which, though desirable in itself, yet is not thought of, when compared with the importance of providing a simple and adapted system of orthography for the languages spoken by the Chinese and other human families.

In the article referred to, the marks proposed to be used over the vowels, and which are critical, are the following three ` , ' ; and the diæresis over the vowels. The former are marks which have been long and generally used, and the latter are the tones: nor does it appear that any others would be

more suitable for that purpose. The writer in the Repository proposes, that they should be used both as diacritical marks, and as designative of the tones: these different uses to be pointed out merely by the position of the marks; viz., as diacritical marks, they are to be placed over the vowels, and as signs of the tones they are to be placed after the word whose tone they point out. We have, first, an objection to placing the mark of the tone after the word; for, as the word cannot have its appropriate meaning, or may even convey no meaning at all, unless it be expressed with the proper tone, it seems right that the mark of the tone should be placed either over or before the word, that it may strike the eye, together with or before the letters which represent the body of the sound. Our objection is, however, still more decided against the use of the same marks (oftentimes in the *veiy* same word), for two totally different purposes. The confusion which would thus be introduced could not but be great. Nothing but absolute necessity could justify this two fold application of the same marks. But in the present case there is no such necessity: other diacritical marks equally good can be easily found. The latter of the three marks (') the writer proposes to use for pointing out an abrupt termination of a vowel, "either by simply ceasing at once to utter a sound, or by suddenly stopping the voice from passing out, and thus producing one of the three mutes *k*, *p*, or *t*." This, however, appears quite superfluous. It is the *ju* tone which causes this abrupt termination. And as the tone must always be marked, and as the mute in which the word terminates must always be expressed, in order that it may be known which of the mutes is intended, there can be needed nothing further. The use to which the diæresis is applied is objected to as being entirely foreign to its ordinary use, and it will be seen below that this application of it is not at all required. The mark (°) used to denote the nasal, and intended to be inserted between the letters of a syllable, thus causing a break in the word, we should exchange for a short horizontal line placed under the nasalized syllable, and so leave the syllable unbroken.

In examining the vowels as they are given in the Repository, we think that such alterations as the following would be an improvement.

1. An additional power of *a* is wanted, the same as that in *wall*, *fall*, or similar to that of *aw* in *law*.

2. The *o*, which is given as having the same power as the *a* in *ball*, is rendered unnecessary by the preceding power of *a*: and the sound seems more naturally represented by *a* than by *o*.

3. The use of two *u*'s, the one having the same power as in *pull*, *push*, the other the same as that in *rude*, *rule*, is, we think, needless. One of these *u*'s is sufficient for every practicable purpose. The length or shortness of the *u* will be pointed out with sufficient accuracy by the tone.

4. A third *u* marked with the grave accent, and illustrated by the word "allure" is not a simple sound. It is nothing more or less than the simple sound of the continental *i* and *u* pronounced rapidly one after the other.

st of vowels furnished, we add *y*, which, it is proposed, have the same sound as in fly, try, rhyme: or as the 'his will take the place of what the writer strangely phthong *ai*, and says it is to be pronounced as the *En-*

of the diphthongs, (if regarded as an additional and the system, and not merely as exemplifications of the sounds in various relative positions,) we think altogether they are nothing whatever but the simple vowels, given position. Still, each one retains its appropriate sound, called the diphthongal sound is nothing more than two vowel sounds uttered in succession. Particularly in language, are diphthongs unnecessary, since it is well however, many vowels may be found together, the whole antal and the vowel sounds in a word are to be pronosyllable.

onants we have the following remarks to make. There for *y* as a consonant. To call it a consonant (as far as) which it is applied in English are concerned), is distinction between consonants and vowels. It is never, cing a word, any thing but the vowel sound of the *e* in ord "remain," or of the continental *i*; though in some young,) the transition from the first vowel sound to part of the word is very rapid. If any one doubts of these sounds, let him instruct a person to pro- sively the word young, and the dissyllable *eung*, pro- *e* in the latter case very rapidly, and with the power it *n*; and let him not know in what order these two ntiated; and we think, however nicely his ear may dis- nds, he will be incapable of finding any distinction be- words. If this be correct, then, it is unphilosophical to nant, or ever to use it as such. The same remarks will, apply to *w* as a consonant, which is nothing more, wheu ord, than the vowel sound of *u* in push, rule. Why then, characters for representing precisely the same sound? the greatest inconsistencies so justly complained of in language, and surely it is not worth while to introduce it stem.

several combinations of consonants which have been epository, the following appear to be unnecessary in the uage.

hich is stated to be the same as *wh* in the English word scribed above, the power here ascribed to *w* is precisely mentioned above, as heard in push, rule. The sound, ght to be expressed by *hw*, is nothing more than simply ollowed by the sound of the continental *u*.

is can in all cases be expressed by the *n* and the conti- illustration of this is found in the last syllables of Bri- rd, spaniel.

the system as it appears after the alterations
marks we use are either one or two dots

*description of the agricultural implements used by the
the plough, harrow, hoe, rake, bill-hook, flail, and
wheel.*

ying, there is no one so ignorant, that he cannot teach n something. It is, therefore, wisdom's part to gather the bee does honey, from every object that presents rom the unsightly and mean, as from the beautiful and that is curious and useful may be gathered from a the arts of life in different ages and among various nly from the civilized and polished, but also from the ous. Opportunities for such comparison and improve- common among this people; and if we can come to ion, with minds unbiased in favor of caste or country, on will be profitable and entertaining. Hardly a day ha may not afford us a chance of learning something

new; either by observing the character of this shrewd people, with all their endless obliquities from rectitude caused by conflicting interests and passions; or in remarking the uniformity of their notions of things derived from a rigid adherence to custom and received truths; either in examining their arts, now become, as it were, stereotyped from immemorial use; or lastly, in ascertaining the secret springs of polity by which so multitudinous a people are kept in subjection, so constantly employed, and so well provided with food and clothing. All these, and many other kindred topics, are fruitful in amusement and instruction to the candid and discriminating inquirer. This country has too long been considered as a peculiar one: a land to which our previous notions of things were not to be brought; a people whose habits and sciences were to be tried by some other standard than that which directed our judgment of other nations. The word *mandarin*, for instance, seemed to convey with it a feeling of awe and power, far above that of magistrate or officer. From the histories of China, which are current in the west, one obtains the idea that an *emperor*, a *colao*, a *mandarin*, and other similar terms, have different functions, or in some unaccountable way are superior to the same dignitaries in other less "celestial" lands. Of this inflated style of speaking and writing there has been enough, and we hope that China is beginning to be looked upon as a component part of the great family of nations, having relative claims and duties like other governments. Madame de Staël once observed, that "she had traveled over all Europe, and everywhere found nobody but men and women;" and we strongly suspect that had she come to China, she would have passed the same judgment. By these remarks we are as far from wishing to withhold praise from the Chinese, in whatever is commendable and worthy of imitation, as we are to deprecate all undue and unjust eulogy of them; we only desire to have a fair estimation made of their character: and to attain a knowledge of China and the Chinese, which is so desirable, we know of no better way than a patient search into all the phases of their character, their arts, and their literature.

Their mechanical contrivances, when compared with those in western lands, sometimes strikingly illustrate the different ways there are of attaining the same end. The most careless observer from a foreign shore here sees many operations, either in the modes of living or in the manipulations of various arts, which instruct him by their ingenuity or amuse him by their oddity. Hardly a trade can be found in which there are not some processes different from those employed elsewhere, and among these trades few implements can be found which are the exact counterpart of those used in other countries. But in all their mechanics, we have remarked one principle which the Chinese seem ever to have had in view; and that is, to make them of such models as will give direction and aid to manual labor, but in no case supplant it. If this observation be true, it is a reason why we look in vain for any complicated machines, any extensive system of water-works, by which nature is rendered subservient to art, or even

ication of animal force in overcoming superior obstacles require the aid of much machinery. In the whole world so simple a piece of machinery as a saw-mill does her this results from any want of invention, or from what would be impolitic to diminish the demand for the introduction of machinery, we will not stop here to describe a large establishment for sawing in the neighborhood, at which upwards of thirty men are employed, who by a single machine, cut out so many feet of timber in a day as could be done by a single mill, requiring the oversight of only an individual. And it is the mode everywhere followed,) the log is laid on two benches, or reared at one end, while the other is raised to the top of the whole sawn up in such shapes as are needed. A process for so simple an act can hardly be imagined. So far as we know, any mills for grinding corn, in labor is dispensed with to any extent, if we except a mill at Macao, some time ago set up by the Portuguese. Much corn is ground by the people, (which is not a very large quantity,) in hand mills themselves in hand mills at their own houses. There are also larger ones turned by oxen, to which, especially in the mountains, the grain is carried by those who have either no mill or a mill to grind it for themselves. The most complicated machinery we know to exist among them are the bamboo water-wheels for the applications of the overshot-wheel, and the loom. In the case of the handicrafts become, that in many of them they use very few tools, but with these they are perfectly satisfied. We have seen an itinerant tinker sitting at the side of the road provided only with a hand furnace, and bellows, a pair of tongs, a hammer, and a roll of felt, soldered an iron pan in a manner.

Generally, the implements are few, and most of them simple. The farmer seldom undertakes to cultivate more than half an acre; and the utensils necessary for all the operations, in a garden, may be considered more than a large garden, are neither complicated. They are for the most part made of iron, and are purchased cheaply. They are very light: we once saw a man returning home, easily and leisurely carrying his plough with his harrow, hoe, and sickle, all together, on his

On account of their simplicity, there are points of striking similarity between the instruments of agriculture used by the ancient Hebrews and, even at the present day, among the Chinese. The mode of guarding the fields from depredators, by watchmen placed in conical thatches overlooking the fields in which the oxen were employed, the customs of the two are alike; but the Chinese used to sit upon a tree or watchtower. The mode of guarding the fields of the Chinese are like those found in Palestine; and

in many operations of sowing and reaping grain, and of ventilation, the resemblance between the two is close. There are, however, also many usages, characteristic of one or the other of the two nations, in which they widely differ from each other.

The *le*, or plough, used by the Chinese, strongly resembles that found among the Arabs or Syrians. It is made of hard wood, except the iron that defends the share, and is drawn by a single buffalo, harnessed to it by a trace or strap, passing before the breast and over the neck. The depth of the furrow depends a good deal upon the strength of the ploughman; sometimes it is a mere scratch, but at others, the soil is turned over to the depth of four inches or more. In this region, the plough is employed mostly in preparing the rice grounds for vegetables, after the crop has been gathered. It is seldom seen in the paddy fields, they being too marshy and wet to allow its use. The character by which the Chinese designate it is composed of an *ox*, a *knife*, and *grain*; thus associating enough of its history in the form to make its use evident to the eye. In China, as almost everywhere else, this implement is synonymous with husbandry; and a farmer is called *kung teën jin*, a man who ploughs the fields.

The *pa*, or harrow, is used in the spring to divide and pulverize the clods on the rice grounds, after the early rains have well soaked the earth, and to reduce the soil to the fine mash so well adapted for the easy dibbling and transplanting the rice shoots. It is drawn by the buffalo, harnessed as when ploughing; while the driver, to give it more weight usually becomes the rider. The teeth are eight or ten inches in length, and about a dozen in number. We can but stop and admire the fitness of the buffalo for this half amphibious and

borious work of dragging the harrow through the wet
ere he sinks to the haunches at every step; the horse or
holly disabled before finishing half a dozen acres. In-
roke, as represented in the figure below, a collar and
se attached to the plough, are very often employed for

ing over and preparing the ploughed land for the seed.
uch used in breaking up the soil in those patches which
l to admit a harrow, where its long blade serves to mel-
l. The women often take a part here, sometimes under-
drudgery. We remember once to have seen a solitary
a child strapped to her back, engaged in hoeing a rice
y that she sunk to the knees at every step, with a power-
g upon her head at the same time. The *keö*, or spade,
d of wood and iron like the hoe, and is chiefly employed
itches, and repairing the dikes which separate the fields,

de, and the *pö* or drill-hoe, but they are not common.
only a strip of narrow iron bent at right angles, and tied

The *pa*, or rake, is made indifferently of bamboo or wood, most usually of the former. For gleanings the fields after harvest, raking the straw at the thrashing-floor, and collecting offal about the streets, the bamboo rake is in universal use. The lowermost of the three represented in the cut is called *teë-tä*, or the 'iron-feeler,' and is seldom met with in this neighborhood. There are other implements seen in farmyards, as beetles, brooms, &c., which require no particular description, as they present nothing peculiar.

The *leën*, or bill-hook, is applied to a great many purposes; in the spring it is used as a pruning-knife, in the summer as a scythe, and in harvest as a sickle; and is occasionally pressed into service as a cleaver and an ax. The blade is thick, and about a foot long.

ü, or flail, is not always made in this manner; the two are united by a strap or cord, like that used in England. This is a common implement for thrashing. There are two or three different ways of rating the grain from the chaff in China. When the rice is ready for the rable, and the rice allowed to stand till fully ripe, a tub is used in the field, having a high defense of cloth on one side, and the grain is carried immediately on to the tub where it is beat out. By this mode, the straw is injured very little, and is used for making brooms, rain-cloaks, mats, &c. When the rice is ready to be gathered before it is fully ripe, it is carried to the thrashing-floor till the time of thrashing, when the grain is separated by flails; oxen are seldom or never used for thrashing in this region. The Chinese are very wasteful of grain, and from the careless manner in which they thrash, they lose enough to sow the field. Some of this residue is left to rot on the hand or swept up, but if the stubble be at all weedy, it is not so; for the loss is not in dropping whole ears, but in dropping the grain so long that the grain shells out when the straw is this, and in some other practices in their agriculture, they exhibit an ignorance of economy sadly at variance with what they have sometimes been supposed to possess.

When rice is thrashed, it is cleaned by fans, and then carried to the granary, where the husk is separated by large pestles. The Chinese sell their produce in the shape of paddy, leaving the rice to be husked. According to Mr. Davis,* the fanning-mill is a Chinese invention, but it is seldom used; for in all the farms and villages hitherto visited, we have met with only one, and that in a situation as proved it to be rarely employed. However, where wheat is cultivated instead of rice, the fanning-mill is probably used, and we may here remark, that our notices of Chinese agriculture apply chiefly to the cultivation of rice as seen in the Canton. The fanning-mill is made like the one common in England, except that the chaff is collected instead of being blown

* The Chinese, vol. 2. page 399.

away. A little modified, it is employed at Canton in separating the impurities of some kinds of tea.

The various modes adopted by the Chinese for irrigating their fields, especially those of rice or cane, have been so well narrated by others, that we need not here particularly describe the machines employed. One plan, when the country admits, is to conduct the little streamlets which descend from the hills into all the patches lying adown the sides and at the foot; thus causing the water to beautify and fertilize the vale through which it runs. Reservoirs are sometimes dug on the summit or sides of terraced hills, from which artificial rivulets are made to descend in the same manner. Water is raised by sweeps from wells, in a way similar to that practiced in England; and also, when the elevation is small, by two men standing over a reservoir or on the banks of a pool, with a bucket suspended between them by ropes, as is clumsily figured in Davis' Chinese, vol. 2, page 396. By this method more water is raised in a given time than by a common pump, but the height seldom exceeds two feet. Where the ascent of the bank will admit, the Chinese employ a chain pump; and in one variety or another, this machine is in great use throughout China, sometimes worked by a crank, sometimes by oxen, and at other times by men. Many of them are to be found between Macao and Canton. It is well described and represented by Staunton. (See Embassy, vol. 2, p. 480.) The same principle is applied also in a kind of portable pump, in which shape, it imperfectly supplies the place of the sucking pump, a machine unknown to the Chinese. But by far the most ingenious contrivance for irrigating lands is the bamboo water-wheel; and we cannot do better in closing this article than to quote entire the description by Davis, who saw hundreds of them in operation on the Kán keäng. The banks of this rapid stream which flows northward from the Meiling into the Poyang lake consist of a loose soil, and the current has worn them away to the depth of thirty feet or more. Here these wheels are placed; and Chinese ingenuity has thus converted the strength of the stream into a power for overcoming the very difficulties which it originally occasioned; "and one is at a loss which to admire most the cleverness and efficiency, or the cheapness and simplicity of the contrivance." "The wheel," says Davis,* "which is turned by the stream, varies from twenty to thirty feet or more in height, according to the elevation of the bank; and when once erected, a constant supply is poured by it into a trough on the summit of the river's side and conducted in channels to all parts of the sugar plantations which there chiefly occupy the lands.

"The props of the wheel are of timber, and the axis is a cylinder of the same material; but every other portion of the machine exhibit some modification or other of the bamboo, even to the fastenings and bindings, for not a single nail or piece of metal enters into its composition. The wheel consists of two rims of unequal diameter, of which the one next the bank is rather the least. 'This double wheel,

* The Chinese, vol. 2, page 316.

nton, 'is connected with the axis by sixteen or eighteen bamboo, obliquely inserted near each extremity of the ring each other at about two thirds of their length. They are held by a concentric circle, and fastened afterwards to spokes inserted in the interior extremity of the axis (or the bank), reaching the outer rim, and those proceeding from the outer extremity of the same axis reaching the inner rim. Between the rims and the crossings of the spokes is a lattice-work of close basket-work, serving as ladle-boards,' which are turned by the current of the stream, and turn the wheel

the diameter of the wheel being something greater than the diameter of the bank, about sixteen or twenty hollow bamboos, closed at their ends and fastened to the circumference, to act as buckets. These are not loosely suspended, but firmly attached with their ends towards the inner or smaller rim of the wheel, at such a distance that when dipping below the water their mouths are turned from the horizontal position; as they rise through the water they soon approach the upright sufficiently near to keep a portion of the contents within them; but when they reach the summit of the revolution, the mouths become enough turned over the water into a large trough placed on a level with the water to receive it. The impulse of the stream on the ladle-boards overcomes the resistance of the wheel, with a radius of about fifteen feet, and overcomes the resistance arising from the difference of level between the ascending and descending, or loaded and unloaded, sides of the wheel. This impulse is increased, if necessary, at a spot where each wheel is erected, by damming the stream and even raising the level of the water where it turns the wheel. The circumstance occasioned some obstacles to our progress towards the Meiling pass, as the water near such a spot flows with the rapidity of a sluice. When the supply of water is cut off over the adjoining fields, the trough is merely turned over, and the wheel continues its stately motion, the water being poured back again down its sides. These wheels are the Kán keäng, from the neighborhood of the pass to a distance down its stream towards the lake, and they are so numerous that we never saw less than thirty in a day. It is estimated that at one of them will rise upwards of three hundred tons of water in our-and-twenty hours. Viewed merely in regard to their construction, they resemble the Persian wheel, and the machines used for raising water in China bear some resemblance to the one just described, but, as Staunton says, 'they are vastly more expensive, less simple in construction, and as well as less ingenious in contrivance.'

The illustration of the water-wheel given in the work quoted from well shows the lightness and neatness of bamboo structures generally, large or small. We have met with a drawing of a different model in a Japanese work, which we have here sketched, and which, with what has already been

onal explanation. It is but just to add, drawings of all the agricultural implements, m the same Japanese work; but not copi- delity to the Chinese models. This book over the Chinese in the arts of design, appears to have attained in many other r their neighbor.

the preparation of Opium for the Chinese market : March 1835, and then communicated to the Benares Agencies. By D. Butter, M. D., Surgeon 63d B. N. I., examiner of the Benares Agency. (From the Journal of the Society of Bengal. No. 51, March, 1836.)

to paper, for the use of my successor in office, the reasons, I would beg, once for all, to disclaim the idea of being infallibly correct: for, although they are the result of attention to their various subjects, I am aware of the disorder which an individual labors, upon whom falls the weight of any subject involving the discussion of obscure points, who is thus deprived of the benefit of the judgment of others; and am prepared to find my remarks hereafter greatly improved by the progress of discovery.

The object of the Bengal opium agencies is to furnish an article to the peculiar tastes of the population of China, who consume a large quantity of opium in direct proportion to the quantity of hot-water extract obtainable from it, and to the purity and strength of that extract when dried and smoked through a pipe. The object, therefore, of the agencies should be to prepare their opium so as to retain as much as possible its native sensible qualities, and its solubility in hot water. Upon these points depend the virtues and value that Benares opium brings in the China market, and which are superior to those of Behár, Malwa, and Turkey opium. Of the last of these (the Chinese) values contain larger quantities of the narcotic opium; but are, from their greater spissitude, and the inferior preparation of the Behár and Malwa, incapable of yielding an equal quantity and perfection of flavor with the

Benares opium. It becomes a question, how the whole process of the preparation of opium from the sowing of the seed to the packing of the chests, should be conducted so as to preserve with the least loss the true flavor and its solubility.

There can be no doubt that the quantity and richness of the milk obtained from each poppy-head depend greatly upon the geological and physical conditions of the locality which produces it; especially upon the nature of the soil, sub-soil, manuring, and irrigation; and also upon the mode of cultivation employed. But as these matters are, in the present circumstances of the Bengal agencies, little open to choice or control, the principal practical inquiries which claim our attention relate to the mode of preparing the juice and its treatment while in the hands of the

processors. In various processes for the preparation of sugar and medicinal vegetable juices, it is well known that distillation is incomparably the most efficient in preserving unaltered the

original taste of the sugar, and the taste, solubility, and therapeutic powers of the extracts. It is also known that this process owes its superiority to the exclusion of the chemical as well as the physical agency of the atmosphere, to its rapidity of exsiccation, and to the comparative lowness of temperature at which it is performed. When sugar-cane juice, after even half an hour's exposure to the air, is boiled in a narrow deep vessel, and under the pressure of the atmosphere, vapourisation goes on so slowly that the sugar has time to undergo the vinous and acetous fermentations, whereby a certain portion of it is converted into vinegar, before the heat can be raised high enough to check this change; and the high temperature, to which it is so long exposed during this slow evaporation, chars another portion, and converts it into molasses. Other vegetable juices, under similar circumstances, undergo analogous transformations: much of their substance is converted into vinegar; and the high temperature causes a partial decomposition of the rest: oxygen also is largely absorbed from the atmosphere, and greatly impairs the solubility of the dried extract.

On the principles which flow from these facts, it would be, *chemically* speaking, advisable to prepare opium by distilling in vacuo, large quantities of the milk just as it has oozed from the capsules; and I have no doubt that opium thus prepared would possess in an unprecedented degree the desired qualities of solubility and strength and purity of flavor, as well as narcotic power; and can imagine, that under a system of open trade in opium, this process would be *commercially* profitable. It would, however, be inapplicable under a monopoly constituted as the present system is; and I have mentioned it only with the view of pointing it out as the acme of that perfection in the preparation of vegetable juices to which we can, with our present means, only approximate.

That the approximation may proceed as far as possible, it will be necessary, first, that the poppy juice shall, at the time of collection, contain a minimum of water; so that its reduction to the proposed degree of spissitude may be effected in the shortest time, and be therefore attended with the least exposure to the air at a high temperature, and with the smallest consequent loss of solubility and of specific qualities that may be practicable.

