CONTENTS

BRITONS AND INVADERS UP TO 1066

Introduction

Timeline

Britain's First People

Arrival of first human-like species in Britain and colonization by modern humans around 15,000 years ago.

Stone Age Britain

Settlers build stone monuments and agriculture develops.

■ STONEHENGE

Iron Age Britain

Warrior elites in hill-forts dominate Britain, maintaining strong links with Europe and producing art of great beauty.

Caesar's Invasion

Julius Caesar establishes treaty relations with British tribes, drawing Britain into the orbit of Roman political ambitions.

Conquest and Resistance

The Romans, under Emperor Claudius, conquer much of Britain, despite bitter resistance in Wales and the north of England.

■ HADRIAN'S WALL

A Distant Province

Much of Roman Britain prospers as towns grow and roads encourage trade and communication.

Outside the Empire

By the 5th century, communities in Ireland and remote parts of Scotland lay the foundations of independent kingdoms.

Life in Roman Britain

Rome profoundly affects British life with its military organization, urban lifestyle, new religious beliefs, and novel foods.

End of Empire

In 410 CE, Roman rule over Britain comes to an end, leaving Britain exposed and at the mercy of Germanic barbarians.

■ THE SUTTON HOO SHIP BURIAL

Holy Ireland

8 Rapid growth in Ireland's Christian Church in the 5th century, as abbots of the main monasteries become powerful and send missionaries abroad.

Anglo-Saxon Rulers

14 Between the 5th and 8th centuries, Anglo-Saxon invaders establish the powerful kingdoms of Mercia, Northumbria, and Wessex.

■ FRANKS CASKET

Christian England

18 Missionaries sent by Pope Gregory I convert Anglo-Saxons to Christianity, transforming England into a vibrant and thriving Christian culture, largely based in monasteries.

Viking Raiders and Settlers

20 Anglo-Saxon kingdoms succumb to Viking raiders, armies, and settlers, leaving Wessex to stand alone, weak and beleaguered.

■ BOOK OF KELLS

■ ALFRED THE GREAT

Wessex Takes the Lead

24 In the 10th century, several able kings of Wessex progressively conquer Viking-held areas of England, uniting the country as far north as the border with Scotland, and becoming kings of the English.

Ireland in the Viking Age

28 From their port-enclaves in Ireland, the Vikings, without conquering the country, play a major role in shaping Irish culture.

Triumph of the Danes

30 At the turn of the first millennium, the Danes successfully invade England and take over the throne for a quarter of a century.

Independent Realms

In the 9th and 10th centuries, Scotland is more successful than Wales at achieving unity and independence from England.

King Edward's World

Edward the Confessor struggles to contain the country's internal tensions.

MEDIEVAL BRITAIN

1066–1485

Introduction

Timeline

Norman Conquest

William the Conqueror installs an Anglo-Norman rule, introduces a feudal society, and reshapes England.

■ BATTLE OF HASTINGS

Norman Realm

Henry I's reign manages to establish the institutional bureaucracy that realizes the Norman kings' desire to dominate their new realm.

■ DOMESDAY BOOK

Reign of a Powerful King

King Henry II fights the Church and his sons, conquers Ireland, and reforms the English legal system.

■ MURDER IN THE CATHEDRAL

Invasion of Ireland

Irish infighting opens the way for Henry II to move in and establish English rule over Ireland.

England in the Crusades

Richard I and other kings of England embark on a series of crusades, as they heed papal calls to regain Jerusalem and the Holy Land.

58 Challenging Royal Authority

Royal concessions to the barons of England lead to a Parliament that has to approve any new taxes the monarch wishes to levy.

60 ■ MAGNA CARTA

A Prosperous Realm

In the 12th and 13th centuries, England prospers, which improves the social and economic life of some of the people.

Subduing Wales

The powerful princes of Gwynedd try to create an independent Wales, but Edward I subdues them.

Scotland's Independence Struggle

Led by Edward I, an English invasion to crush the Scots ends in failure as Robert the Bruce and his army expel the occupiers.

■ BATTLE OF BANNOCKBURN

62 Hundred Years' War Begins

The English and the French fight over the throne of France, starting a series of costly wars that will last more than a century.

68 Knights and Bowmen

During the medieval period, advances in infantry warfare throw a challenge to the central role of heavily armored cavalry.

■ BATTLE OF CRÉCY

72 The Black Death

A deadly infection wipes out half of the population within a year, causing profound social changes.

74 The Peasants' Revolt

A heavy poll tax causes many people to rebel against king and government, but the killing of the rebel leaders brings the revolt to an end.

■ LUTTRELL PSALTER

78 Religious Enthusiasm

Monasteries and pilgrimage play a major role in English life, though religious reformers are brutally suppressed.

82 Poets of the People

Geoffrey Chaucer pioneers vernacular writing in a form of English, poetically revealing everyday contemporary life in his *Canterbury Tales*.

84 ■ ELY CATHEDRAL

Change of Dynasty

As Richard II is deposed, a new Lancastrian dynasty under Henry IV lays the seeds of a conflict that would burst into civil war.

86 Invasion and Revolt

In the 15th century, Scotland proves to be far more troublesome for England than Wales, except for the revolt of Owain Glyn Dwr.

90 The Later Hundred Years' War

Henry V's bid for the French throne almost succeeds after Agincourt, but a French revival sees the English kings lose almost all their lands in France.

92 Merchants and Guilds

Craftsmen and tradesmen form guilds in British cities and towns during the prosperous but sometimes turbulent 15th century.

96 The Wars of the Roses

The houses of Lancaster and York embark on a long period of civil strife as they fight bitterly for the throne of England.

98 ■ MEDIEVAL WEAPONS

TUDORS AND STUARTS

1485–1688

Introduction

Timeline

110 The Early Tudors

Henry Tudor centralizes the state and concentrates power on the monarchy, an enduring legacy he passes on to his successors.

112 ■ HENRY VIII

114 Religious Upheaval

The Protestant Reformation of the Church radically changes the lives of the British people, both religiously and culturally. The spirit of theological self-reliance changes the political landscape as well.

116 Scottish Troubles

The tragic life of Mary, Queen of Scots, epitomizes the dangers Scottish power struggles posed to the English monarchy.

118 ■ ELIZABETH I

English Society under the Tudors

The country prospers as trade and agriculture flourish, but in the rapidly expanding cities hunger and crime stalk the streets.

120 ■ TUDOR LIFE

Sailors and Privateers

Inspired by the skill and daring of several English seafarers, the Royal Navy is founded and British naval power expands with a renewed spirit of exploration and discovery.

124 The War with Spain

England battles remorselessly with her Spanish foe, finally overcoming its fearful shadow and ushering in a golden age.

150 ■ THE DEFEAT OF THE SPANISH ARMADA

The English Renaissance

Arts and philosophy flourish, with great theater, wonderful music, evocative poetry, striking Tudor portraits, and far-reaching humanist thinking.

154 ■ WILLIAM SHAKESPEARE

Conquest and Plantation

English power savagely puts down several fierce revolts in Ireland, followed by colonization and settlement in the north of the country, which sets the stage for future conflicts.

130 The Union of the Crowns

James I's accession effectively unites the kingdoms of Great Britain under the rule of a Scottish dynasty, the House of Stuart.

132 ■ THE GUNPOWDER PLOT

Colonial Expansion 162

English colonists gradually establish settlements along much of North America's eastern seaboard and on many islands of the Caribbean.

■ LONDON AND THE RIVER THAMES 164

Charles I and Parliament 166

Political turbulence unsettles the country as an absolutist King collides with an increasingly confident Parliament.

The Civil War 168

Desperate terror, death, and suffering sweep across the country as rival supporters of the King and Parliament fight a vicious war that eventually divides the entire British Isles.

■ THE EXECUTION OF THE KING 170

The Commonwealth 172

As the country ceases to be a kingdom, many start to build a better society while others feel excluded by the righteousness of the new elite.

Scotland and Ireland Subdued 174

Scotland and Ireland are drawn into the life-and-death struggle of the English Civil War, bringing their destinies closer together.

The Restoration 176

The monarchy is restored, bringing fashion, fun, and color at first, then the King starts to revert to his father's old absolutist ways.

Commerce and War 178

As the world enters a new and more dangerous age, successive governments of England are prepared to fight for their commercial interests.

Pepys's London 180

Samuel Pepys vividly records the political gossip, pioneering ideas, and cultural pursuits of Britain's global commercial center.

■ THE GREAT FIRE OF LONDON 182

Enquiring Minds 184

Modern science is born as new institutions and scholars champion reasoned knowledge and experimental methodology.

■ ST. PAUL'S CATHEDRAL 186

The Glorious Revolution 188

Parliamentary democracy succeeds in overthrowing James II, preventing the King's despotic attempts to shape the religious beliefs of the nation.

RISE OF POWER 1688–1815

Introduction 190

Timeline 192

Succession Wars 194

Rival Protestant and Catholic factions fight each other in Ireland and then engage in wars of supremacy that spread across Europe.

■ TREATY OF UNION 196

The House of Hanover 198

A German dynasty succeeds to the British throne and rules over a people whose patriotism is increasingly linked to the Protestant cause.

Scottish Jacobites 200

Jacobite rebellions in Scotland by Catholic Stuarts rock the Protestant Hanoverian state.

■ BATTLE OF CULLODEN 202

Politics and Prime Ministers 204

Robert Walpole and William Pitt the Younger use their new position to transform British politics.

Power of the Pen 206

New tracts, journals, and newspapers dissect every aspect of British politics, manners, and thought.

Commercial Expansion 208

The Royal Navy gives protection to seaborne trade, while the slave trade flourishes from English ports such as Bristol and Liverpool.

Colonial Conquests 210

The Seven Years' War gives Britain control of Canada, while the East India Company begins the gradual British takeover of India.

America is Lost 212

The 13 colonies of America rebel against Britain, which fails to suppress the rebellion in a costly and prolonged war.

■ SURRENDER AT YORKTOWN 216

Georgian Society 218

In the 18th century, the better-off worked, played, shopped—and reveled in the social season.

■ LANDED GENTRY 220

Disorder and Religious Revival 222

Social turmoil brings crime and disorder to many English cities, causing thousands to turn to religion for help and guidance.

Scottish Enlightenment 224

Edinburgh becomes a center for a flourishing intellectual, scientific, and artistic life.

New Horizons in the Pacific 226

Voyages of exploration bring many scientific and geographical discoveries, and help to extend Britain's imperial horizons.

■ GEORGIAN TRADE 228

Modernizing Agriculture 230

Parliamentary enclosures and landowners seeking increased productivity transform British agriculture.

Inventors and Entrepreneurs 232

Invention and entrepreneurship enable the Industrial Revolution to transform the British landscape, social assumptions, and sense of identity.

The Anti-slavery Movement 234

The campaign to abolish slavery gradually succeeds despite powerful vested interests.

Reaction to the Revolution 236

The British establishment worries that the revolution in France will cross the Channel and undermine its tradition and the rule of law.

Rebellion in Ireland 238

Inspired by the French Revolution, the Irish people rise up against the British, but face defeat.

Napoleonic Wars 240

Britain, with other European countries, attempt to control the vaunting ambition of Napoleon Bonaparte, the "Little Corporal."

■ ADMIRAL NELSON 242

The War of 1812 244

Land and sea battles between the United States and Britain end inconclusively for both sides.

■ BATTLE OF WATERLOO 246

INDUSTRY AND EMPIRE

1815–1914 248

Introduction 250

Timeline 252

The Regency 254

Celebrated for its fashions, art, and architecture the Regency and reign of George IV had political and social repercussions.

■ BRIGHTON PAVILION 256

Steam and Speed 258

In 19th-century Britain, the unquenchable quest for speed creates locomotives and ships that broaden everyone's horizons.

■ ISAMBARD KINGDOM BRUNEL 260

■ ROYAL ALBERT BRIDGE 262

Years of Change 264

The Industrial Revolution brings new ways of working that alter everything from timekeeping and housing to family dynamics and class relations.

The Irish Famine 266

A potato-destroying fungus causes a widespread famine in Ireland, which the authorities do little to alleviate—yet a million people die.

The Triumph of Reform 268

As Britain's economy booms, profound reforms take place to improve the fairness of the way governments are elected and society is run.

■ QUEEN VICTORIA 270

■ THE GREAT EXHIBITION 272

The Crimean War 274

War with Russia dents Britain's self-confidence and questions its competence, while newspapermen have a field day at the front.

Workshop of the World Britain becomes the world's first industrial power, successfully manufacturing a range of goods for international markets.	276	The Suffragettes Parliament's failure to give women voting rights propels them into a campaign of demonstrations and escalating direct action.	308	Irish independence Southern Ireland finally gains independence from Britain as the island is partitioned, with Northern Ireland receiving Home Rule.	332	The Modern Monarchy Queen Elizabeth II's reign is long and stable, yet witnesses great changes in the world and in the country's attitudes to the monarchy.	362
Victorian Values Britain's expanding middle class espouse hard work, progress, self-improvement, and a high moral tone.	278	Trade Unionists and Socialists Political radicals voice the concerns of the working classes, organizing their collective strength.	310	Crisis and Depression Britain experiences the decline of Victorian industries, a general strike, a worldwide depression, financial crisis, and mass unemployment.	334	Retreat from Empire Britain all but ceases to be a colonial power and its Commonwealth is an international organization of limited practical importance.	364
■ VICTORIAN ENTERTAINMENT	280	The Road to War Despite Britain's economic leadership and imperial authority, the rise of German power casts a long shadow of war over the country.	312	■ THE JARROW MARCH	336	■ THE SUEZ CRISIS	366
Cultural Conflict Currents of dissent unsettle British self-confidence, with new cultural, religious, and artistic ideas that challenge the status quo.	282			Life in the Twenties and Thirties Despite the misery of unemployment, many Britons enjoy picture palaces, dance halls, and the wireless, and some even buy homes and cars.	338	The Cold War Britain lives with the risk of nuclear annihilation as it joins America in a Cold War confrontation with the Soviet Union.	368
■ VICTORIAN WORKHOUSE	284			■ DOMESTIC APPLIANCES	340	Never Had it so Good Britons buy houses and splash out on cars, TVs, and other consumer goods as their rising wages bring security and prosperity.	370
Exploring the World British explorers and missionaries venture into many corners of the world, including the dark heart of Africa, the blazing heat of Australia, and the icy poles.	286			Imperial Issues The British Empire reaches its greatest extent, yet it is challenged by a vigorous independence movement in India led by Gandhi.	342	Britain Goes Pop Britain loses its stuffy image in the Swinging Sixties with the flowering of popular culture, fashion and music, stylish art, and loose morals.	372
■ CHARLES DARWIN	288			The Abdication of Edward VIII A constitutional crisis is averted when King Edward VIII abdicates, choosing love and exile over the throne.	344	■ BEATLEMANIA	374
British India Britain gradually takes over of the Indian subcontinent and the Indian Raj becomes the country's jewel in the crown.	290			Slide to War Britain tries to appease Hitler's aggressive Nazi regime, but in the end war becomes inevitable.	346	Conflict in Society Social and political conflicts dominate the 1970s and 1980s as Britain experiences high inflation and rising unemployment.	376
■ INDIAN MUTINY	292			Britain Alone Britain finds itself alone in Europe as it upholds the cause of freedom and survives through epic endurance, loyally supported by its Commonwealth.	348	Troubles in Northern Ireland IRA terror and the presence of British troops on the streets of Ulster fuels a bitter sectarianism and a collapse of law and order.	378
Dominions and Emigrants The white colonies in Canada, New Zealand, and Australia develop as self-governing dominions, attracting many emigrants from Britain.	294			■ WINSTON CHURCHILL	350	Turn to the Right Party politics assumes a more right-wing identity in Thatcher's Britain as wealth and enterprise replace the belief in solidarity and security.	380
Imperialist Muscle Britain's bellicose imperialism triggers wars against the Chinese, Zulu, and Ashanti.	296			■ THE BLITZ	352	■ MARGARET THATCHER	382
■ RAILWAY STATION	298			Life in Wartime Britain During the war, Britons endure rationing, air raids, flying bombs, American GIs, evacuation, and an all-controlling government.	354	Wars in Peacetime Britain defends the Falklands, British aircraft bomb Serbia, and the country's forces join the United States in waging wars in Afghanistan and Iraq.	384
Irish Home Rule As Parnell and Gladstone try to get Home Rule legislation through Parliament, the Fenians and Invincibles resort to terrorism.	300			■ THE BATTLE OF BRITAIN	356	Facing the Future Globalization, Europe, and financial meltdown are key concerns in Britain's future.	386
The Boer War South Africa plunges into a bitter guerrilla war in which a much-relieved Britain defeats the Boers.	302			An Allied Victory Britain's alliance with the United States and the Soviet Union triumphs over Germany and Japan, but the war exhausts the nation's resources.	358	Monarchs and Rulers	388
The Edwardian Age A brief age of extravagance and elegance witnesses a range of modern novelties, from motorcars and tabloid newspapers to airplanes and cinemas.	304			The Postwar Years In 1945 the newly elected Labour government starts to rebuild a country devastated by war and creates a welfare state.	360	Index and Acknowledgments	390
■ SINKING OF THE TITANIC	306						

MODERN TIMES 1914–present

Introduction

Timeline

Britain Enters the Great War

The war that would be "over by Christmas" becomes a terrifying stalemate of pointless trench warfare and a merciless war of attrition.

Victory through Slaughter

With patriotism, courage, and stoical endurance, troops from Britain and its allies finally triumph over their German foes, but victory comes at the cost of almost a million lives.

■ FIRST DAY OF THE SOMME

The Home Front

Propaganda and censorship force British citizens to support the war, yet the social solidarity helps to make the country more democratic.

■ WAR GRAVES

Peace and After

The enormous human cost of victory and the difficult path to a durable peace casts a long shadow over the disillusioned people of Britain.

1

BRITONS AND INVADERS

Up to 1066

The islands of Britain witnessed wave after wave of settlements and invasions that brought wealth, faith, and conflict, while helping to shape the flourishing arts, languages, and destinies of the peoples of England, Wales, Scotland, and Ireland.

Sutton Hoo belt buckle

This gold belt buckle was among the many treasures that accompanied the man who was buried in the Anglo-Saxon ship found at Sutton Hoo. Writhing snakes and bird's heads with curved beaks adorn the buckle, its hollow interior a place to safely store a relic.

Callanish stone circle

The stone monuments at sites such as Callanish, on Lewis, in Scotland, Stonehenge and Avebury, in England, and Newgrange, in Ireland, are among the most evocative human remains from any era of human habitation of the British Isles.

age from around 3000 BCE, when stone monuments appeared throughout Britain and Ireland. Political entities did exist, but their development is hard to trace. It is only from immediately preceding the first Roman invasion of Britain in 55 BCE that we begin to know names: Cassivellanus, Caratacus, and Boudica, native British leaders in the struggle against the Romans.

New identities

The separate destinies of England, Scotland, and Ireland now became apparent. Ireland was never invaded by the Romans, and its Iron Age chieftains developed a political culture untainted by imperial rule. The final limit of the Roman province of Britannia, at Hadrian's Wall (built around 120 CE), marked out a southern entity that would broadly develop into England and Wales, and a northern one that would ultimately become Scotland. Roman Britain lasted 367 years until 410 CE, and gave the area a long period of peace and prosperity not known until early modern times. Yet its ending heralded a troubled time, particularly for England, as successive invaders swept through the south. In the 5th century CE, Anglo-Saxons arrived from northwestern Europe. They gradually progressed westward and

»» First arrivals

About 800,000 years ago, the first human ancestors reached the British Isles from continental Europe. In 1066, their descendants once more encountered European migrants, in the shape of the Norman conquerors of England. Over the intervening vast span of time, all parts of the isles of Britain and Ireland were settled, with Norfolk in England showing the first scant evidence, Scotland being reached around 14,000 years ago, and Ireland about 7000 BCE. When agriculture arrived, in about 4000 BCE, people began to modify the landscape in ways which can be recognized today. Ards (primitive plows) scarred the land and great earthworks and causeways were constructed, culminating in a fully fledged megalithic

northward, expunging many residual elements of Roman culture, and supplanting England's Celtic (and Latin) with a Germanic dialect. The Anglo-Saxon invasions divided southern Britain between a Germanic east and a Celtic west, ultimately creating Wales—a western haven that remained largely unconquered and was ruled by the descendants of the displaced Britons. Christianity joined these two halves (and Ireland and Scotland too) in a common faith from the 6th century CE, while petty kingdoms in each of these realms began to coalesce into something larger. Viking invasions from Scandinavia from the late 8th century CE, decided, by a process of elimination of their weaker opponents, who would inherit the isles.

End of the beginning

England's survivor was the kingdom of Wessex, which merely endured under Alfred the Great, but expanded in the 10th century CE under his successors, until Athelstan in the 920s CE could call himself, with some justification, "king of the English and ruler of all Britain." In Scotland, the Dal Riata ruler Kenneth macAlpin conquered the Picts in 842 CE to create the kingdom of Alba, the forerunner of Scotland. In Wales, the struggle against the Vikings threw up rulers such as

Rhodri Mawr and Hywel Dda, who briefly united the country. Only Ireland remained disunited, with no one kingdom able to establish anything but the most fleeting hegemony. England suffered another brief period of foreign rule by the Danes from 1016 to 1042, but by 1066 it possessed an increasingly sophisticated royal administration, and produced works of literature and art that came close to matching its longer-established European rivals, such as France. In Scotland, Wales, and Ireland, royal rule was much less secure, with government still more closely resembling that of migration-age chieftainships.

The British Isles were about to be changed forever. England and Wales sooner, Scotland and Ireland later, but all profoundly, would be shaped by the Norman invasion of 1066. 

End of an era

The Bayeux Tapestry commemorates the end of Anglo-Saxon England in 1066. It also marks the moment when the Normans, themselves descended from the Vikings, became the last successful invaders of England.

BRITONS AND INVADERS

800,000 BCE–1066 CE

800,000–54 BCE		53 BCE–250 CE		250–448	
	<p>3000 BCE First stage of Stonehenge is built.</p> <p>2400 BCE Beaker-style pottery appears in Britain, a style possibly imported from Iberia.</p> <p>« Paleolithic stone tool</p>		<p>139–143 Frontier of Roman Britain moves north to new line of Antonine Wall from Firth of Forth to the Clyde.</p> <p>C.160 Pull-back from Antonine Wall to Hadrian's Wall begins.</p>		<p>396 Roman general Stilicho visits Britain to restore order.</p> <p>« Mildenhall treasure</p>
<p>800,000 BCE Flint tools in Suffolk are the first signs of human habitation in Britain.</p> <p>40,000 BCE Modern humans arrive in Britain across a land bridge from Europe.</p>	<p>2100 BCE Knowledge of bronze-working arrives in Britain.</p> <p>700 BCE Iron begins to come into regular use in Britain.</p>  <p>« The Battersea shield</p>	<p>« Roman Emperor Claudius conquering Britannia</p> <p>10–40 CE Cunobelinus, king of the Catuvellauni, builds a powerful kingdom in southern England.</p> <p>43 Emperor Claudius dispatches invasion force to Britain under Aulus Plautius.</p>		<p>260–74 Britain forms part of the Gallic empire of Postumus and his successors.</p> <p>260–330 Building of the Saxon Shore forts (coastal defensive line between Solent and Wash).</p>	<p>407 Constantine III chosen as emperor by the British army; he removes most of the troops to Gaul.</p>
<p>4000 BCE Neolithic Age begins in Britain as agriculture arrives from Europe.</p> <p>3800 BCE Earliest megalithic monuments are built; also earthwork enclosures and causeways.</p>		<p>51 Caractacus in captivity after Queen Cartimandua gives him to the Romans.</p> <p>60–61 Boudica leads revolt of the Iceni; Londinium (London), Verulamium (St. Albans), and Camulodunum (Colchester) burnt before the uprising is suppressed.</p>		<p>286 Revolt of Carausius, who declares independent British empire.</p> <p>C.312 Roman provinces divided into two again, so that Britannia now has four provinces.</p>	<p>410 British leaders rise up and expel remaining Roman officials from the towns.</p> <p>432 St. Patrick arrives in Ireland to begin his mission there.</p>
<p>3100 BCE The first henge monuments are built.</p> <p>3000–2500 BCE Stone village at Skara Brae in the Orkneys, Scotland, is built.</p> <p>« Stone house at Skara Brae</p>	<p>« The Battersea shield</p> <p>400 BCE "Developed" hill-forts appear, with more complex defenses.</p> <p>55 AND 54 BCE Roman general Julius Caesar mounts two invasions of Britain.</p>	<p>74–78 Roman conquest of most of Wales carried out by Julius Frontinus.</p> <p>78–83 Campaigns of Agricola in Scotland end with defeat of Caledonians at Mons Graupius.</p>	<p>« Roman helmet</p> <p>208–211 Campaigns of Septimius Severus in Scotland; on his death, new emperor Caracalla terminates the war.</p> <p>213 Roman province of Britannia becomes Britannia Superior and Britannia Inferior.</p>

BEFORE

From around 1 million years ago, the Earth experienced extreme cooling. Ice caps advanced to and from the poles in periods known as glacials. This was the Ice Age.

GLACIALS AND INTERGLACIALS

Britain's last three glacial periods (the Anglian, Wolstonian, and Devensian) were divided by two warmer interglacial periods (the Hoxnian and Ipswichian). The last ice sheet retreated around 10,000 BCE, but today is probably an interglacial (the Flandrian), and glaciers may one day return.

Neanderthal skull

Neanderthals had protruding brow ridges, big teeth, and wide nasal cavities, which may have helped warm the air when breathing.

During the glacial periods of the Ice Age, when much of the Earth's water was locked up in polar ice and average sea levels fell, Britain was joined to the main European landmass and was not a separate island. It is not clear precisely when humans first took advantage of this land bridge and arrived in Britain, but they certainly did so before the Anglian glaciation, which began around 470,000 years ago. Flint tools found at Happisburgh, Norfolk, may date from around 900,000 to 800,000 years ago, and throughout the rest of southern England there is a scattering of other sites where flint hand-axes have been unearthed.

The largest such site is Boxgrove, in West Sussex, dating from around 500,000 years ago, where evidence of both tool-making and the butchering of animals such as deer, bison, and rhinoceros has been found. The inhabitants of Boxgrove belonged to a hominin (human-like species) group known as *Homo heidelbergensis*. They lived as hunters and scavengers in small groups across the southern part of England.

Around 470,000 years ago, one of the coldest phases of the Ice Age began—the Anglian glacial. The ice sheets advanced as far south as Bristol, the Cotswolds, and the Thames Valley. As far as is known, Britain was uninhabited at this time. Only in the succeeding Hoxnian interglacial (425,000 to 360,000 years ago) did humans return to Britain.

Tools and hand-axes

Finds from the Hoxnian are far more plentiful than those in the pre-Anglian period, and belong to two different groups, distinguished by the types of tools they made. The Clactonian culture is characterized by flint flake tools, made by striking a core of flint with a hammer stone. The people of the Acheulian culture made hand-axes of many shapes and sizes, as well as stone scrapers and knives. The best-known Clactonian site is at Swanscombe, Kent, where the inhabitants hunted elephants, deer, horse, and rhinoceros. At Hoxne, in Suffolk, a quantity of Acheulian

hand-axes made of black flint has been excavated. Evidence of deforestation may indicate early peoples deliberately burnt off forest to encourage the growth of scrub, which would be an attractive habitat for the animals they wished to hunt.

Neanderthals in Britain

Relatively few sites of the Wolstonian glacial era (360,000 to 130,000 years ago) are known, but one of them, dating from around 200,000 years ago,

PALEOLITHIC The name given to the Old Stone Age period, or the first period of tool making, lasting from before 1 million years ago to about 10,000 years ago. It covers about 99 percent of the time that humans have used technology.

is at Pontnewydd Cave, in Flintshire. It contained bones of an early form of a new species, known as Neanderthal, or *Homo sapiens neanderthalensis*. The Neanderthals were thicker set and more

Britain's First People

Human-like species arrived on the British Isles around 800,000 BCE, but periods of abandonment followed as ice alternately advanced and retreated across the landscape of the islands. Modern humans finally colonized Britain about 15,000 years ago.

Ice Age landscape

The maximum glacial advance covered Britain as far south as the River Thames. Even to the south of this, a tundra-like landscape prevailed in which only small groups of hunters would have been able to survive the harsh living conditions.

heavily built than contemporary humans, with prominent brow ridges and an average brain size larger than their modern counterparts. They were also capable of some cultural sophistication. For example, in the Middle East, Neanderthal burials have been found where the bodies were deposited with grave goods and daubed with red ochre, indicating a sense of care for their dead.

Neanderthals replaced

Warmer temperatures saw rising sea levels cut off the land bridge with continental Europe during the Ipswichian interglacial, from 130,000 to 115,000 BCE. Britain was recolonized once more

Hand-axes and flint tools

For thousands of years, hand-axes were the main tool used by humans. Attaching a stone head to a shaft was a later development.

by Neanderthals during the early Devensian glacial period. Their tools included flint points that may have been used on spearheads to hunt the plentiful game—including mammoth—which roamed southern England at the time.

99 The percentage of time during the total period of human habitation in the British Isles in which nomadic hunting and gathering, rather than agriculture in fixed settlements, was the main means of subsistence.

The Neanderthals lived as hunter-gatherers in small groups, which probably ranged over large territories. However, no evidence has been found of them living in the north or west of Britain, and the earliest sign of any human settlement in Ireland is as late as 7000 BCE, a long time after the Neanderthals had been supplanted by *Homo sapiens sapiens*, the first modern sub-species of human.

After the arrival of modern humans, the climate cooled and the ice sheets advanced southward and covered much of Britain, forcing people to leave the region and leaving the island uninhabited.

MODERN HUMANS ARRIVE

Modern humans arrived in Britain a little after 40,000 BCE, having crossed the land bridge with Europe. Only about 20 or so sites of this mid-Devensian era are known; many of them seem to have been temporary camps or shelters used by bands of hunters. They show some technological advances, with hand-axes being replaced by more specialist tools, such as “leaf-point” blades and scrapers. One of the most spectacular sites—dating from around 31,000 BCE—is the “Red Lady of Paviland” burial, found in Goat’s Cave, on the Gower Peninsula, near Swansea. The deceased, who was in fact a man, was 5ft 9in (1.75m) tall, his bones sprinkled with red ochre and set in a shallow grave, with around 50 mammoth ivory rods, ivory bracelets, and perforated seashells.

ENDINGS AND BEGINNINGS

Around 25,000 BCE, the climate cooled dramatically once more and the ice sheets advanced as far south as the Bristol Channel. It appears that Britain became uninhabited during this Late Devensian Discontinuity, which lasted some 10,000 years. Around 15,000 BCE, the climate warmed again and the ice sheets began to melt; sea levels rose and the reshaping of the coastlines of northwestern Europe to something like their modern appearance began with the creation of the North Sea. About 13,000 BCE, groups of mammoth-hunters returned, followed 1,000 years later by neolithic elk- and deer-hunters, whose DNA indicates they may have originated in northern France or Spain. After a false start, the continuous occupation of Britain began 16–17 >>.

NEOLITHIC CAUSEWAY, WILTSHIRE

Mammoth carving

The earliest known examples of British art, such as wall paintings and engraved bones from Creswell Crags, in Derbyshire, show links with the Magdalenian cave art of France, a tradition that produced this mammoth-shaped spear thrower in around 10,500 BCE.

Stone Age Britain

The arrival of agriculture allowed communities to live a more settled life. Fixed villages were established and great stone monuments, or megaliths, were erected as tombs or for other complex ritual purposes. By the end of the Neolithic Age, in around 2400 BCE, parts of Britain were densely inhabited by a farming folk whose chieftains were able to accumulate great material wealth.

Agriculture arrived in Britain around 4000 BCE, marking the start of the Neolithic Age, or the New Stone Age. Knowledge of agricultural techniques seems to have been acquired from groups of people arriving from continental Europe. Settlements from as far back as the early 4th millennium BCE show signs of the cultivation of emmer and einkorn, which are early forms of wheat, as well as some barley. They also show the bones of domesticated animals such as cattle, pigs, and sheep, providing clear evidence that an agricultural way of life was being established at this time.

Early farming sites were principally single, isolated farmsteads, although larger, timber-framed longhouses up to 88ft (27m) in length have been found.

BEFORE

The resettlement of Britain around 13,000 BCE, proceeded from south to north, followed by almost 10,000 years of gradual cultural development before agriculture started.

FROM ART TO BOATS

The first **evidence of art** in Britain, such as a rib bone inscribed with a horse, found in Robin Hood's Cave, in Derbyshire, comes from the Creswellian culture around 12,000 BCE. With warmer temperatures after 10,000 BCE, new **hunting techniques** developed and bows and arrows became widespread. At Star Carr, Yorkshire, more than 200 barbed antler points were found, as was a wooden paddle, indicating the **use of boats**.

SETTLEMENT IN IRELAND

Ireland was **first settled** around 7000 BCE, as is indicated by Mesolithic tool finds in the valley of the River Bann. The land passage between Britain and continental Europe had finally been flooded by this time, **transforming Britain into an island**.

**PALEOLITHIC
STONE TOOL**

In some of these carbonized grains have been unearthed. Although evidence of plowing (with a simple ard or scratch plow) has been found near Avebury, Wiltshire, in southern England, from around 3900 BCE, early farmers at this time probably still supplemented their diet from hunting and gathering. Also, rather than go to the extent of actually clearing large areas of woodlands for cultivation, they may have used glades, or areas already thinned out by cattle grazing, for planting crops.

Stone continued to be the most sought-after material for making tools, and flint mines from the period have been found at Cissbury, West Sussex, from around 4000 BCE. Here, shafts as deep as 49ft (15m) were sunk in the search for the best seams of flint, largely using antler picks and ox-bone shovels.

Large-scale monuments

As society became more settled, Neolithic people began large-scale constructions, which required enormous effort in moving huge quantities of earth and clearing extensive woodlands. Among the earliest of the monuments constructed, around 3800 BCE, are large earthwork enclosures (often called "causewayed camps"). More than 100 of these enclosures have been identified and they may have been used as sites for festivals or religious ceremonies.

At Carn Brea, Cornwall, a huge stone wall 6ft 6in (2m) high erected about 3700 BCE enclosed an area exceeding 1 hectare (2.5 acres) in size may have housed as many as 200 people living inside. Many of the causewayed camps remained in use for centuries—the later Iron Age hillfort at Maiden Castle, Dorset, was built on top of a 4th-millennium BCE camp.

Neolithic people erected the first stone monuments for the dead at around the same time. At first, these were simple settings of stone, but later more complex portal dolmens, or

Neolithic pottery

Neolithic cultures are often named after the principal types of pottery found in graves or settlements, but this does not mean that the users of different sorts of pottery belonged to different ethnic groups.

single-chamber megalithic tombs, were built using several stones to form a passage. By around 3500 BCE, a wide variety of burial monuments were in use, including simple round barrows (or earth mounds), long barrows (some of which had chambers inside and could measure up to 328ft/100m in length, as at West Kennet, Wiltshire), and passage graves (in which an internal stone chamber in the mound was connected by a passage to the outside). The latter type was particularly prevalent in Ireland, where the covering circular mounds were up to 280ft (85m) in diameter.

By about 3400 BCE, even more elaborate monuments, known as long mounds and cursuses (long enclosures

created by boundary ditches) were being built. The cursus that was built at Dorchester-on-Thames, Oxfordshire, is 1 mile (1.6km) long. The society that produced these monuments was prosperous, but life was hard; diseases were rife, with tooth decay and arthritis being particularly widespread, and average age at death was about 30

years. The average height (for males, about 5ft 3in–5ft 11in/1.6m–1.8m) was probably only a little shorter than that of today's adults. There is evidence of early conflict; a few graves contain burials of people who had clearly been killed by arrows, while at Crickley Hill, in Gloucestershire, hundreds of flint arrowheads seem to indicate that the camp was stormed by a hostile force and was then burned. Beside the River Thames, at Chelsea, a number of wooden clubs have been found dating to around 3500 BCE, which were also probably weapons for use in battle. The total population of the British Isles around 3000 BCE may have

Newgrange passage tomb

The passage tomb at Newgrange, in Meath, Ireland, was built around 3200 BCE. Its inner chamber was illuminated by light from the rising sun during the winter solstice. Several stones were decorated with spirals.

been as high as 200,000, which is dense enough to mean that competition over scarce resources might often turn violent and descend into warfare.

Complex means of exchange were developed to keep communities supplied with goods that they could not produce themselves. Evidence for this includes wooden trackways that have been found in marshy areas; the "Sweet Track" in Somerset crosses 1.2 miles (2km) of marshes and dates from around 3800 BCE. Across these wooden trackways, goods such as

The mid-3rd millennium BCE saw the beginning of profound changes in Britain with the arrival of new types of pottery, indicating strong cultural ties with Europe.

THE BEAKER PEOPLE

From around 2400 BCE, a new type of pottery vessel appeared in Britain. They were known as Bell Beakers from their characteristic bulb-shaped bowl and upward curve. In Ireland, these are found in the earliest copper mines and are associated with a type of wedge-shaped tomb. In Britain, they were much more widespread, especially in coastal areas. The dispersion of Beakers across the Atlantic coast of Europe suggests an Iberian origin. Beaker burials were often inhumations (as opposed to cremations), one of the most lavish being the “Amesbury Archer” at Stonehenge, who died around 2300 BCE. His grave goods included Beakers and copper knives, while analysis of his teeth revealed that he had grown up in Alpine Europe, possibly Switzerland.

RELIGION

Although gold sun disks of the type common in central Europe have not been found in Britain, the consistently circular shape of the great stone monuments of the later 3rd millennium BCE indicates an interest in the sun, with the circular shape possibly symbolizing the sun’s course through the sky. Older monuments, such as Avebury and Stonehenge, were embellished by the people of the Beaker Culture; Stonehenge was completely remodeled with the erection of massive trilithons (two upright stones with one laid across on top).

Skara Brae

The Neolithic village at Skara Brae, on Orkney’s mainland, was built to a surprisingly uniform pattern. Each of the dozen or so houses had a central hearth, stone beds on each side of the entrance, and stone boxes on the floor, possibly used to contain water.

grindstones, flint axes, and fine pottery (often with very distant origins) would have traveled; axes from as far away as Scandinavia and the Italian Alps have been found.

Radical changes

Around 3200 BCE society seems to have undergone radical changes. The older style of

burial monuments fell out of favor and many of the long barrows and passage graves were blocked up. Around 3000 BCE a distinctive type of pottery known as Grooved Ware emerged. Grooved Ware was characterized by pots with incised spirals, lozenges, and wavy lines. Originating in northern Britain, the best preserved early settlement of the culture that developed this type of pottery is found at Skara Brae, on the Orkneys, Scotland. Here, a partly underground village of about a dozen houses was built between 3000 and 2500 BCE. Similar clustered villages made of wood have been found as far south as Wiltshire.

Other new types of monuments begin to appear at this time, including circles of wooden posts, such as at Seahenge, Norfolk, and large enclosures, such as the first stage of Stonehenge, in Wiltshire, built around 2950 BCE. Circular enclosures bordered by a ditched bank (the classic henge monuments) were also first built, ranging in size up to the colossal example at Avebury, Wiltshire, which has a diameter of 1,148ft (350m).

Passage graves seem to have spread from Ireland to parts of Britain, such as north Wales. In a localized variant of this in the Orkneys, such as at Maes Howe, built in about 2750 BCE, the mound of the passage grave was actually built within the stones of an earlier henge monument. The exact purpose of the larger monuments is still unclear, but they may have had an astrological significance, with stones being lined up in the direction of the sun at key moments, such as the summer and winter solstices.

Central authority

The resources required to build the larger henge enclosures were prodigious; the construction of a large timber building within the South Circle,

at Durrington Walls, near Stonehenge, required the clearing of 8.6 acres (3.5 hectares) of woodland. This implies that there were chieftains, or some other local form of powerful central authority, to command and coordinate the local population in the planning and erection of such extravagant monuments. Grave goods, which become increasingly elaborate after this period, with the inclusion of lavish jewelry in many burials, go some way in supporting this idea. It all adds up to a picture of Britain and Ireland in 2500 BCE, at the end of the Neolithic Age, in which the landscape was far more marked and shaped by human endeavors than it had been at its start. Where once there had been small groups of hunter-gatherers, now there were clustered villages of stone dwellings, extensive forest clearances, plowed fields, and elaborate monuments of banked earth and stone, all overseen by powerful political structures.

Henge monument, Avebury

Like many British Neolithic monuments, Avebury was constructed in stages: the North and South Circles were built around 2800 BCE, the Outer Circle around 2600 BCE, and the two avenues were built about 200 years later.

18 MILLION The estimated man-hours needed to construct the Neolithic mound at Silbury Hill, Wiltshire.

Stonehenge

The famous monument at Stonehenge is part of a larger sacred landscape which developed from around 4000 BCE and includes hundreds of burial mounds. The site that is seen today was built from around 2150 BCE using at least 85 stones from the Preseli Hills in Wales, more than 135 miles (217km) away. Other stones came from the Marlborough Downs nearby.

Iron Age Britain

The Iron Age, which began around 800 BCE, witnessed a gradual political consolidation. The warrior elites dominated the countryside from their hillfort strongholds. They also maintained strong links with their European counterparts, which ultimately proved to be their undoing.

As the Iron Age began in Britain, many areas saw a rise in the number of defended enclosures. The population was increasing and early chiefdoms were coalescing into larger political units. As this process continued, hillforts began to appear, particularly across southern, central, and western England, as well as in north Wales and the Welsh borders. Often with simple ramparts reinforced with timber and a single line of defenses, hillforts such as Danebury, Hampshire, and Maiden Castle, Dorset, probably acted as the residences of local kings or chieftains. From around

650 BCE to 300 BCE, more than 3,000 hillforts were built. The society that was shaped by these new centers of population has conventionally been termed “Celtic.” The term was first used by Greek writers, such as Herodotus, in the 6th century BCE to describe the barbarian groups living on the fringes of the Greek world. Certainly, people of the cultures later termed by archaeologists as La Tène and Hallstatt—who were Celtic speakers—spread from a central European homeland into France, the middle Danube, and Asia Minor. They even threatened to capture Rome in 390 BCE. Yet, “Celt” was not a term that the people of Britain used to describe themselves; nor did the Romans who encountered them in the 1st century BCE refer to them as Celts. The traditional theory that large-scale migration or invasion from Europe brought a Celtic hillfort society into Britain has been modified in favor of the view that it was a process of assimilation, rather than conquest, which led

Bronze torc

Torcs (neck rings) were worn largely by men and were usually meant for ceremonial use. While the rich wore gold torcs, poorer men had to make do with bronze ones.

BEFORE

Tin mining in Cornwall contributed to the introduction of bronze—an alloy of tin and copper—to Britain around 2200 BCE, and ironworking arrived from Europe in 1000 BCE.

ARRIVAL OF IRON-WORKING

Funeral monuments became less grand, with barrows beginning to be replaced from 1500 BCE by cemeteries containing cremations, often in urns. Society became **more stratified**, with an increase in rich personal ornaments such as arm-rings and spiral torcs of gold, together with new weapons, such as swords and shields, around 1300 BCE. **Trade between Britain and Europe** grew stronger. Around 1000 BCE **knowledge of iron-working** also crossed over from Europe, but the British Isles did not really use iron extensively until 800 BCE.

7 The area in square miles (19 square kilometers) enclosed behind the defensive earthworks of the Iron Age settlement at Colchester.

the elites of Iron Age Britain to adopt many of the same political and cultural practices that were found in mainland Europe.

Hillforts and fields

From around 400 BCE, many of the earlier Iron Age hillforts were abandoned, but others were rebuilt and developed in more sophisticated fashion. These more complex structures tended to exploit natural features to enhance their defenses, and they often had more substantial ramparts.

The Battersea Shield

This 1st-century CE bronze shield may have been deposited in the River Thames as a ritual offering. It is decorated with spirals in the La Tène style and is inlaid with red glass, which may have been imported from Italy.

Developed hillforts could be very large, covering areas of up to 25 acres (10 hectares). Evidence of storage pits and dwellings at some, including Danebury, suggests that they were permanently occupied and not just used as refuges in times of danger. The huge resources necessary to build and maintain such structures indicate that in this phase of the Iron Age, kings and chieftains exercised great power, although the presence of a large number of hillforts points to the territories that they ruled over being quite small. Not everyone lived in hillforts, though, and other smaller enclosures and open settlements have been found in their vicinity. In eastern England and East Anglia very few hillforts have been identified, and on the Atlantic fringes of Britain, fortified

Horned helmet

This bronze helmet found in the River Thames near Waterloo Bridge dates from the late 1st century BCE. It may well have been made specifically as a votive object, rather than for wearing on the battlefield.

to the tin required for making bronze, aided this spread, and iron axeheads, spears, and tools become more common in archaeological finds dating from around 700 BCE onward.

The appearance of iron weapons and the number of hillforts has been taken by archaeologists to mean that Iron Age Britain was dominated by the warrior elite, who engaged in frequent minor warfare and raiding. Scattered finds of weapons, and evidence of burning or

Shield, with stylized birds in the central roundel, showed a love of curves and flowing lines, which were essential features of Celtic art of this time.

Trade and grave goods

The Iron Age elites also took advantage of increasing trade connections with continental Europe, particularly with regard to luxury goods, which included amber, glass, and coral. The main avenues of trade were across the English Channel to northern Europe and along the Atlantic coastlines as far as Iberia. It is also from this time that the first written accounts of Britain appear, including those by the Greek adventurer, Pytheas of Massilia (Marseilles). He visited the islands in around 320 BCE and called them Prettania, a name which, modified into Britannia and then Britain, has survived to this day.

Iron Age burials were often surprisingly modest; from around 800 BCE barrows went out of fashion. In some areas, such as Yorkshire, the corpse was placed with the body flexed (the legs bent) and with comparatively few grave goods. Some richer graves included iron swords and spears for the men and jewelry for the women, while a few spectacular graves of the 3rd century BCE contained the remains of chariots. Elsewhere, the normal mode of disposal was excarnation (either leaving the body to be scavenged by wild animals or removing the flesh before burial). By around 200 BCE, the

As the 2nd century BCE progressed, centers even larger than hillforts began to be built, mirroring developments in Europe. At the same time, international trade in Britain also increased.

THE DEVELOPMENT OF OPPIDA

Larger centers, called *oppida*, from the Latin word for “town”, were defended by complex earthworks. Some had their own mints for the production of coins. Their **permanent populations**, however, may not have been large and they occupied a middle ground between hillforts and true towns. The largest *oppida* at Colchester was a royal center and would later become an important town in the **Roman province 28–29** >>>

INTERNATIONAL TRADE

After a hiatus in trade with Europe between 300 BCE and 150 BCE, **new ports were built** in the south of England, including Hengistbury Head and Poole Harbour in Dorset. **Imported goods** including Mediterranean glass, Italian wine, and bronze vessels came through them.

BRONZE DAGGER SHEATH

“The island is **thickly populated** and it is **extremely cold.**”

DIODORUS SICULUS, *LIBRARY OF WORLD HISTORY*, 1ST CENTURY BCE

homesteads rather than hillforts made up the main defensive structures.

The division of the land into fields continued through this period and, although there were variations in different parts of Britain, most people derived their sustenance from barley, spelt, or emmer wheat, with cattle providing the bulk of the meat that was consumed. Surprisingly, even in river and coastal areas, fish played a comparatively small role in the British Iron Age diet.

The spread of iron-working

Although the techniques of iron-working had reached Britain by about 1000 BCE, it was only around 800 BCE that the metal really came to be more widely used. The greater availability of iron ore compared

destruction at sites such as Danebury, together with the later evidence of writers at the time of the Roman invasions of Britain in the 1st century BCE and 1st century CE, tend to confirm this impression. Finds of large cauldrons and cauldron chains at hillfort sites are also suggestive of a society that placed value on feasting, possibly for ritualistic reasons, but also to establish the primacy of the king or chieftain, the feast-giver. In their weaponry too, the Iron Age warriors showed their love of display. Swords of the 3rd century BCE (the weapon had fallen out of fashion in the preceding centuries) showed lavish adornment and intricate curvilinear designs. Much of the decoration shows evidence of the influence of the La Tène cultures of northern Europe. These and the intricate ornamentation on finds, such as the Battersea Shield and the Witham

Iron Age broch

From the 6th century BCE, large roundhouse towers known as brochs began to appear in the Scottish Isles. They were part residence and part fort. This one at Mousa in the Shetlands is more than 66ft (20m) high.

population of Britain had probably reached around 2 million, with the landscape studded with larger settlements, including hillforts that might contain a population of 200 or more. Britain's comparative political isolation would soon, however, come to an end, as its growing wealth and overseas trade contacts made it an attractive asset to a potential invader.

Caesar's Invasion

In 55 and 54 BCE Julius Caesar mounted two expeditions against Britain. Although he met with only limited success and did not establish a permanent Roman presence on the British Isles, he did establish treaty relations with many British tribes and drew Britain into the orbit of Roman political ambitions.

An anti-Roman revolt by the Veneti of Armorica (in modern Brittany) in 56 BCE, which probably received some support from Britain, led Julius Caesar to turn his attention northward. To enter Britain, an island that lay impossibly far off, beyond “the bounds of ocean”, would have brought him immense prestige. However, political difficulties delayed his invasion plans for a year. Finally, in 55 BCE, Caesar prepared to cross the Channel with a small expeditionary force. His principal opponent was to be Cassivellaunus, who was probably king of the Catuvellauni, a tribe that had been expanding from its base

Roman sword

Roman soldiers were exceptionally able infantry fighters. They used the gladius (a short sword), to thrust upward at close quarters and inflict terrible wounds on their enemies.

at Wheathampstead in Hertfordshire to dominate much of southern England.

Preparation

Caesar received envoys from a number of other British tribes who were eager to show their submission and thus avoid having their lands invaded. He also despatched a small reconnaissance force under the tribune (a senior military officer), Volusenus, to scout out suitable landing beaches. In addition, he sent out a diplomatic mission under the Gallic chieftain Commius to further rally pro-Roman opinion. Unfortunately, though, both failed—Volusenus was unable to locate a sheltered harbor for the Roman fleet and Commius was promptly arrested. On August 26, Caesar set sail with

a force composed of two legions—the Seventh and Tenth. The cliffs and beaches around Dover were occupied by British defenders and the Roman ships were forced to run aground somewhere near Deal in Kent. The legionaries had to disembark in relatively deep waters under a constant hail of missiles. Although the legions managed to establish a beachhead, disaster struck four days later when a severe storm scattered the ships that had been bringing more than 500 cavalry as reinforcements, and also badly damaged many of the landing craft. Deprived of cavalry support, Caesar was vulnerable, and after the

Seventh Legion was severely mauled in an ambush, he chose to declare the expedition a success and returned to Gaul accompanied by a number of British hostages.

A new expedition

Preparations were soon underway for a new expedition. Caesar had learnt lessons from the comparative failure of his first incursion into Britain. This time he decided to bring five legions—amounting to more than 30,000 men—and some 2,000 cavalry. The latter were a critical component in countering the battle tactics of the Britons who, unlike their counterparts in mainland Europe, still used chariots in battle to harass infantry units, which lacked mounted support.

On July 6, 54 BCE, Caesar set off for Britain once more. His flotilla of 800 ships landed near Deal, this time unopposed, apparently because the Britons were so intimidated by the size of the force that they chose not to resist it. Once more, however, the Roman fleet was battered by a serious storm and the 10 days delay in building a

800 The approximate number of boats in the fleet that carried the invading Roman army to Britain in 54 BCE. Of these, 28 were warships and most of the rest were troop transports.

rampart extensive enough to allow the remnants of their naval force to be beached, emboldened the Britons. They were then able to offer a more effective defense under the leadership of Cassivellaunus.

The Romans won a series of engagements. They captured a hillfort at Bigbury near Canterbury, overcame an attempt at entrapping a

Roman foraging force, and then pushed on toward the Thames. Diplomatic pressure also began to tell now, as Caesar had with him one of Cassivellaunus's arch-enemies, Mandubracius of the Trinovantes. Some British chieftains who were afraid that Cassivellaunus might use success against Caesar to increase his own power also began to waver in their support for the

campaign against the Romans. The capture of Cassivellaunus's chief stronghold—probably the *oppidum* at Wheathampstead—led to a desperate attempt to stir the Kentish tribes into a final uprising against Caesar. It was to no avail and Cassivellaunus sued for

Caesar's coin

Julius Caesar is shown on this gold aureus wearing the laurel wreath of a victorious general. The coin commemorates his conquest of Gaul.

“... Britons dye themselves with woad... and as a result their appearance in battle is all the more daunting.”

JULIUS CAESAR, *THE GALlic WARS*, c.47 BCE

BEFORE

UFFINGTON WHITE HORSE

The inhabitants of southern Britain had long-standing relations with the tribes across the Channel. Through them, they would have heard of the northward progress of the Roman army.

PRE-ROMAN BRITAIN

The landscape of Iron and Bronze Age Britain was littered with sites of ritual importance, which the Romans would encounter after their invasion. The White Horse at Uffington, in Oxfordshire, is one such site. It may be 3000 years old and have been part of a ceremonial complex.

CONQUERING GAUL

Julius Caesar conquered much of Gaul (modern France) between 58 and 52 BCE. He was able to derive political advantage from British exiles who sought his protection, such as Mandubracius, of the Trinovantes tribe, who was sent to him on his second invasion of Britain.

Britain's invader

Julius Caesar had far less success as a politician than as a military commander. In this sculpture, which stands in Rome, he is making a gesture of peace.

peace. Caesar readily accepted, as he had already decided not to overwinter in Britain, fearing that a revolt might break out in Gaul during his absence. He accepted British hostages and fixed a tribute to be paid by Cassivellaunus

plans to invade Britain at least twice, in 34 BCE and 26 BCE, but suspected revolts elsewhere in the Empire caused him to call off the expeditions both times. Instead, the Romans, who in any case regarded the “whole of the island as

“Leap, fellow soldiers, unless you wish to betray your eagle to the enemy.”

JULIUS CAESAR, *THE GALLIC WARS*, c.47 BCE

before returning across the Channel some time in the middle of September. The Trinovantes became, in effect, a client-kingdom of Rome. In addition, Cassivellaunus was forbidden to interfere in their territory.

Whatever his intentions regarding a third and more decisive invasion of Britain might have been, Julius Caesar was distracted from taking any action until 51 BCE by a major uprising in Gaul and thereafter by his involvement in the Roman civil wars, which led to his appointment as Dictator in Rome in 47 BCE.

Attempts by Augustus

Caesar's adoptive son and successor, Augustus, who also became the first Roman emperor, made

Roman property” (according to the historian Strabo), supported client-kings, such as Tincommius and Verica, who ruled over a Belgic kingdom in southern England, against the growing power of the Catuvellauni, who overran the Trinovantian capital of Camulodunum (Colchester) around 9 CE. The Romans maintained their influence in Britain by involving themselves in its politics.

AFTER

Julius Caesar was assassinated in 44 BCE and the conquest of Britain was not an immediate priority for his successor Augustus.

INVASION BY CLAUDIUS

It was nearly 100 years after Caesar's first invasion that **Britain became a Roman province 28–29** >>. There was an abortive expedition in 40 CE under Caligula, but Britain was **finally invaded on the orders of the Emperor Claudius** in 43 CE. Thereafter, it remained under Roman control for almost four centuries until 410 CE, when the Empire was nearing its final collapse in the west **34–35** >>. **Hadrian visited Britain** in 121 CE and ordered a wall to be built to protect the northern limit of the Empire **26–27** >>.

EMPEROR HADRIAN

Conquest and Resistance

The Romans began their conquest of Britain in 43 CE. After initial success they were dogged by bitter resistance in Wales and the north and by revolts in the south. Forty years after the landing, however, their armies stood on the borders of the Scottish Highlands, the furthest north that they would reach.

Legionary's backpack
Each Roman legionary had to carry entrenching tools in his backpack to help build temporary camps.

The immediate pretext for the Roman invasion of Britain was the appeal by Verica, the exiled king of the Atrebates, to the Emperor Claudius to help restore him. As a result, four Roman legions—more than 20,000 men—embarked for England in late April 43 CE.

The Claudian invasion force, under Aulus Plautius, established its main base in the sheltered harbor of Richborough in eastern Kent and moved westward. The British, under Caratacus and Togodumnus, the leaders of the Catuvellauni, opposed the advance but were pushed back to the Thames. The Romans found a way across and in the ensuing fighting Togodumnus was killed. A pause in the campaign allowed for the arrival of Claudius himself. The emperor was thus able to direct in person the capture of the capital of Camulodunum (Colchester), before he returned to Rome, basking in the glory of his new conquest.

(London) and Verulamium (St. Albans) were burnt to the ground by Boudicca's marauding army. Finally, Paulinus's legions faced the Iceni somewhere in the Midlands. The Roman victory was total; some 80,000 Britons were said to have died, a figure that matches the tally of 80,000 Romans (mostly civilians) who perished during Boudicca's campaign of destruction. The Icenian queen herself died soon afterward, allegedly by poisoning.

The northern frontier

By the mid-70s, the Brigantian kingdom and the rest of Wales had been annexed, but it fell to Julius Agricola, who arrived in Britain as governor in 77 or 78 CE, to project Roman power far into the north of Scotland. Within four years, Agricola had reached the Forth-Clyde line, where he established a number of forts. He then pushed further northward, launching a combined land and naval

Northern Scotland was evacuated by Domitian and the garrisons in southern Scotland were also reduced.

REMOVAL OF A LEGION

Emperor Domitian needed troops to conduct a war in Dacia in the mid-80s. Scotland was not a high priority for him and the legion which should have formed the garrison at Inchtuthill was withdrawn and sent to Moesia on the River Danube by 92 CE.

NEW DEFENSIVE BORDER

During the reign of Trajan (97–115 CE), Roman garrisons in southern Scotland were thinned out and most forces became stationed in the forts along the Tyne-Solway isthmus between Carlisle and Newcastle. **Hadrian's Wall was built close to this line** in the 120s CE **26–27** ➤, forming a new defensive border for Roman Britain.

assault against the Caledonians. In the summer of 83 CE, he won a crushing victory at Mons Graupius (probably somewhere near Inverness). Resistance to the Romans crumbled and Agricola established a legionary fortress at Inchtuthill on the Tay. However, within a few years almost all of his conquests were abandoned.

BEFORE

Cunobelinus, the ruler of the Catuvellauni, expanded his kingdom, encroaching on the territory of the pro-Roman Atrebates.

EXPANSION OF THE CATUVELLAUNI

Cunobelinus maintained a friendly stance toward the Romans. After his death in 40 CE, his sons expanded the kingdom further and were unfriendly to Roman interests. Another son fled to Rome, attempting to provoke a Roman invasion.

Defensive ditches

The remains of Ardoch Fort, built by the Romans in c.80 CE during Agricola's campaigns, is one of the best preserved forts in Roman Scotland.

Roman expansion

The next four years saw the expansion of the Roman-controlled area, as the remnants of the Catuvellaunian kingdom were absorbed, while the future Roman emperor Vespasian mopped up resistance in the south and south-west. By around 47 CE, the Romans had secured a line that ran roughly along the future Fosse Way (from the Devon coast to Lincolnshire) and established a series of forts to cement their control. They then tried to push west into Wales, vigorously opposed by Caratacus, who had escaped to lead a renewed British resistance. He was finally captured in 51 CE after he had fled to the imagined safety of the court of Cartimandua, queen of the Brigantes, who handed him over to the Roman authorities.

Boudicca's revolt

In 60 CE, the Romans faced a serious revolt that almost drove them from Britain. Boudicca, the queen of the Iceni, fearing her territory being incorporated into the Roman province after the death of her husband, King Prasutagus, revolted and marched on Camulodunum. The Roman governor, Suetonius Paulinus, was away in north Wales. By the time he returned, Camulodunum had been razed to the ground, and a detachment of the Ninth Legion cut to pieces. Londinium

The Roman conqueror

This marble relief from Aphrodisias in modern-day Turkey shows Roman Emperor Claudius conquering Britannia. Claudius arrived in Britain in 43 CE to see for himself the defeat of the Britons at Colchester.

Hadrian's Wall

Stretching from Wallsend to Bowness-on-Solway, Hadrian's Wall was almost 75 miles (120km) long. It was built over a period of years, following a visit to Britain by the Emperor Hadrian in 122 CE, and covered some wild terrain. Forts along the length of the wall housed Roman army garrisons, which protected the northernmost border of the Empire.

BEFORE

Britain came under military authority in the very early stages of the conquest, but was soon organized as a regular Roman province. The northern frontier moved several times in the 2nd century CE.

HADRIAN'S WALL

In 122 CE, Hadrian visited England, the first reigning emperor to do so since Claudius and, according to one historian, "set many things right." In the north, the Romans had pulled back to a line from the Solway Firth to the Tyne. Here, Hadrian ordered the building of a fixed barrier, a wall 26–27. Under the governor, Aulus Platorius Nepos, Hadrian's Wall was begun almost at once and completed several years later. Though the Romans continued to occupy a number of outpost forts to the north of the line, the wall effectively formed the northern border of the Roman province for some 40 years.

EXTENDING THE NORTHERN FRONTIER

Hadrian's successor Antoninus Pius ordered the evacuation of Hadrian's Wall and the building of a new defensive line about 100 miles (160km) to the north. The Antonine Wall was constructed of turf and spanned some 37 miles (60km) between the Firth of Forth and the Clyde. A series of outpost forts north of the new wall were also occupied, once more establishing a Roman military presence in central Scotland. Around 161 CE, a new emperor, Marcus Aurelius, ordered the abandonment of his predecessor's advance, and by the mid 160s Hadrian's Wall once more marked the northern boundary of the province.

A Distant Province

During the 2nd and 3rd centuries CE, Roman Britain enjoyed a peaceful and largely prosperous period. Towns grew and a network of roads facilitated trade and communication. Rarely at the center of Roman political life, until the late 3rd century Britain avoided the instability of other parts of the Empire.

The period of peace following the withdrawal from the Antonine Wall until the 280s CE allowed the Roman province of Britannia to develop into a place with a complex road network, flourishing towns, and the full governmental system of a Roman province.

Pax Romana

The most important Roman official was the governor, who was responsible to the emperor and held authority over the civil and military administration. Initially based at Colchester, the governor moved to London toward the end of the 1st century. He was normally of senatorial rank, drawn from the elite of Roman society (although from the 3rd century, men of equestrian rank, the next rung down in the social hierarchy, were appointed). The other chief official of Britannia was the procurator, who was in charge of financial affairs. In 213 CE, the province was split in two: Britannia Superior (covering southern England and Wales) with its capital at London; and Britannia Inferior (northern England, including Hadrian's Wall), whose

governor resided at York. Some time before 312 CE, both provinces were further subdivided into two, leaving

LEGATUS AUGUSTI The official title of the Governor of Britannia. By the 3rd century this was replaced by titles such as *Consularis* and *Praeses*.

Roman Britain with four and, later, five provinces. The result was that each governor, although he had his own staff and bureaucracy, wielded less power and so was unlikely either to mount an effective challenge against the emperor, or to implement policies which might be beneficial to Britannia as a whole.

The army's influence

The presence of the Roman army in the shape of three legions (after the 80s CE), amounting more than 16,000 men and

a roughly equivalent number of auxiliary troops, played a key role in the Romanization of Britain. The units shaped the local economy near the frontier as they needed grain and other supplies for the troops. The army also helped native Britons gain citizenship, as soldiers automatically acquired that privilege after 25 years of military service. Those joining the army would also have had to learn Latin, the language of command, which, because it was also used by the civilian administration, became firmly established in Britain.

The growth of towns

At the heart of Roman Britain lay its towns. Colchester, Lincoln, Gloucester, and York fell into the category of *coloniae*, established for legionary veterans who had full rights of

“The Britons took up... **baths**, and **magnificent feasts**. The unsuspecting natives called these new habits ‘culture’ when they were in fact **part of their enslavement.**”

TACITUS, *AGRICOLA*, c.98 CE

citizenship, with a full town council and constitution. Other towns, such as St. Albans and London, held a lesser rank of *municipium*, where only town councillors and their families received Roman citizenship, but they were also important centers for the Romanization of the province. Many other towns, such as Silchester, started out as tribal centers (*civitates*) that became urbanized in Roman times, or as civilian settlements that grew up outside Roman forts (such as Cirencester). The presence in most towns of typical

The ruins of Viroconium

Viroconium (Wroxeter) is one of the best-preserved Roman towns. It was established in 129 CE as the *civitas* capital for the Cornovii tribe.

Roman buildings, such as baths, basilicas, and amphitheaters, shows the spread of Roman culture within Britain. Towns also served as regional markets and the base for small-scale industries and craft production; there were, for example, workshops for the production of the floor mosaics that adorned Roman villas.

The Romans built a network of roads linking the towns and villages, such as Watling Street running from Dover to Wroxeter and the Fosse Way from Exeter to Lincoln, which facilitated the transportation of bulky trade goods. Although Britain became integrated into the larger economy of the Roman Empire, it did not provide the gold and silver that had been hoped for. Apart from tin, lead, and iron, whose mining

provided some income, Britain's main exports were leather and textiles. In return, Britain imported luxury goods, such as glass vessels, fine Samian-ware pottery, and garum, the fish sauce much beloved of Roman cooks.

Romanizing rural Britain

The vast majority of people did not live in towns. At the top of the social scale, lavish villas, which were often surrounded by farming settlements, colonized the countryside, particularly from the 2nd century CE. Most people, however, continued to live in traditional

roundhouses or rectangular aisled houses. Here, the penetration of Roman ideas was much weaker, and there is evidence of the persistence of traditional beliefs. Priests of the Imperial Cult and devotees of exotic mystery cults such as Isis and Mithras could be found in towns, but in the countryside Celtic deities such as Coventina or Cocidius held sway. Frequently, the identities of Celtic and Roman gods merged—such as Sulis with Minerva at Aquae Sulis (Bath).

Trouble in the north

Emperor Septimius Severus conducted the last major expedition into Scotland in 208–211 CE. A group called the Maeatae, in alliance with the Caledonians, had been menacing positions on the frontier for a decade. Bringing elements of the elite Praetorian Guard and contingents from the army units in western Europe, Severus began to prepare for a full-scale attack against them. The Maeatae sued for peace, but Severus launched his strike anyway, pushing northward. It was a hard-fought campaign in difficult terrain. Severus, by then seriously ill, accepted peace terms when they were offered again. Caracalla cut short a later campaign so he could return to Rome to secure the imperial throne, after Severus had died.

Life in the province of Britannia continued as before, but Roman armies did not attempt another reconquest of Scotland. Several emperors did visit Britain in the 3rd and 4th centuries, but it was to put down a revolt or deal with trouble on the borders, rather than in an effort to push further northward.

Lead curse tablet from a temple

Tablets like this one from Uley, Gloucestershire, were inscribed with messages and left at shrines by people seeking help from the gods in personal matters, such as finding a thief.

AFTER

The 3rd century was a time of grave instability for the Roman Empire, with a series of short-lived emperors unable to cope with the growing threat of barbarians from beyond the frontiers.

INDEPENDENT EMPIRES

In 260 CE, Postumus, governor of Gaul, declared his **independence from central control** and established a Gallic Empire. Britain formed a part of this until the reincorporation of the rebel provinces by Emperor Aurelian in 274 CE. In 286 CE a military commander, Carausius, declared himself emperor. He looked set to establish an **independent Roman state of Britain** but was assassinated in 293 CE and Constantius, one of the official Roman emperors, took control.

THE SURVIVAL OF LATIN

It is not clear whether Latin fully replaced the native Celtic languages of Britain during the Roman occupation. Germanic invaders in the 5th century CE **46–47** >> occupied Romanized areas in the south and east where Latin was widespread. Other areas had retained their native languages and so Latin more or less died out as a living language. It continued to be the **language of education and culture** for centuries. As the **universal language of the Christian Church**, Latin experienced a revival in Ireland and areas of western Britain which were converted by Celtic missionaries **38–39** >> and in parts of Britain converted from Rome by the mission of St. Augustine **44–45** >>.

Brand of authority

This wooden writing tablet bears the stamp of the procurator, Roman Britain's chief financial officer, and may have originated in his office. Unfortunately, the wax-inscribed letter it contained has perished.

Face from the past

This stunning example of Roman metalwork found in Cumbria dates from the 1st–2nd centuries CE. It would have been worn for display rather than in battle.

Ptolemy's map of the British Isles

The Alexandrian geographer Claudius Ptolemaeus (Ptolemy), working in the 1st century CE, produced a world map, which included the British Isles and showed a reasonably accurate outline of the Irish coast.

BEFORE

The failure of the Romans to complete the conquest of Scotland after 83 CE and their decision not to invade Ireland left large areas of the British Isles outside the Empire.

EDGE OF THE EMPIRE

Although the Romans under **Agricola defeated the Caledonians** at Mons Graupius in 83 CE, and established the position for a fortress at Inchtuthill **◀ 24**, they pulled back. By 110 CE, the area north of a line from the Solway Firth to the Tyne lay outside the Empire.

DEVELOPMENTS IN IRELAND

Ireland continued to develop after the Bronze Age. Knowledge of iron working may have reached there by the 6th century BCE and the La Tène culture reached Ireland by about 200 BCE. By the 1st century CE Ireland was **materially rich, but too remote** to invite Roman invasion.

Reconstructed Scottish crannog

Crannogs, houses constructed on artificial islands in lakes, first appeared in the late Bronze Age. Fairly common in Scotland, they were more prevalent in Ireland and may have been high-status dwellings.

Outside the Empire

Little is known about the early political histories of Ireland and the part of Scotland not conquered by the Romans. By the 5th century CE, the first historical figures emerged and the core of later Irish and Scottish kingdoms had developed.

The Roman withdrawal from northeast and central Scotland after 90 CE did not mean that the rulers of the Empire lost interest in the area. Outpost forts, such as the one at Trimontium (Newstead, near Melrose) continued to be occupied, while for 20 years under Antoninus Pius the Romans advanced to the Antonine Wall line between the Clyde and the Forth, with outpost forts even beyond that.

North of the frontier

Such a prolonged period of close contact with the Roman frontier is likely to have had an impact on the tribes who lived just beyond it. While some hill-forts sites beyond the frontier experienced a reduced level of occupation (such as at Castle Law in Midlothian), one, at Traprain Law in East Lothian, evidently prospered greatly during the Roman period. This was the capital of the Votadini, a

pro-Roman tribe, whose chieftains may have played a similar role to barbarian client kings beyond the Rhine and Danube in Germany, acting as a buffer against more distant groups and as a conduit for Roman influence in Scotland. Abundant Roman pottery and coins were found at Traprain Law in East Lothian—as well as an astonishing hoard of silver plate—and occupation continued into the 4th century. The inhabitants of the site were, to some extent literate, as inscriptions in Latin have been found on pottery fragments there.

Similar finds at the western end of the Roman frontier, at Dalry in Ayrshire, may reflect the presence of another client kingdom. The penetration of trade into these areas is revealed by finds of large hoards of Roman coins, such as the 1,900 silver coins found near Falkirk.

The appearance of stone huts and villages in central Scotland around the 2nd century (sometimes on the ruin of hillfort sites) may also have occurred as a consequence of

Roman influence. Elsewhere, traditional crannogs (lake-houses) continued to be built, even in the lowlands (such as at Milton Loch). In the Western and Northern Isles, huge stone-built broch towers persisted until the 2nd century CE, after which stone round houses replaced them.

The Picts

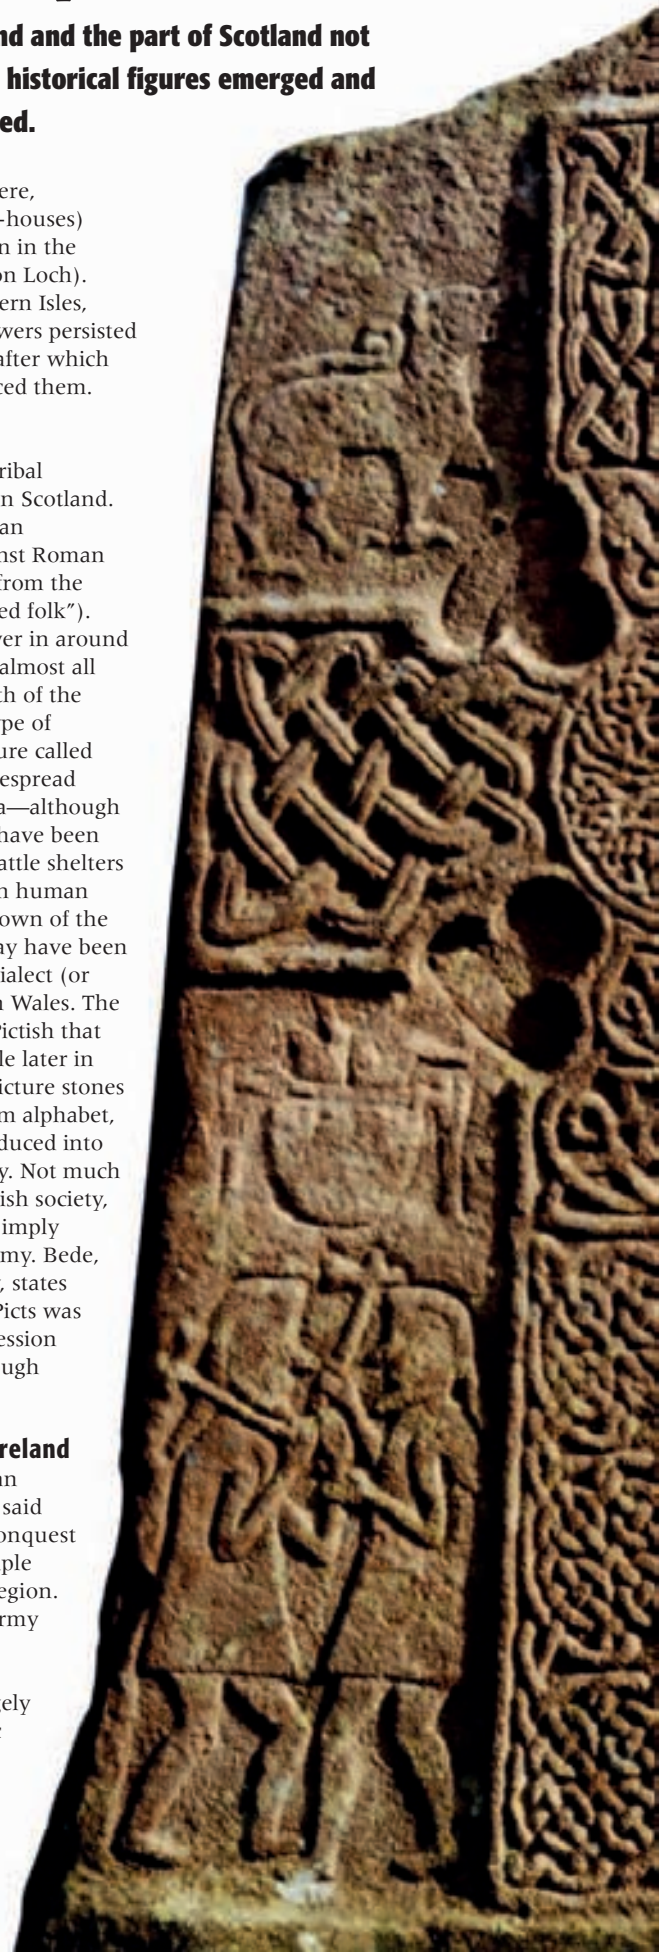

By the 4th century, new tribal federations had emerged in Scotland. Prominent in the “barbarian conspiracy” of 367 CE against Roman Britannia were the Picts (from the Latin *picti* meaning “painted folk”). At the height of their power in around 500 CE, the Picts occupied almost all of mainland Scotland north of the Clyde-Forth isthmus. A type of underground earth structure called a souterrain was very widespread

in this area—although they may have been stores or cattle shelters rather than human dwellings. Very little is known of the Pictish language, but it may have been a relative of the Celtic P-dialect (or Brythonic) later spoken in Wales. The few examples of written Pictish that have been found are a little later in date. They are inscribed picture stones employing the Irish Ogham alphabet, which was probably introduced into Pictland in the 8th century. Not much is understood of early Pictish society, although classical sources imply that they practiced polygamy. Bede, writing in the 8th century, states that the royal line of the Picts was matrilineal, with the succession to the throne passing through the female line.

Writing and stories in Ireland

Julius Agricola, the Roman conqueror of Scotland, is said to have mused that the conquest of Ireland would be a simple affair requiring just one legion. Despite this, no Roman army crossed the Irish sea and relations with Roman-occupied Britain were largely confined to trade. Artistic trends do seem to have crossed the Irish Sea, though, evidenced by finds of brooches and

25 The number of letters in the Irish Ogham alphabet.

horse bits showing the influence of Romano-British style. Perhaps the most significant cultural import was knowledge of writing. The Irish Ogham script, possibly developed around 400 CE, may have taken the Latin alphabet as its model. Ogham characters are written with incised lines along a central stem and are seen on inscriptions from Ireland and parts of Scotland and Wales.

Evidence from the sagas

Ireland possesses a wealth of orally transmitted sagas and histories almost unequaled in northern Europe. Tales such as the *Cattle Raid of Cooley* paint a picture of the country in the late Iron Age, while legendary figures in the histories such as Cormac mac Airt, who was said to have been king of Tara from 227–266 CE, may have a real historical basis. The *Cattle Raid* portrays an Ireland divided into four kingdoms: Ulaid (Ulster), Connachta (Connaught), Laigin (Leinster), and Mumu (Munster). These divisions persisted

The Manse stone

This 8th-century stone slab carving from Glamis with its interlaced stone cross and fabulous animals drew from an earlier tradition of Pictish symbol stones, whose abstract symbols and fantastic beasts have so far defied interpretation.

Irish flesh hook

This bronze object, dating from around 1000 BCE, set with ravens and a family of swans, and with a curved hook at the end, was probably a flesh-hook for retrieving chunks of meat from a stew.

into the Middle Ages and as administrative regions to the present day. The traditions related in the story predate the rise of the Uí Néill dynasty, whose founder Níall Noigiallach (Niall of the Nine Hostages) is thought to have ruled around 400 CE. The Uí Néill would dominate much of early medieval Irish history. They are said to have descended from the Milesians from Spain. This—or the subsequent arrival in legend of the “Black Gaels” around 600 BCE—may reflect a distant memory of the immigration into Ireland, which brought the Q-Celtic (or Goidelic) dialect there some time in the late 1st millennium CE or earlier.

The emergence of these very early dynasties may be reflected in the development during the Iron Age of the complex of enclosures and buildings at Tara, Navan Fort (County Armagh), and Dún Ailinne (County Kildare). The huge size of these—the internal enclosure ditch at Tara encircles 17 acres (7 hectares) of land—indicates the rise of rulers with sufficient power to command the vast resources necessary to construct them.

Irish settlers

By the 5th century CE, as the Roman grip on the west coast of Britain slackened, raiders from Ireland began to seize land there. An area in southwestern Wales was occupied by a group from Leinster, and Irish settlements dotted the coast as far north as Caernarvon. At about this time, a king called Cunedda is said to have established himself in north Wales, having transferred from beyond

Hadrian’s Wall at the invitation of the emperor “Macsén Wledig” (or Magnus Maximus). Behind this story may lie a real movement of a Roman military unit, but the fact that many subsequent dynasties traced their descent from Cunedda is a sign that the Welsh were beginning to exercise political independence, even if this was a position forced on them by the Roman inability to defend their territories on the fringes of Britain. Of similar significance was the settlement, in Argyll in southwest Scotland, of another wave of Irish immigrants around 500 CE. By about 575, this group was firmly established in what became the kingdom of Dal Riata, under King Aedan mac Gabrain, with their capital in the fortress of Dunadd.

Alphabet stone

This stone from inside the Gallarus Oratory in Ireland shows Ogham marks. Several hundred Ogham inscriptions have been found in Ireland, and parts of Wales and Scotland.

AFTER

From the 5th century, definite kingdoms started to emerge in Ireland and Scotland, but it would be several centuries before the bulk of Scotland was united.

COMPETING DYNASTIES

Ireland was not united before the English conquest in the 12th century. Instead, the Uí Néill, Uí Briúin, Uí Fiachrach, and other local **dynasties competed for dominance** and recognition as *Ard Rí* (High King) **55** >>, a title that was mainly symbolic.

SCOTTISH COMPETITION

By the late 7th century in Scotland, **the Pictish kingdom faced competition** from the Irish incomers in Dal Riada, from the residual British kingdom of Strathclyde, based around Dumbarton, and from the Anglo-Saxon kingdom of Northumbria.

“Ravens shall pick the necks of men. **Blood shall gush** in wild combat.”

THE CATTLE RAID OF COOLEY, 7TH–8TH CENTURIES

BEFORE

In the 1st century BCE, life in Britain was beginning to change. Contact with Rome in the century before the Claudian conquest of 43 CE modified it further.

URBAN DEVELOPMENT

A few settlements like those beneath St. Albans, Colchester, Canterbury, and Chichester began to develop into oppida (proto-towns). Many of these became true urban centers in Roman times. The presence of smaller denomination coins shows that they were used as trading places, rather than simply being royal or ceremonial centers.

COIN EVIDENCE

Some coins minted in Britain in the 1st century BCE are inscribed with names in the Latin alphabet, indicating evidence of contact with Rome.

TRADE GROWTH

An increase in trade between Britain and the Continent is indicated by the growth of new ports at places such as Hengistbury Head (near Bournemouth) and the importation of goods including pottery, wine, and glass.

Life in Roman Britain

The Roman rule of Britain, spanning nearly 400 years, introduced new ways of governing and an urban way of life with new architecture and religious beliefs. However, many Britons outside the urban centers continued to live in much the way they always had done.

The organization of an official Roman province of Britannia affected the higher levels of British society most. Some Britons became full Roman citizens and committed to a new way of life. For many people living outside the towns, however, life remained relatively unchanged after the Roman conquest.

Organized taxation

One aspect of Romanization that was hard to avoid was organized taxation. The province became subject to the *tributum capitis* (poll tax) and a tax

Temple of Mithras

These ruins of a Roman temple to an eastern god, Mithras, at Carrawburgh, a fort on Hadrian's Wall, date to the early 3rd century CE. Mithras was popular with soldiers.

on the productivity of the land based on periodic censuses. The poll tax caused particular upset and played a part in fueling the revolt of Boudicca (see p.24). Another unaccustomed imposition was a sales tax, levied on certain transactions, such as the sale of slaves, and on goods entering the province from elsewhere. Those who were Roman citizens—from 221 CE all freeborn inhabitants became citizens—were also liable to pay a five percent inheritance tax.

The organization—and the taxation—of Britain was made possible by the growth of urban centers connected by a network of roads. The well-constructed Roman roads also allowed movement of troops and supplies in the province.

Urban growth

The first official foundation at Camulodunum (Colchester) was in 49 CE.

The head of Serapis

The worship of Serapis, a Greco-Roman version of the Egyptian god Osiris was popular among Roman army units in Britain. This statue of the god was found in London.

Slave manacles

Leg irons such as these were used to restrain captured slaves. Thousands of Britons were probably enslaved during the conquest.

an urban center. The most elaborate examples such as Lullingstone in Kent and Fishbourne in Sussex are evidence of a fully Romanized way of life. Even villas on a more modest scale show a level of everyday luxury that had not been seen in Britain before. Underfloor heating, tiled floors, and plastered and painted walls are commonly found.

Town life

The towns of Roman Britain (see pp.28–29) evolved over time and types of buildings found throughout the Roman world became widespread in the province. These included public baths, temples, and theaters. The best preserved bath site is at Aquae Sulis (meaning “the waters of Sulis”) in the modern city of Bath. Dedicated to the goddess Sulis, the bath complex used a natural hot spring already in use in the pre-Roman era.

Classical temples in the Roman style are quite rare in Britain; the Temple of the Deified Claudius established in Colchester in the mid 1st century CE was probably the earliest established. As a center for the Imperial cult it acted as a focus for Romanization. Other public buildings included forums and basilicas, the judicial and administrative centers of many towns.

Theaters and amphitheaters are less common than temples and baths, which were found in most urban centers. However, the remains of a theater at Verulamium (St. Albans)

shows that Roman entertainments such as plays, dancing, and wrestling were enjoyed there from around 140 CE.

Most temples built in Britain were in the Celtic style. These often had a rectangular *cella* or inner room, which housed sacred images of the gods, around which was an enclosed area. Many Celtic deities seem to have become equated with similar Roman gods, such as Mars with the god Loucetius. Sulis, the traditional goddess of the healing springs, became identified with the Roman goddess Minerva since both shared similar characteristics. Other Celtic gods were not integrated into

Samian pottery

The finest pottery found in Britain was imported red-slip Samian ware, featuring potters' names stamped on it. Samian ware was produced in vast amounts in Gaul from the 1st century to the early 3rd, when the industry collapsed.

This *colonia* was established for legionary veterans on the site of a longstanding native British *oppidum*, a pattern repeated in other places. The story of Londinium (London), which became the capital of the province, is rather different, as there is little trace of a settlement before 43 CE. A town grew up on the north bank of the Thames with a central forum and military fort in the northwest of the town, together with a palace. A major suburb grew up on the south side of the river crossing at Southwark.

The 20 or so large towns of Roman Britain housed about 500,000 people, about 10 percent of the total population. Smaller settlements

5 MILLION The probable number of people living in the territories of Roman Britain at its peak.

clustered near major roads, or lay in the shadow of Roman military installations.

The wealthier Romanized elite owned villas—country estates surrounded by agricultural holdings. Built in the same style as villas found throughout the Empire, usually either in a courtyard or corridor style, these buildings are concentrated in the counties of the southeast, particularly in Somerset and the Cotswolds, usually within reach of

Mosaic pavement

Images from classical mythology, such as this head of Medusa from Cirencester, were a common theme of Roman mosaics, even after the coming of Christianity.

the Roman pantheon. These included the Matres, mother goddesses, and the Cuculli, a triad of mysterious hooded beings, whose statues have been found in Britain.

Health and well-being

The Roman period in Britain provides the first evidence for an interest in hygiene and sanitation. Aqueducts, such as the one at Lindum (Lincoln), were built to provide running water. The discovery of dentists' and doctors' instruments shows that surgery, albeit at a rudimentary level, was being practiced. Diseases like leprosy are also believed to have arrived in Britain for the first time with the Roman army.

Plowman and his team

This bronze model shows a Roman plow, one of many agricultural improvements brought to Britain. Vast amounts of grain were needed for the Roman army, turning large areas of land into cultivable spaces.

AFTER

The economy and society of the province began to show signs of strain in the 4th century, collapsing as Germanic settlers (the Anglo-Saxons) arrived in number.

DECLINE IN THE CITIES

In the 3rd century, many British towns, including London, were walled, perhaps a sign of an increasing **sense of insecurity**. From the 4th century the towns went into decline and few or no new buildings were constructed. The villas underwent a **brief period of renewal**, as the urban dwellers may have retired to their country properties when life in the towns became less agreeable.

THE EMPIRE RETREATS

As the Roman **army was progressively withdrawn** in the 4th and early 5th centuries, economic activity diminished still further. No official supply of coins reached Britain after the reign of Constantine III (407–11); those that did were probably brought by individuals. Trades and crafts stagnated, and there was a notable decline in the quality of locally produced pottery.

THE EMPIRE RETREATS

By the time the Anglo-Saxons invaded Britain in force in the second half of the 5th century, the towns were already ghosts of their former selves. The newcomers **did not have an urban culture** and, unlike the Franks in Gaul, did not find a fully functioning one on which to graft themselves. Many **important Roman towns**, such as Silchester and Wroxeter, became **uninhabited** and when the Anglo-Saxons did begin to develop a more urban way of life, it was **often on new sites**.

LATIN CONNECTIONS

When Anglo-Saxon monarchs wrote to their fellow monarchs in Europe, **they did so in Latin**, a tongue that died out centuries before as a living language in Britain.

BEFORE

By the 360s new challenges were emerging for the Roman rulers of Britain. Picts from beyond Hadrian's Wall became more active and Saxon pirates from northwest Europe started to raid the east coast.

SAXON SHORE FORTS

A series of forts was built along the south coast, from the Solent to the Wash, between about 260 and 310. They are known as the Saxon Shore forts, after the Count of the Litus Saxonum (or Saxon Shore), a 5th-century military official who had responsibility for the defense of the region (presumably against the Saxons). What had been one of the more tranquil parts of Britain was now **in effect a frontier zone**. Some, including Pevensey, were well built and fortified and remained in use by the post-Roman defenders of Britain against the Saxons. Some were **refortified in Norman times**.

THREAT FROM IRELAND

Fourth-century Roman forts in western England, such as at Cardiff and near Lancaster, are an indication that **Roman Britain was also being threatened from across the Irish Sea**.

There are signs that Britain was entering a period of economic decline by the mid-3rd century **CE**.

Industrial activity in towns slackened and high-quality imported pottery disappeared. Elsewhere in the Empire, in northwest Europe, towns were experiencing similar difficulties as the elite tried to escape the onerous duties of being a town councillor (which could be financially ruinous) and retired to their rural villas. Something similar may have occurred in Britain, although even large villas there seem to have suffered economic strains in the 4th century.

Barbarian threats

In 343 **CE** the Emperor Constans was forced to visit the province, to deal with an unspecified threat, but in 367 a more serious "barbarian conspiracy" broke out in which the Picts are said to have coordinated their attacks with the Irish and another group called the Atacotti. The Emperor Valentinian sent over a senior officer, Count Theodosius, who by 369 had scattered the invaders. He also restored a number of forts along Hadrian's Wall and in the east of England, and added a fifth province

Mildenhall treasure

The Great Dish is part of a hoard of Roman silverware found in Suffolk. Its burial may be connected with the uncertainty felt toward the end of the empire.

End of Empire

In the early 5th century **CE Britain suffered from the general weakness of the Roman Empire in the west. The withdrawal of much of the British garrison left it vulnerable to barbarian raids. Finally, in 410 **CE** Roman rule over Britain came to an end and native British rulers were left to face invaders alone.**

LEGENDARY KING (c.500 **CE)****KING ARTHUR**

King Arthur is a legendary ruler in Britain in the period following the collapse of the Roman Empire. The idea that he was a defender of the Britons against Saxon invaders owes much to the *History of the Kings of Britain* written around 1138 by Geoffrey of Monmouth. Given that the Britons do seem to have stemmed the Saxon advance in the early 6th century, the figure of Arthur may be based on a real leader or leaders of around that time.

(Valentia). In doing so, he established the last brief period of stability Britain would enjoy for centuries.

Withdrawal of troops

Britain's economic difficulties were exacerbated by the steady diminution of the Roman garrison in the late 4th and early 5th centuries. In 383 a usurper, Magnus Maximus, was proclaimed emperor in Britain. Taking at least a part of the Roman army of Britain, he crossed over to Gaul, where he defeated and killed the official emperor Gratian. Maximus himself ultimately suffered the same fate in 388 and it is likely that a portion of the soldiers he brought from Britain never returned (or were killed in the civil war). It was probably at this time that the Twentieth Legion was removed from Chester, leaving the western part of England vulnerable to raiders from across the Irish Sea.

Richborough fort

The Saxon Shore fort at Richborough (Rutupiae) was built in around 280 **CE** to boost the defenses of the south coast. The triple ditches date from defensive works constructed a few decades earlier.

The reduction in troop levels appears to have encouraged further barbarian incursions. In 396 Stilicho, the military strongman who dominated the government in the early reign of Honorius (395–423), was forced to come in person to restore order. He did so, but by 400, he, too, seems to have withdrawn yet more military units from the British provinces.

The steady decrease in the numbers of Roman soldiers reduced security and further damaged the economy. Supplies, which had been needed to support the army, were no longer required and the coin to pay its wages stopped being imported. After about 407, bronze coins, which were the only ones really useful for day-to-day transactions, were no longer

AFTER

The period just after the collapse of the Roman province was a confused time, with the arrival of German barbarians and the emergence of old tribal identities.

NATIVE KINGDOMS

After the expulsion of the Roman authorities a number of **native kingdoms** began to emerge, many of them based on the old **pre-Roman tribal centers or civitates**.

EVIDENCE OF GERMAN INVADERS

Goods from 5th century graves provide evidence of **Anglo-Saxon invaders in Britain 46–47** >>. Their culture and traditions are seen in the 10th-century epic poem *Beowulf*, and bear little resemblance to Roman culture.

in circulation in Britain, an indication that the monetary economy had, in effect, collapsed.

407 The last year that Roman coins found in Britain were made.

367 The number of years of Roman occupation in Britain.

The groans of the Britons

The end of Roman rule came with surprising rapidity. In December 406 a horde of barbarians—Alamanns, Vandals, and Burgundians—crossed over the Rhine (which had frozen solid during a harsh winter) and penetrated deep into Gaul. The army in Britain responded by raising another usurper, Marcus, to defend their interests. In rapid succession Marcus was overthrown and replaced by Gratian, who was, in turn, removed by the mutinous troops in favor of

Constantine III. An army officer with higher ambitions, he crossed into Gaul with most of the remaining Roman garrison. He was eventually trapped in 411 during a siege at Arles in southern Gaul and executed; his troops never returned to Britain.

Even before this, in 410, however, the Britons are said to have risen up and thrown out all the Roman officials and set up their own rulers. This, however, was probably a revolt against Constantine III's

The last Roman coins

This gold solidus of the Emperor Constantine III was issued by the last Roman emperor to be proclaimed in Britain. After his departure for Gaul in 407, almost no more Roman coins are found.

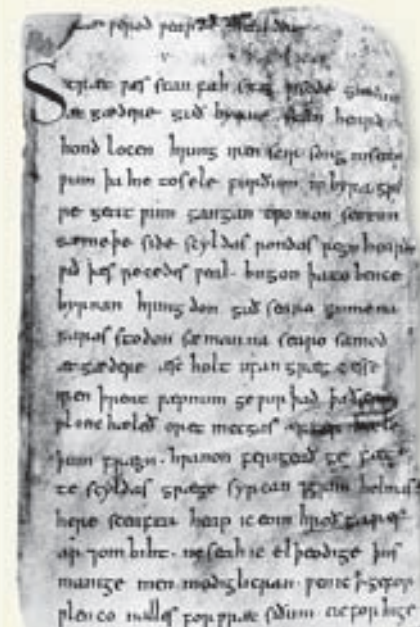

faction rather than a bid for outright independence as they requested help from Emperor Honorius against Saxon raiders from northwest Europe. A letter from Honorius to the British leaders in 411, however, told them that they must look to their own devices and expect no help from Rome. The last mention of contact between Britain and the central

Roman authority comes in about 446 when the British leaders addressed a plea to Aetius, the western

Roman Empire's last effective military commander, to hear "the groans of the Britons" and send them assistance against the increasingly predatory Saxon

raiders. Aetius had enough problems of his own, however, with Hunnish invaders led by Attila and he ignored the Britons' plea (if, indeed, he ever received it in the first place).

The Sutton Hoo Ship Burial

The Sutton Hoo ship burial, discovered in 1939, is probably the last resting place of King Redwald of East Anglia (599–c.624). One of only two full ship burials found in England, its fabulous treasures show the wealth of the East Anglian royal dynasty.

18 BURIAL SHIP

1. Gilt-bronze winged dragon, set to one side of the shield boss, its eyes made of cabochon garnet. 2. Bird of prey set into shield, made of gold foil set into alderwood. The head and leg are gilt-bronze. 3. Shield central boss made up an animal frieze, surrounding a garnet disk. 4. Helmet. The cap was forged from a single piece of iron, with iron ear-flaps and a neck-guard attached. Bronze plates stamped with animals and scenes from mythology were then added. 5. Shoulder clasps, based on Roman prototypes, are curved to fit the shoulder, and have a pattern of garnets and millefiori glass. 6. Buckle from sword belt, inlaid with gold and garnet fittings. 7. Pyramids with garnets surrounded by a gold frame, originally attached to a sword knot, possibly to tie the sword into its scabbard. 8. Sword is pattern-welded from eight bundles of iron rods. It was once mounted with gold and garnet fittings. 9. Purse lid, with an ivory base enclosed

by gold frame, is set with seven decorative plaques, four of them of interlaced animals. 10. Gold coins, minted in Gaul between 575 and 625 CE. 11. Silver bowls. The fluted bowl (right) shows a lady, with a diadem in the center. The cross on the bowl (left) was not necessarily intended as Christian. 12. Silver spoons stamped with the names "Saulos" and "Paulos", a possible reference to St. Paul. 13. Hanging bowl, made of bronze, probably in the eastern Mediterranean and then imported. 14. Escutcheon from hanging bowl, enameled and set with millefiori glass, originally attached to a handle. 15. Gilt-headed birds from harp. Originally attached to a six-stringed harp. 16. Drinking horn, one of a pair set with silver-gilt end fittings. 17. Whetstone, set with a beautifully carved bronze stag on top of an iron ring, believed to be a scepter. 18. Burial ship. This 1939 picture of the excavation shows the lines of the ship's original planking.

Iona Abbey

Iona Abbey occupies the site of the monastery founded in 563 by Saint Columba. Iona remained an important center of Irish monasticism for four centuries.

Holy Ireland

From tenuous beginnings in the 5th century CE, Christianity in Ireland spread rapidly. Monasteries came to wield great power within Church and society, and missionaries were dispatched to the Continent. But secular Ireland saw struggles between the Uí Neills of the north and southern groups.

BEFORE

The Christianization of Ireland occurred during the 5th and early 6th centuries CE. Distant from papal authority in Rome, it later developed an independent identity.

PALLADIUS

The **first evidence of a Christian mission** to Ireland comes in 431, when Pope Celestine I sent the deacon Palladius to Ireland. It is uncertain exactly where he went—he may have also visited Irish-settled areas of Scotland—but it is likely his mission concentrated on the south and east coasts. It clearly **did not prosper**, as no records of its work survived in Ireland.

SAINT PATRICK

The **conversion** of the Irish was achieved by Saint Patrick, who came from a rich family in northern Britain. His own account relates that his father was a town councillor and his grandfather a priest, and that, aged 16, he was seized by Irish pirates and taken to Ireland. After six years he escaped back to Britain, but resolved to return to Ireland to **bring Christianity** to the people there. Unfortunately, Patrick does not provide any clear indications of the dates of his mission. His return to Ireland has traditionally been assigned to 432 (the year after that of Palladius) but it may well have been any time between 400 and 450. The **early years** of the mission were **precarious** and Patrick was forced to make payments to local kings to secure protection. By the time of his death, traditionally given as 492, Christianity had a sufficiently **secure base** in Ireland to ensure its survival.

By the early 6th century, Irish Christianity had established itself much along the lines of the Christian churches in Gaul or Britain, divided up into dioceses, with bishops as the principal church leaders. After this, however, the balance of power in the Irish Church began to shift toward monasteries so that abbots exercised administrative power, and a network of daughter houses of the main establishments, rather than traditional parishes, came to be the characteristic feature of Church organization. The abbot was seen as the *comarba*, or heir, of the original founder of the monastery and the property was legally

vested in him and not in the wider Church. It mirrored the organization of aristocratic families, and it is no surprise that many of the early monastic founders came from the nobility.

Remote monasteries

Men such as Finnian of Clonard and Ciarán of Clonmacnoise established monasteries in the 530s and 540s, followed by a spread of the monastic life into the most remote reaches of the island. Saint Brendan, ranked with Finnian and Ciarán among the “Twelve Apostles of Ireland”, set up a monastery on Inishglora, off the coast of Mayo, in western Ireland, before taking off on a

series of sea voyages in search of even remoter monastic retreats, possibly as far as Iceland and even North America.

Missionaries, culture, and unity

The next monastic generation included Comgall, who founded the monastery at Bangor around 558, and Saint Columba, who, after establishing a string of monastic houses, departed Ireland under a cloud after a dispute over ownership of a Gospel manuscript led to a pitched battle. His exile, however, led to the foundation of the great abbey of Iona, off the west coast of Scotland, in 563, and the beginning of a tradition of Irish evangelization abroad that would culminate in the career of Columbanus (see **BOX**). Columba himself continued to be held in high regard in his homeland, as shown by the Convention of Drum Cett in 575, when he returned to Ireland in the company of King Aidan of Dalriada to a meeting of royalty and clergy, called to settle relations between the Dalriadans and the Uí Neill clan.

From early on, the monasteries were centers of learning. In 536, 50 European students traveled to the monastery at Lismore.

Emly reliquary

Reliquaries housing the bones of saints or other sacred relics were often lavishly adorned. This house-shaped shrine, from Emly, Tipperary, was portable with a strap attached to hinged mounts.

MISSIONARY (540–615)

SAINT COLUMBANUS

Columbanus was born around 540 CE in Leinster, Ireland. Attracted to a monastic life, he spent 25 years under Abbot Comgall of Bangor. Around 590, he was allowed to go on pilgrimage, traveling through Britain, Gaul, and Burgundy. There, he established numerous monasteries, including at Annegray and Luxeuil. However, Columbanus fell foul of ecclesiastical politics—he had not placed himself under the obedience of the local bishop—and made an enemy of King Theuderic II of Burgundy. Expelled in 610, he went to Italy, settling at Bobbio, in the Apennines, where he built yet another monastery and developed what would become one of the more influential early monastic rules.

The Irish monasteries also produced numerous manuscripts. These were often greatly embellished with illuminated pages that are spectacular examples of Celtic art.

By around 700, the Irish Church was rich and powerful, and filled in part a vacuum in the secular political sphere, where no one region or dynasty exercised complete dominance over Ireland. Leinster was probably the most powerful early province, ruled first by the Dál Messin Corb and then, by the mid-7th century, contested by the Uí Dúnlaige and Uí Cenneslaig dynasties. However, from the 6th century, the Uí Neill dynasty began to become the most important group in Ireland, first dominating Ulster after

Book of Durrow

Produced around 675, probably in Ireland, but possibly in Northumbria or Iona, the Book of Durrow is one of the earliest surviving complete Gospel books.

victory over the Cruithin at Móin Dairi Lothair in 563, and then driving the Ulaid into the east of the province. The Uí Neill claim to the kingship of Tara, by long tradition the most venerable kingdom in Ireland, was a symbolic means of asserting primacy over all the other competing dynasties. However, it would be several centuries before anyone came even close to uniting Ireland.

“The Lord **ordained** clerics everywhere through **my unworthy person.**”

SAINT PATRICK, *CONFESSION*, 5TH CENTURY CE

AFTER

When Saint Patrick arrived in Ireland in 432 CE there were few Christians there. By 700 CE the Church was well established and had passed its first, missionary phase.

SECULARISM AND REFORM

Monasteries became **increasingly secularized**, with some abbots marrying. They were even sending **armed raids** against each other by the 8th century. In 764, 200 monks from Durrow died in battle against their rivals from Clonmacnoise. Revulsion at this gave rise to a **reformist movement** of *culdees* (“vassals of god”) who founded new houses, such as Tallaght in Dublin.

MISSIONARY AMBITION

Irish **missionary efforts expanded**, led by men such as Saint Gall, a disciple of Saint Columba, who converted the Alamanns (in modern Switzerland) before his death in 645. From around 700, Irish scholars flocked to Europe, attracted by conditions at the courts of the **Frankish rulers**: Dungal was consulted by Charlemagne after a solar eclipse in 810, while Dicuil wrote the first medieval geography treatise in which he mentioned an island called “Thule” (almost certainly Iceland), and Sedulius Scotus advised Charles the Bald on government around 850.

Anglo-Saxon Rulers

Germanic invaders arrived in Britain in the middle of the 5th century CE and quickly pushed the Britons into fringes of the island. They established a series of kingdoms, which by the 8th century became increasingly sophisticated with rulers who were among the most powerful in Europe.

Lead weights

Trade and commerce played an important role in the prosperity of Anglo-Saxon England. Lead weights such as these were used by merchants to test the weight of precious metals and other small trade items.

BEFORE

Evidence for early Anglo-Saxon kingdoms is obscure and much of our understanding comes from significantly later sources.

VORTIGERN AND THE SAXONS

Writing in the 8th century, the monk Bede **44–45 >>**, dated the **arrival of the Saxon invaders** in England to 449. The British King Vortigern is said to have invited their leaders Hengist and Horsa to bring a troop of mercenaries to protect his kingdom against other barbarian marauders. A Gallic chronicle dates a Saxon victory to 440 and it is probable that somewhere around this time the nucleus of the groups who would form the later Anglo-Saxon kingdoms **began to settle in England.**

THE GERMAN HOMELAND

The invaders, whom Bede divided into **Angles, Saxons, and Jutes**, are believed to have come from northwestern Germany and the Frisian coast of the modern Netherlands. It is not clear why they began to migrate, but the **lack of a central authority in Britain** after the collapse of the Roman province **<< 34–35** must have made the island a tempting target.

The Anglo-Saxons made rapid territorial gains in the century after their arrival in England. There was a pause in around 500 CE when, according to the near-contemporary Gildas, the Britons won a great victory at Mons Badonicus, led by a war-leader whom later tradition identified with King Arthur (see p.34). By 550, however, the Anglo-Saxon advance had resumed and a decisive victory at Dyrham in Gloucestershire in 577 opened most of the West Country to them. By around 600, the Britons had been reduced to control of the area known as Dumnonia (Devon, Cornwall, and Somerset), Wales, Cumbria, and Scotland.

Seven kingdoms

Gradually the tribal war-bands coalesced into a series of kingdoms, with the seven principal among them being collectively termed the Heptarchy (Kent, Sussex, Essex, East Anglia, Wessex, Mercia, and Northumbria). *The Anglo-Saxon Chronicle*, compiled in the 9th century, names the founders of several other kingdoms, although there is little independent historical evidence for any of these figures. Cerdic is said to have arrived in what would become Wessex (in western England) in 495, while Aelle of Sussex enjoyed a brief period of preeminence among the Anglo-Saxon chieftains from 477–491. Among his reported exploits was the capture of Anderida, the former Roman

Offa's Dyke

Running almost the entire border between England and Wales, this defensive earthwork, built by King Offa of Mercia had a 26-ft (8-m) high rampart, ditch, and forts to defend it.

Saxon Shore fort at Pevensey, which the Britons were still clearly using as a stronghold. In East Anglia, a dynasty called the Wuffingas ruled from the late 6th century (although Germanic settlers arrived there more than a century earlier), while in the north-east of

Anglo-Saxon claw beaker

Claw beakers like this originated in northwestern France and Germany. They were made by applying "claws" of glass and molding them. Examples imported to England would have been treasured possessions.

England, Ida founded a kingdom called Bernicia in 547 which, together with its neighbor Deira, probably originated as a British kingdom taken over by Anglo-Saxon war-bands. The Tribal Hidage, a tax-collection assessment drawn up for an 8th-century Mercian ruler, mentions others, such as the Hwicce and Magonsaete in the Midlands, so the reality was probably more like a kaleidoscope than a neat-fitting jigsaw of seven pieces.

Warrior kings

Anglo-Saxon kingship had its roots in north European Germanic custom. The king was a source of patronage and wealth, who gave feasts in his hall attended by a retinue of warriors. He was predominantly a war-leader, and the portrait painted of kings by the epic

of *Beowulf*, one of the most important surviving pieces of Old English literature, probably reflects the reality reasonably closely. The poem gives us an insight into the passionate and dangerous lives led by the kings of this period in a way that the scant archaeological evidence cannot. "It is always better to avenge dear ones than to indulge in mourning", is a line that several kings clearly took to heart, as in the Northumbrian ruler Oswy's campaigns against Penda, responsible for the death of his brother Oswald.

Archaeological evidence for this period has come from sites including Yeavering, near Bamburgh in Northumbria, where a series of royal halls were built in the 6th and 7th centuries. One of them—presumed to be that of King Edwin—was more than 82ft (25m) long.

Power of the Bretwalda

Bede, writing in the 8th century, refers to the office of Bretwalda, a ruler who wielded power over a far greater area than his own kingdom and sometimes over the whole of Britain. The first of these was Aelle of Sussex in the late

3,182 The number of lines in the epic Anglo-Saxon poem *Beowulf*, written in Britain by an anonymous author between the 8th and the 11th centuries.

5th century. Another Bretwalda was Aethelbert of Kent (560–616), the first royal Christian convert. Under him, Kent was open to influences from Merovingian France and seemed set to dominate the constellation of Anglo-Saxon kingdoms in southern England. However, the next Bretwalda, Raedwald of East Anglia (who died c.627) a pagan and the presumed occupant of the Sutton Hoo ship burial (see pp.36–37), denied Aethelbert and his successors the opportunity to expand into East Anglia and relegated Kent to a permanently subordinate position.

The rise of Mercia

Reflecting a shift in power northward the next three Bretwaldas, Edwin (616–33), Oswald (634–42), and Oswy (642–70) were all kings of Northumbria. By now, however, the kingdom of Mercia was on the rise.

Kings of Anglo-Saxon England

This medieval genealogy of the kings of Kent shows Aethelbert, under whom Kent was converted to Christianity, and his son Eadbald, who became king in 616 and under whom there was a brief pagan reaction.

The pagan Penda (626–55) defeated and killed both Edwin (in a battle near Hatfield in 633) and Oswald (near Oswestry in 642), although he himself died in battle against Oswald's successor Oswy in 655. Mercia's position was consolidated by a series of Penda's successors, including Aethelred, who defeated Egfrith of Northumbria in 679 and put an end to the northern kingdom's ambitions to expand into the Midlands. Aethelred felt secure enough to abdicate in 704 to become a monk,

1,200 The number of British monks said to have been slain by King Aethelfrith of Northumbria before the Battle of Chester, 616 ce.

a choice also made by his immediate successor Cenred in 709. King Aethelbald of Mercia (716–57) consolidated Mercia's position, absorbing territory as far south as London, and even went so far as to style himself king of the "southern English" as well as the Mercians.

The Mercians, though, faced rivals in the south in the shape of the growing power of Wessex, beginning with Caedwalla who took control of Kent in 686 and Ine (688–726) who, though he lost Kent, maintained control over the formerly independent kingdom of Sussex. Ine gave Wessex its first law code in 694, a useful source of evidence for the social structure of Wessex at the time: it lays down separate penalties for his Anglo-Saxon and British subjects, showing that the two groups were not yet fully integrated; and it sets an obligation on certain groups to provide *fyrd* or military service, indicating that the defense of the kingdom was a constant preoccupation. It was probably during Ine's reign that the great trading center at

The Witham pins

This 8th-century set of interlinked dress pins, engraved with winged animals shows the Anglo-Saxon taste for elaborate personal ornaments.

Hamwic (near modern Southampton) was established, a sign of the growing economic strength of Wessex. In the 8th century, a series of more obscure kings ruled Wessex, which increasingly struggled to compete with Mercia. A new Mercian king, Offa, seized ground

a monastery, while his replacement Aethelred (790–96) was also murdered to make way for Osbald, whose reign lasted for only a few months.

Offa maintained a network of international connections, in part through the agency of the scholar

“The Angles or **Saxons** came to Britain at the **invitation** of King Vortigern in three **longships**...”

BEDE, *ECCLESIASTICAL HISTORY*, c.731

in Berkshire and around Bath. It would be a century before Wessex was able to establish itself as the most powerful Anglo-Saxon kingdom.

Offa of Mercia

Offa (757–96) was the most powerful king of his day, being the first to style himself simply as “king of the English”. He extinguished the royal dynasties of Kent and Sussex and seems to have ruled there directly. He had the East Anglian ruler Aethelberht put to death in 794 and in Mercia he installed his own son Egfrith on the throne in 787. Only Northumbria resisted his overlordship, and here a period of dynastic instability ensured that it did not pose him any real threat; King Aelfwold (779–88) was murdered and his successor Osred II (788–90) was forcibly placed in

Alcuin, who originally came from York, but who became one of the leading intellectuals at the court of the great Frankish king Charlemagne. He sent a yearly tribute to the Pope in Rome and received papal legates (including Alcuin) at his court in 786. In 795 he corresponded with Charlemagne over a commercial dispute and he clearly viewed himself as the equal of the Frankish ruler, as he asked for a Frankish princess as a bride for Egfrith. Offa also began the minting of a new penny coinage for Mercia, which was issued from Canterbury, Rochester, London, and Ipswich. He commanded sufficient resources to build a huge defensive work—Offa's Dyke—between western Mercia and the surviving British kingdoms in Wales. He left Mercia sufficiently stable and powerful for its hegemony to survive into the 830s when it collapsed under the twin pressures of Wessex and Viking invaders.

AFTER

Northumbria endured a time of prolonged political instability in the 8th century, while Mercia enjoyed a last period of supremacy before its final eclipse by Wessex after 800.

COLLAPSE OF MERCIA'S HEGEMONY

Concerned at the rising power of Wessex, King Beornwulf of Mercia marched against Egbert in 825 but was defeated at the Battle of Ellendun. As a result Egbert was acknowledged as king in Kent, Surrey, Sussex, and Essex.

VIKING PRESSURE

While Wiglaf recovered Mercia's independence in 830, it never recovered the preeminence it had enjoyed under Offa. An uneasy situation prevailed in the 830s and 840s with power balanced between Wessex and Mercia. This equilibrium, however, was destroyed by the onset of severe Viking raids which would ultimately result in the destruction of all the Anglo-Saxon kingdoms save Wessex **46–47** >>. The raid at Lindisfarne in 793 ce is remembered in the Lindisfarne Stone erected there.

LINDISFARNE STONE

Franks Casket

Franks Casket gives a unique insight into early Anglo-Saxon culture. Likely made in the first half of the 8th century in Northumbria, it is an ornately carved, whalebone box and shows scenes from history and mythology, including the sack of Jerusalem by the Roman Emperor Titus, the Adoration of the Magi, and the legend of Romulus and Remus. This panel depicts the legend of Egil the Archer seen defending his castle and wife from attackers.

Christian England

Missionaries sent by Pope Gregory I converted the first Anglo-Saxon kingdom at the end of the 6th century CE. Despite early setbacks, within just over a century all the rest had become Christian, and England became the home of a vibrant and thriving Christian culture, largely based in monasteries.

In around 560 CE, King Aethelbert of Kent married Bertha, the daughter of Charibert, the Merovingian ruler of a Frankish kingdom based around Paris. Like her father, Bertha was a Christian and in her entourage came a bishop, Liudhard, who was allowed to establish a church in Kent.

Despite any intentions Charibert may have had of cementing Frankish influence in England by effecting the conversion of Aethelbert, the Kentish king found it far less politically

Kingston Brooch

Made of gold, inlaid with garnet and blue glass, the 7th-century Kingston brooch, found in Kent, is a testament to the great wealth of the area around the time of King Aethelbert.

constraining to accept missionaries from a much more distant source, Pope Gregory I in Rome.

In 597, a group of clerics despatched by Pope Gregory and led by Saint Augustine arrived in Thanet in Kent. They were warmly received and Aethelbert soon accepted Christian baptism. Whether he truly understood the significance of the new religion or utterly rejected the pagan beliefs of his forefathers is unclear, but he probably saw that the support of a powerful Church would provide him with a strong additional underpinning of his royal authority. Aethelbert was active in the propagation of his new religion and effected the conversion of King Saberht of Essex. East Anglia, too, also fell rapidly into the Christian fold. Its king, Sigebert, had converted to Christianity while he was in exile in Gaul.

Pope Gregory intended the headquarters of the English Church to be in London, but this was under the political control of Essex and Augustine found it more convenient to remain under the protection of Aethelbert. So, the first archbishopric in England came to be

established in Canterbury, the Kentish royal capital, with the cathedral initially in the church that Bertha had used.

The death of Aethelbert

The cause of Christianity in England suffered a rapid setback on the death of Aethelbert in 616, for his successor reverted to paganism (as did the heirs of Saberht of Essex). Kent was rapidly gained back, and around 628 the Christians won a major victory with the conversion of Edwin, King of Northumbria and the appointment of

40 The number of clerics who went with Saint Augustine to Kent.

Paulinus as the first Bishop of York. The fragility of the Christian cause, however, was shown by the effect of the death of Edwin in battle against the pagan Penda of Mercia in 634; Northumbria relapsed into paganism for several years.

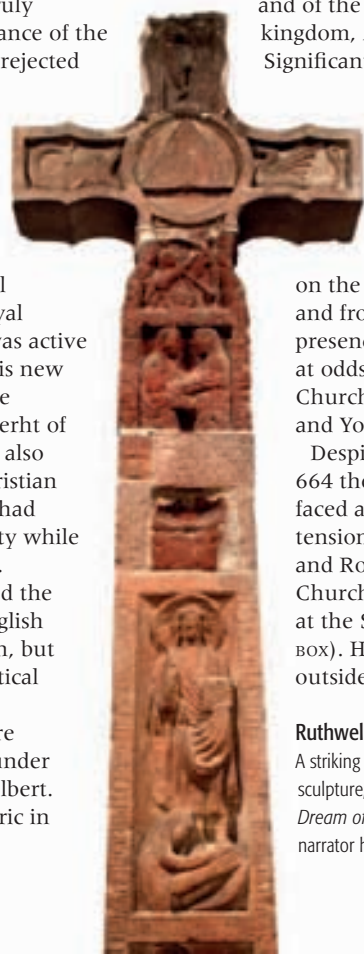

The Christian position in Northumbria was restored by King Oswald (634–53), while elsewhere Christianity again made rapid advances, with the conversion of Wessex in around 635 and of the last major pagan kingdom, Mercia, in 655.

Significantly, Oswald had not sent to Canterbury for missionary support, but to the Celtic monastery at Iona. The bishop he received, Aidan, established his see on the island of Lindisfarne, and from here a strong Celtic presence developed, often at odds with the “official” Church based in Canterbury and York.

Despite these advances, by 664 the Church in England faced a crisis. The acute tensions between the Celtic and Roman wings of the Church were largely resolved at the Synod of Whitby (see box). However, the Church outside Kent was in a parlous

Ruthwell Cross, Northumbria

A striking example of Anglo-Saxon sculpture, the Ruthwell cross illustrates the *Dream of the Rood*, a poem in which the narrator has a vision of Christ's cross.

Roman Britain must have had a substantial Christian population, but evidence for the survival of the religion in the areas the Anglo-Saxons conquered is very slight.

SHRINE OF SAINT ALBAN

GERMANUS OF AUXERRE

In 429, Germanus, Bishop of Auxerre (in Gaul), came to counter the spread of a Christian heresy called Pelagianism, which had taken root in Britain. He visited the shrine of Saint Alban at Verulamium—evidence that at least one Christian place of worship was still functioning.

CELTIC CHRISTIANITY

In areas the Germanic invaders did not conquer **40–41**, Christianity flourished. Monasteries such as Whithorn (established c.432) and Iona (established in 563) became centers of a Celtic church with a distinct identity and bases for the reconversion of northern England and missions to pagan parts of Europe.

state, with few bishoprics there paying more than lip-service to the authority of the Archbishop of Canterbury. To revive the flagging English Church, in 669 Pope Vitalian appointed a new archbishop, Theodore of Tarsus.

Theodore moved quickly to assert his authority over the Church in England, elevating the Northumbrian nobleman Wilfrid to the see of York in 669 (he was a spiritual powerhouse who converted one of the last pagan areas, Sussex, to Christianity in 679). The new archbishop also reorganized the bishoprics in England, sending new

“Study, teaching, and writing have always been my delight.”

THE VENERABLE BEDE, 673–735

The early history of the Anglo-Saxon Church was chronicled by Bede, a monk at Jarrow, in his *Ecclesiastical History* (completed in 731). Bede's narrative was intended to portray the triumph of the Church and the heroic endeavors of its founders and missionaries. However, in a separate letter to the Archbishop of Canterbury in 734, he did complain that the clergy of his day were illiterate in Latin and so could not conduct services properly, and that the standards of conduct in many monasteries were nothing short of scandalous. Despite this, references in his main work to the enormous library of manuscripts that Benedict Biscop had built up—an enormous achievement at a time when all books had to be copied by hand—and the extensive range of classical works quoted by Bede himself, indicate an environment in which scholarship was able to flourish.

In the visual arts, too, Christianity (and the monasteries in particular) made a huge contribution. Buildings, including the 8th-century church at Brixworth in Northamptonshire, and carvings such as the Ruthwell Cross, with its delicately interlaced vine-leaf

SCRIPTORIUM The office in a monastery where the monks produced and copied manuscripts.

patterns, show the great skill of Anglo-Saxon craftsmen. The beautifully painted illustrations in books including the *Lindisfarne Gospels* (dating from around 698) also show a mastery of technique that matches the best of continental European art.

By the late 8th century, the English Church was well-established and confident. This is demonstrated by the foundation of the cathedral school at York by Archbishop Egbert (732–66) and the gifting of large tracts of land to churches and monasteries, attested in contemporary charters. Following Augustine's first small mission 150 years earlier, England had truly become a Christian country.

bishops to many which had lain vacant, and subdividing others which had gained too much power and independence from Canterbury.

A flourishing Church

The later 7th century was a period when the English Church, now on a firmer footing, began to produce exceptional churchmen and flourished spiritually and culturally. Many new monasteries were established; Whitby as early as 657, and the great houses at Monkwearmouth in 674 and Jarrow in 682 (both founded by another

Saint Bede

Bede (673–735) spent most of his life in monasteries at Monkwearmouth and Jarrow. Despite this, he produced the most significant literature in England between Roman times and the Norman Conquest.

Northumbrian former nobleman, Benedict Biscop). The English Church was now self-confident enough to send missionaries of its own to evangelize among the pagans of Europe. One of the most prominent of these was Saint Boniface, who preached in Frisia and unconverted parts of Germany for 35 years from 719.

KEY MOMENT

SYNOD OF WHITBY

By 660, tensions between the Celtic and Roman traditions in England were becoming explosive. One issue was calculating the date of Easter (sometimes the celebrations were weeks apart in Celtic and Roman areas). To resolve the issue, a synod (church council) was held at Whitby, presided over by King Oswy of Northumbria. On the Roman side Wilfrid was the chief protagonist, while Colman, Abbot of Lindisfarne fought for the Celtic cause. Wilfrid was an able debater, and, with roots in the local nobility, had aristocratic support. King Oswy declared that the Roman method of calculating Easter should be adopted. Colman and many of his monks decamped to Ireland, weakening the Celtic cause in Northumbria.

WHITBY ABBEY

AFTER

Between the 9th and 11th centuries, the missionary zeal of the Church in England faltered, due to the depredations of Viking raiders and an increasingly secular clergy.

THE VIKINGS AND THE CHURCH

The Vikings often **attacked monasteries**—such as Lindisfarne—in the initial phases of their attacks **46–47** >>. They were easy targets, undefended, and very wealthy. Later the Vikings **kidnapped senior churchmen**, such as Archbishop Aelfeah of Canterbury, who was seized by Viking raiders in 1011, and killed after he refused to allow himself to be ransomed.

THE CHURCH IN THE 10TH CENTURY

Wulfstan, Archbishop of Canterbury during the reign of King Aethelred II (979–1016), helped bolster anti-Viking resistance in England. He decreed a remarkable national series of fasts and prayer vigils in August 1009 and wrote the *Sermon of the Wolf* to the English in which he blamed the current plight of the kingdom on the English **neglect of their religion** and on the **lack of discipline** in many monasteries. Wulfstan's calls for reform were, however, swept away in the **political storms which engulfed England** over the next 60 years.

Viking Raiders and Settlers

At the end of the 8th century CE, Viking raiders began attacking vulnerable coastal settlements in England. Within 50 years, larger armies overcame the Anglo-Saxon kingdoms and started dividing the land between them. Finally, Wessex stood alone, weak and beleaguered.

The *Anglo-Saxon Chronicle* of 793 CE speaks of “dire portents” that appeared over Northumbria, including “fiery dragons seen flying in the air.” These seemed to be omens of the dragons set on the prows of the Viking longships that raided the monastery of Lindisfarne on June 8 that year. While the effects of this first raid were probably exaggerated by Alcuin of York, who wrote that the Lindisfarne church was “spattered with the blood of the priest of God”, it was shocking nonetheless.

There was some uncertainty regarding the raiders’ origins: they were alternately described as Danes and *nordmanni* (“northmen”) in contemporary accounts, regardless of which part of Scandinavia they came from. The term “Viking” itself was rarely used in the

early stages of the raids. Its origin is much debated; it may derive from the Viken, a part of the Oslo Fjord in Norway. In English, it has come to mean little more than a pirate.

Viking attacks

The years following the attack on Lindisfarne were punctuated by intermittent attacks in the surrounding regions: one on the monastery at Jarrow in 794, another in Iona, Scotland, in 795, and then on the monastic community at Rechur, Ireland, in 795. England was then almost free of raids for the next 40 years.

During this time, the Vikings started establishing bases in France, where the successors of Charlemagne had indulged in a series of civil wars, weakening the country and leaving it vulnerable to the Scandinavian predators. It was probably one such Viking group that appeared in Kent in 835, attacking the Isle of Sheppey.

The frequency of the raids rose rapidly after this; the following year the Vikings attacked

Raids and settlements

The Vikings raided almost the whole of northwestern Europe, and established long-lasting settlements in England, the Scottish Isles, parts of Ireland, and Normandy.

Wessex and in 838 King Egbert had to face a combined Viking-Cornish army at Hingston Down. In 840 the great trading center of Hamwic fell victim to a Viking raid.

The Vikings were highly mobile. They could pull their shallow-bottomed warships onto beaches without the need for a proper harbor, and even sail them up rivers to raid far inland. They were also able to travel quickly on land by horseback.

A new Viking host

As long as the Vikings returned to Scandinavia (or bases in Scotland or France) each winter, the threat from them could be contained. But in 850 a Viking army overwintered for the first time in England, on the Isle of Thanet.

Lindisfarne Abbey

Although probably the work of a small raiding party, the attack on Lindisfarne in 793 CE was the first in a series of Viking attacks that shocked the entire Christian world.

BEFORE

Scandinavia was home to a rich and complex culture in the centuries before the Viking age. The political, technological, and economic changes which then took place here may have triggered the Viking raids.

RICH SCANDINAVIAN CULTURE

The Vendel culture flourished in Sweden in the 6th and 7th centuries, when **lavish weapons and jewelry were deposited in burial mounds**. Denmark seems to have developed a powerful centralized monarchy relatively early. Both here and in Sweden, trading settlements grew (at Ribe, Hedeby, and Birka), where **merchants exchanged Scandinavian goods** (such as furs, amber, walrus ivory, and locally produced pottery or combs) for more exotic imports.

OPPORTUNISTIC RAIDING

Long-distance trade was facilitated by the development of **new types of ships** (built with overlapping planks) and sails to supplement rowing power. However, trade could rapidly turn into opportunistic raiding, especially when periods of instability or political centralization constrained opportunities for young warriors at home. For these reasons, the **first small-scale Viking raids** on the coast of England, France, and Scotland began at the end of the 8th century.

GILT-BRONZE BRIDLE MOUNT

Oseberg ship

The Oseberg ship dates from around 820 CE. Viking ships were built using a skeleton of keel with bow and stern, to which a series of planks were connected, overlapping, and fastened with nails, creating a strong, flexible hull.

by 874. The Vikings had engaged in an abortive assault on Wessex in 870, but it had petered out after a series of

“Never before has **such terror** appeared **in Britain.**”

ALCUIN OF YORK, DESCRIBING THE 793 CE ATTACK ON LINDISFARNE

engagements. Despite the arrival of the Summer Army, the unity of the raiders seems to have been fractured by this time. Ivar returned to Ireland, and in 874 the army under Halfdan split into two groups. One of these retired to Northumbria, and shared out the lands of the Northumbrians—this was the first recorded Viking attempt to settle in England. The remainder invaded Wessex in 875, with some success, but after this another faction elected to halt in Mercia and divide

ARM RING

BROOCH

Viking jewelry

Viking craftsmen were exceptionally skilled metal workers. Although fine pieces in gold were rare, many everyday items for personal adornment were decorated with twists, spirals, and fantastic beasts.

The following year, they stormed Canterbury and London, defeating King Berhtwulf of Mercia. The raids then intensified over the next decade. Yet worse was to come, for in 865 a new Viking host, called the “Great Army” by the *Anglo-Saxon Chronicle*, landed in East Anglia. Led by brothers, Ivar the Boneless, Halfdan, and Ubbe, it may have numbered in the thousands and stayed for 13 years, extinguishing the Anglo-Saxon kingdoms.

After plundering in East Anglia and making peace with the East Anglian king, the Viking army headed north and captured York, throwing King Aelle into a pit filled with venomous snakes. They returned to East Anglia in 869, when King Edmund was defeated and killed.

Settling in Britain

Viking reinforcements (the “Summer Army”) arrived in 871 and put an end to the independence of Mercia

The areas where the Vikings established settlements in England became known as the Danelaw. Eventually, the Viking raids ceased, but the Danelaw continued to retain a strong identity, distinct from the south in many ways.

VIKING LANGUAGE

The number of Vikings who settled in central, northern, and eastern England may not have been very large, but the **effect of their settlement was significant**. Some legal customs in the Danelaw persisted long after its reconquest by the kings of Wessex. Also, much of the **basic vocabulary of modern English** (words such as “eye”, “bread”, and “sky”) comes from Old Norse, the Viking language, and place-names ending in -by and -thorpe also betray a Scandinavian origin.

SCANDINAVIA TURNS INWARD

The **Christianization of Denmark**, which began under Harold Bluetooth from 950 (commemorated by a magnificent runestone at Jelling), and that of Norway, brought Scandinavian monarchs into the mainstream of European rulers. In part with the aid of the Church, they built increasingly strong states with little room for the kind of freelance raids conducted by the Vikings. Although Christian Scandinavian monarchs **sought to conquer and absorb England** into their realms, by the late 11th century, the Viking Age had come to an end.

Book of Kells

One of the most lavishly illustrated manuscripts to survive from the Anglo-Saxon era, the *Book of Kells* contains the first four gospels in Latin. It is believed to date from around c.800 CE and to have been created by the monks on Iona or in a monastery in Northumbria itself. The first page of each gospel was decorated with an ornate initial capital. Here, Saint Matthew is shown opposite the Virgin Mary and baby Jesus.

KING OF WESSEX Born 849 CE Died 899 CE

Alfred the Great

“He **overthrew the pagans** with great slaughter, **smiting the fugitives**, and he pursued them as far as the fortress.”

ASSER'S *LIFE OF ALFRED*, ON THE BATTLE OF EDINGTON, 878 CE

Alfred, who became one of the most renowned kings of Wessex, spent most of his life under the shadow of the Viking threat. Born in 849 CE he was the fourth son of King Aethelwulf of Wessex. He may not have expected to become a king, although he was trained in the art of warfare, supporting his older brothers in battle against the Viking raiders (see pp.46–47). At the age of six he was too young to be considered for the throne on his father Aethelwulf's death in 855.

It was only after his brothers Aethelbald and Aethelbert died that Alfred became the heir to another brother, Aethelred. Alfred does not seem initially to have been given much responsibility by his brother, and so did not share in the abortive campaign of 868 when Aethelred and Burgred of Mercia failed in an attempt to trap Ivar the Boneless's Great Army in Nottingham.

Death of Aethelred

Wessex had not, up until then, been directly threatened by the Viking Great Army, but in 870 the Viking host crossed into Wessex, rapidly taking the important royal center of Reading. Although Alfred and Aethelred won an engagement at Ashdown, Halfdan, the Viking leader, made up for this by subsequent victories at Basing and at Merton on March 22, 871. Aethelred may have been wounded in one of these engagements, as he died in

the middle of April, leaving Alfred undisputed ruler of a kingdom that seemed likely to be dismembered by an overwhelming force of Norse invaders.

After Alfred was defeated at Wilton in May, he paid off the enemy, buying nearly five years of peace in which there is little evidence of his making any further provision for the defense of his realm. Another Viking force, this time led by Guthrum, surged into Wessex in 876. Alfred was only saved by the destruction of the fleet intended to reinforce the invaders in a storm.

The making of a legend

In 878, he was not so lucky. Caught unawares at the end of the Christmas celebration on January 6, 878, Alfred was forced to flee and took refuge in the damp haven of the Athelney Marshes. It was the making of the King, and of his legend. It was from this time that the famous tale of Alfred and the burnt cakes came into existence (see [TIMELINE](#)). Alfred began a guerrilla resistance and gathered his supporters to a meeting at “Egbert's Stone.” Around 4,000 came and it was now Guthrum's turn to be caught unprepared as the Anglo-Saxon levies bested his veteran warriors at Edington. Barricaded in Chippenham, Guthrum was forced to accept

The Alfred Jewel

The inscription on the jewel states “Alfred made me” and it was probably commissioned by the King himself. It consists of a gold backing inset with a rock crystal into which is inscribed a figure that may represent the wisdom of Christ.

The statue of Alfred

This iconic statue of King Alfred was set up in 1899 in Winchester, a city with Roman origins, but which was revived by Alfred as one of his burhs.

Christian baptism, together with most of his leading followers. Under the peace settlement, Alfred retained Wessex and took western Mercia, while Guthrum held the eastern portion of Mercia and East Anglia.

Army reforms

After getting the royal council, the witan, to swear that his sons would inherit the throne after him, so ensuring the line of succession, one of Alfred's first acts following the peace settlement with the Vikings was the building of a sea fleet. Although the armies of Wessex had, on occasion, been able to beat the Vikings on land, they had never

Coin from Alfred's reign

This silver penny of Alfred, issued around 880, post-dates reforms in which he restored the silver content of the coinage to 90 percent.

divided into two, so that one half could remain on their farms while the other half were fighting.

Alfred's defenses were put to the test in 892 when a massive Viking invading force landed in Kent, while another made its way up the Thames estuary. In four years of campaigning, which ranged across the country from the Welsh borders to Essex, the Vikings were unable to secure a permanent foothold in the face of the new network of *burhs* that now enmeshed Wessex. Having suffered a series of setbacks, and with their numbers severely diminished, in 896 they sailed back to France in the hope of easier plunder.

Alfred himself, who only learnt to read when he was 12 and Latin even later, translated a series of books into Anglo-Saxon, beginning with the *Pastoral Care* of Pope Gregory I and the *Consolations of Philosophy* by the late Roman philosopher Boethius. These works were intended to provide firm moral examples for their readers. It was also around this time that the *Anglo-Saxon Chronicle* was begun, providing an invaluable near-contemporary source for his reign.

By the time of his death in 899, Alfred had restored the cultural life of Wessex, reformed its administration and, against all odds, seen off the Viking threat. By ensuring Wessex's survival, the only one of the Anglo-Saxon kingdoms to weather the storm, he had also ensured that when England was united, it was the kings of Wessex that would become its rulers.

“He was **superior to all of his brothers...** both in wisdom and in all good habits, and furthermore because he was **warlike beyond measure** and victorious in almost all battles.”

ASSER'S LIFE OF ALFRED, 893 CE

been able to challenge them at sea. The naval victory of 882, in which the Wessex fleet captured two Viking ships, was a sign the Scandinavians would not in future be able to raid the English coastline unmolested.

27,000 The number of men available for military service from Alfred's burhs. Calculated from a version of the *Burghal Hidage*, which documented the military obligation of the burhs' inhabitants.

In the early 880s, Alfred also boosted the land defenses of his realm by ordering the construction of a series of new fortified towns or burhs (“boroughs” in modern English), each around 20 miles (32km) apart. These provided a network of strongpoints which would hinder any subsequent Viking invasion and whose inhabitants were obliged to provide a certain amount of military service. Alfred also reorganized the army, so that the *fyrð*, the peasant levy, did not have to serve all at once, but was

Spreading literacy

Alfred had saved Wessex, but it was not only for this that he is remembered as “the Great” (the only English king to receive such an accolade). From the 880s, the King sponsored a revival of learning in Wessex, attracting to his court men such as Waferth, the Mercian Bishop of Worcester, Asser, a Welsh monk from St. Davids, who would become Alfred's biographer, and Grimbold of St. Bertin, a leading Frankish scholar. He established a school at court to educate the children of the nobility, setting aside a portion of the royal income to fund this, although his aim of bringing literacy to all free-born men was not achieved.

Commemorative tower

The tower, built in 1770 by a wealthy banker, was set up near the supposed site of Egbert's Stone, the rallying point for Alfred's remaining supporters in the spring of 878.

TIMELINE

- **849** Alfred is born in Wantage to King Aethelwulf of Wessex and his queen, Osburh.
- **853** Alfred, aged three, travels to Rome as his father's representative on a pilgrimage. He returns three years later with his father, who, on the return journey marries Judith, the daughter of the Frankish ruler Charles the Bald.
- **856** Alfred's brother Aethelbald revolts against their father and secures a share in the kingdom. Aethelwulf dies in 858.
- **860** Death of Aethelbald, who is succeeded by Aethelbert.
- **865** Aethelbert dies, and is succeeded as king by Aethelred, Alfred's full brother.
- **868** Alfred marries Ealhswith, the daughter of a Mercian nobleman. Although Alfred's wife did have some royal blood, it was not the most prestigious marriage, a sign perhaps that Aethelred did not intend his brother to succeed him. At the wedding ceremony Alfred is struck down by a mysterious malady, whose exact nature is unclear, but which will afflict him on and off for the next 25 years, inflicting excruciating pain on him at each recurrence.
- **871** Alfred, in command of part of the Anglo-Saxon army, is caught by the main Viking force at Ashdown. It is only the arrival of his brother in the thick of the fighting that saves him. Aethelred had allegedly been delayed by the need to wait until the end of Mass before joining the battle. Aethelred dies some weeks later of battle wounds, and Alfred succeeds him as King of Wessex.
- **878** Alfred flees to Athelney Marshes in Somerset after a surprise Viking attack. There he rallies a new Wessex army. Later legend has it that he took refuge in a peasant woman's house and when asked by her to look after the loaves (sometimes translated as “cakes”) in her oven, he neglectfully allowed them to burn. More a parable about the consequences of neglecting the kingdom's defenses, the tale is almost certainly apocryphal.
- **May 878** Alfred's supporters meet at Egbert's Stone. The *fyrð* rallies and defeats Guthrum at Edington (or Ethandun).
- **882** Alfred's fleet wins a naval engagement against the Vikings, capturing two of their ships.
- **885** A Viking force attacks Rochester, but is beaten off; the first fruit of Alfred's army reforms.
- **886** Alfred makes a new treaty with Guthrum, defining the limits of their respective territories and setting the borders of the Danelaw. Alfred occupies London.
- **892** New Viking armies land in England. One part, led by Haesten, is temporarily bought off, but the armies unite by 893.
- **894** Haesten's men are besieged in Chester, but escape and attack north Wales.
- **895** The Vikings return to Essex and finally agree to leave England.
- **October 26, 899** Alfred dies and is buried in Winchester. His nephew Aethelwold revolts in a failed attempt to prevent the throne passing to Alfred's son, Edward the Elder.

BEFORE

Alfred the Great saved Wessex from conquest by the Vikings, but the Scandinavian invaders still occupied large portions of England's north and the Midlands.

VIKING SURVIVORS

The survivors among the Vikings of the Great Army of 865 CE and the Summer Army of 871 had mostly settled down in Mercia, East Anglia, and Northumbria, establishing bases in **strongholds at York and in the Five Boroughs** (Lincoln, Derby, Nottingham, Leicester, and Stamford).

VIKING REINFORCEMENTS

The campaigns of Alfred the Great << 50–51 caused some difficulties for the British Vikings. By 900, they were looking to the Viking settlements in Ireland, the Isle of Man, and the Scottish Isles for support and reinforcements. In addition to western Mercia and Wessex, the Vikings faced opposition from what remained of the English kingdom of Northumbria, around Bamburgh.

VIKING SWORD

Wessex Takes the Lead

In 900 CE, the kingdom of Wessex had only recently secured its independence from the Viking threat. Over the next half-century a series of able kings progressively conquered the areas of Viking England, until their lands bordered with Scotland. Now the Wessex rulers' claim to be "kings of the English" was no hollow boast.

Edward the Elder, the son of King Alfred, hardly had a smooth path to succession. After Alfred's death in 899 CE, Aethelwold, his nephew, attempted to seize the throne. He failed, fleeing to Viking-held Northumbria, where the Scandinavians installed him as their king. Edward spent the next four years trying to defeat Aethelwold, who finally perished at the Battle of the Holme in 903.

Taking Viking territories

Edward launched raids into Danish territories in 909, but it was only during the following year that he won his first significant victory, at Tettenhall, where three Danish kings perished, together with huge numbers of their men. The death in 911 of Aethelred, who had been ealdorman of Mercia, further strengthened the Wessex king's position, as his replacement was his widow Aethelflaed, the "Lady of the Mercians", who just happened to be Edward's sister.

Aethelflaed secured their position in Mercia by fortifying Chester in 907 and then transforming the ancient royal center of Tamworth into a burh, or defensive fortification, in 913. She created a series of further burhs, including Stafford, Warwick, Eddisbury, and Runcorn. Meanwhile, Edward campaigned to the north and the east, forcing the Viking kingdoms of Essex, Bedfordshire, and Northamptonshire, to surrender by 916. The

Scandinavians of the Five Boroughs did not present a common front and had not had time to establish a centralized kingship such as grew up in York within a few years. When Aethelflaed captured Derby in 917, the only remaining Viking forces south of the Humber were based in Leicester, Stamford, Nottingham, and Lincoln. By the end of the

The Danelaw divisions

Before Edward the Elder began his reconquest of the Danish-controlled areas of England around 910, the Scandinavians controlled East Anglia, the East Midlands, an area around York, and a block of territory in the northwest.

following year all of these were in Edward's possession, while York itself had submitted to Aethelflaed.

Edward's setbacks

Edward then suffered two setbacks. Firstly, Aethelflaed died, opening up the question of the succession to Mercia at a less-than-convenient moment. Edward had Aethelflaed's daughter, Aelfwynn, seized and removed to Wessex, where she could not provide the focus for any resistance to his rule over Mercia.

Ecclesiastical revival

This 10th-century reliquary cross, which contained the finger of an unidentified saint, epitomizes the progressive ecclesiastical revival that followed the Wessex kings' recapture of English lands.

Potentially more serious was the rise of a new Viking power in the north of England. The weakening of the Danes of the Five Boroughs had opened up opportunities for ambitious adventurers from other Viking lands and so in 918, Ragnall, the grandson of Ivar the Boneless, descended on northern England. After an indecisive battle at Corbridge, he moved south and seized York, establishing a Viking kingdom, which acted as a block to Wessex's interests in the region. Edward reacted by constructing a series of fortresses in the northwest and Midlands (including Nottingham) to prevent any further expansion from York. By 920 Ragnall felt it politic to accept Edward as his overlord (joining the Welsh kings of Gwynedd and Dyfed, who had done so in 918). Although this and the submission of

his sister and Sihtric, the Viking ruler of York. When Sihtric died in 927, Athelstan took the opportunity to drive out his successor, Olaf, and take York for himself, razing its fortifications in an effort to neutralize any possible future threat. In the afterglow of victory, he arranged a meeting at Penrith at which he received the submission of King Constantine of Scotland, Hywel Dda of Dyfed, the King of Strathclyde, and the Earl of Bamburgh.

King of all Britain

In 934 Athelstan felt strong enough to invade Scotland, pushing deep into the central part of the country. King Constantine reacted by building an

Ealdred, Earl of Bamburgh, and the kings of Strathclyde and Constantine gave Edward notional lordship over virtually all of Britain, he exercised no real control in those areas. By the time

of Edward's death in 924, Mercia was fully incorporated into Wessex. Athelstan, the new king moved to secure the position on his northern border by a marriage alliance between

“The king of Scots... and Ragnall and sons of Eadwulf and all who live in Northumbria... and also the king of the Strathclyde Britons... **chose him as father and lord.**”

ANGLO-SAXON CHRONICLE ENTRY RECORDING THE SUBMISSION OF THE NORTH TO EDWARD THE ELDER, 920 CE

ANGLO-SAXON KING (C.893–939 CE)

KING ATHELSTAN

Athelstan was the eldest son of Edward the Elder. His upbringing in Mercia—he had been raised by his aunt Aethelflaed—made him acceptable as a sovereign to the Mercian nobility there, and there was relatively little resistance to his rule. Although much of his reign was occupied with the struggle against the Vikings of Northumbria (his success at Brunanburh, setting a seal on his dominance of the north) he also absorbed Lancashire and drove the Britons out of Exeter. Athelstan's prestige as a result of these victories was high, and on his coins he styled himself as “King of the English and Ruler of All Britain”, and he was able to arrange important diplomatic marriages for his sisters, to Charles the Simple and Emperor Otto I. His network of alliances was also boosted by foreign nobles, who were fostered at his court, including Louis d'Outremer (the future Louis IV of France) and Hakon, son of King Harald Finehair of Norway. Athelstan's unexpected death in 939, almost caused the loss of everything he had achieved.

alliance of all those who feared the expansionist power of Wessex: the Scots, the Strathclyde Britons, the Dublin Vikings, and Scandinavians from the Western Isles. The allied army invaded England in 937 and, at Brunanburh (possibly in Cheshire) suffered a catastrophic defeat in which five kings of the anti-Wessex alliance died (though Constantine himself escaped). Athelstan now referred to himself as Emperor Orbis Britanniae (emperor of the whole world of Britain), but his death in 939 showed that the paramount position of Wessex was far from secure.

Athelstan's brother Edmund succeeded to the throne of Wessex, but almost at once lost most of the gains of the preceding 30 years, as Olaf Guthfrithson rode the tide of a Northumbrian revolt to become Viking king of York, seizing, in addition, most of the land of the Five Boroughs. It took until 942 for Edmund to recover

After the fall of York in 947 CE, England experienced more than 30 years of peace in which the strengthening of royal administration and monastic reform were the main developments.

EDGAR'S REIGN

Edgar was Eadred's younger son and became king of Wessex in 959. His reign was largely peaceful and in 973 he received the submission of six kings (including those of Scotland, Strathclyde, and Gwynedd), who are said to have taken oars and rowed him on the River Dee. He supported a series of Church reforms undertaken by his Archbishop of Canterbury, Dunstan, and improved the coinage by insisting that all coins be recalled for reminting every six years. During his reign the custom of appointing ealdormen to larger areas (such as the whole of East Anglia) rather than individual shires became established.

REMAINING VIKING POWER

The Vikings remained in control of Dublin, the Isle of Man, and parts of Scotland 54–55 >>. At the end of the 10th century, new Viking leaders with the resources of whole kingdoms behind them launched fresh raids. Men such as Svein Forkbeard of Sweden commenced a new Viking Age in Britain in the 990s.

this ground, at which point York itself fell prey to factional infighting, resulting in a rapid succession of kings in no position to reassert themselves against the armies of Wessex. Even so, Edmund was forced to grant Cumbria to Malcolm I of Scotland, in exchange for his support against the Vikings.

Final defeat at York

A final threat from York emerged in 947, when Eric Bloodaxe, son of King Harald Finehair of Norway, and a refugee from Scandinavia, was recognized as king. Six years of confused campaigning followed before Eadred—Edmund's brother and successor as king of Wessex—invaded

WITANGEMOT A meeting of the Anglo-Saxon royal council, the witan. It was not a formal institution, including the secular and ecclesiastical nobles the king chose to summon. Its role was to give advice on policy, but the king was not constrained to follow it.

Northumbria. The citizens of York, seeing the cause was lost, expelled Erik, who was murdered while fleeing northward. After half a century of warfare, the kings of Wessex had finally, or so they thought, rid England of the threat of Viking conquest, and had emerged as undisputed rulers of all England.

Ireland in the Viking Age

The Vikings never succeeded in conquering Ireland, instead establishing a series of port-enclaves along the Irish coastline from the 840s CE. From these, the Vikings alternately allied and fought with a succession of native Irish kings, until they finally lost their political independence in the early 11th century. Although their kingdoms did not last, the urban culture they established survived.

Viking gold ring

Some of the treasures plundered from Irish monasteries and churches were melted down and made into jewelry such as this ornate spiral ring.

BEFORE

The early Viking raids on Ireland began in the 790s CE. They were comparatively small scale and it was more than 40 years before larger groups came to settle.

EARLY VIKING ATTACKS

The first reported Viking attack came in 795 against the monastery of Rechrú (Raithlin) which was "laid waste." Raithlin lay off the northeast coast of Ireland, an easy journey for marauders making their way from Scotland, but soon **the Vikings swept south**, attacking Inis Pátraic off the coast of County Dublin in 798 and smashing the much-revered shrine of Do Chonna. Just as they had in England, **the Viking raids caused outrage**, increased by the fact that **monasteries and churches**, with their easily portable treasures, were the raiders' principal targets.

THE RAIDS CONTINUE

By 807 Viking raiders reached the west coast of Ireland, **burning monasteries** as they went. Occasionally the Irish fought back successfully; an annal entry for 811 speaks of a "**slaughter of pagans**" by the men of Ulster. The Book of Kells was brought to Ireland after a raid on the monastery at Iona in Scotland.

BOOK OF KELLS

The main accounts of the early Viking raids come from chronicles such as the *Annals of Ulster*, which were compiled in monasteries. The writers reserved particular venom for the Norsemen, referring to them as *geinti* ("heathens") and holding up the Viking raids as an example of divine wrath against an Ireland that had turned away from God.

Early attacks

The early attackers, who seem to have come from Norway, gradually expanded the field of their operations, in the south reaching Cork by 822 CE, and in the north plundering the monastery of Bangor in 824, where they scattered the relics of Saint Comgall from its shrine, in a shocking act of sacrilege.

Unlike in France and England (see pp.52–53), there was no centrally organized resistance to the Vikings in Ireland, which may have encouraged the Scandinavians to mount further raids. In the 830s, these became more serious, sometimes penetrating deep inland; in 837 two large Viking fleets appeared carrying thousands of warriors (probably from the Norse settlements in Scotland), one on the Boyne and another on the Liffey (near the site of present-day

then, in the following decade, at a number of other points including Lough Ree (845) and Cork (848). The main leader of the Viking raiders in the 840s was Turgéis, who operated from the *longphorts* at Lough Ree, and whose attacks ranged widely through Connaught and Meath, including the abbey of Clonmacnoise. At the latter, his wife Ota is said to have performed a pagan divinatory rite called *seidr*, while draped across the high altar. Finally, in 845, Turgéis was captured by Maéll Sechnaill, the king of Tara, and drowned in Lough Owel.

The Irish kings, who had expended so much effort in fighting each other, now realized that the Vikings posed a much greater threat to their survival. In 848, Maéll Sechnaill won another victory near Skreen, County Meath, in which he is said to have killed 700 Vikings. An embassy sent by the Irish to the Frankish King Charles the Bald the same year announced that they had driven the pagans out of Ireland.

Viking Dublin

The Vikings had not, however, been removed, although they were weakened by internal disputes and the

1,200 The number of Vikings said to have been killed at the Battle of Castledermot (848) against Ólchobar, King of Munster, and Lorccán, King of Leinster.

Dublin). The army of the Uí Néill kings, which tried to resist them, was cut to pieces.

In 839, a Viking fleet stayed over the winter for the first time in Lough Neagh, and remained for two years. If this was a grim development, far worse was to come. For in 841 the Vikings began to establish fortified naval bases, or *longphorts*, first at Linn Dúachaill in County Louth and at Dublin and

Saint Conall Cael's bell

This iron handbell from the 7th–9th centuries may have belonged to Saint Conall Cael. It later became enshrined as a relic. Such items were a common target of Viking raiders.

“The Irish, falling upon the Northmen, **with the help of Our Lord Jesus Christ** were victorious and drove them from our country.”

ANNALS OF SAINT BERTIN, RECOUNTING THE IRISH ENVOY'S ACCOUNT TO THE FRANKISH COURT OF THEIR RECENT VICTORIES, 848 CE

arrival of a new group from Denmark which sacked Dublin in 851. The Scandinavians were only saved from tearing themselves apart by the arrival of Amlaíb from Scotland in 853, who allied himself with Imar, another Viking leader, and re-established the supremacy of Dublin. He made it the main Norse center in Scotland, the Isle of Man, and England. For the next

half-century the dynasty that Amlaíb and Imar founded held sway in Dublin and across the Irish Sea. Frequently, however, the Dublin dynasty's interest in Britain weakened their position in Ireland, as in 866 when the Uí Néill king Aéd mac Néill sacked a series of Viking *longphorts*, burning the Viking fort in Dublin the following year. In 873 Imar died, and for the next 30 years, the Dublin Vikings were riven by a series of dynastic feuds, until finally, in 903, the Irish recaptured Dublin.

The Viking return

Ireland's gain was Britain's loss, as an exodus of Dublin Vikings descended on north-western England and parts of Wales. It was not long, however, before the Vikings returned to Ireland with the appearance in 914 of “a great sea-fleet of pagans” in Waterford. In 917, Imar's grandson, Sihtric Caec, and Ragnall, a Dane from Northumbria, arrived with a new force. Níall Glúndub, the King of Tara, saw the danger and moved against the Norsemen, a campaign which ended in a heavy defeat and the retaking of Dublin by Sihtric.

The Vikings established a second settlement at Dublin close to the first *longphort* of 841. This phase of the Viking town has been excavated, revealing a network of streets and lanes divided by boundary fences of wattle, defining plots containing well-built houses. Remains have been found of a variety of industries, including comb-making, blacksmiths and other metal-workers, wood- and amber-working. At this time, Dublin's population was probably several thousand, and it was clearly a prosperous place.

The Second Age

This Second Viking Age in Ireland from 917 saw an attempt by Sihtric and his kinsman Godfrid, to create a Viking

kingdom in Ireland to match that of York in northern England. However, this effort was undermined by their continued involvement in England, as first Sihtric, then Godfrid succeeded to the throne of York and abandoned their Irish possessions to deputies. Godfrid's successor, Amlaíb, also became entangled in English affairs, fighting against King Athelstan of Wessex at the Battle of Brunanburh in 937. Amlaíb escaped the defeat of his allies at the battle, but he became King of York, as did his successor in Dublin, Amlaíb Cuaran in 944–45.

On his return from England, Amlaíb Cuaran threw himself wholeheartedly into trying to restore the Viking position in Ireland. By now, however, the Norse were more like another fractious Irish kingdom than a foreign power to be feared. In 980, they were thoroughly crushed by Maéll Sechnaill of the southern Uí Néill, who then forced Dublin to come to terms, including the release of all Irish slaves in the territory ruled by the Vikings.

Rise and fall of Brian Boru

By the 980s, the Dál Cais dynasty under Brian Boru had established itself in Munster, beginning a bitter struggle with Maéll Sechnaill for the high-kingship of Ireland. In 997, the two Irish kings divided the island between them, with Brian becoming the nominal overlord of Dublin. He married his daughter to the leader of the Dublin Vikings and married himself into the same family to strengthen his position.

A desperate final bid by the Vikings for independence from the Irish rulers took place in 1014, when the Dublin Norse recruited an army, including Vikings from Orkney and the Hebrides, to help them throw off Brian's rule. On April 23, 1014, the Vikings faced

4,500 The number of men in Brian Boru's army at the Battle of Clontarf in 1014.

1,000 The number of men fighting under Sigtrygg at the Battle of Clontarf in 1014.

the troops of Brian Boru and Maéll Sechnaill at Clontarf to the north of Dublin. Although Brian was killed, the Irish were utterly victorious. After 1014, Dublin remained a fundamentally Scandinavian town for more than a century, but the Viking Age in Ireland was over.

Kilmacduagh tower

Kilmacduagh monastery was founded by Saint Colman in the early 7th century. Its round tower may have offered a refuge against Viking raiders.

Scandinavian influence on the art and language of Ireland lived on even after the Viking defeat at Clontarf in 1014.

VIKING STYLES

The Ringerike style, with its spirals and tendrils in the shape of leaves, and the Urnes style, with its fantastic beasts and sinuous snakes, spread widely throughout Ireland, appearing both in **metal-working** and on **stone sculpture**.

LANGUAGE AND TOWNS

A few Viking terms made their way into modern Irish, such as *accaire*, “anchor”, *margad* (“market”), and *sráid* (“street”). The most enduring Viking legacy of all, however, is the **establishment of the first towns in Ireland**, including Dublin, Limerick, and Waterford.

IRISH KINGS

The **death of Brian Boru at Clontarf was a disaster** for his family, the Uí Briain. Máel Sechnaill once again became the most powerful king in Ireland until his death in 1022. Thereafter, Diarmait of Leinster was supreme from 1042–72, using the remaining Viking fleet of Dublin in campaigns in Wales in the 1040s. His court was a **magnet for disaffected English and Welsh princes**, and in 1066 he **gave refuge to the sons of Harold Godwinson** after their father's defeat at the Battle of Hastings **70–71** >>

King Canute

Despite being Danish, Canute, shown here in a 13th-century manuscript, was widely accepted in England. His rule brought peace, because his rule over the lands from which the Vikings originated meant no new raiders would attack England's shores.

Maldon causeway

Ealdorman Byrhtnoth allowed Olaf's Vikings in 991 CE to cross this causeway leading from Northey Island. Although the Anglo-Saxons fought bravely, most of them paid for Byrhtnoth's decision with their lives.

BEFORE

Following the final collapse of the Viking kingdom of York in 954 CE, England experienced around 30 years free of significant Viking raiding.

REMAINING VIKING POWER

Political changes in Scandinavia at the end of the 10th century boded ill for the ruling English House of Wessex. The Danish king, Harold Bluetooth, consolidated his political control over his kingdom and was among the first of the Viking rulers to accept Christianity. Harold's building of great round forts at Trelleborg, Fyrkat, and Nonnebakken in Denmark, around 980, shows he was able to command considerable resources.

NEW RAIDS

From the 980s Viking raids began once more against the coast of England. There was a political crisis caused by the murder of King Edward in 978 (at the instigation of Aelfhere, Earl of Mercia) and the new king, Aethelred, was at first uncertain of his throne.

OLD BASES

Although the Viking raiders of England came principally from Denmark and Norway, the Vikings retained their bases in Ireland, the Isle of Man, and the islands of Scotland, where the last great raid took place under Magnus Barelegs of Norway in 1098–99.

RECONSTRUCTION OF A LONGHOUSE AT TRELLEBORG

Triumph of the Danes

Aethelred the Unready proved incapable of fending off a new wave of Viking raiders from the 990s CE. By 1016, these raids had turned into an invasion and the Danish king, Sweyn, seized the English throne. His son Canute and his grandsons presided over a quarter century of Danish rule in England.

Aethelred—whose nickname means “Ill-Advised”—was relatively untroubled by the first, small-scale Viking raids. In 991 CE, however, a much more dangerous Viking army made its way from Scandinavia under the command of

48,000 The number of pounds of silver paid by Aethelred to Sweyn as part of the Danegeld of 1012.

Olaf Tryggvason. Landing near Maldon in Essex, the raiders were at first bottled up on an offshore island by Byrhtnoth, the local *ealdorman* (high-ranking official). He then unaccountably let them across the narrow causeway to give battle and found his army cut to pieces.

Paying Danegeld

On the advice of Archbishop Wulfstan, Aethelred paid out a Danegeld of 10,000 pounds of silver to be rid of the invaders, a bribe which merely attracted more Scandinavian armies in search of a similar payoff. Progressively higher Danegelds were paid in 994, 1002, 1007, and 1012, when they reached a colossal sum nearly five times that of the 991 payment.

The strain caused in England by the Vikings led to panic measures being taken. On St. Brice's Day (November 13) 1002, the King ordered the massacre of all Danes in England. This only prompted a fresh invasion in 1003 led by King Sweyn of Denmark, bent on vengeance (Olaf had made peace with Aethelred and agreed not to return to England). From then until 1013, Sweyn and the Danes returned again and again, aided by the wavering loyalty of several Anglo-Saxon ealdormen.

There was a brief respite in 1012 when the Viking leader Thorkell the Tall defected to the English, disgusted at the murder of Archbishop Aelfeah

of Canterbury after his capture by a Viking band. Thorkell returned to Sweyn's side and in 1013 the Danish king landed at Sandwich, Kent, with an enormous force. The rapid submission of Earl Uhtred of Northumbria led to the collapse of Anglo-Saxon resistance. Aethelred fled to the court of his brother-in-law, Richard of Normandy, and by October Sweyn was recognized as king of England.

Canute takes power

Sweyn's early death in February 1014 breathed false hope into the English cause, prompting Aethelred's return. However, Sweyn's son Canute, once he had secured his position in Denmark, returned to England in 1015. Although he briefly acknowledged Aethelred's son, Edmund Ironside, as king of southern England in 1016, both Aethelred and Edmund died within six months of each other and by December, Canute was unchallenged king of the whole country. England was now part of a vast realm that spanned the North Sea and included Denmark, Norway, and part of Sweden. The lack of any

Runestone

This runestone from Uppland in Sweden commemorates Ulf, who is said to have received three payments of Danegeld from Viking leaders, including from Canute.

credible Anglo-Saxon pretender made Canute's rule secure, and his rapid marriage to Emma, Aethelred's widow, cemented his position both in England and in respect of his new father-in-law, the Duke of Normandy.

Canute's main change to the governance of England was to establish the new large earldoms of Northumbria, Mercia, East Anglia, and (in the 1020s) Wessex. He rewarded his leading followers, making Thorkell earl of East Anglia (until his exile in 1020 for

Wulfstan Psalter

Archbishop Wulfstan of York was one of the leading intellectuals at Aethelred's court, and a noted writer of sermons. His tenure saw the production of beautiful liturgical manuscripts, such as this illustrated psalter.

rebellion) and Eric earl of Northumbria. He also appointed native Anglo-Saxons, giving Mercia to Leofric (whose wife was Lady Godiva), and Wessex to Godwine, whose son would later become King Harold II. Canute established his main court in England, at Winchester, which became the capital of his huge northern empire. At the time of his death in 1035 it seemed the triumph of the Danes was complete.

AFTER

Canute's death led to the dissolution of his empire, but Danish rule over England continued under his sons.

RULE OF HAROLD HAREFOOT

Although Canute had probably intended his son Harthacnut to inherit the English throne, the heir was in Denmark when his father died. This allowed **Harold Harefoot**, his half-brother, to **seize the throne of England** with the assistance of Godwine Earl of Wessex.

THE LAST DANISH KING

Harthacnut came to the English throne in 1040. His two-year reign was the last by a Danish king and was followed by the **restoration of Anglo-Saxon rule** under Edward the Confessor **60–61** >>. A Viking fleet **invaded England** under Harald Hardrada of Norway in 1066, and as late as 1085, Cnut IV of Norway planned (but did not dispatch) an expedition to England.

St. David's shrine

Reverence for the 6th-century monk St. David, who died in 589 CE, spread until he was recognized as the patron saint of Wales. The shrine stands in St. David's Cathedral, built on the site of the monastery the saint founded.

BEFORE

In the centuries following the Anglo-Saxon invasions of England, new kingdoms emerged in Wales and Scotland.

EARLY KINGDOMS

Early Welsh kingdoms had their **origins in the tribal groups** of Roman and pre-Roman times such as Dyfed, which derived from the Demetae. In Scotland, the emergence of **rival kingdoms of the Picts**, the Dal Riata Scots from Ireland, the Strathclyde Britons (whose stronghold was at Dumbarton Castle), and an **area ruled from Northumbria** led to a struggle for power.

DUMBARTON CASTLE

Independent Realms

After several false starts, Scotland became a united nation in the 9th century CE, excluding some areas on the fringe. Wales was almost united several times before the 10th century, but the attempts failed. It was, therefore, less well placed than Scotland to resist the aggressive intentions of English kings.

Historical developments in Wales in the 6th century are rather obscure. Gildas, in his *De Excidio*, inveighs against the evils perpetrated by the "Five Tyrants", including Maelgwyn of Gwynedd who died in the late 540s, and Vortepor, ruler of the Demetae (or Dyfed). Also around the late 6th century, the kingdom of Powys emerged in central Wales. It was principally these three kingdoms that struggled for supremacy over the next three centuries.

A brief hope of reuniting the Welsh lands with the Britons of the southwest and Cumbria, from whom they had been cut off by the advancing Anglo-Saxons, occurred in the reign of Cadwallon of Gwynedd. Cadwallon defeated and killed Edwin of Northumbria in the battle of Hatfield in 633. The triumph was short-lived, however, for in 635 Cadwallon perished in battle against Edwin's brother Oswald at Heavenfield near Hexham.

It was two centuries before another ruler of note took power. Merfyn Frych became king of Gwynedd in 825. During his 19-year reign, he consolidated the kingdom and passed on a strong position to his son, Rhodri Mawr or Rhodri the Great.

Rhodri expands Gwynedd

It was a moment of opportunity for Gwynedd as the kings of Mercia, who had long harried the Welsh principality, were under extreme and fatal pressure from Wessex to the south and Viking invaders. Rhodri, too, had to face the Viking threat, and in 856 he defeated them in a great battle on Anglesey.

He also succeeded in expanding his power to the south. Cyngen of Powys died in exile in Rome in 856, probably having been driven out by Rhodri, and the last known independent ruler of Ceredigion, Gwgan, drowned in 872, after which it was annexed by Gwynedd. Rhodri died in 878 and power was divided amongst his six sons. The most active

Welsh ruler

This manuscript depiction of Hywel Dda stresses the idea of his kingship, showing him crowned and bearing a scepter. His successful military campaigns, issuing of a law code, and minting of coinage bolstered the image of a successful and benevolent king.

of them, Anarawd, struggled to contain the twin threats of Alfred the Great's Wessex and resurgent Viking groups who established themselves in Anglesey in 903.

Welsh unity under Hywel

It was Anarawd's nephew Hywel Dda, or Hywel the Good, who achieved the next near-unification of Wales. He became ruler of Dyfed in 910 and strengthened his claim by his marriage to Elen, niece of Rhydderch, the last king of the native Dyfed dynasty. By 920, he united Dyfed with the smaller

territory of Seisyllwg to create a new kingdom of Deheubarth.

Although he submitted in 927 to Athelstan of Wessex, it may have been a means of gaining advantage against his great rival Idwal Foel of Gwynedd, who adopted a more openly aggressive anti-English policy. Hywel maintained a more diplomatic stance, visiting the English court several times and even making a pilgrimage to Rome in 929.

In 942 Idwal launched an attack against England in which he died, and Hywel took advantage to invade Gwynedd before Idwal's sons could

Constantine II

Constantine built a coalition of those interested in weakening the power of Wessex. His defeat at Brunanburh in 937 could have been a disaster, but his kingdom was strong enough for Alba to endure.

claim the throne. This helped him become the king of most of Wales, save Morganwg and Gwent in the southeast. The rest of his reign was peaceful. On

“So then also... came in flight, to his northern land, **Constantine, the hoary warrior.**”

THE ANGLO-SAXON CHRONICLE'S *BRUNANBURH POEM* RELATING THE DEFEAT OF CONSTANTINE II AND HIS ALLIES AT THE BATTLE OF BRUNANBURH, 937 CE

his death in 949 it looked as if the prospects for Welsh unity were bright.

Scottish campaigns

By the late 6th century CE, the Dal Riata kingdom in southwestern Scotland, which was established by immigrants from northern Ireland over the preceding century (see p.31), was beginning to make inroads into the lands of the previously dominant Picts.

King Áedán of Dal Riata, who came to the throne in 576, launched far-flung campaigns in Orkney, the Isle of Man, and central Scotland as far as Stirling. These campaigns, as well as Áedán's possession of ancestral Dal Riata lands in Ireland, created a precocious empire that straddled the Irish Sea.

The defeat and death of Áedán's grandson, Domnal Brecc, at Mag Rath in County Down in 639 led to the total eclipse of the Dal Riata position in Ireland, and an opportunity for the Pictish kings to reassert themselves in Scotland. However, the growing power of the English kingdom of Northumbria, beginning in the reign of King Oswy

35 The number of Welsh rulers who died violent deaths between the end of Hywel Dda's reign in 949 and the Norman conquest of England in 1066.

(642–70), prevented this. In fact, Oswy may have exacted tribute from Picts.

In 671, the Picts seem to have revolted against Northumbria's hegemony and as a result, their king, Drest, was expelled. His replacement, Bridei mac Beli, came and exacted Pictish revenge at the Battle of Nechtansmere in 685. In this battle, King Ecgfrith of Northumbria perished along with the prospects of an Anglo-Saxon dominance of southern Scotland.

Disunity among Picts

The Picts themselves were divided into various clan groups and kingdoms. The ruler of one of these in the south, Óengus mac Fergus (Onuist in Pictish), defeated a rival, Elphin, at Moncreiffe near Perth in 728 and conquered northern Pictland and parts of Dal Riata by the late 730s.

A defeat inflicted by the Strathclyde Britons in 740 briefly threatened Onuist's dominance, but in 746 they

submitted to him in a treaty at Clyde Rock. Instability in Pictland after the death of Onuist in 751, together with the destabilizing effect of the Viking raids that began in 795 with an attack on Iona, made the Dal Riata of the southwest much better placed to assume the mantle of Scottish unity in the 9th century.

Getting Scotland together

In 839, the Vikings won a great victory in which Uuen, ruler of the Pictish kingdom of Fortriu, was slain along with Aed mac Boanta, the king of Dal Riata, and “others almost beyond counting.” As the grip of the descendants of Onuist over Pictland collapsed, the way was open to new men. One such, Cinaed mac Alpin, or Kenneth mac Alpin, succeeded in adding the crown of Pictland to his existing domain of Dal Riata in 842, thereby uniting the two rival kingdoms for the first time.

Kenneth is conventionally regarded as the unifier of Scotland, but it was by no means certain that his achievement

Scotland remained united, but none of the Welsh rulers succeeded in restoring anything like Hywel Dda's kingdom until the beginning of the 11th century.

KENNETH'S LINE REIGNS

Scotland was ruled by the descendants in the male line of Kenneth mac Alpin until the reign of Mael Coluim, or Malcolm II (1005–34). At times, they were **strong enough to intervene in England**. Malcolm II invaded the country while it was weakened by the Viking invasions, and won a victory at Carham on the River Tweed in 1018. Malcolm's grandson Duncan I was deposed by Macbeth, the *normaer* of Moray in 1040. From

the 1060s, Duncan's restored descendants faced a greater threat from Norman England **72–73** >>, which culminated in a **series of bitter wars** in the 13th century **92–93** >>.

WELSH INSTABILITY

After Hywel Dda's death, Wales became unstable and suffered Viking raids—St. David's monastery was sacked in 999. Gruffydd ap Llywelyn **90–91** >> restored the power of Gwynedd from 1023, defeating an English army at Welshpool in 1039 and annexing Deheubarth. However, under pressure from Harold II of England, his support fell away, and he was murdered in 1063. **Wales was annexed** by Edward I in 1283.

would be any more lasting than those of Áedán or Onuist, and a separate Pictish identity persisted for at least 50 years. Kenneth's brother Domnal (858–62) and nephew Constantine I (862–76) were both still referred to as “Kings of the Picts” in the annals.

Constantine had to face a worsening threat from the Vikings as Amlaíb, king of Dublin, embarked on a three-year campaign of plunder. This concluded with the capture of Dumbarton, the main stronghold of the Strathclyde Britons in 870. Constantine died in 877 in a battle against the Vikings and for a decade, the mac Alpin family was excluded from power.

When Constantine's son Domnall regained the throne in 889, it was not as the ruler of the Picts and Scots (Dal Riata) but as the King of Alba. The long-term survival and unity of this new kingdom of Alba was secured by Domnall's successor, his cousin Constantine II. Over his 40-year reign, Constantine saw the demotion of the former Pictish client kings of Athol, Angus, and Mar to the status of royal stewards (or *normaer*) and an increasing confidence in external diplomatic affairs.

Constantine's achievements

It was Constantine II (900–43) who built an alliance of Viking, Strathclyde Britons, and Scots to stem the tide of advance of Athelstan of Wessex in northern England. The fact that the defeat of the alliance at Brunanburh in 937 did not lead to the collapse of Alba is a testament to Constantine II's achievement in securing its permanence.

Pictish stone

The Sueno Stone in Scotland, at approximately 21ft (6.5m) high, is the tallest surviving Pictish monument. It is filled with battle scenes commemorating an unknown conflict, possibly a victory by southern Picts over a more northerly group from Moray.

King Edward's World

The accession of Edward the Confessor in 1042 saw the end of Danish rule in England. However, his reign was marred by growing tensions between the pro-Norman court and the Anglo-Saxon earls—the native powerbrokers. Their squabbles threatened to undermine the stability of the realm. Yet, advances made in the royal administration highlighted an increasingly powerful and wealthy monarchy.

Despite the best efforts of Queen Emma, Edward's mother, his kingship was not unchallenged. Until 1047, there was an ever-present danger of invasion by King Magnus of Norway. Magnus had overthrown Svein Estrithson, the King of Denmark in 1047, raising the prospect of turning the resources of the two kingdoms against England. This threat receded with the death of Magnus soon after.

In 1045, Edward's marriage to Edith, the daughter of Earl Godwin, was symbolic of the internal challenges he faced. Most of the native magnates, both among the nobility and clergy, had power bases more secure than his own. Earl Godwin was the strongest among them and probably the richest man in the country. The influential pro-Norman party in

Edward's coinage

The silver penny was the standard coin during Edward's reign. From 1053 he was shown bearded and wearing a helmet.

Edward's entourage counterbalanced this, also symbolizing his Norman heritage as the grandson of Duke Richard the Fearless.

Struggle for power

Hidden tension surfaced over the archbishopric of Canterbury in 1051.

Earl Godwin's partisans sought to have their candidate elected to Canterbury. Instead, Edward appointed one of his own Norman supporters, Robert of Jumièges, who had been the Bishop of London. Seeing his position threatened, Earl Godwin began to seek allies elsewhere. The marriage of his son, Tostig, to Judith,

daughter of Baldwin, the Count of Flanders, saw the start of a strong alliance against Edward.

Earl Godwin was briefly exiled to Baldwin's court in 1051, following accusations of insubordination against

4,500 The landed wealth in pounds of the family of Godwin of Wessex, from the Domesday Book's survey in 1087. This was the equivalent to a laborer's salary for 3,000 years.

the King. The following year Godwin returned to England with a strong force, inducing Edward to pardon him. Subsequently, Archbishop Robert of Jumièges, who had been appointed by Edward, was unceremoniously removed from the see of Canterbury and replaced by Stigand, a former royal chaplain, loyal to Earl Godwin. In 1053, Earl Godwin died and was succeeded in the earldom of Wessex by his son Harold.

Although the kingdom was largely peaceful for the next 12 years, Edward embarked on two military campaigns. The first was against Scotland in 1054, when Earl Siward of Northumbria supported Malcolm III of Scotland's successful bid to seize the Scottish throne from Macbeth, the reigning king. The other, between 1055 and 1062, was against Gruffydd ap Llywelyn, the King of Wales.

Anglo-Saxon hierarchy

Anglo-Saxon society evolved into its final form during Edward's reign. At the top of the socio-political hierarchy were the great earls of Wessex, East Anglia, Mercia, and Northumbria. Their power was, in theory, exceeded only by that of the King. Next came the royal thegns, whose loyalty was increasingly secured by a new device, the issue of royal writs which granted them "book land" in exchange for the provision of military service, the repairing of fortresses, work on bridges, and any other services the King might require.

Royal officials also played an important role, with shire-reeves, or sheriffs, administering justice at a local level, often undercut by ealdormen, or magistrates, who were appointed by the King. The lowest classes consisted of the main body of peasants and laymen, or *ceorlas* ("churls"), who were liable to

BEFORE

Before the reign of Edward the Confessor, the English throne had been held by the Danish King Canute and his two sons.

THE END OF DANISH RULE

King Canute **56–57** became King of England in 1016. Generally thought to have been a successful king, he ruled over a joint kingdom spanning Denmark, Britain, and part of Norway and brought about a **period of prosperity**. The death of Canute and his sons brought an end to Danish rule in England.

ANGLO-SAXON POWER

Edward was the son of King Aethelred II and Queen Emma, who later became King Canute's wife. The kingship of Edward was unexpected as he had **older brothers in line to the throne** before him. Alfred was killed in 1036 while on a clandestine visit to England, when **the family were living in exile in Normandy**. The second brother, Harthacnut, died following a drinking binge at a wedding in June 1042.

Earl's Barton church tower

One of the finest surviving late-Saxon church towers, Earl's Barton in Northamptonshire was built around 970 CE. The rest of the church was completed during Norman times.

“Prepare **my grave** in the **minster** in the place which will be shown to you.”

THE *VITA EDWARDI REGIS* RECOUNTING EDWARD THE CONFESSOR'S INSTRUCTIONS FOR HIS BURIAL, c.1067

Edward instructing Harold

While in Normandy, Harold is said to have sworn allegiance to Duke William, but whether, as the Normans asserted, Edward (far right) had sent Harold (center) to offer William the throne of England, is disputed.

pay taxes and serve in the general military levy, the *fyrð*. The levying of an “army tax”, known as *heregeld*, enabled the King to command considerable financial resources. The majority of the churls lived in rural areas, and the land they worked was increasingly divided up into strips of intermingled holdings.

A final crisis

Toward the end of Edward's reign there was a final crisis. In 1065, the people of Northumbria revolted against the excessive demands of their earl, Tostig, Harold Godwinson's brother. They overthrew him and selected Morcar, the brother of Earl Edwin of Mercia, as the new earl. The rebel front was too strong, and in keeping with their demands, in October Harold agreed to accept Morcar as the Earl of Northumbria, while Tostig was exiled.

This probably went against the wishes of Edward himself, but he was an ailing man by this time. He died a week after the consecration of his new abbey church at Westminster on December 28. He was succeeded by Harold Godwinson, who was the last Anglo-Saxon to become the King of England (see pp.68–69).

KEY MOMENT

THE FALL OF EARL GODWIN

The Danish King Canute rewarded Godwin with the newly created earldom of Wessex in 1018 in return for his allegiance. He became one of the most dominant men in the kingdom. The most serious threat to his power came in 1051, when soldiers accompanying Eustace of Boulogne

became involved in a brawl in Dover, in which 19 people died. When Godwin defied Edward's orders to ravage Kent in revenge, he faced a coalition of the King, Ears Siward and Leofric, and Edward's Norman

supporters. He was forced into exile, amid accusations that he had been complicit in the murder of Edward's brother Alfred in 1036. He survived his return in 1052 by a year.

EDWARD ACCUSES EARL GODWIN OF MURDER

AFTER

Edward did not name a definite successor until near death, leading to many claimants to the throne in later years.

THE SUCCESSION QUESTION

Edward's **lack of a direct heir** is believed by some to have contributed to the success of the Norman conquest **68–69** >>

EDGAR THE AETHELING

The grandson of Edmund Ironside, Edgar Aetheling, was not considered a successor to Edward as he was only about 15 in 1065.

MEDIEVAL BRITAIN

1066–1485

Fierce rivalry for land and power dominated the centuries following the Norman conquest of the nascent English realm. The ubiquitous feudal system, emerging departments of state, and a strong Church dominated an often prosperous nation, while fruitless wars with France drained the exchequer and frequently divided the country.

Becket's reliquary

This ornate casket, known as a reliquary, is thought to have contained the relics of Thomas Becket. The sides of the casket are decorated in enamel and show scenes of his murder in Canterbury Cathedral in 1170, his burial, and his ascent into heaven assisted by angels.

Kidwelly Castle

After the Norman conquest, the country's new rulers created a network of castles to consolidate their hold over the land. Originally made of wood, they were, over the next generation, replaced by imposing stone fortresses, such as this one at Kidwelly, in Carmarthen, Wales.

As well as French lands, the Norman conquest gave England a feudal system of landholding, which mirrored that in northern France. The growth in royal authority—and in the financial resources available to the king—after 1066, led to tensions in this feudal system. The king tried to assert control over the country's resources without passing through the barons and the Church, who controlled access to those lower down the feudal hierarchy. Although England's civil wars of the 1140s—when Henry I's heir, Maud, and his nephew, Stephen, fought over the Crown—had involved the barons, these conflicts were over who had the right to rule. The later conflict between John and the barons in 1215–17 was over how the king should rule.

Parliament and conquest

Although intended to protect baronial rights, Magna Carta (1215) was the first occasion when an English king's freedom of action was diminished by agreements forced on him by his subjects. Civil war in the 1260s saw a further deterioration in the royal position. Although the barons, under Simon de Montfort, were defeated, the Parliament they summoned at Oxford, in 1258, heralded a platform in which the great men of the realm could organize nonviolent resistance to royal

»» A new kingdom

The Norman conquest in 1066 was a watershed in English, and, by extension, Welsh, Scottish, and Irish history. England joined a realm spanning the English Channel, and the aspirations of English kings to maintain or extend their French lands meant they did not consolidate the monarchy as a purely English affair. The later acquisition by Henry II, through marriage and inheritance, of a vast Angevin Empire, gave him control of up to half of modern France, with the result that English monarchs often spent much of their reign outside England. It seemed that a dual monarchy might emerge, balanced between England and France. All this changed, however, with King John's loss of all his inheritance, save Bordeaux, after 1214.

demands, and to which, by 1376, the king had to defer if he wanted to raise taxation. One reason kings needed additional funding was the increasing sophistication of royal administration, which had been transformed from a few key officials in 1066, into the nucleus of the great departments of state by the 15th century. Money was also needed by successive English kings as they attempted to conquer their neighbors. In Ireland, this was largely successful after Henry III's invasion in 1171, and in Wales, after a brief renaissance under the kings of Gwynedd in the 13th century, the process was completed by 1283. Scotland looked likely to fall into English hands in the 1290s, but a Scottish revival and the defeat of Edward I's army at Bannockburn in 1314 secured Scottish independence.

The English kings' attempts, from Edward III to Henry V, to reestablish an English empire in France came to nothing. Victories at Crécy (1346), Poitiers (1356), and Agincourt (1415) are established in the English imagination, but by the end of the Hundred Years' War in 1453, England held only Calais. All this was at ruinous cost, which further undermined royal authority and increased that of Parliament. Elsewhere there had been peace. By the mid-15th century, Ireland lay uneasily divided between a disunited group of native lords in

the west and the lands of the English Crown in the east. Wales was mostly subdued under English dominion, while Scotland was no longer threatened with conquest from England.

Another civil war

After 1455, the Wars of the Roses threatened to overturn this equilibrium. A long battle between the Lancastrian and Yorkist descendants of Edward III over who had the right to rule the country, left the authority of the Crown in ruins. The man who emerged to claim what was left came from an unexpected quarter. Henry VII, the ultimate victor in the war, was the first Welshman to rule over any portion of England since the 7th century.

Battle of Barnet

In 1471, the Battle of Barnet marked the final defeat in the Wars of the Roses of the Lancastrian king, Henry VI. Just 14 years later, the Yorkist king, Richard III, was ousted by Henry VII, the first Tudor king of England.

Norman Conquest

The Norman invasion of 1066 overthrew six centuries of Anglo-Saxon rule in England. William the Conqueror, the Norman duke, faced early rebellions, but once he had overcome them he radically reshaped England, replacing its old ruling class with an Anglo-Norman aristocracy and bringing the feudal system of landholding prevalent in Normandy to England.

The Norman invasion force that set sail from St-Valéry-sur-Somme on September 27, 1066 to enforce Duke William's claim on the English throne was probably no more than 8,000 strong, yet it succeeded in conquering one of the most established monarchies in Europe. William had luck on his side, in that he landed near Pevensey in Sussex while King Harold Godwinsson was away in the north

dealing with an invasion led by Harald Hardrada, King of Norway. Harold Godwinsson had already defeated the Norwegians and their Anglo-Saxon allies at Stamford Bridge, four days before William's landing, but it was not until October 1 that he heard of the Norman invasion and, after forced marches, it was some two weeks more before he approached the new invaders near Hastings.

“ [Normans] built castles... oppressing... people, and things went... from **bad to worse.**”

ENTRY FROM *ANGLO-SAXON CHRONICLE*, 1066

BEFORE

HAROLD OFFERING ALLEGIANCE TO WILLIAM

Duke William of Normandy had, on the face of it, a stronger claim to the English throne than Harold Godwinsson, who succeeded Edward the Confessor in 1066.

SUCCESSION RIGHTS

William based his claim on being Edward's cousin: << 60–61 Edward the Confessor's mother, Emma, was the daughter of Duke Richard I of Normandy, who was William's great-grandfather. Edward also owed his throne to the assistance William had given him to return to England in 1042, and in 1051 Edward the Confessor is said to have made William his heir. Furthermore, William claimed that Harold Godwinsson had paid him homage while in Normandy in 1064.

William had a fortnight to prepare, but acted cautiously, fortifying the old Roman Saxon Shore fort at Pevensey, but declining to move on to the royal centers of Winchester or London. Harold's death in the subsequent Battle of Hastings (see pp.70–71) on

8,000 The number of troops in the invasion force that William brought over from France in 1066.

October 14 removed William's main obstacle to the throne, but the Anglo-Saxon nobility did not submit at once, for one remaining alternative candidate survived; Edgar Atheling, the great-grandson of Aethelred the Unready, who had a better claim by blood than William.

Crowning a Norman king

The Norman army advanced slowly, first to Dover, and then via Canterbury toward London. The main surviving Anglo-Saxon leaders, such as Earls Edwin and Morcar, and Stigand, Archbishop of Canterbury, at first declined to recognize William, but when it became clear William was too strong to be defeated by their remaining forces, they paid him homage, beginning with Stigand on November 15. Edgar Atheling was pushed aside and on Christmas Day 1066, William of Normandy was crowned King of England in

Norman helmet

The head protection worn by the Norman knights at the Battle of Hastings in 1066 was not as all-covering as that of their successors two centuries later, but it was flexible, allowed good visibility, and warded off glancing blows.

Westminster Abbey, using much the same form of ceremony as had been employed for Harold's coronation barely a year before.

William went to East Anglia in the New Year, where he received the submission of Earls Edwin and Morcar. He then returned to Normandy in March, taking with him Edwin, Morcar, Edgar Atheling, and Archbishop Stigand, so depriving, as he thought, the Anglo-Saxons of any focus for resistance. He left in charge his half-brother, Odo of Bayeux, whom he had made Earl of Kent, and William FitzOsbern, the Earl of Hereford. The two regents were heavy-handed in their exercise of power, and a rebellion broke out in the west under Edric the Wild. Although this was put down, another one promptly erupted in Kent.

William was therefore forced to return to England in December 1067, only to find yet another revolt had begun, led by the men of Exeter. William's rule was dangerously threatened and the situation deteriorated in early 1069 when a

much more serious uprising occurred in the north. This time Earls Edwin and Morcar joined in, together with Edgar Atheling. Although William quickly

dispersed the rebels, in the summer the north revolted once more, now with the assistance of a Danish fleet led by the sons of King Sweyn Estrithson. York itself fell on September 20, and the whole Norman venture in England seemed in peril.

Stamping out resistance

William acted swiftly, striking first west to defeat Edric the Wild, who had rebelled once more, and then north, devastating the land in a "harrying of the north" that was remembered for centuries. York—or at least its smouldering ruin—was retaken by Christmas, and then the last rebel stronghold at Chester. There, and at Stafford and other key towns, William

NORMAN RULER (1028–87)

WILLIAM THE CONQUEROR

William was the illegitimate son of Duke Robert II of Normandy and a tanner's daughter. He became duke in 1047, aged 19. His early rule was insecure, with a revolt that year almost unseating him, and it was not until he defeated Henry I of France at Mortemer in 1054 that he was sure of survival. Continued trouble with rebels plagued him until 1060, and only then could William turn his attention to England. Yet, while his ally and cousin Edward the Confessor was on the throne, the battle-hardened Norman duke chose not to press his claims.

COIN FROM WILLIAM'S REIGN

Granting of fiefs

William I accepts the homage of Alain le Roux, his cousin, who probably led the Bretons at Hastings and received more than 400 manors as a reward.

built new castles to reinforce the Norman control of the northern counties. First made of wood, these would be replaced over the coming century by imposing stone fortifications.

Although a residual Anglo-Saxon resistance continued in the East Anglian fens until 1072, William rounded the campaign off with an attack into Scotland to chastise King

Malcolm III, who had aided the northern rebels. He was never again seriously threatened and felt able to spend most of the rest of his reign in Normandy, where he faced wars in Maine (1073), with Brittany (1076) against the Counts of Anjou (1077–78 and 1081), and against Philip I of France (in 1087).

French nobility

After the revolt of the north, William adopted a conscious policy of replacing the remaining Anglo-Saxon magnates with Frenchmen. The process was

so thorough that by 1086 only two Anglo-Saxons held land directly from the King himself (Thurkell of Arden and Colswein of Lincoln). William took for himself a large portion of the confiscated property, and for the rest established a system of feudal tenancies which mirrored the one that was already established in Normandy. As native influence waned, so English came to be replaced as the language of government, with charters and writs being issued largely in Latin.

The use of Latin

Latin became the language of the Church as well as the government, and the old Anglo-Saxon bishops were largely replaced by Normans. In 1070 William had Stigand deposed as Archbishop of Canterbury and replaced by Lanfranc, the Abbot of St. Stephen's Monastery in Caen, Normandy. Lanfranc, in turn, consecrated Thomas of Bayeux, another supporter of William, as Archbishop

17 The percentage of English land that William kept for himself, worth £12,600. The proportion held by the Church remained at 26 percent, the same as it had been before the Norman Conquest.

of York and set about reforming the English Church, beginning with the replacement of all the English bishops, save those of Worcester and Rochester, as well as the abbots of major monasteries. In the field of Church discipline Lanfranc enforced clerical celibacy. He also supported a program of cathedral building, which resulted in the construction of basilicas at sites including Canterbury and Winchester.

Surveying the land

Shortly before his death in 1087, William ordered the compilation of a great survey of landholding in his English domains, which formed the basis of the Domesday Book (see pp.74–75). By recording who had held the land at the time of Edward the Confessor and who held it at the time of the Domesday Survey, it showed the extent and scale of the Norman achievement. They had conquered the kingdom and occupied the land.

The later part of William's reign was occupied mainly with wars against Normandy's neighbors, who were concerned that the acquisition of England had made the Duke of Normandy too powerful.

A LAND DIVIDED

William had decided to divide his territories between his eldest son Robert Curthose, who was to receive Normandy, and Richard his second son, who was to get England. Impatient and provoked by Philip I of France, Robert rebelled in 1078 and 1083 72–73 >>, but was on both occasions reconciled to his father. The link between Normandy and England, however, was weakened.

TUMULTUOUS REIGN

Richard died in 1081 and a third son, William Rufus, inherited the English throne. He initially faced a coalition of barons, prominent among them Odo of Bayeux, who wanted to see England and Normandy united under Robert's rule. The revolt was put down and Odo captured in 1088. William invaded Normandy in 1091, forcing his brother's submission. A campaign in Scotland followed in 1091–92 to punish Malcolm III, who had been sheltering Edgar Atheling.

ADVENT OF ANSELM

In March 1093, William II fell dangerously ill and, in the hope of divine favor, appointed Anselm, an Italian monk, Archbishop of Canterbury. Anselm was an uncompromising supporter of reform and quarrels broke out between King and Archbishop. In 1097, Anselm went into exile in Rome and stayed there until William's death.

ANSELM'S CHAPEL AT CANTERBURY

“William in the **fullness of his wrath**... ordered the **destruction of all** that could serve for the support of life... beyond the Humber.”

ORDERIC VITALIS, *ECCLESIASTICAL HISTORY*, c.1140

DECISIVE MOMENT OCTOBER 14, 1066

The Battle of Hastings

Hard on the heels of his victorious encounter with a Norwegian army in the north, King Harold Godwinson marched his weary army southward to face the invading force of Duke William of Normandy. On October 14, 1066, the two armies faced each other in a battle that would determine the fate of Anglo-Saxon England.

The Anglo-Saxon army drew near to the south coast at Hastings on October 13. Duke William had been harrying Anglo-Saxon garrisons in Sussex and it was imperative that Harold prevent the Normans from approaching London. Harold's army was around 8,000 strong, composed of a mixture of elite royal bodyguards called housecarls and part-time peasant soldiers. William commanded about the same number of men, with a stronger component of cavalry and, crucially, a larger force of archers.

The battle commences

Harold took up position on a hill called Senlac, with the housecarls forming a wall of interlocking shields. For William to win, he would have to dislodge the shield wall. The Normans reached their opponents' position around 9am, beginning the battle with a thick rain of arrows intended to break up the shield wall. Both this and subsequent attacks up the hill failed. Disheartened, some of the Bretons—the non-Norman forces who made up William's right wing—fled, and wild rumors began that the Duke himself had been killed or

wounded. Seeing their opponents seemingly in retreat, part of the Anglo-Saxon shield wall surged forward, but it was soon surrounded and cut down.

Flight and aftermath

William now ordered a series of feigned retreats, hoping to entice more of the housecarls down from Senlac Hill. Although some of the Anglo-Saxons fell into this trap, it was not enough. Rapidly running out of options, the Norman Duke commanded his archers to pour a stream of arrows into the enemy line. One of these may have hit Harold in the eye—he certainly suffered a mortal wound. Thinking that their king was dead, the Anglo-Saxons' morale collapsed and many of Harold's part-time soldiers fled.

The collapse of part of the shield wall allowed the Normans to storm the hill. Despite a last stand there and at the Malfosse (a steep ditch on the outskirts of the battlefield) the Anglo-Saxon army was soon utterly crushed by the Normans. With Harold now dead and his main army defeated, William was free to march on to London.

“I am **still alive** and with God's help **I shall be victorious**. What madness leads you to flee?”

WILLIAM OF POITIERS, *GESTA GUILLELMI*, RELATING WILLIAM'S RALLYING CRY TO HIS TROOPS

The Bayeux Tapestry

Commissioned after the Battle of Hastings to glorify the events leading up to and including the Norman invasion and conquest of England, this section of the Bayeux Tapestry shows the Norman cavalry assaulting the Anglo-Saxon shield wall at Hastings.

Duke of Normandy

Robert Curthose, elder son of William the Conqueror, became Duke of Normandy in 1087. He was a weak ruler who failed to unite his duchy with England.

BEFORE

From the 12th century, the Anglo-Norman government of England developed ever more sophisticated instruments of government to rule their disparate subjects.

BATTLE FOR THE CROWN

When **William Rufus died suddenly** in 1100 << 57 he was unmarried and childless. His brother, Henry, was nearby when he died. He seized the opportunity to take power, riding to Winchester to claim the treasury and on to London for the Crown. His older brother, Robert, would later attempt to depose Henry.

DEVELOPMENT OF BUREAUCRACY

The **Burghal Hidage**, drawn up in the reign of Alfred the Great's son, Edward the Elder << 52–53, around 914, was an assessment of what each fortified burh needed to contribute for its defense. Anglo-Saxon charters recorded grants of land by the kings to their retainers and to the Church. The **Domesday Book** of 1086 << 74–75 went further, revealing the scale of the land held by the French elite. The reign of Henry I would see further administrative reforms.

Norman Rule

At the start of the reign of Henry I in 1100, the transformation of Anglo-Saxon England into an Anglo-Norman realm was well underway. By its end, in 1135, a set of bureaucratic mechanisms had been developed which gave institutional reality to the Norman kings' desire to dominate their new realm.

Henry I, the fourth son of William the Conqueror, was the first Norman king to be born in England. However, his elder brother Robert Curthose reigned as Duke of Normandy and most of Henry's barons held lands on both sides of the English Channel, so the destinies of the two territories remained firmly intertwined. At Henry's accession he issued a solemn charter promising to restore the laws of his father William the Conqueror (see pp.68–69) and those of Edward the Confessor. Furthermore, his wife Edith was a descendent of Edmund Ironside (see p.57) and so their marriage symbolically united the English and Norman peoples of the realm.

Abortive coup

Henry's attempt to portray the reign of his brother William Rufus as a period of unrestrained oppression and rapacity backfired. One of William's chief advisers, Ranulf Flambard, persuaded Robert Curthose that the English barons would support an attempt by the Norman duke to depose Henry. Robert duly landed in England, but he was easily bought off with the promise of an annuity of 3,000 marks, leaving his baronial supporters to face Henry's justice. Only the ringleader, Robert of Bellême, escaped.

The King and the Church

Henry's relationship with the Church was troubled, too, as Archbishop Anselm returned from exile and

refused to pay homage to Henry for his Canterbury lands. He also insisted that the King give up his right to invest bishops, a practice known as "lay investiture", which had, in theory, been outlawed by the Pope in 1059. The dispute led to the collective

Rochester Castle

Work on replacing the earlier wooden motte and bailey castle at Rochester, Kent, began in 1128, with the encouragement of Henry I. This was one of the earliest stone-fortified castles in Britain.

“He was a **good man**, and there was great awe of him. In his day **no man dared harm** another.”

THE PETERBOROUGH CHRONICLE, ON HENRY I'S CHARACTER, 12TH CENTURY

excommunication of those bishops who took Henry's side in 1105, and renewed exile for Anselm. An agreement was finally reached at a meeting between Henry and Anselm in 1106, when the King agreed to give up his power to invest bishops, but reserved the right to receive their homage.

England and Normandy united

In 1104, the exiled Robert of Bellême joined forces with Count William of Mortain to attack Henry's interests in

Normandy. Not willing to give up his possessions or abandon his supporters there, Henry arrived at Barfleur in 1105 and moved cautiously inland. His brother, Duke Robert, had too little money to raise reinforcements, and in September 1106 at Tinchebrai the army

237 The number of surviving documents from Henry I's reign issued at Westminster (as opposed to 127 at Winchester, 92 at Woodstock, and 71 at Windsor).

of Normandy was defeated by Henry's force. Normandy and England were reunited under Henry's rule. In an act of clemency that he would later come to regret bitterly, Henry allowed Robert's son, William Clito, to remain in Normandy, where he became the focus for dissent and the pretext for a

Tally sticks

Wooden sticks like these were used by accountants and officials during Henry I's reign. They were marked to keep track of transactions and then split between the two parties involved.

the county sheriffs. The sums were recorded with notches on a tally stick, one half of which was kept by the official, and the other by the sheriff as a record of what his county was to raise. A more permanent record of each year's revenues was set down in Pipe Rolls. The court itself became known as the Exchequer after the chequerboard cloth on which the royal accountants made their calculations.

Loss of an heir

Henry's later years were marred by sadness. In 1119, Louis VI was finally defeated in the war over Normandy

“He preferred to **contend by council** rather than **by the sword.**”

WILLIAM OF MALMESBURY ON HENRY I, *GESTA REGUM ANGLORUM*, c.1125

series of wars with France from 1111–14 and 1116–19, as Louis VI attempted to make him into a puppet Duke of Normandy.

Justice reforms

The power of the barons in England had grown dangerously since the death of William the Conqueror, and on his return from Tinchebrai in 1108, Henry I enacted a series of reforms aimed at curbing their power. He began by forbidding members of the royal household to plunder or extort money, on pain of blinding or castration. Henry then stamped down on the practice of county sheriffs who were holding extra sessions of courts to extract profit on their own account. He also began sending royal judges on circuit to hear pleas. As fines from these cases went to the Crown, it was a useful extra source of revenue for the royal coffers too.

Henry's most important minister was Roger, Bishop of Salisbury, and it may have been Roger who devised one of the key administrative advances of the reign. Each year from 1110, officials met at the royal court, normally at Winchester, and prepared a list of the revenues expected to be collected by

and he accepted the homage of Henry's son William Adelin as Duke of Normandy. However, on the return journey to England in 1120 the *White Ship*, the vessel carrying the young prince, was wrecked and Henry's only legitimate son drowned. For a while Stephen of Blois, Henry's nephew, looked likely to succeed. Then in 1125, Henry's daughter Matilda, who had

66 The percentage of property owners in Winchester with foreign names in 1148. At the time of the Norman conquest the figure was 29 percent.

married the Holy Roman Emperor Henry V in 1110, was widowed and returned to England.