The goodness of the soil, and the management of the irrigation, are circumstances which powerfully affect the strength of the juice at the time of its collection: but a third agent, still less amenable than these to control, now comes into play, the precipitation of *dew* on the surface of the capsule. When a current of wind, or a cloudy sky, prevents the formation of dew, it is found that the scarifications made in the capsule about the middle of the preceding day are sealed up by the slight oozing of juice, which had immediately followed the incisions; and the quantity of opium obtained is small. When, again, the dew is abundant, it washes open the wounds in the capsules and thus facilitates the flow of the milk, which in heavy dews is apt to drop off the capsule entirely, and be wasted. But when the dew is in

tity, it allows the milk to thicken by evaporation, and regular tiers, (averaging one grain of solid opium from incision,) which on examination will be found to have stency, and a "rose-red" (*Werner*) color towards the e, while the interior is semi-fluid, and of a "reddish- This inequality of consistence constitutes the *grain of* which I shall have to speak hereafter.

ction of these drops of half dried juice, it is very apt to n the dew, which, in the earlier hours of collection sprinkle the capsules, and which here does a double by retarding the inspissation of the general mass of secondly, by separating its two most remarkable con- that which is soluble, and that which is insoluble, in e aware, or so reckless, even under the most favorable their conduct, are the *koéris* of the injury thus caused it many of them are in the habit of occasionally wash- pers with water, and of adding the washings to the col- norning: in Malwa, oil is used for this purpose, to the injury of the flavor of the opium. On examining the d with water, it will be found that it has separated, as d, into two portions, a fluid and a more consistent sub- er containing the most of the resin, gluten, caoutchouc, soluble constituents of opium, with part of the super- orphia; and the former containing the gum, some resin, e super-meconiate of morphia, and much of the color- which, though pale at first, is rapidly affected by light, very deep "reddish or blackish brown" color. Many he habit of draining off this fluid portion into a separate bringing it under the name of *paséwa'*, for sale, at half ium, to the Benares agency, where it is used as *léwá* (petal envelops of the cakes). Others, after allowing nciples to become thus changed into an acescent, black- fluid, mix it up with the more consistent part of their ring the whole for sale in this mixed state; the conse- ch is that they are subjected to a penalty, called *battò* and regulated by the estimate of the opium examiner y of *paséwá* contained. This penalty is the only effi- on this most pernicious practice of the *koéris*; for on of the *gomáshtas*, it is difficult to impress the necessity g after the *koéris* during the collecting season. Were general fit for their offices, the name of *paséwá* might rom the Bengal agencies; all that is required for that that they should instruct all their *mahta's* and *koéris's*, w as much as possible from the opium at collection, vater to their opium, then or at any other period, but at ir day's collection, to rub it together in a mortar or si- reaking down the *grain* of it abovementioned, so as to ole to a homogeneous semi-fluid mass, which should be ly as possible in the shade, in a current of air, free from

dust, by spreading it on any clean flat surface, and turning it over ten or twenty times. With this management, one afternoon in the dry collecting season would suffice for bringing to the spissitude of 70 per cent. the collection of each day, which could then be secured, along with the rest of the *koéris* opium, in a vessel of any form, safe from deterioration by internal change. It is a common belief, that all new opium *must* ferment:* but that is a fallacy occasioned by the low degree of spissitude at which opium is generally received at the Bengal agencies, and by the consequent fermentation and swelling up which almost constantly occur, when such opium is allowed to stand for some hours in large vessels.

So very large was formerly the admixture of *paséwá* in the opium brought to the Benares agency, that it was thought necessary, for the sake of its appearance, to draw off as much as possible of the black fluid, by storing it for weeks, in earthen vessels, perforated with a hole. Of late years, there has been a great amendment in this respect, and the draining system has therefore become unnecessary; an event which ought to be followed by the abolition of the inconvenient receptacles in which it was carried on, and by the general substitution of moveable wooden cases and drawers in their stead.

Paséwá, in a pure and concentrated state, is a viscid, dark, reddish-brown fluid, transparent in thin plates. Its homogeneous physical constitution prevents its assuming to the eye that appearance of consistency which is presented by ordinary opium. In the former, all the ingredients are in a state of true chemical combination, with the water contained; while, in the latter, many of the ingredients are only in a state of mechanical mixture, a condition which almost necessarily gives an appearance of solidity beyond all proportion to the actual quantity of solid matter contained. Hence, *paséwá*, and opium containing *paséwá*, are less consistent, and would, to the inexperienced eye, appear to contain much more water than pure opium of the same actual spissitude; a source of much perplexity to any one who tries for the first time to estimate, by the consistence, the real spissitude or dry contents of different samples of opium containing more or less of *paséwá*. A tentative process is the only one by which a person can qualify himself to estimate the spissitude with tolerable accuracy. He should, before allowing the *parkhiyas* to state their estimate of the spissitude, form one in his own mind, and make a memorandum of it, noting his reasons for assigning the degree of spissitude on which he fixed. The result of the steam-drying test, to which small samples of all opium are subjected in the Benares agency, will then enable him to judge on which side, whether under or over estimate, he has inclined to err, and to avoid the error in his subsequent operations.

The constituents of *paséwá* are in a state of chemical combination; and the slow addition of water will not subvert that condition. But

* Dr. Abel believed that fermentation was necessary for the development of the narcotic principle, and considered the fermentation as of a panary species, in which the gluten played a principal part.

sion of a large quantity of water on concentrated *pa-* resolves it into two portions, a dark colored fluid con- coloring matter, and super-meconiate and acetate d a lighter colored powder, consisting of the resin and a minute portion of caoutchouc. In making *léwá*, *vaséwá*, or from inferior opium, the necessary quantity be slowly added, and thoroughly mixed previously to more water. Pure opium is liable to the same resolu- onent parts, from the sudden affusion of water: if the added and thoroughly mixed, the gelatinous opium orming a species of hydrate, and will retain its tremu- e; but if the water be suddenly added in considerable mediate separation of the more and less soluble consti- nd the opium loses its gelatinous and adhesive char- opium is dried up to a certain point, below the spissitude it loses the power of absorbing water without decom- cannot be brought to the gelatinous state. It might at, by adding 30 parts of water to 70 of dry opium uld produce a combination possessing the consistence cal characters of fresh standard* opium; but the come *consistence*, and will be found to contain insoluble have lost their power of forming hydrates with water: *de* remains exactly that of standard opium, the precise opium employed in making it being recoverable from urkened and deteriorated condition. The above obser- practical bearing upon the manufacture of *léwá*, as en noticed, and upon the degree of spissitude which u the hands of the *koéris* or in the agency godowns, itted to acquire: it should be limited to 66 or 67 per ormer, and 70 or 72 for the latter; because, with every ee of spissitude above this, the solubility is impaired in ratio.

e thoughts on the subject committed to writing six ind the following remark and query: "The whole of ulky juice will pass through a finer filter than that Chinese in making the extract for smoking: is it possi- opium, retaining its property of such minute division y; or is it necessary for the complete separation of the resin, gluten, caoutchouc, &c., that *some* absorption of take place, and some consequent diminution of their ather miscibility with water?" My reason for noticing the subsequent solution of the proposed problem by M. lcutta, in the highly similar case of animal milk, which have succeeded in drying to a powder with no percepti- the diffusibility of its curdy and oleaginous principles. ry result that should be aimed at in the preparation of Chinese market.

ecause this is the degree of spissitude required at the Bengal *fu* price allowed by government. On parcels of opium, infe- situde, a penalty is levied, called *battá* upon *consistence*.

When the juice of the poppy has been properly dried, that is, rapidly, in a cool shade, and protected from dust, it possesses, at the spissitude of 70 per cent., (that is, containing 30 per cent. of water,) the following properties. It has in the mass a "reddish brown" color (*Werner*), resembling that of copper (the metallic lustre obstructed); and when spread thin on a white plate, shows considerable translucency, with a "gallstone yellow" color, and a *slightly granular* texture. When cut into flakes with a knife, it exhibits sharp edges, without drawing out into threads; and is tremulous, like jelly, or rather strawberry jam, to which it has been aptly compared. It has considerable adhesiveness, a handful of it not dropping from the hand inverted for some seconds. Its smell is the pure peculiar smell of opium, heavy and not unpleasant. In this condition it is said to be "standard" or "*anwal*" opium.

When the juice, again, instead of being thus exposed to the air, has after collection been kept in deep vessels, which prevent evaporation, it presents the following appearances. A specimen of it which has the spissitude of only 60 per cent. has the apparent consistence or substantiality of standard opium of 70 per cent. But on minuter examination, it will be found, that this apparent firmness of texture is a deception, resulting from the mechanical constitution of the mass; it being made up with but little alteration of the original *irregular drops* collected from the capsule, soft within, and more inspissated without; this outer portion, as long as it remains entire, giving the general character of consistency to the mass, just as the shells of a quantity of eggs would do. For, when the opium is rubbed smartly in a mortar, this fictitious consistence disappears, exactly as that of the eggs, if pounded, would do; and in point of apparent consistence, as well as of real spissitude, it is reduced to the proportion which it properly bears to standard opium. When opium thus retains the original configuration of the irregular drops, it is said to be "*kachá*" or "raw;" when these are broken down into the *minute grain*, mentioned in the description of standard opium, it is said to be "*pakka*" or "*matured*," whatever may be the actual spissitude of the opium, whether 50 or 70 per cent. An opinion has been entertained, but on what grounds I know not, that the breaking down of this large grain is an injury to the opium; to myself it seems plain, that, as the large grain *always* disappears before the opium attains the spissitude of 70 per cent., and as this vesicular constitution of the raw opium retards the evaporation of its superfluous moisture, the more inspissated shell of each irregular drop checking the evaporation from its more fluid interior, the object should be to reduce the whole with the least possible delay to a nearly homogeneous mass, in which state the inspissation of opium advances with much greater rapidity.

Connected with this subject, is a question which has been raised, whether the inspissation of opium stored in large quantities in the agency godowns is effected more quickly, by removing, from time to time, into another receptacle, the pellicle of thick opium which forms on the surface of the mass; or by turning over the mass frequently,

ntly mingling with it the pellicles successively formed. the general law of chemical affinity, whereby the last substance held in combination, and in course of gra- are retained with increasing obstinacy, the inspissat- *celeris paribus*, always more rapid in its progress than opium; it is clear that the removal of the pellicle, by of minimum spissitude is constantly exposed to the air, e the inspissation more than the turning over of the ould do; because the latter process exposes to the air gradually acquiring a greater degree of concentration, h the evaporation will gradually be *slower and slower*. t takes place from the external surface only, it may be advert to the propriety of making all reservoirs for opi- standard spissitude as numerous and shallow as may be ie means of stowage; every practicable method being me adopted to facilitate ventilation across, and to ex- m, the extensive surfaces exposed; and as little light l as may be suitable to the convenience of the people

expected, from the ingenuity of the natives of this coun- their imperfect notions of fair trade, that they would at variety of means for increasing, by adulteration, the an- article as opium, in which fraud might be made so ection. But in fact, it is seldom that they attempt any nd, beyond keeping their opium at a low spissitude; an nder the present searching system of examination, they and which, from its occasioning a deterioration of their r fermentation, entails the levying of a battá upon its erefore, in those cases, an inevitable loss. It is impos- m left to itself in the open air, during the parching sea- winds, could remain at the low spissitudes of 50 and 60 which it is frequently brought to Gházípúr towards the eason: and we must therefore conclude, that artificial orted to, in order to maintain it in that condition; either addition of water, or the burying it in a damp piece of h is said to be sometimes done for the sake of security. alpractices have been carried too far, the gluten under- ter or less degree the process of putrefaction; the mass becoming covered with mould, and acquiring an opaque ey" color and a pasty consistence, in which every ves- nslucency and *grain* of the opium is lost; and the smell ous, sour, and at last abominably fetid; in which condi- riorated opium is fit for none of the purposes of the and is always destroyed, and its original value forfeited, . It is to be hoped that their experience of the unvary- ces of such folly, and the introduction of a superior class will in time convince them of the advantage, as well as f bringing in all their opium at very nearly the standard

In some cases it would appear, from the fluid state in which they bring it for sale, as if they expected every drop of water which they add to it, to be assimilated and converted into opium. Occasionally, it would seem that they had admitted some suspicions of its having been watered too much; and their only remedy is to drive off the superfluous water by boiling: an operation which speedily reduces the mixture to a blackened and charred condition, easily recognized.

A more ingenious fraud, but which is seldom practiced, is, that of *washing out* the soluble and most valuable part of the opium, and bringing for sale the residual mass. In this process, the opium loses its translucency, and the *redness* of its color: it loses its adhesiveness also, not adhering to the hand like opium which has not been robbed of its soluble principle; and by these marks, without going further, the fraud is detected. *Sand* is now and then added, to increase the weight, and is at once detected by its grittiness when rubbed between a plate and a spatula.

Soft clayey mud is also, but very rarely, used for the same purpose: it always impairs the color and translucency; and can, as well as sand, be detected, and its quantity accurately ascertained, by washing the opium with a large quantity of water, and collecting the sediment, which is the clayey mud.

Sugar and *gur*, or coarse molasses, are sometimes employed to adulterate opium: they invariably ferment and give it a sickly, sweetish, venous, or acescent odor easily known.

Cow-dung, the pulp of the dhatúrá, or thorn-apple, and the gummy resinous juice of the bél, or Bengal quince, are seldom met with as fraudulent ingredients: the first may be detected by drying it to a powder, or by washing it with water, either of which processes brings under the eye the undigested shreds of vegetable matter, constituting the animal's food; but the two last are extremely difficult of detection, if not added in quantity sufficient to affect the color and smell of the opium, which generally happens in the few instances of their occurrence. The seeds of the dhatúrá are apt to get mixed with the opium, and afford a ready means of detection. A strange, but not uncommon, mode of adulteration is the addition of *pounded poppy seeds*: if reduced to a fine powder, the oleaginous seeds might enter into an imperfect chemical union with the kindred resinoid principle of the opium; but the fraud is never so skillfully effected as to produce this result; and the hard particles of the seeds are perceptible to the touch and sight. Malwa opium, though less now than it was eight years ago, is in general largely contaminated with oil, which is easily separated by dissolving the opium in water; and I have seen, in a few instances, the same fraud attempted within the Benares agency. As the oil is always in a rancid condition, its presence is betrayed by its odor, as well as by the glistening appearance which it communicates to the opium.

By long exposure to the heat of the sun, the texture of opium, whatever be its spissitude, undergoes a remarkable change, through the conversion of parts of its gluten into a species of birdlime. Its

property of exhibiting sharp edges, when cut into flakes appears; and it draws out into long threads. Varieties of texture may almost always be recognized in Benares opium respectively; the former being examined, in the process of drying the cakes, and the latter variety of treatment occasions a difference between the properties of the cakes of the two agencies; the Behár a more speedy but less permanent hardness than the Behár, though firmer in the shell towards the end of the rains. The immediate cause of this difference is found, that in the Benares shells, the *léwa* remains combined with the petals, dark-colored, and tenacious; in the Behár, it is in a great measure absorbed by the petals, and is not in intimate contact with each other, and is not combined from them; the combination being more easily effected by the changes of the atmosphere than the independent *léwa* in the Benares cakes.

At present, a considerable amount of inferior opium is safely applicable to any other purpose than the manufacture, its sacrifice is no great loss. But if all the opium of the different agencies were of a good quality, the substitution of some vegetable paste would be an important desideratum. A cheap mucilage or farinaceous paste, or perhaps some preparation of bird-lime, would answer for the inner portion and an exterior coating of a resinous, waxy, or oily nature to water, would defend this from the moisture of

When a cake for examination, the above points should

It should also be observed whether the external surfaces of the shell are smooth: the former not so, and none of the interior leaves of the latter detachable; there ought, also, to be no vacuities between the leaves, such as are sometimes found, lined with cakes, and the shell altogether ought to be thin, of uniform thickness throughout. The shape ought to be as spherical as possible: that being the geometrical form which the most perfect surface contains the greatest quantity of matter, and consequently affords the least scope for the extrication of air, and injury to the shape of the cake when that air escapes. In the preparation of the cakes, attention should be paid to having the earthen cups, in which the cakes are prepared, hemispherical, instead of parabolical as they now are, in order to attain to the desired sphericity.

In the preparation of a cake, the next thing to be attended to is the manner of separating the hemispheres of the opium separate; the Behár will retain its *shortness*, while the Benares draws out into long threads. The smell should then be attentively observed and noted, and the strongest immediately after the opening, and giving at

that instant the fairest indications of the taste of the opium with respect to preservation; the pure narcotic, venous or acescent odor being then most strongly perceptible: in this respect the Benares will generally prove superior to the Behár. It is an important character; for the Chinese are great epicures in the flavor of opium, and object to it when it smells at all sour.

The surface of the opium should then be narrowly inspected, and the tint and shade of color, both by reflected and transmitted light, noted down, in terms of Werner's nomenclature; also the apparent quantity of *paséwa* if any be present, which is almost constantly the case with Behár opium, where it appears like dark glistening fluid, lining the little cells in the surface of the opium. As the depth of the color of opium in the caked state depends on the quantity of *paséwa* in it, or the degree in which it has been deteriorated by exposure to the sun, the lighter the shade, the better is the opium.

The chemical analysis of opium, after all the trouble that has been bestowed on it, is still in an unsatisfactory state. A perfect analysis, such as we possess of Peruvian bark, and of some other medicinal plants yielding vegetable alkalies, ought to eliminate the whole of the active principles, leaving nothing at its close but an inert mass possessed of no therapeutic power: and the essential principles thus obtained should equal (or, as in the case of quina freed from its bulky fibrous accompaniment, surpass) in activity, a quantity of the original substance equal to that from which it was extracted. But how greatly inferior are the powers over the animal economy, of a grain of morphia, in whatever state of purity or saline combination, to the quantity of opium that is required to furnish that single grain! Yet, for all that we can, chemically, see, we obtain by our analysis the whole of the morphia that is contained in opium. I suspect that the narcotic power is partly lodged in some unknown substance (not narcotic) insoluble in water: for I have, after careful and repeated washing until it ceased to color the water, found the insoluble residuum to act as an opiate with considerable energy. Although morphia, in a state of purity, can, like sulphur, be fused without change; yet, when in combination with the other constituents of opium, it is partly destroyed by a much lower degree of heat, greatly under that of boiling water; for the pharmaceutical and Chinese extracts are found to contain very little morphia; still, the former, as is well known, exerts great medicinal power, out of all proportion to the quantity of morphia, which analysis evolves from them. From all these considerations it would result that the proportion of morphia obtained, by the analysis at present known, cannot be regarded as a true exponent of the total narcotic power of the opium which yields it. An additional source of fallacy in comparing the produce of different countries exists in the varying proportions which they contain of coloring matter, or extraction; a principle for which morphia and narcotine have a strong affinity, forming insoluble compounds* with it; and which, as

* This may partly account for the medical activity of the mass of opium above noticed.

is much more abundant in Indian than in Turkey
 a considerable loss in the purification of morphia from
 an apparent, and probably real, inferiority in its quan-
 we know that good India opium is equal to Turkey in

rocess is the one employed by the opium examiner in
 chief precautions necessary to ensure success and
 results are, not to use too much water at first; to see
 sia is brought to a red heat; not to expose any of the
 ysis to the sun, or to artificial heat, except in the wash-
 solution in alcohol of the morphia; not to use too strong
 ing the morphia and excess of magnesia; and to employ
 colol for its final solution before crystallization. Ser-
 ss is useful where it is not necessary to obtain the
 parate state: and in practiced hands affords speedy
 accurate information. It is probable that Robiquet's
 ime be superseded by that of the late Dr. Wm. Gregory,
 ick does not acquire the expensive use of alcohol,
 re morphia, by 30 or 40 per cent.; affording in fact,
 medicinal preparation known of Turkey opium. It
 : exhaustion of the opium with water under the tem-
 °; concentration of the solution at a low temperature;
 y slight excess of ammonia; elutriation of the pre-
 old water; exsiccation of it at a temperature below
 action to powder; solution in cold water by muriatic
 ded in slight excess; filtration and concentration to the
 syrup; after which, the preparation on cooling, becomes
 stals of muriate of morphia, moistened with a dark-
 n of uncrystallizable muriate of narcotine and resinoid
 r. This solution is abstracted from the crystals by
 e between folds of bibulous paper; and the solution,
 and expression repeated once or twice; after which the
 l in radiated bunches of snow white silky crystals, con-
 rts of muriatic acid and 322 of morphia. But for the
 perabundance of narcotine, and comparative paucity of
 rphia, in Indian opium, the manufacture of the muriate
 le might advantageously be established, at one of the
 es, for the supply of the Indian medical department with
 preparation, the marc (?) of which would be available for
 re of *lévâ*.

with the subject of analysis is another which claims
 from the opium examiner, the accuracy and sensibility
 and balances used in his department. Neither of them
 : allowed to be soiled with opium; and the former should
 e compared, to see that all weights of similar denomina-
 correspond within one-tenth of a grain, and that the lar-
 er weights are equally accurate multiples and sub-multi-
 ber. The knife-edges of the balances should occasionally
 so that they may turn with as little friction as possible;

and the three points of suspension, whenever deranged, should be brought into a perfectly straight line, by bending the beam with the hand: if the centre edges be too low, the balance will, when loaded with its proper weights, be in a state of unstable equilibrium, and will cause great mistakes; and if they be too low, the balance will lose its sensibility, and cannot be depended upon within perhaps two grains. Care should also be taken that the distance from centre-edges to arm-edges are exactly equal; from accidental violence, this element of accuracy is very apt to be deranged, and causes great confusion when overlooked.

Were all the opium brought for sale unexceptionable in quality, free from *paséwá*, and liable to batta on account of deficient spissitude only, there would be, supposing the battá levied with tolerable accuracy little difference at the end of the manufacturing season, between the registered receipts and expenditure of opium: and, supposing it levied with *strict* accuracy, there would be a small loss, occasioned by accidental spilling of semi-fluid opium, adhesion to the persons and clothes of the work-people, and other unavoidable sources of waste. But as, in the present state of things, battá to a considerable amount is levied on quality, the effect of its deduction, if not kept separate from the battá on spissitude, would be to show, at the end of the year, a deceptive deficiency of receipt compared with expenditure. Battá upon quality, or *paséwá*, therefore, should not be admitted into the godown accounts; and should be confined to the account between the receiving-officer and the *kvérís*.

There are no satisfactory experimental means, except perhaps by the specific gravity, of ascertaining the precise quantity of *paséwá* in opium. It will hardly drain at all from opium of higher spissitude than 60 per cent., and not readily from opium of even that spissitude, unless assisted by a slight fermentation, which greatly facilitates its flow: the *paséwá* trickling down the sides of the air-vesicles thus formed. The only convenient rule for the adjustment of battá upon *paséwá*, or upon quality generally, is, that absolute *paséwá*, if not too thin, and the worst opium purchased for the Company, being paid for at half the price of standard opium; for different grades of inferiority in quality between those two conditions, as fair a gradation of penalties shall be fixed, as can be formed from an estimate of the sensible qualities.

It has been thought, that specific gravity might prove an accurate index of the spissitude of opium; which is, however, not the case; its soluble principles, and that portion of its insoluble constituents which, slightly modified, unite with the soluble in forming *paséwá*, acquiring, in their transition to this altered state, a considerable increase of density. Opium, therefore, containing *paséwá*, is much heavier than an equal *bulk*, at the same spissitude, of pure opium. I have found this condensation to bear the same proportion to the quantity of *paséwá* apparently contained: and it might, probably be found to indicate, with considerable accuracy, the proper amount of battá to be levied for *paséwá*, were such nicety desirable or conveniently attainable.

ion of Government, which requires civil surgeons to
relative value of parcels of confiscated opium, accord-
antity of foreign matter which they may contain, is
important points: first, whether, and beyond what
ness, *water* is to be considered as foreign matter ;
whether and beyond what degree of deterioration,
paséwa converted opium, when contained in the con-
, are to be considered as "foreign matter." I have
bit of regarding them as foreign, when the water ex-
cent., and when inferiority in quantity was palpable ;
rent practice would defeat the end for which the regu-
ed, of securing a fair reward to the informer. Under
erpretation of the rule, he would be tempted to double
he seized opium, and consequently his own reward, by
ufficient quantity of water, or of bad opium, such as
s be clandestinely purchased for a trifle in the poppy

secretaries; and J. R. Morrison, esq., English secretary.
the Report.]

the friends of this Institution assembled here this
e expectation of hearing that great deeds have been
that great and speedy results may be looked for, as
heir efforts in behalf of China? Such deeds have not
, nor are such results to be looked for so speedily.
ee has endeavored to effect some good; but its ut-
faint and feeble, when compared with the magnitude
before it. It is not, however, discouraged; for
: this the motto: "*Magna est VERITAS, et preva-*

ack to the position of our own favored countries not
ago, we see much, very much, to encourage us. Has
here, out of the midst of darkness itself? Is that light
abroad in every direction? And shall it not also
gloom in which this empire—this, in some respects,

highly-favored country—is enveloped? When we look at India, we see still more to encourage us. Not half a century since, how small was the band of Englishmen who cared to acquire a good classical knowledge of any of the languages spoken in those vast possessions of the British crown! And how much smaller, then, the band of Indian subjects who were willing to give any attention to the language of the foreign intruders! But now, we see natives of England and of India uniting together in the business of life, readily conversing or corresponding with each other on every branch of science and of useful knowledge. We see the Indian boy eagerly studying the language of the foreign ruler; and we see the young man, who has already acquired a knowledge of that language, drawing from its rich treasures abundant food for his mind and intellect. And with this view before us, why should we despair of doing great good for China, even during the few years that we may be united in this work? And why should we not entertain the hope, that when another generation has arisen, this empire will have advanced some steps towards the seat that awaits it in the general council of civilized nations? Nor will such an advance, when once commenced, be by any possibility hindered or retarded.