Henry doted on Matilda and at Christmas 1126 the Royal Council was made to swear allegiance to her as heir to the throne. Henry's reign was prosperous and peaceful for the next decade, with his administrative reforms bearing fruit in increased revenues and a smoother operation of justice. However, his decision to leave his crown to Matilda ended in catastrophe. For at Henry's death in 1135, Stephen refused to accept Matilda as queen.

The peace and tranquillity of England under Henry I was rapidly replaced by a bitter civil war lasting 19 years.

BITTER CIVIL WAR

Henry I's nephew, Stephen, seized the treasury with the help of his brother Henry of Blois, Bishop of Winchester, and he and leading barons renounced their oath to Matilda. In 1138, her half-brother, Robert of Gloucester, defected from Stephen's side and in 1139, she landed at Arundel in an attempt to unseat Stephen from the throne. **Matilda defeated and captured Stephen at Lincoln** in 1141. However, Stephen was freed in exchange for Robert of Gloucester, who was also a captive. After years of damaging warfare, Matilda finally left England in 1148.

PLANTAGENET RULE

During the civil war, **Matilda's second husband**, Geoffrey Plantagenet, Count of Anjou, took towns in Normandy, leading to his acceptance as Duke of Normandy in 1144. Henry I's legacy of bringing order and prosperity to England, and in uniting the country once more with Normandy lay in ruins.

INNOVATION

FEUDALISM

The Norman conquest of 1066 brought a set of landholding practices to England, which together have been termed feudalism by later generations. The king, in theory, held all land and tenants-in-chief held parts of it from him as *fiefs*. In return, they were obliged to provide military service when the king needed it. These tenants, in turn, had their own tenants who had a similar set of obligations right down to the peasants, or *villeins*, at the bottom of the hierarchy, who owed labor instead of military service to their lord. As a sign of their loyalty, feudal landholders would swear an oath, known as fealty, to their overlord.

Domesday Book

On Christmas Day 1085, according to the *Anglo-Saxon Chronicle*, King William I resolved to send commissions of enquiry all over his realm to determine who held the land and how much money it should yield in dues. The results were collated together to create the Domesday Book, the most famous document from medieval England.

King William I's purpose in ordering the enquiry has been much discussed. However, it seems to have been clearly to the King's advantage to know how much revenue he commanded, and to establish the absolute ownership of land, which would facilitate its redistribution, as well as aid him to resolve property disputes.

The Great Inquest

During the survey, also known as the Great Inquest, commissioners collected oral answers from sheriffs in each shire, from barons, and even from reeves and peasants in villages to know more about the land-holding system. They asked several questions, such as, who held the land now and who had held it earlier; how many plows there were on the manorial demesne (estate land); and how many men there were. The enquiry was conducted with speed and thoroughness. The *Anglo-Saxon Chronicle* laments that "so very narrowly did he have it investigated that there was no... one ox nor one cow nor one pig which

was there left out." The data collected was compiled for each of the seven large survey districts and these were then sent to Winchester, where they were summarized and consolidated into the form seen in the final Great Domesday book. One example of the regional surveys survives in the "Little Domesday", which covers Essex, Norfolk, and Suffolk, and which was never added to the final version.

Remarkable record

The preliminary results were presented to the King in September 1086 and it seems the work was completed before William I died in September 1087. The book included a record of almost every manor in England—from the majority, which yielded around 20 shillings in annual revenue, to certain ecclesiastical estates in East Anglia, which had an income 100 times that. It has been estimated that some 10,000 people took part in its compilation—an extraordinary achievement for a medieval administrative apparatus.

“We have called this book ‘The Book of Domesday’ ... because its decisions, like those of the last judgement, are unalterable.”

RICHARD FITZ NIGEL, *DIALOGUES DE SCACCARIO*, c.1180

Domesday Wiltshire

The first page of the Domesday Book listing for Wiltshire contains the names of the 66 principal landowners in the county. The King is listed first, followed by 19 bishops, monasteries, and churches, and then the secular nobility. Tellingly, Anglo-Saxon names only appear among the subtenants in the main entries.

Reign of a Powerful King

Henry II's inheritance of England and vast areas of France made him one of the most powerful rulers in Europe. He expanded his possessions further in Ireland and made important reforms to the English legal system. However, his reign was marred by a troubled relationship with the Church and the revolts of his sons.

Henry's marriage at the age of 19 to Eleanor, heiress of the duchy of Aquitaine (and the former wife of Louis VII of France) in 1152, made him the most powerful man in France, lord of a domain that historians came to call the Angevin Empire. Yet there was still no certainty he would inherit the English Crown. It was only the sudden death of Stephen's son, Eustace, in August 1153, which opened the way to him (see pp.72–73). By the Treaty of Winchester, Stephen recognized Henry as his successor, on condition that he was left in peace on the throne of England. However,

Stephen did not enjoy this respite long, for he died in October 1154, and within six weeks Henry II had been crowned at Westminster Abbey.

Lasting power

Although he spent only one-third of his 35-year reign in England, Henry's impact there was profound and long-lasting. The wars under Stephen had left England prey to the ambitions of the warring barons and also caused it considerable loss of territory. In 1157, Henry forced Malcolm IV of Scotland to hand back Cumberland, Westmorland, and Northumbria, which the Scots had acquired amid the chaos of the civil war. In 1174 Scotland was reduced to a fief of the English Crown in exchange for Henry's release of its king, William I, from captivity. Attempts to improve the English position in Wales failed in the face of dogged resistance from Owain of Gwynedd and Rhys of Deheubarth from 1157 to 1165.

At home, Henry removed key supporters of Stephen, demolished castles that had been built illegally

£23,000 The average royal expenditure in the last eight years of Henry's reign, according to the Pipe Rolls (compared to £10,000 in the first two years).

during the civil war, and garrisoned others with royal troops. By 1155, some 52 castles (one-fifth of the total) were controlled by the Crown. To further strengthen his position, Henry replaced two-thirds of the county sheriffs with men loyal to him and restored the application of "forest laws", which provided a lucrative source of revenue by levying fines on those who cleared forest land. He also restored the currency with the issue of a new coinage in 1158.

The justice system

A key component in the program to restore royal authority was the

strengthening of the system of justice. Previously, competing jurisdictions had made the administering of justice a haphazard affair. By the Assize of Clarendon in 1166, Henry replaced a

system whereby sheriffs might hear cases in the absence of royal justices with one in which "justices in eyre" visited each locality on a regular basis. They tried serious crimes and

"The French crown has five duchies and, if you count them up, there are three missing."

FRENCH TROUBADOUR BERTRAN DE BORN, REFERRING TO THE POSSESSION OF NORMANDY, BRITTANY, AND AQUITAINE BY HENRY II, 12TH CENTURY

BEFORE

Henry II's route to the English throne was a long and tortuous one, involving civil war and the death of his main rival. His French domains fell to him more easily.

BEGINNINGS OF A DYNASTY

Henry II was the son of Matilda, daughter of Henry I, and Geoffrey Plantagenet, heir to the Count of Anjou. **Matilda's failure to secure the English throne** after the death of Henry I in 1135, and her defeat by King Stephen in the civil war of the 1130s and 1140s << 73 left Henry to fall back on his French inheritance. First, he **became Duke**

of Normandy, conquered by his father in 1144, and then, on Geoffrey's death in 1152, Henry succeeded him as Count of Anjou.

GEOFFREY PLANTAGENET

1162, it seemed an obvious move to appoint Becket as his successor. It was a terrible mistake, for Becket was both inexperienced in Church matters and inflexible. Far from supporting him, Becket opposed Henry at almost every turn, particularly over the issue of crimmous clerks whom Henry wanted tried in the civil rather than ecclesiastical courts. Becket refused and fled England in 1164. The dispute between the two men seemed to have been resolved and Becket returned in 1170. However, the ill-feeling caused by the King's coronation of his son earlier that year without the customary presence of the Archbishop of Canterbury and by Becket's procurement of the excommunication of many of those bishops who had attended, caused it to explode again. The end result was the murder by

CRIMINOUS CLERK A member of the clergy who had committed a serious offense, and who traditionally would be tried by an ecclesiastical court.

Becket in Canterbury Cathedral in December 1170 (see pp.78–79). Henry made a public apology in return for absolution and in 1176 revoked the Constitutions of Clarendon, which had decreed crimmous clerks must be tried in secular courts.

Ambitious conquests

The King's territorial ambitions had not been satisfied by his Angevin and English inheritance, and as early as 1155 he seems to have planned to conquer Ireland, having secured a papal bull *Laudabiliter* from Pope Adrian IV permitting him to seize it.

The King and the Archbishop

This painting from 1350 shows Henry II and Thomas Becket in conversation. A relationship that had been cordial when Becket was chancellor soured when he became Archbishop, and ultimately turned violent.

established assizes, court sessions under which pleas to the Crown concerning serious cases would be answered with a royal writ ordering the local sheriff to assemble a jury to hear the case at the next judicial session. Justice became faster, more effective, and the power of the barons was diluted, as their tenants discovered that an appeal to the Crown might offer rapid relief with a lessened danger of baronial retribution.

Trouble with the Archbishop

Henry's key ally in implementing these reforms was his chancellor, Thomas Becket, and when Theobald, Archbishop of Canterbury died in

In 1171, the activities there of a group of Anglo-Norman knights from the Welsh Marches, led by Gilbert de Clare, Earl of Pembroke, attracted his attention and he led a royal force to secure the lands they had occupied, claiming the island for the English Crown.

A family at war

Henry's later years were marred by worsening relations with his sons. By the 1170s, he had planned to partition his realms between the three eldest, with Henry receiving Anjou, Normandy, and England; Richard inheriting Aquitaine; and Brittany (which Henry II had acquired in 1166) going to Geoffrey. His sons were impatient for their inheritances and Prince Henry rebelled in 1173 (with the support of many English barons disgruntled at the King's financial exactions). It was a particularly dangerous moment. Henry made common cause with Louis VII of France, who persuaded his English ally to grant a variety of French nobles large tracts of land in France, and with William the Lion in Scotland. Yet the revolt petered out: Henry II won a major victory by capturing the castle of Dol in Brittany in August 1173. In England, another of the young Henry's principal supporters, the Earl of Leicester, was decisively defeated at Fornham on October 17, while the Scots fared even worse: William the Lion was captured outside Alnwick in July 1174. The young king made terms with his father in September, and was granted two castles in Normandy. Undeterred, he rebelled again in 1182. Prince Henry died in 1183 and Geoffrey in 1186. This should have ended the family dispute, but Henry II had developed a preference for John, and Richard suspected he was being pushed aside. He rose up in open revolt against his father. Sick and defeated, Henry died at Chinon castle on July 6, 1189.

QUEEN CONSORT OF FRANCE AND ENGLAND (1122–1204)

ELEANOR OF AQUITAINE

Eleanor became Duchess of Aquitaine in her own right in 1137, at the age of 15, and soon after married Louis VII of France. The marriage produced no sons, and Louis divorced her in 1152. Within months,

though, Eleanor had made another politically astute marriage, to Duke Henry of Normandy (the future Henry II of England) to whom she bore five sons and three daughters. Courageous and resourceful, Eleanor retained her own independent court in Aquitaine and was not afraid to oppose Henry, as when she supported the rebellion of their son, Prince Henry, in 1173. She and the King became estranged and he placed her under house arrest for 15 years. Eleanor acted as regent for Richard I while he was on the Third Crusade, outlived him, and survived to see her youngest son John become king.

Extent of Angevin Empire

Henry II acquired Anjou from his father, England through his agreement with Stephen in 1152; Aquitaine by his marriage to Eleanor, and Ireland and Brittany through his own conquest.

AFTER

The absences of Richard I on the Crusade and the weakness of King John, caused the loss of most of the Angevin Empire.

A DIMINISHING KINGDOM

Richard I's **absence from England** on the Crusades from 1191 **82–83** >> allowed Philippe II of France to take back some of the Angevin lands held by England. Under King John, **Normandy fell to the French king** in 1204, and in 1214, Poitou and most of the English-held lands in southern France **were also lost**.

KING RICHARD ON THE CRUSADE IN 1194

DECISIVE MOMENT December 29, 1170

Murder in the Cathedral

When Thomas Becket was enthroned as Archbishop of Canterbury in June 1162, Henry II hoped that his former chancellor would protect the interests of the Crown against excessive ecclesiastical interference. However, Becket proved to be inflexible and his stubbornness ended in his brutal murder inside his own cathedral.

Things turned rapidly sour between King and Archbishop. Disputes concerning the rights of jurisdiction over clerics who had committed criminal acts led to the Archbishop's escape into exile in October 1164. Becket stayed away for six years, until mediation involving Pope Alexander III and King Louis VII of France bore fruit and the Archbishop and King met at Fréteval for a reconciliation in July 1170. Yet in June, Henry II had his son Prince Henry crowned in a ceremony at which the Archbishop of Canterbury should have been present. Offending both ecclesiastical practice and Becket's pride, this action was at the root of the disaster which then unfolded.

At Becket's request, the Pope suspended Archbishop Roger of York and excommunicated the bishops of London and Salisbury for taking part in the coronation. Becket then provocatively sent the letters of excommunication ahead of his own return to England on December 1.

So as the Archbishop arrived back in Canterbury in triumph, Roger of York and the two bishops reached Bures in Normandy to present their case to the King. Henry was beside himself with rage, inveighing against his treacherous former friend. Hearing him, four knights slipped away, eager to win favor with the King.

The four reached Canterbury on December 29 and found Becket. After a brief confrontation, Becket's entourage persuaded him to go to the cathedral as he might be safer there. The knights, though, took up arms and followed him into the church. With most of his followers having fled, Becket resisted attempts to drag him from the cathedral and in the confusion he was struck on the head. Bleeding profusely, he was finished off in a rain of blows.

Henry denied all responsibility for the murder and in May 1172 was publicly pardoned by the Pope. Becket was canonized as a saint in March 1173, less than 18 months after his death.

“Here I am, not traitor to the king, but a priest of God. Why do you want me?”

THOMAS BECKET ADDRESSING HIS MURDERERS, DECEMBER 29, 1170

A fatal stab

This stained-glass window inside Canterbury Cathedral depicts the moment of Becket's murder. The four knights, William de Tracy, Richard le Bret, Reginald FitzUrse, and Hugh de Morville, came upon the Archbishop as Vespers was being said.

BEFORE

The death of Brian Boru at the Battle of Clontarf in 1014 ushered in a period when rival Irish kings fought for power.

A SERIES OF RULERS

The most powerful Irish ruler from 1086–1114 was Muirchertach O'Brien, who began to develop relations with the Normans in Britain. He was supplanted by Turlough O'Connor (1106–56), who built a series of castles around Connaught and destroyed the power of Munster. He commissioned the Cross of Cong to hold a relic of the True Cross.

THE CROSS OF CONG

Holy Cross Abbey

The abbey, founded as a Cistercian monastery by King Domnall Mór O'Brian in the 12th century, is one of Ireland's most venerated places of worship. Its architecture marks the pinnacle of the late Gothic style in Ireland.

“At the creek of Baginbun, Ireland was **lost and won.**”

TRADITIONAL IRISH RHYME REFERRING TO THE LANDING BY STRONGBOW'S ADVANCE GUARD AT BAGINBUN IN 1170

IRISH KING (C. 1166–98)

RORY O'CONNOR

Rory succeeded his father Turlough as King of Connaught in 1156, and soon launched a failed attempt to unseat Muirchertach MacLoughlin as High King in 1159. When MacLoughlin died in 1166, O'Connor's actions in driving out his main rival, Dermot MacMurrough, to win the high kingship, proved his ultimate undoing. The English invasion that followed largely confined him to Connaught and, in 1183, he was deposed by his own son, Connor.

Invasion of Ireland

The English conquest of Ireland happened almost by accident, when the deposed Irish king of Leinster recruited a band of Norman adventurers to restore him to his throne. Their success and the involvement of King Henry II led to the establishment of English rule over Ireland, which endured for 750 years.

A rivalry over the lordship of Dublin brought about the English invasion of Ireland in 1171. Dermot MacMurrough, King of Leinster, claimed to be king of Dublin, but he was unpopular there. Rory O'Connor, King of Connaught, took advantage of this in 1166, to send his ally, Tighearnán O'Ruairc, against MacMurrough. Driven into heavily wooded territory around Ferns, County Wexford, the Leinster King was unable to rally support and took ship for Bristol.

MacMurrough traveled to Aquitaine in France, to offer homage to Henry II in the hope of securing the English King's assistance. But Henry, caught up in a quarrel over his Archbishop of Canterbury, Thomas Becket (see p.79),

was in no mood to take on a costly campaign in Ireland. Rebuffed, Dermot turned to other ambitious members of the Anglo-Norman minor nobility.

Norman power

The effect on the MacMurrough cause was electrifying. The Norman force that answered Dermot's call took Wexford within two days. MacMurrough handed the city over to his allies in return for their acknowledging him as their overlord. The allies endured a few difficult moments in 1169, as the Leinster King's enemies, Mac Gilla Pátraic of Osraige and the High King Rory O'Connor, tried to combine their forces to crush them, but in August 1170 they were reinforced by MacMurrough's most powerful Norman ally, Richard fitzGilbert de Clare, Earl of Pembroke (nicknamed “Strongbow”). The new arrivals soon took Waterford, drove out Askulv, the Viking lord of Dublin, and took possession of the city.

Henry's arrival

The astonishing success of such a comparatively small group of Norman knights finally attracted the attention of Henry II. The English King's landing

at Waterford had, in theory, papal sanction, for in 1156, Adrian IV (the only English Pope) had granted a papal bull *Laudabiliter* giving Henry permission to invade Ireland. Although this may have been a pretext, Henry was probably in reality more concerned with gaining control of the large lands his notional vassals were carving out for themselves in Ireland. Henry regularized the situation by appointing his own man, Hugh de Lacy, as constable of Dublin and placing garrisons loyal to him in key towns such as Cork and Limerick.

Although Henry returned to England in spring 1172, de Lacy and Strongbow continued to build up their holdings in the face of sporadic Irish resistance. In 1175, Rory O'Connor acknowledged that the English could not be expelled and agreed the Treaty of Windsor with Henry II, by which he was recognized as High King in the western part of Ireland, although he was to pay a tribute to the English King, while the eastern portion, including Leinster, Meath, Waterford, and Dublin was to remain in the hands of the Anglo-Norman barons.

English possession

Neither the barons nor the other Irish kings paid much attention to the treaty, and warfare continued between them. The death of Strongbow in 1176 brought a greater involvement by the English Crown and in 1183, Henry II had his son Prince John crowned as King of all Ireland, following the death of Rory O'Connor.

With the English in possession of the east and north of Ireland, colonization from England over the next few centuries changed the character of the area to resemble the feudal lordships on the other side of the Irish Sea. The English-controlled area (known as the Pale of Settlement) gradually expanded, with the conquest of most of Connaught by 1235. Royal control, meanwhile, strengthened as the liberties of the barons were restricted. By 1300, the remaining Irish kings ruled reduced domains and were the feudal tenants of English barons.

300 The number of Norman knights who came to Ireland in the first three ships under Robert Fitzstephen on May 1, 1169.

Kilkenny Castle

The castle was an important stronghold of the Anglo-Norman barons in Ireland from its construction by the earls of Pembroke at the end of the 12th century. The original wooden castle was built by Strongbow.

AFTER

The native Irish kingdoms experienced a resurgence in the 14th century, but subsequent invasions from Scotland and England again crushed their power.

SCOTTISH INVASION

The invasion by the Scottish king Robert Bruce's brother Edward in 1315 destabilized the English position, but control was reestablished.

IRISH DISSENT

When Irish dissent threatened to turn to rebellion, the English response could be brutal, as during the Nine Years' War (1594–1603) and Cromwell's campaign 174–75 >>.

PERMANENT ROYAL GOVERNMENT

King John appointed a chamberlain of the exchequer in 1215 to administer royal revenues. A Court of the Exchequer was established in the reign of Henry III to adjudicate on fiscal matters.

THE EXCHEQUER OF IRELAND, 15TH CENTURY

BEFORE

The capture of Jerusalem by Muslim Arab armies from the Christian Byzantine emperor in 638 CE was a disaster for the Christian world.

THE FIRST CRUSADE

It was centuries before any serious attempt was made to recover Jerusalem. Pilgrims continued to reach the Holy City. Yet anecdotal accounts of the restrictions of Muslim authorities on Christian pilgrims in Palestine, and the effects of the disastrous defeat in 1071 of the Byzantine army at Manzikert by the Muslim Seljuk Turks, reignited efforts to regain the Holy Land. In 1095, Pope Urban II began to preach a Crusade – a holy war – to reconquer Jerusalem.

POPE URBAN PREACHING THE CRUSADE

KING OF ENGLAND (1157–99)

RICHARD I (LIONHEART)

Known as “Lionheart” due to his skill as a warrior, Richard I gained early military experience while rebelling against his father Henry II. He spent only three months in England in 1189, just long enough to claim the throne after his father’s death and raise finances for the Third Crusade. While returning overland from Palestine, he was seized by Duke Leopold of Austria and held prisoner until a large ransom was paid in 1194. Another brief sojourn in England followed to restore the damage done by his brother John, who had seized power in Richard’s absence, but he then spent the last five years of his life in France, where he built Gaillard castle (below) in 1196.

England in the Crusades

As Christian monarchs, the kings of England were bound to take the papal calls to crusade seriously. Over two centuries, scores of English nobles, thousands of ordinary soldiers, and one reigning king took the Cross and embarked for the Holy Land to save it from the advance of Islam.

With cries of *Deus le Veult* (“God wills it”), the crowds responded to Pope Urban’s sermon at Clermont in France in 1095. Many knights and nobles pledged themselves to an armed expedition to seize Jerusalem from its Muslim rulers.

The First Crusade (1096–99) was a largely French affair, but the closely interlinked landed and political interests of the nobility of Normandy and that of England meant that there was an English dimension of sorts; William II’s brother, Robert Curthose, Duke of Normandy, took part, as did others, such as Eustace of Boulogne, who held large estates in England. A small English fleet also made its way to the

Levant, and English sailors may have been present at the fall of Jerusalem on July 15, 1099.

Paying for the Crusade

The First Crusade had another impact on England, a financial one that was to recur during later crusades. Robert Curthose pledged the Duchy of

Normandy as surety for a 10,000-mark

loan his brother

gave him to fund his

crusading effort. To raise this

money, William II in turn levied a crusading tax of 4 shillings to the hide on his kingdom, an imposition so severe that monks were said to have been forced to melt down sacred ornaments to pay for it.

The popularity of crusading as an idea was undimmed by these financial impositions, and the English chronicler Henry of Huntingdon described the preaching of the First Crusade as the

The Crusade assault on Jerusalem

The capture of the Holy City of Jerusalem on July 15, 1099 was a great triumph. It was accompanied by the massacre of large numbers of its inhabitants, both Muslim and Christian.

most important event since the Resurrection of Christ. There was a good response to the first preaching of a crusade in England when the founder of the Templar Order of knights, Hugh de Payens, visited England in 1128. Henry I gave money and soon the Templars and the Hospitallers (the other military monastic order) were receiving widespread grants of land and other property in England.

The Second Crusade

The Second Crusade (1147–49) saw a large contingent of English crusaders. The motives of men such as Waleran, Earl of Worcester, William of Warenne, Henry of Glanville, and William Peverel of Dover were varied. Some felt a genuine religious desire for the recovery of Jerusalem, others sought glory or coveted the lands which might be won, while some, such

as Peverel, found it a convenient means to escape their political

enemies or a reputation for violence.

The Crusade itself, whose aim had been the recovery of the strategic city of Edessa in Syria, seized by the Muslim emir Zengi in 1144, was largely a failure. Its one lasting result came in October 1147, with the capture of Lisbon by a crusading force en route to the Holy Land, prominent among whom were the English crusaders.

Between the Second and Third Crusades, Englishmen took the Cross and made their way to “Outremer” (the term for the Christian states established in Palestine). In 1169, Saladin came to power in Egypt and between then and 1187 he chipped away at the crusader kingdoms. In 1185 Heraclius, the Latin patriarch of

5,023 The amount in pounds spent by Henry of Cornwall in acquiring ships for Richard for the Third Crusade (at a time the average daily wage for a sailor was two pence).

Jerusalem, traveled west to appeal for aid, but the response was muted. Henry II of England made a donation, but no further promises.

The fall of Jerusalem

A few English crusaders, such as Hugh of Beauchamp, made their way to the Holy Land, arriving just in time to die at the Battle of Hattin in July 1187, when Saladin overwhelmed the army of the Kingdom of Jerusalem, leaving the Holy City defenseless. When it fell in October, shock waves reverberated throughout Europe and a new crusade was launched. Henry II of England took the Cross, but died before he could leave for Palestine, and it was left to

Knights' effigy

This monument to a crusader knight is still to be found in Temple Church, London—the headquarters of the crusading order of the Templars.

his son Richard I to lead the English contingent.

The German Emperor Frederick Barbarossa drowned on the way to the Holy Land, leaving the Third Crusade as an Anglo-French venture, with command shared between Richard and Philippe II.

Richard got to Syria in June 1191, and was present when

Acre fell in July. Philippe left soon after, leaving Richard in command, a challenge he took up with resounding success by defeating the previously invincible Saladin at Arsuf in September. Despite this, the war then settled in to stalemate, and in August 1192 Richard agreed a three-year truce with Saladin. Two months later Richard set sail from Acre, ending the campaign of England's only crusader king.

This was the only crusade in England with something like mass participation; Richard's army was at least 6,000 strong and included magnates, citizens, and groups of archers.

Later crusades

The crusades of the early 13th century attracted a much lower level of English participation, as the Anglo-Norman aristocracy was preoccupied with the civil war that only ended in 1217 (see pp.84–85). Richard of Cornwall, the younger son of King John, launched his own crusade to Syria in 1240 and, while Henry III took the cross three times (in 1216, 1250, and 1271) he never actually went to the Holy Land. His eldest son Edward (the future Edward I) did do so in 1270, joining the expedition of Louis IX of France against

Tunis and then making his way to Palestine in 1271. He again achieved little, save the reinforcement of the garrison at Acre.

Lasting effects

If the military importance of English crusading was largely spent by 1192, its cultural effects were more long-standing. Many knights sold their lands to raise money for the long journey to Palestine and the Church, and in particular monasteries, which possessed the largest source of ready cash, benefited by greatly extending their landed properties when many failed to return to redeem their estates. Those who did come back had experienced a lifestyle with which Europe had long been unfamiliar. A taste for luxuries such as silk and spices, which could only be obtained through Muslim intermediaries, came back with the returning crusaders. This helped promote an interest in trade with the area which long outlasted the fall of Acre, the last Christian outpost in Palestine, in 1291.

AFTER

The loss of Acre in 1291 did not mark the final end of European attempts to retake lands in Palestine and elsewhere from their Muslim rulers.

RISE OF THE OTTOMAN EMPIRE

Edward III “took the Cross” in 1312, but he was the last English king to do. Minor crusades were launched in an effort to stop Constantinople, the capital of the Byzantine Empire, falling into Muslim hands, but the Crusades of Nicopolis (1396) and Varna (1444) were all crushed by a newly rising Muslim power, the **Ottoman Empire**. Crusading taxes—such as one of £1,000 raised in 1446—were levied in England, and the proceeds were sent to help finance the fight against the Turks, but even the **fall of Constantinople** to them in 1453 did not prompt a new crusade.

FALL OF CONSTANTINOPLE, 1453

“We have not come seeking wealth... we have come **for the sake of God** and for the salvation of our souls.”

KING PHILIP OF FRANCE AT THE SIEGE OF ACRE (IN WHICH RICHARD I OF ENGLAND WAS TAKING PART), 1191

Challenging Royal Authority

King John of England signed the Magna Carta in 1215. This marked the first of a series of concessions by which English monarchs ceded parts of their power in the face of baronial challenges to their authority. By 1277, Parliament had become established in England and kings could no longer levy new taxes without its consent.

In 1200, King John became involved in a drawn-out war with France. His failures in France, especially the defeat at Bouvines in 1214, tarnished his prestige. His quarrel with Pope Innocent III over his refusal to accept the appointment of English cardinal Stephen Langton as Archbishop of Canterbury in 1207, was also damaging, as England was placed under an Interdict, which theoretically forbade the holding of almost all church services in the country. In November 1209, the Pope excommunicated

John, absolving all his subjects—including the barons—of their oath of allegiance to him.

The increasing level of financial exactions needed to pay for the unpopular French war crystallized opposition to John around a group of northern nobles, including William de Mowbray. A meeting between John and his tenants-in-chief in November 1213 did little to resolve the situation and by the time John returned to England in October 1214, three months after Bouvines, the demands for a

scutage (a tax paid in place of military service) of three marks for each knight's fief (land) had further inflamed matters.

Magna Carta

The baronial revolt looked likely to be settled without violence when the Magna Carta was accepted by King and barons on June 15, 1215 (see pp.86–87). The charter protected the barons from undue exactions by the Crown, but certain of its provisions, such as the choice of 25 of their number who could, in the event of the King breaking

the terms of the Magna Carta, seize the King's castles and lands, were never likely to be allowed to stand by John. The King did everything he could to wriggle out of the agreement, asking for a papal condemnation of it; and in late September 1215, a papal bull absolving John of his promises duly arrived in England.

135,541 The sum in marks (£90,370) that Henry III had to pay the Pope for the appointment of Edmund as King of Sicily.

BEFORE

Royal authority had been strengthened since its restoration after the chaos of the civil wars in Stephen's reign. By the reign of King John, revenues were increasing, but disasters in France undermined royal prestige once more.

ROYAL CHALLENGES

Noble and baronial revolts against the English kings were nothing new. From the rebellion of Earsl Tostig and Morcar against Harold Godwinson in 1065, to the attempt by Robert of Gloucester and Matilda to unseat Stephen in the 1140s, English monarchs had to face challenges from overmighty subjects. The reign of Henry I brought comparative calm << 72–73—at least in England, as abroad he faced revolts by his sons. The absences of Richard I on crusade actually strengthened

the Crown, since the King's justiciar, Hubert Walter, was an able administrator and inspired relatively little opposition.

CHIGNON CASTLE, RESIDENCE OF HENRY I

The kiss of peace

John is seen here giving a fraternal kiss to his arch-enemy Philip II Augustus of France. John was defeated many times by Philip, which fatally undermined his power to control the English barons.

Map of Britain

The 13th-century Benedictine monk Matthew Paris compiled a series of chronicles covering the history of England in the 1240s and 1250s. His works include maps, such as this representation of the British Isles.

Civil war erupted as an assembly of barons declared John deposed and invited Louis, son of King Philip II of France, to take over the English throne. The French prince arrived in Kent in May 1216, and he and the rebel barons soon controlled the whole of southeast England. When John died in October 1216 and his nine-year-old son, Henry III, succeeded him, it looked as though the triumph of the rebels would be complete. The young King was supported by a group of loyalists led by William Marshall, Earl of Pembroke. Marshall secured the support of the papal legate Guala Bicchieri and won crucial victories at Lincoln in May 1217, and at Dover in August. The barons' enthusiasm for rebellion evaporated and a formal peace was signed in November.

Henry's regency council acted quickly to restore royal authority, as the barons had seized much royal land and the King's revenues had collapsed. Under Marshall's direction, justices were sent to the localities to hear all pleas, in the most comprehensive display of royal authority since 1176. As a sop to the barons, the terms of Magna Carta were reaffirmed in 1216, and again in 1217.

The reign of Henry III

After Henry was declared of age in 1223, and especially after his marriage to Eleanor of Provence in 1236, he came to depend on foreign advisors. The barons, feeling excluded, began to chafe once more.

Meanwhile, with little sign of the success in France he craved, Henry sought prestigious ventures elsewhere, and in 1255, had his son Edmund appointed titular King of Sicily by the Pope. The price that the papacy demanded for this was exorbitant and the King was forced into new measures to raise funds. One means of doing this was increasing the amount local sheriffs were expected to exact from their counties. The sum had increased by £2,500 in 1258 compared to the start of his reign and it is no coincidence that Robin Hood stories started to circulate during Henry's reign. The King also turned to Parliament, the assembly of barons and advisers that had replaced the role of the Anglo-Saxon *witangemot*. The barons were not cooperative,

£40,000 The sum spent by Henry III in building a shrine to Edward the Confessor at Westminster Abbey—the equivalent of two years' revenue.

“You English want to **hurl me from my throne** as you did my father.”

MATTHEW PARIS, QUOTING HENRY III IN *CHRONICA MAJORA*, c.1260

however, and of the 14 assemblies where Henry asked for new taxation between 1232 and 1257, Parliament refused it on 12 occasions.

Growing opposition

The demands of payment for Edmund's elevation to the Kingdom of Sicily were the last straw and on April 12, 1258, seven magnates took an oath to stand by each other in opposition to royal oppression. They included Richard de Clare, Earl of Gloucester, and Roger Bigod, Earl of Norfolk. The man who emerged as their leader was Simon de Montfort, a former protégé of Henry's. By the end of April, many other barons and knights had taken the oath and on

May 2, Henry was forced to agree to their demands for radical change. The Provisions of Oxford covered a wide range of judicial reforms and established a council of 15 persons to administer their implementation. They were formalized by the Provisions of Westminster in 1259.

Having agreed, Henry decamped to France and tried to put off the reassembly of the Parliament in February, which in theory could not take place in his absence. Following the tactics of his father John, in 1261 Henry got Pope Alexander to absolve him of his oath to the barons. With both sides unwilling to yield, Henry managed to persuade de Montfort to agree to

The growing complexity of royal administration and the need to raise money to pay for it led to an increasing reliance on Parliament, which was acknowledged as the only body that could raise the funds.

TAXES AND PARLIAMENT

Henry III died in 1272, and his successor Edward I summoned at least two Parliaments every year from 1275–86 to provide funds. He found **new means of taxation**, including a **levy on people's moveable goods**, which raised £117,000 in 1290. In 1297, Edward declared that a proposed tax had been granted by the barons of the kingdom, but a group of nobles denounced this, as no summons to attend Parliament had gone out to the barons, knights, and burgesses. Edward had to issue a **Confirmation of the Charters** acknowledging that taxation could only be levied with Parliament's approval.

CONSULTING PARLIAMENT

Later kings had to ask Parliament if they wished to raise taxes, until **Charles I sought to levy taxes without parliamentary consent** from 1629–40, making use of archaic royal rights to gather funds. This was only resolved by the English Civil War **168–69** >> and Charles I's execution in 1649 **170–71** >>.

KING EDWARD I

arbitration by Louis IX of France. At Amiens in January 1264, the French King listened to both sides' cases and then ignored the barons by declaring Henry vindicated on all points.

The result was civil war. At Lewes on May 14, 1264, de Montfort's forces crushed the royal army, and Henry III and Prince Edward were imprisoned. De Montfort then tried to enlarge his base of support. He had already summoned four knights from each shire to his Parliament of 1264, widening representation from the previously dominant baronial class. In 1265, he summoned burgesses from the towns as well, so that the London Parliament resembled for the first time the later House of Commons.

Prince Edward, however, escaped from captivity in May 1265 and three months later, at Evesham, he trapped de Montfort with a small force. The baronial leader was killed and the rebellious barons melted away or were hunted down. Although their challenge to the King was temporarily at an end, Parliament, whose power it had established, became permanent.

Magna Carta

King John's growing unpopularity with his barons, aggravated by his financial demands and defeat in France, finally led to open revolt in the spring of 1215. At Runnymede, near Windsor, the King and his rebellious subjects met and agreed to Magna Carta, a charter of liberties. Some of the clauses would endure for centuries.

John's authority was fatally damaged by the comprehensive defeat of his army by Philippe II of France at the Battle of Bouvines in July 1214. To make matters worse, the Justiciar, Peter des Roches, who had administered England in John's absence, had levied a scutage (feudal due payable in lieu of military service) of three marks per knight. After widespread resistance to this oppressive tax throughout the fall of 1214, a coalition of barons came together and produced a charter of liberties, which had—they said—been granted to the English by Henry I.

Rebellion and agreement

The barons demanded John confirm this charter, but he fobbed them off with a promise of a reply after Easter, while himself appealing to Pope Innocent III. Given that John had vowed to go on a crusade to the Holy Land, the Pope's reply was predictable and he ordered the barons to pay the scutage. Furious, the barons mustered an army and marched south toward the King's position at Wallingford, in Oxfordshire. On May 5, they renounced their homage, so entering

a formal state of rebellion. The loss of London to the rebels on May 17 concentrated John's mind, and he ordered Stephen Langton, the Archbishop of Canterbury, to act as a go-between. Langton arranged the meeting at Runnymede between the two sides on June 15, although the terms had probably been largely agreed beforehand. Magna Carta ("Great Charter") was dated that day, and on June 19 it was "made firm."

Failure and symbolism

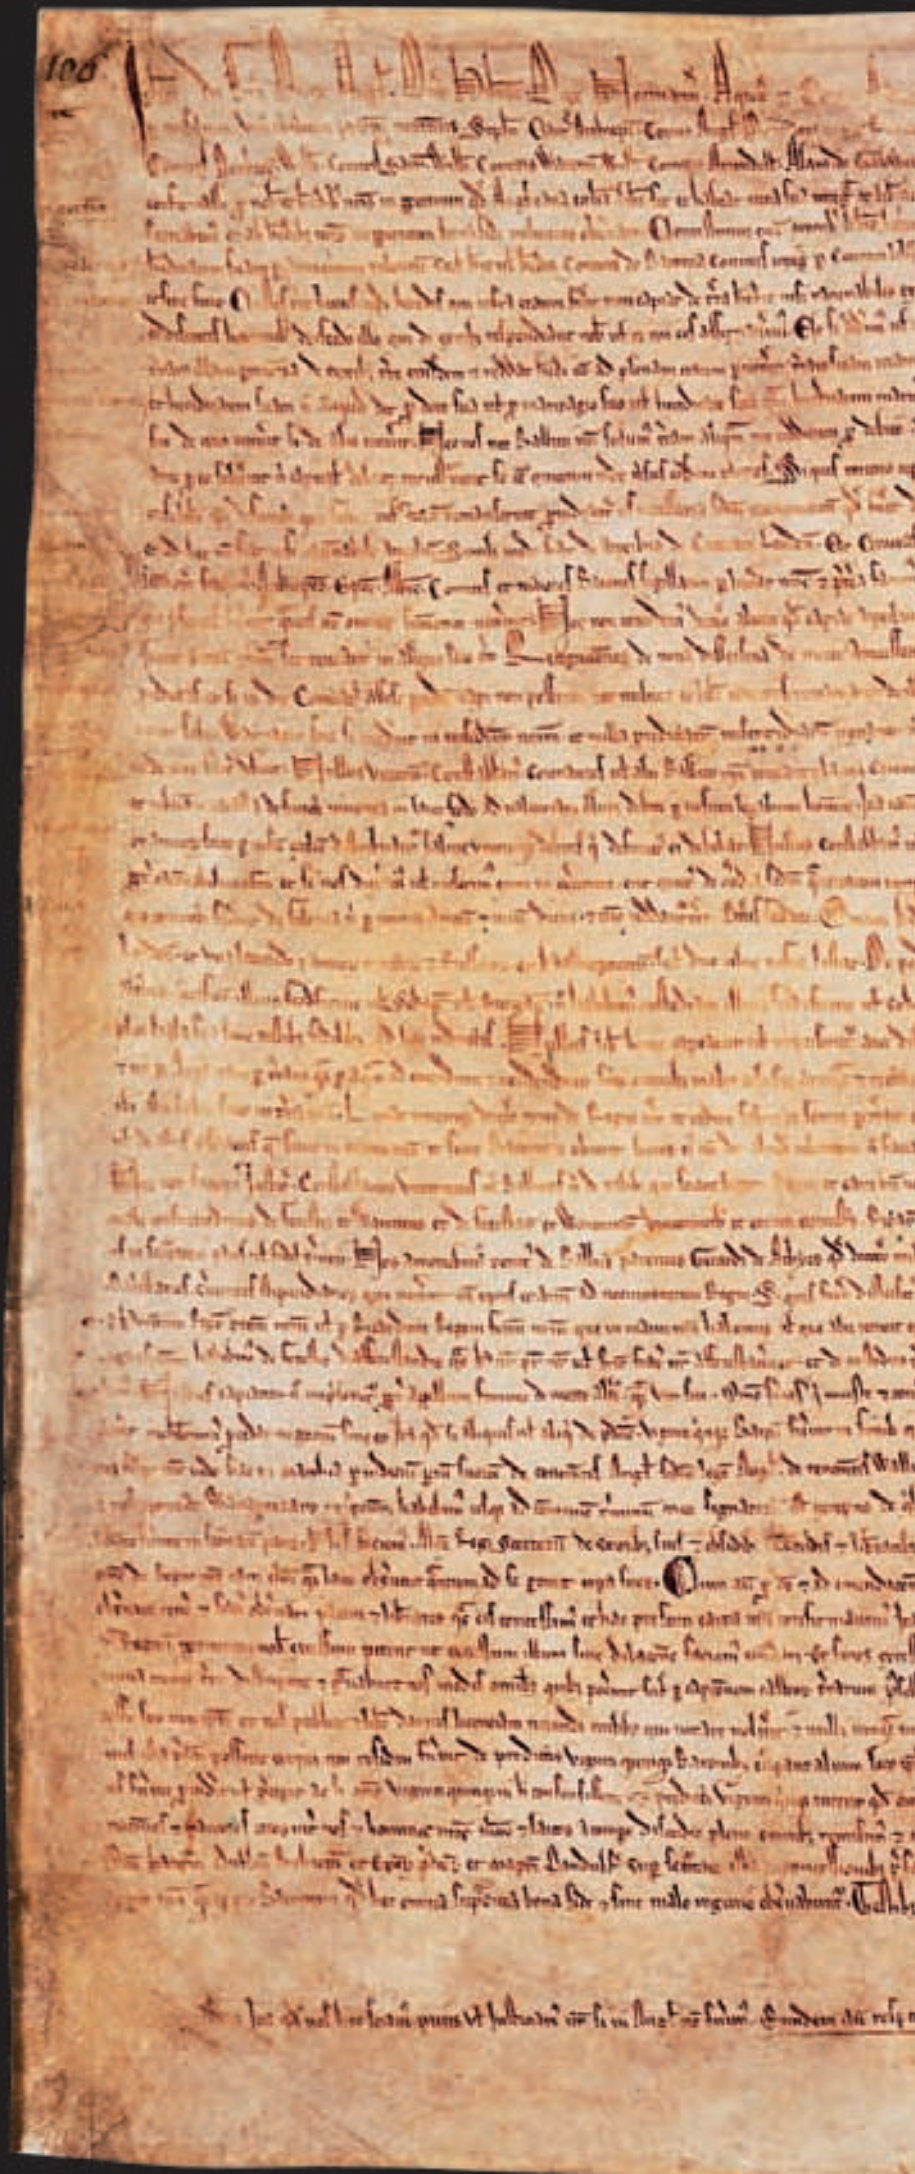

The terms of this extraordinary 63-clause agreement largely confirmed the barons' feudal rights, particularly with regard to inheritance, and restricted the royal right to tax them. Those clauses that seemed to enhance the rights of free men were strictly subsidiary to this main purpose. Although it endured for centuries as a symbol of England's constitutional liberty, in the short term, Magna Carta was a failure. Neither the more extreme barons nor John were satisfied with it, and civil war broke out again in September. It was still rumbling on when John died in October 1216.

“No free man shall be taken or imprisoned... except by... lawful judgment of his peers...”

MAGNA CARTA, CLAUSE 39, 1215

Magna Carta

Four copies of the Great Charter of 1215 have survived. It was reissued with modifications in 1216, 1217, and 1225, under John's successor, Henry III. While most clauses were repealed or became redundant, the right to a fair trial has remained a cornerstone of English law.

Working in the fields

The Luttrell Psalter (c. 1320) shows a farmer broadcasting seed from a basket held on a strap round his neck, while his dog chases off the birds. The narrow field strips were sown in the spring.

A Prosperous Realm

The 200 years following the Norman conquest were troubled times politically, but a time of stability for the kingdom. The population grew, new land was taken into cultivation, trade increased, and urban life flourished.

BEFORE

The old aristocratic Saxon and Anglo-Danish families were swept away after the Norman invasion, and their lands taken over by William the Conqueror, his family, and his Norman and French followers.

FEUDAL LIFE

The Normans were organized for war. They introduced a new type of landholding, **feudalism**, designed to keep them in a state of battle readiness. King William I took all the land into his own hands and **granted large estates** to his main supporters in return for specified military service **◀ 72–73**. These “great men”, the tenants-in-chief of the King, granted land to their own supporters who undertook to give **military service as knights**, the battle-winning armored cavalry of the 11th and 12th centuries.

The men and women who worked the land for their lords, either as free peasants or as **unfree tenants**, made up the greater part of the population. The rhythm of their lives remained relatively unchanged, subject to the seasons.

The ruling class, the king, his family, the leaders of the Church, bishops and abbots, and the great landowners, were all Norman or French. After the conquest (see pp.68–69), the largest estates went to William’s family and to his companions in battle. William’s half-brother Odo, the Bishop of Bayeux, was given the bishopric of Winchester and lands in Kent. Families such as the FitzOsberns and the de Warennes were granted landholdings across several counties. French was their language. From their estates they had access to the best food, and acquired the best horses, armor, and the finest clothes and jewelry from the revenues they collected.

Kings and aristocrats

The Norman kings established “The Forest”, large areas of land reserved for royal hunts, and subject to special laws designed to preserve these habitats. Game such as deer, wild

boar, and birds could be caught in The Forest for sport and to supply aristocratic tables with meat. Indeed, hunting and hawking were important features of aristocratic society, teaching skills that would be useful in war.

The great families were part of an international society and had as much contact with their kin in Normandy, France, or Flanders, as with the tenants to whom they granted land.

When they were not obeying the king’s summons to attend him, they were constantly on the move between their estates.

Life in the countryside

The majority of people lived in the countryside, which was divided into thousands of landholdings called manors. A manor usually included a village and its surroundings, although

“There stretch before you the **most fertile fields**, flourishing meadows, broad swathes of arable land...”

DESCRIPTION OF ENGLAND BY GOSCELIN OF ST. BERTIN, c.1100

some manors incorporated several settlements. Fields were open, long, narrow strips of land. The peasants who worked the land paid part of their annual harvest to the lord of the manor as rent, another part went to the Church. Some peasants were free tenants, others were unfree (villeins), who worked the lord's own fields. They were required to give the lord labor and to pay certain fines (fees) such as *heriot*, when inheriting a landholding, and *merchet*, on the marriage of a daughter. The lord of the manor protected his tenants in times of war and acted as judge in disputes between neighbors.

Some knights owned only one or two manors, but most had several, and managed them through an agent called a reeve. Large estates consisting of numerous manors, often widely scattered around the country, were known as honours. Abbeys and cathedrals owned manors, as did secular lords.

Population growth

During the Norman period, the population rose from around 2,250,000 in 1086 to an estimated 5,750,000 by 1220. To meet this increase, forests were cleared to bring new lands called "assart" into cultivation, reducing the amount of woodland in England from 15 to 10 percent of the total land surface. Some changes in landholding took place too, as land farmed directly by the lords of the manor

Salisbury Cathedral

Towns grew up around large abbeys and cathedrals, such as that at Salisbury. Building work never ceased as bishops and abbots rebuilt their churches in the new Gothic style with pointed arches.

60 MILLION The number of silver pennies in circulation in 1216. The silver penny was the only coin minted at this period and weighed 0.05oz (1.4g). The king kept strict control over its minting.

was turned into smallholdings for freemen and villeins who paid cash rents. The expansion of economic life led to changing social bonds. Many obligations of service, whether providing a knight, or working on a lord's land, were commuted into cash payments, and the use of coins became more important.

Sheep were an increasingly profitable commodity. As well as providing meat and milk for cheese, their skins were used for parchment. They were most valued for their wool, which was exported in bulk to the weavers of Flanders during the 12th and 13th centuries. Many of the great monasteries became specialists in sheep farming.

Urban centers

Growing population and increased agricultural production went hand in hand with a rise in the number and size of towns. The Domesday Book (see pp.74–75) identifies 112 towns. Approximately 150 years later this number had grown to 240, all founded by royal charter. The greatest of these were London, Lincoln, Norwich, York, and Winchester. From a population of 15,000 in the days of William I, London had grown to 80,000 inhabitants in 1300. All the major towns were religious centers, often cathedral cities, but they were also market towns and centers of manufacture.

Surplus agricultural produce was brought from country estates to be sold in the towns, and merchants found a ready market there for goods such as wine and furs. The most common urban trades were those involved with the supply of food and drink—brewers, bakers,

Artistic riches

Wealthy monasteries produced highly accomplished works of art. This portrait from the Eadwine Psalter (c.1160), one of the great treasures of medieval England, portrays a monk at his desk in a scriptorium.

and butchers. Every town had at least one tailor, ironsmith, carpenter, shoemaker, and weaver. Only the large centers would have had more specialized craftsmen.

Town dwellers

Besides the king, other landowners granted charters to build new market towns. These were a source of profit for those who established them and for the merchants and artisans who lived there. Anyone, whatever his origin, who could prove he had lived in a town for a year and a day was a freeman. If he held land in a town, he would have burgage rights, which meant he could subdivide, sell, mortgage, and bequeath it freely. The royal boroughs were governed by the king's officials, but the richer merchants also played a major part in the administration.

Clergy of every rank and type lived in the towns, and schools for the education of boys were attached to cathedrals and monasteries. The universities of Oxford and Cambridge came into being. Instruction was always in Latin, the language of the Church. Books were still rare objects; texts were copied and illustrated by hand.

AFTER

This period of prosperity, population growth, and increased economic activity came to an end at the beginning of the 14th century.

END OF THE GOOD TIMES

In 1314, a **bad harvest** hit Britain, and for the next seven years (1317 was the only exception) repeated violent winds and rainstorms destroyed crops and caused disease in livestock. As crop yields fell, landowners found themselves without grain surpluses to boost their incomes. In parts of southern England, the harvest was 55 percent below normal, and some areas suffered famine. **Town life stagnated** as demand for manufactured goods fell, and exports of cloth and wool declined. In 1304, 46,000 sacks of wool were exported from England; 15 years later this figure fell to 30,000.

There is evidence that villages began to be abandoned early in the 14th century, as the amount of cultivated land contracted, a crisis that deepened after the widespread devastation and depopulation of the **Black Death 102–03** >>

WHARRAM PERCY, A DESERTED VILLAGE

BEFORE

The new Norman lords of England after 1066 were a far more dangerous adversary for the Welsh than the Anglo-Saxon kings.

CASTLE BUILDERS

After the Norman conquest of England, Norman lords established themselves on the borderlands and made inroads into Welsh territory. A series of castles, such as Chepstow and Caerleon, were built, diminishing Welsh autonomy. The Welsh struck back in 1094 and almost all of these were destroyed. For some time after this, English kings were preoccupied elsewhere.

CHRONICLE

Gerald of Wales, a cleric of Norman-Welsh heritage, visited Wales in 1191 and recorded information about the history of Wales.

GERALDUS CAMBRIENSIS MANUSCRIPT

Subduing Wales

In the 13th century, a series of powerful princes of Gwynedd emerged to unite much of Wales. It seemed as though the principality could establish a political identity separate to England, but in the end the English kings were too powerful and Welsh independence was extinguished by Edward I in 1282.

By 1218, Llywelyn ap Iorwerth of Gwynedd—known as Llywelyn the Great—had united Gwynedd under his rule and swept away much of the English royal control in the south. At first, King John had found Llywelyn a useful counterbalance to the earls of Chester, but while John was preoccupied with a civil war against the barons in 1215–17 (see pp.86–87), Llywelyn formed an alliance of Welsh

An “iron ring” of castles

Beginning in 1283, Edward I had a number of castles built in north Wales to protect England’s gains. Designed by master mason James of St. Georges, Harlech Castle, shown here, was completed in four-and-a-half-years.

princes and seized the royal castles of Cardigan and Carmarthen, as well as occupying southern Powys.

Although the Treaty of Worcester (1218) allowed Llywelyn to keep his gains, in 1223 William Marshall seized Cardigan and Carmarthen. Montgomery was also regained for the English. Llywelyn, however, recovered most of these losses in the early 1230s, and after this Wales was mostly at peace until his death in 1240.

Llywelyn’s successor Dafydd paid homage to Henry II for the whole of Gwynedd, but his authority was undermined by the attempts of his half-brother Gruffudd

4,000 The number of workmen employed by Edward I to build Harlech, Caernarvon, and Conwy castles in Wales in 1283–84.

to unseat him. Dafydd reached out to Louis IX of France, offering to hold Wales from the Pope (and thus independently of Henry III) and implicitly offering support to the French King in his wars against the English. Henry’s reaction was weak, even failing to take advantage of Gruffudd’s death in 1246 to make advances. Instead, he made the Treaty of Woodstock (1247) with Gruffudd’s two sons Owain and Llywelyn, by

“Can you not see that **the world is ending?**”

GRUFFUDD AB YR YNAD COCH, LAMENT FOR LLYWELYN AP GRUFFUDD, c.1282

which the strategic Four Cantrefs (land divisions) between Conwy and the Dee were ceded to England.

Llywelyn ap Gruffudd—often known as Llywelyn Fawr, “the Last”—had pushed his brother aside and in 1258 he seized the Four Cantrefs back and assumed the title Prince of Wales. Henry III who had problems enough with the barons’ revolt led by Simon de Montford was again in no position to react. In 1267, the Treaty of

Montgomery finally acknowledged Llywelyn’s right to the princely title, in exchange for a fee of 25,000 marks.

The end of Welsh independence

It looked as though Welsh independence under the overlordship of Gwynedd was secured, but disputes over the treaty led to Llywelyn’s repudiation of it in 1271. Henry III died in 1272 while his heir, Edward I, was away on crusade, so it was not until 1276 that the new English King invaded. Llywelyn Fawr had made himself unpopular with other Welsh rulers

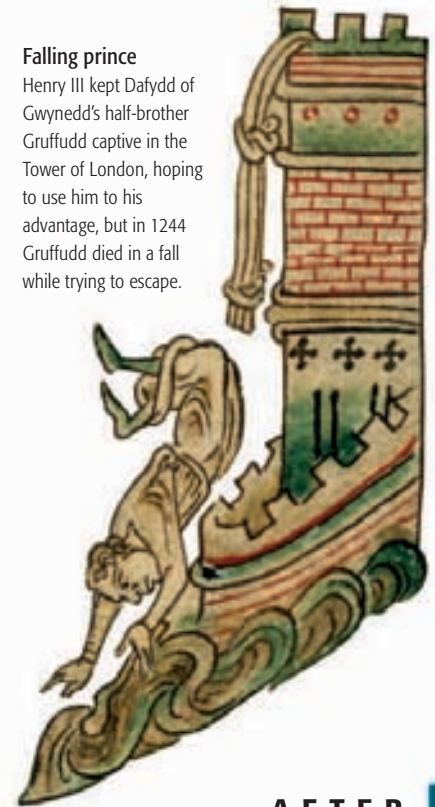

whose lands he had absorbed, and they rapidly submitted to Edward. With the English King advancing

on Deganwy with an army of 15,000, and an English fleet landing at Anglesey, Llywelyn submitted.

He was stripped of all his territories outside Gwynedd, but even then, native rule might have survived there had it not been for his brother Dafydd, who felt himself slighted by the claims of an English lord, Reginald de Grey, to the part of the Four Cantrefs he had received as a reward for fighting on Edward I’s side. On March 22, 1282, Dafydd attacked Hawarden Castle, while his confederates among the Welsh princes seized a number of other key Norman castles. Llywelyn hesitated, but felt he had no choice other than to join his brother’s insurrection. Early successes were followed by a disastrous battle near Builth on December 11, where the Welsh army was cut to pieces and Llywelyn killed. Most of the Welsh princes were dispossessed and Edward I took control of virtually the whole of Wales.

Falling prince

Henry III kept Dafydd of Gwynedd’s half-brother Gruffudd captive in the Tower of London, hoping to use him to his advantage, but in 1244 Gruffudd died in a fall while trying to escape.

AFTER

The conquest of Wales in 1282, and the deposition of most of the native princes opened the way for direct English rule over Wales, which lasted until the union of the two countries in 1536.

THE LAST WELSH PRINCESS

Llywelyn’s daughter, **Gwenllïon**, was born in 1282. She was taken to a nunnery in Lincolnshire by Edward I, where she remained until her death in 1337.

THE STATUTE OF WALES

Edward I moved quickly to organize his new dominion, issuing the Statute of Wales in March 1284, by which he extended **the English shire system into Wales** and established a number of officials to administer the principality.

LATER REBELLION

Rebellions, including that of Rhys ap Maredudd of Ystrad Tywi, one of the few Welsh princes allowed to keep his lands in 1283, and by Madog ap Llywelyn in 1294–95 **were put down.**

ENGLISH PRINCE

In 1301, Edward I’s son, Edward of Caernarvon, was made **Prince of Wales**, a title that is used by members of the British royal family to this day. Wales was largely quiet until the **rebellion of Owain Gly Dwr** in 1415 **116–17 >>**

EDWARD OF CAERNARVON

Scotland's Independence Struggle

Edward I's invasion of Scotland in 1296 began a 30-year struggle, which at first saw the English occupy almost the whole of Scotland. Then, just as the spark of Scottish independence seemed extinguished, the English were expelled from Scotland by a new king, Robert the Bruce.

Scotland was almost undone by a piece of dynastic bad luck. At peace with England for nearly 70 years, the Scottish Crown had gradually expanded its area of control beyond the central lowland core, suppressing Galloway's autonomy by 1245, and in 1266, acquiring the Hebrides from Norway by the Treaty of Perth. In 1286, however, Alexander III was killed by a fall from his horse. His three children had already died, leaving the only obvious heir his three-year old

Coronation chair

Edward I had this chair made for the coronation of English kings. As a snub to Scottish sentiment it contained the Stone of Scone, on which the Scottish kings had by tradition been crowned.

granddaughter, Margaret, the "Maid of Norway." The infant Queen was sent for from Norway, and her planned engagement to Edward I of England's son Edward of Caernarvon (the future Edward II) seemed to presage a union of the English and Scottish crowns, albeit one that was supposed to guarantee Scottish autonomy.

The kingship of John Balliol

In September 1290, Margaret died while on her way from Bergen in Norway to Scotland, throwing the Scottish nobility into disarray.

Edward I summoned an Anglo-Scottish parliament on the border at Norham, in May 1291, and demanded that the Scottish lords acknowledge his right to decide the process by which their next king would be selected. One by one they did so, first Robert Bruce of Annandale and last John Balliol, who had an independent claim to the throne as a descendant of David I. Finally, in November 1292, a commission with 24 jurors and the English King as judge selected Balliol to rule Scotland, but he was not an independent monarch since he owed his position entirely to the favor of Edward I.

John Balliol tried to assert himself, but his refusal to attend Parliaments in York and his maneuvering for a French alliance brought the wrath of Edward ("Longshanks" as the Scots came to call him) down upon Scotland. The Scots were defeated at Dunbar in late April, and in early July, John surrendered. Edward had him summarily stripped of his royal vestments, giving rise to Balliol's unfortunate nickname of "Toom Tabard" (empty surcoat).

The siege of Berwick

As Edward III's army marched north in 1332 to support Edward Balliol's bid for the Scottish Crown, it laid siege to the Castle of Berwick, long contested between England and Scotland. It fell after the Scots defeat at Halidon Hill in July 1333.

BEFORE

A long struggle between the Scottish and English kings over the northern counties seemed to settle down in the 13th century.

KINGDOM OF SCOTLAND

A program of reform by King David I of Scotland (1124–53) created a medieval kingdom of Scotland.

BORDER DISPUTES

Malcolm IV was forced to withdraw from the northern counties of England in 1157 << 76. Alexander II of Scotland, brought stability by renouncing claims to the Border counties in 1237.

JEDBURGH ABBEY, BUILT BY DAVID I IN 1138

Having placed garrisons in many Scottish castles, Edward I then left for Gascony in August 1296. Already the rumblings of resistance were growing louder and a series of risings broke out in spring 1297, with an able leader emerging in the shape of William Wallace, who defeated the English at Stirling Bridge in 1297. Wallace

overreached himself and risked another pitched battle at Falkirk in July 1298, where he was soundly beaten.

For a while, the protection of their French ally Philip IV kept Longshanks at bay, but the French defeat at Courtrai in 1302 and the subsequent Peace of Amiens, which excluded Scotland, gave Edward I free rein once more. In 1303, the English came north again and by early 1304 the Scottish leader John Comyn had surrendered. At a meeting called at Greyfriars' Church in Dumfries in February 1306 to discuss their tactics, Robert Bruce struck Comyn dead and assumed the leadership of the anti-English party. On March 27, 1306, he declared himself King at the traditional royal coronation site of Scone, but it was an inauspicious first year and by early 1307, he was a fugitive in western Scotland.

7,000 The number of inhabitants of Berwick killed by Edward I's army on his way north to Scotland in March 1296.

Return of Robert Bruce

King Robert's comeback began with a victory at Loudon Hill in May 1307, and from then he won an uninterrupted string of victories, aided by the accession of Edward II to the English throne in 1307, a man who

SCOTTISH LEADER (C. 1272–1305)

WILLIAM WALLACE

Wallace emerged to lead the Scottish resistance movement in 1297, following his murder of the English sheriff of Lanark. His defeat of the English against the odds at Stirling Bridge in September 1297 cemented his reputation, but his luck did not hold, and after losing at Falkirk the following year he never led another Scottish army. Wallace left on a diplomatic mission to France, but after his return to Scotland, he was betrayed and handed over to the English. He was hanged, drawn, and quartered in London.

 English victory

Battles between England and Scotland

The Anglo-Scottish wars saw dramatic swings of fortune and civil wars between the rival contenders for the Scottish crown were often as damaging to Scotland's interests as the armies of the English kings.

lacked the firm resolution of his father and who did not adequately fund the Scottish garrisons. Aberdeen fell to the Scots in July 1308, and in 1309 Bruce felt able to call his first Scottish Parliament at St. Andrews.

By spring 1314, only Stirling Castle remained in English hands, and it was to save this last redoubt of English power in Scotland that Edward II finally stirred himself to a counterstrike. This ended in disaster, with the English army being cut apart at Bannockburn on June 24, 1314 (see pp.94–95).

By 1315, Robert had taken the offensive against northern England, besieging Carlisle. In the same year his brother Edward landed in Ulster in an attempt to topple English rule in Ireland. The invasion bogged down, and though Edward was declared High King of Ireland in 1316, it was a hollow title and the Scots occupation was largely confined to the north. By the time Robert recovered Berwick, the last Scottish possession occupied by England, in 1318, Edward Bruce's forces were nearly exhausted and in October 1318 he was killed in battle near Dundalk.

The declaration of Arbroath

A succession crisis ensued as Robert still had no direct heir, and he feared that Edward II, who was grooming John Balliol's son Edward for the Scottish throne, might invade. These anxieties led to a formal Scottish statement of independence by the Declaration of Arbroath in 1320, and the choice by Robert of his grandson Robert Stewart as his successor. The failure of an attempt by Edward II to invade Scotland and the weakening

of the English position by an outbreak of civil war there in 1326–27 finally brought about a negotiated peace. In spring 1328, by the Treaty of Edinburgh, Edward III renounced his claim to lordship over Scotland. The country's independence seemed finally secured.

AFTER

The English invaded Scotland shortly after the Treaty of Edinburgh. However, Scotland retained its independence until the Union of the Crowns in 1603.

ENGLISH GAINS IN POWER

Robert died in 1329, but in 1324 he had fathered a son David, who became king. In 1332, **Edward Balliol**, the son of John, **invaded Scotland** with the encouragement of Edward III. He defeated the army of Bruce loyalists and had himself crowned King at Scone. **A victory at Halidon Hill** in 1333, led to Edward III taking much of southern Scotland. The young King David II was sent to France for safety. Robert Stewart rallied and **drove the English out** by 1341.

COIN OF DAVID II

THE STEWART RULERS

Robert became king in 1371 after the death of David II without an heir. The Stewarts ruled Scotland until **James VI succeeded his cousin Elizabeth I of England** in 1603 **158–59**, and became king of both countries. As a result, a descendent of Robert Bruce ruled over England.

DECISIVE MOMENT JUNE 24, 1314

The Battle of Bannockburn

Following the loss of Edinburgh Castle to the forces of King Robert the Bruce in March 1314, King Edward II of England launched an invasion to relieve Stirling Castle, the last English possession in Scotland. The subsequent encounter at the Bannock Burn would have a decisive bearing on Scotland's fight for independence.

The army that Edward mustered in Berwick in June 1314 was around 15,000 strong, including 10,000 infantry, 2,000 heavy cavalry, and a large force of archers. Pushing north, on June 23, the English arrived just south of Stirling, where King Robert's army lay in wait. Robert commanded around 5,000 men, mainly infantry armed with long spears, organized into shield formations known as schiltrons, and a small force of light cavalry. He set anti-cavalry pits and spikes along the road to Stirling, and deployed the bulk of his forces in the wooded New Park, which blocked the English army's progress. A premature English attack on June 23, was caught in the cavalry traps.

The English then forded the Bannock Burn, a stream to the south and east of the Scottish position. A difficult crossing left the English tired, and they camped the night just across the Burn in an open space. Probably not expecting a direct attack, Edward gathered his forces in a constricted space that made it difficult for them to maneuver in the face of any unexpected assault.

At dawn on June 24, upon Robert's orders, the Scottish infantry charged from New Park, to the astonishment of the resting English troops. The Earl of Gloucester roused them with a cavalry charge, but with little room to move, its impact against the Scots was limited. Archers attacked the Scottish flanks, but with Robert unleashing his light cavalry, the English scattered.

Scottish victory

Robert then inflicted the killing blow against the disheartened English by throwing forward his reserve of Highlanders, while the emergence of the "small folk", untrained Scottish levies, spread panic through the English ranks. Edward fled the scene, first to Stirling Castle, which did not admit him, and finally to Berwick. Back on the battlefield, a massacre took place as the Scots cut down the disordered, escaping English. The blow to Edward's prestige in Scotland was huge, although the war would drag on for another 14 years before Scottish independence was finally recognized by England.

“These barons you see before you, clad in armor, are bent upon destroying... our whole nation. They do not believe we can resist.”

ROBERT THE BRUCE, ADDRESSING HIS TROOPS BEFORE THE BATTLE OF BANNOCKBURN, JUNE 24, 1314

Carnage of close combat

The Holkham Bible's depiction of Bannockburn vividly illustrates the violent chaos of the battle. At its end, the Bannock Burn was bloated with bodies as the fleeing English were butchered in their thousands. Most survivors were captured; very few made it back to England.

Hundred Years' War Begins

The Hundred Years' War between England and France broke out in 1337 over Edward III's attempts to seize the French throne. The fortunes of war ebbed and flowed between the two sides. In 1346 and 1356, the English seemed close to victory, but 25 years later they were left with just a few coastal enclaves in France.

It was the death of Charles IV of France in 1328 that finally provoked conflict between the two countries. Charles had no son and there was no clear precedent as to who should succeed him. Edward III of England, as grandson of Philippe IV (through his daughter Isabella), had a strong claim.

For a few months the French nobility waited to see if Charles IV's pregnant queen Jeanne of Evreux would provide him with a posthumous male heir, but the baby was a girl (French law did not allow succession through the female). The French nobles turned to Philippe of Valois, a nephew of Philippe IV, who had the advantages of being 35, a proven leader and, crucially, was the chairman of the council convened to decide the succession.

Edward's humiliation

On May 19, he was anointed king as Philippe VI at Rheims Cathedral. Although Edward III made a direct claim to the throne, in 1329 he was

Edward III

Edward III, portrayed here in an anonymous portrait, was the grandson of Philippe IV of France and it was his attempt to use this inheritance to claim the French crown that sparked off the Hundred Years' War.

one-tenth on all moveable goods and of one-fifteenth on land. A few skirmishes occurred in 1337–38, marking the start of the Hundred Years' War, and finally, in July 1338, Edward set sail for Antwerp. He then moved south toward Cambrai, but Philippe resolutely refused to give battle, remaining in safety behind the walls of Amiens.

Reduced to the kind of *chevauchées*, or plundering raids, that would characterize much of the Hundred Years' War, Edward grew frustrated. By February 1340, he had almost run out of money and had incurred the staggering sum of £300,000 in debts. He even had to secure permission from his European creditors to return to England.

Master of Brittany

Within months, Edward returned with a fleet of 250 ships. On June 24, he caught the fleet of the French and their Castilian and Genoese allies in harbor at Sluys. In a battle where the English archers showed their mettle, by securing the boarding of ship after ship of the French line, Philippe VI's fleet was decimated and only 30 Genoese vessels managed to escape.

Once again, Philippe's refusal to give battle led to Edward's campaign running out of steam.

Bodkins

Medieval archers had access to a variety of arrowheads. Bodkin points such as these were better able to penetrate mail armor, while the archers would choose flatter broadheads to inflict more serious wounds against lightly armored foes.

The defection of the Duke of Brabant and Count of Hainault to the French side then induced Edward to agree to a five-year truce. Even so, the fighting continued over Brittany, since Jean de Montfort, the would-be duke, offered his fealty to Edward in June 1341, and the English knew well they would need ports there if the war with France should spread again. By 1345, Edward was the master of Brittany, and, though a treaty between the two sides was notionally due to expire only in September 1346, both began to prepare for inevitable conflict.

Victory at Crécy

On June 11, 1346, Edward landed near Saint-Vaast. He probably had around 15,000 soldiers, one of the largest armies ever assembled by an English King in France (where their forces were normally only around one-third to a half of those of the French). The English advanced toward Paris, but faced stiffening resistance until finally on August 13, at Poissy, Edward resolved to turn back north. This time he was pursued all the way by Philippe. They met near Crécy and the French were crushed (see pp.100–01).

Even victorious, Edward lacked the numbers to attack Paris and so headed to Calais. A prolonged siege ensued, and, once more denied significant

BEFORE

The English kings had possessed lands in France since the 11th century. By the 12th century they held almost half of the country, but lost most of it by 1214.

FIGHTING FOR FRENCH LAND

The defeat of Robert Curthose by his brother Henry I, in 1106, reunited Normandy and England, giving the English King great domains in France. The marriage of Henry's daughter Maud to Geoffrey Plantagenet in 1128 meant her son, Henry II, ultimately inherited both England and large parts of France, creating a vast Angevin Empire ◀ 76–77. King John lost almost all this after defeat at Bouvines in 1214. However, Aquitaine was restored, in 1259, in exchange for Henry III's renunciation of his rights to the rest of France. The Duchy of Aquitaine was again declared forfeit by Philippe IV in 1293. From 1294–96 he invaded and conquered it, but handed it back to Edward I after papal arbitration.

A further skirmish in 1323 was resolved by Edward II and Charles IV, and an uneasy peace was restored.

COIN OF PHILIPPE IV

forced into a humiliating act of homage to Philippe for his lands in Aquitaine. Philippe continued to provoke Edward, getting his lawyers to produce a document stating that what the English King had offered the previous year was liege homage making Philippe VI his feudal overlord in all matters, not just those concerning Aquitaine. Edward declined a summons to attend the French court in person, but provided a written statement in 1331, which accepted Philippe's argument.

2,000 The number of French knights that were said to have been captured by the English forces following their victory at the Battle of Poitiers in 1356.

Early skirmishes

Edward had been preoccupied with war against the Scots, but his victory at Halidon Hill in 1333 freed him to turn his attention to France. Both sides postured, seeking allies, and in 1335, the French transferred troop ships intended for a crusade to the Holy Land to the Norman ports instead, seeming to herald an invasion of England.

Edward took time to assemble an army, and he raised the necessary funds by getting Parliament to grant a tax of

ENGLISH COMMANDER (1330–76)

THE BLACK PRINCE

Edward, the eldest son of Edward III, was born in 1330. Aged seven, he became Duke of Cornwall and was knighted by his father on the landing beach at Saint-Vaast at the start of the Crécy campaign. He became the principal English commander after 1355, securing his major success at Poitiers in 1356. An able battlefield commander, his strategic grasp was not so strong, and after Poitiers he achieved relatively little. A disease he appears to

have contracted in Spain in 1367 left him increasingly unwell. He returned to England and died in 1376, a year before his father. Although he was apparently genuinely fond of the color black, the “Black Prince” nickname dates from later centuries.

gains, Edward went home in September 1347, having concluded a treaty due to last until 1355.

The Treaty of Guines

Edward's adversary, Philippe VI, died in 1350 and was replaced by Jean le Bel, who tried to seize land in Aquitaine. In Brittany, a French army made a failed attack on Rennes. Under pressure from these reverses and a rebellion in Navarre, Jean agreed to the Treaty of Guines in 1354. By this, Edward obtained Aquitaine, Anjou, Poitou, Touraine, Maine, and Normandy without giving homage to the French Crown. The English had everything they wanted except the French throne itself. The next year, Jean repudiated the treaty and war broke out again.

The Black Prince

English forces were now commanded by Edward, Prince of Wales (the “Black Prince”). Having arrived at Bordeaux in autumn 1355, he thrust toward Paris, but finding resistance too stiff, turned

back to Aquitaine. On August 19, 1356, near Poitiers, he was overtaken by Jean le Bel and forced to give battle. Once again, a French charge collapsed in the face of English archery, but this time the English knights and men-at-arms contributed to a crushing defeat of the French, which left more than one-quarter of their knights dead or captive. Among the prisoners was Jean le Bel.

The English demanded 4 million gold ecus to ransom the French King and the cession to them of around one-third

Castle under siege

This ivory carving shows knights laying siege to an allegorical Castle of Love. Sieges during the Hundred Years' War were often protracted affairs. Towns and castles more often fell to treachery or through the exhaustion of supplies than to direct military assault.

of France. In 1359, they increased this to all territory north of the Loire, plus a huge swathe around Aquitaine—almost half the kingdom. The Dauphin Charles, heir to the French throne, rejected this and continued the war as best he could.

The English, however, became bogged down and had to retreat to Orléans and negotiate a new settlement. The Treaty of Bretigny in May 1360, reduced the ransom to 3 million gold ecus and the territorial demands to coastal lands around Calais and the Somme, plus Ponthieu and Aquitaine, while Edward renounced his claim to the French throne. With final victory in their grasp, the English had again let it slip away.

AFTER

After the Treaty of Bretigny, the English lost territory and their position in France deteriorated, but the war still dragged on.

LOSS OF TERRITORY

Edward III's failure to give homage to Jean le Bel reignited the war in the 1360s. The only major English success was in 1367, at Najera, when they helped Pedro the Cruel of Castile reclaim his throne. In 1369, Charles VI of France confiscated Aquitaine and **occupied most of the English territory**. A treaty in 1374 with John of Gaunt gave the English a brief respite, but war broke out again in 1377. Most remaining English garrisons were seized. The Treaty of Guerande in 1381 **left them with little save a strip around Bordeaux and a few towns in Brittany**. But the war continued for more than 70 years **118–19** >>

“Sirs... let us not be afraid, **for victory** falls not to the multitude, but where **God will send it.**”

EDWARD, THE BLACK PRINCE, TO HIS ARMY BEFORE POITIERS, SEPTEMBER 19, 1356

Knights and Bowmen

Military tactics did not vary enormously from the Norman conquest to the end of the Hundred Years' War, with heavily armored cavalry playing a central role in warfare. Yet by the end of the period, these were being rapidly rendered obsolete with the advent of longbows and pikes.

By the 11th century in northern France a practice of mounted warfare had emerged, with the knight at its center. With lance or spear, sword, and chain mail armor, he was the ancestor of the high medieval knight. After 1066 (see pp.68–69) this class of warrior was imported into England, along with the system of feudal vassalage, by which knights held land in return for the obligation to provide military service to their lord.

The chivalric code

At the apex of the feudal pyramid lay the king, the chief landholder of the whole system. No military campaign could begin without his lawful consent.

5,000 The approximate number of knights who owed feudal military service during the reign of Henry II, according to his 1166 enquiry.

From the 12th century, there emerged an idea that only the king could make knights; in 1102 a council in London decreed that abbots should not make them, showing how the control of the system of knighthood was becoming restricted. Around this time, an idea of chivalry also emerged, according to which knights were expected to conform to a moral code. These included rules on bravery, honor, and respect toward each other and courtesy for women and the Church.

Knights were created with an elaborate ceremony of “dubbing”, during which the king laid the sword on the knight. A kind of aristocratic career path was established in which a noble child progressed from page through to squire and then finally achieved knighthood. Poems, such as the *Romances of Chrétien of Troyes*, reinforced this ideology, glorifying the moral basis of knighthood.

Tournaments provided a way for knights to sharpen their skills and burnish their reputations outside the field of warfare. They were said to have been invented by Geoffrey de Preuilly in France around 1066, and imported to England by Richard II. By the reign

Canterbury knight

The knight described by Geoffrey Chaucer in his *Canterbury Tales* is well-traveled, wise, and a source of moral authority for the other pilgrims. It was an ideal that many real knights failed to live up to.

BEFORE

After the end of the Roman era, England did not have a standing army. Equipment varied and the warrior retinues of Anglo-Saxon kings fought largely on foot.

THE ROMAN ARMY

The Roman army of Britain was a **professional force**, with a standing army of legionaries and auxiliaries who **served for 25 years**.

THE WARRIOR ETHOS

In early Anglo-Saxon times this was **supplanted by a warrior ethos**, with each free man expected to defend his lord. By the time of the Norman conquest in 1066 << 68–69, England had a military organization of sorts, with a levy, the fyrd, liable for service in the army when called up, and a more permanent body of aristocratic housecarls and thegns << 60–61.

Armed with axes or occasionally swords, and lightly armored, they were fundamentally foot soldiers.

RECONSTRUCTION OF AN ANGLO-SAXON WOODEN SHIELD

Knight and patrons

The windows of Tewkesbury Abbey show the original patrons and founders of the church, most of them knights portrayed in full armor, dedicating their military service and their gift of the church to God.

“This people... very **accustomed to warlike ways**, and most renowned for their powers, are also **the most skilled archers.**”

GIRALDUS CAMBRENSIS, ON THE MEN OF GWENT, c.1190

of Edward III, they were elaborate affairs. The successful end of a Scottish campaign in 1342 was celebrated by an astonishing 15-day festival of jousting.

Siege warfare

The reality of warfare was rather different to the ideal of the chivalric code. Replacing mounted warriors was extremely expensive, and consequently most medieval armies spent their time avoiding pitched battles. There was only a handful of major encounters involving European armies in the

12th century (with Tinchebray in 1106, Northallerton in 1138, and Alarcos in 1195 being the most notable). Siege warfare was more common, with the castles that had sprung up throughout northern Europe, including England, providing the arena for most military action. Castles, however, almost never fell to direct assault, usually succumbing due to treachery or the exhaustion of supplies by one or other side. The armies commanded by the English kings of the 12th to 15th centuries were not standing ones. They had

Crossbow

The most powerful hand-held missile weapons of the day, crossbows were outlawed in 1139 as inhumane and only permitted for use against infidels. Most European armies nonetheless continued to use them.

to be recruited for each campaign on an ad hoc basis, and by the 1370s soldiers normally served on a contract of six months duration. The knights became progressively more elaborately armored. The helmet now covered the whole head (see pp.124–27), and the basic suit of chain mail was encased with a series of metal plates sewn on at weak points.

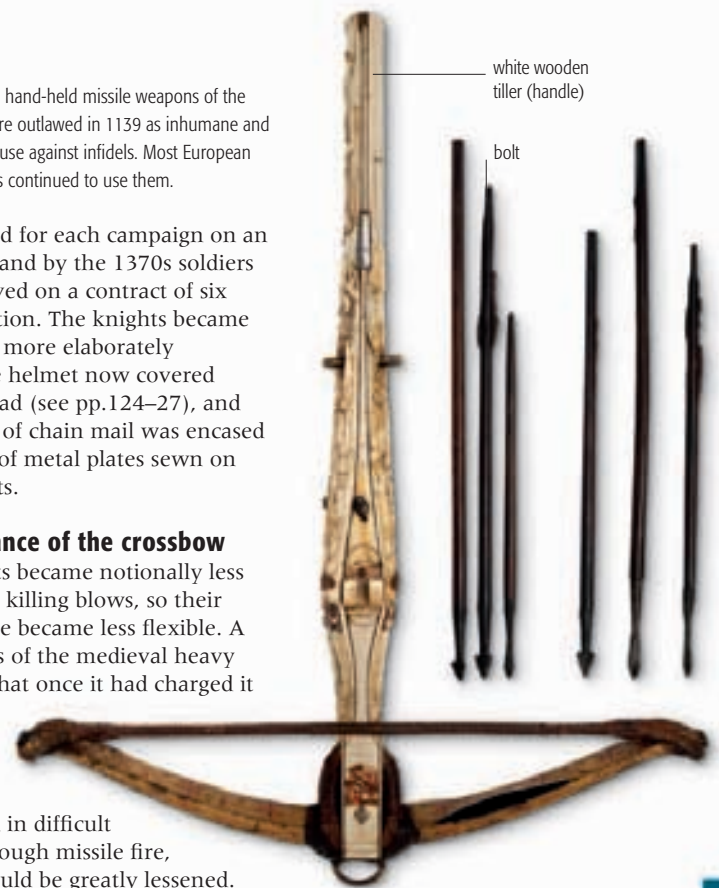

The importance of the crossbow

As the knights became notionally less vulnerable to killing blows, so their battlefield role became less flexible. A key weakness of the medieval heavy cavalry was that once it had charged it was hard to regroup, or if the charge itself became bogged down in difficult terrain or through missile fire, its impact would be greatly lessened.

The English kings had always been able to recruit a wider range of troops to their army than the knights, by such means as Assizes of Arms, which called all free men—who were expected to possess weapons—to serve their monarch. It was such a summons that recruited the English army that won the Battle of Falkirk in 1298. Edward I's reign, indeed, saw the recruitment of infantry at a level not seen before, and in his Welsh war of 1282–83 there may have been as many as 10,000 of them.

Another key component of these armies were archers. Although Edward had around 250 crossbowmen during the Welsh wars—whose bolts could penetrate armor at nearly 984ft (300m)—more prominent were the longbowmen who bore a bow more than 6.5ft (2m) long with a pulling power of up to 176lb (80kg). A mass of these, as deployed at Crécy (see pp.100–01) in 1346 or Agincourt in 1415 could prove lethal to the feudal cavalry, who were decimated before they could reach the English lines. By the mid-14th century, they had become crucial to English armies in France. Edward III landed with 2,500 archers and 1,400 knights and men-at-arms at Antwerp in 1338—a typical ratio.

Long pikes were added to the infantry arsenal to create bristling armored hedgehogs which horses could not penetrate. This equipment—and the longbow—were far cheaper and more widely accessible to lower social groups than the armory of a knight. Once again, the most important component of armies had become the footsoldiers.

AFTER

By the mid-15th century, developments were taking place that would once again revolutionize the battlefield, rendering both knights and bowmen obsolete.

CANNON AND GUNPOWDER

Gunpowder weapons appeared in the 14th century, but it was not until the 15th century that the **cannon began to have a real impact**, rendering sieges a more certain proposition for the attackers. They were first used to real effect on the battlefield in the French defeat of the English at Castillon in 1453. **Full plate armor** developed in the late medieval period.

THE GUN REVOLUTION

Handguns, which were developed in the middle of the 15th century, were at first of limited use, but the **increasing numbers of arquebuses** in European armies rendered armor useless. As guns grew more effective, and the likelihood of achieving a quick and decisive victory through their use increased, so pitched battles grew more common in the 16th century. Cavalry, where it remained, was more lightly armed, and with the diminution of the military role of knights by the 15th century, it lost its central role in the social hierarchy of the country.

LATE MEDIEVAL HELMET

DECISIVE MOMENT August 26, 1346

Battle of Crécy

Edward III's invasion of France in the summer of 1346 was within 19 miles (30km) of Paris. With his army tiring, Edward decided to risk a pitched battle with Philippe VI of France. The outcome of this engagement at Crécy would determine the future of the French Crown and mark a pivotal moment in the Hundred Years' War.

On the morning of August 26, the English—some 12,000 strong, half of them longbowmen—marched out of the forest of Crécy and took up position on a long ridge between Crécy and Wadicourt. The sloping terrain offered them some protection. The French—around 40,000 strong, including 6,000 Genoese crossbowmen—had halted around 9 miles (15km) short of the English position. The French commanders could not decide whether to delay the attack until the following day. However, some of the men headed of their own accord toward the English. Soon, the rest of the army followed suit.

Victory of the longbowmen

The Genoese crossbowmen were the first to attack. But with the sun in their eyes, and deceived by the ridge's slope, their usually lethal volley proved ineffective. The response of the English longbowmen was more telling; swathes

of Genoese fell and the rest pulled back. The Duke of Alençon in the French forward division regarded the Genoese action as cowardice, and ordered them cut down as they retreated.

A hasty retreat

The French knights charged, but were pushed toward the enemy line. When the English knights advanced down the slope, the French retreated to their second division. Soon, English archers poured further volleys into its flanks and the French dissolved into chaos.

Despite mounting up to 15 charges that day, the French were beaten back by the unscathed English knights. Toward midnight, King Philippe withdrew to the castle of Labroye, abandoning his army to flee or die.

Edward chose not to march to Paris, but instead headed to Calais, which he hoped would fall quickly to him. The siege lasted until August 1347 and the impetus of the English victory was lost.

“The French **did not advance in any regular order... some came before and some came after.”**

JEAN FROISSART, *CHRONICLES*, c.1373

A one-sided battle

This illustration from Jean Froissart's *Chroniques* shows the English longbowmen facing the Genoese crossbowmen at the Battle of Crécy. Around 10,000 Frenchmen perished at Crécy, including many leading nobles; about 500 Englishmen were lost.

BEFORE

The Black Death was not the first pandemic to cause great mortality. Others had been recorded in ancient times.

ANCIENT PLAGUES

The Greek historian Thucydides gave a detailed account of an epidemic that struck Athens from 430 BCE, describing its symptoms in detail.

It is likely that neither this, nor the **great Antonine Plague**, which afflicted the Roman Empire in 165 CE, was the bubonic plague widely

believed to be the cause of the Black Death. However, the **Justinianic Plague** of 541–42 CE, which devastated the Byzantine Empire, did have similar symptoms to those of the 14th-century plague.

EMPEROR JUSTINIAN

The Black Death

The “Great Pestilence” that struck Britain in the spring of 1348 killed up to half of the population within a year. Inspiring helpless terror as it passed through the land, the epidemic contributed to profound and long-lasting social changes in the British Isles.

England in the 1340s was a society vulnerable to economic and social stress. Bad harvests in the 1310s and 1320s led to a high mortality rate, as grain prices more than quadrupled. On Halesowen Manor in Worcestershire some 15 percent of adult males died in 1315–16

Time of disease

Outbreaks of smallpox and measles were also well-known killers in late medieval society, but their victims were most often children and their impact did not seriously disturb the social order or damage the economic productivity of the land. Nothing, therefore, had prepared the British Isles for the scourge that descended upon it from the east in the spring of 1348.

“The Great Pestilence... raged so terribly that **it cleared many villages...** of every human being.” *CHRONICLE OF GEOFFREY LE BAKER OF SWINBROOK, c.1357*

The traditional view is that the Black Death—as later historians called what contemporaries labeled the “Great Mortality” or the “Great Pestilence”—was caused by *Yersinia pestis*, an organism passed into the human blood stream by the bite of fleas endemic in certain species of rat. Some historians now suggest that the Plague was in fact

a viral disease. Although the cause is not certain, what is clear is that a terrible disease emerged, most likely in Mongolia around the 1320s, which then spread eastward to China (where successive outbreaks killed up to two-thirds of the population) and west through central Asia. By 1347, it had reached the Crimea.

Plague scene

This 14th-century manuscript shows plague victims being carried from a city to be buried in mass graves. Such scenes would have been seen in many European cities.

Medical care

Late medieval doctors plied their art using the Roman physician Galen's theory of the "humors" in the body, which could be rebalanced by the application of poultices or other equally ineffective measures.

The disease manifested itself first with a high fever, convulsions, and vomiting. Within a few days the victim's lymph glands swelled up dramatically in the characteristic lumps, or buboes, whose black discolored appearance gave the plague its name. In the final phase of

6.5 The amount in pence that a Somerset reaper could earn in 1350, compared to the 3 pence per acre he was able to charge in 1348.

the illness, the buboes split apart and the patient died soon after. Contemporary medicine, dependent on the theories of 1st-century CE Roman physician Galen, was virtually useless in the face of such a virulent affliction, and around 70 percent of those who contracted the illness died.

The plague probably reached Europe through Kaffa in the Crimea in 1347. Genoese sailors, escaping the siege of the city by the Mongols of the Golden Horde, then spread it by ship throughout the ports of the Mediterranean. The first reports of the plague in England came from Melcombe Regis in Dorset, where a ship carrying some Gascon sailors is said to have brought the infection just before the Feast of John the Baptist (June 24), 1348. Before long, the plague was

spreading throughout the southwest, reaching Bristol on August 15, moving north and west to the Midlands and Wales soon after, and making relentless progress toward London in the late fall.

There are varying estimates of the death toll by the time the epidemic had run its course in 1350, but the proportion of beneficed clergy (those who had a stipend) who died was 40 percent and this group probably suffered somewhat less than the general population. In the end, probably somewhere between a third and a half of Britain's population perished in the plague. In England this amounted to up to 2.5 million of the pre-plague population of 5 million in around 1300.

The pestilence in London

London fell victim to the pestilence before All Saints' Day (November 1), by March 1349 cases were recorded in East Anglia, and York succumbed on Ascension Day (May 21). The losses in London alone may have amounted to 25,000, or half the pre-plague population. Reactions to the plague were varied, but always tinged with panic and terror. Many fled their homes, further spreading the disease; others threw themselves into prayer and devotional literature. The art of the period dwells on death and the allegorical *Danse Macabre* (Dance of Death) story in the 15th century is an apt reflection of the preoccupations of the age.

No social class was spared. Three successive archbishops of Canterbury died of the plague in 1348 and 1349, leaving the Church leaderless. As the plague touched Wales and Ireland in 1349, and Scotland in 1350, it seemed as

Taking blood

A method employed by doctors following the methods of Galen was to bleed the patient to remove a perceived excess of blood. Some used leeches, others used more invasive instruments, such as this one, known as a fleam.

Plague saint

Saint Roche of Montpellier is said to have ministered to the victims of a plague in northern Italy before his death in 1327, afterward becoming the patron saint of plague sufferers.

though the death would never end. Yet the Black Death simply ran out of victims, and by 1350 in England the death toll fell.

A changed society

The plague left a radically altered social landscape in its wake. The 1348 harvest had been planted for a population double the size of that left the next year.

Food prices fell and the price laborers could charge for their work rose as a labor shortage hit landowners. Although the Great Pestilence had for the moment passed, the imbalances created meant that landowners

would be forced either to adopt more oppressive measures to secure labor or pay more for it.

AFTER

More outbreaks of the Black Death struck from the 1350s, destabilizing attempts to deal with the aftermath of the 1348 attack.

WAGE RISES

The Statute of Labourers in 1351 established the maximum wage reapers could earn at 2 pence per day and set ceilings for craftsmen such as master carpenters, who were to be paid no more than 3 pence per day. But in 1361, an outbreak of the pestilence killed about 20 percent of the population and the maximum wages had to be revised upward (to 4 pence per day for master carpenters). Further attacks followed every 10–12 years thereafter.

THE GREAT PLAGUE

The final English outbreak of the Black Death struck in 1665 **181** >>, when some 100,000 people died in the capital.

Medicine had advanced little and elaborately dressed plague doctors did little more than administer placebos and collect their pay.

PLAGUE DOCTOR

La plus belle tem
on, ad na qua
et a plus belle

BEFORE

The economic and social consequences of the Black Death continued to cause grave difficulties for the English Crown decades after the main outbreak had ended.

LABOR SHORTAGE

In the immediate aftermath of the plague of 1348 << 102–03, peasants demanded higher wages and improved conditions of land tenure, including fixed tenancy and employment terms. The nobility and Parliament moved to counter this, with the **Ordinance of Labourers** in June 1349 decreeing that all physically fit men and women under 60 be available for work. Some landowners began to **enclose strips of land**, which could then be farmed more easily and with fewer laborers.

CORRUPT COURT

The last years of Edward III's reign were marred by his dementia, and the dominance of the court by a cabal of **corrupt favorites**, including his mistress Alice Perrers. The war against France was also proving costly, with little gain, and in 1376 there was a real **fear of invasion**.

ROYAL LANDOWNER (1340–99)

JOHN OF GAUNT

By the age of 22, John of Gaunt, the third eldest surviving son of Edward III, was Duke of Lancaster and one of England's leading landowners. He was associated with the failing government of his father in the 1370s, and his lack of battlefield success in France and his dominance of the unpopular regency councils of Richard II's early reign made him a target of the 1381 revolt. In 1386, he became King of Castile (through his wife Constanza) but was driven out in 1389, returning to England. He was sidelined by an increasingly tyrannical Richard, and did not quite live long enough to see his son Henry become king.

The Peasants' Revolt

For a week in June 1381, England seemed on the edge of a revolutionary change, as rebels, angered at the imposition of a heavy poll tax, marched on London and threatened to unseat the government. The moment soon passed with the killing of the rebel leadership and the restoration of Richard II's power.

Edward III's death in 1377 was followed by the succession of the 10-year-old Richard II. As a result, England was ruled for the next three years by a series of regency councils, which lacked the firm will to divert the country from its ruinously expensive war with France. One expedition alone, in December 1379, under Sir John Arundel, cost £15,000 and was dispersed by a storm in the Channel without achieving anything at all.

In rural areas resentment simmered at the land enclosures, extortion by landlords, and the successive royal attempts to drive down wages, which had taken place over the 30 years since the Black Death. The Crown's need for extra funding for the French campaign was the spark that set this anger ablaze.

A tax for all

Traditionally the king relied on "lay subsidies" for funding, assessed at around 6 percent of a household's moveable property, which raised correspondingly more money from the rich.

36 The percentage of those eligible to pay the poll tax in the county of Essex, who disappeared from the poll tax rolls between the first tax in 1377 and the punitive poll tax levy of 1381.

In 1377, however, Parliament voted a poll tax of 4 pence from every male and female over the age of 14, irrespective of income. This raised £22,000 and there was no widespread resistance to it. In 1379, a second poll tax was approved by Parliament, levied according to an elaborate set of rules that included 50 gradations, with dukes at the top paying £6, and barons 50 shillings, down to the poorest at the bottom, who were assessed at 4 pence. This more progressive tax raised only £18,600 and with tension simmering on the Scottish border and little sign of success in the war against France, Chancellor Sudbury (who was also the Archbishop of Canterbury) returned to the House of Commons with a demand for a poll tax that would raise an astonishing £160,000. The Commons finally assented and the new tax was levied at a flat rate of 12 pence per head on all over the age of 15—three times

the level of the 1377 tax. Evasion was instant and widespread. The poll tax rolls compiled to show who had paid the imposition, show that 450,000 fewer people paid in 1380–81 than in 1377, meaning one-third of taxpayers had vanished. The royal council ordered enquiries into the massive evasion in January 1381, and in March, new commissions were sent into the counties to track down those who had refused to pay.

Growing resentment

The heavy-handed actions of the commissioners fueled the resentment of the peasantry, which was already reaching dangerous levels. Within three days of the arrival of John Bampton's commission in Essex on May 30, some 50,000 peasants (probably an exaggerated figure) are said to have risen under a certain Thomas Baker of Fobbing. In Kent, the arrest of a man claimed as a serf by Sir Simon Burley proved the immediate spark for revolt, and on June 5, the Kentishmen gathered at Dartford and then marched on Maidstone, which fell to them the next day.

Centers of unrest

The Kent rebels first marched to Canterbury, then on to London, where they were joined by rebels from other farming counties of the southeast.

It is at this point that Wat Tyler emerged as leader of the revolt. Little is known of him—other than he seems actually to have been a tiler—but for the next 10 days he acted as the figurehead for the rebels, together with a radical preacher named John Ball, who espoused a radical (for medieval times) form of egalitarianism, and an even more shadowy figure named Jack Straw, whom some sources claim was no more than an alias of Wat Tyler.

Targets of the rebellion

The rebels next marched on Canterbury, the seat of the hated Archbishop-Chancellor, where they burnt the poll tax rolls. They then moved on London. At an early stage the rebel tactics were clear. They directed their attacks at the King's ministers and sought to extract concessions from Richard himself. On June 13, with the rebels at Greenwich, the King came in person to meet them.

“When Adam delved and Eve span, who then was the gentleman?”

PEASANTS' REVOLT LEADER JOHN BALL, c.1380

Tyler demanded the surrender of John of Gaunt, the King's uncle, Chancellor Sudbury, Treasurer Hales, and a clutch of other especially despised notables. The King refused and tried to trap the rebels into a meeting at Windsor where royal forces might more easily hunt them down. Wat Tyler was not fooled and the rebels, up to 60,000 strong according to some sources, marched on Southwark where they opened the Marshalsea Prison, burnt Sudbury's palace, and razed John of Gaunt's Savoy Palace.

Rebel manifesto

On June 14, the rebels, who had trapped the King and his ministers in the Tower

Tyler's death

The meeting between Tyler and Richard II descended into an argument and the rebel leader may have drawn a dagger. He was then struck by Mayor Walworth, before being killed by Ralph Standish, a royal esquire.

of London, issued a manifesto. It demanded the punishment of traitors to the Crown, the abolition of serfdom, the establishment of a mandatory rent of 4 pence per acre, and the legalization of negotiations between masters and servants on contracts.

On the same day, Richard met once more with the rebels at Mile End. He issued a charter proclaiming the end of serfdom, and many of the rebel bands, with one of their key demands satisfied, started to break up and return home. The men of Kent were more stubborn and refused to disperse, breaking into the Tower and murdering Sudbury and Hales, whose severed heads were displayed on poles to the assembled mob.

Royal fracas

Richard met again with the remaining rebels on June 15 at Smithfield.

Historical sources are hostile to

the Kentishmen, but it seems that Tyler was insolent in the royal presence and some kind of scuffle broke out with Richard's retainers. In the fracas, Tyler was fatally wounded. It was a moment of profound danger that might have descended into a massacre, but Richard kept his head. He persuaded the rebels to move on to Clerkenwell.

The rebellion collapses

The momentum of the rebellion was lost and Jack Straw, who seems to have replaced Wat Tyler as leader, failed to keep the remaining rebels together. Straw was executed the same day and the Great Rebellion collapsed.

14 The age of King Richard II when he rode out to meet Wat Tyler and the rebels in a field near Mile End in 1381. The country was ruled by councils, with Richard's uncle John of Gaunt hugely influential.

It was time rather than violent action that ultimately gave the peasantry what they demanded. The reprisals in the aftermath of the peasants' poll tax rebellion were relatively slight, while over the next century the vestiges of the legal servitude Wat Tyler's men had so dramatically rebelled against, gradually withered away.

The Peasants' Revolt was not the last major rural uprising in late medieval England. Economic and political grievances continued to provoke rebellions well into the 15th century.

REBEL PARDON

The Parliament of November 1381 passed a **general pardon for the rebels**, except those who had been involved in the killing of ministers (and the men of Bury St. Edmunds who were singled out for special punishment). Those who survived the end of the Great Rebellion were **hunted down**, such as John Wrawe of East Anglia, who was executed in May 1382.

FURTHER REVOLTS

The next major rising was that of Jack Cade in 1450–52, when again the men of Kent **marched on London** (though their expressed objectives were political rather than economic). In 1489, opposition to **Henry VII's tax raising** led to violence in Yorkshire, and a major revolt by Cornishmen in 1497 again reached Blackheath, in London. After this, the rural risings of the 16th century had a more **religious and political component**.

Luttrell Psalter

This illuminated book of psalms is named after Geoffrey Luttrell, lord of the manor of Irnham, Lincolnshire, who commissioned it between 1320 and 1340. It contains an array of depictions of contemporary rural life. Here, servants prepare food and carry it to the lord's table. Such depictions mask a grim reality, for in 1315, 1316, and 1321, the harvests failed in England's worst agrarian crisis for centuries, and disease killed many cattle and sheep in 1317 and 1319–21.

Religious Enthusiasm

A matter of concern for people in the Middle Ages was knowing what to believe and how to live the Christian life so as to avoid going to hell. However, criticism of the Church grew in some quarters, and many individuals sought salvation in personal devotion and charitable work.

During the 13th century, the Church in England, as in the rest of Europe, increased in power, organization, and influence. The Lateran Council of 1215, convened by Pope Innocent III in Rome, set out standards of reform for the behavior of the clergy, which the English bishops sought to follow. For example, Robert Grossteste, the Bishop of Lincoln from 1235–54, instructed that the clergy in his diocese should preach regularly to their parishioners. The century also witnessed a new development as religious orders of Franciscan and

“I believe that in the end the truth will conquer.”

STATEMENT OF JOHN WYCLIFFE TO JOHN OF GAUNT, 1381

Dominican friars arrived in England. The friars were committed to a life of poverty, and because they chose, unlike monks, to live in, and not apart from, the communities in which they served, the friars brought the practice of the Christian religion to the people of England’s growing towns. They also came to dominate teaching in the newly established universities of Oxford and Cambridge.

Service and criticism

In the centuries that followed the new orders’ arrivals, influential churchmen, such as William of Wykeham and William Waynflete, each in turn Bishop of Winchester, and Henry Chichele, the Archbishop of Canterbury, founded schools and university colleges to provide a source of educated clergy to act as skilled administrators for both the King and the Church.

Christ in judgement

This painting, known as a doom, shows Christ sitting in judgement over the living and the dead. St. Peter (on the left) admits the righteous to heaven, while St. Michael (on the right) dispatches the wicked to hell.

For lay people, religious observance was expressed in many ways. For the rich, endowing a chantry chapel, where priests would say mass and pray in perpetuity for the founder’s soul after death, was considered to be a path to avoiding their eternal damnation. Lay people also showed their piety by giving sizeable donations or legacies to charitable institutions for the care of the sick, aged, and indigent. Pilgrimage, which was a journey to the

shrine of a saint, was also seen as a means of gaining spiritual merit. Geoffrey Chaucer’s poem, *The Canterbury Tales*, written in the late 14th century, tells of a group of pilgrims on their way to Canterbury, Kent, to visit the shrine of the saint and martyr, Thomas Becket (see pp.78–79).

However, the growth of the Church as a worldly and powerful institution caused unease among many clergy and lay people. One churchman who tried to improve the situation was

BEFORE

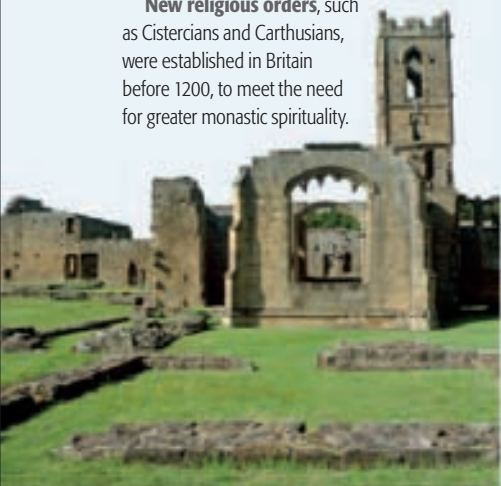

The Anglo-Norman kings sought to strengthen the independence of the English Church. This brought them into frequent conflict with the papacy.

THE KING AND THE CHURCH

William I was crowned King of England with the **papacy’s support**. He appointed churchmen from Normandy as bishops, and initiated the construction of great stone cathedral churches and abbeys in the Romanesque style.

Relations between the King and the Church deteriorated in the 12th century. Henry II’s Archbishop of Canterbury, Thomas Becket, was **murdered at the king’s behest** for refusing to put the interests of the Crown before the Church. A further crisis came when **King John rejected the Pope’s nominee**, Stephen Langton, as Archbishop of Canterbury, leading to his excommunication by the Pope << 84–85.

New religious orders, such as Cistercians and Carthusians, were established in Britain before 1200, to meet the need for greater monastic spirituality.

CARTHUSIAN PRIORY OF MOUNT GRACE, NORTH YORKSHIRE

ENGLISH THEOLOGIAN (1328–84)

JOHN WYCLIFFE

John Wycliffe was born in Yorkshire. As a teacher of theology at Oxford University, he came to believe that the claims of the Pope to be the supreme authority of the Church were unjustified. He escaped persecution in his lifetime, but after his death his body was exhumed and burned, and his ashes thrown into a river.

Monks praying

This stained-glass window in Canterbury Cathedral shows monks praying. Monks devoted their lives to God within the confines of their monasteries, while friars, living a life of poverty, preached to people in the streets.

Archbishop Thorseby, who as Archbishop of York in 1352–73 set about reforming the clergy in his province, and put together a catechism in Latin and English for the instruction of lay people. William Langland's long narrative poem in English, *Piers Plowman*, written in c.1360–87, is a critique of the Church and its practices, as well as an exploration of how to discover the true meaning of the Christian life.

The Lollards

The most open and subversive expression of this mood of discontent with the Church came from the Lollard movement, which rose to prominence in the second half of the 14th century.

EXCOMMUNICATION A decree by the Pope excluding a Christian from the sacraments of the Church. It was used to punish those who flagrantly rejected the Church's teachings or authority.

Reflecting the controversial teachings of the Oxford theologian, John Wycliffe, the Lollards challenged the wealth of the Church, its involvement in the secular world, its doctrine of the Eucharist (the central rite of the Christian Church), and the exclusive role of the priesthood in the administration of the sacraments. Most

importantly, to give ordinary people access to, and understanding of, the Bible, Wycliffe and his collaborators made the first translation of the Bible into English.

Lollardy subsequently found its way into all levels of society in England. In Europe, it influenced the teachings of Jan Hus—the Czech reformer who was condemned to be burned at the stake as a heretic by the Council of Constance in 1415—and also foreshadowed many of the theological teachings of Martin Luther, Ulrich Zwingli, and other later Protestant reformers. Although the Church condemned his theological writings, John Wycliffe himself was protected by Oxford University. His followers also found protection, initially from John of Gaunt, Duke of Lancaster, who was also an uncle of King Richard II. In the 15th century, Henry IV and Henry V, who ruled as the first Lancastrian kings of England, supported the Church in its opposition to Lollard heresy, and regularly persecuted its adherents.

AFTER

The 14th and 15th centuries saw an increasing quest in England for both personal spiritual devotion and a direct relationship with God.

JULIAN OF NORWICH

The real name of Julian of Norwich (1342–1416) is uncertain. It is known that she lived as a hermit in a cell attached to the Church of St. Julian, in Norwich. In *Sixteen Revelations of Divine Love*, believed to be the first book in English written by a woman, she describes a series of intense visions she had of Jesus Christ.

MARGERY KEMPE

Julian's writings greatly influenced Margery Kempe (1373–1438), a married woman who had several children, but all her life felt called to Christ, and made extensive pilgrimages throughout Europe. *The Book of Margery Kempe* describes both her journeys and the inner mystic conversations she had with Christ.

Poets of the People

Britain in the 14th century saw the emergence of a body of vernacular writing—in the spoken language, English, rather than in Latin—that laid the foundation for a richly expressive literary tradition. Geoffrey Chaucer was the major, masterful pioneer among early vernacular writers.

Four terms help in understanding the writers of Chaucer's time: Old English, Germanic, Middle English, and vernacular. Old English, or Anglo-Saxon, was an early English form used between the 5th and 12th centuries. It grew out of the dialects of Germanic peoples—including Angles, Saxons, Jutes, and Scandinavians—who settled in Britain. Middle English evolved from Old English after absorbing French influences from the Norman conquerors. Vernacular languages are those spoken every day by ordinary people.

Chaucer's world

Geoffrey Chaucer (c.1343–1400) was born the son of a prosperous London wine merchant. He made a good marriage and held a succession of important posts for king and country, including being made customs controller for the port of London in 1374 and clerk of the king's works in 1389. He wrote and translated throughout his career and was said to have adorned the English language with new words, most directly borrowed from French.

Chaucer was in the right place at the right time. At the court of Richard II, a great patron of literature and art, English was replacing Anglo-Norman. Chaucer was already well steeped in vernacular French and Italian literature, partly thanks to diplomatic trips abroad. He translated some of the French courtly love poem *Roman de la Rose* into the Middle English *Romaunt of the Rose* and was knowledgeable about the Italian writers Dante (1265–1321), Petrarch (1304–74), and Boccaccio (1313–75). His story *Troilus and Creseyde* has an Italian flavor.

A very English tale

Chaucer blended all of these traditions to develop a rich, flexible language that culminated in his late Middle English

Edward III

The reign of Edward III (see pp.96–97), shown here in a 13th-century painting, saw the flourishing of a mix of literary traditions, and important writers such as Chaucer, William Langland, and John Gower.

masterpiece, *The Canterbury Tales* (c.1387–1400), with its bawdy humor and unforgettable cast of characters drawn from right across 14th-century English society.

This collection of lively tales, told in rhyming couplets, was influenced by the multiple tales of Boccaccio's *Decameron* (c.1350). It features a group of diverse pilgrims, from an outwardly pious but bigoted prioress to a lusty

millar, on their way to Thomas Becket's shrine at Canterbury. They tell tales to pass the time, with settings ancient and modern, and embracing every tradition from bawdy comedy to courtly romance. These showcase the keen sense of drama, humor, vivid

storytelling, and stimulating ideas that make Chaucer's vernacular writing so effective. A line from the knight's tale:

A mantelet upon his shuldre hanginge,/ Bret-ful of rubies rede, as fyr sparklinge.

This translates into modern English: "A short mantle hanging on his shoulders/was brimful of rubies, sparkling like fire."

Important influences

Chaucer and his contemporaries used certain devices to make their work immediate, distinctive, and of their place and time. One is the use of English Midlands dialects, widespread at the time, which evokes ordinary people rather than a classics-educated elite. Another is the medieval tradition of courtly love and romance. This was a popular European fashion, developed in France, for tales of a knight's noble love for an aristocratic lady. First told by troubadours, these stories followed strict rules. A third strand is the importance of rhetoric. Part of any educated person's skills, this was the ability to speak or write in a persuasive way and make an impact.

Another major strand was the use of an alliterative style—standard in English literature at this time. This was a Germanic/Old English meter, using a marked pattern of stresses within "half lines", in verse that was typically unrhymed and was markedly different

GERMANIC The peoples of northern Europe speaking languages including English, Dutch, German, and Scandinavian.

to other rhyming forms from abroad. The later 1300s saw a Middle English alliterative revival.

Creating an English tradition

Other important writers contributed to the vernacular tradition. The poem *Piers Plowman* possibly by William Langland, (c.1330–c.1400) told a tale, in a down-to-earth style, of the search for truth. It is a classic of the Middle English alliterative revival, as is the more courtly *Sir Gawain and the Green Knight* (by an unknown contemporary of Chaucer) and the epic narrative poem *Morte Arthure*, about King Arthur. The English, French, and Latin work of John Gower, author of the allegorical tales *Confessio Amantis* (1386–93) was also influential.

AFTER

The pioneering work of Chaucer and his contemporaries made possible the great body of English literature that has appeared since his death.

LATER VERNACULAR WRITING

In the 15th and 16th centuries, vernacular writing gained increasing ground. A French-style courtly influence also persisted, for example in the work of poet Sir Richard Ros (b.1429), who probably translated Alain Chartier's *La Belle Dame Sans Merci*.

JOHN DRYDEN

THE CHAUCER EFFECT

Chaucer influenced writers such as Spenser 152–53 >> and Shakespeare 154–55 >> who inherited Chaucer's love of contemporary language, and John Dryden 180–81 >>.

Geoffrey Chaucer

This portrait of Chaucer appears in a manuscript of *The Canterbury Tales*, dated c.1413–22. He is often said to be the main founder of literature in modern English.

The quest for the Grail

Tales of King Arthur and a holy quest were influential in medieval times. In this painting from c.1470, Gawain attempts to remove a magical sword lodged in a rock.

BEFORE

Vernacular English literature grew out of a fertile mix of traditions including Anglo-Saxon and Norman literature.

EARLIER WRITINGS

The Germanic meter of Anglo-Saxon tradition influenced the 7th-century *Creation Hymn* of the monk-poet, Caedmon, and *Beowulf* << 35. The prose of Aelfric (10th–11th centuries), had a clear, direct vernacular style. The Anglo-Norman strand included 13th-century romances such as *Floris* and *Blancheflour* and the classic French courtly love poem, *Roman de la Rose*.

So prebly her nature in her co
Shan longer folke to gone one
And walmeus for to seeke ston

Ely Cathedral

Standing high above the flat Fens of Cambridgeshire, Ely Cathedral is one of the finest buildings of medieval England. It was built mainly between 1082 and 1353, having initially been founded as an abbey in 673 CE by St. Etheldreda. In 1322 its original central tower collapsed and an octagonal Gothic "lantern" was constructed in its place. As stone would have been too heavy, oak vaulting was erected instead. William Hurley, King Edward III's master carpenter, was involved in its construction.

BEFORE

The succession of Richard II in 1377 left England with a 10-year old king. Despite early crises, he survived to take power in his own right in 1389.

THE YOUNG HEIR

Edward, the Black Prince, who had shown so much promise at the Battle of Poitiers (1356), died one year before his father King Edward III of England, in 1376. Upon the death of Edward III, the throne passed to his grandson Richard II, a minor. England faced its first royal minority since 1216.

A “continual council” was appointed to administer the regency until Richard was of age to rule. A power struggle between Richard’s uncles—the Duke of Lancaster (John of Gaunt) and the Earl of March—marred the first year of Richard’s reign, although in the end Gaunt prevailed. It was Gaunt’s and the council’s decision to raise more money for the war in France by levying a poll tax that sparked the Peasants’ Revolt in 1381 << 104–05.

GROWING OPPOSITION

Although Richard took the reigns of power in 1382, the Duke of Lancaster dictated policy until he left England in 1386. The King increasingly relied on a small coterie of aristocrats, principal among them Robert de Vere, Earl of Oxford, and Sir Simon Burley, Receiver of the Chamber. An opposition party began to form around disenchanted magnates such as Thomas Beauchamp, Earl of Warwick, and Thomas of Woodstock, Duke of Gloucester.

Rebel seat

Alnwick Castle in Northumberland became the seat of the Percy family in 1309. It was the base for the 1st Earl of Northumberland’s rebellion against Henry IV, which ended with the Earl’s death in 1408.

Change of Dynasty

Richard II’s quarrels with his magnates aroused such opposition that he suffered the indignity of being only the second English king to be deposed since the Norman conquest. The change to the Lancastrian dynasty under Henry IV laid the seeds of a conflict that would grow into civil war 50 years later.

The Parliament that met in 1386 marked the second major crisis of Richard II’s reign (after the Peasants’ Revolt). This time it was Richard’s own actions that were to blame. The assembly condemned Richard’s advisers, in particular Robert de Vere, whom the King had just appointed Duke of Ireland, and demanded the dismissal of the Chancellor, Michael de la Pole. Although Richard protested, he was forced to back down, and de la Pole was removed and imprisoned.

Richard’s opponents established a Commission of Government, including the Duke of Gloucester, the Earl of Arundel, and the Bishop of Ely, to take over the government. In November 1387, these “Lords Appellant”, as they

Face of a king

The tomb effigy of Richard II—which was carved during his lifetime—lies in Westminster Cathedral beside that of his beloved first wife, Anne of Luxemburg, who died in 1394.

became known, published an “appeal” against five of Richard’s supporters, including de la Pole and de Vere, accusing them of treason.

Fighting back

De Vere tried to raise an army, while Richard played for time in Parliament. His cause was undermined by de Vere’s defeat at Radcot Bridge in 1387. The army of the Appellant marched on London and it seemed for a while as though Richard might be deposed. The resulting Merciless Parliament was dominated by the Lords Appellant and most of Richard’s leading loyalists were sentenced to death. Many escaped abroad, but Nicholas Brembre, the Mayor of London, was put to death on Tower Hill in March 1388.

“A **wonderful land** is this... which has exiled, slain, destroyed, or **ruined so many** kings, rulers, and great men.”

RICHARD II, WHILE A PRISONER IN THE TOWER OF LONDON, SEPTEMBER 1389

in 1392 when the city refused to loan him money, and the imposition of a £10,000 fine on its citizens, gradually lost him friends. In 1394, Richard's expedition to Ireland revitalized the English position there. A truce with France, sealed by the King's marriage to Isabelle of Valois in 1396, offered the hope of an end to the expensive war with France.

Rebel army

In 1397, Richard decided to act against his remaining enemies. He manipulated Parliament into declaring the supporters of the 1387 rebellion as treasonous, and levied fines on them.

In February 1399, John of Gaunt died, and Richard, rather than permitting Gaunt's exiled son Henry Bolingbroke to succeed to the title and lands, seized them for the Crown. Bolingbroke made contact with his supporters in England, and the departure of Richard for a new expedition in Ireland, in May, gave him just the opportunity he had been waiting for. In early July he landed at Ravenspur at the mouth of the river Humber.

As the rebels advanced, Richard's officials scrambled to mobilize men and strengthen defenses in the south. By

mid-July, Bolingbroke reached the Midlands, his support growing all the time. At the end of May, the regent, the Duke of York (who was also Bolingbroke's uncle) defected to the rebel cause. Richard hurried back from Ireland and tried to assemble a new army in south Wales, but it soon melted away and, faced with an enormous rebel army, he surrendered to Bolingbroke at Flint Castle on August 19.

A new beginning

Richard was transported to London as a prisoner and a parliamentary commission was set up to decide what to do next. Although it ruled that Richard had broken his own coronation oath and had lost the right to rule, it did not hand the throne to Bolingbroke by right of descent. Instead, Richard was induced to abdicate on September 30, and Parliament passed the Articles of Deposition, which indicted Richard on a series of misdemeanors, accepted his abdication, and acknowledged Bolingbroke as king. King Henry IV addressed Parliament in English, not Norman French, to inaugurate the start of the new, Lancastrian dynasty.

Henry IV faced a dangerous time at the start of his reign. He was regarded by many as a usurper. His son Henry V spent most of his short reign preoccupied by the war with France.

REIGN OF HENRY IV

Henry IV faced a number of revolts early in his reign, initially by supporters of Richard II. After a plot to assassinate Henry at Windsor Castle in December 1399, **Richard mysteriously died** at Pontefract Castle where he was being held prisoner. Several further conspiracies centered around the Earl of Northumberland. In 1402, offended that the King had not permitted the Earl's son, Sir Henry Percy ("Hotspur"), to ransom the Scottish prisoners he had taken at the Battle of Homildon Hill, the **Percy clan rose in revolt**. Hotspur perished at the Battle of Shrewsbury in 1403 and the King had his **body pickled in salt** so that the corpse could be displayed for longer as a **deterrent to potential rebels**. In 1408, at Bramham Moor, the Earl of Northumberland's army was defeated and he was killed.

UNRESOLVED ISSUES

The **rebellions were over** and Henry V succeeded the throne without opposition. With England largely at peace, Henry V devoted himself to a renewal of the **war with France** from 1415 to 1420. His early death, and the accession of his baby son, left England facing a long royal minority. **Unresolved claims to the throne** set the scene for the outbreak of a new civil war and the Wars of the Roses **122–23** >>.

Surrendering the crown

Richard II is seen handing over his crown to Henry Bolingbroke. It was an important part of the propaganda surrounding Henry IV's accession, that his predecessor had voluntarily relinquished his throne.

Royal symbolism

The *Wilton Diptych* glorifies the kingship of Richard II. The King is portrayed gazing at the Virgin Mary and Child Christ, and kneeling beside his patron saint, John the Baptist, and the English royal saints, Edmund the Martyr and Edward the Confessor.

A lack of success in France and the English defeat against the Scots at Otterburn in August dented the prestige of the Lords Appellant, enabling Richard to construct an

100,000 The size of Henry IV's army that forced the surrender of Richard II at Flint Castle in 1399.

alliance opposed to them. The Cambridge Parliament of September was more sympathetic to the King and by May 1389 he felt strong enough to march into council, declare that he had attained his majority, and dismiss the Lords Appellant.

High-handed rule

For the next few years, Richard managed to retain control. Yet his high-handed actions, such as the removal of the Mayor of London

Invasion and Revolt

The wars between Scotland and England erupted several times in the 15th century, but Scottish troubles were caused more by weak kingship than foreign intervention. Wales, in contrast, remained subject to the English Crown save for a brief 15-year period during the revolt of Owain Gly Dwr.

David II secured his release from England in 1357, in exchange for a hefty payment to Edward III. He found his kingdom devastated, as the core regions of Scotland had suffered badly during the wars, and Lothian had been ravaged by the English as recently as 1356 during the “Black Candlemas.” The King’s authority was much reduced, and he was forced to impose heavy annual land taxes to restore the royal income. Robert Stewart, the King’s nephew and William, Earl of Douglas, who had safeguarded the kingdom in David’s absence, felt unrewarded for their loyalty and rebelled in 1363. Robert and David II were reconciled, and Robert was still the heir to the throne, but it led the King to consider appointing one of the sons of Edward III of England as heir to the Scottish throne.

The Stewart dynasty

Despite these problems, Robert Stewart did become King of Scotland on David’s death in 1371, the first of the Stewart

dynasty. His early appointments shaped the rest of his reign, with his son John, Earl of Carrick, becoming lieutenant of the English marches and his brother Robert, Earl of Fife, appointed to run the royal treasury.

In 1384, the Earl of Carrick removed his father from active rule. Carrick was also the architect of the Scottish invasion of England in summer 1388. With the prospect of the renewal of the Anglo-French war making England an appealingly weak target, the Scottish army struck south, encountering the

100,000 The ransom paid in marks (£66,000/\$103,000) to Edward III to secure David II’s return to Scotland in 1357.

English under Sir Henry Percy (“Hotspur”) at Otterburn, in Northumberland on August 5. The Scots were victorious and Hotspur was captured, but Carrick’s joy was tempered by the death of his key ally, the Earl of Douglas, in the battle. This loss so weakened his position that in December Carrick was summarily pushed aside by his younger brother Robert of Fife, who was to dominate Scottish politics until 1420, latterly as the Duke of Albany. A half-hearted counter-invasion by Richard II in 1389, came to nothing and in September the two sides made peace.

The Earl of Carrick succeeded to the Scottish throne in 1390 as Robert III, but his health was so poor that the real ruler was the Duke of Albany; in 1399 he was officially declared unfit to rule. Albany engaged in a more aggressive foreign policy toward England, which culminated in an invasion in September 1402. At Homildon Hill in Northumberland, the English avenged themselves for Otterburn; on the Scottish side, the Earl of Douglas was killed and the death or capture of many other Scottish nobles severely dented Albany’s reputation. Although he remained in power until 1420, it would be almost a century before there was another major encounter between English and Scottish armies in the field.

The rise of Owain Gly Dwr

The Welsh revolts of the late 13th and early 14th centuries (see pp.90–91) were followed by a period of quiet. The effects of the Black Death (see

Battle of Neville’s Cross

The defeat and capture of King David II of Scotland at Neville’s Cross in 1346 was a disaster for Scotland. He was held prisoner in England for 11 years, following the failed attempt to invade England.

BEFORE

Peace between England and Scotland was a fragile affair in the 1330s, ending with a Scottish invasion of England in 1346. Wales was also restless under English rule.

KIND DAVID

King David II of Scotland returned from French exile in 1341, and wanted to match his father Robert Bruce’s record against the English. In 1346, he responded to an appeal from his French allies after their defeat at Crécy << 101–01. He lost to the English at the Battle of Neville Cross and was held prisoner.

WELSH DISCONTENT

In Wales the system of government set up by Edward I with the Statute of Wales (1284) << 91 led to discontent and a series of revolts there, with a major uprising under Madog ap Llywelyn in 1294.

DAVID II OF SCOTLAND

pp.102–03), which struck as hard in Wales as in England, bringing with it wholesale changes in land tenure system and a move to a monetary economy, led to deprivation in the countryside and a distinct rise in Welsh resentment at English rule.

There was no focus for resistance, however, until the emergence of Owain Gly Dwr in 1400. He was descended from the royal houses of both Powys

and Deheubarth, but was also a member of the Anglicized aristocracy, who had learnt law and fought with the English army in Scotland in 1385.

In 1400, a land dispute arose between Gly Dwr and Lord Grey of Ruthin, a supporter of Henry IV. With little prospect of resolution from an unfriendly Crown, Gly Dwr called a meeting on September 16 and was proclaimed Prince of Wales. The rebellion rapidly spread and Gly Dwr's men captured Conwy Castle. In 1402,

he seized two important English prisoners, Lord Grey and Edmund Mortimer.

The ruins of Elgin Cathedral

The cathedral was established in Scotland in 1224, and fell victim to the predatory raiding of one of Robert III's brothers, when the rapacious Alexander Stewart, Earl of Buchan, the "Wolf of Badenoch", burnt it in 1390.

“He is a **worthy gentleman...** valiant as a **lion** and wondrous affable, and as **bountiful as mines** in India...”

SHAKESPEARE DESCRIBING OWAIN GLY DWYR IN *HENRY IV*, 1598

The latter was the uncle of the Earl of March, who had a stronger claim to the throne than Henry IV, and the King declined to ransom him. Mortimer became Gly Dwr's son-in-law. The Welsh rebel leader extended his network of friends by allying himself with Sir Henry Percy.

The end of political freedom

Gly Dwr's first real setback was Percy's defeat and death at Shrewsbury in 1403, as he marched south to link up with the Welsh. The following year, he captured Harlech and Aberystwyth, while the English were reduced to a handful of strongholds. Gly Dwr established all the trappings of government, with a Welsh Great Seal and a Welsh Parliament summoned to meet at Machynlleth. In 1405, he signed a Triple Indenture with the Earl of Northumberland and Mortimer, by which England and Wales were divided into three. Gly Dwr was to receive Wales and a portion of west England.

However, events were moving against the Welsh. A French army landed at Milford Haven, but failed to engage the English and slipped away. In 1408, Gly Dwr lost Harlech and Aberystwyth. By 1410, he was reduced to fighting a guerrilla campaign in the hills and in 1412 he is mentioned in the sources for the last time. Gly Dwr's exact fate is unknown, but when his surviving son

Maredudd accepted a pardon in 1421, all hopes for a revival of the revolt and Welsh political freedom were finished.

AFTER

Wales remained under English rule from the 15th century, while the Stewart kings continued to rule Scotland until 1603, when James VI's accession to the English throne led to the union of Scotland and England.

THE EMERGENCE OF THE TUDORS

After Gly Dwr's defeat, Wales subsided into an **uneasy calm**. The **rise of the Tudor family**, starting with Jasper Tudor, Earl of Pembroke, a key supporter of the House of Lancaster, would lead to the **accession of a Welsh noble** to the English throne, when Henry VII became king in 1485 **122–23** >>

SCOTTISH KINGS

In 1406, Robert III sent his son James to France, but he was captured and held prisoner until 1424. His assassination in 1437 left Scotland ruled by his son James II.

JAMES II OF SCOTLAND

The later Hundred Years' War

By 1413, it seemed the Hundred Years' War between England and France had reached a stalemate that might even lead to peace. The accession of Henry V, a martial king with ambitions for glory, changed that. Soon England once more ruled half of France, but once again the French recovered and, with the aid of new weapons and tactics, chased the English out of France for good.

In 1388, Charles VI of France came of age, and the next year, Richard II of England managed to rid himself of the Lords Appellant, who for three years had kept him sidelined and persecuted his leading supporters. Both monarchs now ruled personally and turned to the relations between them. Aquitaine had long been a running sore that kept the Hundred Year's War alive.

In particular, the matter of whether the King of England should render homage to the French King was still unresolved. Discussion raged between 1389 and 1392 and, though no agreement was reached, an exchange of lands was agreed, by which the English acquired lands bordering Aquitaine in exchange for Poitou, Limousin, and

Pointheu. The French also demanded Calais, but the English royal council refused point blank to relinquish the site of the lucrative Wool Staple and it seemed as though war might break out after all. Only the intervention of Richard II, who requested the hand in marriage of Isabella, the daughter of Charles VI, averted conflict. A truce was agreed, which should have meant peace between the two countries until 1420.

Power struggles

Several events helped reignite the war before then. The first was that Charles VI had a violent fit that sent him mad in 1392. Periodically thereafter he would descend into madness, convinced he was made of glass and might shatter at the slightest touch.

A power struggle broke out between Philippe the Bold of Burgundy (and John the Fearless, his successor from 1404) and the King's brother, Louis, Duke of Orléans. Louis' murder on a Paris street in 1407 sent France into a state of near civil war.

If France was in no state to continue the war, neither was England. Henry IV, who had usurped Richard II's throne,

new English King's overtures regarding a renewed war with France. Both he and Charles VI, however, were taken aback by the scale of Henry's ambitions: he demanded nothing less than to be recognized as the heir to the

French throne. Negotiations broke down in February

1415, and Henry prepared for war. The House of Commons granted Henry a large grant in taxation; even the bishops gave him a loan of £44,000. Knights and archers were recruited from across the land.

Despite a last-minute French peace offer, Henry was set on war. On August 11, he sailed from Southampton with 10,000 men—including 2,000 knights and men-at-arms, 8,000 archers, and 75 gunners. He landed at Harfleur but took until September 22 to force the town to surrender.

Meanwhile, the French had been gathering their forces. Three divisions under Charles d'Albret, the Constable of France, Jean Boucicaut, the Marshal of France, and the King himself converged on Henry V's army. The English had lost 2,000 men at the siege of Harfleur and Henry could only muster a mere 7,000 men, less than one-quarter the size of the French army approaching him.

Victory at Agincourt

The English struck out toward the Somme, in a desperate attempt to evade their pursuers and cross the river at Blanchetaque, just as Edward III had done before the Battle of Crécy (see pp. 100–01). However, they found the crossing

blocked by Marshal Boucicaut and 6,000 men, and were forced far to the south. Henry desperately tried to avoid a pitched battle and find a way through to Calais, but then, three days later, he discovered his way barred by the entire French army.

Brought to bay, Henry made the best of his position, drawing his troops in such a way that the French could only advance along a narrow front hemmed in by the castle woods of Agincourt. At around 11am on the morning of October 25, the English archers

Longbowmen

English archers were key to almost every major victory in the Hundred Years' War, from Crécy to Agincourt. Yet by the end of the war, at Formigny in 1450, they were outclassed by French gunners.

BEFORE

England gained little in the first third of the Hundred Years' War, despite all its victories. The prospects for improving the position under Richard II seemed slight.

EARLY VICTORIES

Edward III's claim to the French throne triggered the outbreak of the Hundred Years' War in 1337 << 96–97. Despite great English victories at the Siege of Calais (1346), where they used weapons such as trebuchets to capture the port, Crécy (1346) << 100–01, and Poitiers (1356), the gains slipped away.

INTERNAL REVOLTS

The war continued after the 1381 Treaty of Guerdande, but both sides were plagued by internal revolts. In France, the Duke of Burgundy, Philippe the Bold, was quick to intervene in an uprising by the burghers of Ghent, a sign of his growing interest in gathering a share of French territory.

TREBUCHET

Warrior king

Henry V was intent on the conquest of France almost from his accession in 1413. Even his marriage to Catherine, the French King's daughter, in 1420, did not turn him aside. Yet his death from dysentery in 1422 fatally undermined the English position in France.

£170,000 The annual cost of the Hundred Years' War to the English by 1435, which was approximately six times the normal annual royal revenues.

had to deal with revolts in England led by the Percy Dukes of Northumberland and a Welsh uprising under Owain Glyn Dwr, which was subdued in 1410.

Henry V's demands

Shortly after Henry V came to the throne in April 1413, the Burgundians were driven from Paris and so Duke John was particularly receptive to the

15 The number of musicians who were recorded as accompanying King Henry V at his landing at Harfleur (along with 13 chaplains, 12 armorers, 6 bowyers, and 20 surgeons).

erected a makeshift barrier of stakes and then loosed a murderous volley into the French line. The French knights charged but, felled by arrows, they crashed into each other and were run into from behind by their own men coming forward to reinforce them. Their line collapsed into a writhing chivalric muddle. The English men-at-arms fell on the French survivors, cutting those who resisted to pieces. D'Albret was killed, and the Duke of Orléans and Marshal Boucicaut captured. A late

French rally only had the effect of causing Henry V to order the killing of all French prisoners, save the great lords. French losses were catastrophic: 8,000 dead and 1,600 prisoners, against just 500 English casualties.

Leaderless

Throughout 1415, the English, led by the Earl of Dorset, and John the Fearless's Burgundians gradually choked off French royalist resistance. In 1417, Henry returned with a new force of 8,000. He took Caen in September, and then reduced the rest of Normandy until Rouen fell to him in January 1419.

In the meantime, John the Fearless had seized Paris. France was leaderless, with the Constable dead and the King insane. Charles VI's eldest son died in 1416; the new Dauphin Charles was 15 years old.

In 1420, the French faced the inevitable and Charles VI signed the Treaty of Troyes, by which the Dauphin was declared illegitimate and Henry V became heir to the throne.

Supporters of the Dauphin continued to resist, but Henry and Philippe the Good, the new Duke of Burgundy, advanced remorselessly.

All change

Henry V's death from dysentery in August 1422, changed the position radically, as his heir was just nine months old. The regent, John, Duke of Bedford, campaigned ably, but the English Parliament was increasingly unwilling to grant large subsidies for the war. The Duke of Burgundy opened negotiations with the Dauphin about switching sides, and in 1427, the Duke

Joan of Arc

The 17-year old "Maid of Orléans" presented herself at the French court claiming she could raise the siege of Orléans, an endeavor in which, against all the odds, she succeeded.

Joan of Arc, who arrived in the French camp in March, convinced she had a divine mission to set the Dauphin on the French throne. Joan's religious charisma and reckless impetuosity worked and the French army were inspired to chase the English from Orléans by May 8.

Unstoppable Charles

Charles was crowned King of France at Rheims on July 18, 1429, and the French armies, now seemingly unstoppable, swept northward taking a string of cities. Even Joan's death in 1431 did not stop the French revival. At a peace conference in Arras, in 1435, the Burgundians switched sides, and by 1436, Paris had fallen to them.

Charles reorganized his armies, setting up *compagnies d'ordonnance* that were strictly drilled and trained, and which helped him to gradually reduce the English territories in Aquitaine. His commanders' effective use of field artillery was not matched by the English and, despite a two-year truce that was signed at Tours in 1446, Henry VI's armies were driven from Normandy in 1449. It looked very much as if the war would end with the English in precisely the same position they had been in 1381.

of Brittany defected to the Dauphin's side. It was against this background that the English, under the Earl of Salisbury, moved south in 1428, and reached Orléans in October. If he could seize this great citadel, the Earl reasoned, he might be able to throttle the French revival at birth.

Divine mission

The Earl reckoned without two things. The first was the cannonball that struck him on October 24, causing him to die of gangrene a week later. The second was a peasant girl,

INNOVATION

CANNON

The earliest effective guns were large cannons, or bombards, which shattered town walls or defended them (though they did not entirely supplant traditional siege engines such as mangonels and trebuchets). At the siege of Harfleur in 1415, Henry V faced a dozen guns that could hurl lethal stone balls up to 220lb (200kg) in weight. By the mid-15th century, artillery was more varied, with field guns that could shoot balls of around 22lb (10kg) in weight. Under Jean Bureau, Charles VII's Master Gunner from 1439, the French artillery won them the key engagements of the last stages of the Hundred Years' War, including Formigny in 1450 and Castillon in 1453.

AFTER

From 1450 to 1453, the English were swept from their territories in Aquitaine, leaving only Calais in their hands.

END OF THE WAR

In 1450, the French invaded Aquitaine. At the Battle of Formigny on April 15, French **cannon fire cut through the English defenses** and destroyed the last English field army in France. English fortunes looked as though they might revive when a new English army under John Talbot landed in October 1452. However, at Castillon on July 17, 1453, this force was **torn to pieces** by the combination of **French cannon** and the discipline of the *compagnies d'ordonnance*. Bordeaux surrendered in October and the Hundred Years' War was at an end.

Calais resisted as a **solitary outpost** until its loss to the French in 1558, during the reign of Queen Mary. To all intents and purposes, however, the **English territorial involvement in France, which had begun in 1066, was over.**

BATTLE OF FORMIGNY

“Sire, there are enough **to kill**, enough **to capture**, and enough **to run away.**”

THE ENGLISH ARMY'S SCOUT DAFYDD GAMME WHEN ASKED HOW LARGE THE FRENCH ARMY BLOCKING THE ENGLISH ROUTE WAS, OCTOBER 23, 1415

BEFORE

The agricultural crisis of the first two decades of the 14th century was followed by the Black Death, which reduced the population by more than one-third. This led to a sharp decline in economic activity.

RURAL UNREST

The remaking of feudal bonds and obligations, already underway before 1350, continued as the countryside was depopulated. In some places, labor became so scarce that wages rose and villeins left their manors to find paid work in the towns or become tenant farmers << 88–89. However, because there was no one to sell goods to, prices fell and landowners imposed harsher conditions on their tenants.

RESENTMENT AND REVOLT

The Peasants' Revolt in 1381 << 104–05 saw these factors coalesce into an outbreak of popular resentment against wealthy churchmen and royal administrators. Urban centers also suffered. After 300 years of steady growth, towns declined as the volume of trade was reduced. Some small towns, reverted to being farming communities, or disappeared.

PEASANTS STACKING SHEAVES OF WHEAT

Signed and sealed

The four wax seals attached by linen ribbons to the bottom of this 14th-century trading document gave this agreement legally binding force.

1400, and remained low into the following century. Towns and cities found new ways of coping with these difficulties. Overall, the urban-based population swelled as large numbers of landless peasants and unemployed moved into the towns looking for work.

All towns would have maintained the trades necessary for daily life—bakers, butchers, tanners, leather workers, and blacksmiths—but some towns and regions developed specialized trades and areas of economic activity. Birmingham was known for its manufacture of scythe blades; Burton-on-Trent was already famous for brewing.

Medieval guilds

Within the towns and cities, each trade was organized into a guild—an association of merchants or craftsmen. Guilds were run by masters and served many functions. They offered professional training, agreed standards

a fee by his family. He was contractually bound to his master and could not leave his master's household or work for anyone else during his apprenticeship (usually five to seven years from the age of about 10). At the end of this time, he became a journeyman, or a "day-worker", again working for a master. The ultimate aim of a journeyman was to become a master himself. For this, he would need to prove himself a skilled craftsman and a successful businessman, and win

and jewelry, also provided banking services. London grocers dominated the import and sale of spices such as ginger and pepper from Asia—by now considered essential to flavor the food of the wealthy. The Bishop of Carlisle bought his spices in London and had them carried north as he knew the quality and range of products were better than any he could acquire locally. Among other specialized crafts, London was also known for the casting of church bells.

Urban success story

Richard "Dick" Whittington (1354–1423) was a younger son with no prospects of inheriting land in his home county of Gloucestershire, so he went to London to learn the trade of mercer (a dealer in cloth). His success as a merchant selling English fabrics to Europe led to him becoming a master of his guild and then a councilman of London, part of the government of the city. He subsequently served as Lord Mayor of London four times during the reigns of Richard II, Henry IV, and Henry V, frequently lending large sums of money to the royal exchequers. He gave money for the rebuilding of the London Guildhall, where the leading merchants could meet to discuss business, and for several churches. He also paid for drainage and sanitation works. In his will he made donations for the construction of almshouses and the repair of St. Bartholomew's Hospital, as well as two prisons.

Merchants and Guilds

Economic activity in towns remained at a low ebb for many decades during the 15th century. Responsible for keeping it alive were the guilds—associations of merchants or craftsmen who managed the trade in a particular commodity or product and regulated employment.

A survey of Gloucester in 1455, a hundred years after the Black Death, presented a gloomy picture of urban decline—houses in ruin, not tenanted, or turned into stables. Gloucester was one of several formerly prosperous wool-exporting ports that had suffered badly as sales of wool and woven cloth to Europe fell away and stayed low. Even so, the wool industry remained the most valuable business in England and Scotland, providing a major source of revenue, through its taxation, for the king and his administration.

Urban decay was not confined to the wool towns. In Canterbury, the rents received by landlords for houses fell by 33 percent between 1350 and

of quality and measurement, and provided a network of mutual support for everyone involved in a particular trade. Above all, they were protectionist, designed to exclude outside competition. As commerce recovered, the guilds became wealthy institutions with their own churches and buildings, and they supported their own charitable foundations.

To enter a trade, a young man had to be accepted as an apprentice by a master, perhaps on payment of

HABERDASHERS People dealing in needles, buttons, and other small items of dress. Other guilds connected with the cloth trade were mercers, drapers, clothworkers, and dyers.

the acceptance of the masters of his guild. Although the vast majority of apprentices were male, some girls were able to train in crafts, including seamstressing, baking, and cordwaining (shoe making).

Growth of London

By the end of the 14th century, London was becoming preeminent in trade and manufacturing. Many businesses concentrated their activities here, including the goldsmiths who, as well as making high-value objects

Uniform weights

The guilds regulated the weights and measures used by traders to ensure they were of uniform standard. This iron weight was probably used on a balance arm or steelyard.

Builders at work

The masons who built the great cathedrals and abbeys were skilled craftsmen who moved as work demanded. The apprenticeship for a stonemason was seven years and master masons, such as Henry Yevele (c.1320–1400), could make considerable fortunes.

English merchants, including the likes of Whittington, traveled to annual trade fairs in the cities of Europe to buy and sell goods. The fairs of Flanders in Europe were particularly important for the wool trade, but English merchants would also travel to fairs in Germany, Italy, and as far away as Constantinople (Istanbul). European merchants established guilds in English cities. The most famous of these was the Hansa, the association of German merchants, who had their own walled community in London, at

the Steelyard. Elsewhere in the city, Lombard Street was named after the area where goldsmiths and bankers from northern Italy (Lombardy) were concentrated.

Recovery of the towns

By the end of the 15th century, town life was recovering throughout England. Towns and cities were more than just places of trade and manufacture. They remained important religious centers, with numerous churches and religious foundations. It is estimated that the City of London had more than 100 religious buildings and Norwich had 60. At the same time, the royal administration and courts of justice, which in earlier medieval times had been peripatetic, moving from place to place, came to be permanently based in towns.

“I thank God and ever shall. It is the **sheep** hath **paid for all.**”

MOTTO IN THE WINDOW OF A RICH WOOL MERCHANT OF NEWARK, c.1480

AFTER

London's rise in relation to the other towns and cities of England, Wales, and Scotland continued inexorably throughout the 16th and 17th centuries.

In 1400, the population of London was 50,000; by 1550, it had risen to 120,000. Although the **Great Fire of London** (1666) **182–83** >> swept away most of its medieval buildings, **reminders of the old city** are still to be found in street names such as Cheapside and Poultry. The greatest **legacy of the medieval city** are the City Livery Companies such as the Goldsmiths, Mercers, Vintners, Skinners, Haberdashers, and Fishmongers—successors of the guilds, which still support educational and community charities in the city.

TRADE UNIONS

In the 19th century, **socialist idealists** such as William Morris and C.R. Ashbee attempted to **revive the medieval guild-craft tradition** in the arts and crafts movement. Others have sought to trace a connection between the medieval guilds that protected the interests of artisans, and the trade unions that sprang up in the industrial cities of the 19th century as **workers' organizations bargaining for better working conditions.**

TRADE UNION BANNER, 1889

BEFORE

A royal usurpation, which took place 56 years before the Wars of the Roses began, set the scene for the longest period of civil strife England has ever known.

RICHARD II (C.1390)

Henry's Lancastrian line stemmed from his father, John of Gaunt, created Duke of Lancaster by Richard; the rival Yorkists traced their claim back to Henry's uncle, Edmund, Duke of York. All the future Lancastrian and Yorkist **claimants were descended** from one of these two siblings.

17 The number of battles during 30 years of war, with fewer than 13 weeks of fighting in total.

3 How many kings were supplied by each of the royal houses of Lancaster and York.

IMPOSING LANCASTRIAN RULE

Henry gained the **support of most of the barons**. Moreover, his claim was accepted by Parliament. His son, Henry V, united the nation through military victories, most notably at Agincourt **<< 118–19**, leaving little appetite for internal dynastic feuds. In the long reign of his son and successor, Henry VI, **military defeat**, combined with the King's weak governance and frequent bouts of ill health, allowed the **feud to resurface** and the Wars of the Roses to begin.

QUEEN CONSORT OF HENRY VI (1430–82)

MARGARET OF ANJOU

Born in the Duchy of Lorraine in 1430, Margaret married Henry VI of England at the age of 15. Her decision in 1455 to exclude the Yorkist faction from court provoked the outbreak of war. For the next 16 years, while Henry suffered repeated bouts of insanity, she led the Lancastrian cause. She contested the ambitions of Richard, Duke of York, first in his role as Lord Protector of England and then in his attempts to establish himself as heir to the throne in place of her own son, Edward. In 1460 her army defeated the Yorkists at Wakefield, where Richard was killed. She was unable to capture London, though, and her star finally waned in 1471 when she in turn was defeated at Tewkesbury and Edward was killed.

The Wars of the Roses

The bitter dynastic struggle for the throne of England, waged by two branches of the royal house of Plantagenet, the houses of Lancaster and York, led to 30 years of rebellions and civil wars. These ended with the victory of Lancastrian Henry Tudor, who founded the House of Tudor.

Henry VI succeeded to the throne of England before he was a year old. The first three decades of his long reign were marked by military defeat in France, whose armies, under the inspiration of Joan of Arc, won back most of the French lands that his father, Henry V, had conquered. Meanwhile, financial overstretch led many in England to question his governance at home.

Henry suffered a mental breakdown in 1453. Richard, Duke of York, was appointed Lord Protector of England until the King regained his wits. As the Yorkist champion, Richard was bitterly opposed by the Lancastrian faction at court and particularly by Henry's wife, Margaret of Anjou. Once the King's

The Coronation of Henry IV

Henry was crowned king in 1399 after his uprising against his cousin Richard II. His military success allowed him to override the claim of Richard's heir presumptive, Edmund de Mortimer, who began the Yorkist line.

health returned, Richard was dismissed. Supported by much of the nobility and in particular by the influential Earl of Warwick, he raised an army and defeated the Lancastrians at the First Battle of St. Albans in 1455, the first battle of the wars. The Lancastrian leader, the Duke of Somerset, was killed, so Richard resumed his old position as de facto ruler of the nation, although he did not press his own claim to the throne.

A precarious status quo held for four years until 1459, when both sides again took up arms. This time Richard and his ally Warwick were outmaneuvered and declared traitors, forcing them both to take refuge abroad. But their exile did not last for long. The following year Warwick returned to England to lead Yorkist forces to victory at the Battle of Northampton. Henry was captured, but Queen Margaret managed to escape to Scotland. Richard once more resumed his former position as Lord Protector.

The wheel of fortune

Richard's triumph was brief. Margaret rallied the Lancastrian forces in the north of England, defeating and killing Richard at the Battle of Wakefield. Margaret won another victory at the Second Battle of St. Albans, freeing the captive King Henry in the process. London, though, remained fervently Yorkist, and Richard's son was crowned there as Edward IV, the first Yorkist king.

Edward and Warwick marched north, gathering a vast army as they went. They met an even larger Lancastrian force at Towton in Yorkshire on March 29, 1461. Edward won the ensuing battle, the bloodiest ever to occur on British soil. Margaret and Henry fled to Scotland, but their remaining hopes were dashed at the Battle of Hexham in 1464. Henry was again captured, and imprisoned in the Tower of London the following year.

Warwick the kingmaker

With the 23-year-old Edward secure on the throne and his Lancastrian rivals defeated or in exile, the future looked bright for a long and peaceful reign.

The Battle of Barnet, 1471

Fought just north of London, the Battle of Barnet marked a turning point in the Wars of the Roses, restoring the fortunes of the Yorkist King Edward IV. His opponent, the Earl of Warwick, was killed during the fighting, as shown in this manuscript illumination.

“**England** hath long been mad, and **scarr’d** herself.”

FROM WILLIAM SHAKESPEARE’S PLAY, *RICHARD III*, 1591

Any such hopes were dashed, though, when it was revealed that the King had married a commoner, Elizabeth Woodville, in secret. His main supporter Warwick, who had been negotiating a match for the King with a French princess, was infuriated. He became even more so when Elizabeth set about obtaining influential positions in the King’s administration for her own family members. The rift between the two men grew until 1469, when Warwick deserted the Yorkist cause and joined with his old enemy Margaret of Anjou, who had been raising a fresh Lancastrian army in France. When she crossed to England, the isolated Edward fled to Flanders. Henry VI, now aged 48, was reinstated on the throne.

It was Edward’s turn to plot abroad. In 1471, with an army supplied by his brother-in-law, the Duke of Burgundy, he confronted his one-time ally Warwick at Barnet. Edward was victorious and Warwick was killed. Edward then defeated Margaret’s troops at Tewkesbury. Captured for a third time, King Henry was taken to the Tower of London, where he was murdered. His son and heir had also been killed during the battle, leaving Edward almost unchallenged on the throne. The only remaining Lancastrian with credible aspirations to rule was Henry Tudor, a distant cousin of the King who was living in exile in Brittany.

Richard’s usurpation

Once restored to power Edward proved himself an able ruler, and the country enjoyed a period of peace and prosperity. Then, in 1483, aged just 41, King Edward died suddenly, leaving his 12-year-old

son Edward V as his heir and his brother Richard of Gloucester as Lord Protector until the boy king reached adulthood. In fact the young Edward was to remain on the throne for only two months before Richard had him seized and placed in the Tower of London. It was then announced that the boy’s father’s marriage to Elizabeth Woodville had been illegal, invalidating the youngster’s right to rule. Richard had himself proclaimed king in Edward’s place, being crowned that July in Westminster Abbey. Edward and his nine-year-old younger brother Richard, the “princes in the tower”, were never seen again, seemingly having been killed on Richard’s instructions.

20,000 The number of men that died at the Battle of Towton, the biggest recorded loss of life in a single day on English soil.

5,000 The number of Lancastrian troops that defeated 10,000 Yorkists at Bosworth, the decisive battle that ended the wars.

Richard’s seizure of the throne was badly received, and Henry Tudor was able to take advantage of the ensuing disaffection. In 1485 he landed with a small force in Wales, where he soon attracted further support. His army came face to face with Richard’s troops at Bosworth in Leicestershire, where Richard was defeated and killed. The victor took the throne as Henry VII, inaugurating the Tudor dynasty. Five months later he married Edward IV’s daughter Elizabeth, thereby uniting the warring houses of Lancaster and York, and finally bringing the Wars of the Roses to an end.

AFTER

Henry VII’s defeat of the last Yorkist King, Richard III, at the Battle of Bosworth ushered in the Tudor dynasty, which would rule England for the next 118 years.

PROFOUND SHIFT

The accession of Henry Tudor marked **the end of the Middle Ages** in England and signaled a change in the relationship between the monarchy and the nobility **132–33** >>. Thirty years of sporadic fighting had severely **weakened the might of the barons**, allowing the Tudor kings to wield far more power than their Plantagenet predecessors. They also sat more **securely on the throne**: not one of the five Tudor monarchs would be murdered or deposed. Except during the short

reign of the boy king Edward VI (1547–53), no aristocrat was ever allowed to grow so strong as to **threaten royal power**, and Parliament was **kept under firm control**.

TUDOR ROSE

A TIME OF CHANGE

Tudor absolutism formed a backdrop for **major social, economic, and cultural change**, most notably the flowering of a class of merchants and manufacturers, as well as Henry VIII’s break with the Catholic Church **136–37** >>. Culturally, the Tudor years would set the scene for the **English Renaissance** in architecture, literature, and the arts **152–53** >>, exemplified above all by the works of Shakespeare **154–55** >>, whose history plays would paint **vivid portraits of the preceding Plantagenet kings**.

Medieval Weapons

Soldiers often fought with metal axes, swords, daggers, and halberds, while wearing helmets, chain mail, or cumbersome suits of armor. Archers could turn the tide of a battle—longbows, though hard to master, were unerringly accurate.

1 English sword from the 14th-century with a double-edge, a pommel on the handle, and a shallow groove, or fuller, on the blade. **2** Dagger of the late-15th-century with a round, disk-like guard. **3** Broadsword with double-edged blade with a long, flat pommel, thin hilt, and thick cross guard. **4** Rondel dagger of an English longbowman with a spiral tang on the handle. **5** Long-handled ax with a curved blade, which would have been wielded with both hands. **6** Mace with a circular bronze head with vertical ridges, or flanges, from the 14th century. It would have been carried by a horseman. **7** Mace with steel pointed ridges, or flanges, which could penetrate armor and helmets. **8** Suit of armor of plate mail and broadsword. It belonged to a knight. **9** English crossbow that fired a projectile that could penetrate a knight's armor. **10** English longbow made of yew, which could fire an arrow more than 1,000ft (300m)

with good accuracy. **11** Longbow arrows with fletchings made from goose feathers. **12** Chain-mail helmet, or coif. It was worn under a plate helmet, giving added protection. **13** Basinet helmet that reached down the sides of the head, giving good protection and mobility. **14** Chain-mail shirt, or hauberk, which extended down to the knees, and had a slit to make it easier to ride a horse. **15** Breastplate, or cuirass. This is pointed with a sharp vertical ridge down the center. **16** Poleax with a sharp spike and an ax blade. **17** Bill was a combination of a spear and an ax. **18** Halberd from the late 14th century with a steel ax head, a sharp, thrusting point, and a metal strip, or langet, part of the way down the haft. **19** Glaive with a single blade on the end. Used by infantrymen fighting at close quarters.

TUDORS AND STUARTS

1485–1688

The Tudors brought controlling leadership to the country, but their break with Rome caused religious strife, just as a renaissance in art, science, and culture was taking shape. The Stuarts' belief in their divine right to rule turned the people against them and unified Parliament, Protestantism, and the constitution.

English gold coin

A rare English gold coin dating to the last half of the 16th century depicts Queen Elizabeth I, a sailing ship, and the Tudor rose. It celebrates the prowess of the English navy and the monarchy.

Arthur, Prince of Wales

This stained-glass illustration of Arthur, Prince of Wales, is from a window at Great Malvern Church. In 1501, he married Catherine of Aragon. He died within a year, however, leaving his widow to marry his younger brother, the future Henry VIII.

Henry VII's reign established a pattern that can be seen running through the history of the next two centuries, in which the reigning monarch's actions produced an outcome that was both unintended and unexpected. Even the Reformation of the Church in this context can be seen as having stemmed only from Henry VIII's desire to control every aspect of life and law-giving throughout his realm. Henry VIII's break with the Roman Catholic Church in the 1540s subjected the country to a century or more of religious strife, but the monarchy itself stayed strong, whether under Catholic Mary in the 1550s, or her Protestant successor, Elizabeth I.

Who should rule the land?

The Tudors' instinct to preserve their power was essentially (if often ruthlessly) pragmatic. It was not something they appear ever to have had to think about—still less to philosophize over. Elizabeth I's Stuart successor, James I (James VI of Scotland), however, adduced learned arguments and scriptural references in support of the idea that kings were "God's lieutenants upon earth." His son, Charles I, insisted so adamantly on his "divine right" in the face of mounting parliamentary opposition that the country slid into civil war in the 1640s.

»» The strength of Tudor monarchy

Henry VII scrambled on to the throne in 1485, having triumphed in a winner-takes-all struggle among England's aristocratic houses. He was absolutely determined to achieve something that no other king had done. His motives for shoring up his own royal power were primarily self-serving, but in hindsight he can be seen to have served the cause of modernization too. Magna Carta, signed by King John in 1215, is celebrated as a statement of what might be seen as "people power"—albeit that of already extremely powerful people. Yet the Wars of the Roses had all too clearly illustrated the converse danger: that an absence of a strong monarch at the center might cause the structures of the state to fly apart.

How much better off the people of Britain were once the pendulum of power had nominally swung their way has to be doubted, given the drabness of life under the Commonwealth of the 1650s. Its leader, Oliver Cromwell, supposedly the savior of the nation's freedoms, soon installed himself as a stern Puritan dictator.

A new return

When the pendulum swung back the Stuarts' way and Charles II was restored to the throne in 1660, the mass of the people seem to have reacted with relief. He too was soon alienating influential subjects. Little seemed to have changed.

If Charles II's absolutism was hard to bear, that of his younger brother, James II, was utterly impossible—especially because it was coupled with his Roman Catholicism—now considered un-English and completely taboo. When James was toppled from the throne in the Glorious Revolution of 1688, his successor, William III, was chosen both for his readiness to reign constitutionally alongside Parliament and for his Protestant beliefs.

However, for most of the people most of the time, such exalted issues barely impinged: they worked the land, and carried out their

trades in the way they always had. Yet they were affected: Tudor taxation influenced everything from land use to the export of wool, while the Stuarts further extended taxes into the towns.

The power of the individual

Along with kings, there were all those anonymous individuals who had walk-on parts in the great dramas of the age: not just the Shakespearean player, but the sailor who helped stop the Spanish Armada in 1588, and the Jamestown colonist of the early 1600s. All of these individuals made their contributions to one of British history's most exciting periods; one whose conflicts were to do so much to shape the modern age.

The Great Fire of London

One of the major events of Stuart England, the Great Fire of London destroyed about 80 percent of the City of London in 1666. However, rebuilding helped turn London into a modern capital city. This unattributed illustration dates from 1667.

TUDORS AND STUARTS

1485–1688

1485–1558

AUGUST 1485
Henry Tudor wins the Battle of Bosworth—and the English Crown.

JANUARY 1486
Henry VII marries Elizabeth of York, uniting the Lancastrian and Yorkist houses.

▲ Tudor coat of arms

APRIL 1502
Henry VIII's intended successor, Arthur, Prince of Wales, dies: Prince Henry will now succeed him on the throne.

JUNE 1509
Henry marries Catherine of Aragon, thus sealing an alliance with Spain.

NOVEMBER 1534
Act of Supremacy passed in Parliament. It makes Henry VIII, as sovereign, supreme head of the Church of England.

SEPTEMBER 1533
Elizabeth is born, the daughter of Anne Boleyn and Henry VIII.

OCTOBER 1521
Pope Leo X awards Henry VIII the title of *Fidei Defensor* ("Defender of the Faith") for his writings against Martin Luther and Reformation.

1536
Dissolution of the monasteries begins.

NOVEMBER 1542
Scotland's James V is defeated by Henry VIII at the Battle of Solway Moss. James dies, and his infant daughter Mary becomes Queen of Scots.

NOVEMBER 1542
Henry VIII dies and is succeeded by his young son, Edward VI.

1549
Publication of the *Anglican Book of Common Prayer*, which had been prepared by Thomas Cranmer.

◀ King Henry VIII

JULY 1553
Nominated by Edward on his deathbed, the Protestant Lady Jane Grey ascends the throne. Nine days later, she is toppled by the Catholic Princess Mary and executed.

▶ Beer barrels used to smuggle messages

1558–1603

NOVEMBER 1558
Having failed to produce an heir, Mary I acknowledges Elizabeth as her successor.

JANUARY 1559
Elizabeth is crowned Queen of England at Westminster Abbey.

▶ Front cover of *The Mirror*, embroidered by Princess Elizabeth

OCTOBER 1562
Elizabeth's forces occupy Le Havre, in northern France, but lose it again some months later.

NOVEMBER 1569
Catholic nobles try to overthrow Elizabeth in the "Rising of the North."

▶ Edmund Spenser's *Faerie Queene*

JULY 1585
Mary, Queen of Scots, is found to have lent tacit support to the "Babington Plot" against Elizabeth. She is tried and executed two years later.

AUGUST 1585
Elizabeth signs the Nonsuch Treaty promising to help the Dutch Republic resist Spanish occupation.

▲ Tudor coin

DECEMBER 1585
Robert Dudley, Earl of Leicester, leads an expedition to the Netherlands. A year later he resigns following its abject failure.

JULY 1588
Philip II's "Invincible Armada" is thwarted.

DECEMBER 1589
A military expedition sent to support the Protestant Henri IV in the French Wars of Religion withdraws in disarray.

1594
Hugh Roe O'Donnell rebels against English rule. He is joined by other Irish chieftains, sparking the Nine Years' War.

FEBRUARY 1601
Essex attempts a coup against the Queen. He is quickly stopped and executed for treason.

MARCH 1603
Elizabeth dies at the age of 69, after a 44-year reign. Scotland's James VI will rule as James I of England.

1605–25

NOVEMBER 1605
Guido Fawkes leads Catholic conspirators in the Gunpowder Plot to blow up Parliament.

JUNE 1606
With the King's approval, Parliament proclaims an Oath of Allegiance, which subjects may be called on to make, swearing their loyalty to the English monarch.

▲ Dried tobacco was an important trade item

1611
New "Authorized Version" of the Bible produced on King James' orders.

1618
James tries to integrate the Scottish Kirk with the Church of England, making it submit to the authority of his bishops.

APRIL 1607
Establishment of the Jamestown settlement in Virginia. 103 colonists—all male—make up the first party.

1609
The Plantation of Ulster gets underway in earnest. British Protestants are settled to help pacify the region.

NOVEMBER 1620
Pilgrim Fathers—Puritan refugees from England—arrive on the coast of Massachusetts.

MARCH 1622
Some 300 settlers are massacred by the Powhatan at Jamestown.

▶ Penn's treaty with the Indians

1609–1610
Jamestown's third winter becomes a "starving time" as supplies from home are interrupted. Horses, cats, and rats are eaten; cannibalism is suspected.

1610
Henry Hudson goes on an expedition to explore the Hudson Strait. He is believed murdered by a mutinous crew.

FEBRUARY 1623
James's son Prince Charles turns up in Madrid, seeking the hand of Philip IV's daughter, astonishing the Spanish King and outraging Protestants in England.

MARCH 1625
James I dies and is succeeded by his son, Charles I.

“That which concerns the mystery of **the King’s power** is not lawful to be disputed; for that is to wade into the **weakness of Princes.**”

BEFORE

The Norman Conquest, which ended the Anglo-Saxon kingdom, brought a period of rule by monarchs of French origin.

SEPARATE KINGDOMS

For centuries, the country was a collection of smaller kingdoms << 52–53. The Danes united it only as part of a wider North Sea Empire << 56–57. Norman England << 68–69 was the property of a French-speaking elite while, in their turn, Henry II and his successors reigned over large parts of France << 72–73.

The loss of these possessions << 122–23 meant retreat and retrenchment on the part of the English kings, **who now saw England as central to their power.**

DYNASTIC UNCERTAINTY

While the English identity was coalescing, the state was crumbling. A period of dynastic uncertainty, which **began with the accession of Henry IV << 114–15**, spiraled into **all-out conflict** with the Wars of the Roses << 124–25. Henry Tudor finally emerged victorious from this mêlée, and **the Age of the Tudors began.**

15TH-CENTURY SWORD

The Early Tudors

Henry Tudor succeeded in seizing the crown; holding on to it was going to be a great deal harder in a kingdom rent from top to bottom by divisions. His response, as Henry VII, was to centralize the state, concentrating power upon his monarchy. His Tudor successors continued the work he had begun.

Henry VII fought ferociously to win the throne in 1485. He had to fight just as hard to keep it in the face of a continuing Yorkist threat. The early years of his reign were interrupted by rebellions, beginning at Easter 1486. Viscount Lovell and the Stafford Brothers, Humphrey and Thomas, hoped to restore the House of York—and with it their own fortunes. But their intended coup collapsed in disarray.

A parade of pretenders

Lambert Simnel was next to try his luck, in 1487, although some were doubtful about his claims to be the Earl of Warwick, rightful claimant to the Crown through the Plantagenet line.

His revolt was easily put down, and the King felt magnanimous enough to pardon his would-be-usurper.

No such clemency was shown to Perkin Warbeck, who claimed to be Prince Richard, younger of the two “Princes in the Tower” (see p.123), in 1490. He was recruited in a rebellious Ireland in 1491, attacked England itself in 1495, and persuaded King James IV of Scotland to invade the following year. Warbeck was apprehended when he landed in Cornwall in 1497, taken back to London, tried, and executed.

Taking hold

Henry VII cemented his own hold by confiscating Yorkist lands. At the same time, he wooed loyal aristocrats with

the Order of the Garter (buying a powerful sense of obligation at negligible cost). His nobles soon grew accustomed to the idea that they would lose their lands through Acts of Attainder if they disobeyed their King or failed in promises to him—and, conversely, that their good service would be rewarded.

Such political firefighting apart, Henry set about strengthening his position by constructing institutions of state around himself. He reinforced his own power (and undercut the aristocracy) by creating a special Court of Star Chamber powerful enough to tackle those great lords who would intimidate any lesser court. He drew on local gentry, rather than the great baronial

**The first Tudor king**

Seen here holding up a red rose, the emblem of his family, Henry VII won power by force. He kept it by the use of threats and bribes. His Tudor successors were never to forget this example.

“He well knew how to maintain his **royal majesty** and all which appertains to kingship at every time and in every place.”

HENRY VII, DESCRIBED BY HISTORIAN POLYDORE VERGIL (c.1470–1555)

families, for the Justices of the Peace he appointed to administer the law across the nation on his behalf.

Like father, like son

Arguably it was Henry VII who founded the Royal Navy. His son, Henry VIII, built it up considerably, just as he continued building the power of the monarchy. The formal unification of England and Wales also took place

£1.25 MILLION

The personal fortune accumulated by Henry VII while on the throne. Estimated to be the equivalent of more than £650 million (\$1 billion) in 21st-century terms.

under Henry VII. Even so, fears of the threat potentially posed by the “White Rose Party” (members of the York family) lingered throughout his reign and that of his successor.

Dynasty in doubt

Henry VIII’s reign was dominated by his need to produce a male heir (see pp.134–35). The Tudor monarchy was severely weakened by the accession of his only son, Edward VI—a sickly boy of nine when he ascended the throne in 1547. Sensing vulnerability, neighboring rulers were not slow

to strike, and English armies suffered reverses in France and Scotland. There was trouble closer to home as well: Catholics in Cornwall and Devon rose up in 1549 in the “Prayer Book Rebellion”, determined to resist the imposition of the Anglican liturgy. In the same year, Norfolk tradesman Robert Kett led a rebellion against agrarian enclosures (see pp.142–43).

The Reformation (see pp.136–37), meanwhile, further complicated the succession issue. Given Edward’s illness, it was clear that he was going to die young. This would open the way for his staunchly Catholic elder half-sister Mary to take throne. Edward himself supported an attempt to thwart her by drawing up of “Device of the Succession”, allowing the Protestant Lady Jane Grey to succeed him when he died in 1553, aged just 15. Her brief installation underlined the extent to which the legitimacy of the Tudor line continued to be questioned, and the importance of religious allegiance. Lady Jane Grey, however, lacked wide support, and was quickly deposed with the help of conservative supporters who wanted to see the late King’s daughter crowned. Mary lost no time in having her rival executed.

Tudor queen

Cheering crowds greeted Mary I’s coronation, showing that there was still a Catholic population in England at the time. Leading courtiers had their reservations. Mary’s marriage to the future Philip II of Spain in 1554 was displeasing even to Catholics. Protestants were enraged, and a popular uprising known as Wyatt’s Rebellion, which may have been partly caused by the desire to prevent the marriage, rocked the throne. However, slowly but surely Mary tightened her hold. She showed characteristic Tudor toughness with her ruthless centralization of power—and her executions of Protestant martyrs.

Crowning a young king

This engraving shows part of the coronation procession of Edward VI on February 19, 1547, amid much pomp. The prestige of the monarchy was constantly reaffirmed by ceremonial occasions such as these.

NINE DAYS’ QUEEN (1537–54)

LADY JANE GREY

The great-granddaughter of Henry VII and a cousin of Edward VI through her mother, Lady Jane Grey had a legitimate, if weak, claim to the throne. The young King Edward VI appointed her his successor and she was made Queen four days after his death. However, there was widespread opposition to her succession over that of the Tudor daughters, Mary and Elizabeth, and she was executed for high treason after only nine days.

AFTER

The early Tudors built a strong state around the institution of the monarchy. The result was a period of unprecedented stability and (mostly) calm.

INCREASING MODERNIZATION

The economy thrived during this period of peace. However, modernization took its toll as many in the rural peasantry were dispossessed and thousands flocked to increasingly unruly cities **142–43** >>

RELIGIOUS REFORMS

Orthodox though his theological thinking was, Henry VIII was to take the country down his own idiosyncratic road during the Reformation of the Church **136–37** >>. A rising force for Protestantism under Elizabeth I **140–41** >>, England came increasingly into conflict with the 16th-century’s Catholic superpower, Spain **148–49** >>.

ELIZABETH I’S COAT OF ARMS

The Nonsuch Palace

Henry VIII’s spectacular Surrey palace got its name because there was “none such” like it for its splendor. This 1582 print by George Hoefnagel shows a luxurious residence that was a proclamation of royal power. The Tudor monarchs were determined never to be intimidated by their barons in the way their medieval predecessors had often been.

BRITISH MONARCH Born 1491 Died 1547

Henry VIII

“One of **the goodliest** men... most amiable, courteous and **benign** in gesture unto all persons.”

CHARLES BLOUNT, BARON MOUNTJOY, ON HIS KING, HENRY VIII

Henry VIII is remembered as a grotesque: a bully, a wife-killer even; a vainglorious tyrant prepared to change his subjects' religion so that he could have his own way. The caricature has endured because it is not entirely false—although it fails to do justice to the complexity of a great king.

Henry was not always the bloated, raddled old man he became. He was athletic, artistic, and cultivated in his youth. But he always had an oversized ego, a ruthless streak, and a low cunning.

Henry's marriage to Catherine of Aragon, contracted just before his coronation in 1509, had been a match made not in heaven, but in the political calculations of his father. The bride had been the wife of Henry's brother Arthur, and when the Prince of Wales died, Henry VII wanted the matrimonial bond renewed to

safeguard the alliance he had with Spain. It was his commitment to the Holy League with Spain that led to Henry VIII's attack on France in 1513, and which in turn sparked a Scottish invasion under the “Auld Alliance” (see pp.138–39). The Scots force was, however, comprehensively defeated at the Battle of Flodden.

Tough Thomases

Despite his absolutist zeal, Henry's instinct was always to delegate—to a series of strong-minded

Catherine of Aragon

“If not for her sex,” said Thomas Cromwell, “she could have defied all the heroes of history.” Henry's first wife stood her ground against the King with impressive courage, but could not win.

Anne Boleyn

Henry pursued Anne for several years while still married to his first wife. For all her beauty and intellect, Anne could no more keep her husband than Catherine had been able to. She too failed to give him his male heir.

Portrait of Henry VIII

Hans Holbein the Younger's portrait has forever fixed our impressions of Henry VIII. The bullish aggression was always there, but the bulk was an aspect of age: Henry was graceful and athletic in his youth.

Cloth of Gold

The meeting place of Henry VIII and King Francis I in 1520 became known as the Field of the Cloth of Gold, due to the magnificence of the tents and pavilions erected.

“The King... conversed for a very long while and familiarly... in good Latin and in French...”

VENETIAN AMBASSADOR ON VISITING HENRY, 1515

Thomas—Wolsey, More, and Cromwell. His chancellors furthered his centralizing agenda. Thomas Wolsey's taxation reforms enriched the Crown while his reforms to the justice system bolstered royal authority at the expense of that of the local lords.

Power and prestige

A major program of palace building boosted the prestige of the Crown, though Wolsey in particular almost set himself up as a second king. He built great palaces for himself, at Hampton Court, for example. This was confiscated by the King after Wolsey's

inevitable fall from grace. Henry's own love of display was shown in the Field of the Cloth of Gold (1520). The splendid tents and pavilions he took with him for his meeting outside Calais with Francis I of France announced England's arrival as a major power in Europe.

Fraught relations

Henry had been chafing under a papal authority he felt extended too far into his temporal sphere when he clashed with Rome over his marriage plans. Exasperated by Catherine's "failure" to produce a male heir, he wanted to marry her maid of honor, Anne Boleyn.

He got his way—overturning the religious settlement of centuries in the process—but having married Anne in 1533, he found this relationship no more fruitful. After three years Anne miscarried a boy. Enraged, he trumped up charges of adultery and incest with her own brother, with whom she had allegedly also been plotting treason. She was tried and executed, freeing Henry to marry his mistress Jane Seymour. She bore him his only son, Edward, but died soon after. The Act of Succession appointed Edward his successor; Catherine's daughter Mary and Anne Boleyn's daughter Elizabeth were both retroactively decreed illegitimate.

Henry then wed Anne of Cleves, but was unhappy from the start. Anne accepted annulment, making way for Catherine Howard, but she (quite genuinely, it seems) was unfaithful to him and was executed just under two years later. Henry finally married Catherine Parr, who was to outlive him.

MUSIC WRITTEN FOR HENRY VIII

- **November 1534** Act of Supremacy is passed in Parliament. It makes Henry VIII, as sovereign, "supreme head" of the Church of England.
- **July 6, 1535** Sir Thomas More is executed for refusing to renounce Catholicism.
- **May 19, 1536** Anne Boleyn is executed for treason and Henry marries Jane Seymour. The Dissolution of the Monasteries begins. The Pilgrimage of Grace—a popular uprising against the reforms—erupts in Yorkshire.
- **October 24, 1537** Jane Seymour dies after bearing Henry a son, the future Edward VI.
- **January 6, 1540** Henry weds Anne of Cleves, but the marriage is annulled. Thomas Cromwell, who arranged the marriage, is executed.
- **July 28, 1540** Henry marries Catherine Howard.
- **February 15, 1542** Catherine Howard is executed. The King marries Catherine Parr the following year.
- **January 15, 1547** Henry VIII dies, aged 55.

Jane Seymour

Perhaps Henry's favorite wife, Jane was able to give Henry the son he craved, in October 1537. But the future Edward VI was sickly, and Jane herself died shortly after his christening.

Anne of Cleves

Henry's fourth wife failed to live up to the portrait her prospective husband had commissioned from Hans Holbein the Younger. The marriage was never consummated, and was soon annulled.

Catherine Howard

Henry's mistress before her marriage, Catherine was transparently repelled by her husband—now old and obese. It is unclear how far the adultery for which she was executed went beyond flirtation.

Catherine Parr

A match for Henry in the marriage stakes, queen number six had already been married twice and was a widow when she caught Henry's eye. She outlived the King and went on to marry a fourth time.

BEFORE

The desire for institutional reform and renewal is as old as Christianity, each age reviewing and reinterpreting what has gone before.

EARLY CHRISTIANITY

Centuries before the Reformation, communities of monks aimed to live the ideal Christian life in Ireland and Iona << 38–39. Monasteries played a “civilizing” role in newly Christianized England << 44–45. As the Lollards were to find, however, religious idealism could all too easily be seen as a threat by the existing authorities << 108–09.

DEFYING ROME

News reached Britain of the German priest, Martin Luther. He had formulated his objections to the Church’s corruptions in the *95 Theses* in Wittenberg in 1517. With its **emphasis on the individual conscience**, Protestantism caught the imagination of a new, educated class of merchants and tradesmen which had emerged in northern Europe’s cities.

THE CATHOLIC CHURCH IN ENGLAND

In England the old feudal ties had gradually been weakened by the **coming of the cash economy and increasing urbanization**. The Catholic order appeared unthreatened by these changes, sustained as it was by a **strong and centralized monarchy** which saw the Church’s authority as analogous to its own.

Edward VI comes to power

The dying Henry’s Church of England endured under his young son Edward VI. English Catholicism was dead and gone forever, gloats the artist: “All flesh is grass”, reads the legend on the Pope’s soutane.

Religious Upheaval

The Reformation changed Britain profoundly, both religiously and culturally. Much was at stake politically, but strong theological principles meant that hundreds were prepared to go to the scaffold as willing martyrs. By the end of the period, the power of the Catholic Church in England was destroyed.

Martin Luther’s defiant words, “Here I stand, I can do no other” had reverberated around Europe since his speech of 1521. A religious revolution that came to be known as the Reformation swept through Germany and the Netherlands. A diatribe against Church corruption, Luther’s message also held the promise of a new Christianity in which believers took responsibility for their own soul.

There were clear political implications. Protestantism, because of its attack on the Church hierarchy, could also be

interpreted as attacking the secular hierarchy with the emperor at the top. In its extreme forms, Protestantism even had an edge of democracy about it. Educated, affluent, and intellectually confident, urban tradespeople and professionals were attracted by a theology of spiritual self-reliance.

Some German princes, weary of interference from higher up the imperial hierarchy, clutched at a creed which endorsed not just their right but their duty to make their own decisions free of interference from Pope or

emperor. Other rulers reflected that any change to the status quo could be dangerous and that the individual conscience was likely to prove a wayward subject.

The kings of France and Spain were chief among the upholders of the old orthodoxy, but Henry VIII of England was an important voice as well. His writings in support of the Church had prompted Pope Leo X to award him the title of *Fidei Defensor* (“Defender of the Faith”) in 1521. Thanks to both his own and his father’s

Thomas Cromwell

Henry VIII’s “enforcer” not only drove through the Dissolution of the Monasteries, but he also made the program a lucrative source of income for the Crown.

“The King... shall be taken, accepted, and reputed the only **supreme head** in earth of the Church of England...”

ACT OF SUPREMACY, 1534

refusal that he broke with Rome. Thomas Cranmer, Henry's chosen Archbishop of Canterbury, declared that Henry and Catherine's marriage was officially annulled. Henry and Anne were duly wed and a series of Acts were passed giving authority to the King over the Pope. In November 1534 the Act of Supremacy made King Henry “supreme head” of the Church of England.

Royal reformer

Despite these reforms, Henry regarded Lutheranism with deep suspicion. Leading clerics like Cranmer would have liked to go further in reforming the Church, but he reined them in. He felt pushed into a more Protestant stance by his need to clamp down on

825 The number of religious foundations closed by Henry VIII. Altogether they accounted for 16 percent of the land area of England and £150,000 (£64 million/\$99 million in today's terms) in annual revenue.

recalcitrant clergy and leading laymen. Former advisers such as the Bishop of Rochester, John Fisher, defied their King literally to the death. Henry's former Lord Chancellor, Sir Thomas More, was executed in 1535 for refusing to renounce his Catholic faith.

There was resistance from the common people too, mobilized by leaders such as Elizabeth Barton, the “Holy Maid of Kent.” People in the

north rose up in the “Pilgrimage of Grace” (1536). Despite the economic, social, and spiritual force of the Church, the Dissolution of the Monasteries began in 1536 and lasted for four years.

The Scottish Reformation

In Scotland, the Protestant gospel had largely fallen on stony ground. Reforming preachers were rejected: Patrick Hamilton went to the stake for his beliefs in 1528. Only much later—swayed in large part by the fiery figure of John Knox—did Scots switch in increasing numbers to the new religion. The Reformation Parliament established Protestantism in 1560.

To Protestantism and back again

By that time, Henry's successor, Edward, had presided over the Protestantization of the Anglican Church: the boy king was serious-minded beyond his years. But his attempt to ensure a Protestant succession through Lady Jane Grey was destined to end unhappily (see p.133).

The accession of Henry's Catholic daughter, Mary I, was greeted with acclaim among what was to some extent still a Catholic-leaning populace. The ferocity of her crackdown seemed to bode badly for Protestantism in England. There was no successor to carry on her work, however, and eventually “Bloody Mary” accepted that her Catholic cause was lost. After years of burning heretics, she approved the succession of the Protestant Elizabeth.

John Knox

Stern father of the Scottish Reformation, John Knox (c.1505–72) called his countrymen to help him build a new Protestant church.

AFTER

With the accession of Elizabeth I in 1558, the Church of England was restored and Catholicism was never reestablished.

CATHOLIC QUEEN

Many Catholics believed that Mary Queen of Scots **138** >>, rather than Elizabeth I, was the legitimate heir to the throne. A devout Catholic, she was executed in 1587.

MARY QUEEN OF SCOTS' ROSARY AND PRAYER BOOK

THE ENGLISH IDENTITY

The Glorious Revolution of 1688 **188–89** >> saw Protestantism become part of the English identity. The **Act of Settlement in 1701** meant that no Roman Catholic and no one married to a Roman Catholic could ascend the throne **200–01** >>. But religion and politics remained a toxic mix in British life.

centralizing efforts, the domestic situation was peaceful. The turmoil of the continental Reformation seemed to have passed Britain by. This situation was to change in the years that followed.

Henry's protest

The instinct to concentrate power upon himself caused Henry to find the authority of the Church increasingly irksome—especially when it threatened the safe survival of the Tudor line. His frustration that his wife, Catherine of Aragon, could not give him a male heir was beginning to reach a crisis.

In 1533, he asked Clement VII for their marriage to be annulled—literally, nullified, as though it had never been. So outraged was he by the Pope's

Ruins of Rievaulx Abbey

Founded in 1131 and forced to close its doors 400 years later, this Cistercian monastery stands as a memorial to the wealth and magnificence of the Catholic Church in pre-Reformation England.

Scottish Troubles

Intensifying power struggles around the Scottish throne affected not just that nation, but its neighbor to the south, holding over successive English monarchs the threat of instability and worse. The dangers were vividly dramatized in the tragic life of Mary, Queen of Scots, who was deemed too sympathetic a figure to be allowed to live.

The Auld Alliance with France had been central to Scottish diplomatic policy since the 13th century, and central to the Auld Alliance had been enmity with England. Times were changing though. In 1502, James IV signed a Treaty of Perpetual Peace with Henry VII's England. James married Henry's daughter, Margaret Tudor, the following year. The peace was not quite perpetual: it broke down in 1513 when Henry VIII invaded France. The loyalties of the Auld Alliance reasserting themselves, James led an invading army south.

On September 9, Thomas Howard, Earl of Surrey, met them with an English force at Flodden Field, in Northumberland. His victory was a catastrophe for Scotland. In just a few hours up to 17,000 Scots were killed. They included the flower of the nation's nobility—and their King.

BEFORE

A diplomatic force since the 13th century, Scotland's Auld Alliance with France had been founded in the old enmity both nations had for their neighbor, England.

ENGLISH WARS

Scotland fought England in numerous battles over the centuries, including Stirling Bridge in 1297 and Otterburn in 1388, but it was the **victory of Robert Bruce** at the Battle of Bannockburn in 1314 that had won Scotland her **independence from England** << 94–95.

BATTLE OF OTTERBURN, 1388

James' successor, James V, was only 30 when he died—after a further defeat by Henry VIII at Solway Moss in 1542. His daughter, Mary I, was just six days old.

Mary, Queen of Scots

While James Hamilton, Earl of Arran, governed Scotland as regent, Mary was brought up in France. Growing up to personify the Auld Alliance, in 1558, she married the French Dauphin and future Francis II of France.

Within a couple of years, however, she was widowed. Mary returned home to Scotland in the midst of its Reformation, though she herself was Catholic. Her marriage in 1565 to the Catholic Henry Stuart, Lord Darnley, sent out an unmistakable signal to Scotland's Protestant nobility, provoking a rebellion that Darnley had

The Osprey

Beautifully embroidered with gold, silver, and silk in tent stitch, this design was created by Mary, Queen of Scots, Elizabeth, Countess of Shrewsbury, and other members of Mary's household.

(subsequently her private secretary) David Rizzio. For all the scurrilous gossip, theirs seems not to have been an adulterous affair, but Mary clearly felt closer to Rizzio than to her rough-and-ready husband or her Scottish lords. When Rizzio was murdered right in front of her, at Holyrood Palace in 1566, she blamed Darnley.

In her grief and rage, she then appears to have plotted Darnley's assassination

with another noble, James Hepburn, Earl of Bothwell. He is believed to have murdered Darnley on her behalf. Having established a hold over her, however, Bothwell was able to compel the Queen to marry him before a fresh revolt by the Scottish lords saw her deposed and imprisoned in Loch Leven Castle, Fife.

ENGRAVING OF ROBERT II

“Look to your consciences and remember... the theatre of the world is wider than...England.”

MARY, QUEEN OF SCOTS, AT HER TRIAL FOR TREASON IN ENGLAND, 1587

difficulty in putting down. Their marriage had implications for England, too, given that both Mary and Darnley could make claims to Elizabeth I's English throne. Insecurity had been bred into the Tudors since Henry VII seized the Crown (see pp.122–23) and Elizabeth's own succession had not been without its controversial aspects.

Unhappy attachments

Mary and Darnley also had their own difficulties with one another. The Queen distrusted her husband's ambitions. Darnley resented his wife's friendship with the Italian-born court musician

At Her Majesty's pleasure

Mary escaped to England but was imprisoned by Elizabeth for 18 years. Elizabeth was sympathetic to helping Mary regain her throne, but when it was proven that Mary had been involved in the Catholic Babington Plot against her in 1585, she ran out of patience and Mary was executed on February 7, 1587.

Message in a barrel

These beer barrels were used by Mary, Queen of Scots, to smuggle messages out of Fotheringay Castle to her fellow plotters.

Execution of Mary, Queen of Scots

Mary died a martyr's death at Fotheringay Castle, Northamptonshire. Her executioner begged, and received, her forgiveness, it is said.

KINGS OF SCOTLAND (1371–1603)

THE HOUSE OF STUART

The Stewart family were so called as they had held the hereditary High Stewardship of Scotland since the 13th century. Robert Stewart (born 1316) served David II so well that, on the King's sudden death in 1371, he was anointed his successor as Robert II, becoming the founder of the Stewart (later Stuart) line of Scottish kings. Their claim on the English throne resulted from James IV's marriage to Margaret Tudor, daughter of Henry VII of England. Their son, James V, followed his father as Scottish king. His daughter, Mary, thus had a claim, as the granddaughter of Margaret, to the English throne, especially if Elizabeth I was illegitimate, as her father, Henry VIII, had claimed.

ENGRAVING OF ROBERT II

AFTER

After all the tumult, the conflicts were resolved when Elizabeth I died childless and the succession passed smoothly to Mary's son. James VI of Scotland reigned simultaneously as James I of England.

UNION OF ENGLAND AND SCOTLAND

Although the Union of the Crowns **158–59** >> brought harmony, in practice, Scots remained resolute **against English domination**, as Charles I found when he tried to **impose an Anglican hierarchy** on the Scottish Kirk (Church) **166–67** >>. Resistance to full political union with England (from 1707) strengthened the unsuccessful **Jacobite Rebellions 202–03** >>.

QUEEN OF ENGLAND Born 1533 Died 1603

Elizabeth I

“I will be as **good unto you** as ever a queen was unto her people.”

ELIZABETH I ON THE EVE OF HER CORONATION, 1559

Elizabeth's birth in 1533 did not give rise to widespread rejoicing. In Catholic eyes she was the bastard product of an unsanctioned and sinful marriage between Henry VIII and Anne Boleyn (see pp.134–35). After her mother's execution, Henry himself had Elizabeth declared illegitimate; a decision that was reversed in 1544. The reign of her Catholic half-sister, Mary, was a dangerous time for the Protestant Elizabeth. She was briefly imprisoned in the Tower of London in 1554 for a supposed plot against the Queen. When Mary died without an heir, however, Elizabeth was crowned.

The Virgin Queen

Elizabeth enjoyed having male favorites about her court. A succession of handsome young men occupied this role. The first, Lord Robert Dudley, was later replaced in her affections by Walter Devereux, Earl of Essex; he became so cocky that he eventually led an uprising against the Queen. Sir Walter Raleigh was another favorite. Elizabeth became known as the Virgin Queen, turning down a number of marriage proposals, including that of Philip II of Spain. This seems to have stemmed more from political considerations rather than from emotional recoil. It is likely that she avoided marriage as she did not wish to give up her power to a consort, as would have been the tradition.

The Queen's cult

Elizabeth followed what had become established Tudor custom in promoting both

Queen Elizabeth I

George Gower's *Armada Portrait*, 1588, shows Elizabeth with a globe, suggesting naval power. A series of portraits helped promote the cult of the Virgin Queen.

herself as monarch and the state of the monarchy itself. Both ideals were at the heart of the Tudor state and she worked tirelessly to keep them alive in her subjects' hearts and minds.

Royal progresses became a feature of her reign. Staying at the homes of her nobles (at their vast expense), she would spend several weeks each summer touring the regions, having herself carried through the streets of the major towns so that her subjects

Front cover of *The Mirror*

The Mirror, or The Glasse of the Synneful, is a moral treatise translated from the French by Princess Elizabeth. She embroidered this cover for presentation to her stepmother, Catherine Parr.

could see her. She also conducted what we might nowadays call a cult of personality. The sheer number of splendid portraits of Elizabeth is striking. Poets mythologized her as Astraea—"star maiden", the name given by the Greeks to the daughter of Zeus, the celestial virgin who stood for innocence, purity, and justice. In the 1590s, she was elaborately allegorized in Edmund Spenser's romantic epic *The Faerie Queene*. One of the titles he gave her was "Gloriana".

Under threat

Only with great reluctance had Mary marked Elizabeth out as her successor. And while her accession came as a relief to England's Protestants, they found it hard to see this slight young woman as the protector they had been yearning for.

At the time, Scotland and France both posed a formidable threat. An attempt by Elizabeth's forces to occupy the Channel port of Le Havre was ignominiously repulsed in 1563. And Elizabeth was wary of Mary, Queen of Scots. She was deeply uneasy about her role as a focus for pro-Catholic feeling in England. This was not just needless paranoia on her part: the Rising of the North (1569) was a serious attempt by Catholic nobles from Northumberland and Westmorland to overthrow Elizabeth and replace her with a Catholic "Mary II" (see pp.138–39).

Tribulation and triumph

The Scottish menace paled into insignificance, however, beside that of Spain, the 16th-century superpower. By re-embracing the Reformation after Mary's death, England had set itself at odds with Phillip II. In 1585, Elizabeth went further. Having signed the Nonsuch Treaty with the Dutch Republic, whose Protestant people were resisting Spanish domination, she was committed to a Netherlands Campaign. The land-war that followed was a hopeless failure (which considerably lowered the stock of the Earl of Leicester, Elizabeth's commander on the ground). However, Philip's attempt to follow through with an "Invincible Armada" (see p.150) brought a famous victory to Elizabeth. The speech with which she rallied her troops at Tilbury before the anticipated invasion made a huge impression on the army and on England. Her words, "I know I have the body of a weak and feeble woman, but I have the heart and stomach of a king," remain well known to this day. An "Armada Factor," noticeable even

Elizabeth's funeral procession

Queen Elizabeth died in 1603. Her death was followed by a regal funeral procession befitting arguably the greatest monarch of England.

NOBLEMAN (c.1532–88)

ROBERT DUDLEY

Elizabeth had known Robert Dudley (c.1532–88) since childhood. She made him the Earl of Leicester in 1564 and he became her inseparable companion at court, despite the fact that he was married. When his wife died suddenly in suspicious circumstances in 1560, many believed that he wanted to marry the Queen. His 1578 marriage to Lettice Knollys enraged Elizabeth, and he never recovered his influence. Although Protestant, he supported persecuted Catholic friends.

at the time, and the achievements of some of English literature's greatest poets and dramatists (see pp.154–55) have given Elizabeth's reign the aura of a golden age.

... And tarnish

The glory was fraying by the end, however. Elizabeth's attempt to place the Protestant Henri IV in power in France was unsuccessful (he only gained the throne by renouncing Protestantism). Tyrone's Rebellion in Ireland was put down eventually, but took its toll over nine brutal years.

Essex's attempted coup of 1601 ensured that Elizabeth's reign ended in a darker mood. The cost of the wars and poor harvests hardly helped. As she died without an heir, Mary Queen of Scots' ambitions were realized via her son James VI, who succeeded the throne as James I of England.

TIMELINE

- **September 7, 1533** Princess Elizabeth is born, at Greenwich Palace, the daughter of Anne Boleyn and Henry VIII. Catholics consider that her father is still married to his first wife, Catherine of Aragon.
- **May 19, 1536** Elizabeth's mother is executed. Henry subsequently has Elizabeth decreed illegitimate.
- **March 1554** Elizabeth is accused of having had a hand in Wyatt's Rebellion, which aimed to depose Mary I and put the Protestant Elizabeth on the throne. She is imprisoned in the Tower of London. Mary has her moved to Woodstock Palace, Oxfordshire, where she is held under house arrest for almost a year.
- **November 6, 1558** Having failed to produce an heir herself, Mary I acknowledges Elizabeth as her successor. She and her husband Philip II of Spain see the princess as preferable to Mary, Queen of Scots, who, though a Catholic, is closely connected with France.
- **January 15, 1559** Elizabeth is crowned Queen of England at Westminster Abbey.
- **October 1562** Elizabeth's forces occupy the port of Le Havre, in northern France, but lose it again a few months later.
- **November 1569** Catholic nobles attempt to overthrow Elizabeth in the Rising of the North.

ELIZABETH'S SIGNATURE

- **July 1585** Mary, Queen of Scots is found to have lent at least tacit support to the Babington Plot against Elizabeth. She is tried and executed two years later.
- **August 1585** Elizabeth signs the Nonsuch Treaty in support of the Dutch Republic against the Spanish. The Earl of Leicester leads the resulting expedition with disastrous results.
- **July 1588** Philip II's Invincible Armada is launched against England and is thwarted.
- **December 1589** A military expedition sent to support the Protestant Henri IV in the French Wars of Religion withdraws in disarray.
- **February 8, 1601** Essex attempts to lead a coup against the Queen. He is quickly stopped and tried and executed for treason.
- **March 24, 1603** Elizabeth dies at the age of 69, after a 44-year reign.

BEFORE

The Domesday Book documented a society in which plots of land were held in grant from the lord of the manor. Common land was open to all for grazing. This was to change during the Tudor period.

A SHORTAGE OF LABOR

The Black Death left a shortage of serf labor << 102–03. Growing discontent with the feudal system was an important factor in precipitating the Peasant's Revolt << 104–05. Although it failed, the rebellion served notice that popular attitudes were changing.

SERFS WORKING THE LAND

GROWTH OF THE GUILDS

A drift to the cities was already under way by the beginning of the Tudor period: merchants and craftsmen in the cities **protected their privileges** by establishing livery companies and guilds << 128–29.

English Society under the Tudors

The Tudor period was a time of far-reaching change for England and its people. Trade and agriculture flourished, and the country prospered, but at a cost. Thousands were cast adrift; many of these went hungry or turned to crime. The rapidly expanding cities were places of opportunity, not just for those who could come by honest work, but also for a growing underworld.

Good housekeeping was the overriding goal of Henry VII's domestic policy (although it also led to his own enrichment). The King set about reforming the Exchequer to make it more efficient. A Privy Chamber was established to manage the costs of the royal court. Named for Henry's own private bedchamber, in which these officials attended the King, reported to him, and received his orders, the Privy Chamber had overall charge of the costs and expenditures of the monarchy.

Taxing policies

Taxation in the country took two forms: ordinary and extraordinary. The first included regular rents from Crown lands, customs duties, and legal fines; the second was in the form of special levies imposed in time of war or crisis. Henry VII was entitled as King to the properties of anyone who died without a will. Since traitors were not allowed

Tudor architecture

Many Tudor houses were built in brick and stone, but the timber-framed building style of Little Moreton Hall in Cheshire is seen as typically Tudor. Around the world it is now seen as quintessentially English.

by law to make wills, he was able to use Acts of Attainder both as a way of boosting wealth and of keeping the nobility in line. These Acts allowed the King to confiscate the lands of those he accused of treason (once he had stated his belief in their wrongdoing, their conviction was merely a formality).

Under Henry VIII, Lord Chancellor Thomas Wolsey drove through a tough taxation policy, which raised vast revenues for the Crown. It was graduated according to income,

10 The percentage of the population categorized as "vagabonds" by the 1570 census. The able-bodied unemployed or "sturdy beggars" were whipped or placed in the stocks and moved on.

so payments from the poor were drastically less than those demanded from the rich aristocracy. Wolsey also introduced laws enforcing a "Just Price", to regulate the price of certain foodstuffs. On top of this, the Crown bought up large quantities of grain after poor harvests and issued it to those who were going hungry.

Balance of trade

The encouragement of trade was a natural extension of fiscal policy. Customs dues were key. At least partly with this end in view, Henry VII encouraged trading ties with France and Spain. The cash economy grew in importance as long-distance commerce supplanted local exchange. Textiles, leather, wine, and other items all raised handsome revenues for the Crown. But wool was overwhelmingly the most important product, accounting for 90 percent of England's export trade in the reign of Henry VII. It made for a completely different economic map from anything recognizable today. Places like Cirencester and Stroud in Gloucestershire and Lavenham

in Suffolk were wealthy centers, exporting to the manufacturers of Flanders and Renaissance Florence. Some manufacturing took place in England too, much of it in Yorkshire. It was in order to protect this trade by sea, that Henry VII started building a Royal Navy, although this was always to remain small by the standards of his son's reign. Henry VII was more interested in encouraging merchants to build big ships, which he could then commandeer when he needed them.

Henry VIII's religious Reformation (see pp.136–37) was not only a religious event, but also an economic one, and it brought the Crown a windfall twice over. The first came when wealth was directly confiscated from the monastic houses; the second when the property of religious houses was sold to landowners.

Agrarian revolution, social change

Already under way illegally, enclosure of agricultural land won approval from the Crown in the reign of Henry VII, since it allowed important economies of scale. So, too, did the turning over of previously cultivated land to grazing. Sheep were the most important livestock: their meat was sold locally, but their wool exported in great quantities—and at vast profit to the big landowners and the Crown. Some selective breeding took place to produce larger and more heavily fleeced sheep. This, in turn, fed through into fashion, in the luxurious "New Draperies" of the early Elizabethan era, which were made using lighter-weight combinations of linen, silk, and wool.

Enclosure also broke the already much-weakened link between the peasantry and the land. The early Tudor period saw the final replacement of the old-style serf with the

Tudor pitchfork

Tools like this remained unchanged over centuries. The agrarian revolution of Tudor times allowed for important economies of scale, but weakened the bond between the rural population and the land they worked.

A fete at Bermondsey

As feudal ties weakened, fetes like this one painted by George Hoefnagel in c. 1569 helped foster social cohesion. They provided a chance to let off steam—and for local magnates to demonstrate their largesse.

independent yeoman-farmer and the tenant farmer who paid his landlord rent in money, rather than in free labor. Laborers were increasingly working for payment in cash, speeding the overall transition to a cash economy.

On the move

Enclosure meant that large numbers of families were evicted from their land. This left them without income, sustenance, or home and uprooted from the places and communities they knew. The growing numbers of the homeless and landless roaming the country also represented a problem for society as a whole, which had to cope with the resultant issues of public nuisance, begging, and petty crime. Successive Poor Laws from 1536 introduced a carrot-and-stick approach, with, on the one hand, food or cash relief for the hungry, and job creation through public works. On the other, however, there were severe punishments for vagabondage, including public flogging and the piercing of the ear as a mark of shame.

While every village experienced the comings and goings of groups of vagabonds, the period saw a steady transfer of population to the towns.

Urban centers were growing quickly now, the push factor of landlessness augmented by the pull of growing prosperity through trade. People felt that there were opportunities in the cities; chances to earn money working for a flourishing new middle class of merchants and skilled craftsmen.