We have alluded to the gloom of ignorance in which this country is enveloped: and we have said, that, great as this gloom is, we are not therefore discouraged. On the contrary, the contemplation thereof urges us to more earnest efforts to bring in that light, which, we feel assured, must ultimately pervade this empire, from one end of it to the other. But some, perhaps, looking cursorily at the Chinese, and seeing them to be an industrious, cheerful, contented people, having many of the arts and conveniences of civilized life, may be of opinion, that, as regards their temporal interests, they do not lack any knowledge that can be of essential value to them. If such there be, we would point them to the great improvements that have taken place in almost every branch of European art, within a short period, by the spread of scientific knowledge. And were these improvements to be introduced into China, would not the time and labor of this industrious people be greatly economized, and the quality of their manufactures be much improved? Have we not, by means of improved machinery, or by the aid of science, surpassed them in some of those manufactures which were once peculiarly their own? And why should we not communicate to them the advantages we have thus derived, by which they and we would find equal benefit, in the improved quality of their work? In the West, we have gained and are gaining much benefit to commerce, by alterations of political measures, arising out of a careful study of the history of commercial operations in various parts of the world. Were we, now, to give to the Chinese, likewise, a succinct history of commerce, may we not hope that they also will see the advantage derivable to themselves by similar changes of policy?

As an instance of the practical advantage that we may immediately and directly convey to the Chinese, it may be relevant to remind the

stitution, that the manufacture of Prussian blue was introduced into this country, from England, by a Chinese; and that the dye was thereby considerably cheapened to the poor-people, whose dress is almost invariably of that color. It is also of the injury arising to them from their ignorance of the dye may be mentioned, that Indian indigo, though cheaper than what is used as indigo in China, cannot be introduced into this country, the chemical solvent for it not being known of the dyers here. Its introduction was attempted, but without account alone.

Unnumbered advantages arising out of such knowledge as is communicated to the Chinese. On the other hand, we might also, if possible, were we brought into constant intercourse with well-informed natives of this country, derive much benefit and hence receive considerable direct benefit, and hence to England,—of the growth and preparation of porcelain, but in this country carried on in any degree of perfection, and hence to England,—of the growth and preparation of porcelain, but in this country carried on in any degree of perfection of the skill manifested by the Chinese in dyeing, there are many reasons which they are not able with facility to imitate.

The object of encouraging prospects immediately before their eyes, the committee has thus endeavored to turn its own view, and to show that these wear a bright aspect. It will point out the main difficulties by which they have to be overcome in the work which it has nevertheless accomplished and is still pursuing, and the more special objects which it is their duty to attend to.

First, then, draw your attention to the difficulties which you will encounter. These have been of two kinds, the one temporary, the other of a more permanent character. The first has arisen from unfriendliness (originating in ignorance) on the part of the Chinese government, to every effort made by foreigners to enter into a more social and intellectual intercourse with this empire,—and from the consequent insecurity of property which could be taken, in this country, to print and publish the Society's publications. This difficulty has been removed, by the assistance of the government, who has most readily and zealously undertaken the task of gratuitously superintending this very necessary and important business. That gentleman has also promised to form arrangements for the printing of the Society's publications, both at Singapore, and at other places as are most frequented by Chinese emigrants. The second difficulty is of a more formidable nature. It consists in the want of a sufficient number of writers, able to pen such works as the Society is most desirous to see written in the language of the Chinese. Those who are sufficiently conversant with the Chinese

be able to write it intelligibly are as yet very few ; and other engagements allow to them, even, but little leisure the wants of this Society. Hitherto, your Committee has since of this nature only in China ; but it looks also to Malacca and other places, where are several gentlemen, nations, who have made considerable attainments in the and whom the Society has the honor to reckon among its ing members. While fully aware of the multiplicity of engage the attention of these gentlemen, in a climate to repress than invigorate the mental energies, your trusts, nevertheless, that its hopes from this quarter will pointed. It indulges a sanguine hope, that, ere another apse, it will be able to tell of works commenced under of this Society, by some at least of the gentlemen to on has now been made.

ing this hope, your Committee has drawn up a plan of sketching the outlines of what it regards as most demand- ing, the details to be filled up in such order as the engage- every inclinations, of those gentlemen who kindly tender nce, shall render most convenient. The divisions of

cluding Biography ; Mechanics and Mechanical Arts ;
including Travels ; Natural Philosophy ;
tory ; Natural Theology ;
 Belles Lettres.

isions have been arranged in the order which their res- tance seems to demand. Some of the mechanic arts bly hold a higher place ; but mechanics, as a science, at least, precede the three first divisions, history, geog- natural history. Your Committee would here remark, mind, that, as we have to create a taste for our works Chinese readers, it becomes important to avoid lengthy subjects uninteresting to them, or in which the interest by them is inadequate to lead them through a minute the other hand, when treating of mechanic arts and ects, we can hardly perhaps enter into too minute a de- l that this is done clearly and perspicuously. It should gotten, to use every means of rendering our works in- entertaining, in the style and manner of treating them, the subjects treated of. In further sketching the outline pective labors, your Committee would suggest the fol- detailed arrangement.

Miscellaneous Subjects,

23. A Magazine, which shall contain less detailed articles on any of the above subjects, moral essays, literary miscellanies, &c.
24. An Almanac, intended to replace with useful information, scientific and statistical, the present Chinese almanacs, which are almost wholly filled with idle prognostications, details regarding propitious and unpropitious days, and so forth.

Of the works which have been above enumerated, the first, a general View of Universal History, in three Chinese volumes, has been completed, and is in course of publication. A History of the United States, and Introduction to Universal Geography, accompanied with an atlas, are also being prepared. The delay in the completion of the geography has retarded the publication of the map of the world mentioned in last year's Report. A thousand copies of Mr. Gutzlaff's Chinese Magazine, in twelve numbers, are in the hands of the Society's agent at Singapore, for publication in that and neighboring places. The publication of the Chinese Magazine, for the future, has been undertaken by the Society. Its Chinese and English Secretaries, and (it is hoped) some of its corresponding members, will contribute to its pages. A prices-current will be attached to it. This Magazine being published, in common with all other works of the Society, at Singapore, it is desirable that an editor should be found for it on the spot. In the meanwhile, it will be edited jointly by Mr. Gutzlaff and the English Secretary. The first number published under the Society's auspices has probably issued from the press, ere this, being for the first month of the current Chinese year. Your Committee has reason to hope, that the editing of an Almanac will be undertaken by one of the Society's Secretaries, in the course of the present year. There is cause also to hope, that some others of the works above enumerated will shortly be presented to the Society.

Mention was made in the last year's Report, of the importance of preparing a Chinese nomenclature, conformably to the pronunciation of the court (or mandarin) dialect, so as to prevent the confusion which must necessarily arise from the use of different modes of writing the same names. Progress has been made in this work, but it is not yet complete; nor can it be rendered perfect for some years to come.

Your Committee has much pleasure in alluding to the continued labors of the Rev. Mr. Dyer of Malacca, and of M. Pauthier, Paris, in the preparation of movable metallic types for printing Chinese. They have not recently heard what progress has been made by Mr. Dyer. From M. Pauthier they have received very minute information, and specimens of the types cast, under his direction, by M. Marcellin-Légrand at Paris. They are happy in being able to speak favorably of these specimens. Until their labors are more extended, and the publications of the Society more numerous, they have not, however,

called upon to expend any large sum in the purchase of movable types.

Treasurer's account, it will be seen, that the funds of the Society present amount to \$1250.48. Out of this sum the Society for the ensuing year will have to meet the drafts of the Society at Singapore, for cost of printing already executed, and other expenses further to be incurred on the part of the Society.

Your Committee great pleasure, to acknowledge the liberal aid and support afforded to the Society by several individuals; and the happiness to rank among its members; and especially to acknowledge the favorable notice taken of this Society by the Society of London.

It is, therefore, your Committee may be permitted to allude to the various kindred institutions, which occupy portions of the ground, in common with this Society, and which aim more or less directly to the amelioration of the intellectual condition of the Chinese. The American Education Society, in particular, as well as to the American College and the Singapore Institution, this Society has the aid and coöperation of a highly important nature. It is the efforts of a few foreigners, alone, that we are to carry into China the benefits of knowledge. The Institutions to which we have just alluded will train up native youth in a good knowledge of various languages, and of sciences and arts; and, at the same time, will give them well instructed in their own language; and will give persons who must be mainly instrumental in diffusing knowledge among the Chinese, their fellow-countrymen. This Society, on the other hand, may usefully coöperate with those Institutions, by furnishing to them books suitable to be employed in the education of the Chinese youth.

Obituary of the EDWIN STEVENS late seamen's chaplain in the port of Canton, with a brief review of the occurrences recorded by his own pen during his ministry.

EDWIN STEVENS, the late seamen's chaplain in this port, died on January 5th, 1837, aged 34 years. He was born and received his early education in New Canaan, Connecticut; in 1824, he entered Yale College, and, having completed a full course, graduated with high honors in 1828. He then spent a year in Aurora, as principal of an academy. Near the close of 1829, he removed to New Haven, and there joined the theological seminary in the college in 1831-32; and in April, 1832,

agreed to the proposals of the American Seamen's Friend Society to become their chaplain in the port of Canton. He was ordained a minister of the gospel at New Haven, June 7th, 1832; and on the 29th of the same month embarked at Philadelphia, for China. He arrived here in the ship *Morrison*, October 26th, and continued in his station, as chaplain, till March 1836, when, according to an engagement made before leaving America, he entered the service of the American Board of Commissioners for Foreign Missions. He however continued to preach at Whampoa, till about six weeks before his death. The journal, which he kept of his labors, in behalf of seamen, commences November 11th, 1832, and closes November 20th, 1836.

Of his childhood, and youth, and academical career, we know but little. From the various appointments and diplomas which he received, it is evident that he held a high rank among his fellow-students. Mathematics, and the Latin and Greek languages, were his favorite studies. It was not till near the close of his collegiate course that his mind became deeply interested in the subject of religion, having previously lived a "very careless and unprofitable life." After his thoughts were turned to a due consideration of his relations as a moral and accountable agent, he soon formed the purpose of living a "new life." The change in his sentiments and conduct, was as life from the dead. To do good to others, and not merely to enjoy himself, now became the chief objects of his attention,—an object which he steadily and vigorously pursued till his last sickness. During his residence here he made considerable proficiency in the study of the Chinese language, in which, however, accuracy rather than rapidity characterized his progress. He had the pen of a ready writer. Besides his sermons, he wrote much for the press: some of his papers were published in America, others appeared for the first time in our own pages. Among these last we may mention the sketch of the life and labors of Dr. Milne, the obituary of Dr. Morrison, the review of *Semedo*, a geographical and historical account of Formosa, a history of Chinese pirates, an account of Assám, and a paper respecting the promulgation of the gospel in China.

Strangers sometimes thought him austere and unsocial. He was not so: he was often reserved, but never harsh in his remarks. He possessed a lively imagination, a keen sensibility, with a great share of good common sense. Before he "put away childish things," he was, to use his own language, "in sports and jolly freaks, a match for any one." But during the last years of his life he never indulged himself in aught that was vain or sportive. In seasons of affliction, his sympathies were easily touched: and his passions, naturally quick and strong, were kept under most complete control. His expedition on the river Min, where he was exposed to the shot of Chinese matchlocks, affords a fair specimen of his conduct in seasons of danger. More than once in cases of disorder and mutiny, he was instrumental in preventing murder. He was, like the seaman, a citizen of the world; and though commissioned and supported by a society in America, he felt the same interest for those of other countries as he

ative land; and he enjoyed alike their respect instance, in point, we may cite the following ad- es, which we find stamped in golden letters on a elegant copy of the Bible, which he bequeathed er,—the only legacy he left to any of his famit property, having devoted whatever he possessed e espoused.

TO THE	
V. EDWIN STEVENS,	
BY THE UNDERMENTIONED COMMANDERS	
TRADING AT CANTON.

sketch of his life and character, we have only survey of his labors during his chaplaincy. He out used to visit Whampoa every week, whenever was on an average, we think, about two Sabbaths; rule to go down on Saturday, and to return on opportunity offered on Saturday in any of the fo- netimes procured a Chinese boat, or secured a from the shipping, which might be going down e Sabbath.

chiefly preaching, distributing Bibles and tracts, l burying the dead. He usually preached from l and complete, but oftener containing merely the se. Many of these notes he left among his pri- y show at once the tenor of his preaching. The : most frequently discoursed were repentance, a word, "Christ and him crucified." Some of re these:—For what is a man profited, if he gain l lose is own soul? Follow peace with all men, and hich no man shall see the Lord; How shall we so great salvation? For whatsoever a man soweth ap; Choose you this day whom you will serve; ord is tried. From his sermon on this last pas- concluding paragraph, as a fair specimen of his ching. After briefly explaining the text, and by citing a great variety of apposite facts, he

remark, the word of the Lord has been thorough- It has been tried by history, and not found

wanting. It has been tried by astronomy, by geology, by argument, and by ridicule. It has been tried during thousands of years by every man who pleased, in every way he chose; by all the learning which could be brought against it, by the conceited and ignorant; by friends and foes, by him that believed and him that believed not. It has stood all trials, and now remains in our hands with daily increasing evidence, that the word of the Lord—that shall stand. Besides the direct evidence for the divine origin of this book, this unrivaled number and variety of ordeals through which it has successfully passed, are enough to commend it to our attention as a record of perfect and tried truth. After all this, it cannot be too much to ask, that it be regarded as of undoubted veracity,—that every word will exactly come to pass. And if it be indeed so, what will be our condition? That word records the establishment of religion in the world, and the promulgation of the law of God which condemns us for sin; it describes the atonement of Christ, by which a sacrifice and mediator is offered to men, and the way in which the blessings of this salvation become our own, by a spiritual change of heart and supreme devotion to the will of God during this life; and it makes known to us the promise of a resurrection of the body, of immortality, of the judgment day, of the sentence of everlasting punishment upon the impenitent, and of eternal forgiveness and blessedness upon the servants of God. It assures us that this life is the accepted time to attend to the salvation of the soul, and that we must strive to enter the straight gate, because many seeking it too late, will never enter in. The promises of happiness and threatenings of misery are also all true." * * * * [A few words here are lost.]

The number of his auditors varied from 15 or 20 to 100 and upwards: the average number was, perhaps, 40 or 45. There was, however, considerable improvement, in this as well as in some other particulars, during the short period of his public ministry: in the early part of it, he was repeatedly denied the use of the cabin or the deck which he requested for Divine service, and in various other ways met with opposition; but subsequently the opposition ceased, and he was welcomed by large and attentive auditories. Under date of Nov. 13th, 1836, he wrote in his private journal: "Preached this day in the Splendid, Rogers, to an audience of some 80 or 100 hearers, from the text, 'Fools make a mock at sin.' I enjoyed considerable freedom, and there was the best attention; but I saw no apparent conviction of sin, or sorrow for it." The next Sabbath, November 20th, he preached his last sermon at Whampoa, of which he made the following note, the last in his journal: "Preached this day in the Otterspool, Richardson, to a large and attentive audience, from the words, 'Come unto me all ye that labor and are heavy laden, and I will give you rest.' No one seemed deeply affected."

After preaching, he often took occasion, before the assembly dispersed, to distribute Bibles and tracts. In the autumn of 1833, he established a biblical exercise, in the afternoon of the Sabbath, at which some twenty or thirty attended. In visiting the sick, he was

ionate, and faithful. He was also always ready to al of the dead. A service of this kind he performed : visited Whampoa ; and many others are recorded in 'wo or three we will notice. " This morning, (Nov. buried poor * * * on Dane's Island. He died yesterday in his state-room. The previous morning I was :onversed freely, and asked him whether he hoped to get ' Oh yes.' I then asked him if he felt prepared to die ; use he said, ' I suppose I must say so, whether I am ord him, you need not say so, if you are not ; but you may n preparing to die. ' Ah,' said he, ' I can do no more ; of anything, I am so weak.' The next day I heard leaving no traces of repentance." On the 16th of the , wrote : " I went down on Saturday morning to attend captain * * *, who died the night previous. He had it a fortnight of an inflammatory dysentery. We buried :rnoon on French Island, nine or ten captains attend- :n boats' crews. I read part of the Episcopal service ; ral eyes filled with tears, as we covered the remains ." On the following Friday he was again called to the l service.

the duties of his chaplaincy ; and such his manner of em. The prevalence of intemperance among sailors, l evils resulting from it, grieved him to the heart. He :nciple of entire abstinence, from all intoxicating drink ; lared that he should feel it his duty to do so, were it only of dissuading seamen from a practice so destructive to haracter ; and frequently remarked that, he scarcely difficulty on board .ship, which did not originate in this t was his opinion also, that most of the sickness and ing at Whampoa resulted from the same source. His ids with facts corroborative of these statements. ds respecting the last sickness of the seaman's friend is brief notice. He embarked from Macao in the Him- n Fraser, on the 3d of December, for a cruise in the pelago. He arrived at Singapore on the 15th of the and soon after complained of head-ache and a fever. n in his head he described as a severe pressure, not as friends soon became anxious as to the issue of his dis- ployed every means in their power which seemed likely n to health or to prolong his life. When his illness be- :ng, he spoke of the possibility of his not recovering, and evident satisfaction to the time when he deliberately ve a righteous and godly life ; and he seemed to rejoice t that he had been led, long before, to make that sur- sself into the hands of Him who could lead him safely " dark valley." His fever was " an insidious intermit- :y varying frowns and smiles kept the physician at bay," :rnatng through a mazy course of symptoms, it carried

him off, by an effusion upon the brain, at a moment when all around him fondly thought they saw the dawn of a happy restoration. His physician adds: "Throughout his sickness he was all gentleness and patience, and very grateful for everything done for him. He was like a child in the hand of God, and not solicitous in regard to any thing. It was a pleasure and a privilege to attend to the wants and smooth the dying pillow of such a patient."

ART. VI. *Embassies to China: observations on former ones, and on the necessity of immediately establishing commercial and political relations with this country; supineness of foreign governments unwise and dangerous; probable consequences to Great Britain, from a rupture with the Chinese in the absence of a treaty.* By a Correspondent.

[Our Correspondent has proposed to himself a very difficult and arduous task, but, nevertheless, a very important one, demanding far more attention than it has hitherto received: we are glad to see that he approaches the subject with a settled purpose of doing it justice: and we trust that he will pursue the investigation, till the duty of foreign governments is made so plain that it cannot and will not be any longer neglected.]

AMONG the many egregious blunders, committed by the natives of the Western world in their relations with Asiatic states, those of them which have been caused by, or which have emanated from, China, are, undoubtedly, entitled to the foremost rank. Whether we look to the magnitude of the errors themselves, or to the consequences with which they have been followed, the truth of this will be equally apparent. It is in great part, to an obstinate and systematic perseverance in a system of nonsensical self-contradictory preconceptions, that we are to trace the cause of the present humiliating posture, in which foreigners yet find themselves with regard to the Chinese. That much of this, as respects England more especially, has arisen in the cupidity of the E. I. Company, and their culpable blinding of the truth, to call it by no harsher name, few will now be found to dispute; but that a large share of the blame rests with those who might have formed correct opinions, had they pleased to take the necessary trouble, is, it appears to us, equally undeniable. The ministry of Great Britain have, for more than a century, given up the trade of this country, "for a consideration" doubtless, to a band of monopolists more than once,—in fact, selling a part of the birthright of the nation for a mess of pottage, in the shape of a gift or loan on advantageous terms, at times when it was not convenient, or deemed safe, to apply for it, directly or openly, from the people of England: thus sacrificing some of the best interests of the people to temporary embarrass-

ing duplicity, in the management of the public money, mer injury, by the obstruction of a trade which should be beneficial to the nation at large. That it was not in truth, the result of this disgraceful transfer, or, as it may be termed, on the part of the ministry, of a trust to their guidance; fostered by the ignorance with which the Company managed to veil all that related to China. It had this, at length, been allowed to go, that it may be said, whether, till the end of the last century, China was one of the countries of the world, that of which the least was known to the people of England. It was believed that tea and porcelain were produced there, and that the E. I. Company alone traded to it; that it was a rich and powerful empire, and that the people were civilized, and that the people were not possessed or sought for. Quarrels continued about the right to trade with, or to possess places of, and while the immense and valuable commerce with a third party, of considerable (at least comparative) civilization, was placed, to the control of the commercial sovereigns of that part of the seas—the highway of nations—declared to be closed, from which all “interlopers” were to be rigidly excluded, leaving the Capes of Good Hope and Horn into the bounds devoted to the enjoyment of a selfish and narrow mind.

Thus, separated from the rest of the world, unvisited at intervals and accidentally, by even vessels of war of that nation, China might have much longer remained, had not the manufactures and merchants, impelled by the constant search for new outlets for their goods, fixed their eyes on the East India mart: and, making determination and reiterated application for influential support and ministerial favor, at length for years foiled and sneered at, wrung from the reluctant ministry that restoration of their rights, from the gigantic falsehood, and an all but a miraculous degree of success, had combined so long to debar them.

The causes which led to this happy consummation may be traced to the embassies (as we have been accustomed to call them), and to the fear of losing some of their advantages, and the hope of others, which they had tamely allowed to remain in abeyance. It is the E. I. Company to solicit from the king of Great Britain that there was a deeper motive hidden under this, and that, in giving for the E. I. Company exclusive privileges of trade to the emperor of China, so as effectually to rivet the bonds, and perpetuate the exclusion of British merchants in general, but vain to inquire: the thing is, however, not the less

and, by these embassies failed; but public attention, once directed to the subject, was not again to be repressed; and the interest which has met the demand, during the last few years, shows how deep and dark was the ignorance in which they originated.

ed, or, as more probable, were arranged by the government of Great Britain. We do not of course include in this the Direction of the E. I. Company, who well knew the value of what the others disregarded; the charge against *them* is certainly not *ignorance*; but, excepting them, we are, we think, justified in the assertion with which we set out; and in no way was this very strange, and all but inconceivable, ignorance displayed so broadly as in the embassies to the court of Peking.

These we propose to ourselves to dissect, separately, in future papers; confining ourselves, now, to general views and remarks on the subject, which has not, as it seems to us, attracted all the attention and inquiry which a subject of such vast importance deserves. Great Britain, Russia, Holland, and Portugal, are the nations of the west which have sent embassies, or "tribute," to the "central land." The trade of France and Spain has not been of magnitude sufficient, we apprehend, to call for it, and the same may hold as to Sweden and Denmark: the U. S. of America have, hitherto, had no official intercourse with the general or local government: and this will give them a great advantage, over all others, whenever the interests of their commerce, or the demands of the national honor, shall make such a circumstance necessary. It may not be too much, even in this early stage of the inquiry, to predicate that the experiment will be tried by them: of this we are sure, that, untrammelled as they are, and free to act as the real dignity of their country dictates, and vigorously and determinedly as they generally act, in affairs of international importance, it would be greatly to the advantage of all foreign nations that the chance should fall to the lot of America. If undertaken at all, we have confidence that it will be done well, and in a spirit of general good, such as it would be foolish to look for from the older and more fettered nations of Europe. The cause will be a noble one, and we trust that it will not be sullied by silly fancies of exclusion and peculiar privilege, which it has been too much the policy of mercantile nations to aim at, as the grand desideratum in all treaties of commerce with foreign powers.