Elizabethan crime

A colorful underworld was well established by Elizabeth I's time, and to some extent was showcased by the drama of the day. Footpads—what we might now call muggers—lay in wait along the main highways and cutpurses stalked the city streets. The equivalent of modern pickpockets, they used sharp knives to cut the leather thongs which people used to hang their purses from their

belts. Vice was rife: pimps and prostitutes figure prominently in the popular humor of the time, including that of Shakespeare's plays, as do confidence-tricksters or "coney-catchers." A coney was a

rabbit—a meek and innocent person: there was no shortage of sharp operators eager to profit from such vulnerable people.

The authorities, on the face of it, had draconian powers to crack down on crime: the punishments at their disposal ranged from placing in the stocks through flogging, branding, and mutilation to hanging.

However, woefully inadequate law enforcement meant that they were for the most part fighting a losing battle. Local "watches", set up by each parish, had poor or little organizational structure, and were staffed by men who could get no other work. With no training, and generally no appetite for the job, the constables were one of Elizabethan society's biggest jokes.

Tudor coin

England had been gradually moving toward a cash economy since the reign of Henry VII. Here, his son Henry VIII sits enthroned on a gold half-sovereign coin dated around 1545.

AFTER

The economic changes of the Tudor Age had a lasting influence. Industry, trade, and urbanization increased over the following centuries.

TRADE WARS

Reliance on trade led the country into war in the 17th century **178–79** >>, although this did not stop the **drive toward trade and enterprise** in the period that followed.

EXPLORING THE COLONIES

Colonial expansion opened up **new sources of raw materials** while at the same time creating market opportunities **162–63** >>. **New financial institutions** and mechanisms made it easier to do business **210–11** >>.

URBAN CRIME AND UNREST

Crime and disorder became common **222–23** >> as **urbanization increased**. The agricultural revolution changed country life **230–31** >>, while clearing the way for **the Industrial Revolution 232–33** >>. The belief of many people that they were missing out on Britain's prosperity—and its democracy—provoked **widespread unrest** in the early decades of the 19th century **264–65** >>.

Tudor Life

The time of the Tudors marked a golden age not just of literature but of ornamental art and craftwork. For an elite, at least, life was now affording little luxuries—and leisure time, whether for private hobbies or social fun.

1 Coins from the reign of Henry VIII found aboard the wreck of his flagship, the *Mary Rose*, which sank in 1545. 2 Commemorative coin minted to mark Queen Elizabeth's recovery from smallpox in 1562—represented here as the bite of a poisonous snake. 3 Gimmel ring with interlocked hands from the 15th century and given as a token of love and fidelity. Typically, a couple would each wear matching rings. 4 Posy ring made of gold with the inscription "I like my choice." It was designed as a gift for a sweetheart or spouse. 5 Pewter badge shaped as a rose, c.1500. These were worn by people who received charity from Henry VII. 6 Armada jewel c.1585–90 with a miniature of Elizabeth I by Nicholas Hilliard on the inner lid and the Tudor rose on the outer lid. This portrait was made to commemorate the English victory over the Spanish Armada and was mounted in a gold locket. 7 Watch set in emerald, c.1610. At this time, watches were prestige items and their dials did not register minutes or seconds. 8 Leather shoe in a style typical of the early Tudor period. More elegant and elaborate footwear would have been worn at court. The fashion for wide shoes became so pronounced that, under Henry VIII, a statute was

passed limiting their width to 6in (15cm). 9 Bone dice dating to the early 1500s. These are weighted with drops of mercury for fraudulent gambling use and some are incorrectly numbered for the same purpose. 10 Tennis ball of the Tudor period made of sewn leather and filled with hair. At this time, tennis was played in an enclosed court. 11 Gaming purse made of leather and silk that would have been worn hung from the owner's belt by leather thongs. 12 Embroidered chasuble—the colourful outer vestment worn by an officiating clergyman—embroidered with the Tudor rose and flowers c.1555. 13 Glass-and-silver tankard from 1546, used by Sir William Lord Parr of Horton, one of Henry VIII's courtiers. 14 Pendant enameled reliquary cross of the 16th century. 15 Gloves made of leather with embroidered gauntlets from the 17th century. 16 Shoe horn made of cow-horn and decorated with a fashionably dressed male figure of the Tudor period. 17 Celebration couplets written in honor of Henry VIII in 1516. A castle is surrounded by sea, while the red dragon suggests the Tudors' Welsh roots and the white greyhound of Richmond represents Henry VII's father, Edmund Tudor.

Elizabethan cannon

Merchant vessels were routinely armed so as to double as fighting ships. The aggression of English privateers in the 16th century did much to provoke war with Spain.

Sailors and Privateers

The skill and daring of its seafarers was to be England's salvation several times over the centuries, and an inspiration to the country as a whole. Yet that tradition was late in developing: not until Tudor times was the Royal Navy founded or the possibilities for naval power realized.

The 15th century had introduced the Age of Discovery. European seafarers set out to explore the wider world. First, under the patronage of Prince Henry the Navigator, in the 1420s Portugal's seafarers started charting the Atlantic, venturing ever further south down the coast of Africa.

In 1487, Bartolomeu Dias rounded the Cape of Good Hope. A decade later Vasco de Gama pushed on to India.

Following on from Columbus' first famous voyage of 1492, Spanish navigators opened up a New World in the Americas. Portugal created its own American colony in Brazil.

A late start

Surprisingly, given their reliance on overseas commerce, the countries of Britain played little part in this exploration. Their maritime tradition meant it could only be a matter of time, however, and Henry VII sponsored the voyage of John Cabot to Newfoundland

vessels of an enemy state. The privateer and his investors kept the profits they made from any ships or cargoes they could capture, allowing a cash-strapped monarchy to both devolve the costs of fighting a war and keep offensive actions at a diplomatic distance.

Merchant adventurers

Privateering was a matter for individualists. In 1563, Plymouth's John Hawkins, whose father had preyed on French ships in the 1540s, took slaves from west Africa to the Caribbean in return for trade goods in a forerunner of the "triangular trade" (see pp.234–35).

Another instinctive adventurer to whom privateering offered a ready-made role was Martin Frobisher. In 1576 he sailed to the Arctic in search of the fabled Northwest Passage to the Indies but found only Baffin Island. He returned with a shipload of shiny, yellow iron pyrites, learning the hard way that "all that glisters is not gold."

State-sponsored piracy to inflict economic damage on an enemy, however, saw successful attacks on Spanish ships in the 1570s. With a permit from Elizabeth I, Francis Drake sacked Nombre de Dios, Panama, in 1572; the following year, venturing inland, he ambushed a Spanish mule train bringing 22 tons of gold from the mines of Peru. His circumnavigation of the globe (1577–80) was as much about enrichment as exploration. And as well as numerous Spanish treasure ships, Drake captured the great galleon, *Nuestra Señora de la Concepción*.

As a base, Drake founded Nova Albion, a short-lived English colony on the Pacific coast of North America. Further colonization was made by Walter Raleigh at Roanoke, Virginia, in 1584, but deprived of supplies in the Armada crisis (see pp.150–51) it died out. The appetite to attack was still strong, however, and in 1586 Drake and Frobisher sacked Spain's great Colombian cities of Santo Domingo and Cartagena de las Indias.

BEFORE

Britain had been an island since the last glaciation, and the maritime tradition had historically been strong. The sea was both highway for trade and barrier to attack.

INVASION

The barrier had been broken: by Romans << 22–23 and by Saxons << 34–35. From the 9th century, Vikings had often raided Britain << 46–47. The Normans landed in 1066 in a huge

BATTLE OF SLUYS, 1340

force from across the Channel << 68–69. But since medieval times naval warfare essentially meant **land battles fought at sea**. English archers decided the outcome of the Battle of Sluys in 1340, just as they had at Agincourt << 118–19.

301 The number of African slaves captured from a hijacked Portuguese ship and subsequently sold for profit in Santo Domingo, in the Caribbean, by English privateer John Hawkins on his first major voyage.

in 1497. He also established a navy, but his son, Henry VIII, is regarded as the Royal Navy's founder, expanding a fleet of five ships by building, buying, and capturing almost 100 ships in his reign. These vessels were designed to protect existing seaborne trade. Soon, however, the possibilities were realized for promoting aggressive policies abroad.

Privatizing war

It was not Henry's official Royal Navy that would be the main motor of either exploration or war. Both were advanced a great deal more by "privateering", in which the King granted a charter to a captain to carry out piratical actions against

Francis Drake

England's seafaring spirit was epitomized by Francis Drake. He was both patriotic servant and maverick adventurer, out for himself.

20,000 The number of gold ducats offered by King Philip II of Spain as reward for the life of the English privateer Francis Drake. The King considered Drake a common pirate.

In the following centuries, England looked to its sailors again and again for protection, as well as for the prestige they won in war and the profits they brought back in trade.

ENGLAND SURVIVES

The **skill and daring** of England's sea captains was to the fore in the decisive moment of the Elizabethan Age. The **Spanish Armada** of 1588 threatened England's independence; its defeat opened the way to its preeminence as Europe's leading **Protestant power 150–51** >>.

COLONIAL QUESTIONS

The 17th century saw major **colonial expansion** for the first time, in the Caribbean, with privateers turning to settlement so to make economic gain from their bases **162–63** >>. Foreign trade was of growing importance **178–79** >>. In the 18th century, England's colonial reach was gradually **extended into India 212–13** >>. However, the country's hold over its **North American colonies weakened 214–15** >>.

Henry Grace a Dieu

The first roll of the Anthony Roll, a vellum that cataloged ships of the English Tudor navy in the 1540s, depicted the *Henry Grace a Dieu*, the largest ship in the fleet during the reign of King Henry VIII.

BEFORE

Spain had been a key ally of England against France in medieval times. Since then, however, the situation had been slowly changing.

SEAL OF MARY TUDOR AND PHILIP OF SPAIN

RELATIONS WITH SPAIN

Henry VII worked hard to maintain **good diplomatic relations** with Spain, marrying his eldest son, Arthur, to Catherine of Aragon, daughter of Spain's king and queen—and then, when that prince died, to his younger brother, Henry **◀ 134–35**. The 16th century had seen Spain emerge as **Europe's major power**, enriched by its New World empire: it made sense to keep relations as cordial as they could be. As king, however, Henry VIII had broken with Rome **◀ 136–37**. Inevitably, this had **soured relations** with Spain, which saw itself as the custodian of Catholicism and its values.

ATTEMPTS TO RESTORE RELATIONS

Rapprochement was made possible by Mary I's **restoration of the old religion**. She even married the future Philip II of Spain. He attempted to renew the alliance when she died, seeking the hand of Elizabeth I, despite her Protestantism. However, this **offer was rejected** by the young Queen **◀ 140–41**.

The War with Spain

Spain was the dominant European power of Elizabeth I's day, and war with that country was the dominant reality of her reign. The fear of this great enemy cast a shadow over England through several decades of the 16th century. Spain's defeat was seen as ushering in a golden age.

England's place as Europe's preeminent Protestant power conferred prestige on the kingdom, but it also brought the enmity of both Catholic France and Spain. Fortunately, the two great Catholic powers were dogged by a rivalry of their own, but even so, their attitude toward England was hostile. One of Elizabeth I's first acts on ascending the English throne was her refusal to accept Philip II of Spain as suitor for marriage. The death of Mary I, which had made Elizabeth queen, had of course left the Spanish king a widower.

Elizabeth's rejection

Philip is unlikely to have taken it personally, of course, but the symbolism was still clear to him. If Philip's marriage to a second successive English queen would have sealed the continuation of good relations between their countries, Elizabeth's rejection underlined the differences between them. This was especially so when her

relationship with his rebellious Dutch subjects seemed to be so warm.

Spain had inherited the Netherlands through the ancestral connections of the then Spanish king, Charles I, with the House of Burgundy. It had proved to be a valuable possession, with its grain exports and woollen-textiles industry. However, as elsewhere in prosperous northern Europe, the people had been receptive to Luther's Protestant message, and Reformation values very quickly took hold. In 1566, there was an explosion of iconoclastic anger in the Netherlands. Protestant rebels sacked churches, smashing stained-glass windows and

Massacre of the Dutch

Drawing inspiration from a biblical event, when Herod massacred every newborn boy in Judea, *Massacre of the Innocents*, by Peter Brueghel the Elder, struck a bitterly contemporary note, clearly commenting on Spanish atrocities in the Netherlands in the 1560s.

The defense of Cadiz

Sacked by Drake in 1587, Cadiz later took on a talismanic quality for English raiders. This painting, *The Defence of Cadiz Against the English*, is by Francisco Zurbarán and dates to 1634.

breaking statues. When, the following year, the Spanish Duke of Alba arrived with his army to restore order, the population rose up in a full-scale revolt.

The rebels were not to be intimidated, but they saw that numbers and strength were not on their side, so they naturally looked to Europe's foremost Protestant monarch for support. Elizabeth was cautious, in fact, conscious of the risks of antagonizing Spain. In reality, she had already done that by engaging with the Dutch. By signing the Treaty of Nonsuch on August 20, 1585, offering them men, horses, and financial support, she had effectively declared war, Philip believed.

Leicester the loser

Elizabeth still hoped to steer a middle course. She quarreled with her favorite, Robert Dudley, Earl of Leicester, about how the situation should be handled. With considerable misgivings, she backed his expedition to the Netherlands in 1585, but was adamant that it should not engage directly with the Spanish. Leicester disobeyed her, and, worse, under his leadership the English came off decidedly second best against the Spanish. He had to resign in 1587, when it became clear that his campaign was not succeeding.

Of battleships and beards

The campaign had enraged Philip II. He was smarting, too, from the continuing irritation of privateer attacks in the Americas (see pp.146–47). Philip began building what was to be an “Invincible Armada”—a huge war fleet (see pp.150–51). This would enable him to invade and conquer Elizabeth's kingdom, and put an end to his English problem once and for all. As the conflict heated up, however, Francis Drake and his fellow privateers took the war to Spain itself: in 1587, they stole into the ports of Cadiz and La Coruña, and sacked them both. The episode was memorialized by the gleeful English as the “Singeing of the King of Spain's Beard.” It was an expression that nicely caught both the boldness of Drake's attack and the humiliation it caused Spain.

A furious Philip launched his Armada attack the following year. On paper, it represented an irresistible force. Its failure was a disaster for Spain and a

Spanish Armada route

English ships harassed the Armada as it sailed up the English Channel to pick up the Spanish invasion force in Flanders. A strong wind then destroyed the Spanish fleet.

much-celebrated high point of English patriotic history (see pp.150–51).

A long slog

It was all anticlimactic for England from this point on. An attempt to counterstrike with an English armada, in 1589, did not succeed. The fleet, commanded by Francis Drake and carrying a land force led by Sir John Norris, was inadequately equipped and unfocused in its aims. Considerable casualties were sustained in both men and ships. (Walter Devereux, the Earl of Essex, took part against the Queen's orders: though still a favorite, he was now living on borrowed time.)

Sir Richard Grenville's attack on Spain's Azores in 1591 fared little better, and Drake's assaults on San Juan, Puerto Rico, were thwarted. So too was an attempted “Second Singeing” in 1596: Essex, Lord Howard of Effingham, and Walter Raleigh arrived at Cadiz, but found the Spanish ready, their treasure ships scuttled for later recovery. A nominally successful raid had brought no appreciable gains. The English were still looking for the

great victory that would humble the enemy, but Philip changed strategy. Rather than renew his all-out assault, he was content to give continuing support to those Irish rebels whose war of attrition was exhausting England's armies and finances. The euphoria of 1588 was ebbing steadily away.

AFTER

At the beginning of the 17th century, England's Protestants, fearful that their new king, James I, had inherited the Catholic sympathies of his mother, Mary, Queen of Scots, were quickly reassured by the determined realities of his reign.

A PROTESTANT KING

The King, simultaneously reigning as James VI of Scotland and James I of England, brought a **union of the Crowns** to the two nations **158–59** >>. Raised as a Scottish Protestant, the King cracked down on Roman Catholics—especially after the **Gunpowder Plot** of 1605 **160–61** >>. He did, however, make **overtures to Catholic Spain**, by attempting to marry his eldest living son, Charles, to Maria Anna, daughter of Philip III. Charles eventually married Henrietta Maria of France, a Catholic **166–67** >>.

COURTIER (1554–86)

SIR PHILIP SIDNEY

“Thy necessity is yet greater than mine...” Sir Philip Sidney's words as, fatally wounded, he passed his water-bottle to a dying Spanish soldier, marked him out as a model of a new and specifically Protestant brand of knightly chivalry. Born in 1554, he grew up an accomplished writer and poet, an elegant courtier, and a valiant and noble soldier, embodying all the greatness and the grace of Elizabeth's England. He died at the Siege of Zutphen in 1586, during the Earl of Leicester's failed expedition to the Spanish Netherlands.

DECISIVE MOMENT August 8, 1588

The Defeat of the Spanish Armada

King Philip II of Spain resolved to free himself from the English irritation once and for all. But his “Invincible Armada” turned out to be all too vincible in the face of skilled and daring English and Dutch seamanship, supported by a cooperative “Protestant wind.”

Philip planned for his Invincible Armada to sail up the English Channel to Flanders, where it would pick up the Duke of Parma’s invasion force and take it to England. The Armada, comprising 24 warships and around 40 armed merchantmen, along with many other smaller craft, was led by the Duke of Medina Sidonia. An English fleet led by Francis Drake sailed from Plymouth to harass them as they sailed past, but had little impact. On August 6, the Armada reached its intended anchorage off the coast at Gravelines, near Dunkirk, in safety.

Armada adrift

However, Parma’s force had been blockaded on shore by patriotic Dutch privateers, so the Armada was left stranded at anchor. As night fell on August 8, it was at the mercy of England’s “fireships” (drifting ships deliberately set on fire). As these

loomed out of the darkness, the Spanish cut their vessels free in panic. They escaped the fireships, but their line lost coherence. The English ships, led by Lord Howard of Effingham, then wove in and out of them at will.

Deadly return

What defeated the Armada was the loss of initiative, not ships (just four sunk). The fracas had been inconclusive, but the longer it went on the further the strong winds dragged the Spanish ships into the North Sea and toward the point of no return. Given the shoals and sandbanks along the Dutch coast, they could not cut inshore to pick up Parma’s army. By August 12, the moment had passed, and the Armada was forced to head home in a perilous journey around the Scottish and Irish coasts. Sixty ships and thousands of lives were lost. A Spanish fleet never seriously threatened England again.

“One of the most notable **disasters** ever to happen in **Spain** and one to **weep** over all one’s life.”

FRAY LUIS DE SEPÚLVEDA, SPANISH FRIAR, ON THE DEFEAT OF THE ARMADA

The Armada is attacked

When the two fleets finally met in force, off the Flanders coast, the Spanish ships lost their discipline allowing the English ships to move in among them, attacking at will. The painting shown here, by an unknown English artist, was completed soon after the battle that it depicts.

The English Renaissance

Arts and philosophy flourished from the early 1500s to the early 1600s. This was the era of Shakespeare and Webster's dramas, the development of the madrigal and sonnet, far-reaching humanist thinking, and Holbein's striking portraits of the Tudor ruling classes.

Hans Holbein's portraits of Tudor nobility, including his iconic painting, *The Ambassadors*, and images of Henry VIII, have become the perfect symbols of this age. Holbein was German but lived in England after 1532, and by 1536 was Henry's court painter, which placed him at the heart of the English Renaissance. Holbein's lavish portraits are statements of affluence and power designed to impress. They reflect the self-confidence that drove Henry's aggressive foreign policy, at a time when exploration was starting to build an empire, which made the King break with Rome in 1531 and place himself at the head of the English Church (see pp.134–35).

Hilliard's self-portrait

This miniature of Hilliard from 1577, aged 30, shows him looking every inch the Elizabethan courtier. His use of line was considered to be one of his talents.

This break, and Henry's Dissolution of the Monasteries and destruction of churches, effectively destroyed the development of religious church painting in England. The aristocratic portraiture that dominated the English Renaissance went on to become extremely important in British art.

Elizabethan glories

Elizabeth's reign did much to keep the country's self-confidence riding high and underpin a flourishing period for the arts. One of the leading portraitists of the day—who was working for the Queen by 1572 and went on to work for James I—was Nicholas Hilliard. His particular talent was for exquisitely detailed and elegant miniatures. He produced images of key figures of the time such as Walter Raleigh, famed explorer of the Americas and a favorite at Elizabeth's court. Other notable painters included George Gower, leading portraitist and Elizabeth's "serjeant-painter", and William Segar, another portraitist and Garter King-of-Arms under James I. Elizabeth and James's reigns were also a golden age for English drama.

Southwark, on London's south bank across the river from the City, became a center for rowdy entertainment. It was home to the Globe and the Rose theaters, where William

William Byrd

Pioneer of English vocal and keyboard music William Byrd (c.1542–1623) wrote almost 500 pieces of music over the course of his career.

Shakespeare's new plays were staged. He also performed at court, which was a great patron of the theater. Shakespeare and Christopher Marlowe were the pioneers of drama in creative blank verse, new to England at this time (see pp.154–55). Another leading playwright was Ben Jonson whose plays included *Every Man in his Humour* (1598), a "comedy of humors", in which each character has a dominant trait, and *Volpone* (1607).

Jacobean theater

James's reign witnessed a rich seam of powerful Jacobean dramas in which extreme tragedy and satire were major

"For all knowledge and wonder... is an impression of pleasure in itself.

FRANCIS BACON, *THE ADVANCEMENT OF LEARNING* 1605

BEFORE

The English artistic Renaissance was less cohesive in nature than the Italian one, comprising a disparate mix of elements from home and abroad.

ITALIAN FORERUNNERS

The Italian Renaissance influenced the English one, but started earlier, in the 1400s.

EARLY ENGLISH CONTRIBUTIONS

Some aspects of the English Renaissance arts also contained features from earlier English traditions. These included: Chaucer and the growing body of English vernacular literature << 110–11; medieval mystery, miracle, and morality plays; and the Gothic style, seen in art such as the Wilton Diptych << 114–15.

The Ambassadors

Holbein's 1533 portrait of two diplomats is full of symbolic objects that display their success. The skull in the foreground representing death only appears recognizable when viewed from a certain angle.

classic. Other Jacobean playwrights include Thomas Middleton, who collaborated with Thomas Dekker on the comedy *The Honest Whore* (1604) and with William Rowley on the tragi-comedy *The Changeling* (1622). Shortly after James's reign, John Ford took the Jacobean drama to extremes with his tale of bloody incest, *'Tis Pity She's a Whore* (c.1633).

The courts of the English Renaissance are also famed for their patronage of poetry, and the sonnet was developed by writers such as Sir Thomas Wyatt. Edmund Spenser produced one of the key masterpieces of Elizabethan poetry with his *The Faerie Queene* (1590–96). In praise of Elizabeth I, this drew inspiration from Italian poet Ludovico Ariosto's *Orlando furioso*, and used complex allegory and vivid description to tell the story of a succession of knights' adventures. Using iambic pentameter (see pp.154–55), he created the "Spenserian stanza": verses of eight five-stress iambic lines, followed by an iambic line of six feet, with a rhyming scheme of a b a b b c b c c.

MADRIGAL An unaccompanied form of music for voices that began in 14th-century Italy and involved more voice parts as time passed. During the English Renaissance, London and Chester were two major madrigal-composing centers.

John Donne, one of the metaphysical (exploring emotional states via complex imagery) poets of the time, was another central figure, penning his famous love poems, as well as *Satires and Elegies* (c.1590–99), while Sir Philip Sidney produced the Renaissance classic, *Arcadia* (1590), a pastoral prose romance filled with poetry.

Sweet music

Some comparisons between the Italian and English Renaissances suggest that the English version was less about art and architecture and more about literature and music. The madrigal came of age, with the light style especially popular in the 1580s and 1590s. The "ayre", a song-form with less counterpoint than a madrigal, was also favored. Madrigals were often played on the lute. The virginal was another key instrument in this period. Leading composers included

Thomas Morley, Thomas Tallis, William Byrd, and John Dowland, whose music includes *Lachrimae*.

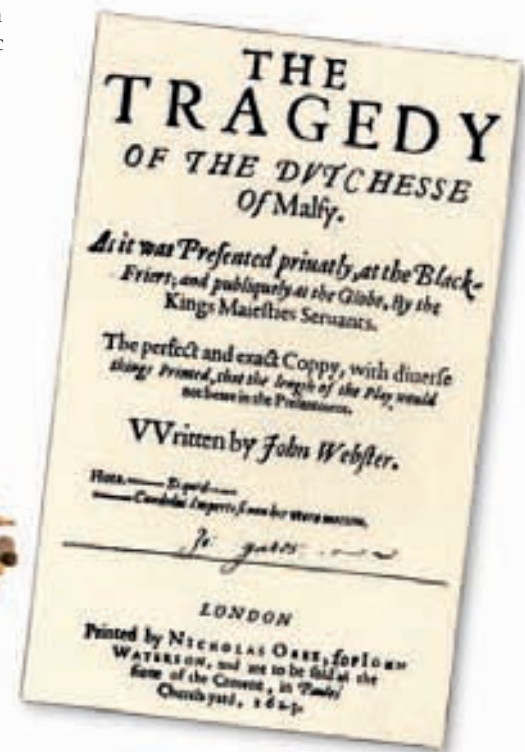

Questioning the world

Underpinning much of the artistic outpouring was an English form of humanism—a philosophical outlook central to the Italian Renaissance. Humanism was a system of thought that placed human beings at the center of things, in contrast to the more remote scholasticism that characterized typically medieval thought. Humanist thought drew ideas from ancient Greek and Latin classics, and asserted the dignity and worth of humans and their ideas and beliefs. Thomas More, Lord Chancellor under Henry VIII, was a leading humanist. His *Utopia* (1516) explored notions about the ideal city-state and was the first time this word was used.

The lute

Most popular during the 16th and 17th centuries, the lute was often played at stately dances. Elizabeth I enjoyed playing the instrument and John Dowland was its leading contemporary composer.

Title page of *The Duchess of Malfi*

John Webster's influential 1623 Jacobean tale of tragedy, passion, bloodshed, and retribution was partly influenced by Philip Sidney's *Arcadia*.

Thinker, essayist, and statesman Francis Bacon was an influential philosophical figure. He attempted to move thought on from the logic of Aristotle toward a more empirical approach—one based on the idea that knowledge comes from experience, received through our senses. This contributed to the growth of modern experimental science, with its stress on causes, which gathered pace in the 17th century (see pp.184–85). Bacon discussed the notion of cataloging useful knowledge in his seminal 1605 work, *The Advancement of Learning*.

AFTER

features. The "revenge tragedy", featuring bitter vengeance invariably accompanied by graphic carnage, was very popular—Thomas Kyd's *The Spanish Tragedy* (1592) is an earlier example, while John Webster's *The Duchess of Malfi* (1623) is a Jacobean

Una and the lion

This 1847 Minton model shows Una from Edmund Spenser's *Faerie Queene*, who is saved from a dangerous fate by a lion.

Forms explored during the Renaissance were responsible for many of the major subsequent developments in the English arts.

POETICAL INSPIRATION

The blank verse developed by Shakespeare, Marlowe, and others was used by later writers. Examples of its use include John Milton's epic poem, *Paradise Lost* (1667), Wordsworth's *The Prelude* (1850), and *Ulysses* (1842) by Tennyson. The stanza-form found in Spenser's *Faerie*

THE MADRIGAL

Madrigal societies were popular in the 18th century. Vaughan Williams (1872–1958), a revival of historic English music, composed his **homage to English Renaissance music**, *Fantasia on a Theme by Thomas Tallis*, in 1910.

PARADISE LOST ILLUSTRATION BY WILLIAM BLAKE

Queene was subsequently used by the Romantic poets John Keats, Percy Shelley, and Lord Byron.

PLAYWRIGHT Christened 1564 Died 1616

William Shakespeare

“He was **not of an age,**
but **for all time!**”

BEN JONSON, IN HIS POEM *TO THE MEMORY OF MY BELOVED, THE AUTHOR MR WILLIAM SHAKESPEARE: AND WHAT HE HATH LEFT US*, 1623

William Shakespeare is regarded as Britain's, and perhaps the world's, most important writer. While some may disagree with this, it is certain that this highly influential poet and playwright had a gift for language that seems as remarkable now as it did in his day. Shakespeare's work was much loved by a wide range of people in his time, and it has continued to enthral all kinds of audiences since his death.

A start in Stratford

The details of Shakespeare's life and works are patchy and much contested. He was born into a provincial middle-class family in the town of Stratford-upon-Avon in Warwickshire. His father was a glover, who served as Stratford's mayor, but also descended into serious debt. Shakespeare was the third of eight children. Three siblings died young and only one outlived him.

Shakespeare probably received a good classical education at the town's grammar school—his work is full

Anne Hathaway's cottage

The childhood home of Shakespeare's probable wife, Anne Hathaway, is in the outskirts of Stratford. Her father was a well-to-do yeoman farmer and so was able to provide this substantial house.

of classical references. Growing up, he may well have accompanied his father to see the many traveling theater troupes that stopped off in Stratford. This early experience could have sparked off his later interest in theater. At 18, he probably married Anne Hathaway. He had three children, one of whom died in childhood—some say that passages in *Twelfth Night* reflect this tragedy.

The King's man

After years about which very little is known, Shakespeare turned up in London in the 1590s as a well-established actor-dramatist. *Venus and Adonis* (1593) was an early poetic success and the *Henry VI* trilogy and *Richard III* were probably among his first plays. By the early 1600s, Shakespeare and his plays were leading the King's Men (named after their patron King James I) to glory as England's greatest theater company. In demand at court, with a home at London's Globe, the most famous contemporary theater, their dramas starred legendary actor Richard Burbage. Shakespeare was now mixing with everyone from royalty to the era's leading dramatists.

From the 1590s, Shakespeare produced a huge body of plays, as well as his beautiful sonnets. Born into the

culturally rich Elizabethan age, with influences including the ancient classics and traditional English folk and mystery plays, Shakespeare made the most of his sources. His settings ranged from the ancient world of *Anthony and Cleopatra* to the contemporary Danish court of tragic *Hamlet*. His characters, too, span the farcically incompetent theatrical troupe in *A Midsummer Night's Dream* to the hot-headed Katharina in *The Taming of the Shrew*.

Vibrant verses

Shakespeare's towering achievement was his lyrical and powerful use of iambic pentameter—typically a line with ten syllables where five unstressed syllables alternate with five stressed ones (in bold below). A common form in English verse, Shakespeare used it very expressively in his sonnets:

*Shall I compare thee to a
Summer's day?
Thou art more lovely and
more temperate:
Rough winds do shake the
darling buds of May,
And Summer's lease hath all
too short a date...*

His extraordinary talent, however, was an unusually clever use of blank (unrhymed) verse—specifically non-rhyming iambic pentameter—in his plays. Blank verse was a new craze in 16th-century

England, which Shakespeare and Marlowe (see box) adapted for plays, often using it in unorthodox, subtle ways.

Shakespeare used blank verse to express all kinds of emotions and information among the histories, comedies, and tragedies into which his plays are grouped. His plays include: histories such as *Henry V* and *Richard III*; comedies such as *A Midsummer Night's Dream* and *As You Like It*, and more complex comedies such as *All's Well that Ends Well* and *Measure for Measure*; the great tragic plays, *Hamlet*, *Macbeth*, *Othello*,

Memorial to Shakespeare

A statue of Shakespeare, designed by William Kent, stands in Westminster Abbey. It shows the playwright leaning on a pile of books and pointing to a scroll with lines from *The Tempest*.

and *King Lear*; the Greek and Roman works, including *Julius Caesar* and *Antony and Cleopatra*; and the mature tragi-comedies at the close of his career, such as *The Winter's Tale* and *The Tempest*.

His work is loved for its dazzling wit, poetry, clever turns of phrase, and word-play. From coarse humor and an evocative use of everyday contemporary English to exquisite poetry, Shakespeare explored the spirit of his times and the human condition in a newly approachable way, using language to conjure varied moods and control complex plots full of mistaken identities and misunderstandings. He is admired for his probing psychological studies (unusual at the time) of complex characters, such as the

ambitious King, Macbeth. His work often contains a central character with a fatal flaw that causes their downfall, an idea common to ancient classical philosophy and writing. Othello's jealousy is just one example of this.

Mysterious to the end

Many mysteries have attached themselves to Shakespeare's life.

His early years may have seen him fleeing to London to escape a deer-poaching charge. He may have been

a secret lover to the "Dark Lady" of his sonnets, whose identity has also been hotly debated. Many have even suggested that he did not actually pen his plays and this has become a contentious issue. Others believe that he collaborated with the likes of Ben Jonson, Sir Francis Bacon, Edward de Vere, and Sir Walter Raleigh.

Shakespeare's Othello

A title page from Shakespeare's *Othello*, which was probably first performed in 1604. The story was taken from one by 16th-century Italian writer, Cinzio.

Shakespeare and Southwark

This stained-glass window in London's Southwark Cathedral depicts characters from Shakespeare's plays. Southwark was (and is) home to the Globe Theatre, where many of Shakespeare's plays were first performed.

Shakespeare's final years are equally mysterious. It is widely believed that by 1610, he was embarking on a peaceful retirement in one of the several properties in Stratford-upon-Avon that he owned. There is little evidence to support this, although Shakespeare did die in Stratford. The cause of his death is uncertain. One popular theory is that it was from a fever brought on by a night's carousing with friends including artistic rival, Ben Jonson, probably the next most successful playwright of the age after Shakespeare.

POET AND PLAYWRIGHT (1564–93)

CHRISTOPHER MARLOWE

Shakespeare's contemporary, Christopher Marlowe, was a poet, playwright, and probable government spy, whose plays include *Tamburlaine the Great* (1590) and *Doctor Faustus* (c. 1590). He was associated with the Admiral's Men theater company. Like Shakespeare, Marlowe was a master of blank verse and populated his plays with human characters. This led many to believe that he was the real author of Shakespeare's plays. Most scholars disagree with these theories but admit that parts of Shakespeare's plays might have been written in collaboration with others.

TIMELINE

- **April 26, 1564** Shakespeare is baptized at Stratford-upon-Avon, Warwickshire, as the first son of Mary Arden and John Shakespeare, glover and burgess.
- **1570s** Shakespeare most likely attends Stratford's grammar school, the King's New School, where he would have taken part in the classical rhetorical declamation (the art of using speech to persuade an audience), which was part of a good education in his day. He probably watches traveling theater shows with his father. John Shakespeare gets involved in dubious trade dealings and serious debt, and drops down the social scale.
- **1582** An 18-year-old Shakespeare gets married—very probably to Anne Hathaway.
- **1583–85** Shakespeare and his wife have a daughter, Susanna (1583) and twins, Hamnet and Judith (1585).
- **1590** It is thought he starts writing plays.
- **c. 1591–1595** Shakespeare writes the three parts of *Henry VI* and *Richard III*.
- **1592** A pamphlet provides evidence that Shakespeare is established as an actor-dramatist in London.
- **June 1592–94** London's theaters close due to plague, causing a temporary break to Shakespeare's career.
- **1595** Shakespeare has a share in the theater company known as the Lord Chamberlain's Men (founded in 1594). The company performs plays by leading dramatists of the time, including Ben Jonson, and gives most of Shakespeare's plays their first outing.
- **1596** John Shakespeare is granted a coat of arms, probably testifying to his son's success by this time.
- **1597** Shakespeare buys an impressive house in Stratford called New Place.
- **1599** Cuthbert Burbage builds the Globe Theatre at Bankside, Southwark; most of Shakespeare's plays from this point onward premiere here.
- **1603** Elizabeth I dies and James I ascends to the throne. The Lord Chamberlain's Men become known as the King's Men, under the direct patronage of the King.
- **1609–11** Writes his more mature plays: *The Winter's Tale*, *Cymbeline*, and *The Tempest*.
- **1613** The Globe burns down. Shakespeare buys a property in Blackfriars, home of the Blackfriars Theatre, where the King's Men perform during winters as the Globe is roofless.
- **1614** A rebuilt Globe reopens for business.
- **April 23, 1616** Dies at Stratford-upon-Avon, possibly as a result of a heavy drinking session, and is buried in the Holy Trinity Church, Stratford.

THE GLOBE THEATRE

Siege of Kinsale

Franz Hogenburg's engraving of 1602 shows Spanish and Irish rebel forces defending the County Cork port in the concluding action of the Nine Years' War.

Conquest and Plantation

A series of revolts against English rule erupted across Ireland in Tudor times. They were put down with the utmost savagery, and with some considerable difficulty. The Nine Years' War cast a lengthening shadow over Elizabeth's otherwise illustrious reign—and sowed the seeds for conflicts yet to come.

Ireland's Hiberno-Norman families resented the Tudor monarchs' attempts to regularize land-use and taxation. The Gaelic chieftains became emboldened and Ireland "beyond the Pale" (the areas outside the well-settled and defended area around Dublin) grew increasingly restive and wayward. From 1541, Henry VIII and

his Chief Minister Thomas Cromwell tried to Anglicize the authority of the Gaelic chiefs through the policy of "Surrender and Regrant." Each chief would surrender his authority and be regranted an English aristocratic title in its place. Up to a point, it worked. Conn O'Neill, in Ulster, accepted the title of Earl of Tyrone, for instance.

But somehow, the "regrant" part seemed more appealing than the "surrender."

Plantation of Munster

In 1569, the Desmond Rebellions flared up in Cork. Quelled in 1573, they erupted again six years later. They were suppressed and the southwest pacified by the Plantation of Munster. New English settlers were planted

Sir Arthur Chichester

A veteran of the Nine Years' War, Chichester had little sympathy with the Irish. As Lord Deputy from 1605 to 1616, he oversaw the plantation policy.

BEFORE

Ireland had been "English" since the 12th century, in that the Norman lords of England also ruled Ireland. England's emergence as one of medieval Europe's preeminent powers had left Ireland the subordinate.

ARISTOCRATIC RIVALRIES

England's hold weakened as its aristocratic rivalries spiraled into war << 122–23. The problem to begin with was not with the Gaelic Irish but with the Hiberno-Normans and "Old English." They had arrived in the first colonizing wave << 80–81 but had "gone native" in the centuries since, adopting Gaelic dress, language, and customs. Like the Gaelic Irish, moreover, they were faithful to Catholicism, so the English Reformation drove a further wedge between the two countries << 136–37.

Cahir castle

Situated on an island in the River Suir, this medieval stronghold was captured by the Earl of Essex in 1599.

“A **million swords** will not do them so much harm as **one winter’s famine.**”

SIR ARTHUR CHICHESTER, 1600

there to domesticate and (as the English saw it) civilize the place. In 1593, Conn’s successor Hugh O’Neill, and allies including Hugh Roe O’Donnell of Donegal, rebelled against Elizabeth. The Nine Years’ War that followed pitted the English against lightly armed Irish kerns and more heavily equipped Scottish “redshank” mercenaries too.

Irish ascendancy

The rebels won the early rounds at Clontibret (1595) and Yellow Ford (1598). In 1599, the Lord Deputy of Ireland, the Earl of Essex arrived in

Ireland with almost 20,000 troops, only to be defeated by O’Donnell at Curlew Pass. Having agreed a truce, Essex was recalled by a furious Queen Elizabeth. He tried to topple his former protector from power in 1601. Failing in his coup, he was tried and executed.

English attrition

His successors fought more effectively, gradually wearing down resistance. By 1600, O’Neill and his rebels were exhausted. The arrival of a Spanish army in 1601 appeared to offer a last-minute respite, but the newcomers were cornered after landing at Kinsale.

The Irish surrounded the army of Essex’s successor, Baron Mountjoy, only to

Londonderry map

The city seems an outpost in this Survey of the Estate of Londonderry prepared by Thomas Phillips in 1624.

be outmaneuvered at the Battle of Kinsale. The Spanish withdrew; the rebellion was quashed. In 1607, the defeated O’Donnell and O’Neill led the “Flight of the Earls” leaving for the Catholic countries of Europe.

Colonization of Ulster

The north of Ireland had been left relatively untouched by Old English settlement. The population was unsettled with communities of herders and the least tractable chiefs.

Around 1610, a program of plantation (or colonization) was launched. Lands were granted to English and Scottish landowners, who brought tenants from their estates to settle the country. Towns were established to provide administration and promote commerce. The City of London guilds were pressed to send

tradesmen and their families. They were given lands to develop around Derry, which was renamed Londonderry.

Separate lives

The Gaelic population, rather than being expelled, moved to the margins, remaining there in poverty and helplessness. The “civilizing” mission never got beyond a policing role, as Protestant settlers and the Catholic populace lived parallel lives. England was storing up trouble for the future.

AFTER

Oppression bred rebellion in a rancorous, self-perpetuating cycle, which was to shape the unhappy history of Ireland for centuries.

RELIGIOUS DIFFERENCES

The entrenchment of religious differences made the Irish seem even more alien to the Protestant English. **Oliver Cromwell rejoiced in their destruction** and drove them from ancestral lands **174–75** >>. Religious considerations ensured that the Irish backed the “wrong” side in the wars which followed William III’s accession to the throne of England in the Glorious Revolution **188–89** >>.

IRISH REVOLUTION

At the end of the 18th century, Protestants and Catholics made common cause as United Irishmen, attempting a French **revolution in Ireland 238–39** >>. The revolution failed, but did enough to persuade some in England that those who starved in the Great Famine of the 1840s were getting no more than they deserved **266–67** >>.

HOME RULE

The Home Rule movement of the late-19th century won sympathy—but little more **300–01** >>.

CROMWELL AND HIS TROOPS STORMING DROGHEDA, 1649

The Union of the Crowns

The death of Elizabeth I left a vacancy on the English throne. There was only one viable successor—the son of her one-time rival, Mary, Queen of Scots. James I's accession effectively united the kingdoms of Great Britain under the rule of a Scottish dynasty, the House of Stuart.

The infant James became James VI of Scotland in 1567, after his mother's ousting. His father had been murdered (see p.138).

Questions of control

James's tutors brought him up a learned man—and a committed Protestant. Yet he had absolutist instincts. Casting envious glances southward at the hierarchical structure of the Church of England, he tried to bring back bishops to introduce order to an overly democratic Scottish Kirk.

Catholics constituted a still more frightening enemy within. James's mother had been Catholic, and some had plotted to topple Elizabeth I in her favor. For this reason, some English Catholics had high hopes for his reign—while Protestants had corresponding fears. As King of England, he calmed the latter by taking a hard line against Catholics.

There was a degree of desperation in the Catholic response: early attempts to topple James only strengthened his Protestant position. The conspiratorial ferment intensified in its turn: hence the plan to blow up the House of Lords during the State Opening of Parliament, on November 5, 1605.

The English Parliament was potentially another enemy. What James saw as its obstructionism was a spur to his writings on monarchy and his theory of the “divine right of kings.” Paradoxically, the Gunpowder Plot (see pp.160–61), and the crackdown on Catholics that followed, helped ease relations between King and Parliament.

Spanish stalemate

The religious question reared up again in the affair of the “Spanish Match” when James tried to marry his son Charles to the Infanta Maria, for diplomatic reasons. The episode was famously satirized by Thomas Middleton's play *A Game at Chess* (1624). The wooing of Spain and her infanta was deeply unpopular.

Tracts against witchcraft

James VI helped ferment the hysteria about witches, claiming innocent lives in Scotland. His *Daemonology* (1597) offered a learned justification for the persecution. He is shown here examining convicted witches.

King James I Bible

A Protestant and indefatigable scholar, James was fascinated by the challenges of scriptural translation. He commissioned an “Authorized Version” of the Bible (1604–11) that is still relevant today.

The Sutherland portrait of James VI/I James's kingships of Scotland and England were separate. However, many saw him as the King of Great Britain—a title that he would occasionally use himself.

“What God hath conjoined **let no man separate**. I am the husband and the whole isle is my lawful wife. . . .” JAMES I OF ENGLAND, 1603

BEFORE

Relations between the countries of Britain had been fractious for centuries. Wales's princes had been put down by England's Edward I, who also rejoiced in his nickname of “Hammer of the Scots.”

SCOTTISH ROYAL COAT OF ARMS

SCOTTISH BATTLES

Gains made by Edward I in Scotland were eroded by Robert the Bruce << 93, who helped Scotland win its independence at the Battle of Bannockburn in 1314 << 94–95. Further skirmishes occurred between the two nations << 116–17. England inflicted a **terrible defeat** on Scotland at Flodden in 1513 << 138.

QUEEN WITHOUT A SUCCESSOR

Elizabeth I had **Mary Queen of Scots executed** << 138. However, her lack of an heir left the way clear for Mary's son, James, to succeed.

Fears of secret Catholic sympathies were allayed by his marriage to the unimpeachably Protestant Princess Anne of Denmark. In 1603, James succeeded Elizabeth and was warmly welcomed by the English people as he progressed triumphantly south.

An uneasy union

His coronation was momentous in bringing about a “Union of the Crowns”, since James I of England was still James VI of Scotland. His promise to return regularly to his homeland was soon neglected. Even so, the system seemed to work. James wanted more general union, with harmonized laws, trade tariffs, and taxation, although neither the English nor the Scottish Parliaments were enthusiastic.

Enemies within

James was formidably clever, but an apparent lack of common sense saw him labeled “the wisest fool in Christendom.” His denunciations of witches seem tragically misguided. Antiwitchcraft legislation dated back to 1563 in Scotland, but it was with James's encouragement that large-scale persecution began in 1590. Hundreds of women (and some men) were killed after summary show-trials.

AFTER

The countries of the British Isles retained their own identities, but English dominance was to remain in the ensuing years.

CROMWELL'S TREATMENT

Cromwell cruelly **suppressed the Irish**, bullying the Scots into an unequal union **174–75** >>.

DANGEROUS ABSOLUTISM

England and Scotland shared much—not least their Protestantism. James's son, Charles I, **upset the Scots** by trying to impose his Anglican hierarchy on the Kirk **166–67** >>. His absolutism **engulfed England in the Civil War 168–69** >>.

THE LAST CATHOLIC MONARCH

James II's Catholic and autocratic leanings lost him his throne in the Glorious Revolution of 1688 **188–89** >>. An Act of Union followed a few years later in 1707, bringing about the creation of Great Britain **202–03** >>. Bonnie Prince Charlie's **bid for the Crown** in 1745 menaced the Union briefly, resulting in the Battle of Culloden **204–05** >>, but most Scots and English united against the Stuart threat.

The Unification of the Crowns

The Union of England and Scotland was given an allegorical spin when Peter Paul Rubens made it the centerpiece of his ceiling painting (1632–34) at the Banqueting House in Whitehall. It shows James's son Charles being brought to the throne by personifications of England and Scotland.

DECISIVE MOMENT November 5, 1605

The Gunpowder Plot

The plot to kill the King and bring the Houses of Parliament crashing down helped shape British history for generations. Yet the ineptness of Guy Fawkes and his co-conspirators did little to console those who had hoped for a new monarch to safeguard their freedom and loosen the grip of Protestantism.

Guy, or Guido, Fawkes is the most notorious of a clique of Catholic conspirators who plotted to blow up Parliament and King James I during the State Opening of 1605. They meant to strike a blow against a state whose laws had deprived them, they believed, of their just rights. Led by Robert Catesby, a veteran of Essex's Rebellion of 1601 against Queen Elizabeth I, they included the Earl of Northumberland's cousin, Thomas Percy, and Francis Tresham. Fawkes, a former soldier, provided the military experience.

Catholic uprising

Percy's ties with Northumberland, a Catholic sympathizer, were crucial. Though there is no clear evidence that the Earl was involved, the conspirators relied on him to rally support. For, shot through with wishful thinking, the plot did not stop at the assassination of the King; the attack was to spark a general uprising. The King's young daughter, Princess Elizabeth, was to be installed as a Catholic queen. But the Catholic

powers on the Continent were skeptical. Spain disliked the idea of overturning the monarchical order, and the Pope was worried that the plan would rebound on English Catholics.

Clumsy conspirators

Preliminary meetings between the conspirators began in May 1604. Later that year, they bought a cellar in a nearby property that ran underneath the precincts of Parliament. They also rented rooms in a house just across the River Thames, so that they could carry gunpowder across at night.

They were discovered when an anonymous letter—from Tresham, it is suspected—warned Lord Monteagle, brother-in-law of Tresham, to stay at home. A search of Parliament by the authorities on the eve of the opening found Fawkes in the midst of his preparations. The others were quickly caught. Two were killed resisting capture and the remainder were interrogated, perhaps tortured, and finally tried and condemned to death.

“... devise some excuse to **shift off your attendance** at this Parliament, for God and man hath concurred **to punish the wickedness** of this time.”

ANONYMOUS LETTER TO LORD MONTEAGLE, OCTOBER 26, 1605

Executed for treason

Guy Fawkes and three co-conspirators were executed outside Parliament on January 31, 1606. They were dragged on wattle hurdles before being “hanged, drawn, and quartered”—hanged until half dead, their innards “drawn” out, and their bodies cut into four. The public were encouraged to light bonfires to celebrate the King's escape.

BEFORE

England was itself the creation of what might be described as colonial expansion. Since the departure of the Romans halfway through the first millennium, it had been occupied by successive waves of settlers.

INVADED ISLAND

Anglo-Saxon raiders established their own kingdoms << 24–25. The Vikings came to plunder but the Danes settled and farmed << 46–47. The Normans crossed the Channel from France, making England a colonial conquest of a sort << 68–69.

OVERSEAS CONQUESTS

Norman lords occupied Ireland in the 12th century. The territories they took there passed to the English kings as (arguably) the country's first overseas colony << 80–81. That such possessions could bring trouble was already becoming clear. Ireland was the scene for successive rebellions in the 16th century << 156–57. This apparently did nothing to diminish England's appetite for conquests overseas. Intrepid adventurers like Frances Drake and Walter Raleigh proved more successful at attacking others' colonies than in establishing outposts of their own << 146–47 in the 16th century.

Penn's treaty with the Indians

The Quaker leader William Penn was granted what became Pennsylvania by King Charles II in 1681, but felt it his duty to reach a separate agreement with the Lenape who actually lived there.

Colonial Expansion

England's earliest ventures into colonial expansion had been ill-fated, and at the beginning of the 17th century that still seemed to be true. The project slowly gathered momentum and successful English colonies were established on North America's eastern seaboard and many Caribbean islands.

The Age of Discovery had been under way for a couple of centuries when James I came to the throne in 1603, but England had not been as successful as Portugal and Spain in conquering new territories. Given the daring shown by so many of its seafarers, it was perhaps surprising that there was no overseas English empire.

Elizabethan adventurers had made many attempts to establish colonies in America. All had met with failure. Sir Francis Drake established a colony at Nova Albion (believed to have been in California) during his circumnavigation

60 The number of Jamestown settlers who survived the "starving time" of 1609–10, out of an original 500. The island had to be abandoned for a time in the spring of 1610.

of the world. The Roanoke settlement came to a mysterious—and presumably tragic—conclusion later on in the 1580s. What happened to this "Lost Colony" is not known.

Dreams and disillusion

The fate of its founder, Sir Walter Raleigh, seemed somehow to set the tone for exploration in the

new century: exaggerated claims, disappointing results—and a grisly end. Raleigh came back from an expedition to Guiana in 1595 with a desire to find the fabled South American kingdom of El Dorado. Queen Elizabeth's favorite was nothing like as popular with her successor: James suspected Raleigh of plotting against him and had the adventurer imprisoned. But in 1616, he allowed himself to be talked round by Raleigh and released him, tempted by the promise of untold treasures.

Raleigh, however, returned from a search for El Dorado without much more to show for a long and expensive expedition than the booty from a Spanish colony he had sacked. Since James had been trying to cultivate good relations with Philip III, this was the last thing he had

wanted. Raleigh was beheaded in 1618, as a goodwill gesture to the Spanish king.

A faltering start

By this time, James at least had a colony to his name—quite literally: adventurer John Smith had named a settlement "Jamestown." Arriving in the New World in 1607, and faced with the challenge of starting a community from scratch, both he and his genteel companions learned the hard way just how many skills they lacked. Writing home to his

financial backers in London, he had called on them to send him colonists of a different kind. "When you send again," he entreated them, "rather send but 30 carpenters, husbandmen, gardeners, fishermen, blacksmiths, diggers up of trees, roots, well provided... than

Pocahontas

Given an Anglicized identity as Rebecca on her marriage to the Englishman John Rolfe, the Powhatan princess became a Christian and worked hard for peace. She even visited England, dying there in 1617 of smallpox.

“The next day **till noon we traded**: the king feasted all the company; and the afternoon was spent in **playing, dancing, and delight.**”

CAPTAIN JOHN SMITH DESCRIBES AN ENCOUNTER WITH THE POWHATAN CHIEF, 1608

a thousand of such we have.” Without such essential workers, the colony had very nearly gone the way of its predecessors, well over two-thirds of its population perishing in the early “starving time”, when the colony was also under siege by the native Powhatan Confederacy.

Commerce and conflict

The start of tobacco cultivation brought an economic lifeline—and made a magnate out of one far-sighted settler, John Rolfe. His subsequent marriage to Pocahontas, daughter of Chief Powhatan, brought peace with the Powhatan Confederacy—at least until the 1620s. As Jamestown grew inexorably, however, new settlers extended its boundaries ever further on to Powhatan land.

In 1622, a new young chief, Opechancanough, decided that enough was enough. His warriors attacked the outlying settlements of the English. The raiders came with meat and cereals, as though to trade, and were welcomed into the settlers’ homes before falling on their hosts and massacring them: more than 300 men, women, and children were killed.

A port in a storm

In 1609, a ship en route to Jamestown was blown off course in rough weather: it finally made landfall far to the south in the Bermudas. The English seafarers called the island group the Somers Isles for their commander, Admiral James Somers. A new settlement was quickly

established there. Captain Henry Powell stumbled on Barbados in much the same way in 1625; it was settled two years later by employees of Sir William Courten’s merchant company. The template for the kind of plantation system, which was to be used throughout the American colonies, was established here: big estates, where cash-crops were cultivated by slave

labor. The slaves at this stage were mostly white: many were more properly described as indentured labor, forced into servitude by debt, though others had been transported as punishments for crimes, or in some cases simply abducted from port cities.

In the aftermath of the English Civil War, Cromwell sent Royalist POWs to America. Crops included cotton, tobacco, and (from the 1640s) sugar.

Hudson’s horror

The New World was still seen less as an end in itself than as a stepping stone to the riches of the East Indies. The Virginia settlements were established with this goal in mind. The search was on for the

fabled Northwest Passage around North America to the Pacific. (This route does actually exist, but is only now appearing thanks to global warming.) Hence the interest of the Muscovy Company, which, after several unsuccessful attempts to find a Northeast Passage around the Northern Cape of Scandinavia and Eurasia’s Arctic coast, sent Henry Hudson to sail the other way. After voyages in 1607 and 1608, exploring the waters around Nova Scotia and Greenland, he set out

Terms of trade
Long in use in the Americas, tobacco was unknown in the Old World until the 16th century. Europeans were soon hooked, and it became a vital currency for trade.

Pilgrim Fathers

A group of English Puritans set off from Delftshaven, the Netherlands, in 1620. America was a land not only of opportunity but of religious freedom.

in 1610 to chart the Hudson Strait and Bay. The conditions he encountered were truly horrendous; Hudson’s crew rose up in mutiny and he himself was lost, presumably murdered.

Religious refugees

The Pilgrim Fathers, a party of Puritan refugees whose ship, the *Mayflower*, arrived on the coast of Massachusetts in 1620 were one of the earliest and certainly the most famous of many groups to flee England’s intolerant climate. They were followed by others—and not just Puritan Protestants. A group of Catholics crossed the Atlantic in the 1630s under the protection of George Calvert, Lord Baltimore. The Quakers followed later, settling in Barbados in the first instance; only from 1681 did they arrive in America. The son of a famous general,

50,000 The number of early settlers to England’s North American colonies who came as convicts. Thousands more came as indentured servants—debtor-slaves.

peace-loving William Penn was granted territory there by Charles II in return for a debt the King had incurred with his father. The settlement was named Pennsylvania, in honor of Penn and the region’s rich forests (“sylvan” deriving from the Latin for “woods”); its capital was Philadelphia—in Greek, the city of “brotherly love.”

AFTER

England did not look back: some Scots saw the Act of Union (1707) as another land-grab, but the Britain it produced was unabashedly imperialistic.

EXPANSION OF THE NEW WORLD

Britain’s **empire expanded** in the 18th century **212–13** >>. But the American **colonies had been lost** by 1781 **214–14** >>. One of the decisive battles was at Princeton in 1777. New territories were opened up, meanwhile, in Australia and New Zealand **294–95** >>.

BRITISH EMPIRE

In the Victorian period Britain’s soldiers and sailors **fought to build an empire** on which “the sun never set” **290–91** >>.

BRITISH FORCES WERE DEFEATED AT THE BATTLE OF PRINCETON, 1777

LOND

Thames fluvius

London and the River Thames, 1611

London in the early 17th century was a huge, bustling metropolis—one of the world's greatest cities. In this panorama by cartographer John Speed, the dominance of the Thames, the city's main commercial artery, is clear. North of the Thames, on the top left of the view, in the City, is old St. Paul's Cathedral. To the right are the piers and arches of London Bridge, then the river's only crossing. In the foreground, on the south bank of the river, Southwark Cathedral is the largest building.

Robert Filmer's book *Patriarcha*

According to the political theorist, Robert Filmer, what the father was in his family, the king was in his realm: God's representative, to be given absolute obedience.

BEFORE

England had always been a monarchy, but since medieval times the Crown had ruled in cooperation with Parliament. Inevitably, there were tensions.

DIFFICULT RELATIONSHIP

England's nobles reined in royal power in 1215 when they compelled King John to sign **Magna Carta** << 86–87. But difficulties had continued, on and off, since the Reformation. **Parliament looked askance** at King James's mother's Catholicism and his Scottish birth << 158–59.

Commotion in the House of Commons

Charles I bursts into the chamber with his guards, demanding the surrender of five wayward members. The King had violated all convention, and for nothing, since the men were gone. As Charles ruefully remarked: "All the birds have flown."

Charles I and Parliament

An absolutist king and an increasingly confident Parliament came into collision in the reign of Charles I. With neither side inclined to compromise on basic principles, political turbulence was guaranteed. Yet no one could have predicted quite how completely or how rancorously relations were to break down.

James I had believed in the divine right of kings, but as a Scots outsider, threatened by Catholics, he had been forced to compromise. His successor, Charles I, felt more secure. This would be his undoing. As Prince Charles, he had traveled to Madrid to seek the marriage of the Infanta. When this unraveled, he made his addresses to Spain's rival Catholic power, France, and married Princess Henrietta Maria, Louis XIII's sister.

On becoming king in 1625, Charles showed his reluctance to reign alongside Parliament. He dissolved it at the slightest provocation, from 1629 dispensing with it altogether. Instead, he introduced a streamlined (and less accountable) executive. A renewed and strengthened Court of Star Chamber (see pp.132–33) dealt with those who opposed his despotic ways.

His style set him against the Puritans. Strict, "pure" Protestants, they rejected the authority of any hierarchy of bishops. They would be ruled spiritually by their individual consciences and by scripture, and saw Charles's Church as Catholic authoritarianism returned. The King's pet clerics, such as William Laud and Robert Filmer, did not disagree. Arguing for Anglicanism's Catholic roots, they rejected the Protestantism of Luther and Calvin, and preached the divine right of kings. Laud was anointed Archbishop of Canterbury in 1633. Charles shared their vision of an English Church whose clear hierarchy

he controlled—not the association of autonomous local congregations the Puritans favored. In 1637, he tried to bring Scotland into line by enforcing the Anglican liturgy, and responded to resistance with the Bishops' Wars of 1639 and 1640. Charles won, but gave way on key demands and saddled England with enormous debts.

Parliament returns

To approve taxes to raise new revenue, he recalled Parliament. Angry at being sidelined for 11 years, it demanded reforms, so three weeks into the "Short Parliament" Charles dissolved it. But, needing money, he swallowed his pride and recalled it again. It passed the Triennial Act, meaning that Parliament had to be recalled every three years, and that the King could not simply decide to do without it. In 1641, he had to agree to a law forbidding him from dissolving Parliament. His Court of Star Chamber was outlawed too.

In an atmosphere of growing rancor, Charles became convinced that leading MPs had discreetly supported the Scots in the Second Bishops' War. Outraged, in January 1642, he went with his guards to Parliament to arrest key MPs. He found them gone—warned of his arrival. But the King's invasion of the chamber trampled all over the tradition of royal respect for the rights of Parliament's House of Commons. Trust broke down completely: King and Parliament were at war.

KEY MOMENT

RIOT AT ST. GILES'

Charles I's attempts to bring the Kirk (Scottish Church) into line with Anglican liturgy and institutional organization were deeply resented in Scotland. In 1637, these feelings flared up into open revolt in St. Giles' Cathedral, Edinburgh's High Kirk, after market trader Jenny Geddes threw a footstool at James Hannay, the minister reading out the Collect from the Book of Common Prayer. Widespread rioting resulted, followed by thousands signing a defiant National Covenant in Greyfriars Kirkyard in February 1638. In 1643, the English Parliament was to join with its Scots equivalent in signing a Solemn League and Covenant, respecting the autonomy of the Kirk.

AFTER

The disagreement between Charles I and Parliament was too profound to be easily smoothed over. It was too bitter to have anything other than a tragic end.

CONTINUING STRUGGLE

In 1642, relations between Crown and Parliament broke down entirely and the nation was plunged into civil war 168–69 >>. After Charles I's execution in 1649 170–71 >>, an attempt was made to govern England without a monarchy 172–73 >>. However, the new Commonwealth collapsed, resulting in a restored Crown in 1660 176–77 >>. In 1688, with the Glorious Revolution, it seemed that at last a solution to the differences between Crown and Parliament had been found with the overthrow of James II and the installation of William III as a constitutional monarch 188–89 >>. But the Stuarts were not finished, and tried repeatedly to reclaim the throne for James's successors 202–03 >>.

Charles I

Anthony Van Dyck's 1637 equestrian portrait of Charles I shows the King as an armored knight, the protector of his subjects. Less than a decade later, however, the King was to drag his subjects into a hugely destructive civil war.

BEFORE

England's medieval rulers had dominated their peers through their courage and charisma. All that had changed by the outbreak of the Civil War in 1642.

CENTRALIZED POWER

The seething rivalries of late-medieval England's great aristocratic houses eventually boiled over into the Wars of the Roses << 122–23, but Henry VII's accession brought this conflict to an end. To prevent further outbreaks of civil strife, he and his Tudor successors set about constructing a more centralized English state << 132–33. Henry VIII also established royal control over the country's religious life << 136–37. The first Stuart ruler, James I, inherited sweeping royal powers.

AN OVERBEARING MONARCH

Too rigid an imposition of order can, paradoxically, promote disorder. The system is liable to break down when there is no sense of give and take. When Charles I's arrogant absolutism proved more than Parliament could stand, he reacted by dispensing with Parliament altogether << 166–67. Finally, in 1642, any sense of government by consent collapsed completely. The King and his Parliament were not just at odds but actually at war.

Battle of Marston Moor

A turning point in the Civil War, the combined forces of Scottish Covenanters and English Parliamentarians defeated Royalist forces at Marston Moor on 2 July 1644.

Feeling his authority imploding, Charles I was forced to flee his own capital. He traveled into the country to drum up support. Charles raised his standard at Nottingham on August 22, 1642: 2,000 noble followers rallied to the royal flag. Called Cavaliers, from the French *chevalier*, meaning “horseman” or “knight”, they expected to fight on horseback; far fewer infantry—traditionally drawn from the lower classes—heeded the call.

Expensively mounted and dressed, the Cavaliers wore their hair long and flowing—in stark contrast with the severely cropped Roundheads recruited by Lord Essex to oppose them.

Early encounters

The Cavaliers had the advantage at Edgehill, Warwickshire, on October 23, yet still contrived to throw away the

victory. They scattered the King's enemies with ease only to lose their focus and fall to plundering. The Roundheads were able to regroup. In the end, this early encounter was inconclusive.

The King continued toward London, attracting new recruits as he went: Essex was waiting for him, west of the city at Turnham Green. His army, too, had grown with the addition of local volunteer militias from across southern England—so many that Charles did not dare attack. The two armies spent several months circling around one another, shrinking from anything but the briefest of attacks. Gradually, through these skirmishes, the Royalists were

gaining ground, but at Newbury, in September 1643, their fortunes were reversed. Again, after a successful charge, they dissipated their advantage and the Parliamentarians secured the victory. Even so, neither side could really consider itself victorious and a lengthy stalemate ensued.

New Model Army

A significant voice in earlier political controversies, but marginalized once the shooting started, Oliver Cromwell now

Oliver Cromwell

The inexperienced Cromwell proved an instinctive general and able military administrator. He masterminded the Roundhead victory in the Civil War.

The Civil War

“We are so many frightened people,” wrote Margaret Eure in June 1642. “For my part, if I hear but a door creak I take it for a drum.” The Civil War may have divided England—and, ultimately, the entire British Isles—down the middle, but it brought desperate terror, death, and suffering to all alike.

Matchlock musket

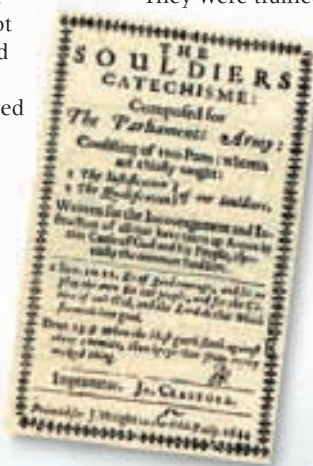

The Civil War saw the widespread use of firearms for the first time on British soil. Lit by a match or fuse, the matchlock was slow to fire, and most effective used in large-scale volleys.

came into his own as a military commander. Having raised his own mounted militia in his native Cambridgeshire, he proved an able commanding officer and had been appointed Lieutenant-General of Horse by the time of the Battle of Marston Moor, in July 1644.

Even then, the battle could not have been won had it not been for the presence of Lord Leven's Covenanting Scots and the discipline they showed under heavy fire. From 1644, a Scots Civil War was continuing in parallel with the English conflict. The Royalists were led by former-Covenanter James

New Model Army's catechism

Protestant faith, moral idealism, and ruthless practicality combined in Cromwell's idea of his New Model Army. Its rules were recorded in a "catechism."

Graham, 1st Marquess of Montrose. Although he had his eye on the bigger British picture, his allies, clan chieftains, were pursuing local rivalries, and their efforts were fatally unfocused.

Back in England, Cromwell was establishing a New Model Army of 20,000 troops. Most were cavalry—Cromwell's speciality by now—but there were also foot-soldiers and artillery. They were known as Ironsides because of the iron breastplates that they wore. They were trained and drilled—and

enthused with the justice of the cause. Cromwell's efforts paid off at Naseby, Northamptonshire, in June 1645. Defeated, Charles was captured and imprisoned.

A second civil war

Charles reached a secret deal with Scottish nobles and succeeded in starting a second civil war.

New Model Army helmet

Cromwell's Roundheads protected their shaven crowns with helmets like this. Other armor was light—usually little more than a simple breastplate.

Under the "Engagement" of 1647, he offered to establish the Presbyterian Church (in both Scotland and England) for three years in return for their support. The deal split the Kirk: powerful figures were against getting involved. Even so, in 1648, the Duke of Hamilton led an invasion, prompting a Royalist revival south of the Border.

Cromwell's defeat of the Scots at Preston caused this to collapse quickly. Some members of the Long Parliament still wanted an accommodation with the King, fearing the power of the New Model Army. Pride's Purge amounted to a military coup: officers led by Colonel Thomas Pride prevented moderates from entering the Commons chamber to vote. The hardline "Independents" had their way, and Charles was tried and executed.

Mopping up

Cromwell put down Catholic resistance in Ireland in no uncertain terms, perpetrating notorious massacres at Drogheda and Wexford. In his absence, in 1650, the late King's son, Charles II, led the Scots Royalists in another invasion of England. Cromwell returned, headed north, and laid siege to Edinburgh. Although forced by a shortage of supplies to withdraw to Dunbar, he defeated the pursuing Royalists there on September 3. He delivered the final blow in England at Worcester a year later.

The immediate consequence of the Civil War was a traumatized nation. The conflict killed a higher percentage of the population of the British Isles (anything up to 10 percent) than any other hostilities, before or since.

CROMWELL'S RULE

Cromwell's victory led to the creation of a kingless Commonwealth **172–73** >>. Hopes that it would prove a utopia of freedom were quickly dashed. The **rule of the Lord Protector** turned out to be as despotic as Charles I's had been. His death—and the **Restoration of royal power** with the accession of Charles II in 1660—came as a relief to most **176–77** >>.

THE GLORIOUS REVOLUTION

England was marked in the long-term by the conflict between king and Parliament. The claims of these two institutions were debated furiously. It was no abstract discussion. **At stake were political power and opportunity**, while religious feeling lent the arguments a special spiritual and moral edge. There was a fear that James II would restore absolutist monarchy. This was the background that made the **accession of William III** in 1688, a Glorious Revolution, rather than a mere coup **188–89** >>.

WILLIAM III AND THE CONVENTION PARLIAMENT

FEAR OF REVOLUTION

The deep and disturbing fear in England of a repetition of the Civil War was perhaps in part responsible for the **caution with which most of the population reacted to the French Revolution** of 1789 **236–37** >>. However, the (broadly) **democratic ideals** its victors had fought for **remained strong**, informing the 19th-century movement for electoral reform **268–69** >>.

Death warrant of Charles I

Whether from a thirst for justice or for the sake of safety in numbers, 59 Parliamentarians signed this document in January 1649.

DECISIVE MOMENT January 31, 1649

The Execution of the King

England had already seen the world turned upside down in its Civil War: that any man should rise against his ruler could hardly have been imagined. What, then, was the country to make of a trial, which having convicted the King of treason, went on to claim the right to take his life?

To say that Charles I's situation was unprecedented barely begins to do it justice; it was revolutionary. The idea that a monarch, who was seen as the head of the state, might be tried for treason challenged conventional wisdom. Yet times had changed, and common assumptions had been shifting subtly. The King's enemies, the Parliamentarians (see p.166), argued that Charles's first duty was to his country—a country they claimed to represent. For them, the King of England was “not a person, but an office” whose holder had to govern the country according to English law.

A criminal King

A special court of commissioners was created by an Act of Parliament for Charles's trial. It went without saying that they all supported Oliver Cromwell, Parliament's most powerful military leader. The trial opened on January 20, 1649 at Westminster Hall. Led by Parliament's chief attorney, John Cooke, the prosecution charged

Charles not only with breaches of England's constitution, but with betraying England itself. By soliciting the Scots' invasion during the Civil War (see pp.168–69), he had effectively conspired against his country. The King, Cooke insisted, had to take responsibility not only for these crimes, but for all the resultant bloodshed.

Defiance and death

Charles I never agreed to recognize the court, and refused to plead one way or the other. Whatever he might or might not have done, he was answerable only to God, he said. He was asked to plead three times and each time he refused on the same grounds. It was no surprise when, at the end of a hearing that lasted a week, he was found guilty on all charges. Charles's death warrant was signed by 59 commissioners. Having been imprisoned in St. James's Palace, he was taken out to a public scaffold in front of the Banqueting House in Whitehall on January 31. There, before an awestruck crowd, he was beheaded.

“I would know by what **power** I am called **hither**... by what... **lawful authority?**”

KING CHARLES I TO THE PARLIAMENTARY COURT THAT PRESUMED TO TRY HIM

The King loses his head

“I shall go from a corruptible to an incorruptible Crown, where no disturbance can be,” reportedly said Charles I on the scaffold prior to his execution. He was then cleanly beheaded by his anonymous executioner with a single stroke of the ax.

BEFORE

The execution of Charles I was the crowning outrage of a chaotic and traumatic period, which, in the words of the ballad of 1643, had left “the world turned upside down.”

A DESPOTIC KING

Charles I’s **despotic ways** undoubtedly upset many of his countrymen, and the controversy he caused **divided Scotland and Ireland** too << 166–67. Even so, most had been horrified to find their country convulsed by civil war. The quarrel was in itself upsetting, but the scale of the **carnage seen during the Civil War** grew far beyond what anyone could have imagined << 168–69.

CROMWELL’S VICTORY

The **victorious Parliamentarians** held the Stuart King responsible for the bloodshed. The King himself appeared **entirely unrepentant** for his part in what had happened. He contemptuously refused to cooperate in a trial << 170–71.

The Commonwealth

Following the Civil War, England headed out into uncharted waters, constitutionally and politically. What had been a kingdom was now effectively a republic. Many believed passionately that they were building a new and better society; others felt alienated by the new elite with their righteous tone.

The dispute between Parliament and the King was brutally resolved. The Long Parliament (called by Charles I in 1640) had been reduced by Pride’s Purge of December 1648 (see p.169). What remained was jokingly called the Rump Parliament, and this was itself divided. While the aristocracy had been ousted, along with the King, those members who remained still belonged to the gentry and had their interests at heart.

Cromwell dissolving the Long Parliament

On April 20, 1653—apparently unconscious of the irony that Charles I had gone down this path before him in 1629—Oliver Cromwell decided to dispense with the services of Parliament altogether.

With a balance to strike between upholding tolerance and maintaining social order, the Rumpers opted for safety-first conservatism. The clamorous demand for reform of the legal system was crystallized by Matthew Hale’s commission of 1652, which called for protection for poor defendants against abuse by the authorities or wealthy litigants. Parliament quickly lost its nerve and none of the commission’s recommendations made it into law.

In religious policy too, Parliament wanted to send reassuring signals to the English elite and European governments. The Church of England remained the established religion, though the Act of Uniformity of 1559

was repealed. This, at least in theory, meant freedom of worship for all Englishmen and women—although its scope did not include Catholics or the wilder nonconformists.

Religious sects

The Rump was concerned lest it should be thought that the country had collapsed into anarchy. There is no doubt that, in the ferment unleashed by the bringing down of the monarchy and the pinning back of the Church’s authority by Protestant “people power”, small and self-willed sects of every sort were flourishing. Their “enthusiasm” (a derogatory expression at the time) in bearing witness to their beliefs

The Commonwealth Laureate

The creator of *Paradise Lost* (1667), John Milton, is regarded as the Commonwealth Laureate, inspired by Puritan principles to produce his greatest work.

sin. While some groups threatened English social structures, sects such as the Ranters seemed to be stepping outside society altogether.

A puritan aesthetic

There was a literary reawakening too. Parliamentary supporter Andrew Marvell wrote lyrics in a witty, sometimes knotty “metaphysical” style, harking back to Elizabethan poets such

COMMONWEALTH A term from the early English concept of the common weal—meaning “good” or “welfare”. It suggested a community of interests, ruled not by a king, but by collective considerations of the public good.

as John Donne. But his friend John Milton, a sometime aide of Cromwell, was clearly inspired by Commonwealth values (though he was not to complete *Paradise Lost*, his epic of Man’s creation and fall, until after the Restoration).

unnerved more conservative Christians. The Quakers were typical of these new groups—and the threat they posed. From the late-1640s on, they spoke out for social justice. A strict interpretation of the commandment against murder meant that they condemned all war and military service—a profoundly problematic attitude for the state. The Levellers, though not themselves a sect, were also driven by religious convictions to denounce all inequalities in society.

Mad or menacing?

The Fifth Monarchists placed their trust in the prophecy of the Book of Daniel, which holds that a fifth monarchy, with Christ as King, would succeed those of Assyria, Persia, Macedonia, and Rome. It was to become at least partly real in 17th-century England after 1666 (the year whose number would of course contain the “number of the beast”, from the Book of Revelations).

As their nickname suggests, the Ranters were regarded by respectable society as mad. They saw God in all creation; and so completely did they consider themselves to have been “justified by faith”, in Luther’s theological terms, that they believed themselves to be completely without

The Pilgrim's Progress

John Bunyan’s allegorical account of Christian’s long and hazardous journey to reach the salvation of the Celestial City is utterly simple in its conception, but has endured, a classic of Commonwealth literature.

John Bunyan’s *Pilgrim’s Progress* (1678) was a vividly realized allegory of Christian salvation. The former Parliamentarian soldier became a preacher and was jailed after the Restoration for attending nonconformist meetings.

Tax burden

The economic outlook during the Commonwealth was gloomy, with huge liabilities left from the Civil War, and continuing conflicts in Scotland and Ireland. Beleaguered by hostile Catholic powers, England embarked on a major program of shipbuilding from 1649. This was backed up by the Navigation Act of 1651 (see pp.178–79). Ironically, in 1652, this crudely protectionist measure precipitated war—not with Catholic Spain or France, but with the Protestant Dutch.

The Protectorate

The general disillusion found a focus in Parliament, which Cromwell upbraided in ringing terms on April 20, 1653. “Ye sordid prostitutes,” he cried, “have ye not defil’d this sacred place, and turned the Lord’s temple into a den of thieves? ... In the name of God, go.” The tone

may have been moralistic, but the intent was cynical enough: Cromwell was seizing power in a coup. For a few months, a Barebones Parliament, directly appointed by Cromwell and the leaders of the New Model Army, went through the constitutional motions. No one was convinced, and this assembly was dissolved in December 1653, and Cromwell appointed Lord Protector—or dictator.

Intolerance for all

Although strongly religious, Cromwell was, in principle, more indulgent to the sects than the Rump had been. As dictator, however, he found dissent threatening. The flow of Puritan

emigrants from England not only continued but intensified. Not that non-Puritans could be any happier in an England whose government had puritanized every aspect of everyday life. Sacred images and statues in the old cathedrals were destroyed. Theaters, inns, and other haunts of immorality were closed, and restrictions placed on Sunday games and “pagan” festivals. Christmas was not abolished as such, although so many of the associated celebrations were indeed outlawed that Christmas Day became a day like any other day.

Playing cards

Cromwell plays the pipe for his morris-dancing military commander, Lord Thomas Fairfax, on one of a set of satirical “cavalier cards.” The Puritans’ distrust of all such pagan pleasures was notorious.

AFTER

The mass of the population was not disposed to mourn the passing of the Commonwealth. Charles II’s return was welcomed with relief.

A TIME OF CELEBRATION

The “Merry Monarch” seemed determined to continue celebrations throughout his reign. The Restoration period became as much a **byword for decadent revelry** as the Commonwealth had become for seriousness and sobriety **176–77** >>. Over time, public disapproval at royal decadence would be deepened by renewed anger at Stuart intransigence (and suspected Catholic leanings). Charles II’s younger brother James, was to be ousted in the Glorious Revolution of 1688 **188–89** >>.

TRADE AND SCIENCE

In some respects, life continued as it had done under the Commonwealth. Britain’s **commercial interests** were unchanged and **conflict with the Dutch** came quickly **178–79** >>. Meanwhile, major **intellectual and scientific advances**, made with royal support, suggested that, despite the stereotypes, all seriousness had not been entirely set aside **184–85** >>.

“Where is that good, or **where is that liberty** so much pretended, so **dearly purchased**...?”

LEVELLER PAMPHLET *ENGLAND’S NEW CHAINS DISCOVER’D*, FEBRUARY 1649

BEFORE

The English Revolution did not happen in isolation. Both Scotland and Ireland had to some extent been involved.

SYMPATHY AND HOSTILITY

Scotland's Presbyterians felt a **close kinship** with England's Puritans and shared their vexation at Charles I's **interference** in their Church. Their disputes with Charles had eventually led to the Bishops' Wars << 166–67. While their High Church opponents had supported the Stuart King, Charles had eventually done a deal with a powerful Presbyterian group, who in 1648 **invaded England** on his behalf << 168–69.

Catholic Ireland had by contrast viewed the rise of the Parliamentarians with alarm—even rising up in **rebellion in 1641**. England's new regime felt a particular contempt for the “popish superstition” under which they saw the Irish as laboring, but they felt much as any other recent rulers of the English state had done. Ireland was the same **poor and uncivilized** province that had rejected Henry VIII's modernizing attempts and had later risen up against Elizabeth I in the Nine Years' War << 156–57.

The Parliamentarians could not allow either country to continue in open rebellion—or even as a haven for the disaffected and a **base for future attacks** against England.

MAP OF THE BRITISH ISLES, PUBLISHED 1640

Edinburgh Castle

The Scottish version of the Union Flag flutters proudly in the sky above the Scottish capital, Edinburgh, but it took a century or more of wrangling to get it there.

Scotland and Ireland Subdued

Locked into their life-and-death struggle, the two sides in the English Civil War spared little concern for the other countries of these islands. Yet Scotland, Wales, and Ireland had all been involved. If not yet a “united kingdom”, these were clearly countries whose historical destinies were closely interwoven.

One less obvious consequence of the English Civil War was its underlining of English preeminence in the British Isles. The conflict could even be seen as part of a wider War of the Three Kingdoms, which started with the First Bishops' War in 1639, when Charles I invaded Scotland to impose the Anglican liturgy on the Scottish Kirk (Church). Wales was swept up in England's internal conflict in 1648, but its half-hearted revolt against Parliament that year was quickly put down.

Divine slaughter

The Irish revolt of 1641 had been both a trigger for the English Civil War and a tragedy for Ireland. At first, Catholic Royalist forces remained secure while the Parliamentarians were occupied with fighting in England. But the Irish were eventually trounced at Rathmines by the Parliamentary commander Michael Jones (a Welshman) in August 1649. Soon after, Oliver Cromwell arrived, and what followed was really an extended mopping-up—and, in Cromwell's eyes, a divinely ordained

punishment for earlier rebellion. Hence the gloating tone of his reports of massacres at Drogheda (September 1649) and Wexford (October 1649). Further victories were achieved at Duncannon, Clonmel, and Galway.

And so to Scotland

To Cromwell, the Scots were more “godly” than the Catholic Irish. Scots Presbyterians had fought alongside his men at Marston Moor, so the hatred he had for the Irish was not seen in his Scottish dealings. Although appalled by the Presbyterian lords' “Engagement”

2,000 The number of men “put to the sword” in a single night at Drogheda, in 1649, by Cromwell's own account. Most historians believe that hundreds more—including many women and children—were also massacred.

with the King in 1647 (see p.169), he felt more sorrow than anger. In 1649, Scots Presbyterians had proclaimed Charles I's son as King Charles II, and in 1650 allied with him in the shape of a Solemn League and Covenant. With Ireland now subdued, Cromwell felt compelled to invade Scotland. The

Battle of Dunbar

"Praise the Lord, all ye nations!" Oliver Cromwell led his men in the singing of the 117th Psalm before the Battle of Dunbar in 1654. Most historians have ascribed to Cromwell's generalship the fact that his Ironsides went on to win against overwhelming odds.

Scots' army, led by the Earl of Leven, dug in around Edinburgh and stopped Cromwell and his New Model Army in their tracks. Cromwell's ragged retreat to Dunbar almost became a rout before he managed to regroup his forces. His Scots pursuers allowed him to tempt them down from the high ground, on which they would have been impregnable, after which he outflanked them to secure an improbable triumph.

An uncomfortable union

Victory against the odds at Dunbar convinced Cromwell (yet again) that God was on his side. Many Scots were becoming unhappy about their alliance with a king whose beliefs and principles they distrusted. But they were still determined to resist the English invader. Yet Cromwell prevailed, and Scotland was effectively conquered. A face-saving show of free union was put on: leading officers and Presbyterian nobles were scapegoated so ordinary Scots could be said to have been misled. Their lands confiscated, they were sent into slavery in Barbados and America. Scots members were welcomed into the

now weakened English Parliament. Meanwhile, those of Ireland's Catholics not already transported to Barbados and other Caribbean islands—more than 50,000 in all—were told by Cromwell that they could go "to Hell or Connaught." Under the punitive terms of the Act of Settlement of 1652, some 50 percent of the Irish adult male population was at least technically living under a death sentence. Catholic landowners, and a few Protestants, deemed disloyal, lost their lands and were granted smaller leases in western Ireland. In the newly

confiscated lands, a sort of informal plantation policy was carried out, with parcels handed to retiring veterans of the New Model Army. Some of these were sold on to speculators. Ironically, of the 10,000 or so who stayed, many adopted the customs of the country, either they or their descendants eventually converting to Catholicism.

Cromwell currency

The only individual other than a reigning monarch to appear on a British coin, Cromwell wears the laurel wreath of the Roman emperor on this English shilling.

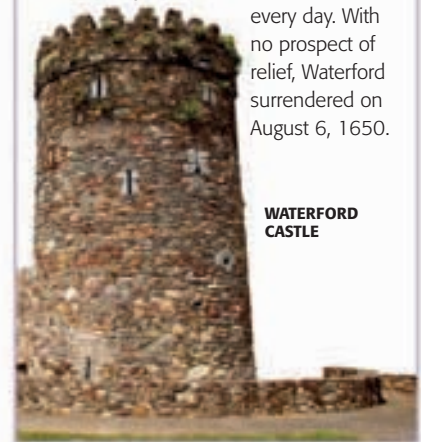

KEY MOMENT

BATTLE OF WATERFORD

Waterford, in southeastern Ireland, was besieged twice by Parliamentary forces. The first attempt was made toward the end of 1649. In wretchedly cold and damp conditions, Cromwell's army, 6,000 strong, squatted outside the city for several fruitless weeks. They were short of supplies, and their effective numbers were steadily reduced by the ravages of disease. On December 2, Cromwell gave up the effort and withdrew his troops.

His general, Henry Ireton, returned with an army the following summer, having spent the spring campaigning in the surrounding region, gradually cutting off the city from its hinterland. The tables had now been turned. Thomas Preston's Irish garrison was running out of provisions, while an outbreak of plague was carrying off more of the defenders

every day. With no prospect of relief, Waterford surrendered on August 6, 1650.

WATERFORD CASTLE

AFTER

An uneasy calm returned to the British Isles as the 1650s began: if not peace, at least order had been restored.

REBELLION AND UNION

Oliver Cromwell's atrocities left a **legacy of bitterness in Ireland**. Consequently, the Irish sided eagerly with the supplanted Stuart James II after the Glorious Revolution **188–89** >>. Thereafter, their **readiness to rebel against Britain** was repeatedly in evidence—most obviously in 1798 **238–39** >>, and in the fight for Home Rule **300–01** >>. And, of course, in the 20th century, when all but six northeastern counties of Ulster **broke away completely** from Britain **332–33** >>.

In Scotland, a formula was found for making conquest look like **consensual union**. It involved portraying Scotland's Royalist officers and Presbyterian nobles in a bad light, while treating most Scots sympathetically. Yet many disagreed, and **resentment of the union** that was sealed in 1707 was to be a factor in the fury of the Jacobite rebellions **202–03** >>.

BEFORE

Britain had survived without a monarchy for a decade since the reign of Charles I was cut short in 1649.

DEATH OF THE KING

Charles I's quarrels with his Parliament had ended with his execution ◀ 170–71. His son, who had fought with him in the Civil War, led a Scottish army into England in 1650, with the intent of bringing about his own restoration of the Stuart monarchy. This **invasion was beaten back**, and Cromwell defeated the Scots at the Battle of Dunbar ◀ 168–69. Charles II fled to France and remained in exile.

Cromwell's Commonwealth ended up offering all the rigidity of the most absolutist Stuart rule with none of the fun ◀ 172–73. He died in 1658 and bequeathed the Protectorate to son Richard.

His father had **governed through fear**, and when he was unable to inspire that, his authority quickly crumbled. "Tumbledown Dick" was deposed within two years.

CROMWELL'S DEATH MASK

The Restoration

Rejoicing greeted the Restoration of the monarchy in 1660 as the atmosphere of the Commonwealth had become oppressive. However, moralists deplored the moral license liberation brought by the return of fun and fashion and the mood darkened as Charles II seemed to revert to absolutist Stuart type.

General John Lambert moved to fill the vacuum left by Richard Cromwell's collapse, attempting a second New Model Army coup. General George Monck rose in resistance; he had served both the Royalist and Commonwealth causes. Now, however, he openly courted the exiled King.

It was probably at his suggestion that on April 4, 1660 Charles made the Declaration of Breda. It offered an amnesty to his and his father's old enemies (the "regicides" excepted). Charles undertook to be guided by Parliament if restored, implicitly waiving any claim to a divine right to rule. Under Monck's protection, those MPs expelled in Pride's Purge of 1648 (see p.169) were recalled. This Convention Parliament invited Charles II back to take up his throne.

The monarchy restored

The end of the Interregnum (period between monarchs) came on May 8. Cheering crowds greeted the restored King when he arrived in London on May 28. The Convention Parliament

passed the Indemnity and Oblivion Act, delivering on Charles' promise of forgiveness, before its replacement by an elected (though overwhelmingly Royalist) Cavalier Parliament. This rolled back resented Commonwealth reforms, reinstating maypoles, mince pies, and other festive treats. Charles wanted to restore popular celebrations.

Reign of revelry

Charles II was notorious for his mistresses: Nell Gwynn, Barbara Villiers, and Molly Davis were only the most famous. Puritan sobriety was banished—at least at court and in fashionable London, where men and women vied to outdo one another in flamboyance and flair. The moral tone was free and easy: the stereotypical Restoration rake was by no means mythical, and was represented not only by the King but by other brilliant libertines, such as George Villiers and John Wilmot, Earl of Rochester. The reopened theaters offered much raunchier fare than had ever been seen before on the English stage.

13 The number of the regicides—signatories of Charles I's death-warrant—who were executed. Three more, including Cromwell, were already dead but were exhumed and "executed", their half-decomposed corpses hanged, drawn, and quartered.

For the first time, women's roles were played by actresses rather than boys in drag. Playwright Aphra Behn became England's first known professional woman writer.

Taking liberties

Meanwhile, however, Charles was quietly clawing back some of the religious freedoms he had promised, introducing measures restricting the freedoms of nonconformist Protestants.

Charles was eager to boost England's overseas trade, but this brought

Return of the monarch

Charles rides through London on the eve of his coronation in 1661. The Restoration of the monarchy was a restoration of pomp and splendor; a dash of much-craved color for a country sunk in drabness.

The Merry Monarch

They called him the “Merry Monarch”, but the glint in his eye was not just of lust. Charles had a steely side, and the absolutist inclinations of his Stuart forebears.

England into conflict with the Dutch—hence the Second Anglo-Dutch War, 1665–67 (see p.179). However, there were fears that Charles was too outward-looking. His marriage to the Portuguese (and Catholic) Catherine of Braganza hardly helped.

A secret treaty

Charles went too far for Parliament when he made his Declaration of Indulgence in 1672, offering religious toleration to Nonconformists. Parliament was furious, guessing that his real aim was to ease the situation for Catholics.

They would have been more enraged still had they been aware of the secret treaty Charles had made with Louis XIV at Dover in 1670, stating his long-term intention of embracing Catholicism and reestablishing it as state religion. He also committed himself to an alliance with France against the Dutch Republic in return for lavish payments.

Charles went to war without involving Parliament, but the Third Anglo-Dutch War proved far more expensive than anticipated. Louis’ grants did not begin to cover the costs; the Dutch refused to be defeated, and Charles had to recall Parliament to introduce new taxes. They refused.

Anxiety became hysteria when news broke of the King’s brother James’s conversion to Catholicism. Charles’s officially stated disapproval scarcely mattered. Given his lack of legitimate children, his crown would go to James. In 1679, 1680, and 1681, MPs brought in an Exclusion Bill to cut James out of the succession, but Charles dissolved Parliament before it could be passed.

“... such a Restoration **was never seen** in the mention of any history, ancient or modern.”

DIARIST JOHN EVELYN, 1660

Rebirth of theater

The Cavalier aesthetic was flamboyantly elegant, witty, and risqué. All these qualities were on show in the comedies of William Wycherley, John Vanbrugh, Aphra Behn, George Farquhar, William Congreve, and others.

AFTER

Charles had been welcomed back on to the throne, but his death was disquieting—not because he would be missed—but once again because of familiar anxieties that a Stuart king was taking the country back to Catholic absolutism.

THE POPISH PLOT

Such anxieties stalked the latter part of Charles’ reign.

The supposed **Popish Plot of 1679** might have been a hoax got up by the arch-Protestant mischief-maker

Titus Oates, but it had been believed (and 15 innocent priests and lay-Catholics executed) because it corresponded to existing fears.

FEAR OF CATHOLICISM

Fear of a Catholic monarch loomed so large in the reign of James II that his Protestant subjects felt they had to oust him in the **Glorious Revolution of 1688 188–89** >>. This fear was to return in 1715 and 1745 **202–03** >>.

TITUS OATES

BEFORE

Trade had always been important to Britain. Since the Tudor period the world had expanded, offering new resources and new markets to exploit.

OVERSEAS TRADE

In Tudor times, the wool trade with the Continent brought great prosperity << 142–43. During Elizabeth I's reign England's navigators began to travel further afield << 146–47.

Even then, serious colonial expansion had to wait until James I's reign << 162–63. In 1623, 20 English merchants were massacred by Dutch traders in Amboyna, Indonesia, in a conflict over the trade in spices.

AMBOYNA MASSACRE

Commerce and War

Trade and conflict had been seen as mutually exclusive, but the world was entering a new and more dangerous age. Whatever else divided them, the Commonwealth and Restoration governments of England shared a conviction that commerce was something worth fighting for.

The Commonwealth government under Oliver Cromwell (see pp.172–73) worked hard to build its naval power. Distinguished for their contributions to the land campaigns during the Civil War, George Monck and Robert Blake became preeminent as “Generals at Sea.”

At stake was not only England's defense, but its commercial interests: trade was key for a small nation with big aspirations. Naval power was needed to safeguard trade with existing colonies and to secure new ones. In the mercantilist thinking of the time, it was crucial for a country to take the biggest share it could of what was assumed to be a finite international market.

Competitors were kept at bay by obstructionist regulation and tariffs.

To protect a merchant fleet recovering after the Civil War, the Navigation Act (1651) stipulated that imports to England be brought direct, without the involvement of foreign shipping.

Difficulties with the Dutch

The Dutch knew that this legislation was aimed at them, as northern Europe's leading traders. After a

Michiel de Ruyter

The Dutch admiral scored major victories against the English, including the Medway Raid. Personally unassuming, his daring was that of the consummate sailor who had served half a century at sea.

Despite some defeats at the hands of the Dutch, Britain's course was clearly set: it saw its future as a trading nation.

NEW ECONOMIC IDEAS

Britain's role as a trading nation was given impetus by the introduction of **new financial mechanisms** in the early 18th century **210–11** >>. Capitalism was becoming not just a way of doing things, but an article of faith. The **advent of modern economics** was heralded by the work of Adam Smith and other **thinkers of the Scottish Enlightenment** **224–25** >>. The Industrial Revolution gave entrepreneurs the chance to put their theories into practice **232–33** >>. In the decades that followed, Britain broke new ground—an economic experiment on a massive scale.

A FREE MARKET

When Britain took action to **end the international slave trade** in the early 19th century, the freedom of the market loomed as large as the liberation of men and women. The campaign by caring members of the public also made a difference to the outcome **234–35** >>. The same contradiction would be seen in the **aggressive promotion** of “free trade” alongside widespread support for the **regulation of working conditions** in the factories and mines **268–69** >>.

Attack on the Medway

England was still dazed from the shock of the Great Plague and Fire of London when, on June 9, 1667, during the Second Anglo-Dutch war, Dutch ships calmly sailed into Chatham and destroyed the English fleet.

chance encounter at Goodwin Sands on May 19, 1652 flared into fighting, the advantage during this First Anglo-Dutch war seesawed back and forth. The shock of several defeats was salutary. Although England's navy triumphed at Portland in March 1653, the shipbuilding program was intensified and Blake's new “Instructions” for war at sea were issued in response to failures in English tactics there. Rather than engaging in a free-for-all, ships filed past the enemy in a “line”, maximizing the impact of their cannonades. At the Battle of the Gabbard in 1653, the Dutch were forced back and besieged, but the English retired exhausted and the war ended inconclusively.

Hostilities restored

Charles II's England felt the same commercial imperatives as the Commonwealth had. Anti-Dutch

fever was stoked by the great trading companies. Charles's younger brother James, Duke of York, was involved with the Royal Adventurers—in 1672 renamed the Royal African Company. The slave trade was growing in importance, as prisoners-of-war and indentured labor were replaced by Africans, and Dutch trading posts in West Africa and the Caribbean coveted.

In 1663, the Duke of York sent a fleet to Guinea; a separate expedition took the New Netherlands (now the northeastern USA). The Dutch admiral Michiel de Ruyter quickly took back the African colonies, before heading west to attack the English in America. Open war erupted in 1665, the Dutch suffering a shock defeat at Lowestoft that June, but turning the tables a year later in the Four Days' Battle off the

£1,300,000 **The amount of the Crown debt reneged upon by Charles II in the “Great Stop of the Exchequer”, 1672, to enable him to finance the Third Anglo-Dutch War.**

Dutch East India Company insignia

Formed in 1602, the Dutch East India Company became Britain's most powerful trading competitor in Asia during the 17th century.

coast of Kent. De Ruyter followed through with his daring Medway Raid. England was brought to terms: under the Peace of Breda, it received the former New Netherlands as New England (New Amsterdam was named New York in James's honor) but had to climb down over its Navigation Act.

Third time lucky?

Neither the Netherlands nor England wanted another war. But a secret treaty with Louis XIV tied Charles II into mounting Franco-Dutch tensions. The navy's role in the Third Anglo-Dutch War (1672–74) was initially just as seaborne back-up for a French land invasion. The war at sea became central when Louis' army was thwarted by Dutch defenders, who opened their

dykes to flood the countryside. The English were spared defeat at Solebay (June 1672) by a sudden change in the wind, but divisions within the French navy led to reversals at the Schooneveld and then Texel, and Charles II had to sue for peace.

BEFORE

The 17th century was the climax of a gradual process whereby London, over the previous centuries, had shed its medieval character and become a truly modern city.

CHANGING CAPITAL

Medieval London was where **Church and trade guilds** held power ◀◀ 120–21. In Tudor times, power shifted to monarchy and merchants, and London became a **center of government**.

Population and trade increased, helped by new shipping routes to other continents—90 percent of Tudor England's **foreign trade** came through London. Elizabethan London saw merchants and trade concentrated in the City, around St. Paul's, while the upper classes moved to grand homes to the west, along the Strand or in Westminster.

During the English Civil War, the City of London was a stronghold for Parliament ◀◀ 168–69. It helped consolidate and even raise London's status, but Parliament's **Puritanical attitudes** smothered much of the capital's cultural life by closing the theaters and other entertainments, and London lost some of its luster ◀◀ 172–73.

MERCER'S GUILD COAT-OF-ARMS

Coffeehouse

Coffeehouse "crawls" were a popular diversion and Samuel Pepys's diaries are full of such visits. The coffeehouses (where chocolate was another favorite drink) were a welcome change from the traditional ale houses. This illustration shows a coffeehouse on Bride Lane, just off Fleet Street in London.

Pepys's London

In the 17th century, London became Europe's largest city. It was a global center of commerce, culture, and pioneering new ideas. While Charles II kept a colorful Restoration court and political gossip circulated in fashionable coffeehouses, prominent official Samuel Pepys (1633–1703) vividly captured it all in his famous diaries.

Under Charles II, who returned England to a monarchy in 1660 (see pp.176–77), London became vibrant and stimulating. Tired of restrictive Puritanical practices, and tempted by Charles's promises of increased powers, the City switched sides and became Royalist. The new King found favor with Londoners when he visited the City in person to see what was happening and direct events while it was ablaze during the Great Fire of 1666 (see pp.182–83).

Samuel Pepys was a significant figure in Restoration London: First Secretary of the Admiralty in 1673, Member of Parliament, and president of Charles's newly founded scientific Royal Society (see pp.184–85), among other achievements. He was ideally placed to record events, great and small, in his diaries, which covered 1660–69. These included the Restoration and Charles's coronation, the Great Plague of 1664–65, and the Great Fire of London. Pepys caught the spirit of an exciting city in an age where a person with wit, energy, and drive could do very well for themselves.

The growth of areas outside the City, to the west, which had been taking place in Tudor times, became much more pronounced after the Great Fire, and centers for London's social life increasingly established themselves in London's West End.