Whoever has been, for the last few years, but moderately attentive to foreign relations with this country, cannot but have noticed the rapid and general spread of the opinion that some appeal to the court of Peking cannot very long be dispensed with. Recent converts from an opposite opinion are many and frequent; and those who advocate, and those who deprecate, violence or threats, seem alike anxious to see the point fairly tried. The unsound and critical state of the great foreign trade with Canton seems to render this unavoidable; and we have little doubt but that the spirit which has wrenched asunder the shackles of the E. I. Company will not rest till a sound, fair, and just understanding is made to replace the wretched and rickety system of disgrace and chicane, with which their predecessors, for reasons best known to themselves, were content to put up. We do not shut our eyes to the fact that, up to the present moment, the subject has been one of singular unpalatableness to the British govern-

to Ireland, abolition of sinecures, or real reformation of establishments, harsh and unwelcome as each of these the ears of a troubled and tottering ministry, could be inviting than would be the demand that an attempt, at a commercial treaty with China should be made: however felt; the cry for it is begun, and, though off for a time by subterfuge and equivocation, yet it last. When the footing, on which England stands is fairly appreciated—when the unprotected and uncertain trade is, as it must soon be, generally known, it must, be in the power of any government to treat the demand that will be made; and the semblance of a China, absurd and useless as it now is, will be laughed at, it is withdrawn, and the expense of it devoted to ameliorate the condition of the trade, instead of mere hollow pretense of authority.

Useless, aimless—powerless to protect—notoriously ineffectual, even the least useful purpose, for which it could be maintained, this unreal mockery exhibits a fair idea of sense, knowledge, and judgment, with which the first nations of the globe has protected and advanced the trade, even now yielding a revenue, wanting which the national executive must be most seriously affected, if annihilated. This last reason, cogent and intelligible as it may have its due effect, and may work out the end which the moral strength, though not of such immediate expectation, for in vain. The direct amount paid into the treasury, by the trade with China, may be estimated at not less than a half millions sterling per annum. The employment of other less direct benefits to the country, we do not stop to consider. It may be worth an early and attentive consideration by the ministry, or better still by the thinking men of the people, since a portion of this enormous sum may be guaranteed to the crown. The sudden stop might, within a few months, be productive of great national embarrassment; and, in a political view, might have of which the mere overthrow of a ministry would be but a small part. It should be borne in mind, that, during the time of the present pany, this danger was, in some degree, guarded against, by a hasty enactment for the constant keeping of a two years' stock in the country. This does not now exist: and, partly in consequence of the effect which this very stock has been allowed to produce by speculations under the new system—we wish we could, if we may, call it the free trade system—it is more than doubtful if a quantity of tea, much greater than required for the domestic consumption, will be henceforth kept in the country. The consumption, caused by the grievous, impolitic, and unnecessary duties, originally established, and the no less admirable equalized rate of duty, on an article, varying in value from one to seven shillings, will tend to this. It seems now

generally understood, that no profitable trade to the importers of tea, can be hoped for, *till the country is under-supplied* with this, an article of general or nearly universal use; so that, through the wise arrangements of the English administrative, the interests of the merchant and consumer, which should run together, are now rendered antagonistic. The result of this will be felt, by the recoil of the evil, on the heads of its authors, in the shape of the immediate cutting off of this great source of revenue on the first quarrel or outbreak of the traders with the local or general government of this province and empire. It will then be for the chancellor of the exchequer of the day to discover, if he can, some source whence so large an amount may, at once, be obtained,—a task, we suspect, in the present state of Great Britain, of no easy nature; and bitter then will be the regret that puillanimity, ignorance, and procrastination, should have had so much the mastery as to prevent the possibility of such a catastrophe; or, at least, greatly to diminish the chances of it, by a well-defined and understood arrangement with the court of Peking.

It may be foolish to look at British relations with this country as connected with national honor, or, more properly speaking, national pride:—if glanced at, the retrospect would not be an agreeable one; but it may be as well, at once, to *envisager* this question, and to imagine the different attitude which England, would, in such a case as we have supposed, have to assume, with that which she might now fairly claim, notwithstanding the absurdities and degradation which have marked her diplomatic connection with China, up to the present hour. Ignorant as we yet hold the rulers of the nation, on the points which should be known, we cannot imagine the recurrence of the follies displayed in Macartney's embassy; though, whether the unpalatable humiliations of the country, in the person of Lord Amherst, might not be repeated or surpassed, we should not choose to assert. The fine clothes and gewgaws of the first might be more easily dispensed with than the tacitly acknowledged tributary character of the other; and, cunning as the Chinese are, and well informed, as we believe them to be, of the direct importance of this trade to Great Britain, the position, in which an envoy sent to China after the occurrence of a rupture between the countries, would be placed, must be as difficult as distressing. If instructed to support, in any way, the honor and dignity of his country, his mission would be futile. It is true, it is possible, that this might not be a *sine qua non* with his directors; and that trade, on any terms, so as to obtain the revenue, might be the object; in which case he probably might succeed, at the cost of national honor, in purchasing a temporary license for the trade; but this, though we fear by no means unlikely, is a contingency which we do not wish to imagine. We will, therefore, suppose an embassy, after the twelfth hour. Is it not manifest that the Chinese, feeling their advantage, would seize the opportunity to force terms, such as suited themselves, on "the haughty and fierce barbarians?" That supplication, on the one side, would lead to insolence on the other, and the return of the defeated envoy notice

ar, or aggression on our part, the real cause for

ART. VII. *Remarks on the opium trade; being a reply to the papers of Choo Tsun, Heu Kew, Another Reader, and V. P. M., published in the Repository for January. 1837.* By "A Reader."

[It being the object of both A Reader and his opponents to ascertain the truth respecting the subject under discussion, they are equally entitled to a patient hearing. We are pleased with the manner in which the case has been argued, and hope the question will not be dropped. till the truth, as to the morality or immorality of dealing in opium, becomes so clear and distinct that there can be no two opinions on the subject. In our number for February, it was stated, on the authority of Mr. Fleming and others, that the contents of a chest of Malwa opium weigh, on an average, 134 lbs.; and other kinds 116 lbs.; but varying, sometimes being 140 lbs. A friend has given us the following: "average of Patna, 120 cattiees or 160 lbs.; last year it was unusually heavy, averaging 125 cattiees, or about 167 lbs.; Malwa is about 101 cattiees or 135 lbs.; from long usage, Turkey opium is always sold and delivered at 100 cattiees per chest." We will refer to this in our next number.]

MR. EDITOR,—Since the appearance of the letter of 'A Reader' in the number of your Repository for December, on the subject of Archdeacon Dealtry's hasty attack on a considerable body of merchants, it has become the opinion of some of the best informed foreign residents in China, that opium is about to be legalized by the emperor on a duty. The consequences of such a measure on the argument at issue, with the productions of Choo Tsun, Heu Kew, Another Reader, and V. P. M., all appearing in your number for January last, it is my intention to discuss in this article; and if the length of argument is beyond usage, I intreat the public's indulgence, since it contains an answer to the ingenious reasoning and assumptions of two Chinese and two sincere, but I think, mistaken foreigners: I suppose it would hardly be fair also to call it an answer to the Archdeacon, he, by your January number, appearing merely to have been the stalking-horse, behind which a Canton merchant fired off his treatise against the wicked dealers in opium. Let us first try to deal with our Chinese friends, Tsun and Kew, as good and loyal subjects. These statesmen must believe all their arguments, as to expediency, have been met, and controverted at the foot of the throne of the emperor, before he will act contrary to their advice, and opium is legalized: and we may safely argue from this fact, that his Celestial Majesty is of opinion that the risk and peril of opium to the existence of his army, is a mere dream, and all its evils very much exaggerated; or no arguments from censors or others would be tolerated on a subject of discussion.

ery existence of an absolute government, viz., its

ngers described by Tsun, in the Repository for Jan., shows that he knows more of the growth of opium than Chinese writers of recent date. Tsun says, truly, they grow on the best soil, and not on poor or barren soil; the home growth of the poppy interferes with the foreign, the prevention of its cultivation is within the power of the government, as was shown in the case of the growth of the opium, which, when necessary, was effectually restricted by the intelligent ministers of Portugal ever produced. On the prohibition of the prepared extract of opium is believed of the Chinese government to stop. Moreover, as a Chinese emperor finds the home growth of the poppy to interfere with the growth of wheat, it is his policy to encourage its importation from foreign parts, as one vessel will hold, of prepared opium, a quantity of 1000 acres of fertile land will produce. We can only find the emperor's real reasons from his deeds, and the chief credit for is, that he finds he has not honest servants to curb this pervading luxury; as a matter of policy, therefore, he prohibits it, and thereby probably puts an end to smuggling, to an unprecedented extent, and the effect of which, on those engaged in it, are quite as demoralizing as the use of opium can be.

foreign opponents: I desire to arrive at the truth by a candid and sincere inquiry into the morality of the deal-
I give my opponents equal credit for their sincerity. I give them all their facts and their arguments, and to give them credit for all that I will have no assumptions; I will not continue to argue with men who, like the Archdeacon, first assume that opium is a disseminating poison, and on that assumption proceed to condemn them in this world and the next.

is solely poison, and I tell you, when you do so, I will be your disciple and assistant, as I am now your opponent. Wine, taken in moderation, is a healthful and exhilarating beverage, and is a blessing from a beneficent Deity for man's use and enjoyment. The majority so using it are in no way responsible for the ruin of the few who destroy themselves by its abuse; far less are the traders, in this production of the earth, answerable for the ruin of a small portion of their customers. This I repeat, in a former letter, I tried to support by showing that the society think as I do; and I repeat here, all wine merchants, all growers, all manufacturers of rum, all spirit dealers, all gunpowder makers or growers, all manufacturers of gunpowder, all breeders of race-horses, all billiard-table makers, all card-makers,—all these so employed, are situated precisely as the traders are; that is, they are dealing in articles which are useful, and safe, when used as luxuries; but which, when used as the means of sin and guilt!

I say therefore, Mr. Editor, that having this numerous body of dealers in all countries of the world, in all ages and states, engaged in the very avocations we are engaged in, it is a fair argument to say, the force of their united authority as to the innocence of our dealings, is greater than all or any of the arguments brought by Another Reader, by V. P. M., or by Archdeacon Dealtry, and all his coterie. Further, in the state of local knowledge we possess, as to Chinese habits, it is extremely difficult to ascertain how the great mass of opium is consumed; but from the little I know, by ten years' personal experience, I believe a vast proportion of it is used as a harmless social family luxury; and I brought in aid of this view, in my last letter, a calculation as to the few, in comparative numbers, of incorrigible permanent smokers, who would be equal to the task of using every chest that is imported. When you look at this statement, and consider that if my opponents are right in their views, that *all people smoking opium are drunkards*, and that thus you have a mass of fifteen millions of dollars to collect annually from less than half a million of debased, useless, infatuated opium smokers, the averment is ridiculous! Is it probable, is it to a commercial man for a single minute to be listened to, that these degraded few could year after year furnish such a vast sum? I ask the question, "Whether this is the most likely, or that the taste for this drug pervades the empire, and that it is occasionally used by a large portion of the whole inhabitants, and that the sum in question is raised by a payment falling lightly on a vast number out of a population of 300,000,000?"

I see no portion of the scale of figures, as to the consumption, given in my former letter, that is damaged by either Another Reader or by V. P. M.; and I again respectfully submit it to the public, in support of my argument as a near approximation to the truth. It is usual for those opposed to each other in argument, to treat lightly the averments of their opponents; and V. P. M. goes fully the usual length when he says, in page 413, of me, "Now, is there another man in Canton who believes this!" In answer to this I have to observe, that a reward of £100 is not given to prove that two and two make four, but to prove some doubtful, unsettled, unadmitted, principle; therefore I must hold V. P. M. by his deeds to be convinced that many on this subject do think with 'A Reader,' or he would never pay "A Reader" the compliment of having a treatise drawn up at the expense of £100 for his sole conversion. I am not alone in my view of the innocent nature of the use of opium; see what the Rev. Dr. Walsh says in passing through the opium districts of Turkey;—the best part of his remarks will be found in a late number of the Canton Register. Ask any one who has come from Rájputana, near the Malwa country, and you will find that some of the finest soldiers in India come from provinces where the use of opium is large and nearly universal. Its nourishing qualities have in India been applied, in times of famine, both to men and animals.

One view more. If a public act of legalization by the emperor should take place, it is likely to tend to the more rational use of

away its *abuse*. To all respectable people, acting of the land is a subject of regret. Now if the use of opium is to be no longer a hidden, guilty, solitary indulgence, at least the fears of being betrayed by servants of legal luxury, its use will be open to public observation, and will be a strong restraint on excess.

I remain Your's, "A READER."

837.

Journal of Occurrences. Premium for an essay on the Opium Trade; H. B. Majesty's commission, by imperial pleasure, to repair to Canton; foreign ships forbidden to anchor at the Moon; the expulsion of foreigners from Canton; an envoy returns to Peking; thunder-storms.

On this date we have been unable to impanel a jury, or (in the opinion of the arbiters, to award the premium for an essay, 'showing the effects of the opium on the commercial, political, and moral interests of the individuals connected therewith, and pointing out the course to be pursued in regard to it.' In courts of justice it is requisite that the arbiters—men—rather men, who have not prejudged the case. In such cases, arbiters enough could be obtained, were it not that every man, 'in China, has formed an opinion,' and might, therefore, be led to, as not being an impartial judge. The same difficulty is experienced in referring to the Straits of Malacca or to India; and it is deemed most satisfactory to commit the subject to the trustees of a literary or scientific institution in England or America. The result will be given in our next number.

Majesty's commission has obtained permission from his Celestial Majesty, Emperor of China, to repair to the provincial city. The chief of his suit may be expected here in a few days. The following "special edict" on the subject:—

Respectful remembrance of maritime customs, &c., to the hong-merchants, requiring assistance herewith. The following is a communication which was received on the 16th instant from his excellency governor T'ang:—

A memorial (observes the governor) which I addressed to the Emperor on the 10th of January, I represented to his Majesty the fact, that the late Governor Elliot, had been appointed to take the control over the mercantile affairs of his country. I have now, on the 14th instant, received, from the Board of War, a dispatch from the Council addressed to the Emperor, the substance of which is, that since the dissolution of the chief supercargo has come to Canton; that in December, last year, the Emperor gave a special appointment to one of its officers, to proceed to Canton, to have the general control of the merchants who come to trade, and to be responsible for the safety of the ships, and the crews, &c; that since the ships of the said nation continually come to Canton, it is to be some one to control them, with a view to preserve the peace of the said foreigner having received a public official commission of the merchants and seamen, although his title be not that of a chief supercargoes hitherto sent, yet in this duty of controller. It is, therefore, our imperial pleasure that he be permitted to proceed to Canton, under the existing regulations applicable to chief supercargoes, and that on his arrival at the provincial capital, he be allowed to take the necessary measures. For this purpose, the superintendent of customs is here-

by commanded to grant him a passport. In future, he is to reside sometimes at Macao and sometimes at Canton, conforming herein to the old regulations; and he must not be permitted to exceed the proper time, and by loitering about gradually effect a continued residence. The said governor and his colleagues are hereby authorized to hold the said foreigner responsible for the careful control of affairs, that so all disturbances may be prevented. They should issue strict orders to all the officers, civil and military, and to the hong-merchants, requiring them to inform themselves from time to time of the true state of things, and to keep a watch on the said foreigner. If he exceed his duty, and act improperly, or, combining with traitorous natives, seek to twist the laws to serve his private ends, he must immediately be driven back to his country, in order effectually to remove the source of evil. Let this edict be communicated to Täng. Respect this'

"I the governor have, on the receipt of this edict, given my attention to the subject, and find that I before sent to you a copy of my memorial; I will now direct the financial and judicial commissioners of this province to issue instructions requiring obedience to this edict. I will also give strict commands to the civil and military officers, and to the hong-merchants, requiring them, from time to time, to inform themselves of the true state of things, and to keep a watch on the said foreigner; and, if he overstep his duty and act improperly, or, combining with traitorous natives, seek to twist the laws to serve his private ends, directing them immediately to report the facts, and to request that he be driven back to his own country; at the same time cautioning them not to connive at anything, lest they draw investigation upon themselves. Besides taking these steps, it is incumbent on me to communicate to you the above edict, to the end, that you may act in obedience to it, and in the hope that, as soon as the said foreigner requests a passport, you will at once give it to him according to the legal forms, at the same time directing the hong-merchants and linguists to enjoin upon him these commands,—that it is henceforth imperative on him, when he comes to Canton to manage affairs, to conform himself to the existing regulations applicable to chief supercargoes,—that he is to be held responsible for the careful control of affairs,—that he must not overstep his duty and act improperly,—and that, as regards his residence, sometimes at Macao and sometimes at Canton, he must in this also conform to the old regulations, nor can he be allowed to loiter beyond the proper period."

I the Hoppo, on the receipt of the above, forthwith issue this edict. When it reaches the said hong-merchants, let them in obedience hereto, immediately enjoin upon the said foreigner these commands,—that it is henceforth imperative on him, when coming to Canton to manage affairs, to conform himself to the existing regulations applicable to chief supercargoes—that he is to be held responsible for the careful control of affairs,—that he must not overstep this duty and act improperly,—and that, as regards his residence, sometimes at Canton and sometimes at Macao, he must in this also conform himself to the old regulations, nor can he be allowed to loiter beyond the proper period. Oppose not A special edict. Taoukwang, 17th year, 2d month, 12th day (18th March, 1337).

The convenient and secure anchorage of Cumsing Moon, if the governor's orders are to be obeyed, is henceforth closed against all foreign ships. His excellency has issued three successive edicts. In his last, he says, his "words are ended."

The expulsion of certain foreigners from Canton, which was to have taken place yesterday (April 4th), has not been effected. What further measures are to be "proclaimed," remains to be seen.

The imperial envoy, Choo Szeyen, who arrived here in December, left Canton for Peking on the 14th of March; and, if current reports are to be believed, the affairs, which were to be investigated, are now wrapped up in more obscurity than ever. For the present we can make no report on the case.

Heavy showers of rain, accompanied with wind, lightning, and thunder, sometimes quite terrific, have visited Canton and vicinity within a few days. The boat which was to have brought H. B. M.'s commission to Canton was wrecked near Macao; and others, in other places; and among them, several native passage-boats near this city, with great loss of life. Some of the boats were upset almost instantly, and sunk with all their passengers. Two lives were also lost, and other damages sustained, by lightning

THE
LITERARY REPOSITORY.

L. V.—APRIL, 1837.—No. 12.

Rise and Decline of the Ottoman Empire; present form in its government, and in its policy towards and foreign manners, customs, and usages.

On the origin of the Turks and Tartars, renders the one former are undergoing intensely interesting to us, within the dominions of the latter. The Mantchou, and the Turk, derived a common origin from the unclassifiable wild tribes of Central Asia. Many characteristics common to them all; and especially, the anomalous Mantchous in the Chinese empire bears a striking resemblance to that of the Turks in the Ottoman empire. That positively described as "less resembling a nation, than an individual in the midst of vanquished nations." Each was composed of tribes of adventurers, of a more hardy character than the more polished people they conquered; each is marked by pertinacity in adherence to fixed customs. In the Turks the operation of changes both from within and without are already visible, as well in their character as in their

territories, and consequently the population, of the Ottoman empire, that no statement respecting them can possess great value. Before its recent losses, its extent was estimated at 1,000,000 square miles; of which 180,000 lay in Europe, 400,000 in Asia, and 420,000 in Africa. The population was varied from 20,000,000 to 40,000,000. But the African provinces are now lost; and the conquest of Syria by the viceroy of Egypt, and the provinces on the Danube by Russia, have reduced the empire to nearly half its former extent. The rapid rise, and rapid decline, of the Ottoman power are among the

most interesting phenomena of modern history. Though the origin and early achievements of the Turkish tribes are involved in uncertainty, yet sufficient is supposed to be ascertained to evince that they early gave alarm and annoyance to the Chinese government; that they were subsequently found in a state of servitude to the Tartars; and that having successfully risen against their oppressors they were gradually urged westward into bloody collision with the hardy tribes of Caucasus. The word *Turk* itself is said to signify 'wanderer,' and to be regarded by the Ottomans as a contumelious appellation; yet it is a remarkable fact, and hardly consistent with such an idea, that in the correspondence between *Timúr* and *Bajazet*, the Mongol emperor, as he is usually called, designated himself and his countrymen as *Túrks*, and stigmatized the Ottomans as *Turkomans*. In the year 830, distinct mention is made of the Turks, when *Motassem*, the caliph of Bagdad, formed more than 50,000 of their robust youth into a body-guard for himself. These were trained to war and to the profession of the Mohammedan faith, and soon grew to such a height of insolence that they deposed their masters, and often too under circumstances of shocking cruelty.

But the present Ottoman empire and dynasty originated no earlier than A. D. 1299, in the person of the obscure chief *Athman* or *Othman*. His father was probably a petty chief over one of the clans, which either migrated or were forced westward several centuries earlier; and for many years he ruled over his camp of 400 families. *Othman* himself, a soldier of fortune, soon succeeded in enfranchising himself from the control of a superior. His son *Orchan* achieved the conquest of *Prusa* (the present *Brúsa*) in 1326; and this may be taken as the date of the true era of the Ottoman empire. From that time the tide of Turkish conquest rolled onward with a force that could not be withstood by the feeble Greeks; and in 1338, the Ottomans first obtained a footing in Europe. The institution of the janizaries dates in the reign of *Amurath*, the grandson of *Othman*; and for a long time they proved the most powerful, numerous, and best disciplined standing army then known. His son *Bajazet*, surnamed the *Thunderer*, condescended to accept the title of sultan from the caliph of Egypt; for till then his race had been satisfied "with the humble title of emir." The defeat of the Turks by *Timúr* proved a momentary check, and in 1453 *Mohammed II.* entered Constantinople sword in hand, and established himself on the throne of the *Cæsars*. Not satisfied, however, with the possession of all the countries from *Mount Amanus* to the *Danube*, the grandson of *Mohammed* added *Syria* and *Egypt* to his dominions; and *Solyman*, the *Magnificent*, contemporary with *Charles V.*, conquered the greater part of *Hungary*, and extended his sway eastward to the *Euphrates*. "At that time the Turkish empire was undoubtedly the most powerful in the world." Able princes succeeded *Solyman*, and the Ottoman arms maintained their ascendancy in Europe till 1683, when their army was totally routed by the famous *John Sobieski*, of *Poland*, at the siege of *Vienna*.

ed, though they fought for a time with varying success the wane of the empire. It soon appeared how the improvements of the Christian powers in the arts the Turks were rapidly expelled from Hungary, Transylvania, much of Albania, and the Morea. It is worthy of note in 1718, through the mediation of England and Holland, negotiated, the Grecian provinces being secured to the Ottoman Empire, she also wrested a large part of her dominions. Weakened by combined wars with its great enemy, Russia, with France, England, and, last, not least, by internal dissensions, the decline of the empire for the last seventy years is attributed to the mutual jealousies of the other European powers and its own strength.

The rapid decline of this monarchy it is not difficult to ascertain. In the beginning of their conquests, the Turks, being young and inured to war, and moreover were firm believers in the true faith was the most glorious passport to the greatest felicity hereafter. But these furious and formidable borders were the united Greeks, or the more valiant but not more judicious. They secured their own fall by relying on brute force and the sword, while the infidels were steadily advancing in knowledge, the Turks were stationary or retrograde. The warfare having robbed them of any advantages which their zeal once conferred, they scorned to resort to new tactics, "with our conquests," was their language, "without European tactics, and we do not now stand in need

of any aid. A period preceding the revival of religion and letters in Turkey it can be denied that the Mohammedan sultans were not despotic, unenlightened, accomplished, or tolerant of European sovereignty. It was the oppressions of the then governments, and intestine wars, that the dominions of the Sultan were at one time, those in which the greatest portion of the population and personal security were enjoyed. The early sultans valued their erudition and love of learning, both a college and a library were considered indispensable appendages to a mosque.