Changing London

The City became a thriving commercial center, containing large proportions of London's people and businesses. The Great Plague and the Great Fire caused setbacks. The plague brought major loss of life, while many who fled the fire settled elsewhere in England and never returned, leading to a drain of skilled labor. London, however, proved itself

Samuel Pepys

Perhaps the most famous Englishman of his time, Samuel Pepys's diaries tell us much about life as a cultured, pleasure-loving man enjoying the London life. He was painted by John Hays in 1666, and the music he holds is Pepys's own setting of a lyric by Sir William Davenant.

“... musique and women I cannot but give way to, whatever my business is.”

SAMUEL PEPYS'S DIARY, MARCH 9, 1666

resilient and recovered well.

Commercial milestones included the founding of the Hudson's Bay Company in 1670 to increase trade with England's growing North American territories. New immigrants added to London's rich vibrancy. Many brought valued skills, such as the Huguenots' production of fine silks, which influenced aristocratic fashions. From 1670–1710, around 50,000 Protestant Huguenots fled persecution in France, and were allowed by Charles II to settle in England, many in Spitalfields (outside the City, to avoid its restrictive guild practices). Also, immigrants from the

The Great Plague

This title page of a publication detailing London's burials is for 1664–65, the time of the Great Plague, which killed about one-fifth of the city's population.

Puritan past, new plays appearing on the London stage were typically satirical, witty, and bawdy. Charles had a love of French fashions and culture, and the risqué French themes of playwright Molière were a strong influence. Dramatists who flourished included John Dryden, William Wycherley, and, very slightly later, William Congreve. Playwright-managers such as Thomas Killigrew and Sir William Davenant (also Poet Laureate

and popularly rumored to be William Shakespeare's illegitimate son), successful in pre-Parliamentarian days, were given theaters once again. In 1663,

“I do **indulge myself**... more in **pleasure**, knowing that this is the **proper age**... to do it.”

SAMUEL PEPYS'S DIARY, MARCH 10, 1666

Low Counties brought the Dutch talent for map making: as knowledge of places was increasing so too was the desire to record them skillfully.

Art, science, the stage, and coffee

Charles was a patron of new thinking in both the arts and sciences, and this made London a major intellectual and cultural hub. As well as the Royal Society, his patronage included leading architect Sir Christopher Wren, creator of the new, post-fire St. Paul's Cathedral (see pp.186–87).

The King was especially fond of all artistic and cultural pursuits, but it is really the theater that defines the age, and it was a passion of both the King and Pepys. London's theaters had been closed for 18 years under the preceding Puritan regime, during which time any performances were held in secret, and discovery brought serious penalties. They were reopened by Charles in 1660 (although they were closed again for a time after the plague of 1665). In further marked contrast to the recent

the Theatre Royal, Drury Lane, opened as the home of Killigrew's theater company and won a place at the heart of fashionable life. The stereotypical Restoration man-about-London became a witty, dandyish, carousing, theater-going womanizer. That said, although much of the classic image of “Merry Monarch” London is true, there was some persistence of Puritan attitudes.

These were also the early days of women appearing on the English stage (the first time had been in 1629, featuring French actresses). Previously men had played women's parts as acting was considered highly unseemly for a woman. Ann Marshall was Killigrew's leading lady, while Nell Gwynne, perhaps the king's most famous mistress (from 1669), became a leading comic actress of the era, having started out as an orange-seller at the Drury Lane theater. There were even some female playwrights, including Mrs. Aphra Behn, whose play *The Rover* (1677–81) was a hugely popular tale of English cavaliers.

Samuel Pepys's navy office

Pepys's office, while First Secretary of the Admiralty, was in Crutched Friars, London. He served in this post from 1673, finally severing his links with the Royal Navy in 1689.

Increased foreign trading links saw coffee becoming popular in the 1600s. The first London coffeehouse, Pasqua Rosee's, opened in 1652 in St. Michael's Alley, in the City (the first coffeehouse in England was in Oxford in 1650). These became popular places for gossip, business, and socializing in Pepys's time. Each coffeehouse attracted a certain kind of crowd, such as artists, writers, actors, gamblers, lawyers, scientists, or politicians. They became important meeting places for some of the City's burgeoning financial businesses (for example, fire insurance companies only came into existence after the Great Fire). Lloyds of London was named after Edwin Lloyds' coffeehouse, where marine underwriters gathered from Pepys's day onward. Pepys not only socialized in coffeehouses but, as a lover of music, sang in them too. Coffeehouses also became hotbeds of new and radical thought, so much so that Charles II tried to close the coffeehouses down in 1675 as an anti-insurrection measure, but a general outcry stopped him.

450,000 The number of people living in the main urban area of London in 1680. London was an enormous center of population, despite the ravages of plague. It is said that, by 1680, two out of every three town- or city-dwellers in the whole of England lived in London.

AFTER

Charles II's reign had helped to put London on the world map and this trend continued in the late 17th and 18th centuries.

POWER AND CULTURE

London continued its **expansion** into a social West End and a commercial City. The Bank of England was founded in 1694, the British Empire grew, and the Industrial Revolution began **210–11** >>. London grew as an **intellectual center**, with improved literacy, greater printing press activity, and Fleet Street at the heart of an early press. Coffeehouses remained popular, until drinking tea and visiting clubs took over.

HUGUENOT HOUSES, SPITALFIELDS

HUGUENOT WEAVERS

Foreign craftspeople **continued to thrive**, particularly the Huguenots of Spitalfields, which still has French street names, such as Fournier Street, and early 18th-century houses with large upper windows to let light in for weaving.

PEPYS'S LATER LIFE

Pepys lost prominent office from 1679–84, rose again under James II, but was finally **forced out** by the Glorious Revolution **188–89** >>. In retirement he stayed in London, enjoying the life of the city and building up his library. His **diaries** were first **published** in 1825.

DECISIVE MOMENT September 2–6, 1666

The Great Fire of London

This great conflagration decimated 80 percent of the City of London, destroying familiar landmarks. New buildings would fill the gaps, including Christopher Wren’s St. Paul’s Cathedral, transforming the skyline, and establishing new building patterns and standards that helped to create modern London.

On September 5, 1666, famous diarist Samuel Pepys climbed the tower of All Hallows Church, close by his home in Seething Lane, and beheld a terrifying sight: raging fire as far as he could see. It seems the fire first sparked into life in the small hours of Sunday, September 2 at Thomas Faryner’s bakery in Pudding Lane, near London Bridge. By the following day, it had advanced west and north. King Charles II tasked his brother, the Duke of York, with controlling the fire-fighting operation—there was no true fire service at this time.

The summer had been hot and dry, the level of the River Thames was low, and a brutal wind blew from the east. Closely packed buildings, many largely timber, easily caught fire. For days, the flames ripped down narrow, twisting streets and through wooden warehouses stuffed with flammables such as oil, brandy, and pitch.

Buildings were pulled down and blown up with gunpowder to provide windbreaks. On September 4, old St. Paul’s was engulfed and its lead roof melted “down the streets in a stream”,

according to diarist John Evelyn. Many of London’s hysterical citizens suspected arson. Some foreigners were lynched and the Spanish ambassador gave refuge to others. The fire was finally extinguished on September 6. The next year, it was officially declared an accident caused by the hand of God, heat, and wind.

A new city

After the disaster, Christopher Wren, John Evelyn, and Robert Hooke presented the King with ambitious rebuilding plans. Wren wanted to raise a magnificent Renaissance city with wide streets, but his ideas were deemed too costly and impractical. The new city arose slowly on the old plan, with some wider streets, new sewers, and (for the first time) sidewalks. Buildings were made of brick rather than wood.

Wren’s St. Paul’s Cathedral, completed in 1711, became one of the world’s most-admired buildings. Along with his jointly designed monument to the fire, and a number of satellite churches, he helped to shape the City’s new profile and create an iconic skyline.

“The churches, houses, and all on fire and flaming at once; and a horrid noise the flames made, and the cracking of houses at their ruins.”

SAMUEL PEPYS’S DIARY, 1666

The fire by night

This painting, called *The Great Fire of London in 1666*, was created by 17th-century Dutch maritime artist Lieve Verschuer (c.1630–86). Many contemporary paintings depicted the event, providing historians with an important strand of evidence for what happened.

Flamsteed House

Named after Charles II's first Astronomer Royal and designed by Sir Christopher Wren, Flamsteed House was the original Observatory building at Greenwich, London.

17th-century blood circulation experiment

The milestone discovery by William Harvey (1578–1657) that blood circulated around the body drew on observation, reasoning, and experimentation.

Enquiring Minds

A great change took place in scientific thinking in the 17th century. New institutions such as the Royal Society and the Greenwich Observatory, and scholars including Newton and Hooke, helped to push scientific enquiry toward the rational and methodical. Modern science was born.

The 17th century was an exciting time for British science. It aroused public interest and saw many groundbreaking demonstrations. Wealthy gentlemen made a hobby of it. New ideas spread rapidly via the universities, scientific organizations, and coffeehouses, and the rising tide of printed matter. Measuring things, and developing instruments to do so, was central to 17th-century science and London grew into a major center for scientific instruments.

British statesman and philosopher Sir Francis Bacon (1561–1626) was a pivotal figure. He valued observation, experience, and experimentation over the Aristotelian methodology of making deductions from assumptions (see pp.152–53). Another English philosopher who advocated reasoned experimentation was John Locke (1632–1704).

Scientific laws

The Baconian school asserted that science should establish rules and laws by a thorough cataloging of

phenomena, including variations and negative examples. Suggestions arising from this process should be tested via experiments. Bacon believed that science should have practical applications, for “the relief of man’s estate”.

British scientists were influenced by a host of European developments. German mathematician and astronomer

Johannes Kepler (1571–1630) devised his laws of planetary motion around 1610. Italian astronomer and physicist Galileo Galilei (1564–1642) employed quantitative experiments and systematic analysis, and produced work on falling bodies and on the telescope, which he also used to study the heavens. French thinker and scientist

“Mathematical Demonstrations . . . are the only Truths.”

CHRISTOPHER WREN, 1657

Light from an oil lamp (left) passed through this glass and diffused and projected onto the specimen.

Compound microscope

This is a replica of Robert Hooke's compound microscope. Hooke's *Micrographia* (1665) was the first important work in its field, detailing the many observations and discoveries of his microscopy.

BEFORE

The roots of scientific rationalism, with its stress on “method” can be found in different places, from the Renaissance humanists to the Reformation.

REJECTING THE OLD

The new scientific revolution could be said to have grown from the **rejection of classical and medieval ideas** by European Renaissance humanists << 152–53. Other factors include the growth of vernacular languages << 110–11, and the rise of Protestantism. Prior to the Protestant Reformation << 136–37, **Rome was the ultimate authority** in matters concerned with religion and scientific matters seen to relate to religion. When Luther questioned this, he opened the field up to other systems of thought.

MAPS AND MATHEMATICS

Another strong influence leading into the 17th century was exploration. The **expansion of exploration** in the 16th century << 146–47, in which England played a major role, drove a great

need to improve math and astronomy in order to devise better maps—for example, the pioneering 16th-century Mercator projection, improved significantly by English mathematician Edward Wright (c.1558–1615). Math, essential for any meaningful scientific enquiry, made significant strides by the start of the 1600s, while interest in astronomy was aroused by events such as the appearance of the **comet of 1532**, visible for more than 100 days, which Edmund Halley later cited in his theories.

THE COMET OF 1532

INNOVATION

NEWTON'S LAW

Isaac Newton's gravitation law states that there is an attraction between two bodies that depends on their mass and the distance between them. He realized that something must make an apple fall downward from its tree, keep objects close to earth, and hold planets in their orbits. There would have been no exploration of space without Newton's discovery of gravity's laws. There is a famous tale that this revelation came after Newton saw an apple falling off a tree around 1665. The law is contained in *Principia* (1687), and is one of the most important contributions to the modern world.

NEWTON UNDER AN APPLE TREE IN HIS LINCOLNSHIRE BIRTHPLACE

AFTER

The 17th-century scientific revolution laid foundations for the 18th-century Enlightenment and later social theories.

THE AGE OF REASON

In the Enlightenment, or Age of Reason, figures such as poet Alexander Pope (1688–1744) stressed a rational approach in all things **208–09 >>**, **224–25 >>**.

SOCIAL SCIENCES

Seventeenth-century scientific breakthroughs and philosophical thought showed the **potential of the human mind** and human progress. This anticipated the work of figures such as Jeremy Bentham (1748–1832) and John Stuart Mill (1806–73), with their rigorous social theories of Utilitarianism **282–83 >>**.

JOHN STUART MILL

competitive spats with fellow scientist Robert Hooke (1635–1703), chief curator of the fledgling society. Newton was elected society president in 1703 (until his death), from which point he dominated affairs there.

Leading scientists of the age had an astonishing array of talents. Newton became Master of the Mint (1690s), organizing the great replacement of old hammered coinage with coins with milled edges. Architect Sir Christopher Wren (1632–1723) was also a formidable mathematician and general scientist

1664 The year Robert Hooke was granted a salary for the diverse demonstrations and discussions he offered for the Royal Society. He had been made curator of experiments for the new society in 1662, but remained unsalaried while the society found its feet.

highly regarded by Newton, a founder member and president of the Royal Society (early 1680s), and an Oxford professor of astronomy. His brilliant intuition for the new experiment-based approach, and for geometry, produced such feats as St. Paul's great dome (see pp.186–87) and the span of Oxford's Sheldonian Theater (1669)—showing his ability to fuse beauty with a sense of proportion, which expressed this new age of rationalism.

Equally diverse in talent was Robert Hooke, whose continuous talks and demonstrations across multiple fields in the Royal Society's first years produced incredibly fertile results. Hooke's roll call of breakthroughs includes introducing the term “cell” to biology and formulating a law of elasticity. He

Eye cup keeps the distance between eye and eyepiece correct. The eyepiece lens was at the top and the objective lens was next to the specimen. Between the two, lay a field lens, which increased the field of view.

Body of wood and vellum-covered pasteboard.

Descartes (1596–1650) helped establish scientific method with his 1637 *Discourse on the Method* and his concept “I think therefore I am”, using deduction by logic.

Royal patronage

Charles II played a major role in the British scientific revolution, backing two new crucial institutions. The Royal Society was founded in 1660 by Bacon's followers as a forum for scientific ideas, true to his belief in the importance of openly exchanging knowledge. The first of its kind in Britain, and still prestigious today, it is also the world's oldest surviving scientific body. It was

“If I have seen further it is by **standing on the shoulders of giants.**”

NEWTON, IN A LETTER TO ROBERT HOOKE, 1676

Focusing was done by moving and turning the microscope on a screw thread, rather than moving the specimen.

given a royal charter in 1661. In 1675, Charles founded the Royal Greenwich Observatory.

The mathematician, philosopher, and academic Sir Isaac Newton (1643–1727) dominated this era of thinking. His work included breakthroughs on gravitational pull (see right), mathematical calculus, and optical principles—he invented a pioneering reflecting telescope and showed that white light was made up of a rainbow of colors.

The spirit of his age

Newton was a key figure in early Royal Society circles. A man of difficult temperament, he is famed for his

also fitted in acting as a chief surveyor for the City's rebuilding after the fire of 1666 (pp.182–83).

Plotting the stars

Another Royal Society member, in the mold of Bacon and the practical application of science, was Edmund Halley (1656–1742). Encouraged to pursue astronomy by the Observatory's Astronomer Royal, John Flamsteed, Halley worked on planetary motion and helped Newton formulate his gravitational theories. His star catalog of 1678–79, using observations he had taken at sea, was the first account of its kind for the southern stars. He is best known for his work on comets.

St. Paul's Cathedral

St. Paul's Cathedral, completed in the early 1700s, is the masterpiece of architect Sir Christopher Wren. Its dome is one of the largest in the world and is made up of three layers—the inner dome, the brick cone, and the outer dome or "skin." The inner dome measures 103ft (31m) across and 225ft (69m) in height. The murals inside the dome, showing the life of St. Paul, are by the English painter Sir James Thornhill.

The Glorious Revolution

The 17th century had already seen one king killed by order of “the people” and the country plunged into bloody civil war. When a second Stuart monarch, James II, seemed determined to shape the nation to his despotic will and dictate its religious beliefs, his throne was soon under threat.

BEFORE

Tensions between the monarchy and those who considered themselves the representatives of the country were nothing new.

THE MONARCHY AND THE PEOPLE

Magna Carta curtailed the power of the monarchy, although it did not benefit the people as a whole << 86–87. The Tudors redressed the balance, aiming to centralize power << 132–33. James I viewed the matter in philosophical, even theological terms, presenting learned arguments for the **divine right of kings** to rule << 158–59. His son, Charles I, was prepared to go to war with his Parliamentary opponents << 170–71 over this theory, and to defy them to the death when he was defeated. Parliament’s victory was a mixed blessing: it was hard to see how the cause of democratic

CHARLES I AS CHRISTIAN MARTYR

representation or accountability was advanced by the **dictatorship** into which the Commonwealth quickly descended << 172–73. Charles II’s **Restoration was welcomed**, but the King’s absolutist inclinations soon became evident << 176–77.

ROYAL RELIGION

Charles II’s apparent **leanings toward Catholicism** also caused tension between the monarchy and the people, while his younger brother, James II, was an **avowed Catholic** << 177. In the eyes of English Protestants, that (clearly hierarchical) faith was the natural accompaniment to Stuart absolutism. It was not one they wanted anything to do with.

William III landing at Torbay

Seen in this painting from c.1680 as a heroic deliverer, many regarded William as a usurper, and James II’s ousting as the most cynical of coups.

The Duke of York was a controversial figure even before he became King James II: his conversion to Catholicism upset many; his marriage to Mary of Modena made matters worse. The object of Exclusion Bills (see p.177) and assassination plots, he had no illusions as to his popularity. Yet he was unflappable in his arrogance or, as he saw it, his consciousness of his divine right as king.

Some later historians have tended to see James as an inadequate, cowardly, and weak man. In fact, he was courageous and experienced in

7 The number of nobles—the “Immortal Seven”—who democratically decided that William of Orange should occupy the British throne.

battle. During his French exile, he saw front line service against the Fronde—an uprising of disenchanted nobles in the 1650s.

Monmouth’s folly

Resistance to James II was quick in coming. The Duke of Monmouth was Charles II’s illegitimate son and James’s nephew. However, he was also a Protestant and hoped to take the throne. Landing in Lyme Regis with a small force in June 1685, he marched inland through a strongly Protestant region, recruiting supporters at a series of pretend coronations. Failing to take Bristol, he tried Bath before moving on to Warminster. An attempt to open a second front in Scotland having failed, Monmouth’s men fell back before being defeated at Sedgemoor on July 6. Judge Jeffreys’ Bloody Assizes followed: more than 300 rebels were executed.

James’s decision to raise a standing army, rather than recruiting soldiers ad hoc, sent out the message that he was at war with his subjects. His Declaration of Indulgence toward Catholics caused outrage in 1687 and the birth of a son, and legal successor, provoked panic.

By invitation

A group of Protestant nobles, already in negotiation with William of Orange, Stadtholder (the chief of state) of the Dutch Republic, became even more

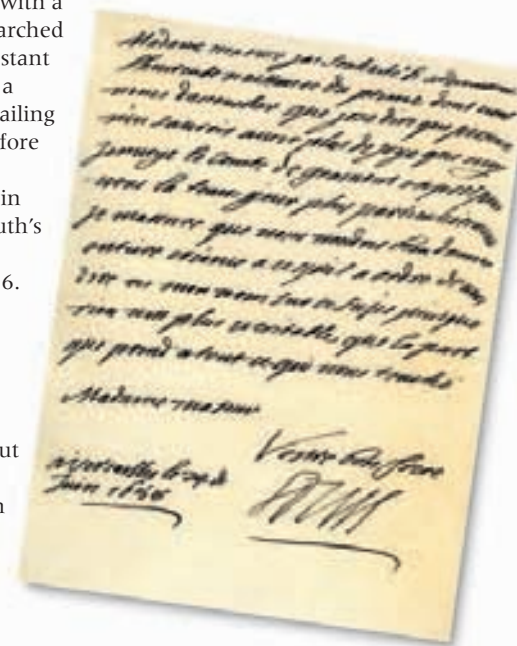

eager for him to depose James and reign as William III. His wife, Mary (James II’s daughter), had the better claim, but William wanted to be more than Prince Consort.

His first invasion fleet was dispersed by winds in October 1688; he later landed at Torbay. James was unfazed until he found his officers defecting in droves. He fled for France, but was captured. William turned a blind eye while they escaped, so James could not become a focus for royalist unrest.

A Convention Parliament in January 1689 issued a Declaration of Rights, asserting that James’s attempt to flee amounted to abdication and branding his actions as king unconstitutional. William III and Mary II were (unusually) made joint co-rulers in his place.

Draft for democracy

The Declaration of Rights was primarily a stick to beat James II with. As formalized in December 1689 as the Bill of Rights, however, it became the blueprint for a constitutional monarchy. The King and Queen would be held in the highest respect as heads of state, but would not be allowed to disregard the wishes of the people’s parliamentary representatives.

Birth of James Francis Edward Stuart

In this letter of June 24, 1688, Louis XIV of France congratulates James II’s wife Mary of Modena on her son’s birth. “James III” was seen by Stuart supporters as rightful king of England.

Mary and William

Shown here enthroned in heaven, William and Mary reigned over England together. At Mary’s insistence, theirs was a partnership of equals.

AFTER

James’s overthrow was first described as a Glorious Revolution in 1689, and since then, its centrality to the modern British identity has never been in doubt.

ELECTRESS SOPHIA OF HANOVER

LAST OF THE STUART KINGS

The Stuarts, unsurprisingly, believed that an outrageous injustice had prevailed. James fought unsuccessfully to win back his throne **196–97** >>. William’s **failure to leave a dynasty** merely prompted Parliament to seek out another ruler, Sophia, Electress of Hanover (granddaughter of James I), whose successors were to reign into the 19th century **200–01** >>.

JACOBITE SUPPORT

Stuart supporters—known as Jacobites from *Jacobus*, the Latin form of James—continued to keep faith, in Scotland especially. **A number of unsuccessful uprisings** were staged in the decades that followed **202–03** >>.

NO REVOLUTION

The French Revolution of 1789 **did not spark a similar overthrow** of the British state **236–37** >>. Possibly the **constitutional upheavals of 1688 and after** had satisfied the desire for moderate democratic change in Britain.

4

RISE OF POWER

1688–1815

As England and Wales united with Scotland, the British realm grew into a powerful trading nation that expanded financially and commercially. It acquired new territories, markets, and sources of raw materials, while inaugurating the Industrial Revolution and eventually defeating the mighty French foe.

Marine timekeeper

In 1735, English clock-maker John Harrison unveiled a precision timekeeper that was unaffected by the motion of a ship; it was the first step in his successful bid to solve the problem of determining longitude at sea.

William and Mary

Mary looks on as her husband, William of Orange, receives the royal crown of England from the assembled lords. The crowning of the joint monarchs was the culminating moment of the Glorious Revolution of 1688.

For England, Wales, and Scotland now constituted a collective kingdom of Britain, under a Protestant Hanoverian monarchy. (Ireland was a kingdom of its own, although under the same monarchy as Britain.) And to the British, religious allegiance had become an inseparable aspect of political loyalty. To be patriotic was to be Protestant: it was that simple.

Struggle to unite

Yet it had by no means been a straightforward process reaching this point of unity, and it had assuredly not been easy. If the Glorious Revolution of 1688, in overthrowing the Stuart king, James II, had resolved the opposition between the monarchy and the representatives of the people which had so dominated the Tudor and Stuart period, it had brought new and bitter conflicts in its wake.

To some extent, the early tumults were about clearing up unfinished business from the period before. James II, a Roman Catholic, still had claims on the Crown, and still had hopes of returning to power. Yet his defeat in the early 1690s was a defeat also for Catholic Ireland, as well as for like-minded groups in Scotland too. Scotland, however, remained the more immediate threat for the new

» A British kingdom

The writer Daniel Defoe had a day at the races in 1724, on Epsom Downs, Surrey, where the famous Derby would be run from 1780 onward. Even then, the spectacle was something to comment upon. Defoe was exhilarated by the sight of so many carriages, all the smartly turned-out gentlemen, the ladies in their finery, and, of course, “the racers flying over the course as if either they touched not, or felt not the ground they run upon.” Summoning up all of his poetic powers to find an image glorious enough to do justice to the occasion, he wrote: “I think no sight, except that of a victorious army, under the command of a Protestant king of Great Britain could exceed it.”

Hanoverian line in the 18th century, but, again, victories over Stuart pretenders in Scotland in 1715 and 1746 were triumphs for both the state of Britain and for Protestantism.

Empire and industry

The struggle to sort out its own domestic settlement was only the start for the new British state. It had to establish a position for itself, both in Europe and in the wider world. It also had to find a suitable function, and Britain saw its future as that of a major trading nation.

The building of the financial structures that would make this possible from 1694 onward went in parallel with the acquisition of numerous overseas possessions. These lands were to be both sources of raw materials and potential markets for the future. Britain met an early setback in its loss of the American colonies in 1783, but there was consolation to be had in the territorial gains which continued to be made in India.

Britain was extending its horizons in other ways as well. In Scotland, in particular, writers and thinkers were coming to a new understanding of the world, in what became known as the Scottish Enlightenment. Meanwhile, more literal explorations were taking

place, as great navigators such as James Cook and Matthew Flinders opened up the exotic lands of the Pacific and Oceania. As remarkable in their way also were the new developments taking place in such apparently mundane spheres as farming and industrial manufacture. A revolution swept British agriculture in the 18th century. This in turn, by freeing up resources for the towns, did much to make possible the extraordinary explosion of economic and technological creativity which we now think of as the Industrial Revolution.

When real revolution came in France, in 1789, a constitutionally stable Britain proved more-or-less immune to its effects, and strong enough to fight off the menace of a marauding Napoleon Bonaparte as the 19th century began.

Battle of Waterloo, 1815

The narrow victory of the Duke of Wellington's British-led army over Napoleon Bonaparte at the Battle of Waterloo in 1815 left Britain as the dominant power in Europe. For Britain, it also heralded a lengthy era of peace and prosperity.

BEFORE

The Glorious Revolution of 1689 left unfinished business to be sorted out.

SCOTTISH RESENTMENT

England may have been happy that it had made Protestant succession sacrosanct, but the other nations did not share the same view. Most Scots approved of England's efforts at ensuring a Protestant monarchy, but many were uneasy at England's unquestioning assumption that it could take the lead. Resentment of English arrogance had been bred into the Scots for centuries—and certainly since the days of the Independence Wars << 92–93. Moreover, there were still some Scots who had not been happy to see James II overthrown. They wanted to see the restoration of the Stuarts—originally a Scottish dynasty << 158–59.

IRISH ANGER

Ireland, after fighting England for years, had lost its elite to the Flight of the Earls << 156–57, only to experience cruel repression under Oliver Cromwell << 174–175. The view that the Stuarts stood for despotism and their enemies for freedom struck no chord with those who had suffered so much at Protestant England's hands. They might have no reason to be grateful to an English king, but they neither had they any reason to rejoice when James II was toppled in the Glorious Revolution << 188–89.

Succession Wars

Scotland and Ireland became battlegrounds as rival factions fought for James II or for William III. The victory of the “Williamites” spelled an end to an immediate Stuart restoration. Protestant triumphs at Derry, Enniskillen, and the Boyne became a foundation-myth for Ulster’s Unionist tradition.

The Protestant powers of Europe feared the strength and ambition of Louis XIV of France, though Catholic states such as Spain, Portugal, and Bavaria felt threatened by him as well. The Dutch were immediately threatened when, in 1688, Louis XIV’s designs on the Palatinate of the Rhine became clear.

William III of England was still the Stadtholder, or “steward”, of Holland. He approached Emperor Leopold I, who formed the League of Augsburg, or “Grand Alliance.” The War of the Grand Alliance is also known as the Nine Years’ War—though it was different from the Irish conflict of the same name (see pp. 156–57).

The orange and the green

With fighting erupting in Europe, Ireland’s fate could hardly have loomed large for Louis. But James II hoped for his support in a bid to recover his throne. That the deposed Stuart should

Battle of Boyne

James II’s defeat at the Battle of Boyne in 1690 ended his hopes of taking back his throne. William’s triumph is celebrated each year on July 12 by the Orange Order.

see Catholic Ireland as a natural staging post for a reconquest of Britain was logical enough, for many Irish had never accepted William’s accession. James landed at Kinsale in the far southwest in March 1689.

A month later, James laid siege to

7,000 The number of combatants killed at the Battle of Aughrim (1691), considered to mark the final collapse of the Jacobites in Ireland. William’s army lost around 3,000 men, but the Jacobites also lost crucial officers.

Derry. While the authorities in the city made plans for its surrender, a group of apprentice boys put them to shame by unilaterally locking the gates. The citizens rallied, and a few months later the Royal Navy came and relieved the city. Although Protestant irregulars in the north scored successes, William’s forces became bogged down. William himself came to break the stalemate.

A French naval presence could have prevented William from aiding his forces, and a belated fleet was sent up the Channel. An ill-prepared England was caught out in its turn, and a hastily

Louis XIV of France The “Sun King” had his own agenda, in which Britain’s Wars of Succession were a small and incidental part.

SCOTTISH NOBLEMAN (1648–89)

“BONNIE DUNDEE”

John Graham of Claverhouse and 1st Viscount Dundee, won fame and his nickname for his fidelity to the Stuart cause. However, in his loyalty to Charles I during his Bishops’ Wars (see pp. 166–67), such was the energy and ruthlessness with which he had hunted down the Covenanters (Protestant signers of Scotland’s National Covenant), that he was widely remembered in the Lowlands as “Bloody Clavers.”

Duke of Marlborough

Included among the furnishings at Blenheim Palace, Oxfordshire, this tapestry shows John Churchill issuing orders at the Battle of Blenheim in 1704.

assembled Anglo-Dutch fleet was badly mauled at the Battle of Beachy Head on July 10, 1690.

The twelfth and after

Protestant pride was restored when William led a force to victory at the Battle of the Boyne. The engagement's anniversary on July 12 marks the climax of the Orange Order's marching season, though in fact it was fought on the first of the month according to the Julian calendar then in use. The battle was fought over a ford in the River Boyne: William's army was not only larger (with more than 35,000 men to James' 23,000) but also better trained.

James fled in panic back to France. Led by Patrick Sarsfield, the Earl of Lucan, those left behind fought on bravely. They defeated William at the First Siege of Limerick (1690), but were badly beaten at Aughrim.

William's Second Siege of Limerick was successful, forcing the Jacobites to surrender. Both sides signed the Treaty of Limerick in 1691.

Scottish slaughter

In Scotland John Graham of Claverhouse, Viscount of Dundee, had stayed loyal to the Stuarts when

James II (James VII in Scotland) was deposed. The rebellion of "Bonnie Dundee" (see box) lifted Jacobite hopes with victory at the Battle of Killiecrankie (July 1689). They were dashed again soon after by defeat at Dunkeld that August and at the Haughs of Cromdale the following year. From the first, a nasty cocktail of religious

enmity and clan rivalry informed the conflict. This came to a head at Glencoe in 1692. There a group of Campbells in King William's service fell upon the MacDonalds who had taken them into their homes as guests, killing 38. Dozens more died of exposure after fleeing into the snow. The Campbells' justification was the reluctance of their hosts to make an oath of allegiance to the Protestant King—though they seem to have been as interested in settling their own old scores.

Back into battle

Britain had it all to do again in Europe: the Grand Alliance was recreated in 1701 for the War of the Spanish Succession. This time, Britain fought on the Continent, with John Churchill, the Duke of Marlborough, demonstrating his dash and flair. In 1704, he threw the French completely off their guard by marching 50,000 men from the Low Countries to the Danube in just five weeks. His victories at Blenheim on August 14, 1704 and Ramillies in May 1706 were crucial; he won again at Malplaquet in 1709.

The War of the Spanish Succession was also fought in North America. Known as Queen Anne's War, it took its name from William's successor, Anne, who reigned from 1707. It was only in 1713 that Louis XIV was defeated. France ceded to Britain its claims in the Hudson Bay territories in the Treaty of Utrecht.

“The **action began** at a quarter past ten, and was so hot till **after eleven** that a great many old **soldiers** said they **never saw brisker work.**”

CONTEMPORARY ACCOUNT OF THE BATTLE OF THE BOYNE

AFTER

A sideshow of the European conflicts of which they formed a part, the Succession Wars were crucial in the development of the modern British and Irish identities.

THE HANOVERIAN DYNASTY

It took a particular context to make a German dynasty into British kings and queens, but the Hanoverians were **quickly accepted by their subjects**. They were also accepted in Scotland once it had come together with England into a united Kingdom of Great Britain **200–01** >>. In both countries there were those who fought on for James II's Stuart successors **202–03** >>.

A LEGACY OF HATRED

It was in **Ireland** that the legacy was to be most bitter. The country **rose in rebellion** in 1798 **238–39** >>. It was an enduring legacy as well: Ulster's Protestant Unionists drew inspiration from "King Billy" and his victories as they made their stand against Irish independence early in the 20th century **332–33** >>. They did so again at the time of the "Troubles" when they rejected the **nationalist aspirations** of their Catholic neighbors **378–79** >>.

King and warrior

In 1743, George II became the last British monarch to lead his army into action at the Battle of Dettingen, in the War of the Austrian Succession.

The House of Hanover

In their search for a successor to maintain the sort of monarchy they wanted, the English had looked first to the Netherlands. Now a German dynasty was to occupy the throne, but the Hanoverians were at home among a people for whom Protestantism and patriotism were coming to mean the same thing.

A new century heralded a new succession crisis, and further fears of Britain falling back into “popish” hands. In 1702, Queen Anne ascended the throne, and though no one felt the least anxiety about her loyalties, she was still a Stuart and the daughter of James II, a Catholic king. She was also going to die without an heir, as her last surviving child, Prince William, Duke of Gloucester, died in 1700, aged only 11 years. In 1701, Parliament had rushed through the Act of Settlement to preempt any bid by the exiled James II himself, should he outlive Queen Anne, or by his son James Edward Stuart or daughter Louisa Maria Teresa, if he should not. Instead, the Act established that the succession would go to the reliably Protestant (and German) Sophia, Electress of Hanover.

Union dues

Scotland’s Parliament, irritated at England’s high-handed conduct in passing the Act of Settlement without consultation, brought in an Act of Security in 1704, insisting on its right to choose a monarch of its own. The Westminster Parliament retaliated with an Alien Act that marked out Scots in England as foreigners to be discriminated against—putting the Scots and their economy at a major disadvantage. In these less than ideal circumstances, the Scottish Parliament had little alternative but to commit itself to a permanent relationship with England. Both countries passed complementary Acts of Union in 1707.

Sophia died just a few weeks before Anne herself died, so on August 1, 1714, Sophia’s son became King George I of Great Britain and Ireland.

A foreigner on the throne

George was aged 54 by the time he was crowned king of a country to which he was a stranger. His previous life as a German prince included service in the Hanoverian army in the War of the Spanish Succession. Set in his ways, he never became fully naturalized in England—or in the language of English. But staunch Protestantism mattered more than nationality at this time.

After the failed Jacobite rising of 1715 to restore the Stuarts to the throne, and a second minor scare in 1719, George’s reign was comparatively secure, and for

the most part peaceful. George did, however, take Britain into the War of the Quadruple Alliance (1718–20), fighting alongside the Dutch Republic, Austria, and France to thwart Philip V of Spain in his plans to take the French throne and territories in Italy, over which he felt his wife, Isabella Farnese, was entitled to reign. In the realm of domestic government, George’s fears of Jacobitism led him to be suspicious of the Tories—despite their traditionally being the monarchical party—and

consequently into the embrace of the constitutionalist Whigs, who favored a diminution in the power of monarchy.

11 days were “lost” in September 1752 when Britain switched from the Julian to the Gregorian calendar. New Year’s Day, previously March 25, became January 1 as a season-based year was replaced by a strictly chronological one.

Soldier king

George II, who acceded to the throne in 1727, was also a veteran of the War of the Spanish Succession. However, his most ferocious fights had been with his own father—the prince was arrested and banned from the court after one particularly bad quarrel in 1717.

An early event of George II’s reign was the War of Jenkins’ Ear, fought against Spain from 1739, over the right of Britain to sell slaves in the Spanish Empire (it was named after an English sea captain, Robert Jenkins, wounded by Spanish coastguards). Failure to prosecute the war vigorously enough contributed to the fall of Robert Walpole’s Whig government. By 1742, the war broadened out to become part of the War of the Austrian Succession, in which Britain sided with the Austrian Maria Theresa, and her “Pragmatic” party (in favor of bending the rules to allow her succession to the Habsburg throne as a female), against France, who had Frederick II of Prussia in its camp. The end of the War of the Austrian Succession was little more

Long-reigning George III

George III, Britain’s third Hanoverian king, reigned for almost 60 years, a record length of time for a monarch on the throne, until later surpassed by that of his granddaughter, Queen Victoria.

INNOVATION

HERSCHEL’S TELESCOPE

Born in Hanover in 1738, William Herschel came to England in 1756. His fascination with the precision craft of grinding lenses and the mechanics of making telescopes led to his interest in what they revealed. With the help of his sister, Caroline, he conducted systematic surveys of the heavens, discovering the planet Uranus in 1781, and calling it *Georgium sidus*, the “Georgian Star” or the “King’s Star”. A fascinated George III further encouraged these researches, making William the King’s Astronomer in 1782. In 1785–89, William built what was then the largest telescope in the world (shown here). Its main mirror had a diameter of 1.2m (4ft).

BEFORE

The continuity that is key to the ideal of monarchy had been hard to find in the England of the 17th century.

STUART DIFFICULTIES

In 1603, the death of Elizabeth I, the “Virgin Queen”, had brought a **Scottish king to the throne** in the form of James I (James VI of Scotland) **◀ 158–59**. But since then, the Stuart succession had been anything but smooth. Charles I had so **alienated his Parliament** that he fought a civil war with them and was executed in 1649 **◀ 170–71**. For just over a decade after this, during the years of the Commonwealth, the country was **without a king** **◀ 172–73**.

RESTORED—BUT RESENTED

The monarchy **made its return** with the Restoration of Charles II in 1660 **◀ 176–77**. But Charles quickly **upset Protestants in Parliament** and the country. His high-handed style (and **Catholic sympathies**) stretched their patience to the limits—and his younger brother, James, promised to be **even more absolutist** in his style. In 1688, a Dutchman, William, Prince of Orange, was **invited to take the throne** as England’s William III **◀ 188–89**.

than a pause for breath before, in 1756, the same combatants (albeit in a different combination of alliances) became embroiled in the Seven Years' War (see pp.212–13). Before this, in 1745–46, George had to overcome the threat to the British throne of a new Jacobite rebellion (see pp.202–03).

“Farmer George”

In 1760, a young king followed an old one when George III came to the throne. He was George II's grandson, not his son, and only 22 years of age. His “madness”—porphyria, an inherited disorder—was a feature of his later life. Although he lost time to illness from early on in his reign, he was generally a force for stability and calm, despite his accession being overshadowed by the Seven Years' War. The Hanoverian dynasty seemed to have come of age as Britain's ruling house in him: English was his first language and he never visited Germany.

Yet his succession had come as a surprise after the unexpected death of his father, the Prince of Wales. Brought up very strictly, George was religious and was devoted to his wife Queen Charlotte—despite not having met her until their wedding day. His down-to-earth manner and agricultural interests earned him his nickname “Farmer George”, but he was also a highly educated and cultured man. His interest in agriculture was actually in the scientific innovations

Cartoon of George IV

“To be or not to be?” The Prince Regent asks himself what everyone else was asking in 1820: was he really ready to be king?

transforming British farming at the time (see pp.230–31). A passionate reader and bibliophile, he established the King's Library, London, and was a generous patron to the Royal Academy.

George III broke the Hanoverian mold by leaning toward the Tories, rather than to the Whigs, in Parliament. He was true to Hanoverian type, however, in having a difficult relationship with his son, although the Prince of Wales had to step in as regent from 1811, when illness incapacitated him.

“Born and educated in this country, I **glory in the name of Briton.**”

GEORGE III, IN HIS ACCESSION SPEECH, OCTOBER 25, 1760

So firmly established had the Hanoverians become that their foreign origins were more or less forgotten. Britain seemed comparatively at ease with itself as the century wore on—though the effects of tumults abroad were strongly felt.

OVERSEAS THREATS

The rebellion of the American colonies was of direct concern, of course. Britain fought frantically to keep hold of its possessions **214–15** >>. The **French Revolution** followed **236–37** >>, but the specter of home-grown sedition was soon displaced by a well-founded fear of **Napoleon Bonaparte 240–41** >>.

FIT TO REIGN?

The monarchy, for the most part a tower of strength, briefly became the **source of instability** in 1788 as George III's failing health prompted the Regency Crisis **254–55** >>. From the 1790s, the public airing of dirty linen brought the **royal family into disrepute**. The wild and extravagant conduct of the future George IV as his father's Regent from 1811 was **hardly calculated to redeem it**.

Coronation of George IV

The coronation of George IV took place at Westminster Abbey, London, in July 1821. It was marred by scandal when the new King's estranged wife, Caroline, from whom he had lived separately since 1796, came back to London to claim her rights as queen.

BEFORE

The Stuart family had started out in medieval times as stewards to the Scottish kings, but since then their ideas had become much more exalted.

RIGHT TO RULE

James VI firmly believed in his “divine right” to rule, and he took the same conviction into his reign as England’s James I << 158–59. His son, Charles I, was prepared to go to war with his Parliament << 168–69, finally giving his life for his principles—and pride << 170–71. His son, Charles II, managed to take back the throne after years of exile << 176–77.

A SECOND RESTORATION?

Charles II was succeeded by James II, whose Catholicism and absolutism alienated powerful Protestant subjects. In 1688 he was toppled. << 188–89. James and his supporters—the Jacobites—fought back to win the throne, but without avail << 196–97; though a Stuart did succeed William III, it was the Protestant Queen Anne << 200–01.

SON OF JAMES II (1688–1766)

THE OLD PRETENDER

James Francis Edward was the man who would have been King James III (James VIII of Scotland)—the rightful “King Over the Water” as far as Jacobites were concerned. Others claimed that James II’s son had actually been an imposter from birth; that he was smuggled into Mary of Modena’s bedchamber in a warming pan after her own baby was stillborn.

James grew up in France. He returned to Scotland in 1708 to reclaim his throne, but his French invasion fleet was beaten back before he could land. He fared little better when he returned for the rebellion in 1715.

Scottish Jacobites

The struggles of the Stuarts to reclaim the Crown—for themselves and for Catholicism—continued through the early decades of the 18th century. The ousted dynasty came back to haunt the Hanoverians in a series of rebellions that rocked the state, reminding Britain of what had so nearly been.

The Jacobites’ hopes rested with James Francis Edward Stuart, or James III, though his attempted invasion of 1708 had failed. A Jacobite rebellion in 1715 started promisingly with the capture of Perth, but the Duke of Argyll held Stirling. The Scottish clans were divided: the Earl of Seaforth was with the rebels, but his army was harassed by hostile clans. A small force

invaded England, hoping to attract sympathizers along the way; but on November 14, the Jacobites were defeated at Preston. Measures to prevent future risings were introduced.

Taming the Highlands

The Disarming Act did what its name implies, depriving the Highlanders of their weapons. This was a cultural

attack as well as a military one, since the dirk (long dagger), claymore (broadsword), and target (small round shield) were part of Highland dress.

British commander General George Wade inspected Scotland in 1724 and recommended large-scale infrastructure improvements to help control the region, with new roads and barracks, and the founding of Fort William,

Flintlock pistol

Firearms were improving fast: this silver-mounted, sidelocked flintlock from the Jacobite era was not just elegant, but easily reloaded and reliable.

Very much a Highland band in its organization and tactics, it was at the same time firmly loyal to the Crown.

The Young Pretender

“Bonnie Prince Charlie,” Charles Edward Stuart, was the son of “Old Pretender,” James Francis Edward. With the War of the Austrian Succession in 1743, the French were again looking to make mischief for the British. They agreed to provide naval

Fort Augustus, and Fort George. Even so, there was an attempted rising in 1719. This one relied on Spanish help, the French

having now made their peace with England. The invasion force was dispersed by the weather; a few hundred men were landed and managed briefly to occupy Eilean Donan Castle, but were defeated at Glen Shiel on June 10.

Efforts to “domesticate” the Highlands continued with the establishment of the Black Watch regiment in 1725.

backing for an invasion of England, but this fleet was broken up by storms. France lost interest, but Charles kept planning. In July 1745, he turned up virtually unannounced (and without French troops) on the Scottish island of Eriskay. His standard was raised at Glenfinnan a few weeks later, despite skepticism among the Highland chiefs.

Charles mustered 3,000 troops, and took Perth and Edinburgh. He lingered there, posing as monarch, while many of his troops dribbled away. He led what was left of his force to an unexpected triumph at Prestonpans, East Lothian, on September 21. There was still no sign of a popular rising in his support. By now, the Crown was organizing its forces.

Dissension split the Jacobite camp: army general Lord George Murray disagreed with Charles on just about everything, including the idea of invading England. Even so, in November the Jacobites headed south via Carlisle and Manchester, where a group of English supporters joined them. However, there was no rush to rally to the Jacobite banner. At Derby, a government agent told Charles that a staunch defense had been prepared in London (which was untrue). To Charles’s disgust, the chiefs voted to withdraw to Scotland to consolidate their position.

Bonnie Prince Charlie

After months on the run, the “Young Pretender,” lying low on the island of Benbecula in the Outer Hebrides, met Flora MacDonald. A supporter’s daughter, she helped him escape, disguising him as her maid Betty Burke.

“We are sadly convinced that they are **not such raw ragamuffins** as they was represented.”

WILLIAM WALPOLE IN A LETTER, AFTER PRESTONPANS, SEPTEMBER 27, 1745

Execution of Scottish clan chief

Simon Fraser, chief of the Fraser clan and Jacobite supporter, was the last man to be beheaded on London’s Tower Hill on April 9, 1747.

AFTER

In the Highlands, whole communities mourned their dead and surveyed the smoking ruins of their homes and fields. They would have to rebuild their lives—without the support of cultural traditions barred by vengeful and oppressive laws.

REACHING A SETTLEMENT

Many felt used and abandoned by those whom tradition had set above them. They were to feel the same **sense of betrayal** subsequently. Clan chiefs, who turned into strutting aristocrats, started **clearing whole communities off their ancestral lands 294–95 >>**

For most in Scotland and England, though, the crushing of the Jacobite rebellion in 1745 was welcome. It brought a period of taking stock. The Jacobites’ downfall confirmed for Britons that their **future was to be Hanoverian and Protestant**. Most were happy enough with the settlement. The **flowering of intellectual and artistic culture** in Glasgow and Edinburgh in the late 18th century suggested that in some ways the Union with England suited Scotland **224–25 >>**

FORT GEORGE, INVERNESS

DECISIVE MOMENT April 16, 1746

The Battle of Culloden

The Young Pretender's pretensions were unceremoniously ended in a scrappy encounter against professional British troops in open country near Inverness. Culloden has the status of myth, but it was a series of disastrous decisions that ensured the Jacobite cause had to content itself with a romantic gesture of heroic failure.

Prince Charles and his supporters were backed into a corner at Culloden, but they did not have to fight a pitched battle, particularly on such disadvantageous ground. Both tactics and field were the Prince's choice, against the objections of Lord George Murray, his senior general, who favored a low-level guerrilla war.

Futile attack

Murray's own idea for a night attack on the British camp at Nairn, on April 15, was badly botched. The Jacobites were exhausted, hungry, and in disarray as the British, led by the Duke of Cumberland, advanced early on April 16. Confusion among the Jacobite commanders led to their front line being overstretched. Then the Prince left his men standing, exposed to fierce artillery fire, while he waited for the right moment to attack. When it came, the Highlanders' charge quickly lost its

cohesion over the rough and marshy ground. Most were shot as they pressed forward. By the time Murray could bring up the French-trained Royal Écossois, his left wing had broken and fled. Victory was out of the question now, though the professional Écossois allowed an orderly retreat, and gave Prince Charles a chance to flee.

The rising collapsed. The Prince, a wanted man, had a price of £30,000 on his head. Even so, he was helped by loyal supporters, and was on the run for months before he slipped away (disguised, notoriously, as Jacobite supporter Flora MacDonald's maid).

Bloody retribution

Reprisals across the Highlands by "Butcher" Cumberland saw suspected Jacobites killed, cattle stolen, crops burned, and villages destroyed. Clan culture was suppressed, with traditional weapons and Highland dress outlawed.

“Their front had **nothing left to oppose us** but their pistols and broadswords...”

CAPTAIN JAMES-ASHE LEE, OF CUMBERLAND'S ARMY, ON THE JACOBITE CHARGE

Annihilation at Culloden

The heroic charge of the Jacobite's Highland infantry, with broadswords raised, was nullified by the rough and marshy ground across which they had to struggle, under a hail of cannon and musket fire from the disciplined ranks of red-coated British troops.

BEFORE

The power struggle between the monarch and representatives of the general populace has long been a feature of British history.

POLITICS OF POWER

Efforts to **curb the king's power** were made in medieval times in the Magna Carta **<< 86–87**. The Tudors tipped the balance the other way, by **centralizing authority in the sovereign << 132–33**.

The Stuarts took this philosophy to extremes, with James I subscribing to the **divine right of kings << 158–59**. His son, Charles I, felt so strongly on the subject that he went to war with his Parliament **<< 168–69**. Charles engaged in a **struggle for power with the Parliament of England**, attempting to obtain royal revenue while the Parliament sought to **curb his royal prerogative**, which Charles believed was divinely ordained. After his execution in 1649 **<< 170–71**, his son, Charles II, regained the throne **<< 176–77**, which was subsequently snatched away from his younger brother, James II **<< 188–89**. The real winner in the Glorious Revolution was not William III but Parliament, in cooperation with which he had agreed to rule. Similarly, the defeat of the Stuart Pretender Bonnie Prince Charlie in 1745 **<< 204–05** was a victory not just for the Hanoverians but for the whole **principle of constitutional monarchy**.

After the Act of Union, the English and Scottish assemblies were dissolved to be replaced by a single British Parliament. The power of the Parliament increased—the Glorious Revolution reaffirmed the importance not only of Protestantism, but of Parliamentary democracy.

20 Number of complete years served by Robert Walpole as prime minister, Britain's first such administration—and still easily the longest. In total, Walpole was premier for 20 years and 314 days.

The rise of Walpole

Whig politician Robert Walpole was elected to his father's old Norfolk constituency in 1701 and quickly made his mark, being appointed Secretary of War in 1708. Surviving a politically

inspired impeachment, he emerged as First Lord of the Treasury and Chancellor from 1716. He came unscathed and (through no virtue of his own) emerged untainted through the South Sea Bubble crisis of 1720 (see pp. 210–11).

As the last man standing in a discredited administration, he assumed unchallenged preeminence as First Lord of the Treasury, Chancellor, and Leader of the House. Walpole was asked by King George I to sort out the crisis,

Debating chamber

By the 18th century, the Commons chamber could be seen as the beating heart of British politics. The Hanoverian monarchs were content to let the politicians have their way.

Politics and Prime Ministers

A war had been fought, a revolution staged, and several insurgencies suppressed so as to protect the sovereignty of Britain's Parliament. In the 18th century, Whigs and Tories debated how best to wield Parliament's new-found power and govern the nation.

RADICAL POLITICIAN (1725–97)

JOHN WILKES

John Wilkes was not content with the King being accountable to Parliament. He fought to make Parliament accountable to the people by printing its proceedings. Already in trouble for publishing satirical material, he was stripped of his seat as an MP in 1769. He persuaded Middlesex voters to assert their democratic rights by reelecting him (though they were promptly overruled by the courts). Wilkes' life and writings helped inspire the American Revolution.

Houses of Parliament

The debating chambers of the House of Commons and House of Lords were in the royal Palace of Westminster, which burned down in a fire in 1834.

which he did most effectively. In the decades that followed, he favored peace and prosperity over aggression, inaugurated a sinking fund to reduce the national debt, and helped secure the Hanoverian succession.

First prime minister

George II had fallen out with Walpole by the time of his accession in 1727, but Walpole's position was too strong to be assailed. Relations were mended: the King tried to give Walpole 10 Downing Street as a gift, but he would accept it only as an official prime minister's residence.

The title "Prime Minister" did not yet exist, and would not really do so till the 20th century. However, Walpole is generally held to have shaped the office around himself. Even so, his position differed from that of the modern prime minister. He was appointed by the King, not by Parliament; and it was the King (rather than the prime minister) who

Robert Walpole

It would be no exaggeration to say that Robert Walpole (1676–1745) created the office of prime minister around himself, though the title would not be used until later.

chose his cabinet. The role was to remain controversial—and fluid in definition—under his successors.

Whigs win out

Walpole's ascendancy was good news for the Whig party he led.

The Whigs' whole purpose was the defense of constitutional rights, and this period saw a strengthening of the role of Parliament.

The Tories were marginalized, with their respect for royal and aristocratic privilege out of favor. The Whig supremacy went on almost without a break until 1756. But the Whigs also generated their own internal opposition groups based around particular causes or personalities. Rapidly changing

coalitions therefore meant that political power could change hands under the broader banner of Whig power.

The family firm

William Pitt the Elder was the leader of the "Patriot" Whigs. They disapproved of Walpole's noninterventionist line on

a series of European conflicts. Coming to the fore during the Seven Years' War (1756–63), Pitt was arguably the real premier in Lord Newcastle's administration from 1758; he took over as prime minister in 1766, but was forced out of public life by ill-health.

William Pitt's son—William Pitt the Younger—was Britain's youngest prime minister ever. He was just 24 when he took office in 1783, and served for more than 17 years before resigning in 1801, but was back in power between 1804 and 1806. He tried to clean up public life and (in the aftermath of an expensive American war) sought to increase revenues through taxation. He also clamped down on smuggling, which was practically an industry at the time.

2 The number of pence in the pound paid at the basic rate for the first income tax in 1798. At the time, a pound had 240 pence, giving a taxation rate of just over 0.8 percent.

Taxes! Taxes! Taxes!

Income tax was an utterly alien idea when William Pitt the Younger introduced it in 1798. In this contemporary cartoon the taxman tries to convince John Bull that he is his friend.

AFTER

The opposition between Whigs and Tories was to become a foundation of the British political debate, establishing the parameters of parliamentary business for generations.

CHANGE IN WHIG SUPREMACY

The main point of debate was not the two-party system, but the number of voters who were to have a say in bringing the winning party to power **224–25** >>. From the 1890s, the Labour Party threatened what workers had increasingly come to see as a cosy accommodation between different factions of the ruling class **310–11** >>. The Whigs—now the Liberals—were marginalized thereafter.

PARLIAMENT BURNING DOWN, 1834

BEFORE

The critical, satirical writing that flourished in the 1700s stretches back to ancient times.

CLASSICAL INSPIRATION

Satire was common to ancient classical literature, and certainly among the Roman writers so admired in 18th-century Britain. These include Juvenal (c.60–c.140 CE), whose 16 famous “Satires” attacked the vices of Roman society.

HOME-GROWN SATIRE

In the Middle Ages, Chaucer’s *Canterbury Tales* << 110–11 created a very English satirical tone. The Restoration era, freed from Commonwealth restrictions, reveled in an irreverent exposure of human folly that characterized 17th-century work such as John Dryden’s comic play *Marriage à la Mode* (1673) and his verse satire, *Absalom and Achitophel* (1681). The 17th-century work of dramatist William Congreve (1670–1729), such as *Love for Love* (1695), provided another precedent.

Jonathan Swift

Swift’s work includes his 1729 pamphlet *A Modest Proposal*, in which he uses satire with full force by ironically suggesting that Irish poverty might be eased by feeding poor children to the rich.

Power of the Pen

As the 18th century got underway, a rapidly rising number of tracts, journals, and newspapers dissected every aspect of British politics, manners, and thought. Satire and a questioning spirit defined the times, whose leading figures included Alexander Pope, Jonathan Swift, and Daniel Defoe.

The 1700s was a highly productive time for British thinkers, scientists, artists, and writers in general; it was the Age of Reason and Enlightenment, fed by a new rationality and spirit of exploration (see pp.184–85, 224–25).

The first half of the 1700s was a particularly fertile literary period, often labeled the new Augustan Age after the great Classical writers—Virgil, Livy, Horace, and Ovid—that flourished during Roman Emperor Augustus’s reign (27 BCE–14 CE). Eighteenth-century writers made this comparison themselves and looked for inspiration to this ancient era.

There was much political activity in the early 1700s, with factions still nursing grievances from the 1600s and kicking against the established order—the 1715 Jacobite rebellion (see pp.202–03) was a key event. This made it an apt time for writers questioning the order of things—literary, political, religious, and social. The ways in which

“Satire is a sort of glass, wherein beholders do generally discover everybody’s face but their own.”

JONATHAN SWIFT, PREFACE TO *THE BATTLE OF THE BOOKS*, 1704

they did this were heavily influenced by the satires of Roman writers Horace and Juvenal, which exposed hypocrisy, weakness, folly, and corruption.

Defining satire

Satire as a label for a kind of writing first came into being in ancient Rome. In Latin, *satura/satira* means “medley”, as ancient writings that analyzed society were often a medley of miscellaneous poems and prose fragments. Although satire soon became identified with the humorous exposé, its original meaning remained in the minds of 18th-century writers, making it slightly different to our view of it today.

Irish writer and clergyman Jonathan Swift (1667–1745) was the master satirist of the 1700s. His satirical tracts covered topics from religion and poverty to literature and England’s unfair treatment of the Irish. Early works include two published in 1704: *The Battle of the Books* (dealing with ancient versus modern learning) and *A Tale of a Tub* (comparing different religions). His prose satire on human society, *Gulliver’s Travels* (1726), is presented as an autobiographical account by a ship’s surgeon of travels to fantastical lands, and allowed Swift to comment on reason, civilization, and certain political issues.

English poet Alexander Pope (1688–1744), another leading contemporary satirist, is known for his biting wit and skill with heroic couplets—pairs of rhyming lines in iambic pentameter (see pp.154–55)

that were a popular form in his time. His works include *The Rape of the Lock* (about a lock of hair; 1712–14), *The Dunciad* (in which he attacks the dullness of much contemporary writing; 1728), and *An Essay on Man* (analyzing humans’ relationship with God and the universe; 1733–34).

Club culture

Men’s clubs in the 18th century were melting pots for literary trends and political gossip. The infamous Kit-Kat (or Kit-Cat) club, strongly linked with the rise of satire, was named after Christopher Catling, proprietor of the tavern in which members first met. A dining and discussion establishment founded in early 18th-century London by leading Whigs, its members included William Congreve, Alexander Pope, Robert Walpole, writer and politician Joseph Addison, and Irish writer Richard Steele.

Kit-Kat members Addison and Steele were active in another major literary trend of the time—the rise of magazines, journals, and newspapers. Here society gossip, heated issues of the day, poetry, and opinions about current plays and books took printed form. Their contents were much discussed in clubs and coffee shops, and played a major role in spreading new ideas as well as news. Steele founded the *Tatler* periodical (1709–11) and, with Addison, the *Spectator* (1711–12).

Samuel Johnson, a leading light in literary circles, who went on to create the first real English dictionary (1755), was a regular contributor to publications such as Edward Cave’s very popular *Gentleman’s Magazine*

KIT-KAT A term for a painting measuring 36 x 28in (91 x 71cm). It comes from more than 40 portraits of the Kit-Kat club’s members, painted by Sir Godfrey Kneller. The size worked well for upper-body images.

The art of caricature

In this late 18th-century image, cartoonist Thomas Rowlandson satirizes the practice whereby rich people paid to have teeth from a poor person transplanted into their own mouths.

satirical work *London* (1738) attacked Prime Minister Robert Walpole's policies, while John Gay's *The Beggar's Opera* (1728) and dramatist–novelist Henry Fielding's *The Historical Register for 1736* also poked fun at Walpole. In 1737, Walpole issued the theater Licensing Act, a censorship system that remained until 1968. Defoe's pen brought him plenty of trouble, too: he was imprisoned after producing anti-Jacobite pamphlets in 1712–13.

Revolutionary writer

Anglo-American political writer Thomas Paine (1737–1809) fled to France at one point after being indicted by the British government for treason. His pamphlet *Common Sense* (1776) supported, and helped to move along, American independence (Benjamin Franklin sponsored Paine's emigration to America in 1774), and his *The Rights of Man* (1791) defended the French Revolution. *The Age of Reason* (1794), in which Paine criticized Christianity, caused widespread outrage.

William Hogarth

Painter–engraver Hogarth (1697–1764) is one of the most famous satirical artists of all time. His famous moralizing series *Marriage à la Mode* (c.1743) points out the hypocrisies of upper-class marriage.

British satire remains a powerful way of questioning tradition.

CONTINUING THE TRADITION

Lord Byron carried on the 18th-century tradition with his satirical poem, *English Bards and Scotch Reviewers* (1809). The 1820s saw a **torrent of satire attacking George IV's policies**. In 1841, *Punch* was founded. At its height, this weekly illustrated periodical's radical cartoons and articles were highly influential. Charles Dickens also used satire very effectively to make **comments about social conditions** in his novels.

THE AGE OF TV

The 1960s brought fresh blood to satire and **television became an important forum 372–73 »**. The magazine *Private Eye*, founded in 1962, has continued the tradition of printed political satire into the 21st century.

(1731–1907), possibly the first journal to use the word “magazine.” Johnson also wrote most of his own *Rambler* periodical (1750–52). Important Irish writer Oliver Goldsmith (1728–74), whose writing includes the comical play, *She Stoops to Conquer* (1773), wrote for a dizzying array of periodicals and also produced his own publication, *The Bee* (in 1759).

established—the *Edinburgh Gazette* had been founded in 1699, and 1747 brought the *Aberdeen Journal*. In 1791, the oldest surviving Sunday paper, the *Observer*, was born.

Daniel Defoe (1660–1731), talented essayist, satirist, poet, and pamphleteer, was a major figure in this flood of print, and one of the earliest examples

of an investigative journalist and feature writer. Defoe's short-lived *Weekly Review* (founded 1704) covered leading contemporary

events, while the historical fiction *A Journal of the Plague Year* (1722) shows great investigative skills. Defoe's *Robinson Crusoe* (1719), based on the true story of a shipwrecked sailor, is often said to be first English novel.

The power of the word

The pen became a mighty weapon and a thorn in politicians' sides in the 18th century. Samuel Johnson's early

Birth of *The Times*

This shows the day—January 1, 1788—on which the *Daily Universal Register*, founded by John Walter I in 1785, became *The Times*. It is Britain's oldest surviving newspaper with continuous daily publication.

The age of the newspaper

British news-sheets had started gathering momentum in the 17th century—the

London Gazette was founded as the *Oxford Gazette* in 1665 and is the world's oldest surviving periodical. However, newspaper floodgates burst open in the 1700s, helped greatly by Parliament's decision in 1695 not to renew a previous Licensing Act—thus establishing a free press. Soon there were numerous national and provincial papers—dailies, evening papers, and even Sunday papers. The first daily, the *Daily Courant*, arrived in 1702, and the first evening paper, the *Evening Post*, four years later. In 1737, came the *Belfast Newsletter*, the world's oldest surviving general daily newspaper. The Scottish press was also getting

50 The number of provincial (that is, non-London) newspapers going strong in 1782; this was double the number in existence in 1723, and the number would double again to more than 100 by 1808.

“Proper words in proper places, make the true definition of a style.”

JONATHAN SWIFT, *LETTER TO A YOUNG GENTLEMAN LATELY ENTERED INTO HOLY ORDERS*, JANUARY 9, 1720

A slaving company

The coat of arms of the Royal African Company—a slave trading company—shows the chief commodity that was traded by it. It was earlier known as the Royal Adventurers.

Commercial Expansion

In the early 18th century, the British economy took a great leap forward—though not because of any major boom in manufacturing or farming. Instead, what has been described as a financial revolution made new ways of making money possible. And then, of course, there was “black gold”—the trade in slaves.

The Glorious Revolution (see pp.188–89) was all very well, but Britain’s economic situation was anything but glorious. Scottish merchant William Paterson proposed opening a subscription among entrepreneurs who were prepared to invest money. Collectively, they were to become the governors of a Bank of England, founded by royal charter in 1694.

Market forces

The new national bank gave promissory notes in return for gold deposits. By 1725, these were part-printed, then completed by

cashiers, so they could be sold on and circulated to some extent. By 1759, £10 notes circulated freely as currency. The trend took off, although British banking—still in its infancy—was extremely localized: every town had its own bank, issuing its own bills. Money was a working metaphor, standing in for gold in the first instance, but after that for products or labor—whichever the holder chose.

Joint-stock companies, although not altogether new, grew rapidly in importance. These offered a way of sharing risks and profits—investors bought stocks in a company on the open market and partook in the profits, even if they were not directly involved in the company’s trading activities. An investor could also sell his share in the company’s stock to another buyer at an agreed price. The stock exchange had

been established during Elizabeth I’s reign, but the volume of business was dramatically increasing. The freedom with which cash could now circulate in note form and stock could be traded in share certificates made everything more fluid, freeing up what economist Adam Smith (see pp.224–25) would refer to as the “invisible hand” of the market.

South Sea Bubble

The risks were classically illustrated by the speculative frenzy of the South Sea Bubble. Shares in the South Sea Company soared in value (from about £100 to £1,000 at their peak in August 1720) on the back of claims that the firm had secured a monopoly on the *asiento*—the regular contract for selling slaves to the Spanish Americas. Members of the public who had

BEFORE

Britain built its power and prosperity on trade, the lifeblood of its island economy for centuries.

TRADE AND ECONOMY

Trade played its part in securing the relative **affluence of medieval England** << 88–89. The **mercantile economy** was developed both by the **monasteries** << 108–09 and the **city guilds** << 120–21. Henry VII promoted overseas trade << 132–33, and his Tudor descendants built on this success. The **colonization of North America** opened up new possibilities << 162–63.

1.2 MILLION The amount of loan (in pounds) raised by William Paterson and his partners in 1694 to endow the new Bank of England they were founding.

Royal Exchange of London

The original Royal Exchange, founded in 1565, had been destroyed in the Great Fire of 1666. Its successor was an architectural statement, a declaration of capitalist intent.

borrowed heavily to buy shares came catastrophically unstuck when the company crashed and share prices collapsed.

Expanding horizons

By the early 18th century, the English East India Company was shipping tea, silk, porcelain, and other luxuries from China. It also had bases in Thailand and Vietnam, and a network of contacts in the Spice Islands of Malaysia and Indonesia—although here it lost the major share of the trade to the Dutch. The wealth of the Indian subcontinent was a consolation: the East

India Company established a toehold in the 17th century, founding posts at Madras (now Chennai, 1640), Bombay (Mumbai, 1668), and Calcutta (Kolkata, 1690), which grew into major cities.

Rule, Britannia!

The reliance on a strong Royal Navy for protection on the seas was crucial in maintaining confidence in overseas trade. The fiasco at Beachy Head (see p.197) in 1690 took some of the gilt off the Glorious Revolution, and Britain was determined to avoid any repetition. This concern influenced the founding

40,000 The number of slaves carried by British ships from Africa to the Americas each year in the 1780s; more than 10 million Africans were transported over the four centuries of the Atlantic slave trade.

“**Trade**, without enlarging the British territories, has given us a kind of **additional empire...**”

JOSEPH ADDISON, ON THE ROYAL EXCHANGE, IN *THE SPECTATOR*, 1711

of the Bank of England in 1694, which was seen as an important way of raising some of the funds needed for a major ship-building program. Thereafter, the navy grew in size, while also improving its fighting capability. The policy paid off in the War of the Spanish Succession (see pp.196–97), notably in the capture of the strategically vital Rock of Gibraltar, which became a long-standing possession. The British Empire (see pp.212–13) did not exist yet, but the idea that Britannia might “rule the waves” did: the famous song was published in 1740.

Tragic triangle

The new, more flexible financing methods lent fresh impetus to a long-standing slave trade. London and Bristol took the lead, but were overtaken by Liverpool in the 1740s. Ships from that port alone transported 1.5 million men, women, and children to the Americas. The “triangular trade” was profitable on all three legs: cheap trinkets, textiles, and weapons sent to West Africa were exchanged for slaves, who were sold for profit in the Americas; the traders then loaded up slave ships with cotton, tobacco, and sugar to be sold back home.

The slaves had to endure the agonies of being torn from their homes and families, then forced to suffer the

Rule, Britannia!

Thomas Arne’s music and James Thomson’s lyrics came together in a stirring (and Anglo-Scottish) partnership in this immensely popular song. Britannia’s rule was more aspirational than real, at least for the time being.

miseries of the “Middle Passage” (the journey from Africa across the Atlantic), crammed into fetid and filthy holds for weeks before being sold as beasts of burden on the other side.

AFTER

Britain was rich, or at least, an important minority of its people were, and the economy as a whole surged ahead at an exhilarating rate.

INVESTING IN THE FUTURE

Now that new mechanisms were in place for making money, **new ways of spending money** were also found—and these were not always wasteful. Suddenly, newly rich landowners found themselves with

the **financial security and the leisure time** that enabled them to be creative.

This first manifested itself in the construction of stately homes in ornamental grounds, and was quickly followed by more significant innovations—experiments that transformed British farming in the 18th century **230–31** >>. Then, of course, came that time of financial entrepreneurship and technological invention known as the **Industrial Revolution 232–33** >>. With the financial and technological tools it now had its disposal, Britain was ideally placed to be the **workshop of the world 276–77** >>.

INDUSTRIALIZED MANCHESTER SEEN FROM KERSAL MOOR, 1857

BEFORE

England and Scotland, both island nations, had long depended on seagoing trade. They needed trading partners to secure their own prosperity.

EARLY COLONIES

While Scotland stuck largely to the North Sea routes, England looked beyond, but lagged far behind Spain and Portugal when the **Age of Discovery** got under way in the 15th century << 146–47. Its first attempts at colonizing North America were sporadic. **Elizabeth I's** adventurers had done a great deal better by **raiding the New World cities** of the Spanish kings. Under her successor, James I, settlements started in Virginia and New England << 162–63. After difficulties, these early colonies prospered.

A SUCCESSION OF WARS

In recent centuries, however, Britain had been beset by problems closer to home: most notably a bitter series of **succession wars** << 196–97. Its armed forces had barely been able to get their breath back before a new round of fighting began over **Maria Theresa's claim** to the Austrian succession << 200–01. This conflict had in theory ended by the signing of the **Treaty of Aix-la-Chapelle** in 1748, but—with so much still to fight for—few diplomatic observers in Europe were convinced.

Colonial Conquests

The middle of the 18th century saw Britain acquiring new territories to the east and west—in India, and in Canada. Its good intentions were quickly tested, as it became clear how immense the possibilities were for England's commercial development—and for the personal enrichment of those in charge.

The Seven Years' War was a European conflict, pitching Britain and Prussia against France and Austria and their allies (see pp.206–07). This inevitably brought about a North American dimension, as both Britain and France had transatlantic colonies. The British settlers coveted Ohio, currently claimed by the French Canadians, who traded with the native tribes for furs.

North American acquisitions

General James Wolfe sailed up the St. Lawrence River in June 1759 with 9,000 men on almost 50 ships to attack Quebec, but this dramatic entrance was followed by an anticlimactic siege. It ended, on September 13, with the hour-long Battle of the Plains of Abraham, in which the generals from both sides sustained fatal wounds. France's Louis Joseph de Montcalm died the next day, but General Wolfe's death in the moment of victory was heroic. His dying proclamation, "Now, God be praised, I die contented..." has become legendary.

Death of General Wolfe

The British Empire did not yet exist, but a mythology of imperial self-sacrifice was taking shape. Wolfe's heroic death, shown in this painting by Benjamin West of 1771, foreshadowed that of Nelson and Captain Scott.

Canada became a British possession when the Treaty of Paris was signed in 1763. George III promptly made a Royal Proclamation, attempting to control the pace and scope of settlement and secure good relations with the Native American peoples.

Birth of British India

European companies setting up among "savage" peoples took it for granted that they had a policing role, if only to safeguard their own activities. The East India Company had been chartered by the British Crown, and essentially acted on its behalf. It even had its own army.

The Company's competition with its French rivals soon spilled over into fighting, before getting caught up in the wider conflict of the Seven Years' War. Robert Clive, later the Governor of Bengal, commanded the British force. His

Growing borders

From the 1770s, the map of India tells a story of continuous British expansion. The fires of the Mutiny were little more than a flash in the pan (see pp.292–93).

troops smashed the army of the *Compagnie des Indes* and its local ally, the Nawab of Bengal, at the Battle of Plassey (1757). Britain then commenced the Carnatic War in the southeast, capturing the French headquarters at Pondichéry (modern Puducherry) in 1761.

Company consolidates

With the Battle of Buxar (1764), the Company tightened its hold over eastern India, shattering what remained

KEY MOMENT

BLACK HOLE OF CALCUTTA

Perceiving a threat to the independence of the area, the rebellious Nawab of Bengal, Siraj ud-Daulah, laid siege to Fort William. His troops crammed a large number of men, women, and children into the fort guardroom through the night of June 19, 1756. More than 120 of them suffocated in the tropical heat. So at least the legend has it. However, most historians warn that this is at the very least an exaggeration. The story was used in Britain as propaganda.

THE FORT WILLIAM IMPRISONMENT

Tipu's tiger

This wind-up automaton, featuring a life-size tiger savaging a prostrate redcoat, completed a colonial wish-fulfillment fantasy. The life-size device was made for Tipu Sultan in the late 18th century.

of Mughal power. The Mughal emperor Shah Allam II was still nominally in charge, but the Company became his official agents in the region.

Resistance continued in the south of the subcontinent. Four Anglo-Mysore Wars were fought between 1766 and 1799. The rise of the ruler of the kingdom of Mysore, Tipu Sultan ("Tiger of Mysore"), took Britain by surprise, and he won some initial victories. He was killed in 1799 during the Battle of

Colony expands

Lord Cornwallis takes receipt of two hostage princes of Mysore in this oil painting from 1793. Scenes like this cheered a nation still reeling from the loss of the American colonies.

Seringapatam, and most of Mysore's territory was annexed by the British. The Anglo-Maratha War in the west was to continue into the 19th century, but Britain's ascendancy over much of the subcontinent had been established.

Controversies followed the rise of the East India Company in the region. The Company was accused of stripping India of its assets by its taxation policy, and pressing for productive land to be turned over from food to cash-crops, such as opium poppies. British officials oversaw policies that led to a collapse in the agricultural economy in Bengal in 1769–73. This brought about a devastating famine, which caused several million deaths.

Imperial status seemed to suit Britain. The power and prestige were the least of it: the possession of colonies was a vital boon to what was first and foremost a trading nation.

SHIFTING SANDS

Britain's status as an imperialist power was soon called into question. Within a generation, the settlers of the original English colonies were in revolt; ultimately, they **broke away completely 214–15** >>. By the end of the 19th century, Britain was more concerned with its own survival, with the **real threat of a French invasion** looming on the horizon **240–41** >>.

EMPIRE BUILDING

The East India Company kept up the fight to **retain its grip on India** until the late 1850s **290–91** >>. With the Victorian Age, Britain continued to build the greatest empire the world had ever seen **296–97** >>.

BEFORE

In the space of a few generations, North America had changed its status relative to Britain—from an exotic New World to a vital trading partner.

GROWTH OF COLONIES

Settlement in new colonies, begun in earnest during James I's reign <<162–63, continued apace after early difficulties. The population was swelled by **religious refugees from Britain seeking sanctuary** from the intolerance of the Stuart kings << 166–67, << 176–77 (or, for that matter, of the Commonwealth << 172–73).

TAXATION

Instead of the 13 colonies depending on Britain, the “mother country” **relied on them for 25 percent of its export trade** in the 1740s. The government taxed them on luxuries such as printed publications, sugar, and tea. The colonies were also **taxed for their governance and defense**.

GEORGE III
HALF PENNY

America is Lost

“No Taxation without Representation!” resounded the cry throughout the colonies, whose people felt they had become a fiscal piggy-bank for a cash-strapped Crown. Alongside such grievances, however, high idealism was taking hold—a desire for republican freedom that was to be secured only by breaking all ties with Britain.

Victory in the Seven Years' War (see pp.212–13) gave Britain some breathing space in which it could attend to its American colonies, which had been getting on without much interference—and prospering in the process. Britain increased taxes to pay for the upkeep of military protection by the British regular army against further French encroachments. In 1765, an unofficial convention of colonists issued a “Declaration of Rights and Grievances.” The British, far from being moved, simply imposed more taxes. They also responded to a boycott of British goods in Boston with a military occupation of the city, and added a Tea Tax to the list

in 1773. In Philadelphia, in 1774, the colonists asserted their rights at the First Continental Congress, but they only got the so-called “Intolerable Acts”—a set of five acts that restricted their freedom—for their pains.

The shooting starts

The settlers had traditionally relied on their own militias to defend themselves against a Native American attack. Now, such militia constituted a ready-made rebel army. In April 1775, with the colonies in ferment, Britain tried to preempt trouble by seizing the weapons in the arsenal at Concord, Massachusetts. Fighting turned into a general uprising. Led by George Washington, the rebels besieged Boston. General Howe's attack

A commander and a president

“First in war, first in peace...” No one did more than George Washington (1732–99) for the American Revolution, commanding the Continental Army, then serving as the first president of the republic.

at Bunker Hill on June 17 brought a British victory, but failed to stop the siege. From June, the various rebel militia groups were brought together to form a new Continental Army.

Independence declared

The rebels took Boston in March 1776, and on July 4 the Second Continental Congress issued the Declaration of Independence. But by September, General Washington, having lost New York, had to retreat in haste through

KEY MOMENT

THE BOSTON MASSACRE

Paul Revere's inflammatory engraving made a cold-blooded massacre out of what had admittedly been a lamentable error by twitchy troops confronted by a hostile crowd. It happened on March 5, 1770 in Boston, after weeks of mounting anger. The British government was absent, but the redcoats had to bear the brunt. Menaced by the mob, eight soldiers panicked and opened fire. Five colonists were killed in an incident which could hardly have been more unfortunately timed.

REVERE'S ILLUSTRATION OF THE MASSACRE

“We hold these **truths** to be self-evident, that **all men** are **created equal...**”

UNITED STATES DECLARATION OF INDEPENDENCE, JULY 4, 1776

Declaration of Independence

The American colonies finally broke free of British control and declared their independence on July 4, 1776. Although Britain tried to regain its command, it had to give way once the French entered into an alliance with the Americans.

New Jersey and escape across the Delaware River. On Christmas night Washington crossed the icy Delaware again, to launch a surprise attack on a mercenary force at Trenton. He followed through with a victory over Lord Cornwallis's English army at Princeton.

The following summer saw a succession of victories for the Continental Army, culminating in a crucial one at Saratoga on October 7. Louis XVI of France was impressed, and offered assistance to the rebels.

Darkness... and dawn

The British regrouped and took the capital, Philadelphia, in September 1777. Washington and his Continental Army (now much-reduced) crept away to Valley Forge. Britain was beginning to lose its focus, though. Washington broke his army into smaller militia-type

detachments, and Generals Clinton and Cornwallis became involved in a guerrilla war. Cornwallis was ordered to fall back to the coast and prepare a fortified base for a Royal Navy rescue force. He withdrew to Yorktown, Virginia, but was forced to surrender.

Protest against taxation

On December 16, 1773, colonists disguised as Native Americans climbed on to a number of tea ships in Boston harbor and tipped £10,000 worth of tea overboard. They were reacting against overtaxation. This event came to be known as the Boston Tea Party.

AFTER

The loss of the American colonies was a major blow to Britain. It was hard to see how their contribution was going to be replaced.

EXPANDING EMPIRE

Britain had already started establishing its “**second empire**”—including existing colonies in Canada and India. In the decades that followed, however, **new territories were added**—discovered by Captain Cook in the Pacific **226–27** >>, or taken from France in the course of the Revolutionary and Napoleonic Wars **240–41** >>. Other colonies, such as Ceylon (modern Sri Lanka) and South Africa's Cape Colony, were taken not from the French but from the Dutch, to prevent them from falling into French hands.

JEWEL IN THE CROWN

By the middle of the 19th century, India **290–91** >> was the jewel in an imperial crown which **encompassed almost every continent** of the world **296–97** >>.

The colony is lost

John Trumbull's 1817 painting, *Declaration of Independence*, shows a draft of the Declaration being presented by Thomas Jefferson and John Adams, its main authors, to the committee of the Second Continental Congress for their consideration.

DECISIVE MOMENT October 19, 1781

Surrender at Yorktown

Even a few months before, the British had seemed to have the upper hand against the American insurgents. Lord Cornwallis's withdrawal to Yorktown, on the coast, had been an orderly regroup. Defeat, entirely unexpected, would stun the British establishment, and launch the newly independent United States on a euphoric tide.

Cornwallis found himself isolated, with no support coming from his commander, General Clinton, who was convinced that Yorktown faced no threat. Led by the Marquis de Lafayette, the Virginia army besieging Yorktown was indeed not large, but it held out the hope of reinforcements arriving from the northern colonies. These included both Americans, under General Washington, and a French force led by the Comte de Rochambeau, which had landed at Rhode Island.

Support from the sea

At this point, crucially, Washington and Rochambeau heard that the Comte De Grasse, France's admiral operating in the Caribbean, had agreed to move up the coast in their support. (He had been tied up till now in the Caribbean, but was freed by Spain's agreement to mind French merchant shipping.) Spurred by this, the Americans and French moved south, as though to attack New York,

but then continued south to Virginia. Soon, with Lafayette's army, there were almost 17,000 men outside Yorktown, hitting it relentlessly with heavy guns.

Left high and dry

Cornwallis still expected support, and the Royal Navy was indeed on its way. But De Grasse's fleet was waiting when it got there. On September 5, just outside the mouth of Chesapeake Bay, battle began. It was a ragged affair, both fleets being short-crewed, while shoals hampered the formation of lines. The outcome was inconclusive—but that was good enough for the French and the Americans. The British fleet was forced to continue north. Cornwallis, marooned with his men at their base, under ferocious bombardment, felt he had no alternative but to surrender. The American War of Independence was now effectively over, although it would take the signing of the Treaty of Paris two years later to make this official.

“I have the mortification to inform your Excellency that I have been forced to... **surrender the troops** under my command...”

DISPATCH FROM LORD CORNWALLIS TO GENERAL CLINTON, OCTOBER 20, 1781

Surrender at Yorktown

With Cornwallis claiming to be ill, Brigadier Charles O'Hara took the sword of surrender out on his behalf. Rochambeau refused it, pointing to Washington, who in turn indicated Major-General Benjamin Lincoln, who had suffered the humiliation of surrendering at Charleston.

BEFORE

Significant changes took place throughout 17th-century Britain, which would make the following century a mixture of tradition and new ideas.

FOUNDATIONS OF WEALTH

Britain in the 1600s was largely rural, and presided over by the nobility, but change was on the way. The Bank of England, set up in 1694, provided sound public finances and a source of government borrowing, helping to encourage commerce, while the gradual establishment of an empire augmented this with new markets and sources of trade << 210-13. The growth of trading towns and cities broadened people's horizons as they moved there in search of work. But huge numbers of people still lived in rural areas where lifestyles were taking much longer to change, and many farming implements were little different from medieval times.

PEASANT'S CART

Georgian Society

Life in 18th-century Britain could be very enjoyable indeed for those of the better-off classes. There were jobs in London and country retreats for wealthy men, and new professions for those of a more modest means. Fashionable women reveled in the elegance of the social season, while a rising middle class sought out the many shops now proliferating everywhere.

Although there were wars for about half of the century, and economic problems for some of the time, the 1700s were generally a period of stability and prosperity. Wealth, however, was spread unevenly, with around one-third controlled by five percent of the population. Inheriting land was still the way to achieve any position of power, as in the century before. To be an MP, a man had to hold land worth around £500 per annum, and most men couldn't vote unless they owned some property. A country squire with property would be the local magistrate,

and those with money set the day's tone and tastes. One taste was for the social season, which increased in popularity throughout the 1700s. As London grew as a more important commercial and political center, men of substance would spend much time there, with stays often dictated by the sitting of Parliament. Life at their country residences was often linked with the hunting season. A whole social season arose around time spent in London, lasting from April or May to the start of August, and was filled

with parties, theater trips, and sporting events such as the races. Similar seasons arose in Dublin and Edinburgh.

Outside London

Provincial towns and cities were growing, especially the "spa" towns, where the wealthy would stay a while, as part of the annual social rounds, to partake of supposedly health-giving waters from natural springs. Bath was the most fashionable spa,

Jane Austen

With great wit and observation, Jane Austen chronicled the social lives of the middle and upper classes around 1800 in books such as *Pride and Prejudice* (1813).

Elegant Bath

Much of Georgian Bath was created by architects John Wood the Elder and Younger. The younger Wood designed the much-imitated Royal Crescent, seen here.

Early game of cricket

Sports were important male leisure pursuits. Cricket, popular by Restoration times, became a national sport in the 1700s. The Marylebone Cricket Club was founded in 1787. Other male pastimes included hunting, shooting, watching bear-baiting, and the races.

Employment also began to change. Traditional careers for men, had they not been squires, included the Church, army, or navy, often in modest roles, but options now grew. Journalist Daniel Defoe listed a hierarchy of social classes, mentioning “the middle sort, who live well.” The rise of professions now saw a growing body of men working as clergy, doctors, lawyers, or—as commerce and industry expanded—businessmen and merchants. They were usually based in towns and were not wealthy landowners, but earned reasonably well. The rising middle classes and their leisure pursuits and growing spending power helped feed new industries and create a consumer revolution. Shopping for everything from cutlery to china to buttons became all the rage.

and its population grew markedly in the 18th century. It was a place of fashion and manners, and its season, as in London, was an opportunity for both sexes to show off new clothes, learn new dances, and attract suitable wives and husbands. This might occur at the perennially popular ball, often a lavish affair with added entertainments such as fireworks. At smaller parties, young women might be admired for their singing or piano playing—suitable pursuits along with accomplishments such as sketching. As other towns expanded, also gaining theaters, assembly rooms, and coffeehouses, people from the surrounding areas enjoyed “mini seasons” there, too. It meant that many people moved around

regularly, helped by greatly improved roads that by mid-century reduced traveling times to hours not days. This movement, as well as the greater exchange of goods between town and country, meant that the social classes did start to intermix more.

“I was **three days...** in the race ground, and **danced every night** at the assembly.”

JOHN COURTNEY, BEVERLEY SOCIAL SEASON, 1764

The Regency and beyond saw some instabilities and class divisions, while the social season continued.

WIDENING GAP

The 1800s brought **uncertainties** arising from wars with France, and the Regency saw a contrast between the extravagance of the rich and the poverty of the urban poor **222–23** . The middle classes continued to rise; commerce made headway into the **Industrial Revolution**.

QUEEN VICTORIA'S SEASON

By Victoria's reign **270–71** , the **social season** had become highly structured. For families with links to aristocracy, a young debutante's first social season marked her coming of age, and she was presented, dressed in an **extravagant gown**, to the Queen, before embarking on the season's entertainments.

Landed gentry

In the mid-18th century, power in Britain was held by an increasingly confident landed gentry. It was a power that was based upon ownership of land, and the income it provided. *Mr and Mrs Andrews*, painted by Thomas Gainsborough in 1750, is a commentary on the social status of this landowning class, and portrays a married couple presiding over their land. While Mrs. Andrews appears fashionable, her husband's shotgun brutally underlines his proprietorship over the countryside.

Disorder and Religious Revival

Peaceful rural rhythms overseen by a benevolent squire and parson often masked social turmoil. In the cities especially, authority seemed remote; pastoral care and spiritual support still more so. As crime and disorder raged, thousands turned to religious belief for help.

BEFORE

The stresses and strains of the social order always found a way of expressing themselves, whether in eruptions of unrest or in outbursts of religious enthusiasm.

UPHEAVAL AND UNREST

In the context of a feudal system in mounting crisis, the **Peasants' Revolt** << 104–05 and the Lollards' spiritual rebirth << 108–09 may be understood as two sides of the same coin. In the period that followed, **disorder descended onto the kingdom from above**: it was the country's ruling families who brought chaos and confusion through the Wars of the Roses << 122–23.

While the drift of the population to the cities through the Tudor period was accompanied by a rise in crime << 132–33, religious upheaval was introduced by the king and by a clerical elite << 136–37. With **industrialism** poised to transform the overall economic scene in Britain, **a new round of social and spiritual unrest seemed inevitable.**

Britain was growing wealthier by the year, with its trade and commerce (see pp.210–11) expanding as the country's colonial reach extended (see pp.212–13). Enormous fortunes were being made in the slave trade in particular. Not all shared the prosperity, although everyone had been affected by the transformation of the countryside, as the enclosure process had gathered pace during the 17th century. Thousands, uprooted from the relentlessly poor but essentially orderly life of the country, were living in squalid city slums, where a certain amount of social anarchy—crime, prostitution, and drunkenness—were rife.

Demonized drink

One of William of Orange's less welcome introductions had been gin, a liquor distilled from wheat and flavored with juniper berries.

Armed police

A Bow Street Runner carried this pistol, made in 1763, but the authorities were fighting a losing battle against street crime, in the capital and elsewhere.

Thousands relied on so-called "Dutch courage" to help them through their hard and unrewarding lives. In pursuit of its mercantilist goals (see pp.178–79), the government eased restrictions on domestically distilled spirits while hiking up the duties on imported drinks. So gin was a readily available tittle—and the most visible in its effects on the urban poor.

Even so, the Gin Craze that took hold of the nation in the middle of the 18th century seems to have existed more in the minds of the media, and those respectable citizens, who saw "mother's ruin" as the ruination of society at large. Gin-drinking was associated

with an urban underclass already regarded with deep suspicion. Then as subsequently, the poor were clearly stereotyped: idle, shiftless, slatternly, criminal, promiscuous, and insubordinate; their potential for violent disorder always feared.

Riotous assembly

Outbreaks of public violence were in any case a feature of this period. There was invariably trouble in naval ports

Gordon Riots

In 1780, armed troops were deployed on the streets of London to break up serious rioting, whipped up by the anti-Catholic rhetoric of Lord George Gordon and his Protestant Association.

225 The number of criminal offences that were deemed punishable by the death penalty under the Bloody Code operating in Britain at the end of the 18th century and the beginning of the 19th century.

when the fleet was in. Rioting by demobbed soldiers and sailors marred the peace after major wars.

The mob—a monstrous entity—loomed large in the nightmares of the elite, but was this many-headed monster really just the “people” by another name? Was its violence the only way they had of registering their feelings in a system which offered them no representation? Bread riots would not have broken out if hunger had not taken hold. The Gordon Riots of 1780 articulated real anger at the passing of the Papists Act, which had eased the penalties against Catholics prepared to swear their loyalty to the Crown.

Punishing criminals

Taming the monster brought ever more draconian punishments: by the 1800s more than 200 offences were punishable by death. These included stealing a sheep; shoplifting or pickpocketing an item worth more than five shillings; and identity theft.

Punishment had to be done publicly, to send out a message. Often, the policy backfired, making celebrities of colorful criminals. Jack Sheppard, a habitual thief who also made a habit of escaping prison in spectacular style, was briefly idolized in the 1720s; so too, in the

1740s, was “Gentleman Highwayman” James MacLaine. Executions became a show, with carnivalesque scenes on the road from Newgate prison to the gallows at Tyburn, as swaggering desperadoes joked and postured to the delight of drunken crowds.

KEY MOMENT

ORDERING ENGLISH LAW

In 1765 William Blackstone (1723–80) started a quiet revolution with the first volume of his *Commentaries on the Laws of England*. Blackstone brought order to an impenetrable forest of obscure (and often apparently contradictory) legislation that had been passed over centuries. For the first time, ordinary people could, if they wished, consult a clear and authoritative guide to the law.

SIR WILLIAM BLACKSTONE

Gin Lane

William Hogarth's notorious satire clearly expressed the exaggerated fears of the Establishment. But there is no doubt that the gin craze wreaked havoc among large sections of the urban poor.

A cheap and cheerful literature celebrated the exploits of the most notorious criminals in handbills or broadsides. Crime became a source of sensational entertainment. Thief-taker-turned-criminal Jonathan Wild inspired a novel by Henry Fielding (1743) and the “fair parricide” Mary Blandy inspired a play (1752).

Moral concern

With concern mounting about the moral effect this glamorization of crime and punishment was having in society as a whole, transportation—to Van Diemen's Land (Tasmania) or Botany Bay (New South Wales)—was increasingly seen as an alternative. Early efforts to toughen up law enforcement came with the formation of the Bow Street Runners by the writer and magistrate Henry Fielding. They were known as Robin Redbreasts for the distinctive bright red waistcoats that they wore.

There was a growing sense that religion was not reaching most of the population, especially in the cities. Religious apathy was seen as underpinning immorality and indiscipline of every sort. It was this feeling which prompted the Wesley brothers and George Whitefield to launch their Methodist revival movement, revitalizing what had become a deadened faith.

John and Charles Wesley had already developed disciplines of prayer and contemplation, creating what was mockingly called the Holy Club, during their time at Oxford University. They then went off to the American colonies to spread the word.

Another Holy Club member, George Whitefield (1714–70), who had also spent time in America, was, by the 1730s, back in England carrying his Christian message to large open-air congregations. Impressed, the brothers joined forces with him: they and a growing band of followers made forays out into the country, preaching in churches, and when allowed, in fields and open spaces.

“This **wicked gin**, of all Defence bereft, and guilty found of Whoredom, Murder, Theft...”

LONDON EVENING POST, MARCH 1751

Crime raged on, regardless of the Bloody Code: fears of punishment were overridden by need, but also criminals realized they were unlikely to be apprehended by a ramshackle system of law enforcement.

METROPOLITAN POLICE

Law enforcement by parish was grossly inadequate, underfunded, and disorganized. The **first major step forward** came in 1829 when Home Secretary Robert Peel established a Metropolitan Police Force for London **278–79** >>.

MAKING PROGRESS

More hopeful signs of a **moral awakening among the emergent middle class** was evident in the **anti-slavery campaign** of the late-18th century **234–35** >>. Moreover, while the failure of discontent to translate into action in the aftermath of the French Revolution might have disappointed radicals, conservatives could see this as a sign that **Britain was getting something right 236–37** >>.

The name of “Methodism” suggests a dry, mechanical religion: that preached by the Wesleys was anything but. They believed the individual was free either to accept or reject the salvation offered him or her by God. Its acceptance was a joyful embrace of faith. This was why hymn-singing was so important: not only did it enable an uneducated congregation easily to absorb the key tenets of their faith, it allowed a collective belief to be celebrated in a way that was pleasurable for all.

BEFORE

Earlier development of a tolerant humanism was key to Scottish 18th-century thought.

RELIGIOUS EXTREMISM

In the 16th century, Scottish humanist George Buchanan (1506–82) preached **resistance to religious tyranny**. Scotland in the 17th century was rife with **superstition and intolerance**, but many were shocked by the execution of a young student for **blasphemy** in 1697.

NEW TOLERANCE

In the early 1700s, a **more moderate outlook** developed. Ulster-born philosopher Francis Hutcheson (1694–1746) was a major figure. His students at Glasgow University included Adam Smith and future Church leader Alexander Carlyle.

The Scottish Enlightenment did much to forge Scotland's sense of history and identity. It centered on Edinburgh, where people gathered in taverns, debating clubs, and the salons of poet Alison Cockburn to share ideas. Edinburgh's university became the most-revered worldwide.

Ideas-wise, there was a stress on human potential, improvement, reason, and on finding underlying principles. Leading figures shared a widespread admiration for French philosopher Jean-Jacques Rousseau (1712–78), who believed that humans had been constrained by civilization. The most important thing was to think for oneself.

Shaping society

Social and economic improvement and organization were central issues, and Scottish Enlightenment theory was

Walter Scott

Scott's evocative tales of Scotland were popular in his own day, placing Scotland on the international map. He is said to be the father of historical fiction.

Ferguson (1723–1816) was a sociology pioneer who characterized humans as sociable, naturally progressive beings.

The power of song

Ayrshire-born Robert Burns (1759–96) has become, for many, Scotland's eternal poet laureate. Popular in his day, he collected traditional Scottish songs (including *Auld Lang Syne*) and wrote poetic favorites such as *Tam o' Shanter* (1791) in Scots dialect.

In a similar vein, James Macpherson (1736–96) collected Gaelic literature and claimed that his *Poems of Ossian* (1760–63) was a long-lost Celtic epic. Despite this being false, the work was a huge contemporary success worldwide.

Burns and Macpherson might be seen as attempting to find a new identity for post-Union and post-Culloden Scotland, as was poet and novelist Sir Walter Scott (1771–1832). His romantic

very influential in France and America. Theorist David Hume (1711–76), author of *A Treatise of Human Nature* (1739–40), believed in challenging conventional wisdom and, in true rationalist style, valued experience (see pp.184–85). Adam Smith (1723–90), often cited as the father of modern economics, stood against strong state economic controls. Philosopher Adam

Scottish Enlightenment

Scottish intellectual, scientific, and artistic life flourished in the 18th century, and Edinburgh became an internationally important, stylish center. Leading figures included poet Robert Burns, thinkers Adam Smith and David Hume, engineer James Watt, and Romantic historical novelist Walter Scott.

18th-century New Town, Edinburgh

Edinburgh and Glasgow grew enormously in the 1700s. Edinburgh gained the extensive New Town, a masterful example of city planning.

James Hutton

A pioneering natural scientist, Hutton developed controversial views (since vindicated) on the Earth's aging in works such as *Theory of the Earth* (1795).

historical novels began in 1814 with *Waverley*, set during the 1745 Jacobite rising. The novels mix nostalgic Scottish tradition with the Enlightenment's desire for progress.

Art and architecture

In late 18th-century Edinburgh, the lively, natural portraits of Sir Henry Raeburn (1756–1823) captured the major players of the Scottish Enlightenment. Raeburn was the first Scotland-based artist to gain worldwide acclaim. Allan Ramsay (1713–84) was another renowned Scottish portraitist, known for sensitive images of women. Edinburgh-based Alexander Nasmyth (1758–1840), famed for landscapes that brought a

Adam Smith

This 1797 coin commemorates Adam Smith, author of *The Wealth of Nations* (1776), which outlined the “division of labor” theory.

natural air to classical conventions, is seen as the source of the Scottish landscape tradition.

The 1700s brought increasing prosperity and rapid population growth to Edinburgh. The

city's 18th-century New Town, with its elegant, spacious Georgian terraces and squares, was created to cope with some of this. Influential worldwide, it includes Charlotte Square, a gem by Scots-born architect Robert Adam (1728–92).

Science and engineering

There was considerable scientific activity. William Cullen (1710–90) and Joseph Black (1728–99) pioneered chemistry as a discipline, as did James Hutton (1726–97) with geology. James Watt (1736–1819), and John McAdam (1756–1836), made their names as engineers. Watt invented the condensing steam engine and gave us the terms “watt” and “horsepower.”

“The **heart of man** is made to reconcile the most **glaring contradictions.**”

DAVID HUME, FROM *ESSAYS MORAL AND POLITICAL*, 1741–42

Scottish Enlightenment thought reverberated through many fields, notably signaling the social sciences and socialist theories of the future.

SMITH AND THE FREE MARKET

Adam Smith's ideas about the **division of labor** helped to create **modern western capitalism**. The **division of labor** deals with the way in which various tasks are shared among different parties in society. Smith believed that, if unconstrained by state controls, a **free market encourages specialization** and society benefits. His ideas influenced economics well into modern times. The Adam Smith Institute, a **British think-tank**, was founded in 1977, and Margaret Thatcher **382–83**  cited him as an inspiration. Adam Ferguson's views on the division of labor anticipated those of communist Karl Marx (1818–83) and French sociologist Émile Durkheim (1858–1917).