The Turkish sultan at the head of his army, himself was the object of an enthusiasm which rendered him irresistible in power. But the sultan in the seraglio, surrounded by the power of his own janizaries, and incapable of executive power, was rather a pageant than a monarch, and impeded the exercise of his own authority.

It did not become that Turkey must reform or perish, that it was in the last fifty years have seemed to admit the unwelcome necessity to attempt the arduous work. The first active reformer, Mahmud III., who ascended the throne in 1789. A long series of defeats from Russian troops of inferior numbers had

taught the Ottoman ministry to feel the need of a change, but had not reconciled the public mind to it. Here was seen the natural result of a despotic government, checking all inquiry after better things and all attempts at improvement, till some change became inevitable, while yet those who were to be benefited were not sufficiently enlightened to welcome such a change. In such a state of things, there is no other resort but to brute force, since the mass have never learned to move at the voice of reason. Selim mounted the throne amidst the most gloomy prospects. The Turkish arms were worsted in foreign wars, and the resources of the empire wasted by formidable civil wars. The young sultan found his chief supporter in the work of reform in Mahmúd, the reis effendi, who had visited the courts of Vienna, Paris, and London, and who was raised to the post of secretary of state for foreign affairs. Under his auspices, a code of new regulations was promulgated, which provided for the organization of a new corps of soldiery, for improvements in the discipline of the janizaries, for the instruction of the military cadets, for a new modeling of the navy, in which recourse was had to the aid of foreigners. These regulations tended to array more directly against the monarch the influence of 400,000 janizaries in the empire, and the ecclesiastical authority of the sacred *ulema*; while each petty pasha was striving to take advantage of the times so as to make himself independent or rich in his pashalic. From this, it may be gathered, that while no country ever more needed reform, in none was it more difficult.

These enlightened innovations were generally received with little satisfaction, and the discontent was artfully fomented by the representation of the janizaries, that their sovereign was siding with the infidels, against the religion and laws of the empire. In that ever turbulent body, these murmurs, at length, broke out into open rebellion, by the instigation of Músa pasha. The reforming reis effendi first fell a sacrifice to their fury. All the janizaries, now aroused, passed through the streets of Constantinople, with a melancholy clanking of their kettles, into the open square Atmeidan. Disregarding the sultan's offers of negotiation, they called for the death of the ministers that had advised the new measures; and, rising in their demands as they were successively granted, Músa at length announced to Selim, by the hand of the mufti, that he had ceased to reign, and that Mustapha IV. sat on the throne. This was in May, 1807. Selim received the announcement with composure, and after a few turns in the saloon, to bid farewell to his weeping attendants, he retired to the apartments of the unfortunate princes of the house of Othman, and from thence he returned no more.

During the few months in which the imbecile Mustapha sat on the throne, he was the mere instrument of the will of others. All the projects of reform and improvement were hushed. But the famous Bairacter, the pasha of Rudshuck, a true follower of the unfortunate Selim, resolved to avenge his fall and restore him again from his prison to the throne. Accordingly, he moved his camp, composed of hardly Albanians, near to Constantinople, and assaulted the gate of

demanding entrance in the name of the deposed Se-
proved fatal to the imprisoned monarch, who was
dered by the last orders of Mustapha, just before
away to a similar confinement and like end. After
múd was found concealed in the furnace of a bath,
was drawn forth to ascend the Ottoman throne in
title of Mahmúd II., which he still occupies.

pices of the vigorous Bairacter, the new monarch
the work of reform. The heads of the principal
e exhibited at the seraglio gate, and many others
cks and thrown into the sea; a council of pashas
he intention was openly avowed by Bairacter of abol-
ing the order of janizaries, for which purpose a new
sed. All proceeded favorably, till growing confident
cter dismissed most of his provincial forces, by which
d his enemies, and thus, by this rash act, was left
an infuriated soldiery thirsting for his life. The
of the janizaries, and the destruction of the vizier
his own palace, proved his rashness. But his friends
enge him, and therefore uniting the new forces with
e successive days, the battle and the flames raged in
the janizaries, pressing towards the entrance of the
ed the restoration of the imprisoned Mustapha; a de-
ised the immediate death of the prince. Mahmúd,
r of the imperial house, having nothing to fear from
janizaries, gave orders that hostilities should cease,
at the new corps should be no more. "Thus termi-
remendous revolution that Constantinople has experi-
ell into the power of the Osmanlis, which cost the
ins, and spilt the best blood of the empire."

ne onward till 1823, the janizaries were uniformly
on one occasion rose to such a pitch that the sultan
ithdraw quite from Europe and from reach of their
clear that from the first, Mahmúd desired to relieve
ir arrogance, and for this purpose he was constantly
ces to stand by him in the hour of trial. He deter-
one more attempt to reform, and if they resisted that,
n. In 1823, the janizaries again burst forth into
consequence of the innovations, beat to arms, and
in the Atmeidan to the number of 20,000. The ex-
l now come. The sultan sent officers to negotiate,
death. He then consulted with the grand mufti
ight to put his rebellious people to death, and receiv-
answer. Upon this, he called on the forces, whom
eping in reserve, and entirely surrounded the Atmei-
men. Worthless as was the order of the janizaries,
pity their cruel fate. Filling the Atmeidan with one
ey awaited the result of their revolt, not doubting that
objects must be gained as usual, and were entirely

unaware of the sultan's intention, till a general discharge of grape shot disclosed both that and their horrid situation at once. The houses were soon in flames over their heads, and were battered down with cannon; and as no quarter was given, the janizaries resisted bravely, and killed vast numbers of their assailants. On the ensuing morning, the whole Atmeidan presented a scene of horror, covered with smoking ruins, steeped in human blood, with dead bodies and ashes mingled together. For two days, while the gates of the city were shut, the sultan relentlessly commanded search to be made everywhere for any of the fated corps, and multitudes were thus found, brought out and beheaded. After these things, the sultan went to mosk in his new uniform, publicly anathematized the janizaries, and forbade the mention of their name.

We need not follow this stern reformer into all the bloody details of his measures. In the language of one of his admirers, "he has effected three things, which have been the principal objects with every sultan, since Mohammed IV.—the destruction of the janizaries, the extirpation of the Dere beys, and the subjugation of Albania, which had not admitted the supremacy of the Porte, even in its days of conquest. Since his accession, blood has flowed incessantly; it has been shed in secret and in public; by general executions and by concerted massacres; by civil and by foreign wars. But he has at length swept away all internal opposition: and having thus maintained and strengthened his own individual seat, it may be questioned, when we remember the shattered state of Turkey at his accession, whether he has done so at the expense of his empire."

Next to Russia, the Porte has found the most formidable foe in Mohammed Ali, the present independent sovereign of Egypt. This remarkable man was born an Albanian peasant, and entered the service of the governor of his native town. From the day when he reached Egypt, in 1798, with his 300 men, his rise has been uniform. He first destroyed the haughty Mamlukes, then expelled the governor, and after eight years of warfare was formally invested by the sultan as viceroy of Egypt. Since that period he has pushed his arms into Nubia further than Greek or Persian ever trod; has gained the favor of the faithful by recapturing the holy cities of Mecca and Medina from the heretical Wahabees; has thrown off the yoke of his master, and wrested Syria from him; and has a disciplined and successful army of more than 40,000 regular troops, with a marine of twelve ships of the line, and more than double that number of frigates and small vessels. He has constructed roads, dug canals, introduced manufactures, and has given some encouragement to learning. The military college of Grand Cairo educates 1400 boys in languages, arts, and sciences, at an expense of £12,000 per annum. In the words of an eye-witness: "it is hard to fathom the reason of Mohammed Ali's introducing European arts and knowledge into his country. If it were to better the condition of his people, one might give him some credit for it, but he has no intention of this kind. His own aggrandizement is his own aim, and the caliphate of Bagdad.

before his eyes. He rules Egypt with a rod of iron; is fit for the people, and the people for him, and it is unce which is the worst. He seems a scourge in the o lash them for their iniquities." Still, under his stration order is restored, and a good degree of re- is enjoyed.

that necessity or inclination has already induced a ation from the former haughty tone of the Turkish rather perhaps of public and individual sentiment. eman in Smyrna wrote: "In the condition of all the ayah population of Turkey, decided improvements un. By an imperial edict, just published, the different s, Greeks, Jews, Armenians, and Catholic Armeni- on the same footing before the Mohammedan tribu- ammedans themselves. In criminal cases they can- ed without the sanction of the heads of their own Among the Greeks at Smyrna, Constantinople, and ent schools have been established on the Lancasterian t only met with approbation from the Turkish gov- en obstacles were raised by evil-affected Greeks, they y a Turkish officer, who "gave the agent full per- , and establish as many schools among the Christians

A missionary to the Jews has also been allowed to at Constantinople; and the chief rabbi of that ever n has been recently raised to rank by the Sultan, and esponsible head of his community. The Armenians, interesting people, have shared largely in the efforts and philanthropic men to revive learning and restore the pure gospel among them. Great encouragement o these exertions, and an evident religious movement community. While such was the state of things all d them, the Turks could neither be blind nor remain it spectators. In 1833, a gentleman wrote from Con- : Turkish effendies and distinguished Mussulmans reek school near the capital. Much interest was ength an officer, of some consideration with the sul- oduced the system among the young soldiers in the books, cards, &c., he has depended on one of the mis- n the school at Scutari was opened, the same officer holars in the following pithy language: "His most , sultan Mahmúd, desires your good. These schools o him, but he designs them for your benefit. You different parts of the empire, you are in the morning now in your power to become learned and wise. In an schools nothing of value was learned; men were uses may become men. This badge of rank which reast was given me by my sovereign, as a token of orrow he may take it away, and then shall I be as as any other man. But what knowledge I acquired he

cannot take away from me ; the terrible conflagrations, which you see consume almost everything elsewhere, cannot burn it, nor can the floods overwhelm it, or tempests sweep it away. Knowledge, therefore, young men, knowledge is the best property you can possess."

In 1834, four schools had been opened for the Turks, one of them within the seraglio ; and 2000 youths were enjoying the benefits of education on the Lancasterian method.

These and other cheering facts all go to show that a change, favorable to improvement, has, at least, begun in the spirit and demeanor of the haughty Turk. Though reformation must naturally be slow, and must still meet with checks and obstacles at every step, yet we cannot doubt it will go on, till not only civil rights shall be recognized and acknowledged, but the true religion from heaven also be received. Recent interesting accounts from Brúsa, the ancient capital of the Ottomans, and still a splendid city, confirm this opinion. A visitor to that city writes : " I could not be uninterested in the Turks of Brúsa. They appeared more liberal and tolerant than even their brethren in Constantinople, whose reputation for comparative liberality is not bad. With great civility and kindness they admit Christians to their mosks and mausoleums, and engage in conversation with the followers of Christ with cordiality and interest. It grieved my heart to see such a golden door for the entrance of truth among the Mohammedans of Brúsa, and no one ready to enter it. Next to Constantinople, there is probably not another place in the empire where a missionary to the Turks would be more useful." Smyrna is also recommended as an important and interesting station for another missionary to the Turks. Though these are yet but *prospects*, yet evidence is not wanting in the way of *facts*, that there is a growing tendency to accessibility in the Turks. Excluding Jerusalem, Beirút, and other places in Syria, now under the government of Mohammed Ali, and where Christian missionaries reside and pursue their work with comparative quiet, there have been for several years Christian missionaries, and schools, for the Jews, Armenians, Greeks, and Nestorians, under the dominion of the sultan, at Smyrna, Constantinople, Brúsa, Trebizond, and perhaps elsewhere, without any opposition from the government.

Such being the aspect of events, it cannot but be regarded with wonder, and with devout gratitude to God, that while no efforts to enlighten the people would have been allowed, had the government been in the hands of some Christian powers, a good degree of toleration is enjoyed by benevolent men in the work of doing good, under a Mohammedan ruler. And not only so, but the dominant power itself is desirous to look into these things, and to appropriate to itself a portion of the proffered blessings. These things should be received by every sober man and Christian as tokens of good. From first to last, the whole career of the Ottoman power is calculated to impress strongly on the mind one sentiment, that the letting loose of those fierce powers on western Asia and Europe was, in the hands of the Almighty Ruler, a work of judgment and of mercy. It was a

effeminate and disorderly powers, who were supplantless inroads. It was judgment to those, so called s, who, entrusted with the true revelation of the will heaven, under the most solemn charge to make it out the whole world, instead of executing this sacred ing themselves in ease and indolence, or disputing tes and ceremonies to the neglect of the weightier reat salvation, till they became an inviting and easy ose welfare they had most iniquitously disregarded. trust, mercy to the conquerors, who in turn are to y the mighty power of God, through the gospel of And thus they will be, unwittingly, the meaus of ribes still further East, which first urged them in course; and thus will prove, not like the messengers emperor, who brought from the West an increase of ay be, the bearers of the true religion back to their d Turkey and Persia be the doors for the gospel to l Asia.

Unmindful of the kindness which had n, he drew over to himself several bodies of soldiers, rebellion. The king had him apprehended, an inves- and having ascertained the truth, instead of having committed him to the custody of Cháyuat. After a was released, and put into the priesthood, where he ore than three days, when he had collected another s. The news of this reached the king, who sent one pursuit of him. He, in the meantime, had consulted his fortune, who informed him that Saturday, the 1st month, would be an auspicious season for putting his ion. At that time, there were five noblemen, prison- to sent prince Sisín a letter, saying that the king had ve them executed the next morning; they therefore advance and rescue them that night. He was thus roach that evening. The nobleman, who was sent in being apprized of his (approach) advance, mounted it and came forth to attack him. Sisín encountered him from the elephant, advanced, and entered the The king, in astonishment hastened to his boat, and ountry. Sisín released the five nobles from their

prison, but was furiously assailed by the king's sons, Rámésawan and Mahintirát, and slain by a musket. On the king's return, he had the priest, whom Sisin consulted in regard to his success, and the five prisoners, whom he released, apprehended and slain, and their bodies exposed on gibbets with that of Sisin. At that time, the concubines of several noblemen accused their masters of having been confederate with Sisin, and the accusation being found well supported, many of them were likewise put to death.

907. This year the king caught a white elephant seven feet high. [These elephants are always dignified by some lofty title. This was called the "gem of the sky." The "leveler of the earth," the "glory of the system of the world," or "elephant of the sun," are titles frequently given them. The reverence with which they are treated is truly astonishing. The present king of Siam (1836), gives one fourth of all his revenues to one old dingy creature, which is called the "glory of the land." This sum, amounting to several hundred thousand ticals, is entrusted to an officer, whose business it is to see it expended in the purchase of fruits, ornaments, &c., for the favored animal. Just now she is sick, and all the nobles and doctors are required to wait upon her, and all the priests to pray for her. The pra-khang is so constantly required in her service, that he has built himself a temporary residence near her, that he may be always at hand. The king himself feeds her with his own hand, whines about her, and prays her not to die before he does!]

908. This year caught a white elephant in the jungle of Petchabun [southwest of Bankok]. In the 10th month, caught another with her young, both white!

909. Caught two more white elephants. The country was now distinguished by having seven white elephants, and its fame spread through all nations. Hence, vessels in great numbers came to trade from France, England, Holland and Surat, and junks from China. Hence the priests, nobles, and brahmins, honored the king with the title, "the mighty emperor, Rájáthirát, lord of the white elephants." The rumor of the king's having seven white elephants extended even to the kingdom of Hongswadi (Pegu), whose king sent 500 men with a message, begging for two of them as an honor to his country. This message was accompanied by the assurance, that if his Siamese majesty would grant his request, their friendship should be perpetual, and with the threat, that if he would not, there would be a rupture between them.

The king of Siam consulted his nobles, most of whom were in favor of yielding to the request, inasmuch as the Peguan king was mighty, and had shown himself generous in restoring the two Siamese princes, whom he had taken captive; but three of them, the prince Rámésawan, the foreign minister, and the minister of war, advised otherwise, inasmuch as the white elephants were the distinguishing mark and glory of the country: they affirmed moreover, that his majesty had once given two white elephants, but the Peguans could not manage and were obliged to return them; to do

it smaller. Maháthammar'já, therefore, requested four priests to go forth and hear what the king of Pegu had to say. He showed them his scaling ladders and mounds of earth, and told them, that if his brother did not come to see him, he could cause his soldiers to take each a handful of earth from the mounds and fill up the city in a single hour. The priests conveyed this intelligence to the governor, who said to his nobles, 'I have waited beyond the appointed season for assistance from the emperor; the Peguan army is immense; the noise of it is like the noise of a hurricane; I must either go, or the city be trodden down, the priests and people all destroyed, and our religion brought to ruin. If the emperor is displeased, I shall only die alone, which is better than that all should perish.' On Saturday morning, the 5th of the waning moon of the 2d month, he went forth to meet the Peguan monarch, who required him to collect his army, elephants, and horses, and in seven days be ready to accompany him on his march. He collected 30,000 men, the march commenced, and they proceeded, and pitched their camp at Nakhónsawan. Intelligence of these matters reached the ears of the lord of the white elephants, who was much disconcerted. He called on Rámésawan, Phýáchakrí, and Suntonsongkbram, the three nobles who had volunteered to defend the country, to know what they would do in the existing emergency. They determined to await the approach of the enemy and then make a desperate assault. The Peguan king learned from the governor of Pitsanulók, that his request for two white elephants was not granted, because these three men had undertaken to defend the country against any invasion by him. He compared them and their undertaking to a short legged rabbit who undertook to fathom the ocean, and a short winged bird who engaged to fly across the ocean with Phýákhрут. [This is a fabulous monster, often referred to in Siamese writings as real, having a human body, the bill and wings of an eagle, &c.]

911. The enemy approached Ayúthiyá; the king perceived the army was too powerful for him to attack, and all attention was directed to defense rather than to assault. The Peguan monarch sent a message, inquiring why the Siamese king did not come forth to attack him, as a matter of amusement, or if he had determined not to fight, why he did not come forth, and at least hold a parley with him. The lord of the white elephants found no way of escape; the next day, therefore, he went forth in state, and was received with much civility by the king of Pegu, who detailed the cause of his visit, and, as some compensation for all the pains he had taken, now requested four white elephants, instead of two. He also begged to take prince Rámésawan and adopt him as his son. He added, moreover, Phýáchakrí and Suntonsongkhram to his requests, all of which, under existing circumstances, were readily granted; and he then returned to Pegu.

Note. Under date of Nov. 4th, 1836, our Correspondent at Bangkok thus writes to the editor: "The subject of orthography to which you refer, has been a matter of discussion, but it is one of much difficulty. You say in your note (in the Re-

that the consonants most surely are not, in my communication. This is true in relation to *j* in *rájá*. The Siamese word which so much resembles it, that, as *j* has almost universally, I have used it not altogether inadvertently, and as most understood. That sound would properly be represented by *ráchhá*, though more awkward, is a more correct representation-pronunciation than *rájá*. The word which you suppose should '*rájá* *Tírít*', should, notwithstanding, be written *Rájáthírít*, as an official name. '*Prince rájá*,' which you suppose is like, nevertheless, rather like '*Mr. Prince*,' '*Captain King*,' the office converted into a proper one. There is one further example. The Siamese have no sound equivalent to our *th*, as in *ec*.; but whenever I use *th* in spelling Siamese words, I use *the*. The same is true of the communication to * * * *. That is more than 150 years ago, and the book which contains it is in the 'Penang library,' which was given to me by the librarian, from which that was extracted. The whole was used in Siam by the priests as a sermon to their auditors, and in the discourses they give to honor Budha and themselves, it is to you to extract or review, or to do anything with it you wish. In my communications, I am not without the hope that they may be of reference to students of Siamese literature, and on this subject I have more geographical names, with the Siamese orthography, than you could wish. Those who read of a country wish, not simply to know the names of places, but how the natives call them. I recently purchased a book, '*Siam, Cochinchina, Tonking and Malaya*,' published by the printer to his Majesty, London, 1832. The number of places is considerably numerous, but almost of all them are Burman, and I have taken from the *dictum* of some Burman traveler. Should I ask you to send me such and such places are situated, taking this list as my guide, and tell me there were no such in his country." Our ever-ready Correspondent is entitled to our best thanks for his communications. That "to * * * *," is the life of Thevetat, translated, and contained in Monsieur De la Louvere's History of Siam, which I hope to notice it in due time. There are some points which still need explanation: why, for example, is *prakhlang* or *phraklang*, or *p'hraklang*? Maulamein for Maulmein?

marks on the diplomatic relations with Cochinchina, by the government of the United States, with a state-subject from an officer of the king.

Attempts to establish diplomatic relations between the East and the West, have, with few exceptions, proved unsuccessful. Sometimes, indeed, they have not only not accomplished any good, but by bad management they have increased and perpetuated evils, exciting and fostering dissensions and bloody strifes. Contemplating them under these circumstances, the casual observer has been ready to deprecate the attempts, and to dissuade from every attempt to establish

een two days in port, when deputies arrived from the
province, and the political correspondence with the
mmenced. A delay of some days was occasioned at

the very commencement, by two important errors in the first official document, which the officers who forwarded it neglected to point out, although they appeared conspicuously on the outside. These errors were (1) the application of the title of king, instead of emperor, to the mighty potentate who sways the sceptre of Cochinchina; and (2) the use of one of the names by which the country is generally known, in place of a less familiar, but more classical one, which the reigning family has chosen to adopt. Other deputies came afterwards from Hué, which to an official personage is five or six days' journey from Phuyen (or Fooyan), though often traveled by the expresses in three. The common method of traveling here, among the rich, is a kind of palanquin, made of net work or woollen cloth, somewhat resembling a hammock in appearance, which is hung by the two ends to a long stout pole. This is borne by two, four, eight, or more, bearers, according to the rank of the owner. The attendants of officers, and the people in general, ride on horseback, there being large numbers of a small lively breed of ponies in the country. A few elephants follow in the train of official personages, apparently for show, rather than for use. The small parties of military which came to the place as escorts, appeared well disciplined, in comparison with their neighbors the Chinese and the Siamese. They were, however, very troublesome to us. The timid jealousy and bigoted national exclusiveness of the court of Hué, or some other latent cause, placed numerous hindrances and vexatious delays in the way of the mission's proceeding to the capital, in consequence of which, after about five weeks' stay at Phuyen, the negotiations were broken off by the 'Peacock's' departure for Siam, without having effected any of the objects of her voyage in relation to Cochinchina."

In 1835, the same diplomatic agent was again dispatched from his government; and after visiting the Persian Gulf and other places, and exchanging copies of a treaty with the king of Siam, he once more touched on the coast of Cochinchina. But on account of his own sickness, and that of others connected with the expedition, he again effected nothing. The Peacock and Enterprise, the vessels employed on the occasion, arrived in Macao Roads, the 25th of Feb., 1836. Mr. Roberts died soon after, and the diplomatic agency terminated, there being no one appointed to act in his stead. Not many months after this, a vessel, belonging to the king of Cochinchina, arrived off Macao, having on board an envoy from the court of that country. During her stay there, she was visited, among others, by an American gentleman. The envoy improved the occasion to inquire for the hasty departure of the vessels, which had visited his country. To satisfy those inquiries, in some measure, a translation of the following note was put into his hands:—

"The Americans are a people who navigate the four seas, and have friendly relations with other nations. Having never been able to trade with your honorable kingdom, they have, therefore, twice sent an envoy to make arrangements for a commercial intercourse between Cochinchina and the United States. This is on record. Were the trade well conducted under the

orable country, it would be advantageous to both nations. I refer, deeply regret that their efforts have not succeeded. Ask your excellency, what are the reasons which have prevented the conclusion of a treaty, and the settlement of a tariff, for the regulation of trade. On receiving your excellency's answer, we shall be most desirous to our native country, together with any other information to communicate; and we hope that, in future, all obstacles, which may hinder the establishment of friendly relations with your honorable country, and the merchants of our native land."

who is styled, *kungfoo yuen waelang*, under the *hwang*-*ho* he wrote his own title, and that of his sovereign, (his country,) gave the following reply:—

"Near, a ship from your honorable country arrived at the port of Puhngan, in Cochinchina. At that time, being advised, I sent deputies to congratulate those who arrived, and necessary arrangements to receive them. But the writing and languages not being the same, the interchange of thought was slow with regard to commerce, it seemed desirable to have a clear and as superintendent I was engaged in preparing the requisite, but before they were ready, your country's vessel left the port the third month of the current year, vessels arrived from your country and anchored in the port To-seang, near Kwang-ngas; and on that occasion I sent deputies to congratulate them. But though they often repeated their inquiries, they obtained no answer; when they thought announcing their intention of leaving, the ships departed suddenly, twice they arrived, and twice they went away, empty. Was it not, indeed, labor lost? Soon after my arrival at the port, you, gentlemen, being on board, made inquiries about the particulars. But because our conversation was not intelligible, I have written out the preceding statement, and present it to you, to enable you clearly to understand, that it was my intention, to manifest the tender regard which our government cherishes towards those who come from afar; and that our government is disposed to treat them with incivility."

The statement of his Annamese majesty's officer to be seen here, we see no reason to question its accuracy, the causes of the failure of the diplomatic mission from the United States are evident also, that, in future, the same or similar causes should be avoided. Ignorance of the languages, manners, customs, laws, and usages of Eastern courts, is one of the principal causes which have operated against a successful issue in the negotiations of our country's ambassadors and envoys, who have been sent thither for two or three centuries. In the second visit of the French ambassador, he seems to have had no means of communicating with the officers sent from court. We are aware that the French ambassador, who was spoken in Cochinchina: a native of that country, who had been in France, and there educated, under one of the Romish missions; but in all such cases of this kind, we suppose the French is spoken in preference to the English is in Canton, most barbarously and except in simple matters of barter. In the first visit a

translator, equal to the task, was secured, but on terms which ought never to be named. There were other things, such, for example, as articles to be given as presents, which might have been provided on a much better scale.

The present king of Cochinchina, Mingming, or "Illustrious Fortune," succeeded to the throne of his father in February, 1820. He is represented as being more anxious to cultivate intercourse with foreign nations than his predecessor; and he has, it is said, reduced the duties on foreign vessels frequenting the ports of his kingdom. He has a small navy, and some of his ships are built on the European model. That recently at Macao, a man-of-war, was about 400 tons measurement, being about ninety feet long and twenty feet beam. Her crew was composed of fifty marines, and sixty-three sailors, most of them large limbed and well-proportioned men, their average height being five feet. The hull of the vessel was constructed of teak, and apparently very strongly put together. The masts were well made, though the spars and rigging were not in very good proportion. A flag, bearing the words *kin chae* 欽差 hung from the peak. The marines were clad in uniform dresses, made of red longells or camlets; they wore black turbans, and were barefooted. The words "treasure guard," in Chinese characters, were painted on their breasts. The late conduct of his Annamese majesty, in protecting the crew of the John Bannerman, furnishing them with clothing, provisions, and money, and in dispatching two of his own ships from Turon to convey the strangers to Singapore, speaks well in his favor.—Whether the recent expeditions fitted out for exploring the regions of the northern frozen ocean, and the northern polar seas, are likely to prove more beneficial to the world, than they would if employed in surveying the Indian Archipelago and the coasts of China and Cochinchina, and in forming an acquaintance and establishing commercial relations with the inhabitants of these regions, seems never to have been made a question with Western governments. There are no seas in the world that need so much to be surveyed as some of these; and there are none more neglected.

ART. IV. *The traffic in opium carried on with China: its early history, and the present mode of conducting it, from the delivery of the drug by the cultivators to its reception by the consumers.*

ENOUGH is known of the early history of this traffic to show that the rapidity of its increase, during the last seventy years, especially in China, is unprecedented in the annals of commerce. The plan of sending opium from Bengal to China, was suggested by Colonel Watson, and adopted by Mr. Wheeler, then vice-resident in council,¹

1767, says an Indian journalist,³ the import of "this" into China, rarely exceeded 200 chests: that year 1000; at which rate it continued for many years, in the Portuguese. In 1773, the British East India Company's venture of opium from Bengal to China.⁴ About this article was established by the English, on board vessels, stationed in a bay to the southward of Macao, Lark's Bay,⁴ where they often sold their opium for 500 or 600 rupees in Bengal being about 500 rupees per chest.

The product of opium for one year was lying unsold in the warehouses in Calcutta, their shipping being employed in the trade with rice, and the seas being infested with Dutch cruisers. Under these circumstances the Bengal government determined to obtain "reasonable offers" for their opium and determined to export it themselves: accordingly, two vessels were chartered, one to the Indian Archipelago, and one to the East Indies; the proceeds were to be paid into the Company's treasury. The Bengal government drew against this for ten lacs, of rupees; and issued to their civil and military servants, in Canton, there to be exchanged for bills on London: this afforded a seasonable relief to the Company's finances."¹ The opium which was sent to China, was freighted in small vessels, which in those days appear to have been on the river, within the Bogue, "free of measurement the drug came to a bad market; and the supercargoes, on account of the delay and difficulty, were obliged to dispose of it at 210 per cent. which were at two per cent. discount, in reference to

The opium was purchased by Sinqua, a hong-merchant who previously conducted an extensive business at Macao. Sinqua was very anxious that Pwankhequa, the senior in the trade, should take a share in the purchase; but the latter was unwilling to expose himself to his enemies in this way, as opium was then understood to be, and had long been, an interdicted article. The quantity purchased by Sinqua was 1600 chests; but only 2800 chests had previously been imported; these 2800 chests so overstocked the market that Sinqua reshipped the greater part of his purchase to the East Indies. In 1791, the price of the drug ranged from 100 dollars per chest.⁵ In the reign of Keenlung, as well as in the reign of Kienlung, opium was inserted in the tariff of Canton as a medicine, the duty of three taels per hundred catties, with an addition of two taels, four mace, and five candereens, under the name of large per package.⁶

These authorities seem not to have taken any public notice of the trade which imported opium until 1793, when they began to regulate the vessels lying in Lark's Bay.⁵ In 1794, after many attempts to establish themselves under the sanction of the British government, and being constantly annoyed both by the British government and pirates at Lark's Bay, the parties concerned in the trade were induced to bring one of their ships, laden

exclusively with opium, to Whampoa, where she lay unmolested for more than fifteen months, with from 290 to 300 chests of the drug on board. This practice, of bringing opium to Whampoa in foreign vessels, continued till 1820, and without any interruption or molestation, except an attempt, in 1819, to search those vessels which were supposed to have it on board. Meanwhile, however, the Chinese government enacted special laws to prevent both the importation and the use of the drug. In the 4th year of Keäking (1799) Keihking, of the imperial kindred, and then the governor of this province, "regarding it as a subject of deep regret, that vile dirt of foreign countries should be received in exchange for the commodities and money of the empire, and fearing lest the practice of smoking opium should spread among all the people of the Inner Land, to the waste of their time and the destruction of their property, presented a memorial, requesting that the sale of the drug should be prohibited, and that offenders should be made amenable to punishment. This punishment has been gradually increased to transportation and death by strangling." In 1800, the Chinese prohibited the importation of opium, and denounced heavy penalties on the contravention of their orders. In consequence of this, the supercargoes of the East India Company recommended to the Court of Directors, to endeavor to prevent the shipment of the article for China, either in England or Bengal.¹ Early in the 14th year of Keäking (1809), the governor of Canton, then holding the seals of commissioner of maritime customs, published an edict, requiring the hong-merchants, when presenting a petition for a ship to discharge her cargo at Whampoa, to give bonds that she has no opium on board. The governor then proceeded to declare, that, since it was well known to all parties to be a contraband article, in case of disobedience, the vessel should not only not be permitted to discharge her cargo, but should be expelled from the port, and the security merchants brought to trial for their misdemeanor.² This edict was often repeated, by orders from Peking. In 1815, governor Tseäng sent up a report to the emperor concerning some traitorous natives who had established themselves as dealers in opium at Macao: in reply, commands were given to carry the laws rigorously into execution. It does not appear, however, that the commands were put in force. In 1820, governor Yuen took up the subject, in conjunction with Ah, the commissioner of maritime customs. The following proclamation bears date of April 5th, 1820.³

"Yuen, the governor of Kwangtung and Kwangse, and Ah, the hoppo of Canton, hereby issue a proclamation to the hong-merchants, with the contents of which let them make themselves fully acquainted. Opium is an article which has long been most strictly prohibited by his imperial Majesty's commands, and frequent proclamations have been issued against it, which are on record. But the passages on the coast of Canton being very numerous, Macao being the resort of foreigners, and Whampoa being the anchorage for foreign ships, should be more strictly watched and searched. It is found on record, that during the 20th year of Keäking, the then governor Tseäng, reported to court, and punished the abandoned Macao merchants, Choomeiqwa

buying and selling opium. The emperor's will was then received to this effect:

Portuguese ships arrive at Macao, it is incumbent to search every ship. And let the governor widely publish a proclamation, being an article produced abroad, and from thence flowing to every region has its usages and climate proper for itself, and others, the celestial empire does not forbid you people to do so, and diffuse the custom in your native place. But that when you go into the interior of this country, where vagabonds clandestinely eat it, and continually become sunk into the most stupid and ignorant, so as to cut down the powers of nature and destroy life, is the manners and minds of men of the greatest magnitude; and, therefore, it is most rigorously prohibited by law. Often have imperial edicts, commanding a search to be made; and it is absolutely forbidden for you people to bring it in a smuggling manner, and disperse it afterwards, when your ships arrive at Macao, they must all be searched and examined. If one ship brings opium, whatever other vessels may contain, it will all be rejected; and all commercial vessels are disallowed. If every vessel brings opium, then the very vessel will be rejected; and none of the ships be permitted to enter the state they come, will be driven out, and sent away. As to you people, who live in Macao, since you are subjects of the celestial empire, you therefore ought to obey the laws of the celestial empire. If you presume, without public authority, to frame rules for yourselves, and cherish schemes of avarice to grasp illicit gains, the laws are prepared to punish you; and in the case of those who in China clandestinely promulgate the laws of religion, they will assuredly severely punish your crimes, without any indulgence. In this manner let an explicit and pointed edict be published to the said foreigners, and no doubt they will be afraid, and yield implicit obedience, and not dare to disobey, and to sell opium. And hereafter let a true and faithful edict, as before, and so the source from which the evil springs

Respect this.

Edicts were published and stand on record; and since five or six years have elapsed; and it is feared, that remissness has crept in by length of time. It is probable, though not certain, that Portuguese ships anchor in Macao harbor, there may be avaricious men who smuggle opium in the port, and therefore the Macao deputy officers have been ordered to search very strictly and faithfully. At Whampoa, it is the anchorage of all the foreign ships, and the governor, appoint to each ship an attending officer; and I, the emperor, appoint tide-waiters, who watch the ship on each side, and which, which seems as strict a guard as can be kept; still the officers are not all good men; it is impossible to be sure that they never mix themselves with native vagabonds, and seize opportunities of smuggling; therefore, strict orders are given to all the local military stations, to be on the watch from the custom-house, and to the armed police at Whampoa, to be strict in searching; and further, confidential soldiers are sent to search and seize. Besides these precautions, the emperor has required to promulgate to all foreign factory chiefs, resident at Whampoa, our commands to them, to yield implicit obedience to forms and laws, which disallow the clandestine introduction of opium, and to cut off the sources from which it comes. If they dare to disobey, as soon as a discovery is made, the ship concerned will be

expelled, and not permitted to trade; and the security merchant will be seized and punished for the crime; if he dares to connive, he will most assuredly be broken, and prosecuted to the utmost, and without mercy. Be careful, and do not view this document as a mere matter of form, and so tread within the net of the law; for, you will find your escape as impracticable, as it is for a man to bite his own navel. Report the manner in which you execute these orders; and at the same time present a bond, engaging to abide by the tenor of this. Delay not! A special edict.

[Dated] "Keeking, 25th year, 2d month, 22d day."

Hitherto, since the prohibition of opium, the traffic in it had been carried on, both at Whampoa and Macao, by the connivance of local officers, some of whom watched the delivery of every chest, and received a fee; whilst others, remote from the scene of smuggling, received an annual bribe for overlooking the violation of the imperial orders. In September, 1821, "a Chinese inhabitant of Macao, who had been the medium of receiving from the Portuguese, and paying to the Chinese officers, the several bribes usually given, was seized by government for hiring banditti to assault an opponent of his, which they did; and, having got the man in their power, poured quicksilver into his ears, to injure his head without killing him; and having shaved the short hair from the man's head, they mixed the hairs with tea, and forced him to drink the portion. The wretch who originated this cruel idea, and paid the perpetrators of it, had long been the pest and the terror of his neighborhood, by acting as a pettifogging lawyer, and bringing gain to the public officers; who, finding him useful, always screened him from justice. An enemy, however, at last, arose amongst his official friends, who contrived to have this man's character laid before the governor, with his influence or power in the neighborhood stated in an exaggerated degree, affirming that no police officer could apprehend him, for he had but to whistle and hundreds of men flew to his defense. The governor, alarmed and irritated by this declaration, ordered a party of the military to seize him forthwith; and then had him cast into the judge's prison. The pettifogging lawyer now turned his wrath against his former official friends; and immediately confessed that he had held the place of bribe-collector; and that all the governmental officers in the neighborhood received each so much per chest, or so much annually (stating the exact sums), to connive at the smuggling of opium: these bribes were received, not only by the inferior attendants in public officers, but by the superior officers of the rank of blue buttons; and even by the admiral, who wore a red button.—The governor at no period could have been ignorant of what was going on in reference to opium; for it was very commonly used by clerks, secretaries, military officers, and other persons in his own establishment; but the exposition now laid before him brought it more fully to his notice, and risked more his own safety, than any previous occurrence; for, after being in the government of Canton for several years, to plead ignorance of such misrule would not be accepted as an excuse at the imperial court: nor would it have screened him from censure, and

tion, to have proceeded immediately to punish the whom he had received information; for they being he was, in a certain degree, responsible to the su- nant for their good conduct. Instead, therefore, of pun- were directly guilty, he made up his mind to accuse merchant, a timid rich man, nicknamed by the Chi- young lady," and easily assailable, and charge him performance of the duties of his suretiship, in not government every foreign ship which contained opium. or the man to plead that he had never dealt in opium, inection with those who did deal in it; nor could he to ascertain what was in them; nor could he control officers who encouraged, and virtually protected, of opium; the governor had determined to hold him

y having disgraced the senior hong-merchant, next rowing all the odium of this traffic, not on the Chi-, smugglers, and magistracy, "who certainly, in jus- borne a part of it," but on foreigners—the Portu- lish, and the Americans. In one paper, he tried to gious principles of hope and fear, by the promise, that conduct the fair dealers in safety across the ocean, he contraband smugglers of a pernicious poison, the royal law on earth, and the wrath of infernal gods in pended." The American captains, he said, were em- ng opium, "because they had no king to rule them." governor did not attack directly those who were in is government, yet he sent an officer, as a spy, to ue cutters. This officer surprised a party in the very g; and in the attempt to seize them, one or two men The consequence of these proceedings against the at Whampoa and Macao, "was, that foreigners, having om to place their opium, proceeded to Lintin." Of e foreign vessels have visited all the ports of Fuhkeën, ängnan, Shantung, and even to Teëutsin and Man- he purpose of selling opium." Such is an outline of his traffic; the mode of conducting it comes next to

ltivators in India, the drug is quickly conveyed to the oughout the Chinese empire. About three fourths of Malwa is, at present, transported directly to Bombay; uty of 125 rupees per chest paid to the British govern- er fourth is carried by a circuitous route to the cement of Damaun,⁶ whence it is exported for China ips only. That from Bombay is generally shipped in

Before being put on board, it is carefully examined, 5 chests, each containing about 400 or 500 cakes, 0 four tael's weight, averaging 101 catties per chest. o the cultivator in Malwa is about double that paid,

for a given quantity, in Behár and Benares, the former being estimated at 600 rupees per chest.¹¹ The pure opium alone is made into cakes, which are covered with a thin coating of oil, and afterwards rolled in pulverized petals of poppy.¹

In Behár and Benares the inspissated juice is collected by the ryot, and delivered to the government's agent during the months of February and March. The ryot formerly received 3 rupees 8 annas per seer;¹² but of late years, as the product has increased, the price, paid to the ryot, has decreased. The price has varied, at different times, and according to the quality of the article. In 1836 it was 3 rupees per seer, nearly; previous to 1819, it was sometimes sold for 2½ rupees. After it comes into the hands of the governmental agents, it is examined, made into balls, and packed in chests. A chest ought to contain two maunds, or eighty seers, equal to 160 lbs. It is brought as near as possible to the 'pecul chest,' containing 133½ lbs., or 100 cattie; but considerable allowance is made for 'dryage.' On its arrival in China, it usually weight 115 cattie; but in a few months, loses ten or twelve per cent. in weight.¹³

The chests are made of mango-wood, and consist of two stories, in each of which there are twenty 'pigeon holes,' making forty small apartments in the chest. The drug is formed into solid balls and covered with a hard skin or shell, composed of the petals of the poppy, and a gum obtained from inferior opium juice. Being thus prepared, the balls are packed in the chests with dried leaves of the poppy—forty balls in each chest. In order to keep the chests and their contents secure, those in Patna are covered with the hides of bullocks, and those in Benares with the skins of gunnies.¹ In this state, the drug is sent to Calcutta, where it is sold at public auction, "divided into four sales, at intervals of about a month, commencing generally in December or January, in lots of five chests,—under the following unusual conditions: one rupee is paid down to bind the bargain; a deposit of 30 per cent. in cash or Company's paper, to be made within ten days after the purchase, 'unless a longer period shall be allowed' by the opium Board; in failure of which, the opium is subject to be resold at the risk of the defaulter. The opium is to be paid for within three months from the day of sale, in default of which, the above deposit is forfeited to the Company, the opium disposed of and the proceeds taken by the Company."¹⁴

The whole product of India for 1836, has been estimated at 35,000 chests, nearly half of which goes off at auction in Calcutta, "probably yielding a net revenue to government of some two crores of rupees." The drug now becomes the property of individuals,¹⁴ and "most of the commercial houses in Calcutta are engaged" in its traffic; on the other side of India, the number of traders and the amount of capital are equally great; and together they have brought into their service some of the finest vessels that ever navigated the Eastern seas. A few are constantly employed, while others are only occasionally freighted. Four or five vessels are stationed, as receiving ships, at Lintin; and an equal number drive the coasting trade. The manner in which

ved by the native boats and conveyed into the interior / described by Heu Naetse, and the account need ated. Sometimes opium has been sold by foreign ore than \$2,000 per chest. The present price (4th na, old \$330, new \$760; for Benares, old \$730, new Malwa, both old and new, \$600. The stock at Lintin, was 8364 chests.¹⁵

Rájá of China; with notices of the early intercourse Malays and the Chinese. From a Malay author, by the late Dr. JOHN LEYDEN. London. 1821.

ider the extent of the Indian Archipelago, the extra- ies which it affords to commerce, the vastness of its richness of its soil, and the peculiar character of its seems surprising that such a field should have been so . In the interior of the larger islands, the population sively devoted to agriculture; while on the coasts, the aracter of the Bugis, and the persevering industry of ave given rise to an extensive native trade. Through- , the inhabitants have imbibed a taste for European and the demand is only limited by their means. Art- ay, for a time, check the increase of these means; but here, independently of the cultivation of the soil, the e mines seem inexhaustible, and the raw produce of in equal abundance, it is not easy to fix limits to the ese means. With a high reverence for ancestry and ent, the Malays are more influenced by individual quicker discerners of it, than is usual among people ad in civilization. They are addicted to commerce; ay given them a taste for the conveniences and luxu- , a propensity indulged to the utmost of their means. eople, a wide scope is given for enterprise; and it is s their intercourse with Europeans increases, and a adds to their resources, the arts of life and the trea-

tures of sound knowledge will become more extensively diffused; and we may anticipate a much more rapid improvement, than in those nations which, having once arrived at a high point in civilization, are going backwards, and sinking downwards, from the rank and influence they once held. With these views of the case, we may indulge the sanguine expectation of improvement among the tribes of the eastern isles, and look forward to an early abolition of piracy and illicit traffic, when all those seas shall be open to the free current of commerce. Restrictions and oppressions have too often converted their shores into scenes of rapine and violence, but an opposite course pursued by foreigners may, ere long, subdue and remove the evils.

Such were the opinions entertained of the Malays, by Dr. Leyden, more than twenty years ago. "Notwithstanding their piracies and the vices usually attributed to them in their present state, there is something in their character which is congenial to British minds." Retaining much of that boldness which marks the Tartar stock, "from whence they are supposed to have sprung, they have acquired a softness, not less remarkable in their manners, than in their language." That a new era is about to commence in the history of the Indian Archipelago, we fully believe; and it will be more or less illustrious, according as the foreigners, frequenting those regions, exert themselves by example and precept to extend the principles and practice of pure religion—the surest basis of civilization, the best guaranty of peace, the safest pledge of prosperity. On what grounds the Malays are supposed to be a branch of the Tartar stock, we do not know; but that they have in times past enjoyed friendly intercourse with the Chinese, is proved by a great variety of incidents and testimony.

On a former occasion (see page 433 in this volume) we presented to our readers a translation of a paper, written by Luhchow of Fuh-keên, in which he gives a description of the Malays; it seems but fair, therefore, that the latter be allowed, in turn, to give an account of their ancient friends, the Chinese. When Dr. Leyden first visited the Archipelago, in 1805, he at once espoused the cause of the Malayan race, with all the ardor and enthusiasm which so distinguished his character. While deeply engaged in investigating their languages and literature, he neglected no opportunity of becoming acquainted with their more popular tales and traditions. He was aware that their authentic history was only to be dated from the introduction of Mohammedenism among them; but in the wild traditions of the Malays, he thought he sometimes discovered a glimmering of light, which might, perhaps, serve to illustrate an earlier period. These glimmerings, he was accustomed to say, were very faint, but in the absence of all other lights they were worth pursuing; they would, at all events, account for and explain, many of the peculiar institutions and customs of the people, and serve to make Europeans better acquainted with a race which appeared to him to possess the greatest claims on their attention. By this impression, he was induced to undertake the translation of a volume of the Malay Annual,

introduction by Sir Stamford Raffles, was published 1821. Many of the preceding remarks we have borrowed; and we will subjoin a few extracts from them which form a neat volume of 360 octavo pages, and are of great attention of the student in the Malayan language or

before us is a compilation of the most popular traditions among the Malays themselves. It was the intention of the author that the text should have been illustrated by notes and maps of the more interesting parts, and that the late different states of the Archipelago, since the establishment of Islam, should have been annexed; but the unexpected death of Dr. Leyden prevented the execution of the work, and the translation now appears without note or map. The work, its author says, was suggested at an assembly of the nobles, in the year 1021 of the Hegira, when one of the persons of the party remarked, that he had heard of a book which had been lately brought by a nobleman from Java, and that it would be proper for some persons to be appointed to attend to the institutions of the Malays, so that it might be made more useful. "On hearing this," the author proceeds to say, "I determined to attempt the work." He wrote in Arabic. It gives a true history of the Malayan rajas, with some account of their institutions, for the "benefit of posterity." Early in the history, Hindústan, Túrkestan, and China, are mentioned. When Rájá Suran reigned in Amdan Nagára, all the islands to the east and west were subject to him, "excepting the islands of Java and Sumatra." A plan was formed for conquering China, the men were ordered to march; the march commenced; "the earth shook, the hills and rocks flew off in shivers. Two months they marched, and the darkness of night was illumined by the splendor of the sun, and the roaring thunder could not be heard because of the warriors, and the cries and trampings of their feet." Klings and Siamese joined in the pursuit. When they were in the country of Tamsak, the rumor of their approach to the Celestial empire.