MOVING ON

Historian and political philosopher **Thomas Carlyle** (1795–1881) **282–83**  inherited much of the forthright, challenging spirit of the Scottish Enlightenment and was an important influence on 19th-century British culture.

New Horizons in the Pacific

Successive voyages by George Anson, James Cook, and Matthew Flinders gave Britain an important presence in the Pacific Ocean. Cook's explorations in particular brought scientific and geographical discoveries, and gave opportunities for the creation of new colonies, opening up new realms to the imagination and extending Britain's imperial horizons.

BEFORE

The British people had been intrepid seafarers for many centuries, but were slow in starting colonies across the world.

VOYAGES OF DISCOVERY

Elizabethan adventurers accomplished great voyages of discovery ◀◀ 146–47, but successful settlements were not established until the reign of James I ◀◀ 162–63.

FULL AHEAD

By the 17th century, England was a trading nation, prepared to fight for its commercial interests ◀◀ 178–79. The country was also a developing center of science: advances were to translate to the world of navigation, making a systematic exploration of the globe a possibility ◀◀ 184–85.

By the 18th century, the study of science had advanced.

New inventions and insights (see pp.184–85) both fostered and facilitated the desire to investigate the world, inspiring explorers and giving them better navigational instruments and investigative aids. Britain was in the forefront of these new researches.

Booty came first, though: George Anson's circumnavigation of the globe did not start out as a voyage of discovery. His intention was to attack the Spanish treasure fleets that brought home the riches of the colonies.

Anson's voyage

Leaving Portsmouth in September 1740, Anson's flagship HMS *Centurion* led a flotilla of five warships across the Atlantic and around Cape Horn, braving ferocious storms, only to find

Cook's sextant

A relatively new invention, the sextant allowed Cook to plot his geographical position with accuracy.

the weather in the Pacific Ocean even worse. They stopped for repairs before setting out to search for treasure-laden Spanish shipping.

Only a couple of minor vessels came their way until, after stops in China, on June 20, 1743, they encountered the galleon *Nuestra Señora de Covadonga*. Sailing westward from Manila, it was

Cook arrives in Hawaii

Cook's second visit to what he called the Sandwich Islands in 1779 was ill-starred. He was killed by islanders in a fracas over a stolen boat.

almost defenseless—despite being laden with silver coins. After capturing it, Anson made his way home. His share of the booty was more than £90,000.

Cook's tours

Born in Yorkshire in 1728, James Cook served as a merchant seaman on a coaster in the coal trade before joining the Royal Navy at the start of the Seven Years' War. In 1768, his ship, *Endeavour*, took an expedition to the South Pacific, from where a Transit of Venus (the passage of the planet across the face of the Sun) could be observed. While the expedition's scientific leader Joseph Banks oversaw the recording of astronomical observations, Cook and

his crew observed with astonishment the ways of the Pacific Islanders. These were captured by the expedition's artists (notably Sydney Parkinson), while botanist Daniel Solander collected a wealth of undiscovered plants.

Endeavour sailed south to New Zealand before heading west to Australia, where it made landfall at what Cook called Botany Bay, with its many specimens for Solander to collect. The ship then rounded Cape York and passed through the Torres Strait to New Guinea and Indonesia, finally reaching England again in 1771.

Southern search

In 1772, Cook led a second voyage in HMS *Resolution*, accompanied by a ship aptly named *Adventure*. The expedition was charged with finding *Terra Australis* (Latin for "Southern Land"), an undiscovered southern continent whose existence had been proposed since ancient times. The theory was that *Terra Australis* would somehow "balance out" the vast landmasses of the northern hemisphere. Of course, Cook did not find it—though he would have reached Antarctica if he had ventured even a little further.

His third voyage, from 1776, was once again on *Resolution*. Cook discovered the Sandwich Islands (Hawaii) before going north along the western coast of North America to the Bering Strait. Their goal was to find the fabled Northwest Passage (see p.163) from the "other"—Pacific—side.

Meeting with no success, Cook turned back, heading south to Hawaiian waters again. He put in to rest at Kealakekua Bay in January 1779. On February 14, during a clash with local warriors, he was killed, in rather confused circumstances, on the beach.

Around Australia

If Matthew Flinders (1774–1814) had never done anything else, he would have had a place in history for popularizing the use of the name "Australia" (from *Terra Australis*), for what had previously been called New Holland. The earlier name testified to the pioneering role of Dutch adventurers in opening up these waters in the 17th century. Captain James

Cook established Britain in the region, but the competition from French navigators such as Louis de Bougainville (1729–1811) was stiff. The first Frenchman to circumnavigate the globe, Bougainville explored the Pacific

Ocean a couple of years before Cook, and claimed several island groups for France.

By 1800, the British were at home in New South Wales: the rest of the continent

remained mysterious, however, with even its coastal outline uncharted. Matthew Flinders helped complete the picture by the successive surveys he undertook on his naval sloop,

Investigator. Setting out from England in December 1801, he took a course well to the south of what was then customary, arriving off Cape Leeuwin (the southwestern tip of

Western Australia) and following the southern coast, all the way around to Sydney. After a period in port, between 1802 and 1803 he took to sea again, heading north up the Queensland coast, ultimately circumnavigating the continent completely.

Chronometer

By keeping accurate time, seafarers could calculate longitude by working out the difference between local noon and noon at Greenwich.

Tahitian lady

In the 18th century, English voyagers were staggered by the exoticism and beauty of the indigenous cultures they came upon in the lands of the Pacific.

“Several of the Natives came to us in their canoes, but more to look at us than anything else.”

CAPTAIN JAMES COOK, ON HIS ARRIVAL IN TAHITI, 1769

AFTER

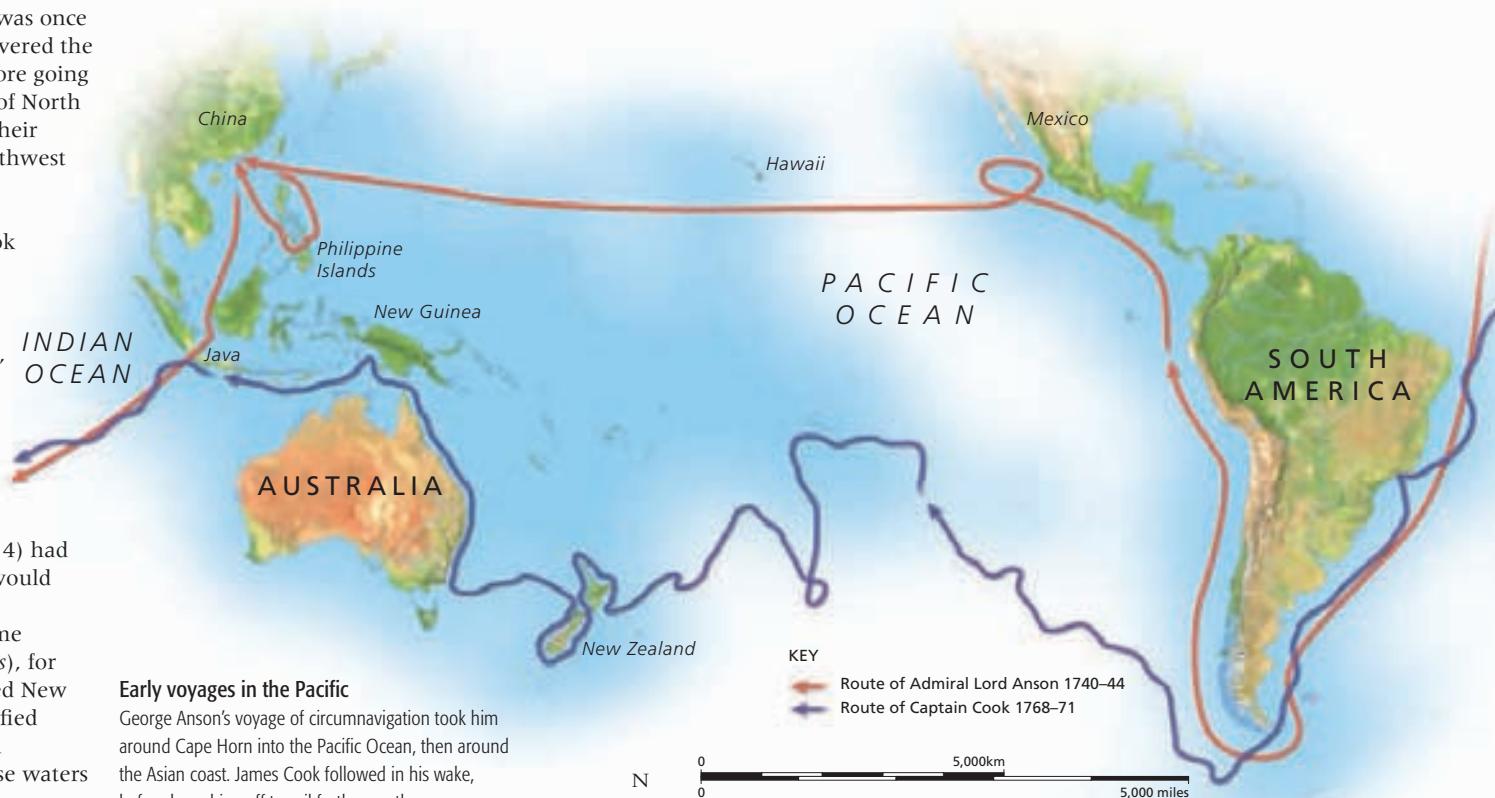

Britain's explorers did much to extend their country's global reach—of crucial importance to becoming a great commercial and imperial power.

TRADING NETWORK

The worldwide trading network that resulted from extending the country's reach was to stand industrial Britain in good stead when it came to finding raw materials and markets for its exports 266–67 >>. Further major explorations of the world were made in Victorian times 286–87 >>. In the meantime, Britain built up its presence in India 290–91 >>, while sending emigrants into its new dominions across the world 294–95 >>.

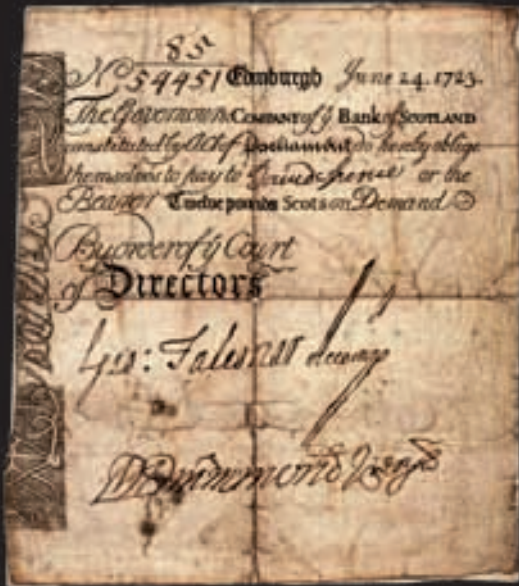

BRITAIN'S FIRST SETTLERS IN AUSTRALIA

Early voyages in the Pacific

George Anson's voyage of circumnavigation took him around Cape Horn into the Pacific Ocean, then around the Asian coast. James Cook followed in his wake, before branching off to sail further south.

Georgian Trade

The Georgian age brought a boom in Britain's domestic and international trade, supported by a fast-expanding financial sector and an increasingly professional merchant navy. Britain was in business, bringing in raw materials from North America and the Far East, and making high-quality luxuries for export. Other trades were less glamorous—notably a cruel and squalid traffic in slaves from Africa.

1 Banknote, issued by the Bank of Scotland in 1723. One of the earliest British banknotes in existence. The individual's details were filled in by hand. 2 Business card, 1754, printed by a maker and seller of scales in Birmingham. 3 Enamelled copper snuffbox made in Staffordshire in 1775. 4 Blunderbuss flintlock pistol made in 1785. It has a brass barrel and two triggers. 5 Lloyd's List, Friday, June 7, 1745 details the day's shipping news. First published in 1734, when London's port and financial markets were both beginning to boom, it has appeared regularly ever since. 6 Hand-painted delftware punchbowl, 1752, decorated with a ship sliding down the slipway to mark a successful launch. As the vessel has no guns, it is likely to be a merchant brig. 7 Silver nutmeg grater made in London in 1810. 8 Foldaway medicine chest, c.1800, belonging to a ship's doctor. 9 Worcester blue tea service, 1750s, showing the

clear influence of Chinese design. Itself a Chinese invention, porcelain was first made in Europe in the 18th century. 10 A roll of snuff, some clay pipes, and a wallet dated 1761. 11 Samuel Wyatt's plan for the Isle of Dogs (1796) was one of several such designs proposed. The port of London was expanding rapidly at this time. 12 Ship's biscuit inscribed with the date April 13, 1784. Made of flour and water, hard tack kept for years. 13 Iron ankle band used to shackle a slave, 18th century. 14 Ceramic creamware pitcher, c.1780, painted with a scene of a sailor's farewell to his girl. Modernizing Agriculture

Rural life had long been idealized as a blessed state: man toiled hard, and the earth gave its abundance by God's grace. In the 18th century, however, landowners asked whether it was giving enough and whether the application of scientific methods might not make agriculture more rewarding.

The idea was catching on that agriculture might be an industry; that its skills and equipment might be bettered, its yields improved. The feudal serf had been a subsistence farmer, tied to his land and loyal to his lord. His situation was defined by a cosmography in which he would no more have questioned his place than that of the sun or the stars circling in their spheres. His role was not to change things, but to accept them stoically. This medieval outlook became a memory, however, as cash payment took the place of the feudal bond.

The farmer was a paying tenant now, or at least a paid laborer on an employer's land.

The coming of enclosures

Key to this changing relationship was the accelerating trend toward enclosure, which dated back to Tudor times (see pp.142–43) but had speeded up in the 17th century. Large numbers of the rural population, dislodged from lands they and

Plow of wood and iron

Ancient technology was reinvented in the Agricultural Revolution of the 18th century. Wood-and-iron plows offered the perfect compromise between robustness and lightness for ease of use.

their forebears had farmed for centuries, drifted to the cities. The enclosures were a tragedy for thousands of poor families. The advantage from the landlord's point of view—and for the economy overall—was the opportunity enclosure brought to make improvements. Until then, agriculture had been traditional and inherently conservative. Now, however, a new confidence was apparent in landlords; a new readiness to try out innovations and to take risks. Crop rotation was not new in itself, but it was improved. The three-field system used (though gradually refined) since late medieval times was replaced with a four-field system. After a cereal crop, legumes such as clover, or root crops such as turnips, would be planted. Both helped recharge the earth with nitrogen, while producing food for livestock (whose manure was widely used as fertilizer).

This and other improvements were made possible by pioneers such as Robert Bakewell, who from the 1760s adopted a more scientific approach to agriculture. He set aside designated plots on his Dishley estate, in Leicestershire, and tested combinations of rotation, fertilizers, and livestock.

Taking stock

Bakewell's method of stockbreeding involved keeping males and females apart, so that he could manage their breeding much more carefully than had been done before. This way he was able to develop the much larger and luxuriantly fleeced New Leicester sheep and the Dishley Longhorn cow (big and chunky, and so purpose-bred for beef). He also produced a more

BEFORE

In Britain, as in most of Europe, the medieval economy was overwhelmingly agrarian and was changing only very slowly.

A FEUDAL SYSTEM

The Domesday Book shows an England dominated by the feudal system: most people **toiled in serfdom on the land** << 74–75. Efficiencies over the centuries that followed gradually increased agricultural productivity, without radically changing the feudal system << 88–89, though growing tensions were registered in the Peasants' Revolt << 104–05. The cities came into their own, and **merchant companies and guilds organized urban economic life** << 120–21.

CHANGES BEGIN

Tudor enclosures made England's farmland yet more productive, albeit at considerable social cost << 132–33. The **enclosure process gathered momentum** through the 17th century. So too,

however, had researches into science and the study of humanity's relations to its world. While Isaac Newton was mapping out the universe, others were **enquiring into just about every other aspect of the natural environment** << 184–85.

ulif et nomnat le setes.

PEASANT WORKING THE LAND

The Country Housewife

Science came to the kitchen when Richard Bradley, Cambridge University's Professor of Botany, wrote *The Country Housewife* in 1736. This manual, on every aspect of cookery, food preservation, and brewing, became an indispensable housekeeper's companion.

powerful Improved Black Cart Horse, the ancestor of the modern Shire.

A disciple of Bakewell's, Thomas Coke developed his ideas at Holkham Hall, in Norfolk, from 1776. His Holkham Clippings, open to the public, made his annual shearing into what we would nowadays call an agricultural show. It served as a sort of trade fair for improvement-minded farmers, stockbreeders, and engineers.

The consequences of these local experiments were felt nationwide. Statistics kept by London's Smithfield Market give the average weight of a bullock in 1710 as 370lb (168kg); by 1795 it was more than twice that at 800lb (363kg). Over that same period the weight of sheep actually more than doubled, from 29 to 79lb (13 to 36kg).

Technological transformation

Farming was transformed by innovations such as Jethro Tull's seed drill (1701) and Joseph Foljambe's

Scientific agriculture

Selective breeding allowed the scientific landowner to achieve constant improvements—and aspire to even more. While genetic science was not yet understood, it was clear that mating animals with special strengths offered the chance of a benefit in the next generation. Animals could be bred bigger, meatier, or woollier.

Rotherham plow (1730), which was lighter, yet more robustly made than earlier models. Andrew Meikle's threshing machine (1786) made the annual harvest much more easy to manage, making light of one of the most labor-intensive tasks.

Technological development in agriculture helped to create a climate in which technological advances could be harnessed in other areas too. The growth in profits helped fund amateur research and experimentation, and rapidly rising yields meant that a growing urban population could be fed, setting things in place for the now-incipient Industrial Revolution.

INNOVATION

LANDSCAPE AS ART

Enlightened landowners saw their profits soaring as their lands became more productive. With their wealth they could afford to improve not just their working farms, but their homes as well. Their confidence was rising too: they believed implicitly that they could improve on nature, and set about creating numerous picturesque settings.

Landscape architects such as Charles Bridgeman (1690–1738) and William Kent (c.1685–1748) led the way in establishing the taste for a natural look which, while offering an enticing hint of wildness, was reassuringly domesticated in its overall effect.

This sensibility reached its height in the rolling parkland vistas conjured up by Lancelot "Capability" Brown (1716–83). Where a previous generation might have rejoiced in the self-conscious artificiality of an ornamental garden with fountains, lawns, and symmetrically laid-out walks, now the emphasis was on a carefully contrived spontaneity. Great as the contrast with earlier styles was, such scenes were to fall foul of later Romantic judges, who believed that natural beauty should not be landscaped, but should be wild and uncontrolled.

AFTER

The Agricultural Revolution was profoundly significant in itself; yet its indirect results were still more far-reaching.

DRIFT TO THE CITIES

Brutal though the process may have been, enclosure—and the evictions it brought—helped to clear the way for the great advance that was

CITY SLUM DWELLERS, 1861

to be represented by the Industrial Revolution. Those dislodged from the land, drifting to the cities, **constituted a ready-made labor force**, grateful for the chances offered to them by the new entrepreneurs **232–33** >>

URBAN NEEDS

The transition was by no means painless. Living conditions in the industrial cities were frequently horrific; work was exacting (and often dangerous) and the hours were long. Soon, **political discontent found expression** in popular protest **264–65** >>. But there was to be no putting the clock back. In time and as industrialization gathered momentum **276–77** >>, the **greater output from the countryside** allowed a large and (in food terms) nonproductive urban population to be supported. As the 20th century began, Britain was well on its way to becoming a predominantly urban society.

Inventors and Entrepreneurs

In the space of a few generations, the Industrial Revolution was to utterly transform the British scene—from its landscape to its social assumptions and sense of identity. Invention and entrepreneurship went together in bringing about these changes. Neither could have taken place without the other.

BEFORE

Trade was always important to the nations of Britain. In the preceding centuries, it became more vital still.

CONDITIONS FOR ENTERPRISE

In Tudor times, **the wool trade brought great prosperity** << 142–43. Flourishing commerce (cultural and mercantile) with northern Italy ensured that England shared in the benefits of the Renaissance << 152–53. **Trade expanded rapidly during the Commonwealth and Restoration**, with England even going to war to defend its market share << 180–81. Scientific advances through the 17th century led to new technologies << 184–85. Just as important was **the financial ingenuity that made their development possible** through the introduction of more sophisticated banking and of joint-stock companies << 210–11. Meanwhile, **increased agricultural productivity was freeing up a huge potential workforce** to work in industry << 230–31.

INNOVATION

A NEW POTTERY

Founded in 1736, Josiah Wedgwood's Staffordshire stoneware was industrialized elegance, bringing gracious living within reach of the middle class. A readiness to innovate in kiln and glaze technology was matched by resourcefulness in marketing, especially in securing the approval of Queen Charlotte in 1765. Although it was mass produced, it was made to exacting standards, was beautifully colored in white, blue, or black, and was tastefully decorated—often with classically influenced designs.

WEDGWOOD TEAPOT

The early 18th century found a still overwhelmingly rural Britain poised uncertainly between a fast-receding past and an unknown future. Thousands of agricultural workers were left unemployed by a labor surplus that resulted from high rates of population growth; often their families were uprooted by enclosures, which were gathering pace throughout the decades of the Agricultural Revolution (see pp.230–31).

With a sole dependence on agriculture seemingly gone, manufacturing, mainly in textiles, offered an alternative, or at least additional work. Some people had established themselves as spinners or weavers, processing wool on wheels or handlooms in their own homes, often combined with farming work. Yet such “cottage industries” were by definition small in scale. There was no suggestion that production could be stepped up sufficiently to supply anything more than the most modest local trade.

Productivity and factories

Technological innovation was to change all that. Inventions, such as John Kay's flying shuttle, in 1733, made even handloom-weaving more productive. The realization that these devices automated the processes of manufacturing offered to

manufacturers the possibility of replicating them, perhaps many times over, to bring output to unprecedented levels. Yet productivity was still limited by the capacity of the individual man or woman to work, marrying strength and stamina with manual skill.

External sources of power were not new: horses had pulled carts and coaches from time immemorial; windmills and watermills had been used for centuries in grinding grain. The challenge facing 18th-century inventors was to harness the brute power of water to the delicate tasks of textile manufacture. In 1738, Lewis Paul and Edward Baines invented a roller-spinning machine, which allowed yarns to be made on a much larger

The new industrial landscape

The Industrial Revolution excited not just the economic, but the artistic, imagination. A new kind of landscape that both attracted and repelled was born at the Ironbridge Gorge, in Coalbrookdale, Shropshire.

scale. Paul's carding machine of 1748 allowed the clumps and tangles to be teased out of the raw wool with ease, enabling the worker to produce far more usable fiber. James Hargreaves' spinning jenny (1764) was quickly eclipsed by Richard Arkwright's spinning (later, water) frame, in 1775.

Arkwright was arguably responsible for a more important innovation: modern factory production. At his five-story mill in Cromford, Derbyshire, he used water power to drive whole rows of carding machines, spinning

500 The number of horses whose work Newcomen's first steam engine of 1711 was able to perform. Steam power was quickly to become much stronger still, performing the work of thousands of horsepower.

frames, and mechanical looms, under the supervision of some 200 local workers—men, women, and children. Serving in shifts, they kept the factory running day and night. Arkwright's system meant that the output of thousands of highly skilled artisans could now be surpassed by that of a few, mainly unskilled, workers.

Arkwright achieved enormous economies of scale, but water power was not available everywhere, and even where it was, capacity was limited by difficulties of access and river flow. The first steam pump was developed by Thomas Savery, in 1698, although its poor performance gave no suggestion that a technological revolution was under way. Thomas Newcomen's atmospheric engine, in 1712, was an improvement, although Scottish engineer James Watt was to make it better still. Watt saw how inefficient Newcomen's engine was, particularly in its condenser. Using cold water, this condensed steam in

its chamber to produce a vacuum, which had the effect of pulling a piston down to raise the pumping beam. Then more steam was produced, driving the piston up once more, until the chamber cooled down and the condensing cycle could begin again. Heated and cooled at every stroke, the process was hugely wasteful in energy. Watt's separate condenser allowed most of the heat to be retained and reused in successive strokes; his steam pump also had an efficient rotating engine. Watt was sponsored by Matthew Boulton, who was one of the new breed of entrepreneurs. With no personal pretensions to technical mastery, he was driven instead by a dream of industrial power; a desire to realize the potential of new technologies. His Soho Manufactory, in Birmingham, made

Marketing technology

Richard Trevithick's 1808 locomotive, named *Catch Me Who Can*, raced a horse around a specially built circular track in Bloomsbury, London, in order to prove the value of this new invention. It was not enough to invent technology, it had to be sold as well.

“I sell here, sir, what all the world desires to have—**POWER.**”

MATTHEW BOULTON, TO DIARIST JAMES BOSWELL, 1776

everything from toys to buttons and, from 1788, had a steam-powered mint for the mass production of coins.

A new age of iron

Steam was used where water power was used before, but now with new applications, especially in mining, for coal and Cornish tin. Steam pumps raised rainwater from previously inconceivable depths, allowing a rapid expansion in the industry, and—since Abraham Darby had found a way of using coke in iron production—meeting a soaring demand for coal. In 1709, ending centuries of charcoal-fueled forest-smelting, Darby built a gigantic blast furnace at Coalbrookdale, making possible the large-scale production of pig-iron. It also made its mark on the Shropshire landscape, a diabolical one, many felt. Belching smoke by day, it cast an infernal glow at night, while ringing with the din of its machinery. The Industrial Revolution was everywhere. Even where mills and mines did not stud the skyline, canals crisscrossed the country. With huge quantities of raw materials and manufactured goods to be moved, canals were vital. The Sankey Canal, near Warrington, was built in 1757; the Bridgewater Canal four years later; and the Leeds and Liverpool Canal followed in 1774.

AFTER

Britain led the way as the world's first industrial nation. The challenge now was to manage that advantage.

DRAMATIC CHANGE

The **pace of change was startling**: the sense, at once exhilarating and alarming, was of an entire country rushing onward like one of the new steam trains that were careering across the countryside **258–59** >>. Many of the population felt left behind, however: **uprooted from the traditions of rural life**, they found themselves disorientated, struggling to find their way in sprawling cities. At this time of progress and prosperity, **poverty was rife and living and working conditions frequently atrocious**. It seemed that political turbulence, including a Luddite backlash against machines and industry, could hardly now be avoided **264–65** >>.

NO WAY BACK

Britain's course was established, and with other competitive nations racing to catch up, there was no turning back, or any great desire to. Despite the problems, **most took pride in the industrial preeminence** of what remained the workshop of the world **276–77** >>.

ANTI-INDUSTRY LUDDITE

The Anti-slavery Movement

The institution of slavery did not seem self-evidently wrong to many in 18th-century England, much of whose prosperity depended on the trade. The success of the abolitionist cause represented not just the righting of a historic wrong, but a rare example of sustained persuasion producing a real change of heart.

In 1765, Bristol-born sugar planter John Pinney wrote: “I can assure you that I was shocked at the first appearance of human flesh exposed for sale.” He recovered from his discomfort

quickly enough, however, and was able not merely to accept but to justify the trade in Africans: “Surely God ordained them for the use and benefit of us.”

A lucrative trade

How much easier was it for those in England who simply profited at second- and third-hand? That group was not restricted to the merchant communities of Liverpool and Bristol. The slave trade

BEFORE

Slavery was a part of Roman and early medieval life, but for the British, trading in slaves on a large scale was relatively recent.

THE NEED FOR SLAVES

The 17th century brought **colonial expansion on a significant scale**, opening up new North American and Caribbean territories for exploitation << 162–63. True, people there could be exploited, but Native Americans were not the answer. Epidemiologists estimate that, within a century of the Europeans’ arrival, about 90 percent of the indigenous population were carried off by **Old World diseases** to which they had no inbred immunity. As commerce became increasingly the mainstay of British economic life, **the slave trade played an ever more central part** << 178–79.

AFRICAN SLAVE SHIP

Campaigners successfully mobilized middle-class opinion: this meeting was called by prominent clergy and other pillars of the community in Wakefield, Yorkshire.

underpinned Britain’s general prosperity. The trade brought tobacco from the Chesapeake, rice from the Carolinas and Georgia, and sugar from the Caribbean. The profits from the trade contributed to some of the ventures and infrastructure projects of the Industrial Revolution.

British and black

A small but significant Black-British population had by this time become established. Some were freed slaves—often former personal servants—but there were also US seafarers from the northern states who had decided to stay on in the (sometimes only slightly) more tolerant climate they found in

seaports such as Liverpool and Bristol. London had Britain’s biggest black community, though: it was a major port and the nation’s economic powerhouse. Most of the new Black-British population worked in menial trades, but some were more educated and prosperous. These included Ignatius Sancho (a shopkeeper who was also a composer and playwright), Ottobah Cugoano, and Olaudah Equiano.

“Am I not a man...?”

The last two became important—as examples of what black people might become—for a new but growing abolitionist movement. “Am I not a man and a brother?” asked the kneeling

Slaves thrown overboard

In 1781, the Liverpool slave ship *Zong* threw 122 slaves overboard to relieve overcrowding, and then made an insurance claim—later contested in court—for their lost cargo. Such indifference to life horrified many in Britain.

black slave on the medallion issued by Josiah Wedgwood in 1787. White Britons found this rhetorical question easier to answer in the affirmative when faced by articulate and presentable figures such as Cugoano and Equiano.

Some voices (such as those of the Quakers) had been raised against the outrage of slavery since the end of the 17th century. The Society for the Abolition of the Slave Trade was founded in 1787. Its leaders included

Gustavus Vassa

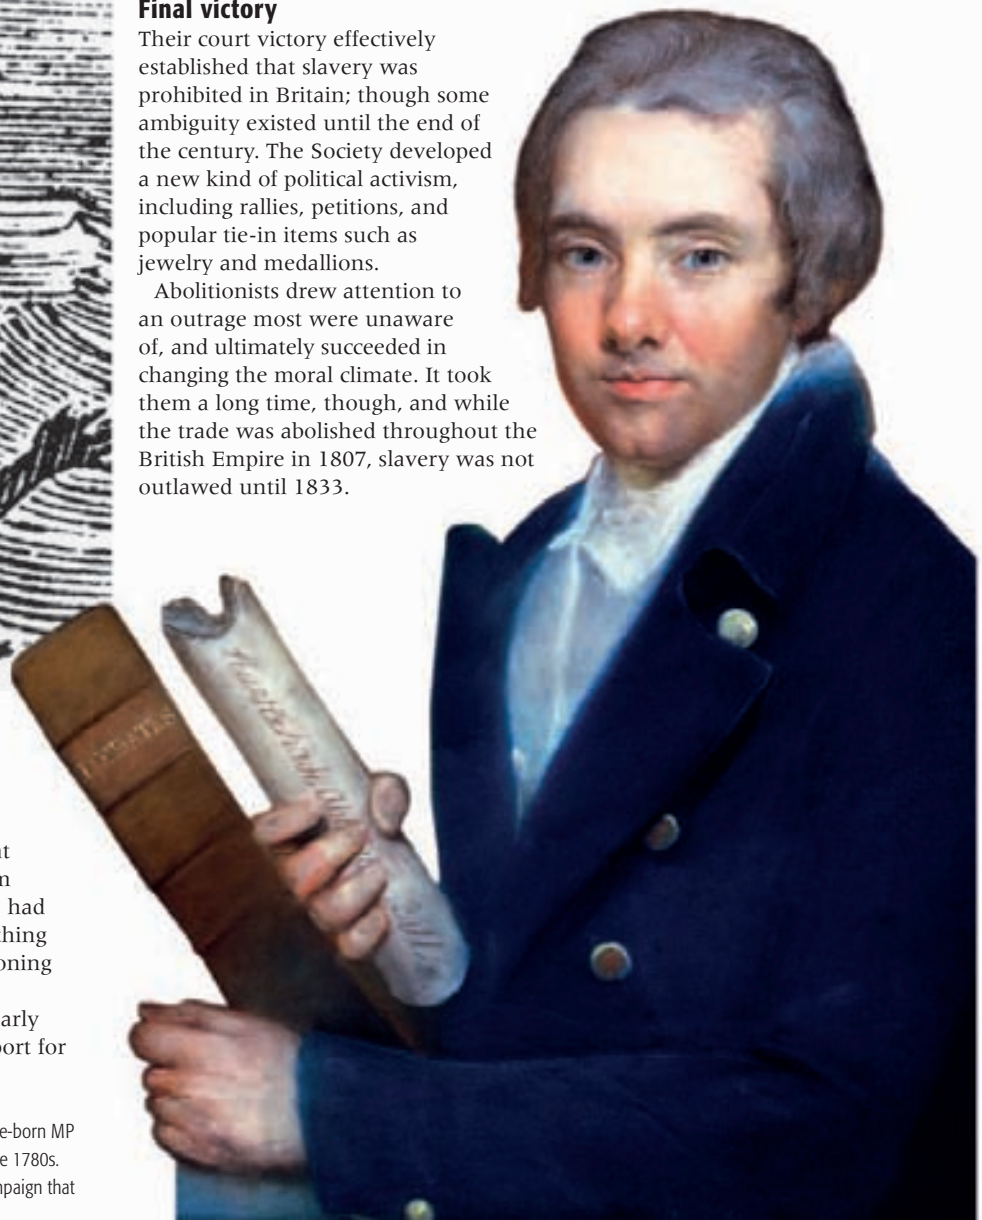

Nigerian-born Olaudah Equiano was renamed by his Virginia owner after a 16th-century Swedish nobleman. It seems to have been an act of sheer facetiousness. However, Gustavus Vassa later became an important abolitionist campaigner.

American slave James Somersett, who ran away during a visit to London. He was captured, but Sharp took legal action to prevent his return to Virginia.

Final victory

Their court victory effectively established that slavery was prohibited in Britain; though some ambiguity existed until the end of the century. The Society developed a new kind of political activism, including rallies, petitions, and popular tie-in items such as jewelry and medallions.

Abolitionists drew attention to an outrage most were unaware of, and ultimately succeeded in changing the moral climate. It took them a long time, though, and while the trade was abolished throughout the British Empire in 1807, slavery was not outlawed until 1833.

James Ramsay (a Royal Navy surgeon, who had seen conditions on slave ships), Elizabeth Heyrick, Thomas Clarkson, Granville Sharp, and, most famously, William Wilberforce. The latter's key contribution was in Parliament where he introduced his first bill in 1791, though it was roundly rejected.

The Society was strongly Christian: three-quarters of its founders were Quakers; others belonged to Anglican, Methodist, Baptist, and other groups. Christian views did not automatically ensure abolitionist views. John Newton, since famous as a reformed slaver and as author of the hymn *Amazing Grace*, did not end his involvement in the trade until some years after his spiritual

rebirth of 1748. A non-Christian case against slavery was also emerging—and not just a post-Enlightenment view that it was inhumane. Since Adam Smith (see pp.224–25), there had been a prejudice against anything that hindered the free functioning of the market economy.

Granville Sharp scored an early victory in 1772 with his support for

William Wilberforce

Christian conviction inspired this Yorkshire-born MP to take up the cause of abolitionism in the 1780s. Religious groups took the lead in the campaign that called for an end to the slave trade.

In Britain itself, the immediate impact of the abolitionists' eventual success was to raise questions about how Britons were being treated by their fellow Britons.

GREATER DIGNITY AND CHOICE

Slavery might not have existed officially in Britain, but countless thousands toiled in **terrible conditions in mines and factories**, and in the **sweatshops** of the garment trade. Caring members of the richer classes took an interest in their plight, while radicals attempted to **mobilize the poor** themselves **264–65 >>**.

The recognition grew that bound up in their wage-slavery was **a genuine lack of democratic participation**, and this added momentum to the campaign for electoral reform **268–69 >>**. A desire to have greater dignity and choice in their lives spurred many in the working classes to strenuous efforts in self-education **278–79 >>**.

BEFORE

Political violence had been seen in Britain, although nothing matched the scale of the revolution in France (1789–99).

BRITISH UPRISINGS

The **Peasants' Revolt** of 1381 set the establishment trembling << 104–05. Two centuries later, **Henry VIII's Reformation** sparked off not just religious but social unrest << 136–37. Charles I's problems with his Parliament << 166–67 started a struggle between elites, but the whole country got caught up in the **horrors of the Civil War** << 168–69. The Glorious Revolution, despite its name, had been more of a palace coup, though its repercussions were felt by all << 188–89.

FRENCH REVOLUTION

INTELLECTUAL (1737–1809)

THOMAS PAINE

Born in Norfolk in 1737, Thomas Paine emigrated to America in his mid-thirties, and experienced the tumults and the triumph of the American independence struggle. A friend of founding fathers such as George Washington and Thomas Jefferson, he discovered a calling in the radical cause, and went to France to join the fight for freedom there. His book *The Rights of Man* (1791), an eloquent counterblast to Burke's *Reflections* won him widespread admiration as the prophet of revolution, but he found little honor in his homeland, where he was roundly vilified.

Reaction to the Revolution

"Bliss was it in that dawn to be alive," wrote the Romantic poet William Wordsworth, recollecting his experiences as a young student in revolutionary Paris. But many of his countrymen were not convinced—especially as hope turned to disillusion, and tumult to terror.

The French Revolution did not directly involve Great Britain. On the other hand, it was happening less than 30 miles (48km) from Dover. Prime Minister William Pitt the Younger was concerned, but felt that it was not Britain's quarrel. He found he could not ignore it altogether, though. Pitt was no radical, but in a spirit of good-housekeeping he had been trying to clean up British public life (see pp.206–07). However, events in France produced a conservative backlash in Britain, and the merest hint of reforming intent was taken

as revolutionism. The new mood was articulated by the Irish statesman and thinker Edmund Burke, in his pamphlet *Reflections on the Revolution in France* (1790). *Liberté, égalité et fraternité* ("freedom, equality, and brotherhood": the French revolutionary slogan) would only lead to tyranny and bloodbath, Burke prophesied.

Pamphlet war

Burke's book kicked off a major debate over the issues raised by the Revolution: what place (if any) the monarchy should have; what freedom should

mean; the relative importance of individual and collective rights. More than 300 further publications appeared in the "pamphlet war" that followed. Tom Paine, longstanding cheerleader for change (see box) responded with his *Rights of Man* (1791), although Mary Wollstonecraft had beaten him to it, her *Vindications of the Rights of Men* appearing

Pitt the Younger at Westminster

As Britain's youngest ever prime minister—just 24 when he came to office—William Pitt the Younger did much to reform the assembly whose committees he graced and whose debates he electrified.

French Liberty, British Slavery

James Gillray's satirical swipe takes a familiar line: Britain's cautious conservatism delivered more to the people than France's radicalism. There was something in the claim.

Government alarm, meanwhile, led to a crackdown on radicalism. At the Treason Trials of 1793–94, a series of writers and speakers were charged with sedition, first in Scotland, then in London. The Scottish trials were kangaroo courts; radicals Thomas Muir and Thomas Palmer being found guilty and transported as a formality. London jurors would not be cowed: a couple of

defendants (including Paine) were convicted, but most were not. In some cases their prosecutions were quite literally laughed out of court, although the Conservative press and “Loyal Britons” were not amused.

Mutiny!

Although most of the violence in Britain up until this point had come from those the radical thinkers were now branding “reactionaries”, the threat of revolution was not altogether imaginary. “Corresponding Societies” called for universal male suffrage, schools for all, and other measures, which would undoubtedly have transformed society. A famine in the mid-1790s inevitably heightened popular unrest. In 1795, George III's coach was mobbed by a crowd up to 200,000 strong, shouting “No King, no war, no famine and no Pitt!” Rushed through in response to this outrage against the Crown itself, the Two Acts (against Seditious Meetings and Treasonable Practices respectively) promised to make life all but impossible for the radicals.

A shudder ran down respectable spines when the insurrectionary spirit now showed itself in the very force that

just weeks after Burke's *Reflections*. She went one better in 1791 with a *Vindication of the Rights of Woman*, a bold articulation of the case for feminism.

Terror and treason

Whatever the rights and wrongs of the argument, events on the ground in France were bearing out Burke's gloomy prognosis. By 1792, the revolutionary government was calling on others to emulate their example. Then, in January 1793, Louis XVI and his family were executed; centralized despotism and the beginnings of the Terror followed. Relations with Britain were frosty even before France, as part of its aim to export revolution, declared war on February 1. After this, what had been a fear for the country's political stability became a concern for its immediate security.

While respectable England was haunted by the specter of the *sans culotte* (the “knee-breech-less” hooligan of the Paris streets), the first riots in Britain were by reactionary “Church-and-King” mobs. These attacked dissenters and intellectuals over their supposed sympathy with the French Revolution. A particularly nasty attack occurred in Birmingham in 1790.

“But what is **liberty without wisdom, and without virtue?** It is the greatest of all possible evils...”

EDMUND BURKE, *REFLECTIONS ON THE REVOLUTION IN FRANCE*, 1790

Britain showed every sign of riding out the revolutionary storm. Its constitutional regime was flexible enough to cope with and contain a degree of unrest.

MOVEMENTS FOR CHANGE

In the decades that followed, **industrialization placed enormous strains on the social order.** Workers started organizing to win their rights. One early movement was that of the **Chartists 264–65** >>, who campaigned for electoral reform **268–69** >>.

CHARTISTS MEETING, 1848

300 The number of effigies of Tom Paine burned across Britain by members of the Association for the Protection of Liberty and Property against Republicans and Levellers, November–December 1792.

was supposed to be protecting Britain. April 1797 brought a naval mutiny at Spithead, off Portsmouth.

It was, in truth, barely a mutiny at all, although it suited a Conservative press to see it that way: the participants, seeking better pay and conditions, bent over backward not to be disruptive and promised that they would not refuse to fight if called upon to do so. This dispute was resolved by negotiation.

The following month, however, a second, more serious, mutiny took place off the Nore at the mouth of the Thames. Whilst this started as a copycat protest, it quickly got out of hand—partly because the Admiralty cracked down on it so harshly, clearly seeing it as a sign of the rot setting in. The Navy's tougher line was met with violence—and escalating demands. Ultimately, indeed, quite ludicrous demands: the dissolution of Parliament, for instance, and an end to the war with France. The Nore mutineers were starved into submission, and when the protest finally collapsed, ringleader Richard Parker was hanged from the yardarm as a warning to others; 28 of his followers were also executed, while others were flogged or transported to Australia.

Rebellion in Ireland

Among those looking to the French example in their thirst for freedom were those in Ireland, both Protestant and Catholic, who believed that it was time to break the British connection, once and for all. In May 1798, the moment came for the United Irishmen. Thousands rose in open rebellion.

Ireland appeared stable as the end of the 18th century approached. But this stability was based on the rule of an essentially Anglican Ascendancy: northern Presbyterians shared the Catholics' sense of disenfranchisement.

United for Ireland

This was the logic behind the formation of the Society of United Irishmen, which held its first meeting in Belfast in 1791. Its founders Samuel Neilson, Theobald

Wolfe Tone, and Thomas Russell were all Protestants, as was their early leader James Napper Tandy. They were "patriots"—in the specialized sense that they were Protestants who favored Irish independence. They were also unabashedly influenced by both the American and French Revolutions. Yet it was only Wolfe Tone who favored universal suffrage—Catholics included.

His comrades felt the peasantry was (in William Drennan's words) "unfit for liberty"—too much influenced by its clergy to be trusted with democratic responsibilities. The issue was energetically discussed at meetings and in the United Irishmen's newspaper, the *North Star*.

Theobald Wolfe Tone

Wolfe Tone believed that Ireland's Protestant "patriot" gentry could make common cause with the Catholic peasantry. He committed suicide after he was captured in 1798.

Vinegar Hill

General Lake looks on as his cannon cut a swathe through the rebel ranks. They made a valiant last stand atop this hill in County Wexford.

BEFORE

The story of the previous two centuries in Ireland was one of English overlordship, often brutally enforced.

FLIGHT OF THE EARLS

Finally prevailing in the Nine Years' War, England demanded the **loyalty and obedience** of the old Catholic elite, who for the most part chose instead to leave their homeland, in the Flight of the Earls. The Plantation of Ulster established Protestant settlers in the north << 156–57.

DRIVEN UNDERGROUND

Meanwhile, a series of penal laws **restricted the religious freedoms of Catholics**, barring them from public office. Cromwell's atrocities made clear his contempt for the Irish and their religion << 174–75, driving Catholicism underground. Not surprisingly, the Catholic Irish sided with the Stuarts in the Succession Wars << 196–97.

ANGLO-IRISH ATTITUDES

Calm was assured in the 18th century when a Protestant Anglo-Irish "Ascendancy" **felt secure in its hold** over a powerless, impoverished, and overwhelmingly Catholic peasantry.

ANGLO-IRISH STATELY HOME, WICKLOW

The ultra-Britishness of the Protestants in Ulster is taken for granted now, but as the example of the United Irishmen shows, this was not always so.

Even at the time, however, some Protestants took a different direction. The edge of the Ulster Plantation was a natural flashpoint for sectarian violence. The Orange Order, which was named after William of Orange, whose victories in the Succession Wars (see pp.196–97) were rallying-points, was established at Loughgall, Armagh, in 1795, after the Battle of the Diamond. This sectarian brawl at the Diamond crossroads sparked off the Armagh Outrages, in which many Catholic homes were attacked. Membership of the Order

overlapped with that of the Peep o' Day Boys, who attacked in the dawn, ruthlessly driving out many hundreds of Catholic families.

Crackdown

Meanwhile, a crackdown by the authorities in 1793 had driven the United Irishmen underground. By 1796, Wolfe Tone and Lord Edward FitzGerald were meeting French revolutionary officials in Paris.

A son of the Duke of Leinster, FitzGerald, the "Citizen Lord", was potentially a powerful advocate for the United Irishmen's cause. In the event, his impetuosity and indiscretion made him a liability, alienating moderates in the Irish ascendancy and rattling the French. Even so, France did put together an invasion fleet that same

“... the union between Ireland and Great Britain [is] the scourge of the Irish nation...”

THEOBALD WOLFE TONE, TO HIS COURT-MARTIAL, NOVEMBER 10, 1798

year, only for it to be dispersed by a "Protestant Wind." Despite this, the United Irishmen had 280,000 members by the beginning of 1798. Again, government reaction left them no peaceful recourse: the imposition of martial law in March 1798 precipitated a rising. This time, however, the French dragged their heels and sent only a small force.

In Ireland, a new group of rebels, known as the Croppies, were ready for the fight. The Croppies took their name and style from the French Jacobins, who had close-cropped hair to show their contempt for the aristocratic powdered wig. Across the country, though, support for a fight was patchy.

Brutal campaigns by General Gerard Lake in Ulster and around Dublin weakened the United Irishmen in what should have been their heartlands. Further south, the Catholic peasants were far more exercised by their poverty—and by the penal laws.

90 The number of days after the start of the rebellion when the first French forces arrived in support, but they were too late. The Irish rebels had been, to all intents and purposes, crushed two months before.

Vinegar Hill

On May 24, 1798, Kildare was taken in a surprise attack by the British. It all turned very dirty as a string of tit-for-tat massacres ensued. The high-minded nonsectarianism of the United Irishmen went by the board, especially in the south. The murderous feeling was mutual as British armies converged on the county of Wexford. A force that was 20,000 strong defeated the inadequately armed rebels at Vinegar Hill on June 21. Up to 1,000 people, including women and children, were killed in the aftermath.

Toward union

The French sent a disappointingly small force under General Humbert, which arrived on the coast of Mayo in August 1798. With their help, the local rebels established a Republic of Connaught—which lasted all of 13 days. In October, Wolfe Tone tried to land in Donegal with a larger French force, but he did not even make it to the shore before being captured by the British.

Up to a point, the justice of the rebels' cause was implicitly acknowledged in the 1800 Act of Union, which came into effect in January 1801. William Pitt the Younger viewed Ireland's exclusion from full union as an anomaly and the direct cause of much disaffection among the island's ruling class. In his eagerness to enlist support, he strove to further the cause of Catholic emancipation. This upset George III, who took seriously his role as patron and protector of the Church of England. The prime minister was forced to resign in 1801, and Catholic emancipation progressed slowly, finally arriving only in 1829.

AFTER

The harsh suppression of the rebels guaranteed that Ireland's 18th century would end just as its 16th and 17th centuries had: in a burning sense of grievance against the English.

UNDERCURRENT OF ANGER

Violent unrest continued to be part of Irish life in the decades that followed, but for the most part, on a small and local scale. The Famine of the 1840s, **266–67** >>, did nothing to reduce **Irish resentments**, though sheer want and exhaustion produced passive stoicism, rather than violent eruption. A deep, continuing undercurrent of anger ensured that, despite the best efforts of O'Connell and Parnell, a wholly **peaceful campaign for Home Rule** would be difficult to sustain **300–01** >>.

THE FENIAN FIGHT

If the Fenians—formed by the Irish diaspora in America in the 1850s—looked to ancient Ireland and the warriors of Finn MacCool's Fianna for their name, they looked to the Croppies of 1798 for **political inspiration**. They were a model for Irish Republicans down to the troubled years of the 20th century **378–79** >>.

FENIAN BANNER, 1866

BEFORE

Antagonism toward France was for centuries an established constant of English, and then British, history.

WARS WITH FRANCE

Close ties in the Norman era later gave way to the Hundred Years' War << 96–97, << 118–19. Conflict flared again in Tudor times << 138–39.

A united kingdom now, Britain built an empire at France's expense, taking territories in North America and India << 212–13. France in its turn tried to thwart Britain's plans, supporting rebellious colonists in America, << 214–15, and the Jacobites in Scotland << 202–03. The French Revolution and ensuing Terror caused consternation across the Channel,

<< 236–37, especially when the French backed the United Irishmen's uprising << 238–39.

GUILLOTINE OF THE TERROR

The Napoleonic Wars

A whole continent could not contain the vaunting ambition of Napoleon Bonaparte, the “Little Corporal” who seized an emperor’s crown. For Britain, as for other European countries, the need to handle the threat from France overshadowed the end of the 18th and start of the 19th centuries.

France in the early 1790s was ebulliently aggressive: this was a way for the revolutionary regime to maintain momentum and keep the people’s spirits high. French soldiers were repulsed on invading the Austrian Netherlands in 1790, but fared far better when they tried again two years later. Britain joined Austria, Spain, Prussia, and the Kingdoms of Sardinia and Naples in a First Coalition against France in 1793, but this alliance did not faze the French. With reason: the defeat of an Austro-British army at Tourcoing, in May 1794, left the First Coalition in disarray, and by 1795,

France appeared to be secure. But war was a way of life now for France; the

first resort of a government which preferred to seek enemies abroad than to tackle its difficulties at home.

Little Corporal to emperor

The Italian island of Corsica had been ceded to France in 1768, so when Napoleone di Buonaparte was born the following year, he was French, and it was to a French military academy that he went a decade later. He came to prominence as a young artillery commander at the Siege of Toulon, in 1793, after that city had sought, with British backing, to throw off France’s Convention government. He had then

The Battle of Waterloo, 1815

The Battle of Waterloo, in which the French were beaten by an Anglo-Prussian force, finally finished Napoleon (see pp.246–47). It took place after Napoleon had escaped from his exile on the island of Elba.

625 The percentage rise (from 40,000 to 250,000 men) in the size of the British Army between the start of the Revolutionary Wars (1793) and the height of the Napoleonic Wars (1813).

saved the new Directory government, thwarting a coup attempt in 1795. Now a general, from 1796 he fought a triumphant campaign against Austria in Italy. Austria was brought to terms in 1797, though the following year, it became a member (with Britain, Russia, Portugal, Sweden, and the Ottoman Empire) of the Second Coalition.

In 1798, Napoleon invaded Egypt. Though the Canal was not yet built, Suez was vital to Britain’s links with its empire in Indian. The British therefore supported the Ottoman Turks, Egypt’s then rulers. Although the Royal Navy,

under Horatio Nelson, failed to stop the French landing, in 1799 its guns helped push them back at the Siege of Acre, preventing a French conquest of Syria. However, Napoleon still controlled Egypt, and, from November 10, he was a preeminent member at home of the Consulate, a dictatorial government. Yet he remained a field commander, leading a reorganized army to dazzling victories at Marengo and Hohenlinden. In 1802, with Austria once more forced to surrender, Britain agreed its own reluctant peace at Amiens.

Both sides broke the Treaty of Amiens, the French by interfering in Switzerland, the British by seizing Malta. When a Third Coalition brought Britain into

Napoleon's invasion plan

This cartoon jokingly imagines coordinated attacks over, under, and across the English Channel as Britons faced up to the threat of a French invasion in 1805. All these approaches were feared as real possibilities.

alliance with Austria, Russia, and others, Napoleon demonstrated his defiance by crowning himself Emperor of France on December 2, 1804.

Defending the “ditch”

In 1805, resolving to invade England, Napoleon marshalled 180,000 troops on France's northern coast. It was almost as many soldiers as the British Army had in total (about 200,000, to France's 2.5 million). The English Channel, Napoleon notoriously observed, was “a mere ditch”, which it would take only a little courage to cross. It turned out to be a more formidable barrier, however, especially when it was patrolled by a determined Royal Navy.

Vice-Admiral Robert Calder thwarted Villeneuve's French fleet at Finisterre that July; Nelson won famously (albeit tragically) at Trafalgar three months later. In the longer term, the Royal Navy also helped to protect Britain's overseas trade (and damage France's). This was crucial for an industrializing nation. As Napoleon, despairing of dominance at sea, imposed his Continental System, British trade was barred from French-controlled areas, which by this time meant much of western Europe. Thanks to the Royal Navy, this “nation of shopkeepers” (Napoleon's gibe) was able to stay in business—not least by providing economic support to other nations struggling against Napoleon.

On land, however, Napoleon's victories went on: December 2, 1805 brought his culminating triumph over an Austro-Russian army at Austerlitz. Again, Austria was forced out of the coalition. It was unable to join the Fourth Coalition, now hastily formed by Britain in conjunction with Prussia, Russia, Saxony, and Sweden. Events followed the familiar pattern: Britain won significant victories at sea, but the Coalition as a whole was soon defeated.

France invaded Portugal in 1807 with Spanish assistance. The Peninsular War began when the ungrateful French occupied Spain itself in 1808. Britain sent troops to help Spanish regular and irregular forces in what was to be a long and dirty war. They made some progress—so much so that Napoleon decided to come and take charge himself. He swept through Spain in the now-customary way. The moment he returned to France, however, his armies became bogged down again. General John Moore's death at La Coruña, in January 1809, provided an iconic

“**Destiny** urges me to a goal of which I am ignorant. Until that goal... I am **invulnerable**...”

NAPOLEON BONAPARTE, *MAXIMS OF NAPOLEON*

moment for patriotic Britons: he had not won, but he had saved his country from a crushing defeat. In May, Arthur Wellesley (later the Duke of Wellington) effectively expelled the French from Portugal at the Battle of Grijó. It was by no means a rout, however. Indeed, a lengthy stalemate ensued. An attempt by Britain to open a second front in central Europe in a Fifth Coalition with Austria failed in the face of now-familiar defeats.

The tide turns

The year 1812 changed everything. Wellesley was already back on the offensive (having taken Badajoz in April) when Napoleon invaded Russia in June. Wellesley took Salamanca, in July, in a decisive victory for the allies, and with no Napoleon to reverse it. Emboldened by the Emperor's disastrous defeat in Russia, the European powers joined Britain in a Sixth Coalition. With Napoleon's army exhausted after its Russian nightmare, and under unrelenting pressure in Spain, France was defeated at the Battle of Leipzig in October 1813. Britain, though not directly involved in that fateful engagement, played its part in Iberia, finally expelling the French from the peninsula in April 1814. By then, Napoleon had been forced to abdicate and sent to Elba, an island off Italy's western coast.

AFTER

The Napoleonic Wars, and the Battle of Waterloo that followed in 1815, gave Britain a nasty scare, but the country emerged as a great power.

EUROPEAN LEADER

The reign of Queen Victoria, **270–71** >>, was to be something of a **golden age**, as Britain opened up a technology gap—and an economic lead—over its continental neighbors. This **preeminence found a showcase** in the Great Exhibition of 1851 **272–73** >>.

FRENCH FRIENDS

That a **degree of complacency** crept in became evident in the Crimean War, where the military, which had gone **more-or-less untested** since the Napoleonic era, struggled to make its advantages of technology and resources tell **274–75** >>. Britain was **an ally of France** in that conflict and, as Germany emerged as a major (and increasingly aggressive) power, the **alliance was renewed** in World War I, **320–21** >>, and then again in World War II **346–47** >>.

YOUNG QUEEN VICTORIA

BRITISH NAVAL COMMANDER Born 1758 Died 1805

Admiral Nelson

“Our country **will... forgive** an officer for **attacking** an **enemy** than for **leaving** him alone.”

CAPTAIN HORATIO NELSON, 1794

Born in Norfolk to a country clergyman, Horatio Nelson grew up to be Britain’s most famous admiral. He was not just admired but extravagantly fêted, attracting such interest and excitement that his status came close to that of a celebrity. While his sense of duty was strong, he showed an audacity that bordered on indiscipline and a dashing courage that kept him in the public eye. His

Emma Hamilton

The wife of Britain’s ambassador to Naples, Emma Hamilton met Nelson in the aftermath of his triumph at the Nile. Neither tried to conceal their relationship.

romantic life was equally reckless, with his long-standing affair with Lady Emma Hamilton arousing scandal and admiration in equal measure.

Nelson joined the Royal Navy in 1771, aged only 12. Starting his career as an ordinary seaman, he soon became a midshipman, the lowest officer rank. In 1773, he volunteered to serve on HMS *Carcass* in a journey in search of the Northwest Passage (see pp.286–87). It was on this voyage that the 14-year-old encountered a polar bear on an ice floe. His musket misfiring, Nelson had

to fight the beast off with the weapon’s butt. His Arctic foray was followed by a venture to the tropics, when Nelson sailed with HMS *Seahorse* to the East Indies. The late 1770s and the American War of Independence and associated battles with France brought great opportunities for an able officer and Nelson attained several commands.

Hero of Cape St. Vincent

In 1783, now a captain, Nelson married Frances “Fanny” Nisbet, the daughter of a wealthy West Indian planter. Though they appeared to have been happy together, Nelson had more time than he wanted with his wife. Peace had left him bored and it was only after the outbreak of the French Revolutionary Wars in 1792 that the Admiralty finally gave him a new command.

Nelson quickly showed himself worthy—displaying, moreover, a readiness to put his own safety on the line. He lost the sight in one eye in action in Corsica in 1793. Four years later, he disobeyed orders in leading a boarding party at the Battle of Cape St. Vincent, off the Portuguese coast. Fortunately, the gamble paid off and, the Spanish fleet defeated, Nelson returned to England a hero, especially after having lost an arm in a later battle at Tenerife. Nelson was idolized as a dashing rule-breaker who led from the front.

Battle of the Nile

Napoleon, the French general, was one of Nelson’s strongest rivals. In May 1798, Napoleon set sail with his fleet from Toulon, France. His plan was to invade Egypt as a first step in a

Admiral Nelson

Devotion to duty and individualistic swagger vied for supremacy in Nelson’s style. He became the ultimate British hero for the Romantic age.

“To leave off action... **damn me**...
I have only one eye—I have a
right to be **blind sometimes**...”

NELSON, NOT SEEING THE WITHDRAW SIGNAL AT COPENHAGEN, 1801

campaign against the British in India. Although Nelson narrowly failed to intercept Napoleon, he found the fleet a few months later at Aboukir Bay, Egypt, completely destroying it in the brief Battle of the Nile that followed. Nelson's victory influenced the course of the entire war and he was awarded the title “Baron Nelson of the Nile.”

Nelson now broke another rule by embarking on a long affair with Lady Emma Hamilton, who was the wife of the British ambassador to Naples. Yet, however scandalous his conduct, he seemed to have a special license. At Copenhagen in 1801, where the Danish and Norwegian fleets had been defying the British blockade on French trade,

Battle of Trafalgar

An audacious battle plan to split Villeneuve's fleet brought Nelson a vital edge against the Franco-Spanish; the final flourish of an unconventional career.

Nelson famously put his telescope to his blind eye and “did not see” Admiral Parker's signal to withdraw. In the battle that ensued, he forced the Danes to ask for a ceasefire and surrender. Victory, it appeared, vindicated any misconduct, and at home Nelson was made a viscount.

Battle of Trafalgar

HMS *Victory* was to be Nelson's flagship as a commander-in-chief of the Mediterranean Fleet, locked in conflict with the navy of a France now led by Emperor Napoleon. By 1804, the French were trying to destroy the Royal Navy, or at least entice it away from the English Channel to give an invasion force a clear run at Britain. But Admiral Villeneuve's Franco-Spanish fleet was trapped at Toulon. Breaking out eventually, it was pursued south to Cádiz, in Spain, by Nelson, who finally confronted it near to Cape Trafalgar.

Breaking the rules for the final time, Nelson formed his fleet into smaller squadrons in order to outmaneuver Villeneuve's traditional line formation. He had the signal flags spell out the message “England expects every man to do his duty.” He was no exception, walking openly on the deck throughout, an inspirational presence to his men—and an irresistible target for the French sniper who finally felled him with a shot. His hero's death, in the hour of victory, became emblematic of the British spirit of self-sacrifice. His body, having been taken home, was borne up the River Thames on a barge and he was given a splendid state funeral at St. Paul's Cathedral.

Nelson's death

The admiral's heroic death at the Battle of Trafalgar took on iconic significance, endearing him to the masses during Britain's imperial age.

TIMELINE

- **September 29, 1758** Horatio Nelson born in Burnham Thorpe, Norfolk, the son of clergyman Reverend Edmund Nelson and wife Catherine.
- **1771** The 12-year-old Nelson enlists in the Royal Navy.
- **1774** Nelson joins HMS *Seahorse* for a voyage to the East Indies. He experiences action for the first time in a clash with vessels belonging to Hyder Ali, King of Mysore, in southern India.
- **1783** Commanding a small flotilla in the Caribbean, Captain Nelson leads a daring, but unsuccessful, attempt to capture the Turks Islands from the French.
- **August 1793** A Royal Navy expedition captures Corsica. Nelson loses the sight of his right eye during the preliminary bombardment.

HMS VICTORY

- **March 14, 1795** The French plan to retake Corsica is frustrated when Nelson defeats their fleet at the Battle of Genoa.
- **February 14, 1797** Nelson disobeys orders in defeating the Spanish off Cape St. Vincent, southwestern Portugal.
- **July 22–27, 1797** Nelson loses his right arm after it is struck by a musket ball in the course of the capture of Santa Cruz de Tenerife.
- **August 1–3, 1798** “By this time tomorrow I shall have gained a peerage or Westminster Abbey,” Nelson jokes before leading his fleet to triumph over the French in the Battle of the Nile.
- **April 2, 1801** After ignoring his commander's order to withdraw, Nelson defeats the combined fleets of Denmark and Norway at Copenhagen.
- **October 21, 1805** Nelson is victorious at the Battle of Trafalgar, but is hit by a sharpshooter's bullet and killed. In 1843 his life is immortalized by Nelson's Column, in Trafalgar Square, London.

NELSON'S COLUMN

BEFORE

Deep distrust continued between the United States and Britain, but the US had difficulties with France as well.

NEW WORLD NEUTRALS

The settlers had enjoyed France's support during their **independence struggle** << 214–15, so the French expected US support during their Revolutionary Wars << 240–41. Angry to receive only **protests of neutrality**, they waged a low-level quasi war at sea, with intermittent **attacks on American ships** between 1798 and 1800.

SHIPS AND SHAWNEE

Britain was even more upset than France. It still **seemed to consider America its colony**. The Royal Navy tried to prevent US trade with France, and to impress (forcibly recruit) its seamen.

The Americans also **believed that the British were supporting Tecumseh's Northwest Confederacy** on their western frontier. Tecumseh, a Native American leader of the Shawnee people and a large tribal confederacy, had refused to ally with the British, but the US was not convinced.

The War of 1812

Fighting between Britain and the United States ended in the sacking of Washington, with the White House in flames. However, a sense of triumph apart, Britain was to gain little from the conflict.

In November 1811, a US army led by the future president William Henry Harrison inflicted a resounding defeat on Tecumseh's Confederacy at the Battle of Tippecanoe. The Shawnee Chief and his comrades had been fighting to keep the colonists out of what was later to become the state of Indiana. While not quite securing America's frontier, Harrison's victory clearly gave the United States the upper hand.

Mr. Madison's War

As confidence returned to Washington, so did expansionist greed. President James Madison, much emboldened now, felt that Canada could easily be taken over, as the British were sparsely represented there (just 5,000 troops) and overstretched in Europe due to the

Napoleonic Wars. Yet the US did not have the military capability for such a task. The win at Tippecanoe, though important, had been hard won and costly in casualties and resources. And besides, the British were going to be a tougher proposition than Tecumseh's force, brave and committed as they had been.

During the Revolutionary Wars, the US had made an ideological decision to have only volunteer state militias; it had since made a pragmatic choice to save money by leaving them under-trained and poorly armed. On the other hand, Britain's soldiers in Canada, however few, were tough and experienced professionals. They were well-armed, and well-versed in the ways of modern warfare. In August 1812, an American invasion force

Scalping the enemy

"The King... will reward you," says the officer in William Charles' 1812 representation of "the humane British and their worthy allies." The warriors of certain tribes did in some circumstances take scalps from their slain enemies.

1,000 strong and led by General William Hull, was routed by British soldiers with the help of Canadian militias and allied tribes. These now included Tecumseh's Confederacy. Despite his earlier wariness, the Chief had been forced to the conclusion that he had no alternative but to support Britain against an implacable US.

Victory afloat

The Americans fared better at sea. With the Royal Navy focused on the war with France, only a few smaller vessels could be spared, making the odds favorable for the US. The USS *Constitution* beat several British ships in battle, while the United States took a prestigious prize in the frigate HMS *Macedonian*. Ships were specially built to challenge the British on the freshwater Lake Erie. The US Navy Commandant Oliver Perry won a famous victory here on September 10, 1813. His triumph isolated Britain's forces in the west and opened the

AFTER

Commandant Oliver Perry

"We have met the enemy and they are ours," Perry reported after the Battle of Erie (September 10, 1813). "Two ships, two brigs, one schooner, and one sloop" is how he briefly summed-up what had been a bitter struggle.

way to the recapture of Detroit. Tecumseh and his confederates, now holding this city, were dislodged by General Harrison and his American force. On October 5, the Americans cornered and killed them at the Battle of the Thames (near Chatham, Ontario).

By 1814, the Americans were a great deal better organized. General Winfield

Scott led another invasion of Canada. He took the Niagara Peninsula and Fort Erie, then, on July 5, beat a small British force at the Battle of Chippewa. He was stopped at Lundy's Lane near Niagara Falls on July 25. Another future president, Andrew Jackson, had meanwhile been in action further south. The Red Stick confederacy of

American flag

The battle-scarred "star-spangled banner" that waved over Fort McHenry, Baltimore, in 1812 inspired Francis Scott Key to write what was to become the US anthem.

Creek tribes, roused by Tecumseh's example, massacred 400 people at Fort Mims, Alabama, in August 1813. Jackson led the US army, which defeated them at Horseshoe Bend the following March.

Ignominy

The US, however, was fighting on borrowed time. With the war over in Europe in 1814, Britain could free its forces, ships, and men. A full-scale naval blockade put the squeeze on the US economy. After defeating the Americans at Bladensburg on August 24, 1814, a British army marched on to Washington, burning down its public buildings. Moving on to do the same to Baltimore, however, it was held at Fort McHenry.

Both sides realized that the war was going nowhere, and that it was best to make peace. The fighting flared up anew, as each combatant made last-minute bids for bargaining counters. Britain took Maine, but an invasion of New York state from Canada failed. The Treaty of Ghent

1,000 British troops captured Fort Bowyer, Alabama, in February 1815. They learnt later that their country had agreed a truce almost two months earlier.

had already been agreed upon, on Christmas Eve 1814, but the news was not yet through when, on January 8, a British expedition from Jamaica attempted a night attack on New Orleans. The repulse of this force by Jackson's army allowed the US to feel they had won what had actually been a pointless and exhausting conflict for both sides.

Battle of Lake Erie

As Commandant Perry's flagship, the USS *Lawrence* was crippled, he moved to the *Niagara* to continue the fight. His victory allowed the Americans to gain control over the Great Lakes, cutting off British forces in the west.

Britain and America quickly realized that, whatever their remaining resentments, they had much in common—in attitude and interests.

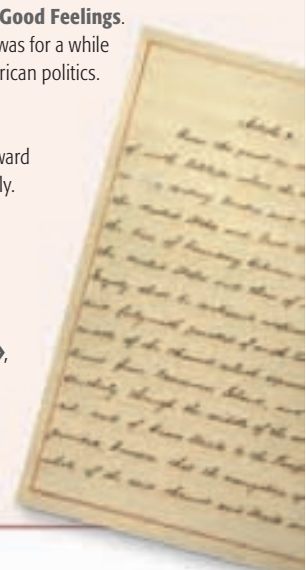

GOOD FEELINGS

The Anglo-American Convention of 1818 and the Oregon Treaty of 1846 established the US-Canadian boundary at the 49th Parallel (line of latitude). The United States was losing—or outgrowing—the revolutionary ardor of its youthful years. Under the aegis of President James Monroe, it entered the charmingly titled **Era of Good Feelings**. Aggressive partisanship was for a while almost absent from American politics.

CHANGE IN PLANS

American sentiments toward Britain changed drastically. The countries were **staunch allies** through much of the 20th century—in World War I **320–21** >>, World War II **358–59** >>, and the Cold War, which came soon after **368–69** >>.

OREGON BOUNDARY SETTLEMENT

KEY MOMENT

TRIBAL TROUBLE

There had been unrest on America's northwestern frontier for some time. Settlers attacked the villages of British-supporting tribes during the Revolutionary War. Fighting resumed as the Northwest Indian War (1785–94) until the colonists seized much of Ohio.

A legacy of simmering resentment was left. It boiled over in 1808, when the charismatic prophet-priest Tenskwatawa of the Shawnee people called for resistance. His brother, Chief Tecumseh, gave military direction to the strong but unfocused wave of anger. That anger only increased when the Fort Wayne Treaty of 1809 awarded large tracts of Illinois and Indiana to new white settlers. Some chiefs reluctantly accepted this, but Tecumseh's faction emphatically did not.

CHIEF TECUMSEH

DECISIVE MOMENT June 18, 1815

The Battle of Waterloo

Just when the European powers had thought they were safe, Napoleon Bonaparte was back to torment them. Escaping the Mediterranean isle of Elba in March 1815, the ousted emperor set about re-conquering the Continent. By June, he seemed poised for a lightning and final triumph.

While Britain and its allies mobilized, Napoleon assembled a volunteer army of seasoned, and besottedly loyal, troops. Deeming attack the best form of defense, he marched into Belgium (then part of the United Kingdom of the Netherlands), hoping to prevent the British and Prussian forces assembled there from linking up and attacking.

The fighting begins

The British, led by the Duke of Wellington, moved south from Brussels, meeting the left wing of the French army, led by Marshal Michel Ney, on June 16. Holding Ney's attack, they fell back to a ridge above the Brussels road. On June 18, its numbers now swollen to 68,000 by the arrival of Dutch and German allies, Wellington's force faced Napoleon's experienced army of 72,000 and twice as many cannon. However, Wellington set up fortified outposts in farms on the ridge, and established his own artillery and sharpshooters there. Wellington kept his main force behind

the ridge so a relentless French bombardment was largely wasted, moving his men up only when the French infantry charge began. Despite devastating musket volleys, Napoleon's troops kept on coming until forced back by Wellington's heavy cavalry. Ney's cavalry now charged—again and again; the British infantry formed squares and held firm. Finally, the vital farm of La Haye Sainte, in the center of the battlefield, was seized by the French. Napoleon's victory seemed imminent.

Defeat and exile

However, the 50,000-strong Prussian army, led by Marshal Blücher, was now approaching. While the main French army tried to hold it back, Napoleon's Imperial Guard made one last attempt to break the British line. Wellington's army stood firm and the French fled, having suffered 25,000 casualties and 8,000 captured. Napoleon abdicated his throne on June 24, surrendering to the British on July 15. He was exiled to St. Helena, in the South Atlantic.

“It has been a **damned nice thing**—the **nearest-run thing you ever saw** in your life.”

THE DUKE OF WELLINGTON, AFTER THE BATTLE OF WATERLOO, JUNE 18, 1815

Battle of Waterloo

French cavalry charge a tightly packed British square at the Battle of Waterloo. Marshal Ney's cavalry came very close to breaking through the British by the time that Blücher and his Prussians came to Wellington's rescue.

INDUSTRY AND EMPIRE

1815–1914

In the 19th century, Britain dominated the world with an Empire ruled by Queen Victoria and built on industrial might, economic power, and imperial muscle. In the early 20th century, the threat of war overshadowed the bright prospects of an Edwardian era that witnessed innovation, justice, and hope.

James Watt's steam engine

Scottish mechanical engineer James Watt developed a steam engine that was more efficient than Thomas Newcomen's pioneering invention: it transformed the generation of steam power and opened the way for the Industrial Revolution.

The Prince Regent

This painting of the Prince Regent, by Thomas Lawrence, shows the future George IV in his garter robes. Despite the splendor of this ceremonial garb, the portrait did little to challenge the widely held impression in Britain of a profligate prince devoid of any dignity.

What neither narrative hints at, however, is the sheer scale of Britain's transformation in the 19th century, as factories and furnaces sprang up, and canals and railways crisscrossed the landscape. The immediate physical effects can easily be exaggerated, as those outside the main industrial areas would hardly have been aware of them. Yet life was changing for everyone in a whole host of other ways not previously imagined.

Industrial powerhouse

The 19th century saw Britain's emergence as the world's first industrial nation, and, consequently, its foremost economic power for most of the 1800s. Along with its industrial might, it built a great military strength, and a vast and populous overseas empire. It was a stirring story, of triumph of endeavor and hard work, which was to be celebrated in the writings of Samuel Smiles and others in the late 19th century. Many in the Victorian age were happy to see theirs as a "golden age." The small print tells a different story: of enterprise, undoubtedly, but also of ruthless exploitation and fearful suffering of British people, as well as of imperial injustice and cruelty abroad.

Modern lives

Train travel was linking the town to the country, as well as London to the regions, as never before, with dramatic consequences for everything from family relationships to timekeeping. The whole nation now worked to the railway timetable—quite literally, since clocks were being coordinated nationally for the first time. A people whose ancestors had followed the daily cycles of the sun and the seasons of the agricultural year, now had to clock on for set working shifts in factories, mills, or offices.

A newly emergent middle class was enjoying not only the benefits of electoral reform from 1832 onward, but also the pleasures of an affluent and leisured consumer society. However, there was not

much affluence and leisure to be seen in the mines and the mill towns, where women and children worked all but interminable hours in all but unendurable conditions.

In Ireland, the Industrial Revolution was a distant rumor, and in the 1840s, a potato blight destroyed the means of sustenance almost entirely, leaving thousands to starve. Widespread misgivings in Ireland about being involved in the United Kingdom of Great Britain and Ireland that had been established in 1800 were reciprocated by those in Britain who saw Ireland as, at best a cheap supplier of foodstuffs, and at worst a country inhabited by an idle, even subhuman, population, and a drain on British resources. This view was apparently confirmed by outbreaks of Irish violence later in the century. Not surprisingly, Irish families were in the forefront in the tide of emigrants that left the shores of the British Isles for America and for the new dominions of the British Empire.

New attitudes

Ambivalent attitudes characterized Britain's relationship with its ever-widening Empire. The British ruling classes took increasing pride in imperial power, and what they considered its civilized rule over the

Empire, but also saw the possessions, which so enriched it as a responsibility—the “white man's burden.” They were also prone to see both resistance to conquest, and rebellions against imperial rule, as in India, as examples of ingratitude.

Increasingly, though, there was resistance at home as well: in the factories and mines, workers were mobilizing, organizing politically for the first time. And it was not just Britain's soldiers who were on the march: Irish activists were agitating for Home Rule; and women were agitating for the vote. By the early 20th century, a new, aggressive power was arming itself on the continent of Europe for what already promised to be the most destructive war the world had ever seen.

Suffragette march, London 1911

The early 20th century brought general agitation for change. The suffragettes campaigned for the right of women to vote. Charlotte Despard (second right, in the black scarf) campaigned not only for the vote for women, but for workers' rights and (later) Irish freedom.

BEFORE

When a monarch came to the throne when he or she was too young to reign with mature judgement, or when a king or queen was incapacitated by an illness, the tradition was for a trusted counselor to act as Regent, reigning on their behalf. It had not happened for centuries, however.

OVERSEEING THE KINGDOM

William Longchamp, Richard the Lionheart's Lord Chancellor, administered England during his King's absence at the Third Crusade and after ◀◀ 82–83. More typically, a regent would be appointed to oversee the kingdom while the monarch was a minor.

TRUST MISPLACED?

This position of regent was clearly open to abuse. In 1330, the 17-year-old Edward III had to rise up and seize his own throne from the regent Roger Mortimer, Earl of March (his mother's lover), who had abused his position. In 1453, Richard Plantagenet, the Duke of York, stepped in to run the kingdom as Lord Protector when Henry VI had a mental breakdown ◀◀ 122–23.

Such precedents came to mind in the 1780s as George III's unstable health raised the question of whether a regent was going to be needed—particularly because this would mean replacing a King who had by common agreement reigned wisely and well ◀◀ 200–01 with a profligate and somewhat irresponsible Prince of Wales.

The Regency

As his father's regent and, subsequently, as king in his own right, George IV brought the monarchy—and to some extent his kingdom—into disrepute. The Regency is rightly celebrated for its fashions, art, and architecture, but this historic spree was to have a hangover, both political and social.

George III was quiet and staid. His son could hardly have been more different. The King was angered early on by the Prince of Wales's radical airs and his friendship with Charles James Fox, the leader of the Whig party.

The profligate prince

The Prince was witty, scandalous, and a spendthrift. Setting himself up in sumptuous style at Carlton House, he ran through the £100,000 per year (about £5 million/\$8 million by today's values) he received from his father and from Parliament. Partying heroically, he kept a series of expensive mistresses (including actress Mary Robinson and Grace Elliott, a rich physician's wife).

The situation became even worse once he decided to settle down, secretly marrying Maria Fitzherbert—a widow twice over and a Catholic. Marriage did nothing to dull his enthusiasm for taking mistresses. In 1787, after his father refused to bale him out, the Prince had to leave his royal residence and move in with Maria. As the Prince

**Prince Regent**

A socialite, a spendthrift, and a sexual adventurer, the Prince Regent showed no sense of seriousness or responsibility. Many thought that he did not represent much improvement on his now unstable father.

630,000 Amount in pounds of debt owed by the Prince of Wales, as of 1795. This is in the region of £50 million (\$78 million) at 21st-century values. These (and subsequent) debts were paid by Parliament.

had perhaps anticipated, an embarrassed Parliament paid off his debts, enabling him to return to Carlton House.

Regency crisis

By 1788, the King was slipping toward physical and mental collapse, though his so-called madness may have been the rare blood disease porphyria. Fox saw the crisis as an opportunity, urging the prince's adoption as Regent; Tory leader William Pitt the Younger was naturally opposed. Finally, he agreed, but insisted that the Prince's powers as regent must be restricted.

In the event, George III recovered and was determined to sort out his son. So, in 1795, by once more withholding his financial support, he forced him to wed his cousin, Caroline of Brunswick. The

“Dundas attempted to make himself known to the K, but... the **King was fully occupied** with his own ideas...”

PRINCESS MARY, LETTER TO THE PRINCE REGENT, DECEMBER 28, 1812

Prince was physically repulsed by her from the start. Caroline was just as disappointed in a husband who, she confided, was “very fat and... nothing like as handsome as his portrait.” The Prince was drunk at the wedding ceremony that April.

They produced a daughter, Charlotte (born the following January), after which Caroline considered her marital duty done. They lived apart and had their own lovers from that time on. While a noisy press took Caroline’s part, young Princess Charlotte had to be taken into the care of her paternal grandfather, George III. (Caroline returned to Europe in 1814.)

The Regency begins

The Prince’s actual Regency dated from January 5, 1811. Parliament repeated its procedures of 1788, but this time followed through. There followed a golden age of glamour, albeit shot through with a certain sleaziness—and largely funded by the public purse. The Prince Regent was a lavish patron of the arts—especially of John Nash’s architecture, which remains a lasting monument to the Regency and its values. It was a great time for fashions and furnishings too, though most of all, it was an age of glittering parties.

Not everyone was having so much fun. Poverty was rife in the country at large, a problem aggravated by the economic slump that followed the end of the Napoleonic Wars. The slump’s impact was redoubled by the imposition of protectionist Corn Laws to keep up the price of grain.

A rapidly radicalizing working class and a frightened elite made a combustible mixture. Fears of sedition were to some extent self-fulfilling: rioting broke out across the north in the months that followed the Peterloo Massacre of August 16, 1819. At St. Peter’s Field in Manchester, a mounted militia of local gentry charged a mass meeting calling for parliamentary reform. Fifteen were killed and hundreds hurt.

There was real sedition too: the Cato Street conspirators hoped to murder Prime Minister Lord Liverpool and his Cabinet in February 1820. They were infiltrated by a government agent and apprehended, but still gave the Establishment a nasty scare.

King George IV

Just weeks before, George III had died and George IV succeeded as King in his own right. Caroline returned, resolved

The high life

Regency London was celebrated for its glamour and glitz. The Cruikshank brothers Robert and George created this caricature in 1825. George, in particular, was destined to achieve great fame for his comic art.

Luddites attack a machine

A spate of attacks on new machinery swept industrial England from 1811. Named for Ned Ludd, the (maybe mythical) hand weaver who started the craze, the Luddites feared the new technology was destroying jobs.

to be Queen Consort. A public outcry prevented George from officially excluding her from this position. Still barred from the Coronation, she fell ill and died a few weeks later.

Things went downhill fast from here. George refused to support his old Whig friends in their long-cherished plan of Catholic emancipation. He increasingly identified with the Tories—though he was hardly the greatest of assets from their point of view. Grotesquely obese by now, he attracted public ridicule. He died in 1830. Princess Charlotte and George’s brother Frederick had both died, so the succession passed to a younger brother, William IV.

AFTER

George IV left the country in some chaos—political, social, and to a certain extent economic. The monarchy was bankrupt, both financially and morally. Yet industrial development, quietly continuing in the background all this while, meant that the economic outlook was rather better than it may have seemed.

RESTORING STABILITY

Political turbulence continued into the reign of George IV’s successors **264–65** >>, only partly allayed by the introduction of electoral reform **268–69** >>. Yet time was on Britain’s side: the **lengthy reign of Queen Victoria** would be a chance for stability to be restored **270–71** >>. It was at this time that Britain emerged as the world’s leading industrial nation **276–77** >> and a strong (and increasingly assertive) imperial power **296–97** >>.

Brighton Pavilion

Begun in 1787 as a seaside bolt-hole for the Prince of Wales (later George IV), Brighton Pavilion was successively redesigned until 1822. John Nash, who created this final form, knew the Prince's tastes and produced an awe-inspiring monument to frivolity. Even so, it has its serious aspect, hinting at, as yet barely acknowledged, British ambitions in Asia. In contrast with the Indian theme of the exterior, with its suggestion of the Taj Mahal, the interior is a riot of Chinese-style ornamentation.

Steam and Speed

Speed became the watchword of 19th-century Britain. A railway mania pulled Britain out of its rural past, and sent steam locomotives hurtling around an expanding national network. Great steamships also rode the waves. Amazed Victorians found their horizons instantly broadened.

It was the steam engine that revolutionized Britain's transportation system forever. It is hard to imagine how incredible railway travel must have seemed in the 1800s. At the beginning of the 19th century, British life for many was slow, rural, and provincial. Travel was by horse and the greatest distance that could be covered at a full gallop in one day was approximately 80 miles (130km).

First steps

In 1804, Cornish mining engineer Richard Trevithick (1771–1833) demonstrated the world's first railway journey by steam at Penydarran. By this time, there was a large amount

of colliery track across the country, and people were beginning to see the potential for national passenger services.

The first major landmark in British railway history was the opening of a rail line between Stockton and Darlington, in 1825. Originally intended to link coal mines, its first locomotive was George Stephenson's *Locomotion No. 1*. This carried passengers at the line's grand opening demonstration, and did so subsequently, marking it as the world's first steam locomotive-pulled public railway. The next milestone was the 1830 opening of the Liverpool to Manchester line, linking two great, rapidly expanding industrial cities. *Rocket*, George

The prices of many goods fell in places linked by rail, letters arrived quicker, and people's horizons widened. Building trains, tracks, tunnels, and bridges provided work, and increased the country's engineering and construction expertise—now in demand worldwide.

Steam ships

Taking people and goods by ship was important to Britain. There was already a good system of internal waterways,

Stephenson's *Rocket*

The *Rocket*, built by George Stephenson and his son Robert, was the model for all future steam locomotives. Its main features include a multitube boiler that improves heat transfer.

but looking farther afield, Britain—an island—needed to be able to trade with as many other countries as possible.

Early steam-engine technology was adapted for the first British steamships, such as William Symington's small wooden paddle-steamer, *Charlotte*

272 Acts of Parliament were passed at the height of the railway mania in 1846, creating new rail companies.

Stephenson's best-known locomotive (1829), ran on this line at speeds of up to around 29mph (47kph).

Railway mania

After the Liverpool–Manchester line opened, numerous other lines followed at a dizzying speed. By the 1840s, Britain was in the grip of a railway “mania.” All kinds of people joined the mad scramble to make money from the railways. A lot of ordinary, inexperienced middle-class investors got caught up in a mess of poor practice, fraud, and chaos, and many lost large amounts of money, as did railway companies. Everywhere there was a frenzy of uncontrolled rail expansion.

By mid-century, most areas of Britain were close to a rail line and trains were giving the country's Industrial Revolution a massive boost, propelling it into position as a world leader. The canals soon became overshadowed by the railways for rapid freight transport, and trades such as mining, and the production of iron, textiles, and manufactured goods, prospered as a result. Coal could be taken speedily from collieries to major ports for onward transportation; Welsh coal was transported through great tunnels in the Malvern Hills to Birmingham's expanding factories.

BEFORE

CHALDRON WAGON

While the history of railways is firmly rooted in mining, by the 1700s, large quantities of freight were being transported by water.

EARLY INNOVATIONS

Between the 1500s and 1700s, wooden, then cast-iron, tracks were used for **mining wagons**—horse-drawn coal wagons called chaldrons were common in northeastern England. In the 1700s, Thomas Newcomen, James Watt ◀ 224–25, and Matthew Boulton developed the **steam engine**. Early locomotives were used in collieries.

In the 1700s, much freight was moved around British waters; large wooden sailing boats plied the coasts and oceans with both cargo and passengers. In 1783, the French *Pyroscaphe* became the **first successful steamboat**, and in 1794, the Earl of Stanhope built the *Kent*, an influential prototype.

“... the **desire of gain** has become so strong, that a **Railway to the Moon** would have found **speculators...**”

ALFRED CROWQUILL, *ILLUSTRATED LONDON NEWS*, NOVEMBER 1, 1845

INNOVATION

BESSEMER PROCESS

As the 1800s progressed, steel rails became a feature of the railways. Steel was increasingly used in place of iron in large ships. In the 1850s, English engineer Sir Henry Bessemer (1813–98) patented the process that made mass steel production possible. Molten pig-iron is placed in a furnace called a Bessemer converter, air is blown in, impurities are removed, carbon is added, and molten steel is then poured off. This process made steel cheaper and contributed to the 19th-century boom in British transport, manufacturing, and industry.

Dundas, in which the steam engine drove a single paddle wheel located in the stern. In 1801–02, she was put to the test on the Forth and Clyde canal, near Glasgow, and traveled 20 miles (32km) in six hours, towing two 70-ton barges, making her the first operational steam tugboat. She became the first vessel in the world to use steam propulsion commercially (although her life was short-lived).

Vying for trade

By the 1820s, British steamships were an alternative to stagecoach travel for better-off people, and by 1840 they were common on Britain's rivers and around its coasts. Rather like railway mania, competition heated up among the major steamship companies founded in the late 1830s, especially to make the fastest crossing of the Atlantic. In 1838, the flagship of the Great Western Steamship Company, Brunel's *Great Western*, sailed into New York 14 days and 12 hours after leaving Bristol (see pp. 260–61). It arrived just 12 hours behind *Sirius*,

The Cunard Line

Canadian-born British shipowner Sir Samuel Cunard founded one of the early competitive transatlantic steamship companies. In 1840, he won the contract to carry mail from Britain and Canada on a fleet of four 1,000-ton ships made in Scotland.

its rival from the British and American Steam Navigation Company, which had sailed from Ireland and had taken longer to cross the ocean. A regular transatlantic service ensued and steamships became very important for passenger and freight trade alike.

In the 1840s, paddle wheels were replaced with screw propellers, which were much more efficient. Larger engines were needed, but these were too heavy for wooden boats, so iron was introduced, and later steel, supplied by Britain's flourishing metals industry,

which gained further strength as a result. Places such as the Clyde, the Tyne, and Belfast became famed for their shipyards and supplied the world, with other jobs created by the maintenance and building work on harbors and ports.

The telegraph

The electric telegraph was another enormously important communications development and it was closely associated with both trains and steamships. Developed in 1837 by British scientists William Cooke and Charles Wheatstone, the railways were used for the telegraph system and, from the mid-1800s, telegraph cables were laid across the Channel and North and Irish seas. Later, Brunel's *Great Eastern* steamship was used to lay a transatlantic cable.

The Liverpool–Manchester line

This contemporary engraving shows excited crowds gathered at Edge Hill, Liverpool, for the grand launch of the Liverpool–Manchester line, on September 15, 1825. This was the world's first timetabled intercity passenger railway, also transporting large amounts of freight.

The march of rail and ship was unstoppable in the 19th century, experiencing some dramatic reversals in the 20th century.

EXPANDING NETWORK

By the 1890s, British railway companies **owned 10 percent of urban land**. The railways increasingly established a vital link between the south and north. In 1934, Locomotive number 4472, the most famous of the *Flying Scotsman* service, became the first locomotive to travel non-stop from London to Edinburgh and the first steam engine to reach 100mph (160kph). In 1963, the controversial **Beeching Report** initiated a massive cost-cutting closure of more than 2,000 local stations.

In 1900, Britain had the world's **largest navy** and a flourishing **shipbuilding industry**. The Edwardian age produced massive stylish **steamship liners** carrying wealthy vacationers and ordinary people seeking to emigrate. Cunard's speedy RMS *Lusitania* and RMS *Mauretania* were the world's first quadruple screw liners, and by 1912, it took just five days to cross to New York from Southampton. From the 1960s, British shipbuilding **gradually declined**.

PIONEERING ENGINEER Born 1806 Died 1859

Isambard Kingdom Brunel

“... **great things** are **not done** by those who **count the cost** of every thought and act.”

BRUNEL'S COLLEAGUE, DANIEL GOOCH, ON BRUNEL'S DEATH, 1859

Brunel was one of history's most inspired engineers, with a unique instinct for materials and artistic design. Ambitious and entrepreneurial, he epitomized industrial Britain's spirit. Brunel was the son of talented engineer Sir Marc Isambard Brunel, who fled revolutionary France and arrived in England in 1799. Educated in engineering and mathematics in Paris, the younger Brunel worked with his father from 1825–28 on constructing

SS Great Eastern

The massive ship was designed partly to cater to the emigration encouraged by 1851's Great Exhibition (see pp.272–73). Although the ship could carry 4,000, she proved too costly to run as a passenger ship.

the first tunnel beneath the Thames. He sustained a serious injury there when the tunnel flooded.

By bridge and rail

While recovering, Brunel drafted plans for a great bridge across the Avon Gorge, at Bristol. Leading Scottish engineer Thomas Telford also submitted a proposal, but a suspension design by Brunel, for the longest single-span yet built, was adopted.

Man of the moment

The chain-cigar-smoking Brunel was a driven, often impractical workaholic, who constantly juggled projects. A celebrity in his day, he raised the status of engineering as a profession and lent it glamour and excitement.

Flying on the Firefly

This 19th-century image shows a Firefly class steam locomotive, designed by Brunel's designer Daniel Gooch, on the track between Bath and Bristol. These achieved speeds of more than 70mph (113kph) by the late 1840s.

this technical miracle cost many construction workers' lives and greatly exceeded its budget.

Brunel built railways all over Britain and in Italy, and advised on railway line construction in Australia and India.

100 Roughly the number of workmen killed during the construction of the Box Tunnel through solid rock between Bath and Chippenham. The project took five years to build.

His numerous rail structures include Maidenhead bridge (the world's flattest brick arch), Saltash Bridge (see pp.262–63), and Box Tunnel.

By this time, Brunel was living well, with a pleasant London home-office at Duke Street, Westminster. He started building a grand retreat at Torquay (which was never finished). Married in 1836, he and his wife had two sons and a daughter.

Brunel at sea

Steamships were another record-breaking area for Brunel. Each of his ships was the world's biggest when unveiled. In 1838, his wooden paddle ship, the *SS Great Western*, became the first steamship to run a regular transatlantic passenger service. This massive vessel could cross the Atlantic without refueling. His *SS Great Britain*, the first large vessel to have an iron hull and a screw propeller, first crossed to New York in 1845; it later carried 16,000 emigrants to Australia. The *SS Great Eastern* (1858), with both a screw and paddles, was the first ship with a double iron hull. The 32,000-ton ship proved to be one too many exhausting, difficult projects. Brunel died shortly after its maiden voyage.

Construction began in the 1830s, but was dogged by financial and other problems and did not finish until 1864, after Brunel's death. Many doubted that such a bridge would hold, but it is now considered one of the greatest engineering achievements in the world.

In 1833, Brunel was remodeling Bristol's docks and also started work on the ambitious plan to build a railway between Bristol and London. The Bristol to Paddington line opened in 1841, with an extension to Exeter by the mid-1840s. Although successful,

Beauty in structure

Brunel's design sense brought a new beauty to engineered structures. He oversaw all design aspects of the Great Western Railway's line, including the original Bristol terminal building at Temple Meads.

TIMELINE

- **1806** Born at Portsea, Portsmouth, on April 9, the third child and only son of Sir Marc Isambard Brunel and Sophia Kingdom.
- **1814–20** Attends schools in Chelsea and Hove, demonstrating great mechanical and artistic skill.
- **1820** Marc Brunel sends his son to schools in Paris, where he also gains technical instruction.
- **1822** Returns to England, aged 16, to work for his father as an apprentice engineer.
- **1825–28** Works on building the Rotherhithe to Wapping tunnel under the Thames, until he almost drowns in a flooding incident there.
- **1829** Enters a competition to design a bridge across the Avon Gorge at Clifton, Bristol.
- **1830** Elected Fellow of the Royal Society.
- **1831** One of his designs for the Avon Gorge bridge is accepted.
- **1833** Starts remodeling docks in Bristol. Becomes head engineer for the Great Western Railway company's proposed link from Paddington to Temple Meads. Promoted to chief engineer of the Great Western Steam Ship Company.
- **1830s** Construction of the suspension bridge begins, linking Clifton to Leigh Woods.

CLIFTON SUSPENSION BRIDGE, BRISTOL

- **1836** Marries Mary Elizabeth Horsley, who comes from an artistic family.
- **1837** *SS Great Western* launched.
- **1838** The *Great Western* reaches New York in half the time taken by sailing ships, arriving with 200 ton of coal to spare.
- **1840s** Employs a large professional staff working for his business.
- **1841** The Great Western Railway London to Bristol route opens.
- **1842** Queen Victoria travels from Slough to Paddington on Great Western Railway's new line on June 13. This is the first rail journey made by a reigning British monarch.
- **1843** *SS Great Britain* is launched.
- **1845** *Great Britain's* maiden voyage from Liverpool to New York takes place.
- **1847–48** Short-lived running of Brunel's South Devon air-propelled atmospheric railway. The project ceases due to technical difficulties.
- **1850–59** Brunel serves as vice-president of the Institution of Civil Engineers.
- **1854** Brunel's Paddington Station opens.
- **1859** Brunel dies on September 15 at the age of 53, after suffering a seizure, probably brought on by overwork.

Royal Albert Bridge

Cheering crowds acclaim the opening of the Royal Albert Bridge by Prince Albert, consort of Queen Victoria, on May 2, 1859. Much patriotic pride was taken in major projects such as this one, recognizing the part they could play in promoting prosperity. The bridge, which was one of Isambard Kingdom Brunel's greatest engineering achievements, crosses the River Tamar, linking Plymouth, Devon, with Saltash, Cornwall.

BEFORE

The Industrial Revolution made its mark on British society, but many people still struggled to adapt to a new situation.

SOCIAL CHANGES

Parliamentary enclosure and new crop systems increased agricultural productivity, while also marginalizing rural workers, many of whom sought employment in towns << 230–31. Gradually, technology brought further social changes, as it reinvented some types of work, such as textile spinning and weaving, and ironmaking << 232–33. Older forms of work persisted in small workshops, but thousands of the new industrial workers were exploited in a system akin to servitude.

LEAD ORE WASHERS

Years of Change

Few doubted that the Industrial Revolution was changing the nature of work and the diversity of British workplaces. From 1820 to 1850, the industrializing areas witnessed new ways of working that started to alter everything, from timekeeping and housing to family dynamics and class relations.

The impact of machines such as the spinning frame and steam engine on many workplaces is easily exaggerated. Most British people still worked on the land and—outside key regions such as Lancashire, West Midlands, and central Scotland—much manufacturing took place mainly in the home (spinning and hand-weaving) or in small establishments such as blacksmith's shops and iron foundries.

Petition by trade unionists to the King

Up to 100,000 protestors registered their opposition to the transportation of the Tolpuddle Martyrs in April 1834. Although the demonstrators petitioned in a deferential manner, the protest was a show of potential strength.

Where the factory system was in place, however, work was redefined. Physical strength was less important. Women did the same work as men (for less money). Children tended the machines—reaching in to clear snags, or crawling underneath to recover objects. Mine owners also preferred employing women and children—they were good in confined spaces and cheap to employ. Employers took on families: the male head was responsible for the behavior of his wife and children.

Pay was often docked for disobedience or perceived lack of effort. Employers had other holds over workers and their families. Many factories and mines

17 The average life expectancy in years in Liverpool during the 1850s. High infant mortality depressed the figure, as did the city's unhealthy cellar dwellings and an influx of famine-weakened Irish immigrants.

provided accommodation, but charged high rents. Often workers were paid in tokens exchangeable only in company-owned "truck" shops—where cheap goods were sold at high prices.

All change

The rhythms of life were changing. While the agricultural day was geared to the sun and the seasons, urban trades

Chartists' meeting

How many people came to Kennington Common on April 10, 1848 to support the Chartists' cause is contentious. The authorities' estimate of 15,000 was low, but Chartist claims of 300,000 were fanciful.

involved careful timekeeping. In fact, the advent of railways and their travel timetables increasingly encouraged the observance of a "standard" time across the country.

Highly regimented employees worked regular shifts in factories running 20 hours a day or more. Gas lighting made this possible. It had, for example, been in use at Matthew Boulton's Soho ironworks since the 1790s.

City life had always been more anonymous than country life, but there was a sense that workplace relations in the coming age of automation might become more impersonal; workers feared that as factory hands they might be mere cogs in the machine.

United we stand

From 1838, there was a clamor for a People's Charter, enfranchising the working class (or at least the males). Millions signed petitions demanding votes in annual elections. Chartists held mass protests, some of which ended violently, shocking the establishment.