China was alarmed at hearing this intelligence, and said to her ministers, "If Kling rája approach, the country will be invaded. What method do you advise to prevent his approach?" A minister of China, said, "Lord of the world, your slave will do it." The rája of China desired him to do so. Then this mantri (the Chinese mode of pronouncing *provo*) to be made of fine needles, but covered with rust; and planted in it Bidara (Bér) plants; and he selected a party of old men, and ordered them on board, and directed them to sail with the prow set sail, and arrived at Tamsak in the course of a few days. When news was brought to Rájá Suran, that a party of old men had arrived, he sent persons to inquire of the mariners how far it was to the Celestial empire. Accordingly they went, and inquired of the Chinese, who had set sail from the land of China, we were all young, about

twelve years of age or so, and we planted the seeds of these trees; but now, we have grown old and lost our teeth, and the seeds that we planted have become trees, which bore fruit before our arrival here.' Then, they took out some of the rusty needles, and showed them, saying, "When we left the land of China, these bars of iron were thick as your arm; but now they have grown thus small by the corrosion of rust. We know not the number of years we have been on our journey; but, you may judge of them from the circumstances we mention.' When the Klings heard this account, they quickly returned, and informed Raja Suran. 'If the account of these Chinese be true,' said Raja Suran, 'the land of China must be at an immense distance; when shall we ever arrive at it? If this is the case, we had better return.' All the champions assented to his idea.' p. 13.

The ráji of Palembang is the hero of the next story. In the neighborhood of that place was a mountain, called Sagantang Maha Miru. On this mountain lived two young women, one named Wan Ampu, the other Wan Malin, (Chinese names?) employed in cultivating large fields of rice. By the influence of prince Sangsapurba, rájá of Palembang, they were married to young men of distinction; to requite this favor Ampu and Malin made obeisance to the prince, and recommended to his notice a lady of royal blood, Wan Sundaria, who became his queen, and of whom were born four lovely children, two sons and two daughters. The family soon became renowned throughout the whole world, even in the land of China.

"Then the raja of China sent to Palombang, to Raja Sangsapurba ten prows to ask his daughter in marriage. They brought with them as presents three buhars of gold, and a great quantity of articles of China. Along with them one hundred male Chinese slaves, a young Chinese of noble birth, and a hundred female Chinese; all to convey the Rájá's letter to Sangsapurba. They reached Palombang and delivered the letter of the Rájá of China in a most respectful manner, in the hall of audience. The letter was read and comprehended, and raja Sangsapurba consulted with his warriors, whether it would be proper or improper. They were all of opinion, that if the request were not complied with, the safety of the country would be endangered; "besides," said they, "there is no greater prince than the Raja of China, nor of more noble extraction, whom she could get for her husband, nor is there any country greater than the land of China." "Then," said Sangsapurba, "if you approve of it, we will grant his request, in order to promote the friendship between the Malay and Chinese rajás." Accordingly the elder princess, named Sri Devi, was delivered to the Chinese ambassador, together with a letter, stamped with the signet Kampen, desiring the ambassador to take notice, that, when a paper signed with a similar stamp should arrive in China, they might depend on its being sent by him or his descendants, the Malay rajás, but not to credit any other. The Chinese mantri was highly gratified. The young Chinese of noble birth remained in Palembang, and became greatly attached to Raja Sangsapurba, who likewise had a great affection for him, and wished to settle him in marriage with the Putri Tunjongbui. The Chinese ambassador left with this young nobleman one of his prows, and took his leave of the raja, who honored him with a rich change of dress. He returned to China, the raja of which was highly gratified with the daughter of the raja, from the mountain Sagantang, and treated her with the dignity due to her rank and family. She in due time produced a son, from whom are descended the royal race who reign in China at the present time." p. 30

iam, Sumatra, Malacca, and many other places, are great exploits; but we have room for only one more—a long and curious one, and with it we close this to the reader to make his own explanations.

China heard of the greatness of the Raja of Malaca, and thither, and directed the ambassador to present to the raja a pair with needles, and also silks, gold-cloth, and kincanbe, or with a great variety of curious articles, such as are nowhere to be had. After they had arrived in Malaca, Sultan Mansur Shah of China to be brought up with the same honors as had been done to the Raja of Siam. He then received it by the hand of a bentara, in the presence of an audience, and delivered it to the khateb who read it accord-

ingly. The king then dispatched from beneath the sandals of the feet of the King of Malaca a pair of shoes placed above the diadem of the Raja of Malaca. 'Verily I have heard that the Raja of Malaca is a great raja, for which reason we have desired friendship and attachment, because we are also descended from Zulkarneini, and of the same extraction as the Raja of Malaca. There is no raja in the universal world greater than me, and it is not to be wondered at that I have numerate the number of my subjects, but the pile which I have made is as a needle for every house in my empire.' On hearing the king's words the raja smiled, and having emptied the prahu of the ambassador he ordered it with sago-grains, appointed Tun Parapati Puti, the daughter of the bandahara Paduca Raja, to conduct the ambassador to the land of China; and the Raja of China commanded the ambassador to be brought up in state, and caused it to be left at the door of the mantri named Li-pó, till it was almost morning, when Li-pó and his attendants entered into the palace of the raja, and the ambassador entered along with them; and there came an innumerable number of crows which entered along with them. When they arrived at the palace and all the chiefs who accompanied him stopped, and the ambassador entered along with them, and sounded the great gong to give notice of his arrival, and a prodigious noise. After which the door was opened, and the ambassador accompanied him entered, and the flock of crows also entered, and reached another gate, and stopped and sounded a gong in the same manner as before, after which they entered. The same process was repeated as they had passed seven doors. When they reached the interior, and they were all sitting arranged in their several places in the hall. This hall was one league in length, and it was not roofed, but had a great access of persons, though the persons were closely packed, there was no place left vacant; and all those who attended the king, the para-mantris and hulu-balanga, and the crows extending over the whole assembly. After this was heard the king, with thunder-claps and lightning flashing to and fro, and the Raja of China came forth, his form reflected like shadows in a place full of mirrors, which appeared to be in the mouth of a snake. As they beheld the Raja of China, all who were present fell on their knees to the ground, and saluted the Raja of China, without lifting their heads again. A man then read the letter of Malaca, and the Raja of China was highly pleased with the contents. The sago was then brought in, and the raja of China asked how it was made. Tun Parapati told him it was made by rolling it up into grains, and that the raja of China should give him a grain for every person in his dominions, till the prahu

had been loaded, for so great is the number of the subjects of our raja that it is impossible to count them. The raja of China said, 'Of a truth the raja of Malaca is a powerful raja, his subjects are in truth very numerous, and no wise inferior to mine. It will be very proper for me to connect myself with him.' Then the China raja said to Li-pó, 'Since the raja of Malaca is so powerful as to have these sago-grains rolled up by his people, I in like manner am determined to have the rice which I eat husked, and no longer to be beaten.' Li-pó replied, 'Very well, Sire,' and that is the reason why the raja of China does not eat beaten rice unto the present time, but only that which is peeled from day to day. The raja of China has at his meals, fifteen gantangs (each gantang five catties) of husked rice, one hog, and a tub of hog's lard. When Tun Parapati Puti presented himself before him, he had ten rings on his ten fingers, and whosoever of the Chinese mantris viewed them eagerly, he took one of them off and presented it to him, and the same to the next person who viewed them attentively, and so on constantly, whenever he presented himself before the China raja. The raja of China one day asked him what food the Malaca men were fond of; he replied, kankung greens (*Convolvulus repens*) not cut, but split lengthwise. The raja of China ordered them to prepare this mess according to the direction of Tun Parapati Puti, and when it was ready, he sent for Tun Parapati Puti, and all the Malaca men, and they all eat of it, taking it by the tip of the stalk, lifting up their heads, and opening wide their mouths, and thus Tun Parapati Puti and the Malaca men had a full view of the raja of China. When the Chinese observed this proceeding of the Malaca men, they also took to eating the kankung greens, which they have continued to the present time.—When the monsoon for returning arrived, Tun Parapati Puti asked permission to return. The raja of China, judging it proper to ally himself with the raja of Malaca, since he had sent to pay his respects to him, said to Tun Parapati Puti, 'Desire the raja to pay me a visit, in order that I may marry my daughter, the Princess Hong Li-pó, to him.' Tun Parapati Puti represented, 'Your son, the raja of Malaca, cannot possibly leave the kingdom of Malaca, which is surrounded with enemies; but if you would do a favor to the raja of Malaca, permit me to conduct your daughter, the Princess, to Malaca.' Then the raja of China ordered Li-pó to prepare a fleet to conduct the Princess to Malaca, consisting of a hundred pilus, under the command of a high mantri, named Di-pó. Then the raja of China selected five hundred daughters of his para-mantris, of great beauty, whom he appointed to be handmaids to the Princess. Then the Princess Hong Li-pó, and the letter, were conducted on board the vessels, and Tun Parapati Puti set sail with them for Malaca.

"When they reached Malaca, the Sultan Mansur Shah was informed that Tun Parapati Puti had returned, and brought with him the Princess of China, at which he was greatly delighted, and went himself to receive the Princess to the isle Pulu Sabot. Having met her with a thousand tokens of respect, he conducted her to the palace, and the Sultan was astonished to behold the beauty of the Princess of China, and said in the Arabic language, "O fairest of created creatures, may God the Creator of the world bless you." Then the Sultan directed the Princess Hong Li-pó to be converted to the religion of Islam, and after she was converted the Sultan espoused her, and had by her a son named Paduca Maimut, who begat Paduca Sri China, whose son was Paduca Ahmed, who begat Paduca Isup. All the daughters of the Chinese mantris were likewise converted to Islam, and the raja appointed the hill without the fort for their residence, and the hill got the name of Den-China, or the Chinese residence (in Siamese); and the Chinese formed a well at the foot of this hill. The descendants of these persons are denomi-

China, or the Chinese personal attendants. Sultan Mansur in honorary dress on Di-pó, and all the rest of the mantris and the Chinese Princess; and when the moosoon for returning asked permission to return, and Tun Tanali and the mantris directed to attend the ambassador to China, and the raja sent a letter to the raja of China, on account of his becoming a friend by this marriage. Then Tun Tanali sailed away for Malaca, and a violent storm arose, and carried him with the mantri Jana Petra.

When the Sangaji of Burné was informed of this circumstance, he called them into his presence, and Tun Tanali and the mantri Jana Petra were brought before him. Then the raja of Burné said to the mantri Jana Petra, "What is the style of the raja of Malaca's letter to the raja of Burné?"

Tun Tanali replied, "I, his servant, (*sahaya*) the raja of Malaca, salute my father, the raja of China." The raja of Burné inquired, "The raja of Malaca send his humble salutation to the raja of Burné?" Tun Tanali remained silent, but the mantri Jana Petra said, "No, Sire, he does not greet him as an inferior, of (*sahaya*) the word in the address, signifies *slave* in the address, and of course, the phrase 'Sahaya Raja Malaca dulang Ayabanda Raja China,' signifies, 'We the slaves of the raja of Malaca salute the Paduca our father, the raja of China.'" Then said the raja of Burné, "Does the raja of Malaca send a humble salutation to the raja of Burné?"

Tun Tanali was again silent, and the mantri Jana Petra said, "No, Sire, he does not send a humble greeting to the raja of Burné, for the phrase *Sahaya Raja Malaca* denotes all of us who are his slaves, not the raja of Malaca;" on which the raja of Burné was satisfied. When the moosoon for returning arrived, Tun Tanali and the mantri Jana Petra asked permission of Sangaji of Burné, to return; and the raja of Burné sent a letter to Malaca, couched in this style, "May the Paduca Ayabanda arrive beneath the majesty of the raja of Burné." Then Tun Tanali and the mantri Jana Petra returned, and when they presented the letter of the raja of Burné to Sultan Mansur, he related all the circumstances which had occurred to them, and the satisfaction of the raja, who rewarded highly Tun Tanali and the mantri Jana Petra, and presented them with honorary dresses, and he called the mantri Jana Petra.

And the rest of the Chinese mantris, who had conducted the ambassador on Di-pó to Malaca, returned to China, they presented the letter of the raja of Burné to the raja of China, and the raja of China was highly pleased with the contents; after this the raja was seized with an itch of the whole body, and a physician was called, and asked for medicine. The medicine, however, had no effect, and whatever number of physicians attended him, it was entirely the same. There was, however, an aged man who presented himself to the raja, and said, "Sire, Sir Kopea, this disease is sent by the visitation of God, and is not to be cured by medicine, because of it is particular." The raja asked, "What is the physician's answer?" The physician answered, "It is a judgment on account of the raja of Malaca's sending you a salutation as an inferior, and it cannot be cured without drinking the water which has washed the feet and face of the raja of Malaca." When the raja of China had heard this opinion, he ordered the ambassador to be sent to Malaca, to ask the water which had bathed the feet and face of the raja of Malaca. The ambassador sat out and reached Malaca, and applied to Sultan Mansur Shah, and the letter from the public hall by the khateb. Then the water was delivered to the ambassador, who was honored with a dress according to his rank;

and having received a letter to the raja of China, he set out on his return. As soon as he arrived, he delivered the letter of Malaca with the water, of which the raja drank, and in which he bathed himself, when the itch totally disappeared from his body, and he was cured. Then the raja of China vowed that he would not suffer himself to be so saluted by the raja of Malaca, and that no such practice should be admitted between their posterity. After this a friendly intercourse on equal terms, subsisted for a long period between the raja of China and the raja of Malaca." p. 173.

ART. VI. *Remarks on the Opium Trade, being a rejoinder to the second letter of A Reader, published in the Repository for March, 1837.* By Another Reader.

[The title to the last article, on this subject, was ours; and any incorrectness there may have been in it, is chargeable to us. For the errors in the press, we cannot account; the usual care was taken to secure accuracy; but the copy having been destroyed, we are now unable to determine to whom the errors should be attributed. We can only say, therefore, that when such do occur, we will take the utmost care to correct them, as we do in endeavoring to prevent them. The question in debate, being one of great importance, affecting more or less directly the well-being of many millions of our fellow-men, we are particularly desirous to have all the arguments and facts adduced by our Correspondents, accurately published, that they may be duly appreciated.]

MR. EDITOR—The opium champion has, I see, come again to the charge. I cannot say that I am glad to see the defense persisted in; but as the meagreness of the article, in your last number, leaves room to suppose that his matter is exhausted, it is best, perhaps, that the battle should be fought out at once. Allow me to suggest, that the title—whether your's or your Correspondent's—is scarce quite correct: "a Reply" to the papers of Choo Taun, Heu Kew, V. P. M., and others, would be indeed a formidable affair; and when I perceived that this was to be contained in less than three pages, I was tolerably well satisfied as to the sort of "reply" by which I was to profit. Not that I wish for length, or that I consider the *arguments* in favor of opium (so to speak) could not be contained in three lines, but that a fair attempt to *disprove* what has appeared against the traffic must, necessarily, run to a considerable extent. However, it is as well, perhaps, as it is. I am not quite certain, that, in the absence of all but mere assertion, on the part of your Correspondent, it might not be sufficient to refer those who are interested in this discussion, back to the papers which have again brought "A Reader" into the field. It is true, that he assumes to deny the facts and deductions introduced; and, taking credit to himself for sincerity and persuasibility *ad libitum*, arraigns them as imaginary or unproven, because he himself is, as he says, not

em. Now as he 'will have no assumptions,' I hope he he same right; and, though I have sought, unsuccessfully for anything that can fairly claim to be designat- term, I will, for the present, waive the right, and pro- his last paper in detail. He will, I trust, excuse me, if I his compliment about sincerity: each of us knows in be claimed. It does, I confess, puzzle me to com- ny one who possesses reason, and knows how to use it, to defend, *on principle*, the sale of opium; yet, whether it there is any obliquity of vision, arising from interest hough it is of course possible that he may be sincere, imself and asserts, I am somewhat afraid that neither onvince the other.

to a tribunal which I cannot allow to be a competent

"Prove," he says, "that it is solely poison, and I tell do so, I will be as steadily your disciple and assistant ur opponent." This is all very well: but "A Reader" rves to himself the decision as to this proof, of which be so desirous. I suspect that Choo Tsun, Heu Kew, hdeacon Dealtry, "and all his coterie," as he phrases lly be content to let him off so easily. The amount of t for him decide on. Were it so, the condemnation nt habit," as he formerly termed it, might be more di- friends of morality would admire. He is not in this dge. He, as an opium dealer, is on his trial at the bar ion; and it would, it seems to me, be about as wise to er to decide on the sufficiency of the evidence of his rt of justice, as to admit of "A Reader" sitting, as he udgment on himself in the matter of opium.—This is, but a little *ruse*, which I merely notice to knock over, er matter in his letter, containing (I quote his own wer to the ingenious reasoning and assumptions of two o sincere, but, I think, mistaken foreigners.' Now I nsuccessful in discovering the ingenious reasonings, in finding the answer of which he talks. Where are easonings, and where is the assumption? A Reader er, indeed, to deny the existence of light, matter, and t in my power to *prove* their existence; nor is it, , in my power to establish, beyond cavil, what the im advance; but I do think, that, to an unprejudiced t statements and fair deductions from them, brought go near to carry conviction. If we are to wait till admit that they are vanquished in argument, and there- rinciple and willing to reform, I fear that our logic ss. Our object is to convince the public, and for this, at time is required. All that is wanted is, that atten- drawn to the subject, and reflection aroused. The rest hat rectitude of feeling which all men possess, though s for the time, smothered by circumstances. The cause

same conclusion which Heu Kew, Choo Tsun, V. P. Dealtry, and many more, have separately done. True, I do not think it right to call them all assumptions; if he pleases, he may do so. The cause in which the opponents of opium are so good a one, that it can well afford to run the incredulity and ridicule. It is *THE TRUTH*, and it

regulation of this trade by the Emperor of China, on which he builds so much of his argument, that, more than I am able to do, I own myself unable to comprehend the objection which he wishes to deduce from it. In the first place, it has never yet been done. In the second, it is highly improbable ever to be effected. In the third, were it even so, it would be a bad thing. An edict of the emperor of China could not prevent the use or sale of opium less immoral and dangerous than he could by his will stay the course of the tides. It is true, remove the penalties under which smugglers now are, and sell or put to hire protection to vice and shame be it admitted—has been, and yet is done in the West. His imperial and celestial Majesty might derive a revenue from this licensing of destruction and obstructions in the way of vice, as does his Majesty of

Ireland, India, &c., from the liquid fire annually consumed in the subjects' stomachs at the expense of the comforts of the lower classes, and the partial demoralization of the community; but I think it would be somewhat new to suppose that this was right and proper, *because* government derives a means of revenue. It is not in the power of men to alter the laws of morality, and prostitute government protection to feeling the consequences of their misconduct.

England, let our brutalized gin consumers, our licentious orders, show. What it is in China, I, at least, do not see the opinion of Choo Tsun, Heu Kew, and many others, regards the effects of opium.

It is not to lay stress on the opinion of the Rev. Dr. Walsh, on the necessity of the use of opium. I have read attentively what he alludes to. One of them states, that 'the use of Turkey has fallen off;'—that he thinks that 'the effects of its use are much exaggerated—that as a recreation is principally confined to the districts where it is grown, the people are ruddy and healthy.' The other passage which he witnesses, asserts that 'all the produce of the poppy, is kept for their own use by the people; the impure mass produced from the poppy heads, is alone exported;' that 'when one of these men wants a dram, he takes a drachm as an Irishman would a dram, and, sitting on his divan, is in a few minutes wrapt in elysium'—a mode of a similar nature and probability.

It is not to believe this mass of "information," it is more to not consider as much Dr. Walsh's self contradiction

in asserting that 'the effects as described by de Tott are here unknown, though, perhaps the use is as general as ever;' and am content to leave it to the judgment of any man in possession of his senses, or especially any merchant, how to reconcile Dr. Walsh's ideas on the subject of profit with the proceedings of his opium-growers. I may observe that the book of this mere travelling book-maker is not one of first rate authority; bearing throughout, as in the passages quoted, strong evidence of a disposition to receive impressions unexamined and unchallenged—it is, in fact, a specimen of the book manufacture of the day. When Dr. Walsh prints his volumes to keep for his own gratification, he may expect that he will be believed in his assertions as to the opium district of Turkey; and not before. The whole of the passages are plainly hearsay caught up *en courant*, and do not require or deserve to be seriously discussed: the same as to his assertion in one place, that 'the use of it has been much exaggerated;' while a few lines after he talks of 'a boy taking a Turkish drachm per hour, without apparent injury;'—as he says, 'if our host's report be true, (!!!) there must be something in the constitution of an Asiatic Turk which resists its deleterious effects.' To talk of this mere roadside compiler as an authority, is too ridiculous. Both extracts are a mass of contradictions and folly.

That the preparers of the drug are healthy, is to say no more than that the workmen in distilleries, and the laborers in vineyards, or the officers and crews of opium ships at Lintin, are the same. The Spaniards, Portuguese, Italians, and French, who grow wine for half the world, are generally sober people. The natives of Java, where arrack is prepared, are the same; yet this does not prove that wine and spirits are health-giving, when indulged in to excess. We think, in fact, that it is found that the producers of these excitements are generally moderate in the use of them. To them they are not a luxury.

With regard to the natives of Rājputāna and their soldierly qualities, it is to be proved that these same men use opium: that it is consumed in Ajmīr, there is no doubt: but it does not follow that the individuals known in the Company's army as Rājputās, under which name, if I am not mistaken, are included the up-country people of all parts of the N. W. of India, (and not natives of Ajmīr alone) use opium; and even were it so, it would prove little. The Indian army has never been accused of want of courage; and discipline is all that is required besides to make a soldier of. But, if A Reader fancies that the Rājputās are *better* soldiers than other *sipahis* because they use opium, I must beg to dissent from him *in toto*.

With reference to A Reader's observation, that opium cannot be considered as perilling the army of the emperor, and that he "must be of opinion, that the risk, &c., must be a mere dream, and its evils very much exaggerated; or that no arguments would be tolerated on the subject by him," I beg to refer A Reader back to Vol. V, page 266 of the Repository, where he will find the opinions of his Majesty's council as to the strict prohibition of the drug to "officers, scholars, and soldiers," even though other classes should be permitted it,

he express ground of its injurious effects. A Reader by no means judiciously chosen; they rather tell

aid enough. If facts and arguments, if experience, if unanimous and corroborating testimony of so many fail to convince A Reader, it were foolish indeed in the quixotic attempt to persuade him; but I may not expect of believing, as I do, that he will find but few to be interested individuals. I may also hope, that the number will be diminished as reflection is brought to the subject, and that the same meed of public approbation may be due to the opium manufacturers, including the chief poison manufacturers, the East India Company, as is now, by most right-minded persons, the manufacturers of rum, spirit-dealers," &c., &c., and the opium dealers, with whom A Reader is so anxious to identify his cause. I am, Sir, your humble servant,

ANOTHER READER.

Mr. P. denies that his calculations have been affected by what V. P. M. and myself. I am aware that my own sketch was defective in that it being misprinted served to confuse. I will now, as to my opinions as to the number and ratio of opium smokers, set them in a more regular shape.

It is estimated that there were last year 33,200,000 taels' weight of the opium prepared from the opium imported, and that a tael each per 50 people will give 912,000 smokers.* Instead of a tael I take the tenth, or 57.984 grains Troy,) which is, as the Chinese say, a good allowance. This will make 9,120,000 smokers in China and Turkey drug. In addition to this, let us add the opium brought into China overland. Opium is grown largely in the central and southwestern provinces of China. Mr. P. says expressly, that "many thousand chests" are produced annually. I shall not, I think, go too far if I estimate the total at 2,280,000 lbs. Besides, this consumption is but of the first smoking; the rest is thus destroyed, it being used *twice or thrice over*, each time more in flavor, though not so much its strength. Each *risfacciato* is stronger than the former one, till the worst, mixed with tobacco, or some other substance, is placed within the reach of the very young. This will permit a much larger allowance for the original effect of the drug. I will strengthen the dose, and add but little to the number of consumers—either way increase the effect of the drug. I will strengthen the dose, and add but little to this—say a total of 12½ millions of opium smokers in China; a moderate computation. I may, of course, be mistaken on the information of many Chinese, and have purposely kept

the empire is assumed to hold 300 millions of people. This may seem so nearly impossible, that it has been over and over again assumed by A Reader, I will follow him. Of these 300, near

the points to which our Correspondent alludes above, as having been used; in the former paper, the first was 912, instead of 912,000; *unce*, instead of *mace*.]

one half (25 to 26, or 20 to 21) are females, according to the known laws of population. Of these 150 millions of men, I assume that three fifths are under 20 or over 60 years of age, in the absence of all Chinese statistics, taking the census of the U. S. of 1830 as a fair guide. There will remain 60 millions of men, from 20 to 60 years of age, among which I suppose the opium smokers may be found. We shall thus find one in every five of men in the prime of life, or verging to old age, an habitual opium smoker, and this within, I may say, 50 years of the introduction of the habit, which in 1792 was so little known that Sir George Staunton in Macartney's embassy nowhere mentions it, save by name among the articles of trade in the Appendix. See how it is advancing. In 1816-17, twenty years ago, 3210 chests of Indian opium were sold in China. In 1826-27, ten years back, it had advanced to 9969. In 1836-37, as A Reader acknowledges, it had progressed to 34,000, an increase, in ten years, of 250 per cent.; and in twenty, of more than 1000; so that, for every one who then smoked opium there are now eleven; and for each two, ten years back, there are now seven smokers; and it appears to be so fast, even yet, on the advance, that it is apprehended that the legalization of the drug would at once advance prices enormously, by the facilities which it would offer. This is the horror which "A Reader" insists on calling "a harmless luxury!"

APPENDIX.

No. 1. "The use of opium for the purpose of exhilarating the spirits has long been known in Turkey, Syria and China, and of late years it has been unfortunately adopted by many, particularly females, in this country (Eng). Russell says, that in Syria, when combined with spices and aromatics, he has known it taken to the amount of three drachms in twenty-four hours. Its habitual use can not be too much reprobated. It impairs the digestive organs, consequently the vigor of the whole body, and destroys also gradually the mental energies. The effects of opium on those addicted to its use, says Russell, are at first obtinate costiveness, succeeded by diarrhœa and flatulence, with the lost appetite and a sotish appearance. The memories of those who take it soon fail, they become prematurely old, and then sink into the grave, objects of scorn and pity. Mustapha Shatoor, an opium eater in Smyrna, took daily three drachms of crude opium. The visible effects at the time, were a sparkling of his eyes, and great exhilaration of spirits. He found the desire of increasing his dose growing upon him. He seemed twenty years older than he really was; his complexion was very sallow, his legs small, his gums eaten away, and the teeth laid bare to the sockets. He could not rise without first swallowing half a drachm of opium." *Phil. Trans.* xix, 239.

No. 2. "In moderate doses, opium increases the fullness, the force, and the frequency of the pulse, augments the heat of the body, quickens respiration, and invigorates both the corporeal and mental functions, exhilarating even to intoxication; but by degrees these effects are succeeded by languor, lassitude, and sleep; and in many instances headache, sickness, thirst, tremors, and other symptoms of debility, such as follow the excessive use of ardent spirits, supervene. In very large doses the primary excitement is scarcely apparent, but the pulse seems to be at once diminished, drowsiness and stupor immediately come on, and are followed by delirium, sighing, deep and stertorous breathing, cold sweats, convulsions, apoplexy, and death. The appearances on dissection are those which indicate the previous existence of violent inflammation of the stomach and bowels; but notwithstanding the symptoms of apoplexy which an overdose, when it proves fatal, occasions, no particular appearance of an inflammatory state or fullness of the vessels of the brain is perceived." *London Encyclopædia*, p. 461.

No. 3. "(The opium eater) soon after having taken the opium perceives an unusual exhilaration and activity of spirits; his imagination revels in luxurious images, and he enjoys a feeling of more than common strength and courage; but this pleasing intoxication soon leaves him, and in its stead follow laziness, disgust at all kinds of occupation, and a certain imbecility of the senses, closely border-

To avoid the duration of his insufferable state, opium must continually changing between the highest excitement and despondency, the consequence of which is an early derangements of the body, and a premature death. The Arabs are at to this dangerous practice, since they have begun secretly to use all over Turkey is very general." *Bohn's Waaren Lager.*

tures were frightful; those who were completely under the influence talked incoherently; their features were flushed; their eyes were full of liliaucy, and the general expression of their countenances was effect is usually produced in two hours, and lasts four or five. In some cases three grains to a drachm. The debility, both moral and physical, on its excitement, is terrible; the appetite is soon destroyed, the body trembles; the nerves of the neck become affected, and the head is affected; several I have seen in this place who have wry necks and are unable to sit still they cannot abandon the custom. They are miserable for taking their daily dose." *Madden's Travels in Turkey.*

The use of opium, it must be confessed and lamented, has struck deep and extended its malignant influence to the morals of the people, and has situated its powers in degrading their character and enervating the strength of the European government, overlooking every consideration of humanity, shall allow a paltry addition to their finances to outbalance the ultimate happiness and prosperity of the country. It is used in the crude state as *menta*, or smoked as *mentat* or *chidu*. In the *fat*, the crude opium is boiled down with the leaves of tobacco, and reduced to a sticky or somewhat liquid state. In *ca du*, the opium is boiled down without any admixture, to a still thicker consistency, and made into pills, in which state, when dry, they are inserted into the pipe and smoked. The crude opium is eaten principally by the people of the country, in the provinces of the native princes: the use of smoking is used along the coast, and generally in the other parts of the island; it is prepared by the Chinese. The use of opium, carried to a considerable extent, is still reckoned disgraceful, and it is looked upon as abandoned characters, and despised effects of this poison on the human frame are so well described by the commissioners who sat at the Hague in 1803, and who much to the credit of the Dutch government in allowing its use, that together with the governor of the gendorp, who concurred with them, I shall insert their statements to the authorities, whose views were so creditable to their own character, and the importance of their opinion on the part of the population, will plead an apology for the length of the following present.

The governor, observe the commissioners, 'requires likewise attention. The Dutch government have assumed an exclusive right to conduct the same, and a considerable number of chests containing that article annually sold at public auction. It is much in demand on the Malay coast, and at all the islands towards the east and north; and particularly in the use thereof is confined to the lower classes. The effect of opium on the constitution is different, and depends on the quantity and the other circumstances. If used with moderation, it causes a very slight and somewhat intoxicating sensation, which absorbs all care and the quantity is taken, it produces a kind of madness, of which the Dutch are especially when the mind is troubled by jealousy, or insatiable vengeance or other violent passions. At all times it leaves a deep and permanent mark on the mind, which undermines the faculties of the soul and the constitution of the body, and renders a person unfit for all kinds of labor and an image of the devil. The use of opium is so much dangerous, because a person who has once taken it can never leave it off. To satisfy that inclination, he will neglect his own welfare, the subsistence of his wife and children, and his property. Poverty is the natural consequence, and then it becomes necessary to say by what means he may content his insatiable desire after opi-

um ; so that, at last, he no longer respects either the property or lives of his fellow creatures. If here we were to follow the dictates of our own hearts only, and what moral doctrine and humanity prescribe, no law, however severe, could be contrived, which we would not propose, to prevent at least that in future, no subjects of this Republic, or of the Asiatic possessions of the state, should be disgraced by trading in that abominable poison. Yet we consider this as absolutely impracticable at present with respect to those places not subject to the state. Opium is one of the most profitable articles of eastern commerce ; as such it is considered by our merchants ; and if the navigation to those parts is opened to them (which the interest of the state forcibly urges) it is impossible to oppose trading in the same. In this situation of affairs, therefore, we are rather to advise, that general leave be given to import opium at Malacca, and to allow the exportation from thence to Borneo and all the eastern parts not in the possession of the state."

" " Opium," says Mr. Hogendorp, 'is a slow though certain poison, which the Company, in order to gain money, sells to the poor Javans. Any one who is once enlaved to it, cannot, it is true, give it up without great difficulty ; and if its use were entirely prohibited, some few persons would probably die for want of it, who would otherwise languish on a little longer : but how many would by that means be saved for the future ! Most of the crimes, particularly murders, that are now committed in that region, may be imputed to opium as the original cause. Large sums of money are every year carried out of the country in exchange for it, and enrich our competitors the English. Much of it is smuggled into the interior, which adds to the evil. In short, the trade in opium is one of the most injurious and most shameful things which disgrace the present government of India. It is, therefore, necessary at once, and entirely, to abolish the trade and importation of opium, and to prohibit the same, under the severest penalties that the law permits, since it is a poison. The smuggling of it will then become almost impracticable, and the health, and even the lives of thousands, will be preserved. The money alone which will remain in the country in lieu of it, is more valuable as being in circulation, than the profit which the Company now derives from the sale of it. This means will excite no discontent among the Javans, for the princes and regents, with very few exceptions, do not consume any opium, but, as well as the most respectable of their subjects, look upon it as disgraceful. The use of opium is even adduced as an accusation of bad conduct, and considered as sufficient cause for the removal or banishment of a petty chief.'" *Raffles History of Java* Vol. I, pp. 103, 105.

No. 6. " Dr. Smith, while at Smyrna, took pains to observe what the doses of opium taken by the Turks in general were. He found that 3 drachms in a day was a common quantity among the larger takers of it, but that they could take six drachms a day without mischief. A Turk eats this quantity before him, three drachms in the morning, and three in the evening, with no other effect than its giving him great cheerfulness. But the taking it thus habitually greatly impairs the constitution ; the persons who accustom themselves to it, can by no means live without it, and are feeble and weak ; their legs are usually thin, and their gums eaten away, so that the teeth stand bare to the roots ; they are also often of a yellow complexion, and look much older than they really are. *Ross' Encyclopædia*.

No. 7. " There is another set of people, however, who live in a still cheaper way than the dervises : strangers to the pleasures of the table, an opium pill supports, intoxicates them, throws them into ecstasies, the delights of which they extol very highly. These men, known under the name of *theriakis*, are mentioned by Monsieur de Tott and others, as being looked upon even in a more despicable light than the drunkards, though I know that the practice betrays more dissoluteness of morals. They begin with taking only half a grain at a dose, but increase it as soon as they perceive the effect to be less powerful than at first. They are careful not to drink water, which would bring on violent colics. He who begins taking opium habitually at twenty, must scarcely expect to live longer than the age of thirty, or from that age to thirty-six ; the latter is the utmost age that, for the most part, they attain. After some years they get to take doses of a drachm each ; then comes on a frightful pallidness of countenance, and the victim wastes away in a kind of marasmus that can be compared

elf: alopecia and a total loss of memory, with rickets, are the sequences of this deplorable habit. But no consideration,—neither of premature death, nor of the infirmities by which it must correct a *theriaki*; he answers coldly to any one who would anger, that his happiness is inconceivable when he has taken his be asked to define this supernatural happiness, he answers, that account for it; that pleasure cannot be defined. Always beside *heriakis* are incapable of work, they seem no more to belong to the end of their career, they, however, experience violent roured by constant hunger; nor can their paregoric in any way ferings: become hideous to behold, deprived of their teeth, in their heads, in a constant tremor, they cease to live long to exist." *Pouquerville's Travels in the Morca*, p. 257.

re is a decoction of the head and seeds of the poppy, which they or the sale of which there are taverns in every quarter of the ur coffee-houses. It is extremely amusing to visit these houses, arefully those who resort there for the purpose of drinking it, have taken the dose, before it begins to operate, and while it is entering the tavern, they are dejected and languishing: soon taken two or three cups of this beverage, they are peevish, and id; everything displeases them. They find fault with every- el with one another, but in the course of its operation they make d, each one giving himself up to his predominant passion, the et things to his idol—another, half asleep, laughs in his sleeve g and blusters—a fourth tells ridiculous stories. In a word, a lieve himself to be really in a mad-house. A kind of lethargy eceed to this disorderly gayety; but the Persians, far from treat- ves, call it an ecstasy, and maintain that there is something venly in this state." *Sir John Chardin's Travels in Persia*.

his country opium is much used, but seldom with the view of cation. Some, indeed, deny that it can do so, strictly speaking. on is meant a state precisely similar to that from over- inous or spirituous liquors, they are undoubtedly right; but rits a wider latitude of signification. The ecstasies of opium ntrancing than those of wine. There is more poetry in its vital aggrandizement—more range of imagination. Wine, in invigorates the animal powers and propensities; but opium, in nanner, strengthens those proper to man, and gives, for a period urs, a higher tone to the intellectual faculties. It inspires the usand delightful images, lifts the soul from earth, and casts a halo t and feeling over the spirits of the most unimaginative. Under mind wears no longer that black passionless aspect which, even s, it is apt to assume. On the contrary, it is clothed with beauty ent," and colors every thought that passes through it with the and romance. Such are the feelings which the luxurious and nan seeks to enjoy. To stir up the languid current of his mind, cessa of pleasure and rendered sluggish by indolence, he has re- medy which his own genial climate produces in greatest per- l perhaps amid the luxuries of oriental splendor—with fountains l, and the citron shading him with its canopy, and scattering rides—he lets loose the reins of an imagination conversant from erything gorgeous and magnificent. The veil which shades the s withdrawn, and the wonders lying behind it exposed to view; and temples in the clouds; or the paradise of *Mahomet*, with its rs of amaranth, may stand revealed to his excited senses. Every in poetic exaggeration. The zephyrs seem converted into aerial bear golden fruits, the rose blushes with unaccustomed beauty Earth, in a word, is brought nearer to the sky, and becomes one asure. Such are the first effects of opium: but in proportion as oi is the depression which succeeds them. Languor and exhaus- on come after; to remove which, the drug is again had recourse to est an essential of existence.

"Opium retains, at all times, its power of exciting the imagination, provided sufficient doses are taken. But, when it has been continued so long as to bring disease upon the constitution, the pleasurable feelings wear away, and are succeeded by others of a very different kind. Instead of disposing the mind to be happy, it now acts upon it like the spell of a demon, and calls up phantoms of horror and disgust. The fancy is still as powerful as ever, but it is turned in another direction. Formerly, it clothed all objects with the light of heaven: it now invests them with the attributes of hell. Goblins, spectres, and every kind of distempered vision haunt the mind, peopling it with dreary and revolting imagery. The sleep is no longer cheered with its former sights of happiness. Frightful dreams usurp their place, till, at last, the person becomes the victim of an almost perpetual misery. Nor is this confined to the mind alone, for the body suffers in an equal degree. Emaciation, loss of appetite, sickness, vomiting, and a total disorganization of the digestive functions, as well as of the mental powers, are sure to ensue, and never fail to terminate in death, if the evil habit which brings them on is continued." *Macnish's Anatomy of Drunkenness*, p. 51.

No. 10. "As a last and deperate resource, I tried to drive away my frightful vision by gayer dreams, the children of drowsy opium. I found my way to the great mart of that deleterious drug, the Theriukee Tchartchee. There, in elegant coffee-houses, adorned with trelliced awnings, the dose of delusion is measured out to each customer, according to his wishes. But lest its visitors should forget to what place they are hieing, directly facing its painted porticoes stands the great receptacle of mental imbecility, erected by Sultan Suleiman for the use of his capital. In this Tchartchee, any day might be seen a numerous collection of those whom private sorrows have driven to a public exhibition of insanity. There each reeling idiot might take his neighbor by the hand, and say, 'Brother, and what ailed thee to seek so dire a cure?' There did I, with the rest of my familiars, now take my habitual station in my solitary niche, like an insensible, motionless idol, sitting with sightless eye-balls staring on vacuity. One day, as I lay in less entire absence under the purple vines of the porch, admiring the majestic Suleimanye, as it shaded the Tchartchee, the appearance of an old man with a snow-white beard, reclining on the couch besides me, caught my attention. Half plunged in stupor, he every now and then burst out into a wild laugh, occasioned by the grotesque phantasms, which the ample dose of *madjoon* he had just swallowed, was sending up to his brain. I sat contemplating him with mixed curiosity and dismay, when, as if for a moment roused from his torpor, he took me by the hand, and fixing on my countenance his dim vacant eyes, said in an impressive tone, 'Young man, thy days are yet few; take the advice of one who has counted many. Lose no time; hie thee hence, nor cast behind one lingering look; but if thou hast not the strength, why tarry even here? Thy journey is but half achieved. At once go on to that large mansion before thee. It is thy ultimate destination, and by thus beginning where thou must end at last, thou mayest at least save both thy time and money.' The old man here fell back into his apathy, but I was roused effectually. I resolved to renounce the slow poison of which my neighbor was so woeful a specimen; and, in order not to preserve even a memento of the sin I abjured, presented him, as a reward for his advice, with the golden receptacle of the pernicious drug, which I used to carry. He took the bauble without appearing sensible of the gift; while I, running into the middle of the square, pronounced, with outstretched hands, against the execrable market where insanity was sold by the ounce, an elaborate and solemn malediction." *Hipe's Anastasius*, Vol. II. page 230.

No. 11. "And here, it may be mentioned, as a proof of Mr. Horsburgh's philanthropy, that on its being remarked by a friend, that he was thereby [viz., by his chart of the East Coast of China, 1835] aiding the opium-smugglers in a traffic which he abhorred, as repugnant to the laws of God and man, and destructive of the morals and lives of the Chinese people, he replied, 'Very true, but as they will carry on that vile trade, we may as well afford the means of preserving their lives.'" *Asiatic Journal for Sept. 1836*.

No. 12. "A late memorial to the emperor from one of the censors laid open the evil in all its deformity, and showed its prevalence among the officers of government. 'I have learned,' says he, 'that those who smoke opium, and eventually become its victims, have a periodical longing for it, which can only be

application of the drug at the regular time. If they cannot obtain daily period arrives, their limbs become debilitated, a discharge place from the eyes and nose, and they are altogether unequal to out, with a few whiffs, their spirits and strength are immediately rising manner. Thus opium becomes, to opium-smokers, the when they are seized and brought before magistrates, they will severe chastisement than inform against those who sell it. * * * ordinates in office, and nefarious traders, first introduced the abuse; of family, wealthy citizens and merchants adopted the custom; reached the common people. I have learned on inquiry, from school persons, that opium-smokers exist in all the provinces, but the on of these are to be found in the government offices; and that it acy to suppose that there are not smokers among all ranks of civil icers, below the station of provincial governors and their deputies. s of districts issue proclamations, interdicting the clandestine sale : same time that their kindred, and clerks, and servants smoke it as the nefarious traders make a pretext of the interdict for raising e police, influenced by the people in the public offices, become asers of opium, instead of laboring for its suppression; and thus nd regulations become vain." *Davis' China*, Vol. II, p. 454.

["A Reader" is yet unsatisfied, and should want more can give it: in addition to the above authorities, he may has been said by Heu Kew, Choo Tsun, Heu Naetse, arjoribanks, Crawford, Abel, De Tott, Fraser (J. B.), Marsden, Thornton, Eton, Hamilton, the emperor of ninisters,——but oh! *jam satis*. A. R.

Admonitory Pictures, being a series of Chinese paintings ating the rapid career of the opium-smoker, from health uence to decrepitude and beggary. BY SUNQUA.

preceding article was passing through the press, our at- incidentally directed to some paintings by a native artist street, named Sunqua. They are on pith-paper, six in rming a series, designed to exhibit the progress of the opi- from health and prosperity to misery and degradation; y are a counterpart to Hogarth's famous 'Rake's Progress.' ve can ascertain, the idea was original with the painter; ed as mere works of art, the pictures are by no means un- notice. The figures and attitudes are well conceived and l the story clearly and strongly carried through. We were o see how exactly some of the pictures "hit off" the cha- ne opium-smoker, as described by the writers in the preced- *lix*; and we will not fail to make further inquiries respecting *it* the circumstances which led the painter to form his design. their discussion, we wish our Correspondents would en- termine whether *any* use of the drug—except as a medi- and harmless; and, if it be so, what degrees in the *U* smoking may be taken without doing or suffering wrong;

and finally, when it does prove to be injurious, how far the purveyors are responsible. In 1832, seventy-five physicians in Boston, comprising the great body of the profession in that city, signed a declaration, in which they declared it to be their opinion, "that men in HEALTH ARE NEVER benefitted by the use of ardent spirits, that on the contrary, the use of them is the frequent cause of disease and death." Those physicians formed their decision from a great variety of facts and extensive personal observation. So, in the case of opium; evidence is required to show its effects. Whether Sunqua's paintings can be received as evidence, our readers must judge. We thought, at first, of giving a description of each; but, on reflection, we are inclined to think, that his own explanation of them will be more satisfactory than any account of ours.

In addition to these paintings, Sunqua has drawn another series, illustrating "the gambler's career." But though two or three parts in that series are well done, the designing, as a whole, is much inferior to the other,—which, taking it all in all, is the most spirited and striking thing we have ever yet seen from the pencil of a Chinese. The following is his own explanation of the six pictures:—

ADMONITORY PICTURES.

The son of a gentleman of fortune, his father dying while he was yet but a youth, comes into possession of the whole family estate. The young man having no inclination for either business or books, gives himself up to smoking opium and profligacy. In a little time his whole patrimony is squandered, and he becomes entirely dependent upon the labor of his wife and child for his daily food. Their poverty and misery are extreme.

No. 1. This picture represents the young man at home, richly attired, in perfect health and vigor of youth. An elegant foreign clock stands on a marble table behind him. On his right is a chest of treasure, gold and silver; and on the left, close by his side, is his personal servant; and, at a little distance, a man whom he keeps constantly in his employ, preparing the drug for use from the crude article, purchased and brought to the house.

No. 2. In this, he is reclining on a superb sofa, with a pipe in his mouth, surrounded by courtesans, two of whom are young, in the character of musicians. His money now goes without any regard to its amount.

No. 3. After no very long period of indulgence, his appetite for the drug is insatiable, and his countenance sallow and haggard. Emaciated, shoulders high, teeth naked, face black, dozing from morning to night, he becomes utterly inactive. In this state he sits moping, on a very ordinary couch, with his pipe and other apparatus for smoking, lying by his side. At this moment his wives—or a wife and a concubine—come in; the first, finding the chest emptied of its treasure, stands frowning with astonishment, while the second gazes with wonder at what she sees spread upon the couch.

No. 4. His lands and his houses are now all gone; his couch exchanged for some rough boards and a ragged mattress; his shoes are off his feet; and his face half awry as he sits bending forwards, breathing with great difficulty. His wife and child stand before him, poverty stricken, suffering with hunger; the one in anger, having dashed on the floor all his apparatus for smoking, while the little son, unconscious of any harm, is clapping his hands and laughing at the sport! But he heeds not, either the one or the other.

No. 5. His poverty and distress are now extreme, though his appetite grows stronger than ever—he is as a dead man. In this plight, he scrapes

copper cash, and hurries away to one of the smoking-houses, of the scrapings from the pipe of another smoker, to allay his ngs.

re his character is fixed—a sot. Seated on a bamboo chair, y swallowing the feces of the drug, so foul that tea is required own his throat. His wife and child are seated near him, with tretched on bamboo reels, from which they are winding it off s earning a mere pittance for his and their own support, and om day to day a miserable existence.

*Premium of One Hundred Pounds sterling, for an
the Opium Trade; specification of the conditions on
premium will be awarded.*

r in which £100 were placed at our disposal, to be r the best Essay on the Opium Trade, showing its effects nercial, Political, and Moral, Interests of the Nations and connected therewith, and pointing out the Course they sue in regard to it," was stated in our number for Janu-llowing are the conditions on which that premium will

ndidates for the premium will send their manuscripts, of not or more than 100 octavo pages, to the Chairman of the Society ion of Useful Knowledge in England, giving their names and a separate envelope sealed; of these envelopes only the one y the successful essay will be opened by the arbiters.