Workers tried to come together to exert influence on their employers, but their scope for action was very circumscribed. The Combination Laws of 1799 and 1800 prohibiting trade unions were abolished in 1824, but, since this triggered a spate of strikes, a tough new act was passed in 1825. When six farm workers in Tolpuddle, Dorset, formed a union

in 1832, they were sentenced to transportation. The Tolpuddle Martyrs soon become icons for those who sought to expand the trade union movement and its influence later in the century.

Changing opinions

Many opinion-formers were worried about the effects of changes taking place. Elizabeth Gaskell called one of her novels *North and South*—the two were a world away, economically and culturally. Her north and south were stereotypes: much of Lancashire and Yorkshire was agrarian still; while factories operated in southern England, in centers such as Swindon and around the capital. However, Gaskell's title reflects the growing feeling that, society-wide, the ties that bound people together were loosening.

Those who invested in the free market were not dissuaded by the thought that it created want as well as wealth. No one was to blame for the poverty of the masses; nor should the wealthy be swayed by their plight. *The Times* was notoriously to claim it was "the result of Nature's simplest laws."

Many reformers were as inhuman as the capitalists, insisted writers such as Charles Dickens and Elizabeth Gaskell, for they believed in systems and theories and overlooked the individual. The criticism was harsh, given that individuals were to benefit from the reformers' work, not just in bringing in factory acts and other humanitarian legislation, but in embarking on a new kind of systematic social study—the Blue Book, in which statistics collected by government inspectors in particular places or industries were published.

Other social work set out to improve people's lives. John Snow's research on the distribution of cholera outbreaks in London in the 1850s, brought a breakthrough in medical understanding. Philanthropists founded Ragged Schools for street children, offering basic skills in reading, writing, and arithmetic, and—since many founders were clergymen—Bible study. In New Lanark, Scotland, Robert Owen tried to run a factory community that provided comfortable accommodation for his workers and education for their children.

"If something be not done, something will do itself one day, and in a fashion that will please nobody."

THOMAS CARLYLE, OF THE CONDITION OF THE WORKING CLASS, IN *CHARTISM*, 1840

ENGLISH NOVELIST (1812–70)

CHARLES DICKENS

Victorian England's most popular novelist, Charles Dickens was first and foremost an entertainer who created a wonderful cast of characters—adorable, eccentric, and grotesque. Beguiling as they were, his stories also took readers into a Britain they might never otherwise have visited—from slums to factories and from workhouses to back-offices.

Thanks to his unique ability to bridge the gulf between the classes, his readers were deeply moved by what they read. Many people were inspired into action: Dickens' great novels worked their influence on many aspects of Britain's changing society, from poverty and penal policy to sanitation and schooling.

AFTER

Britain marched on in apparent prosperity and peace, but the injustices persisted too: so did the deep resentment of the poor.

STILL EXCLUDED

The Great Reform Act of 1832 expanded the electorate and made the **electoral system more accountable 268–69** >>. However, the mass of people were still excluded, their helplessness underlined by a sense that they were now the only group that did not have a stake in the nation's fortunes, which had never been better, as Britain reigned supreme as the **world's leading industrial nation 276–77** >>.

WORKING-CLASS VOICE

The **plight of the poor**, and its reflection on society at large, influenced, explicitly or implicitly, everything from **architecture to literature and theology 282–83** >>. This interest and concern could hardly compensate for **lives of toil and chronic hardship**—or the lack of any **democratic voice**. As the 19th century approached its close, living standards for most working people improved, while British workers became better organized, making their presence felt in workplace action and finding their voice in party politics **310–11** >>.

BEFORE

In the Tudor age, England had taken violent possession of Ireland. Since then, Ireland had come through a difficult few centuries.

VIOLENT UNION

Elizabeth I's armies brutally crushed the country, and James I (James VI of Scotland) established a plantation to pacify the north that included many Scots << 158–59. But the Irish took advantage of the English Civil War to rise up themselves, although Oliver Cromwell put their rebellion down << 174–75. The Succession Wars brought renewed resistance, though William III's victory at the **Battle of the Boyne was decisive << 196–97**. With the United Irishmen's defeat, it seemed the British had finally prevailed: since 1800, **Ireland had belonged to the Union << 238–39**.

The Irish Famine

***Phytophthora infestans*, a water mold, struck potato fields in Ireland in 1845, and destroyed the all-important potato crop, but the famine that ravaged Ireland in the years that followed was as much the result of human mismanagement as nature.**

Ireland was outwardly prosperous at the start of the 19th century. This was hardly the whole story, though. The Irish had undergone successive displacements since the old landowners were condemned by Oliver Cromwell “to Hell or Connaught” (to either be killed or move to the barren lands in western Ireland). Many of the Anglo-Irish had displaced themselves, becoming familiar figures in Dublin and London society. Known as “absentee landlords”, they received regular remittances from their agents, and the middlemen often leased their estates, subdividing them into smallholdings for renting on short leases with inflated rents.

Tenants were also displaced to higher, more marginal land, to make way for lucrative livestock. They often had to bid for their own plots at auctions as each lease ended, and the rents rose dramatically every time.

A miracle food

By the 18th century, the masses were living a life of abject poverty, sustainable only because of potatoes. This New World crop had been introduced in the 16th century. The Irish had traditionally lived mainly on cereals (wheat and oats). Now, any grain they could grow went to the market, along with any dairy products: people subsisted entirely on potato. They were also paid in potatoes for the work they did on larger farms.

Yet, remarkably well-nourished, they thrived.

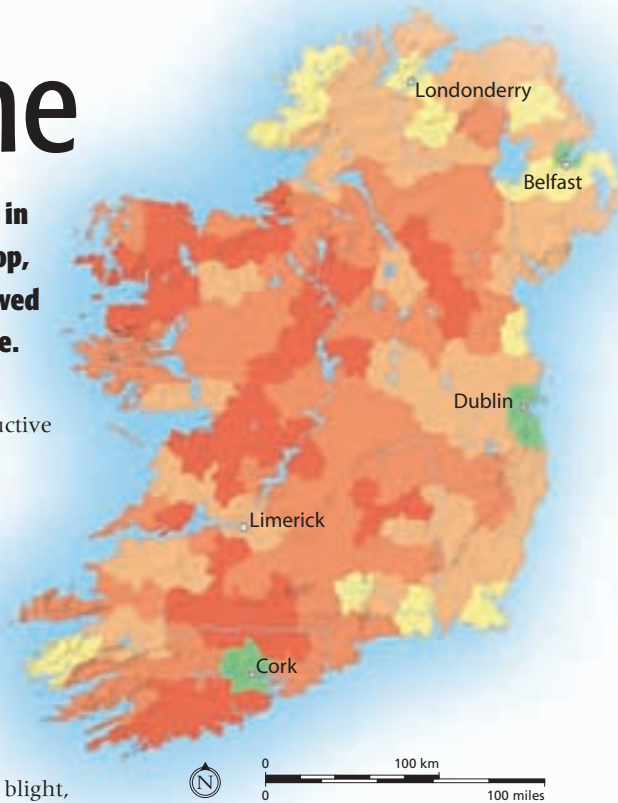

Between 1687 and 1791, the population more than doubled, from 2.16 to 4.75 million. By 1841, it had risen by 3.4 million, not counting the 1.75 million who had emigrated.

A blighted country

By 1845, a population of more than 8 million was completely dependent on the potato. It was not much of a life, perhaps, but it allowed the country's

richer land to be fully productive from the point of view of a landowning class who were largely disengaged.

The “blight”, as the mold was also called, showed itself in black blotches on the leaves of the plant, but did its real damage underground. The potato first discolored, and then turned into a watery, rancid mush. All of Europe was affected by the blight, but elsewhere, potato was just one among many different food crops grown. In Ireland, the potato dominated agriculture. Approximately half the Irish crop was destroyed in 1845, and this rose to 75 percent the following year.

Remembering the dead

Rowan Gillespie's haunting Famine Memorial, created in 1997 in Dublin, records Ireland's tragedy.

Deserted village

This empty ruin, on Achill Island, Mayo, stands in a former village that was abandoned in the Famine.

Extent of the famine

The west of Ireland, largely comprising the province of Connaught, became a “hell of hunger” as a result of the famine, and saw significant depopulation, as the map shows. Other rural areas fared little better, while the main cities saw the desperate influx of the hungry.

Since the Act of Union in 1800, Ireland had not had its own parliament, and Britain, untroubled by the blight and dominated by free-trade thinking, was deaf to pleas for protectionist measures. These might have stopped other food exports from Ireland, which were still proceeding on a massive scale.

Tory Prime Minister Robert Peel discreetly shipped in maize from America, but the facilities for making it

1.1 MILLION

An approximate estimate of the number of deaths attributable to the Irish Famine, not including those who died during emigration to another country.

edible did not exist in Ireland. In 1846, his Whig successor, Lord John Russell, set up programs to create work, but his Assistant Secretary to the Treasury, Charles Trevelyan, believed the Famine was a divine judgement on the

rebellious and feckless Irish. They were thus cast as idle charity-cases, despite the fact that they were still highly productive, and that throughout the Famine, Ireland continued to export food to the world.

Final toll

Britain, the world’s leading economic nation, was embarrassed by the international response to this tragic failure. Offers of help to Ireland came from everyone from Native American groups to the Ottoman Sultan. All were indignantly rejected by London. In Ireland, many suspected the motives of those who helped—especially of the British Protestant missionary groups, a minority of whom served religious instruction with their food. The much-exaggerated idea of the “souper”—the desperate, starving individual who converted from Catholicism to Protestantism in return for soup—took hold throughout.

Mortality figures for the Famine are difficult to establish and inevitably contentious. While many could be said simply to have starved to death, many more died of diseases related to famine. Others died as a result of a cholera epidemic. A reasonably cautious estimate would be about 1.1 million dead, and a further 1 million pushed into emigration. There was a cultural cost as well. If the memory of the Famine became a major rallying point for the Irish diaspora worldwide, its effect in Ireland was to weaken the sense of national identity, or of the Gaelic identity at least. Rural Irish speakers bore the brunt of the disaster. An ancient culture was destroyed.

Searching for potatoes

As depicted—part sympathetically, part disdainfully—in *The Illustrated London News* in 1849, Irish families sought frantically for any sustenance.

AFTER

The legacy of the Famine in Ireland was to be both bitter and enduring: Irish emigrants carried their resentment with them around the world.

MASS EMIGRATION

Many Irish went to **Britain’s overseas dominions 294–95** >>, though most ended up in the United States. Across this new diaspora, as in Ireland itself, the **mood was rancorous**.

SHIPS TAKING EMIGRANTS

AN ANTI-BRITISH VOICE

The Irish had **little influence** in US society at first, but as they became established, they were able to raise a powerful **anti-British voice**. From the 1850s, US-based Fenians fought for Irish freedom, but the Home Rule campaign was mainly peaceful **300–01** >>. In the 1970s and 1980s, Irish-Americans lent support to the IRA in its **armed struggle 378–79** >>.

The Triumph of Reform

While some were asking why the poor should suffer to underwrite Britain's booming wealth, a rising middle class was questioning the justice of the electoral system—and demanding change.

The urban middle class had already shown their strength in the success of the Abolitionist movement (see pp.234–35), compassion reinforced by a steeper sense that slavery was a brake on the free market.

Parliament abolished the slave trade throughout the Empire in 1807 and the Royal Navy enforced the policy at sea. Again, idealism and economic realism went together. Britain, the inevitable winner in trials of economic strength, opposed all kinds of anticompetitive practice.

Corn Laws

Yet a certain ambivalence was evidenced by the introduction of the Corn Laws in 1815. They barred all wheat imports unless the domestic price reached a certain level. Unabashedly protectionist, the laws guaranteed the income of an aristocratic landed interest,

The House of Commons

Rebuilt since the fire of 1834, the Palace of Westminster made an impressive home for Britain's Parliament. Yet democracy had its limits: there was no place in the Commons for representatives of the working poor.

which was represented by the Tories. The Whigs, to whose cause the class of newly wealthy industrialists had naturally gravitated, favored a free market in food so cheaper produce could be imported and wages kept down.

5 The number of electors who, in the constituency of Old Sarum, Wiltshire, sent two members to Parliament in the 1802 elections. Gatton, Surrey, had seven voters, while Camelford, Cornwall, had 25.

Wage slaves

In general, the Whigs had come to have the interests of the industrialists at

heart, so it was the Tories who took the lead in trying to ease conditions for the working poor. The 1802 Factory Act stipulated a maximum eight-hour working day for children aged between nine and 13 years; 12 hours for those aged 14–18. But the repeated outlawing of the employment of under-nines in textile mills thereafter underlined how often legislation was ignored. Besides, the law could influence only the most readily regulated industries—chiefly textiles. Others—including mines and garment-making sweatshops—were unaffected.

Lord Shaftesbury, a Tory, and Radical MP John Fielden fought for a new Factory Act, though they were not finally to prevail until 1847. Others were campaigning too.

In 1838, Richard Cobden and John Bright launched their Anti-Corn Law League, providing a powerful focus for the Free Trade lobby.

Electoral absurdity

Social injustice was perpetuated by political inequality. Only those owning a property could vote, so a mere 200,000 out of more than 10 million adult males were eligible. Of more significance to

BEFORE

The people of Britain had learned to take pride in their perceived tradition of liberty, courageously—but moderately—upheld.

PEOPLE POWER

Tyranny was successfully resisted during the Civil War << 168–69 and the Glorious Revolution of the 17th century << 188–89. Yet the dangers of “people power” when taken to extremes were all too clear from France’s recent Reign of Terror << 236–37.

AN END TO SLAVERY

Ordinary people took heart from the fact that, as the 19th century began, their voices were being heard and their opposition spurred an end to the cruel slave trade << 234–35.

the property-owning middle classes, however, were the glaring geographical inequities in the system. Many constituencies were “pocket boroughs”, their electors voting at the behest of the local lord. Several “rotten boroughs” had only a handful of electors, but still sent members to Parliament on the landowner’s say-so.

The Industrial Revolution had demographically transformed Britain. Cities such as Manchester and Leeds grew, and with them substantial, new (and predominantly Whig-supporting) electorates. A system that placed a major conurbation on a par with a quaint cathedral city (or even Oxford and Cambridge Universities, which both had their own MPs) appeared to them to be crying out for reform.

Lord Grey’s Whig government, elected in 1830 after George IV’s death, tried twice to bring in reform, but both times it was rebuffed—when they got legislation through the Commons, it was thrown out by the Lords.

The Great Reform Act

The Tories tried to block yet another attempt in 1832, but gave in to William IV’s threat to create more lords who would vote the bill through. So the Great Reform Act was duly passed. It abolished the worst rotten boroughs and extended the electoral franchise—though not as much as working-class campaigners had hoped. Parliament was far more cleanly elected by a much

1832 Reform Act

Whig leaders attack the Old Rotten Tree with the axes of reform—whilst frantic Tories try to keep the whole tottering structure standing. Rural magnates sit pretty in their nests while, from nearby Constitution Hill, the smaller British nations—and the aristocracy—look on.

larger electorate, but a property qualification remained, so only about one in six men (and no women at all) could vote.

British politics looked different, even so. Having long since won the fight for parliamentary power under a constitutional monarchy, the Whigs were moving on to the battle for free trade and for limits to government intervention in the economy: increasingly they called themselves “Liberals.” The Tories too were changing. Robert Peel’s Tamworth Manifesto (1834) laid the foundations for the modern Conservative Party. Endorsing the Great Reform Act, Peel promised to support change where truly needed.

As good as his word, in 1846 he sacrificed his second term as prime minister to repeal the Corn Laws. And it was to be a Conservative prime minister, Benjamin Disraeli, who introduced a Second Reform Act in 1867; the Liberal William Ewart Gladstone brought in the Third Reform Act in 1884.

AFTER

It was in the 1840s that philosopher Karl Marx made “bourgeoisie” the dirty word it has remained for writers and thinkers on the left. Whether by accident or design, the electoral reforms of the 1830s drove a wedge between the middle class and the working class.

FIGHT FOR CHANGE

Professional men, who had been excluded, now had their place in Parliamentary democracy, but working-class men (and all women) were still out in the electoral cold. Even so, **many in the middle class strove to improve social conditions 278–79** >>. Among the workers, however, the conviction was growing that if they wanted change they were going to have to fight for it themselves. **310–11** >>.

VOTING BY BALLOT

BRITISH MONARCH Born 1819 Died 1901

Queen Victoria

“I shall do **my utmost** to fulfil **my duty** towards **my country.**”

QUEEN VICTORIA, ON HER ACCESSION, 1837

Both of William IV's daughters had died soon after birth, leaving him with no immediate successor. Of the King's younger brothers, none of the next three in line had lived long enough to ascend the throne, and only the late Duke of Kent (formerly next in line after William) had a legitimate surviving child. So it was that, on William's death in June 1837, his young niece, Victoria, came to the throne. She was ill-prepared in many ways for the responsibility of monarchy.

Hers had been an isolated childhood: she had been closely protected—possibly overprotected, many felt—by a manipulative mother, the Duchess of Kent, from whom she was eventually to become estranged. There had been some question that the Duchess might become regent, acting on behalf of her daughter, but Victoria had just reached the age of 18 when her uncle died, and Lord Melbourne, the Whig Prime Minister, took the new Queen under his wing, winning her eternal gratitude and affection in return.

Queenly bearing

“I may call you Jane,” she had told a childhood playmate, “but you may not call me Victoria.” Britain's longest-serving monarch felt a strong sense of regal entitlement from the start. While in many ways Victoria is rightly taken as a model of the modern constitutional monarch, she had a distinctly despotic streak at the same time. Her strong favoritism for Melbourne and the Whigs was quickly established, and she took very little trouble to conceal it. Tory Prime Minister Robert Peel, having

defeated Melbourne, resigned in 1839 when she refused to go along with changes he proposed to her royal household. (This despite the fact that the appointment of new personnel was at that time customary with incoming administrations.) Far from feeling embarrassment,

Prince Albert

Victoria's public image was of austerity, even coldness, but her love for her Prince Consort was clear. She never got over his death in 1861.

Queen Victoria

For some years after Albert's death, it seemed that the Queen had all but abdicated, but she resumed her duties, and her dignity and decorum were much admired. She is seen here in 1899, still in mourning for the Prince Consort.

Queen Victoria and her family, 1890s

Victoria's family was the center of her life; her children married many of the crown heads of Europe. Her grandson Kaiser Wilhelm II is seen here (front row, left).

Victoria was only too delighted when Peel's resignation cleared the way for Melbourne and the Whigs to return to office. However, her hostility toward Tory governments was only a short-lived feature of her reign.

Wife and mother

Queen she may have been, but as an unmarried woman Victoria still had to live with her mother, according to the convention of the time, and the Duchess still bullied her the way she had when she was a girl. This in part may have driven her in her desire to marry Prince Albert of Saxe-Coburg and Gotha, for this relationship does not appear to have been a case of love at first sight. The attachment became legendary,

however, once the Queen fell madly in love with her Prince Consort, who also became her key adviser. They had nine children, who were destined to make matrimonial connections with all the leading royal houses of Europe.

Victorian morality

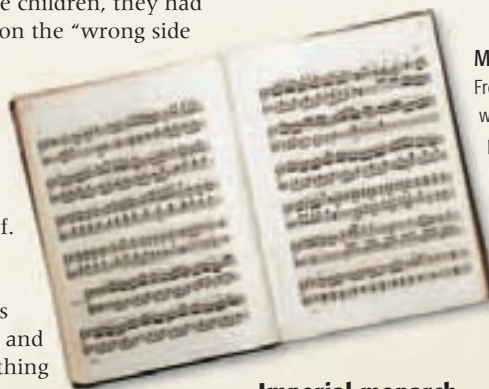

The idea of a "royal family" became celebrated at this time. The sanctity of the home and the joys of domestic life were widely idealized; sober respectability was much prized. Traditionally, the ruling class had been conspicuously lax in their sexual conduct: if Victoria's uncles had been short of legitimate children, they had produced plenty on the "wrong side of the blanket."

However, "Victorian Morality" had no better exemplar than the Queen herself. A devoted (even passionate) wife to Albert, she was seriously prudish and intolerant of anything that smacked of sexual license.

Albert and after

As her Prince Consort, Albert further developed the role of the monarchy in promoting all-round good works. He was an important patron of the Great Exhibition in 1851, and encouraged the Queen's own close identification with the armed forces, underlined by her introduction of the Victoria Cross for valor, in 1856, against the background of the Crimean War. However, tragedy struck in December 1861, when Albert died from typhoid fever while at Windsor Castle. He was only 42.

The Queen was left desolate. She wore mourning from that time on, and shunned public appearances where she could. While she always met minimum requirements, her failure to go further caused public muttering (gossip about her attachment to her Balmoral gillie John Brown did not help). There was some serious anger at what some saw as a dereliction of duty. On the other hand, her retreat from the political front line was welcomed by those in government. She slipped back into the largely ceremonial role that is now expected of monarchy.

Musical queen

From childhood, Victoria was an enthusiastic pianist, particularly loving works by Beethoven, Schubert, and Mendelssohn, who wrote pieces especially for her.

Imperial monarch

In the latter part of her reign, Victoria regained her popularity as the symbol for a successful and ever-more powerful imperial nation. More experienced now, she also regained the confidence to act on her own initiative. As a result, she was a much greater influence over (and nuisance for) senior politicians. In 1876, Tory Prime Minister Benjamin Disraeli arranged for her to be given the additional title of Empress of India.

Whatever Victoria's personal flaws, they were rendered insignificant by her sheer longevity as reigning monarch. There was a huge outpouring of joy at her Diamond Jubilee in 1897.

TIMELINE

- **May 24, 1819** Princess Alexandrina Victoria is born to Princess Victoria of Saxe-Coburg Saalfeld and Prince Edward, Duke of Kent and Strathearn, George III's fourth son.
- **June 20, 1837** Princess Victoria becomes Queen at the age of 18.
- **February 10, 1840** Victoria marries Prince Albert of Saxe-Coburg and Gotha in the Chapel Royal of St. James's Palace, London.
- **May 1, 1840** The Queen's profile appears on the world's first postage stamp, the Penny Black.
- **November 9, 1841** The Queen gives birth to Prince Albert Edward, the future King Edward VII.
- **1845** The Queen and Albert buy Osborne House, on the Isle of Wight, to redevelop as a holiday home.
- **April 1848** Victoria and her family leave London for Osborne House, amid fears of revolutionary violence in the capital.
- **April 7, 1853** The Queen is anesthetized with chloroform for the birth of her seventh child, Prince Leopold of Albany, giving this medical innovation an important boost.
- **October 1853** Outbreak of Crimean War. The hostilities do not cease until February 1856.
- **January 29, 1856** The Victoria Cross for valor is introduced.
- **April 24, 1857** Outbreak of Indian Mutiny. After it has been put down, the Crown takes direct charge of administrating India.
- **May 1, 1876** Victoria is awarded the additional title of Empress of India; it is formally proclaimed in Delhi the following year.
- **March 2, 1882** After seven earlier attempts, would-be poet Roderick MacLean tries to assassinate the Queen with a pistol. He is finally confined to an insane asylum.
- **March 27, 1883** Victoria's personal attendant John Brown dies. His passing, the Queen's letters suggest, leave her feeling almost as though she has been widowed a second time.
- **June 8, 1886** Gladstone's Government of Ireland Bill, proposing Home Rule for Ireland, is voted down in the House of Commons, to the Queen's ill-concealed relief.
- **June 20, 1887** The Queen's Golden Jubilee—50 years on the throne—is celebrated. Celebrations are intensified by news that an Irish Fenian plot to kill her has been discovered.
- **June 20, 1897** Victoria's Diamond Jubilee—60 years on the throne—sparks general celebration.
- **October 11, 1899** The Second Boer War begins. It ends in a British victory—although British tactics cause controversy and the war lasts until May 31, 1902.
- **January 22, 1901** Victoria dies at Osborne House at the age of 81.

OSBORNE HOUSE

DECISIVE MOMENT May 1, 1851

The Great Exhibition

At 11:45 am on May 1, 1851, Queen Victoria arrived to officially open The Great Exhibition of the Works of Industry of all Nations, in Hyde Park, London, the first-ever international industrial exhibition. It announced Britain as the foremost nation battling for manufacturing supremacy in an increasingly industrialized, modern world.

The world had never seen a trade fair this large before. Such was the public's enthusiasm that on its first day up to 30,000 crammed into its purpose-built venue, a massive airy greenhouse designed by Joseph Paxton and nicknamed "The Crystal Palace" by *Punch* magazine. Among the crowd, alongside Victoria, was Prince Albert, whose pet project this had become.

Empire on the rise

By the mid-1800s, Victoria headed an empire on such a rapid rise that it would embrace a quarter of the world's population by the end of her reign. The Great Exhibition was conceived as a way of showing that Britain was now the "workshop of the world" and its leading industrialized nation, and so this great fair displayed a dizzying array of extraordinary, impressive, and innovative goods and machinery from throughout its lands. Items from potential competitor countries were

also on show, following Albert's desire to promote healthily competitive free trade and diplomatic links.

Science, industry, and artistry

The 100,000 exhibits ranged from the huge Koh-i-Noor diamond to Sir David Brewster's stereoscope, and from steam locomotives and mechanical toys to an envelope-making machine and a garden seat for the Queen carved from coal. Exotic items such as North African tapestries and metalwork, and shawls from India, influenced Victorian tastes, and the sheer array of goods fed the growing mania among middle-class Victorians for shopping.

By the time the Great Exhibition closed, on October 11, 1851, around 6 million people had seen it, many of them several times—the Queen herself made 34 visits. The Crystal Palace was dismantled and moved to Sydenham, south London, where sadly it perished in a fire in 1936.

"God bless my dearest Albert, and my dear Country, which has shown itself so great today."

QUEEN VICTORIA'S JOURNAL, MAY 1, 1851

Caxton's Crystal Palace

Joseph Caxton's Crystal Palace exhibition hall covered about 26 acres (10 hectares) of Hyde Park, in London, and was designed to be later dismantled and moved. It was the world's first true prefabricated building made from mass-produced parts.

BEFORE

As the 19th century reached its mid-point, Britain was strong and confident.

FULL STEAM AHEAD

The country had been quick to translate **technological advance** into entrepreneurial opportunity since the start of the Industrial Revolution << 232–33. It had led the way in developing steam power, on the railways, and at sea << 258–59. With all its **economic strength**, however, its military might had **not been substantially tested** since the Battle of Waterloo in 1815 << 246–47.

SAFEGUARDING SUEZ

India's importance to Britain had been growing since the 18th century << 212–13. Hence the need to ensure stability on the isthmus of **Suez, a vital junction** on the route to India. With the Ottoman Empire clearly in terminal decline, Tsar Nicholas I of Russia had **designs on the Dardanelles**, the straits linking the Black Sea with the Mediterranean and Suez.

RUSSIAN AGGRESSION

At the beginning of 1853, Nicholas **proclaimed himself protector** of the Ottoman Sultan's Christian subjects, with rights over Jerusalem and its pilgrimage sites. The **Sultan appealed** to France and Britain, and when Russia invaded his Danube provinces of Moldavia and Wallachia that summer, **they responded**. After the Russian Navy had destroyed the Turkish fleet at Sinop, the focus shifted to the Crimean peninsula.

NURSING PIONEER (1820–1910)

FLORENCE NIGHTINGALE

Moved by press reports of the wounded in the Crimean War, well-connected Florence Nightingale pulled strings and secured permission to take 38 volunteer nurses out to help. In October 1854, her party arrived at the military hospital at Scutari, Turkey. They found a tumbledown facility built above broken sewers. Rats and flies were everywhere; no artificial light or anesthetics, or even bandages, were available. The wounded lay directly on the floor or on soiled straw. Florence took it all in hand, got it clean and orderly, and sorted out the administration. Strongly proprietorial, she walked the wards in the darkest watches of the night earning herself the reverential nickname, the Lady with the Lamp.

The Crimean War

The expectation was that Crimea would see a powerful industrialized Britain sweep aside all opposition, a “Great Exhibition” for the military. The reality was different. Organizational limitations let the armed forces down, and they found themselves in a wretched stalemate for many months, killing thousands.

A Franco-British force was sent to Crimea in the spring of 1854, largely to neutralize the Russian Black Sea naval base of Sebastopol. British naval power was crucial, and a base for it was established near the Ottoman capital, Constantinople (Istanbul).

Industrial might

Britain's industrial output was 10 times Russia's and its army much better equipped. Its standard musket range was five times that of the Russian equivalent. Russia's infrastructure was almost completely undeveloped. It took three months to get weapons and materiel to Crimea by horse and cart. Britain and France could ship supplies by sea in just three weeks. Crimea anticipated later wars in hingeing as

Surgeons kit

These instruments were used in Crimea by a military surgeon, Dr. Evans. Supply problems meant that most operations had to be carried out without anesthetics, although chloroform, for example, was now in use.

much on logistics as on fighting itself. One in three Russian troops did not even make it to the front. But Britain's advantages were offset by poor training and provisioning.

In the public eye

Previous wars had seemed remote to those not involved. The Crimean War was modern in having an important media presence. William Howard Russell went on behalf of *The Times* newspaper, becoming the first known war correspondent.

Since his copy was substantially uncensored by the authorities, war's sufferings were literally brought home to the public in their morning papers. They became available almost instantly through telegraph technology. Photos were published for the first time too. Russell had plenty to write about.

Map of the Crimean War

After fighting took place along the Russo-Ottoman borders, the focus moved to Crimea, and Sebastopol, from where Russia's navy attacked Ottoman shipping.

KEY
 British, French, and Ottoman forces
 Russian forces

In September 1854, after defeating the Russians at the Battle of Alma, the Allies besieged Sebastopol. The Russians tried unsuccessfully to lift the siege on October 25 at the Battle of Balaclava, but Britain's victory was marred by the misunderstanding that led to the Charge of the Light Brigade. Almost 300 men were needlessly killed when the wrong target was attacked.

This kind of thing had happened before, but now Russell was on hand to give his unsparing report. The tragic charge was presented as a heroic failure, but

the official incompetence was unmissable. A fresh attempt by the Russians to dislodge the Allies failed at the Battle of Inkerman on November 5.

However, the Allies' siege had so far failed too. They dug in for months of miserable trench warfare and artillery bombardment. Freezing conditions became more wretched when winter storms interrupted seaborne supplies: cholera and typhus, rife since summer, tore through the army. In January 1855, while about 83 men died of wounds, 2,761 died from disease. Russell was scathing in his criticism of provision for the wounded and of the general incompetence with which the war was being waged.

A victory... of sorts

The final victory was one for both British logistics and British capitalism. Engineers Thomas Brassey and Samuel Morton Peto built the Grand Crimean Central Railway to bring up men and artillery to Sebastopol, swinging the fortunes of the siege.

However, it was fairer to say that Russia had lost the war than Britain had won. The Tsar could not keep up the struggle, having lost more than 100,000 men, compared to Britain's 17,500 dead, France's 90,000, and Turkey's 35,000. The death of Nicholas and the succession of Alexander II allowed an opportunity for peace talks to be held in Paris in 1856.

Battle of Sebastopol

Painter Jean-Charles Langlois had served as a soldier himself. He went to Crimea with war photographer Léon-Eugène Méhédin. His panoramic scenes of the conflict are beautiful but unsparing.

British artillery officers with cannon

Officers of the 14th Artillery Regiment pose casually around a gun in a photograph taken by Roger Fenton toward the end of 1853. Staged as they may seem today, images like this one made a powerful impression on the public back in Britain, beginning to bring home to them the awful realities of war.

AFTER

The immediate outcome of Crimea for Britain was a great deal of soul-searching. Its self-confidence and, more specifically, competence were called into question. The war had boosted the prestige of the press, even as it lowered that of the army and the administration, and the newspapers led the ensuing hue and cry.

VITAL CHANGE

Reforms were introduced in nursing and the army. Officers' commissions once sold to wealthy young gentlemen now went to **professionals** on merit. Confidence recovered, restored by easy triumphs against China in the Second Opium War and some **harder-won campaigns** against the Zulu and Ashanti in Africa **296–97** >>

INDUSTRIALIZED WARFARE

These **colonial wars** were unequal struggles, fought against poorly armed and primitively equipped adversaries. The Crimean War provided at least a **foretaste of what might happen** when great modern armies met. Only much later would it become clear how far the **dismal conditions** of the armies dug in around Sebastopol foreshadowed the trench warfare of the Great War of 1914–18 **320–21** >>

BEFORE

Britain's Industrial Revolution gave it a head-start over the competition in the race for economic dominance.

LARGE-SCALE INDUSTRY

As early as the 18th century, British inventors were building the **technological foundations** on which future prosperity would be built

« 232–33. The **cottage industries** of the past were giving way to large-scale production, much of it in fully mechanized, meticulously organized factories.

British know-how enabled industrial and economic development to surge forward full-steam-ahead in some of the most **modern factories** and on the most modern **transportation infrastructure** in the world « 258–59.

HANDLOOM WEAVER

Workshop of the World

If the 18th century had seen an Industrial Revolution, it was the 19th that saw Britain totally transformed into what was to be the world's first industrial power. This second phase of transition was as much economic and social as it was technological, touching almost every aspect of British life.

The Great Exhibition had been a wonderful store window for the products of the Industrial Revolution, but Britain was busier than ever behind the scenes. For a brief moment, it had been not just the foremost but the only industrial nation, producing two-thirds of the world's coal, half its iron, almost three-quarters of its steel, and about half of its commercially

Workers in a textile factory

Processes once done painstakingly by hand by highly skilled workers were now carried out mechanically—and on an enormous scale. Much of the work could be done by women and children, who were cheaper to pay and easier to manage than male labor.

manufactured cotton. Rival nations were reacting fast. For the moment, though, they were struggling to catch up.

A world city

While industry was associated with the Midlands and North, London, a city of manufacturing itself, although mainly in smaller workshops, was growing as a financial center underwriting much industrial enterprise. The skills it developed served entrepreneurs internationally. By 1800, it was the modern world's first city with a population of a million; by 1900, it would have more than six times that number. Railways made it a

transportation hub, the main stations having been built from the 1830s. The Underground (subway system) was under construction from 1863.

Textiles, toys, and tools

The more familiar industrial activities also continued. The Lancashire cotton mills flourished. Cotton products accounted for more than half Britain's exports by value by 1830. By 1860, Lancashire alone had 440,000 cotton workers, employed in 2,650 mills. Wool was enjoying comparable fortunes across the Pennines in Yorkshire. Bradford, a small town of 16,000 people in 1800, had 182,000 by 1850.

Leeds emerged as a major trading and communications center. Birmingham was booming too: a miscellany of mostly small-scale concerns here made everything from buttons to toys and tools. England's second city soon had an impressive collection of public buildings to advertise its new wealth and status in a golden age of civic pride.

King coal

The early industrial heartlands in Lancashire and Yorkshire were fueled by the availability of coal supplies so close to the surface that they could simply be dug out from handy hillsides. Many other seams could not be mined, owing to access problems, though the demand was not so great that this really mattered. From about 1800, deep-mining technology developed, including wooden pit props, winding gear, and engine-driven fans for ventilation. The Davy lamp made mining much safer from 1816.

From iron to steel

Welsh coal had been extracted since very early in the Industrial Revolution. Passages could be dug more or less horizontally into the valley sides. The coal extracted was used in the local iron industry. Later, shafts were sunk vertically to depths of 2,600ft (800m) or more. Tramways, and later railways, were built to take coal to the coast for export (mainly from Cardiff) and use in local steelworks. Centers like Merthyr were already important in ironmaking, but production took off during the railway boom. The great blast furnaces built at Dowlais and Cyfartha were the most important in the world by the 1840s. Much iron from Welsh works was exported through Swansea to support rail construction elsewhere.

The large-scale switch to steel (an alloy of iron with carbon for extra

toughness) was made possible by the introduction of the Bessemer Process in 1858. This used jets of air to remove the impurities from the molten metal and allowed mass production for the first time. Sheffield, the traditional steelmaking center, still used a small-scale crucible method. It was overtaken by big steelworks elsewhere, but had a role making high-quality steel for cutlery and weapons.

Prospering ports

All these products had to be shipped to their export destinations, and in many cases raw materials had to be brought in. Seaports boomed along with the general prosperity. London was the world's largest port by 1802: it was linked to the canal network with the construction of the Limehouse Basin in 1820. Wapping Dock (from 1805) could accommodate 300 ships at a time. The East India Docks handled £30 million worth of tea a year by the 1860s. Frozen meat was brought in from Australia by the 1880s.

Other ports flourished too. The boom enabled Liverpool to take the loss of the slave trade in its stride. Already a major port in 1800 (Britain's first wet

1,000 The percentage rise in UK iron production between 1800 and 1850, from around 250,000 tons to 2.5 million. Steel production went from 60,000 tons in 1850 to 5 million in 1900.

dock was built here in 1715), it had just over 2 miles (3km) of quays, taking £130,000 dues per year. By 1857, it had 15 miles (24km) of quays, and dock dues of £250,000; it almost doubled in size again by 1900.

Shipbuilding

The first steam seagoing ship, the *Comet*, was built in Glasgow in 1812. An estimated 42 steamships had been built along the Clyde by 1820. In general, iron hulls were built on the Lower Clyde and machinery built upriver in Glasgow. Shipbuilding in Belfast began in the 18th century: Harland & Wolff was founded in 1862, although its heyday would not be until the early 20th century. Newcastle, a long-standing port for shipping coal in the coastal trade, emerged as another important shipbuilding center.

Enfield carbine rifle

British industrial might translated easily into military dominance in the early 19th century, particularly over the peoples of Africa and Asia. Britain's colonial conquests were in part driven by the need for both new markets and supplies of raw materials for its industry.

Steelmaking

The Bessemer Process made possible the manufacture of high-quality steel on a massive scale: here steel is seen being fired in the converter (above) and cast into ingots (below).

AFTER

Britain's industrial dominance could not go on for ever: too many competitors wanted their share of the economic spoils.

CHANGING WORLD

Britain's workers wanted their share of the spoils too. The **rise of trades unions and the Labour Party** in the early 20th century meant that managers could no longer arrange things on their own terms **310–11** >>. If the conflict of 1914–18 brought Europe its **first industrialized war 320–21** >>, the peace that followed brought a war of a different sort, as industry battled to progress against the power of an **ascendant United States 330–31** >>.

DEPRESSION AND DECLINE

The **Great Depression** after 1929 was deep and worldwide **334–35** >>, but for a Britain already bruised by the experience of World War II **354–55** >>, the loss of its empire came as another blow **364–65** >>. While the **chronic labor unrest** that afflicted Britain in the 1970s **376–77** >> may have been arrested by the Conservative governments of Margaret Thatcher in the 1980s **382–83** >>, it was at the expense of the industrial economy as a whole.

Shipbuilding

Prosperous industrialists in top hats pose in front of a large ship under construction. Enmeshed by supportive struts, the ship looms above the river with factory chimneys behind.

NEW INDUSTRY IN BRITAIN, 1920s

Victorian Values

Hard work, progress, and self-improvement were important in Victorian Britain. Society's values were increasingly in the hands of an expanding middle class that was growing wealthy through industry. Home, hearth, and family life were central to well-being, while there was a great drive to raise living standards for all.

In Victorian Britain, the home became a powerful symbol of what every right-thinking citizen should aspire to. Here, everyone knew their place, all was kept in pristine order, and family life was nurtured. Having a strong family unit within this home, the Victorians believed was to be the aim of all. The model home was middle-class, fashioned by money from

19th-century industry, rather than inherited aristocratic wealth. Domesticity was a virtue encouraged in all women and a middle-class wife absorbed herself in homemaking or genteel pursuits, such as needle skills. For poorer girls and women, working as a domestic servant was seemly because it supported family life or helped them prepare for their own married lives.

Part of making society an ordered Christian place was sexual restraint. Ladies were expected to behave with decorum and to be accompanied by male chaperones until they were married. At the same time, prostitution was rife because many women who needed to earn money had few other ways available to them for supporting themselves.

Victorian institutions

The Victorians set up a number of institutions to control or care for the population. Workhouses were set up in 1834 for those who were unable to work. The idea was that people should work for their food and accommodation, rather than relying on handouts.

Conditions in the workhouses were such that many would go to any lengths to avoid going there.

Family values

Dollshouses like this one helped girls prepare for the role of running a home, as well as being cherished toys and family heirlooms.

BEFORE

The Victorian era reacted against some moral aspects of the previous century while developing others.

SOCIAL REFORM

Victorian primness was partly a reaction against the decadence and sexual openness of their Georgian forebears, as caught in Thomas Rowlandson's caricatures of Georgian aristocrats. However, the Victorians also inherited some of their zeal for social reform from some notable Georgians, including William Wilberforce ◀◀ 234–35.

SELF-PORTRAIT BY THOMAS ROWLANDSON

The basis of the modern police force was started by Sir Robert Peel. He created the Irish Constabulary in 1822 and London's Metropolitan force ("bobbies") in 1829. The aim was to provide a centralized and ethical crime prevention force. By 1857, there were regional police forces in England, Scotland, and Wales.

Jails and asylums were also built on a grander scale than before—the 1845 Lunacy Act ordered all counties to build asylums. Mental illness sufferers had previously been treated as criminals—the Act was seen as a force for good, enabling people to receive treatment.

1891 brought "board" schools (run by boards of governors) and compulsory free education. Discipline was highly valued and schoolchildren were often beaten. Dickens, who campaigned for better education

before these Acts were enforced, portrayed several cruel schools in his novels. At the same time, Acts limiting child labor and reducing working hours for all were also introduced.

Numerous public lectures and evening classes at Working Men's and Working Women's colleges further raised levels of education.

Household advice

The Victorians loved strict rules. Mrs. Beeton's bestseller, *Book of Household Management* (1861), included instructions on food preparation and medical advice.

Social improvement

There was social improvement of many other kinds, too. In an age when diseases such as cholera tore through industrial slums, better drains, and

Education for all

In the drive to educate the nation, hundreds of schools opened. A series of Education Acts between 1870 and

Hub of the home

This typical Victorian parlor sums up middle-class values perfectly. Crowded with possessions, it was where families gathered to read and enjoy their hobbies.

sewage systems came into existence: the first part of Joseph Bazalgette's great new London sewer system opened in 1865. Gas street lighting increased throughout the 1800s and in the late 1800s, Mosley Street, Newcastle, became Britain's first street to be lit by electricity. Model middle-class suburbs were built around the larger cities, such as Ealing in west London, and, thanks to increased train links, bankers, doctors, and lawyers led healthier lives far from city smog in new houses with indoor toilets. Public parks and gardens were laid out at the same time in these suburbs, with the aim of improving the health of the nation.

Ragged schools

This illustration shows a Birmingham ragged school set up in 1843. This institution was set up for the poor to provide a basic education and teach skills such as shoe-making, carding wool, or making firewood.

“The **spirit of self-help** is the root of all genuine growth in the individual.”

SAMUEL SMILES, *SELF-HELP*, 1859

REFORMER (1812–1904)

SAMUEL SMILES

Scotsman Samuel Smiles was the quintessential Victorian. A doctor, campaigning journalist, and chief executive of various railway companies in their golden age, he was a true middle-class professional. He was also a political and social campaigner, and was interested in self-improvement. Smiles admired prominent self-made men, such as George Stephenson and Josiah Wedgwood. Potted biographies of such figures, along with Smiles's general reflections, filled his best-known book *Self-Help* (1859), which sold more than 250,000 copies during his lifetime. This hugely influential work helped shape the typical middle-class Victorian values of hard work and thrift, the drive to rise from humble origins, self-reliance, duty, and strength of character.

AFTER

Victorian values continued to be a touchstone against which new ideas were measured into later periods.

POST-WAR BRITAIN

In 1950s Britain, many Victorian buildings were demolished as **society looked to the future** rather than the past. Later in the century, Victorian architecture was preserved and became much-loved. **Many Victorian creations**, including buildings, sewers, and museums, are **still in use today**.

LATER VIEWS OF THE VICTORIANS

Consumerism, **self-improvement**, and **competition** are still at the heart of British society. Some politicians continue to use the term as shorthand for family values and law and order—or narrow-minded repression if you have a different set of views. In the 1980s, Margaret Thatcher **382–83** >> famously praised the “Victorian values” of **self-reliance and betterment**, and of being one great nation.

Victorian Entertainment

Victorian Britain believed in having fun. The middle class had the means and the leisure—for evenings out, vacations, and hobbies in the home—and the working poor were frantic in their desire to escape a monotonous round of toil.

1 Portraits and cameras were widely available by the mid-19th century. Albumen from egg-white bound the chemicals together in photographic prints. Formats were rigidly standardized, the carte de visite size of photograph being increasingly replaced by the larger cabinet card. **2** Stereoscopic viewer in walnut of the late Victorian period, made by Poulton & Sons of London. The photograph in the fretwork holder was shown as if in 3-D. **3** Season ticket for the Great Exhibition of 1851 in Hyde Park, which allowed repeated admission. **4** Thomas Cook brochure advertising vacations for 1901. Along with sea cruises, rail tours to historic cities and scenic places were popular. **5** Tennis racket made of wood. These became easily warped or unstrung. **6** Duffers Golf Club Papers on golf published by the *Montrose Standard* newspaper in 1891. The cover photograph shows the links at Montrose, in eastern Scotland. **7** Lemonade label from a bottle, showing a picture of a cricket match. **8** Drink label, from a bottle of Football Punch, a drink for winter. **9** Soccer ball with leather panels

sewn together. **10** Cyclist tourist club certificate (front and back) made of metal that was issued by the Cycle Touring Club to H.H. Wells of Etna Iron Works, Lewes, Sussex, in 1890. **11** Penny-farthing bicycle, got its name because its front wheel was bigger than its back one, suggesting the different sizes of the two coins. **12** Mrs Beeton's *Every Day Cookery and Housekeeping Book* was published in around 1880. She was already famous for her *Book of Household Management* (1861), shown here open, left. **13** Charles Dickens' *The Magic Fishbone*, a children's book, was published in 1868. **14** Penny Dreadful, a popular type of literature that aimed to thrill and shock. **15** Christmas cards were first sent in the 1840s. **16** Punch and Judy puppets used to entertain children. **17** Theater posters advertising performances at London's Palace Theatre in 1898. "Varieties and novelties" and a magnificent "smoking saloon" are offered. **18** Sheet music of *Her Majesty's Lancers*, a polka written by Edward Solomon, published in 1877. **19** Automatic music box popular from the 1890s.

BEFORE

WORDSWORTH'S HOME, DOVE COTTAGE

Religion and Romanticism were two major pillars of the cultural conflicts that engaged many 19th-century thinkers and artists.

PRE-REFORMATION RELIGION

The **Oxford Movement** looked back to the ideals of the pre-Reformation Church ◀ 136–37. They saw it as a **pious and pure religion**, untainted as yet by the liberalism and **rationality of subsequent centuries**.

PRE-RAPHAELITE ART

The Pre-Raphaelite artists **admired the art** prior to High Renaissance painters such as Raphael (1483–1520), whom they deemed **too polished and idealized**. They favored early 15th-century Italian and Flemish work, such as the *Arnolfini Portrait* by Jan van Eyck.

ROMANCE VERSUS REASON

The *Lyrical Ballads* (1798) of William Wordsworth and Samuel Taylor Coleridge are often seen as **starting the high point of English Romanticism**. The Romantics fought against the 18th-century Age of Reason. Influenced by French thinker Jean-Jacques Rousseau (1712–78), they **promoted beauty, unconstrained nature, and human emotion and liberty**. They were a huge influence on 19th-century figures, such as the critic John Ruskin (see box), who greatly admired Wordsworth.

ENGLISH ACADEMIC, CRITIC, AND SOCIAL REFORMER (1819–1900)

JOHN RUSKIN

London-born Ruskin had a claustrophobic childhood framed by a Romantic-spirited father and a religious mother, and he struggled with the oppositions of sensuality, intellectualism, and religious propriety. In the 1870s, “aesthetic” artist James McNeill Whistler sued Ruskin for accusing him of “flinging a pot of paint in the public’s face” with an abstract work. The ensuing court case thrust Ruskin, and the era’s artistic values, into the spotlight. Ruskin emotively championed the landscapes of J. M. W. Turner in *Modern Painters* (1843–60) and Gothic architecture in *Stones of Venice* (1851–53).

Cultural Conflict

Running through the self-confidence of the 19th century were currents of conflict and dissent. Religious believers underwent crises of faith, while writers and artists criticized the status quo. All kinds of ideas circulated, from the Romantics’ call for freedom, to the return to medievalism of the Pre-Raphaelite artists.

Spurred by political revolutions across Europe, a Romantic cultural rebellion took hold in Britain in the early 19th century. Escaping from 18th-century reason, poets William Wordsworth, John Keats, Percy Bysshe Shelley, and the dissolute Lord Byron, stressed nature and the emotional expression of the individual. Notable works included Keats’ *Ode on a Grecian Urn* (1820) and Byron’s epic *Don Juan* (1819–24). Another cultural strand, Romantic medievalism, turned away from the mass materialism of Victorian culture, whose values many found superficial. The Pre-Raphaelite Brotherhood of young English artists, founded in 1848, rebelled against what they saw as the artificial, pompous, and academic art of the day, and sought an anti-dogma truth to nature. They

Madox Brown and, later, Edward Burne-Jones. The frequent mix of realism and religion, rejection of

UTILITARIANISM The moral theory of creating the greatest good for the greatest number of people. Also known as the “greatest happiness principle,” utilitarianism was a popular theory in the Victorian period.

Renaissance styles, and Rossetti’s sensual female portraits (such as *Bocca Baciata*, 1859) all caused initial outrage, although leading art critic John Ruskin championed them.

Dissatisfaction with mechanistic Victorian industrialization spawned two other historical revivals: the Gothic Revival and the Arts and Crafts Movement. Ruskin played a major part

and Crafts Movement. This reacted to mass production by promoting a medieval-influenced idea of the craftsman and of handmade goods.

Faith, radicalism, and hard times

The 1830s onward saw a revival of High Anglican and Catholic ideas, as a way of reinvigorating a stagnating Church of England. It was led by Oxford churchmen John Newman, John Keble, and Edward Pusey. Often called the Oxford Movement, or Tractarianism (after a series of written tracts), it greatly affected Anglican theology. Though some feared a return to papacy, it saw instead a general religious revival, with new churches built and a desire to help the needy. It was also an age when people, including Ruskin and novelist Thomas Hardy, questioned their faith.

“I seek antiquity not novelty. I strive to revive not invent.”

AUGUSTUS PUGIN, LETTER TO JOHN BLOXAM, SEPTEMBER 13, 1840

harked back to medieval art prior to the work of Raphael and the High Renaissance, which was revered by the Victorians. Their founding members were Dante Gabriel Rossetti, John Everett Millais, and William Holman Hunt. Associated artists included Ford

in both. His love of what he saw as the beautiful Christian spiritualism of medieval architecture was shared by numerous British architects, notably Augustus Pugin, author of *The True Principles of Pointed or Christian Architecture* (1841), whose Victorian Gothic work includes detailing on the Houses of Parliament. George Gilbert Scott became the most successful Victorian Gothic architect, completing London’s St. Pancras Station in 1865. Pugin wrote that “all ornament should consist of enrichment of the essential construction of the building.” This functionalist idea, that art and design should honestly express its purpose and construction, rather than being superficial decoration, was also a guiding principle of William Morris, who was at the forefront of the Arts

Symbolic realism

John Everett Millais’ *Christ in the House of His Parents*, c.1850, believed to be influenced by Oxford Movement caused great controversy for showing the sacred as ordinary.

The ideas of Charles Darwin on natural, not divine, evolution (see pp.288–89) had a profound effect, and an increasing agnosticism pervaded this age of scientific enquiry.

While some looked to the past, others faced the present head on. Modern industrial society had highlighted poverty and many social inequalities. Ruskin became a social reformer, and taught at London's Working Men's College (see pp.278–79). Morris formed the Socialist League in 1884 and outlined a socialist utopia in *News from Nowhere* (1891). Europe's 1848 revolutions furthered radical thought. Karl Marx and Friedrich Engels wrote the *Communist Manifesto* (1848), and founded modern communism. Engels, author of *The Condition of the Working Classes in England in 1844* (1845), worked in a Manchester cotton mill run by his German family. Marx was a German economist and philosopher, based in England after

Hard Times

In novels such as *Hard Times* (1854) and *Oliver Twist* (1839), Charles Dickens highlighted the plight of the dispossessed of Victorian Britain.

1849. His *Das Kapital* (1867–94) predicted capitalism's collapse.

The writings of Charles Dickens championed the downtrodden and sought social reform in areas such as sanitation and poor law. Dickens was a contradiction typical of this age of cultural conflicts. The society that he critiqued, albeit often fondly, gave him great success. One of his targets, notably in *Hard Times* (1854), was the utilitarianism of Jeremy Bentham and John Stuart Mill, central to Victorian thinking.

Through all of this, ran the influence of Thomas Carlyle, a Scots historian–philosopher, based in London after 1834, and author of *Sartor Resartus* (1833–34). Carlyle disliked Victorian materialism and utilitarianism, and promoted social reform. Doubting conventional Christianity, he developed an unorthodox spiritualism and a belief in the power of strong individuals.

MORRIS & COMPANY William Morris's company was founded in 1861. Its carefully crafted products were designed by artists such as Dante Gabriel Rossetti and Edward Burne-Jones.

Form and function

This modern-looking chair by Philip Webb came from Morris & Company. It is simple but functional, and covered with fabric in a nature-inspired design. Typical Morris items were furniture, fabric, wallpapers, and beautiful medieval-style, handmade books.

AFTER

In the 19th century, cultural trends forged major modern ideas, from the cult of the individual to the Welfare State.

INDIVIDUALISM

The Romantics' stress on the **unfettered individual**, rather than on the needs of the group or society, **often ran counter to Victorian utilitarianism** and fed the 20th-century "cult of the individual." The Romantic poets' image also did much for the **concept of the tortured artist** and the special qualities of being creative.

MODERNISM

The idea, embraced by Morris and the Arts and Crafts Movement, that **form should express function** prefigures the form-follows-function mantra of 20th-century Modernist design. The stylish minimalist chairs of the 1930s owe much to Morris. Even Pugin's Gothic designs, with their **functionalist ethos**, connects in the unlikelyst of ways with modern British architects.

THE WELFARE STATE

The **socially conscious** and campaigning work of figures such as Dickens, Ruskin, and Morris aided the **rise of socialism** and the Labour Party. Ruskin, with his passion for making lectures and courses available to the working class, and his **general interest in social reform**, is often said to have influenced the creation of the Welfare State **360–61** >>

Victorian workhouse, 1900

At this Marylebone workhouse, in London, men sit in regimented rows to receive their evening meal. Women were kept separate from the men, for the sake of decency. As charity was regarded by many Victorians as being morally corrupting and encouraging idleness, hard (if pointless) labor was prescribed in order to reduce its harm. The resemblance to a prison of the day is inescapable—as it was to its inmates, for whom it was clear that poverty was considered a crime.

Exploring the World

Explorers had always experienced the desire to chart the unknown wildernesses of the Earth, but they had never felt so well-equipped as they did now. They were often driven by other motives too: a desire to spread the word of Christ or, perhaps unconsciously, that other gospel—the Anglo-Saxon way.

British explorers in Africa were often impelled by a pious desire to bring salvation to the “savages.” It seemed only natural that, along with the good news of Christianity, they should bring tidings of black Africa’s divinely ordained subservience to white Europe. Explorer James Richardson’s visit to the Sahara oasis of Ghat, in 1845, was a case in point.

Presumed Livingstone

Another missionary-explorer, David Livingstone (1813–73) traced the course of the upper Zambezi River from 1851; he then walked to the Atlantic coast at Luanda. Retracing his steps to the source of Zambezi, he followed it down to the Indian Ocean, becoming the first European to cross the African continent from west to east.

He was also the first westerner to see one of the largest waterfalls in the world—local people knew it as the “Smoke that Thunders”; Livingstone named it Victoria Falls.

The Queen’s name was also given to the lake discovered by Richard Burton and John Speke’s expedition in 1856. Speke’s claim that Lake Victoria was the source of the Nile was correct, though little more than an educated hunch.

An 1860 expedition intended to furnish proof was beaten back by hostile tribes.

Livingstone, back in Africa from 1865, disappeared into the interior, occasioning a media outcry in Britain. An American newspaper, the *New York Herald*, sent Welsh journalist and explorer Henry Morton Stanley in search of him. In 1871, finding a frail and elderly European in a village by

The Northwest Passage
Navigators were still tantalized by the idea of this tempting short-cut to the riches of the east. It was there, but severe ice made it impassable.

“During the whole day, we had not seen a single drop of water or blade of grass.”

CHARLES STURT, IN THE AUSTRALIAN INTERIOR, 1829

BEFORE

The timeless urge to travel was accompanied by a new-found sense of scientific exploration.

EXPLORATION AND DISCOVERY

Mungo Park, a product of post-Enlightenment Scotland << 224–25, traveled up the Gambia River to the Niger in 1795. Cook’s voyages << 226–27, were inspired by a hunger for adventure and knowledge.

NEW PURPOSES

The anti-slavery campaign generated an interest in Africa << 234–35. Industrial Britain began to regard the world as a source of raw materials, and as a potential market << 276–77.

MUNGO PARK’S
BOOK, 1816

Burke and Wills explore Australia

Robert Burke and John Wills approach Coopers Creek on what was both a successful expedition and an ill-fated one. The explorers crossed the continent, but only one of the group returned.

Lake Tanganyika, Stanley hailed him with the iconic words, “Dr. Livingstone, I presume....”

Australia opens up

The Sydney Cove settlement (see pp.294–95) sat on the doorstep of an enormous continent, so did colonies at Melbourne (from 1835) and Adelaide (1836). Not much was known even of New South Wales before the first forays by farmer-explorer Gregory Blaxland from 1813. Subsequent explorations revealed the Lachlan and Macquarie Rivers flowing north and west, away from the ocean. Working around the

David Livingstone

A complex mixture of wanderlust, curiosity, Christian evangelism, and a desire to stop the slave trade drove Livingstone.

This 19th-century lithograph shows him arriving at Lake Ngami in Botswana.

coast in opposite directions, navigators Matthew Flinders and Nicolas Baudin managed to miss the mouth of the Murray River. The assumption remained that the rivers to the north drained into some inland sea.

From 1829, Charles Sturt began exploring the Darling Basin, finally finding the Murray and tracing it down

to the ocean. He struck deeper into the interior during his Central Australian Expedition of 1844–46. Suffering from scurvy, heat, and dehydration, he was lucky to make it back alive.

Explorers Robert O’Hara Burke and William John Wills were not so fortunate. In 1860, they left Melbourne to cross the continent from south to north. They took camels, which they felt would cope well with the conditions. Even so, only four out of 20 men made it to the Gulf of Carpentaria in northern Australia. Nine dropped out in the early stages; then seven died, three on the homeward journey,

29,000 The estimated total distance, in miles (47,000 km) covered by Livingstone in Africa, opening up some 1 million sq miles (2.6 million sq km) of territory.

including Burke and Wills themselves. Only one—John King—returned home, but the expedition had achieved what it set out to do.

Arctic agony

Meanwhile, the centuries-old search for the Northwest Passage (see pp.226–27) continued. Sir John Franklin mapped much of North America’s northern coastline from the 1820s. His final expedition in 1846–47 ended grimly, with his ship getting trapped in ice, off King William Island in northern Canada. What happened to Franklin and his crew will probably never be known, though rumors of murder and cannibalism circulated at the time.

Heroic failure was the order of the day for British exploration of the North and South Poles, most famously in the case of Captain Scott (see box). But Ernest Shackleton turned objective setback into triumph when, having first failed to reach the South Pole in 1908, he undertook a new expedition six years later. His ship *Endurance* ice-bound and his men forced ashore, Shackleton took a small party by boat to South Georgia island, 800 miles (1,300km) away across rough seas, to summon help.

EXPLORER (1868–1912)

ROBERT FALCON SCOTT

Born near Devonport, Robert Falcon Scott joined the Royal Navy in 1888, working his way up the ranks over the years. By 1897, Scott served as lieutenant and torpedo officer, and led an Antarctic expedition from 1901–04. His second expedition to the South Pole though, ended in tragedy. Setting out in 1910, Scott and his companions lost out to Roald Amundsen’s Norwegian expedition through sheer ill-luck and—it was later

suggested—poor organization and obstinacy. Reaching the Pole only to find they had been beaten, they then faced a terrible homeward trek.

Their bodies were found in their tent by a subsequent search party, along with Scott’s journal—a moving record of their final days.

AFTER

The idea gained ground that adventurers were running out of places to explore—that the remaining challenges were more about endurance than exploration.

FEAR OF THE UNFAMILIAR

For many Britons, the feeling that the world “out there” was dark and dangerous was only underlined by news of the **Indian Mutiny 292–93** >>. Paradoxically, though, thanks to a **steady flow of emigrant families**, many other far-flung places were becoming British homes away from home **294–95** >>.

RISE AND FALL OF THE EMPIRE

For better or worse, the country became accustomed to interacting with large parts of the outside world mainly through the medium of its warships, its soldiers, and its colonial officials **296–97** >>. The responsibilities imperial power brought proved troublesome **342–43** >>. In the decades following **World War II**, it became clear that the sun was slowly setting on the **British Empire 364–65** >>. While, for some, Mrs. Thatcher’s **Falklands** adventure brought back Britain’s self-respect; to others it seemed an incongruous show of bravado by a fading force **382–83** >>.

BRITISH NATURALIST Born 1809 Died 1882

Charles Darwin

“Man... **still bears** in his bodily frame the **indelible stamp** of his lowly origin.”

CHARLES DARWIN, *THE DESCENT OF MAN*, 1871

Charles Darwin was perhaps the greatest biologist of the 19th century. His “natural selection” idea, a process whereby plants and animals best adapted to their environments survive, formed the bedrock of the current theories about evolution. They caused outrage and excitement in his time, and overturned the western world’s social and religious outlooks, making people see their place in the universe in a new light. As well as being a biologist and natural historian, Darwin made significant contributions to modern geology and marine science.

Early family life

Charles’s father, Robert Darwin, was a doctor and local philanthropist and his grandfather was Erasmus Darwin, a

18th-century potter Josiah Wedgwood (see pp.278–79). Charles’s mother died when he was eight. He hated the narrow education he received as a boarder at Shrewsbury School and did not prosper academically. Despite this, he seems to have had a happy childhood, enjoying long walks, science experiments in a small, home laboratory, collecting things such as minerals and birds’ eggs, and game-shooting. As a young man, Charles showed little interest in a medical career. His father told him, “You care for nothing but shooting, dogs, and rat-catching, and you will be a disgrace to yourself and all your family.”

Science and religion

Charles’s father sent him to Edinburgh University to study medicine, but Charles found surgery horrifying and withdrew. His father then sent him to Cambridge to make him a clergyman. Despite getting his degree, Charles did not pursue this, partly because of his religious doubts at the time. At both Edinburgh and Cambridge, however, he spent time studying natural history, including the evolutionary theories of Lamarck and his own grandfather. Influential figures included Cambridge botany professor, the Reverend John Stevens Henslow.

It was via Henslow that, some months after graduation, Darwin was invited to join a round-the-world survey expedition on board HMS *Beagle*, captained by Robert Fitzroy, as an informal naturalist. Between 1831 and 1836, the ship visited South America, Tahiti, Australia, New Zealand, South Africa, and various Atlantic and Indian Ocean locations. On the Galápagos Islands, Darwin observed the finches,

English naturalist

Darwin was a confirmed agnostic at the end of his life. After his death, rumors circulated that he had converted to Christianity and doubted evolutionary theories on his deathbed. This was denied by his family.

1809 The year in which French naturalist Jean Baptiste de Lamarck (1744–1829) proposed the first formal theory of natural evolution.

leading doctor, writer, and evolutionist. His mother, Susannah Wedgwood, was the daughter of the hugely successful

Voyage of the HMS Beagle

Darwin wrote up his *Beagle* voyage as a *Journal of Researches into the Geology and Natural History of the Various Countries Visited by HMS Beagle* (1839).

“Animals, whom we have **made our slaves**, we do not like to consider our equal.”

FROM CHARLES DARWIN'S NOTEBOOK, 1836–44

whose diversification on different islands would be vital to his theories. Darwin's southern hemisphere adventure involved periods on land and he collected, analyzed, and thought deeply as he went.

Variation and adaptation

On the voyage, Darwin noted the many adaptations that different life forms display. He thought about how the environment is always changing and wondered about the origins of species. His influences, nudging him toward evolutionary theory, included Charles Lyell's *Principles of Geology* (1831–33), which discussed how the environment changes naturally by small degrees over a long period of time. He also looked to Thomas Malthus's *Essay on the Principle of Population* (1798), which suggested an idea of a struggle for survival.

Through the 1840s and 1850s, Darwin continued to read and experiment, acquiring a formidable reputation. By now he was a family man. In 1839, Darwin had married his cousin, Emma Wedgwood, a devout Christian, who became increasingly worried by her husband's growing religious doubts. However, the marriage was happy and Darwin was seemingly an affectionate husband and father. He was prosperous due to family money and successful investment in the burgeoning railways (see pp.258–59), and able to spend time at his home, Down House, Kent, developing his theories. In 1851,

SURVIVAL OF THE FITTEST The term Darwin first started using in *Variation* and later editions of *On the Origin of Species*. It was meant as an alternative to “natural selection”, which was criticized for sounding as though it was the result of a conscious choice or design made by some agency.

however, his 10-year-old daughter Anne died, shaking his faith further. He was also suffering ill health, possibly due to problems picked up on his travels.

The race to publish

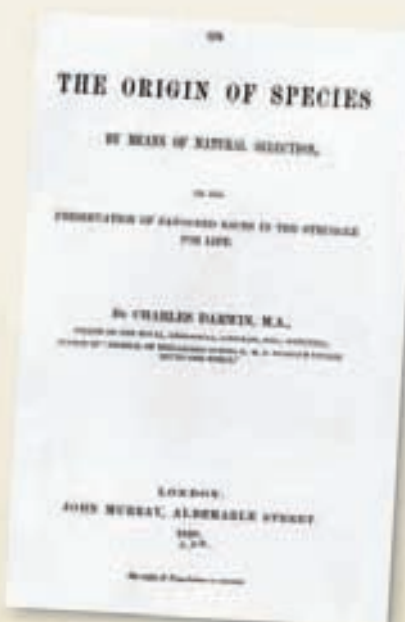

In 1856, Darwin started writing up his evolutionary theories for publication, encouraged by contemporaries such as

Darwin Hawk moth

Observing the long nectar tube of the Madagascan orchid, Darwin predicted that a pollinator moth must exist with a very long proboscis. Such a moth was later identified, and named after him.

Lyell. Time was now all-important, as another naturalist, Alfred Russel Wallace, had already produced an essay with similar theories. A joint announcement was quickly made at London's Linnean Society in 1858. In 1859, Darwin published *On the Origin of Species by Means of Natural Selection, or, The Preservation of Favoured Races in the Struggle for Life*. It stated that plants and animals vary, and over a very long period of time, as conditions change

On the Origin of Species

The book sold out on the day it was published in 1859, has never been out of print since, and has been translated into almost 40 languages.

Darwin's possessions

Darwin took several notebooks and a personal compass on his *Beagle* voyage.

gradually, they will change (or evolve). Those best adapted to their environment will survive and reproduce.

Darwin's book caused a storm of controversy, despite support from scientists such as T.H. Huxley, a biologist who was part of a new secular wave of thinking that was moving away from dominance by the Church. Many Victorians were horrified that God seemed to play no part in this form of creation, and many inferred a suggestion that man was descended from apes. The book, however, avoids opposing religion or religious creationism. It makes little mention of humans, and no mention of descent from apes.

Darwin consolidated his ideas in later works that included *The Variation of Animals and Plants under Domestication* (1868), *The Descent of Man* (1871), *Expression of the Emotions* (1872), and further editions of *On the Origin of Species*. In *Descent*, he finally made the pioneering suggestions that all humans were descended from apes and that humans probably originated in Africa. A fully realized modern theory of evolution did not appear until around the 1950s, but Darwin's work had a shattering effect on the Victorians' sense of self. It caused a crisis of faith and a revolution in thought (see pp.282–83), although in many ways it chimed with the growing materialism of Victorian Britain's progressively industrialist and consumerist society. By the end of his life, Darwin was a leading figure and, after a campaign by colleagues, was buried in Westminster Abbey with a state funeral.

TIMELINE

- **February 12, 1809** Born in Shrewsbury, England, fifth child and second son of the town's prosperous, principal doctor Robert Darwin and his wife Susannah Wedgwood.
- **1818–25** A boarder at Shrewsbury School, whose narrow classical curriculum he hates.
- **1825–27** At Edinburgh University, supposedly studying medicine; disliking the subject, Darwin studies natural history instead and finally leaves without a degree.
- **1828–31** At Christ's College, Cambridge, to study for the Church. Abandons plan to be a clergyman due to doubts about strength of faith. Continues natural history study, but passes his BA degree, coming 10th out of 178 passes.
- **1831–36** Explores coasts and lands across the southern hemisphere as an informal gentleman-naturalist aboard the HMS *Beagle*. Collects extensive material that will feed his groundbreaking evolutionary theories.
- **January 29, 1839** Marries his cousin Emma Wedgwood. Their first child is born this year.
- **1841** Second child, Anne, is born.
- **1842** In September, Darwin moves his family to Down House, an old parsonage at Downe, a quiet spot on the North Downs, about 15 miles (24km) from London. He stays here for the next 40 years.
- **1842–56** Emma gives birth to eight more children, one of whom dies as a baby and another as a toddler.
- **1844** Darwin is made a vice-president of the Geological Society.
- **1851** His eldest daughter Anne dies, seriously knocking Darwin's religious faith.
- **1855** The *Annals and Magazine of Natural History* for 1855 includes Alfred Russel Wallace's "On the law which has regulated the introduction of new species."
- **1859** Darwin receives the Wollaston medal, the Geological Society's highest award. *On the Origin of Species* is published in November.
- **1868** Publication of *The Variation of Animals and Plants under Domestication*.
- **1871** *The Descent of Man* is published.
- **1877** Darwin receives an honorary doctorate of laws from Cambridge University.
- **1881 and 1882** *Punch* magazine carries Linley Sambourne's famous cartoon "Man is but a Worm." It shows the evolution of an earthworm into a man (Darwin) via spermatozoid creatures, apes, cavemen, and a top-hatted Victorian gentleman. Darwin's theories drew horror and ridicule, as well as admiration.
- **1882** Dies in April, at Down House. On April 26, 1882, is buried at Westminster Abbey.

PUNCH'S ALMANACK, 1882

Indian postage stamp

Introduced in 1857, the postal service was one of many benefits brought to India by the Raj. The British were slower to acknowledge the immeasurable benefits—economic and strategic—they received.

BEFORE

Britain's position as an island nation had, paradoxically, prevented it from ever growing too insular. Reliant on trade, it always had to look beyond its own shores.

COLONIAL EXPANSION

After something of a false start in the reign of Elizabeth I << 146–47, England's **first colonial ventures** were across the Atlantic in North America << 162–63. The 18th century brought territorial gains in Canada, and **the establishment of outposts** in the Indian subcontinent by the **East India Company** << 212–13. The Company's fortunes expanded under British officer Robert Clive when Mughal Emperor Shah Alam granted it the revenue rights to Bengal. These acquisitions went some way toward making up for the **loss of the American colonies** << 214–15. With industrialization proceeding apace << 232–33, **colonial expansion** became **ever more essential** to Britain, which needed new sources of raw materials and potential markets for its manufactured products << 276–77.

ROBERT CLIVE RECEIVING THE DIWANI (REVENUE RIGHTS) OF BENGAL, 1765

British India

For better or worse, Britain's sense of its imperial destiny came of age in 19th-century India. Lives were devoted to the Empire's service—and colossal fortunes were made. The occupiers believed that they had brought their Indian subjects a golden age of good governance, order, civilization, and prosperity.

Britain carried its policy of arm's-length imperialism in India into the new century, with the East India Company acting as an occupying power. The conquests continued: the Mughal Emperor Shah Alam II, an old man with his authority already much reduced by his defeat at Buxar (see pp.212–13), was forced to accept British protection in 1804. He was reduced to no more than a puppet of the Company. The power

of the Maratha Empire was broken in 1818, but still the Company kept up its program of expansion.

Taking hold

The expansion started in 1824 with the conquest of Burma, which proceeded smoothly. Company troops took Assam, Manipur, and adjacent territories by 1826, but there were setbacks. The First Afghan War (1839–42), intended as a war of conquest, ended up an unmitigated disaster. Of the 4,500 men (and 12,000 civilian followers) who went to Kabul, only one man—military surgeon William Brydon—survived.

Soon, though, the British were back on the offensive. They took Sind (1843) and Gwalior (1844) before going on to fight two Sikh Wars (1845–46 and

1848–49). These consolidated the Company's hold on the Punjab, while a Second Burma War (1852) secured Lower (southern) Burma.

Tax and trade

By 1856, 70 percent of the subcontinent was directly under British rule. In reality, though, British dominance was more or less complete. Treaty arrangements with local rulers typically respected their ceremonial authority, while reserving actual power for the Company itself.

Slowly, the Company's role changed from that of a commercial operation doing the minimum policing required to ensure stability, to something very much like a government. Increasingly, its profits were derived more from taxation than from trade.

British officer in India

Even averagely important officers could live like little viceroys in British India. Thronged by servants, they ignored the wider realities, encountering only deference from those Indians they came into contact with.

British Indian railways

A locomotive pulls into a railway station near Calcutta in 1867. Originally built to boost trade and for military purposes, the Indian railway network soon saw rapid growth in passenger services.

thousand British officers had charge of huge numbers of native sepoy. In 1857, the entire edifice very nearly came crashing down—when sepoys rebelled against their officers and a full-scale mutiny erupted (see pp.292–93). The mutiny threatened the very continuance of British rule.

The British Raj

The aftermath saw a wholesale reorganization of the army in India, with more native-British troops brought in. The East India Company's role as intermediary was replaced with direct rule from Westminster. Queen Victoria was proclaimed the Empress of India. Britain was proud of this "jewel in the crown": Indian chic influenced everything from furnishings to cuisine.

Its future now apparently secure, the Raj (the new official name for British rule) went on with its routines. Officers' families could enjoy elegant rounds of picnics, balls, and banquets. They escaped the heat for cooler hill stations in summer and commanded a large complement of servants, thanks to the abundance of cheap labor.

Most Britons convinced themselves that they were carrying what Rudyard Kipling called the "White Man's Burden" in a spirit of self-sacrifice.

INDIAN INDEPENDENCE

There was some anger then, when the 1920s and 1930s brought an intensifying campaign on the part of Indians, who wanted to be free of British rule >> 342–43. World War II changed attitudes—and Britain's position in the world—and in 1947 **India became independent** >> 364–65. Built for the British Viceroy, Delhi's Rashtrapati Bhavan is now the official residence for the president of the Republic of India.

THE IRON GATES OF RASHTRAPATI BHAVAN

Corruption was endemic either way, although there were intermittent crackdowns, as in the case of Warren Hastings. In 1788, Hastings, the Governor of Bengal, was impeached on corruption charges. Although acquitted by the House of Lords, he was disgraced.

Western ways

Britain made great play of its "civilizing" mission—and did try to stamp out *suttee* (the burning of Hindu widows on their husbands' funeral pyres) and female infanticide. It also suppressed the *Thuggee* (Thugs) a cult whose members lived as bandits, strangling innocent travelers as sacrifices to the goddess Kali. And, of course, it gave India the benefits of western technology and infrastructure. Roads—of obvious military use—were at the same time beneficial to all. The Company spent £400,000 per year on its road building program during the late 1840s: this included a tarmac highway between Delhi and Calcutta. Railways, vital for British business, could also be presented as a boon for Indians. Soon the whole subcontinent was crisscrossed by railways.

Rebellion flares up

Many Indians viewed the educational opportunities made available to members of its elite with suspicion. They sensed that the British were intent on educating them out of their Indian ways, and schooling them in subservience to Company rule.

Cultural sensitivity was all-important, given the extent to which the British were outnumbered. Tiny in number compared with the indigenous population, they may have enjoyed immense power but it was precariously poised. Even in the army, a few

“I know nothing at all about them ... I think **the less one sees and knows of them the better.**”

ENGLISH LADY ON INDIANS, REPORTED BY JULIA CHARLOTTE MAITLAND, 1837

DECISIVE MOMENT May 10, 1857

Indian Mutiny

The initial flare-up was over the use of greased gun cartridges, but the sepoys' sense of outrage went much further. The ensuing mutiny threatened to consume the British Raj. Asked to oppress their own people, the native soldiers were shocked to find themselves despised—and exhilarated to appreciate the power they possessed.

It is hard, in hindsight, to pinpoint when the uprising started, as a series of minor incidents marked an escalating crisis. The first major outbreak came at the Meerut cantonment where, on May 9, several troops refused on religious grounds to use gun cartridges greased with pork or beef fat. The next day, they were court-martialed and sentenced to long prison terms. The punishment provoked a general mutiny on the base and rioting in the nearby city.

Escalating violence

The uprising at Meerut fueled similar insurrections across much of north and central India. The rebels reached Delhi on May 11, and attempted to set up Bahadur Shah II (the last of the Mughal line) as the emperor of India. By July, the British forces placed the city under siege—although they were besieged themselves from behind by Indian forces. At Lucknow, the British garrison

kept the rebels at bay, but a prolonged fight for the control of the city continued for many months.

In June, the rebel forces besieged the British garrison in Cawnpore (now Kanpur). Despite the British surrender, 100 of their wives and children were captured and massacred.

Outrage and retribution

The barbaric killings fueled mounting anger in Britain. The country erupted in jingoistic rage and stridently called for dire punishment. Bloody retributions followed, as British troops regained their hold over the colony through 1858. Reports of genuine atrocities, compounded by more exaggerated tales, helped foster a deep-seated sense of racial superiority and distrust toward Indians among the British population. As a precaution, the British Parliament ended the East India Company rule and put India under the direct administration of the British Crown.

“We heard dreadful shouting and screaming in the city; it was **fearful** to think **how close** the **wretches were** to us.”

DIARY OF LADY JULIA INGLIS, UNDER SIEGE IN LUCKNOW, JULY 4, 1857

Storming of Delhi

British troops, with loyal Sikh sepoys, storm the gates of Delhi, while the rebel sepoys defend their positions. One of three coordinated attacks, it began just before daybreak on September 14, 1857. Even then, it took days of fighting to secure the city.

BEFORE

Britain had been sending people to America for some time—often unwillingly as convicts or indentured labor.

NEW COLONIES

After a difficult start Britain's colonies along North America's **Atlantic coast** << 162–63 flourished. Much of **eastern Canada** << 212–13 was **colonized**, and more colonies were acquired from the French in 1763. Although the loss of the American colonies << 214–15 hit Britain hard, **new possibilities** opened up **in the Pacific** << 226–27. In the 19th century, men such as Gregory Blaxland and Charles Sturt ventured into the **Australian interior** << 286–87.

EMIGRATION

If new lands exerted a pull as potential colonies, a definite push for emigration already existed. The **Agricultural Revolution produced slow-motion turmoil** in the British countryside over generations << 230–31. An **Ireland still shattered by the famine** of the 1840s << 266–67 saw **people emigrating** in their thousands every year.

Dominions and Emigrants

Britain started to think of itself as an imperial power, but with that status came responsibilities. This unprecedented situation required innovative thinking: how was such a large empire to be run? As the 19th century wore on, British power and people were making their presence felt around the world.

Even as America's colonies were breaking free, Britain had been extending its influence to the north. Naturally, though, there were fears that the Canadian colonists might follow their American neighbors. Rebellions broke out in Lower and Upper Canada in 1837–78, general dissatisfaction compounded in what was formerly French Lower Canada (now Quebec) by a nationalistic impulse. Upper and Lower Canada were in 1840

First settlers

Believed to be the first photograph to be taken in Australia (in 1855), this image shows the racial hierarchy already well established. The white man quite literally has the whip-hand.

brought into a single Province of Canada—French-speakers were now outnumbered. However, from 1848 steps were taken to allow a limited degree of autonomy under a system known as Responsible Government.

A better England

Edward Gibbon Wakefield, who founded the New Zealand Company in 1837, said that New Zealand was destined to be “a better England.” His vision enthused thousands, and British emigrants flocked there. Difficulties early on with the warlike Maori were

apparently settled with the Treaty of Waitangi in 1840. Some 500 chiefs signed the treaty—although it is not clear if they understood the terms they were agreeing to. In any case, new arrivals quickly encroached beyond the boundaries appointed for settlement, causing continuing conflict. Even so, more Maoris were killed by diseases from which they had no immunity. An indigenous population estimated at around 140,000 in 1840 had fallen to 42,000 by 1890.

161,700 The number of people who were transported to Australia (New South Wales, Tasmania, and Western Australia) between 1788 and 1868. An estimated 25,000 of these were women.

“...our **new home**... what a **wilderness** ... a few native huts, and surrounded by ... **savages.**”

HARRIET LONGFORD, IN A LETTER TO HER MOTHER, FROM PORT AURORA, NEW ZEALAND, JANUARY 27, 1840

Initially an outpost of New South Wales, New Zealand was its own colony from 1841. It won what amounted to Responsible Government status in 1852. It was certainly a “better England” as regards electoral representation—extending the vote to women in 1893.

Gold rush

New South Wales got its first, unwilling, settlers on January 18, 1788, when Captain Arthur Phillip’s First Fleet arrived in Sydney Cove, bringing 700 convicts. The green countryside was more arid than it seemed, its soils obstinately uncultivable, but the convicts had to make it work to survive, and ultimately they succeeded.

Soon emigrants were coming voluntarily, not just to New South Wales, but to the other colonies of what from 1817 was called Australia. Tasmania (or Van Diemen’s Land), first settled in 1802, was a separate colony from 1825; Western Australia followed in 1832; South Australia in 1836; and Victoria in 1851. These too started gaining Responsible Government status. Queensland (1859) and Northern Territory (1863) received this status from the start.

“Wherever the European has trod death seems to pursue the aboriginal,”

Rebelling emigrants

The defeat of the *Québécois Patriotes* at Saint-Eustache December 14, 1837, meant the Lower Canada Rebellion was all over—bar extensive reprisals by the British.

wrote Darwin when the *Beagle* sailed into Australia in 1836. Australia’s native population fell by 90 percent through the 19th and early 20th centuries. Some were massacred; many more died of Old World diseases.

Spectacular gold finds in the 1850s brought fortune hunters flocking in from around the world. In a single decade, Australia’s population rose from 400,000 to more than 1 million. The gold rush was quick, but many disappointed prospectors stayed on. Australia was starting to feel like its own nation, but it was not until 1901 that it became a self-governing dominion.

Striking out

“The great tide of emigration flows steadily westward,” reported the *Illustrated London News* in 1850, although this was because the main current of emigration was from an Ireland still reeling from the Famine (see pp.266–67). The Irish made up

Emigrants from the British Isles

This map shows the principal areas of the world to which people from the British Isles emigrated between 1821 and 1911. Colored arrows show the number of emigrants as well as the percentage of the total number of emigrants.

the overwhelming majority of the hundreds of thousands of emigrants from the British Isles to the United States during the 1840s. Paradoxically, this rural people settled mainly in the big cities.

English, Welsh, and Scottish emigrants mostly made their way to existing British colonies—arriving in Canada at a rate of 35,000–40,000 a year through the 1840s.

The Scottish Highlands were undergoing a sort of speeded-up version of English Enclosures in the shape of the “Clearances.” As traditional chiefs reinvented themselves as aristocrats, with the authorities’ encouragement, they needed cash to sustain their newly lavish lifestyles. Many decided to clear land—which had supported subsistence farming—for grazing by sheep. Whole communities were evicted, sometimes brutally, and many had little choice but to emigrate.

Ornate Maori club

The Maoris used hooked clubs in the wars of the 1830s. The immediate impact of white settlement sparked off trouble between native tribes.

AFTER

The white-dominated dominions continued to maintain the closest of connections with the mother country. This continues to the present day.

CANADIAN INDEPENDENCE

The restive spirit lingered in the French-speaking areas of Canada, a **Québécois separatist movement** sprang up in the 1970s, although calls for **secession** were **rejected in referendums** of 1980 and 1995.

FRIENDS IN NEED

Despite a posture of **impatience with the “Poms”** (a mildly offensive word used by Australians and New Zealanders for an English person) of Britain, Australia remains close to Britain, both at an official level and in the **informal contacts** between family members across the world. Both Australia and New Zealand sent floods of **volunteers to support Britain** in World War I. ANZAC (the Australia and New Zealand Army Corps) suffered terrible casualties in the Gallipoli Campaign (April 1915–January 1916) **320–21** >>. **Both countries came to Britain’s aid** again during World War II **348–49** >>.

THE BRITISH MONARCHY ABROAD

The **independence movement** of the **post-war period** was noticed in Australia, New Zealand, and English-speaking Canada, but their white populations had far more **positive feelings toward Britain** than the colonized peoples of Asia and Africa **364–65** >>. There was, correspondingly, less pressure to break the connection, in particular with the Crown, still held in high affection thanks to the **popularity of Queen Elizabeth II**. Moves to abolish the monarchy have so far been thwarted.

Imperialist Muscle

The world's first industrial power, Britain was a pace-setter in technology, trade, and agriculture. Its navy ruled the waves and its army occupied vast areas of dry land. It is no surprise then that Britain was walking tall. Increasingly, indeed, it was swaggering—a self-appointed policeman, supremely arrogant in its “civilizing mission.”

Britannia began life as a colony—the bleakest and most remote of the Roman Empire. At least, after the cruelties of conquest, its people had been able to enjoy several comparatively untroubled centuries of the *Pax Romana*—“Roman Peace” (see pp.31–32). Britain's imperial apologists liked to talk of a *Pax Britannica*, bestowed on the fortunate peoples of Africa and Asia.

The Opium Wars

Britain's addiction to tea, and to its trade in Chinese silk and ceramics for the European market, was at first paid for with silver. Once America was lost, however (see p.214–15), and the price of silver rose, opium was found to be a perfect substitute. High in value and easy to ship, it grew well in the hilly areas of India where labor was also cheap. There was one small problem though—opium had been illegal in

6 MILLION The number of opium addicts in China by the end of the 1820s, their habits supported largely by illegal imports from British India. Britain took violent exception to a Chinese crackdown.

BEFORE

Britain's forces had fought abroad for centuries, but taking territories for colonization belonged to a comparatively recent stage in the country's history.

COLONIAL EXPANSION

England's adventurers missed the boat when the **Age of Discovery** began in the 15th century. While Portugal and Spain built vast empires, England's early attempts at establishing **New World colonies** were half-hearted << 146–47. Not until **James I's reign** had serious settlement begun << 162–63. Since then, however, England made great strides, the **Thirteen Colonies** in North America going from strength to strength while the merchant companies took huge areas of **Canada and India** under British administration << 212–13. More territories were taken from the French (and from the Dutch) at the time of the **Revolutionary Wars** << 240–41. Further conquests were made in the **Indian subcontinent** after the defeats of the Mughal and Maratha empires << 290–91.

Second Opium War

Chinese tents await the arrival of the British delegation in Tientsin (Tianjin) in 1858. So disadvantageous was the agreement reached here that the Emperor had second thoughts and tried to resist.

China since 1729. Britain used “independent agents” (or, more bluntly, smugglers) to conduct its trade, and it did so on an extraordinary scale. In 1729, 200 chests of opium were brought into China. By 1828, the figure rose to 13,131, despite repeated crackdowns. Quite apart from the social cost of mass addiction, this was a huge drain on the Chinese economy.

Another anti-opium drive was mounted in China in 1836. The Chinese Emperor wrote politely to Queen Victoria asking her to stop the traffic, but was ignored. In May 1839, officials confiscated 20,000 crates of opium at Guangzhou (Canton) and destroyed it. British officials demanded that full payment be made. When the Chinese instead turned back foreign vessels approaching the port, Britain dispatched a punitive expedition of 16 warships, with 4,000 men. These clashed with the Chinese fleet that November, destroying 71 junks and capturing 60 coastal batteries. Having consolidated its hold on this section of coast, the expedition headed north to Shanghai and smashed another war fleet, before heading up the Yangtze River, destroying property and killing thousands of civilians.

Opening of the Suez Canal, 1869

Britain displaced the French in India—which only made their presence in Suez more disconcerting. The French-built canal was of strategic significance. Britain went part of the way to relieving its anxieties by buying out the heavily indebted Ottoman Egypt's share in 1875.

Forced to sue for peace, under the Treaty of Nanjing, the Emperor had to hand over Hong Kong, open key ports, and accord Britain “most favored nation” status. This meant that any privilege given to any other nation would automatically apply to Britain

too. The Emperor also had to allow the opium trade to continue. Other powers, including the United States and France, then demanded their own treaties. Christian missionaries arrived in China and started preaching.

All this foreign interference—and the continuing opium problem—pushed China too far. The murder of a French missionary and the arrest of a Chinese ship, previously registered as British, for opium-smuggling became the pretext for joint Franco-British hostilities. This Second Opium War (1856–60) was designed to wring further concessions

from a thoroughly humiliated China. When the Emperor dragged his feet, the allies attacked with Russian and American support. They sacked Beijing,

13 MILLION The extent in sq miles (33.7 million sq km) covered by the British Empire in the early 20th century. More than 450 million people lived under British rule.

including the Summer Palace. China was carved up into tranches for exploitation by the foreign powers.

African upstarts

Zulu power, built by King Shaka through the 1820s, had carried all before it in southern Africa, but it came up against a technology-gap at Blood River in 1838. More than 3,000 Zulu warriors were cut down here by the rifles of 500 Boers. Things did not always go the white man's way though: on January 22, 1879, at Isandhlwaha in South Africa, King Cetshwayo's Zulus inflicted a shattering defeat on a bigger and much better-armed British army. The shock to morale back home was tempered by the

Zulu War 1879

A British delegation returns from talks with the Zulu king Cetshwayo. At Isandhlwana his warriors had earned him the right to be treated with respect. Even in defeat, he demanded careful handling.

stirring heroism of a handful of troops who maintained a gallant last stand at Rorke's Drift. European firepower ultimately proved overwhelming: within six months, the Zulu capital Ulundi fell and Cetshwayo was forced to sue for peace.

Britain also clashed with its former partners in the slave trade, the Ashanti. The Ashanti had built a powerful empire centered on present-day Ghana. Britain tried to take it over in the First Anglo-Ashanti War of 1823, but was badly mauled before beating the Ashanti back into the interior. A second war in 1863–64 was inconclusive. Britain won the Third Ashanti War (1873–74) convincingly, burning the

47 The number of British casualties at the Battle of Omdurman, September 2, 1898. Kitchener's British force cut down 9,700 Sudanese rebels with their artillery and their Maxim guns.

Ashanti capital Kumasi. After further wars (1894–96 and 1900), the Ashanti territory was finally absorbed into Britain's Gold Coast colony.

Egypt had long been important as a crossing-point between the Mediterranean Sea and the Indian Ocean. It had been still more vital since the opening of the French-built Suez Canal in 1869. Not quite a British colony, it was nominally a part of

“Whatever happens, we have got/The Maxim gun and they have not.”

HILAIRE BELLOC, *THE MODERN TRAVELLER*, 1898

the Ottoman Empire but ruled by Ismail Pasha, the Khedive—a sort of viceroy or governor. It was on his behalf, at least in theory, that Britain's General Charles George Gordon made an expedition southward up the Nile into Sudan.

Here the Islamic teacher Muhammad ibn Abdalla announced he was the *Mahdi*, a Messiah-like redeemer prophesied in certain traditions of Islam.

Carved buffalo horn

Carved around 1880, this horn shows scenes of the recent Zulu Wars. The Zulus favored battle tactic was inspired by the buffalo horn—two wings extended outward, moving in to enfold the enemy as the *impi* (regiment) as a whole attacked.

British soldiers used cannons to attack Zulu warriors armed with spears.

Zulu regiments carried shields covered in dried cow hide. Experienced soldiers had white shields with black markings.

However successful the British were in persuading themselves that their empire-building was altruistic in intent, their subject nations were harder to convince.

DEMAND FOR AUTONOMY

The desire for autonomy among British colonies was strong. By the 1930s, Indians were looking to a future free of British domination **342–43** >>. **British high-handedness** was remembered then—just as it was to be in the period after World War II when the “*Wind of Change*” began blowing through **Africa**. It would also be remembered by the Chinese as they negotiated the arrangements for **Hong Kong 364–65** >>. Its arrogance would blow up in Britain's face in its humiliation over the **Suez Canal 366–67** >>. Some would say that Britain had been badly served by the unchallenged supremacy it enjoyed at its imperial noon in the 19th century. The entire post-war period was overshadowed by a **sense of long-drawn-out decline**.

Thousands flocked to join him, and by 1882 the Egyptian authorities had lost their grip.

Last stand

George Gordon had gone to Khartoum in Sudan to restore order, but since his presence only inflamed the situation, he was ordered to evacuate his troops. Instead, he took the personal decision to stay on and defend the city and Sudan against the *Mahdi's* forces. By March 1884 he was under siege. A popular clamor in Britain led to the dispatch of a relief expedition from Egypt. But on January 26, 1885—just a few days before help arrived—the rebels stormed the city, and Gordon had his heroic end, cut down by his attackers.

Fury erupted back home and Lord Herbert Kitchener began a long and arduous campaign to take back Sudan. The battles of Omdurman (1898) and Umm Diwaykarat (1899) were both victories for Britain's Maxim gun and heavy artillery. Might prevailed: Sudan was declared a condominium—jointly ruled by Britain and Egypt, but with the former in charge.

“Remember that you are an **Englishman**, and have drawn **first prize** in the lottery of life.”

CECIL RHODES, IN *THE INDEPENDENT*

Railway station

New transportation technologies such as the railways and the steamship shrank the world and extended people's horizons in the 19th century. They could travel for business or for pleasure, and to find fresh work opportunities. William Powell Frith's painting, *The Railway Station* (1862), teems with colorful characters from all social classes in 19th-century London's Paddington Station.

BEFORE

Ireland had always seemed alien to England in a way that Scotland had not, however strong its enmity. It persisted with a foreign religion and culture despite the best efforts of British administrators, Protestant clerics, and armies.

IRISH REBELLION

Nine years of fighting in Elizabeth I's reign subdued the Irish without reconciling them to their subjection; the **Plantation of Ulster** was at best only a partial success << 156–57. Cromwell crushed the Irish, << 174–75 but he could not make them renounce their rebellious ways, a fact that became clear in the **Succession Wars** of the late-17th century << 196–97.

ACT OF UNION

A wholesale rebellion in 1798 was ruthlessly put down << 238–39. The Act of Union of 1800 established **Ireland's official status as one of the four nations of the United Kingdom**. Far from providing an answer, though, the new arrangement called into question the integrity of the British state—the very phrase “the Irish Question” dates from this time. Any idea the Irish may have had of belonging to Britain—except in the sense of being a colonial possession—was destroyed by their experiences during the **Great Famine** of the 1840s << 266–67.

Irish Home Rule

The United Kingdom was never going to be truly united as long as an unwilling Ireland remained a member. The campaign for autonomous Home Rule might have seemed philosophical to a people mired in poverty, but Daniel O'Connell and Charles Parnell inspired a mass-movement for real change.

Ireland was still trying to recover after the overwhelming experience of the potato famine in the 1840s. The old problems remained unresolved, yet the people were in no position to organize. The campaign for Catholic emancipation launched by Daniel O'Connell, a noted Irish lawyer and political leader, had from 1805 changed an elite preoccupation into a mass-movement. Once emancipation was achieved in 1829, the next step was to agitate for repeal of the Act of Union of 1800. Britain sent a battleship to counter O'Connell's “monster meeting” near the coast at Clontarf in 1843. As so often in Irish nationalist history, British overreaction fed unrest.

A violent alternative

O'Connell's peaceful strategies and limited demands increased Irish impatience. He saw a self-governing Ireland as remaining under the British monarchy. A more radical Young Ireland alliance was established in 1842, and in 1847 an avowedly violent Irish Confederation broke away from that.

“No man has the right... to say to his country: ‘Thus far shalt thou go and no further...’”

CHARLES STEWART PARNELL, JANUARY 21, 1885

Its leader, Protestant landowner and MP William Smith O'Brien, was fired by the revolutionary ferment sweeping Europe in 1848, but his uprising ended in fiasco.

The Fenians

A decade on, Young Ireland veterans reformed as the Irish Republican Brotherhood (IRB), behind James Stephens in Ireland, and John O'Mahoney and James Doherty in New York. The IRB is now generally known as the Fenian Brotherhood, the name taken by its American arm. It referred to the Fianna, a war-band of the legendary Fionn mac Cumhail, a hunter-warrior from Irish mythology. The Fenians included Irish-American troops demobilized after the Civil War (1861–65) in the United States. In a raid on

Canada (May–June 1866), they briefly captured Fort Erie, defeating the Canadians at the Battle of Ridgeway.

In Britain and Ireland, however, the authorities quickly swung into action, arresting most of the rebels. Those still free felt their hand forced, so they mounted a hastily conceived Fenian Rising on March 4–5, 1867. The action invited a draconian British response. Five men were hanged over a policeman's accidental killing. Although the Fenians failed militarily, their movement injected a new radicalism

200,000 The number of people who turned out for the funeral of Charles Stewart Parnell at Glasnevin, Dublin, on October 11, 1891. He was mourned as another Irish martyr.

into mainstream nationalism—and a new urgency into the British Establishment's response.

Home Rule

The 1870s saw O'Connell's Repeal campaign reinvented by Isaac Butt, his former opponent and a Protestant: his “Home Government” slogan was soon changed to a snappier-sounding call for “Home Rule.” An admirer of Britain, Butt preferred devolution—with the Irish Parliament responsible for domestic affairs and Westminster handling bigger issues such as foreign policy and defense. In 1875, Home Rule candidate Charles Stewart Parnell was elected to Parliament, where his flamboyant filibustering and points of order amused the press and public as much as they irritated the government.

Such constitutional discussions did not appeal to an impoverished peasantry. Prime Minister William Gladstone's Liberal government passed a Land Act in 1870 to address their problems, but the situation remained intolerable. From 1879, the Land

Fenian leaders snatched from police, 1867

A policeman was shot when Fenians in Manchester attacked a prison van to free a couple of comrades. Though his death had clearly been accidental, five men—the “Manchester Martyrs”—were hanged.

League—set up by former Fenian Michael Davitt—campaigns for fairer tenancy agreements. Parnell was made the League’s first president. He had the unique ability to charm the political classes while reaching out to the downtrodden. Even neutrals saw the mismatch between the League’s prosaic aims and the popular enthusiasm it awakened. It attracted radical elements and, at a local level, tenants angry at the conduct of (often absentee) landlords and agents. Tenants took the law into their own hands during a long period of unrest that became known as the Land Wars. In 1881, Gladstone’s government passed a Second Land Act, which made things marginally better.

Parnell proved adept in walking the tricky tightrope between constitutionalism and radicalism. Even so, he was arrested and taken to Dublin’s Kilmainham Gaol that year. From prison he negotiated the Kilmainham Treaty. Agreed with Gladstone on May 2, 1882, it regulated rent-arrears for tenant farmers. Parnell received a hero’s reception upon leaving jail and the campaign went on.

Charles Stewart Parnell

A Protestant landowner, Parnell made an improbable hero for Ireland’s Catholic poor.

T. H. Bourke were knifed to death in Dublin’s Phoenix Park. This single action of an IRB splinter group, the Invincibles, created an outrage, giving new impetus to the constitutional movement and the growing partnership between Parnell and Gladstone. The Home Rule campaign grew rapidly. Gladstone introduced a bill in 1886, though this was defeated in the Commons and he lost the general election he called in response.

Political scandal

Parnell’s reputation was badly damaged by the following year’s purported “revelations.” In 1887, *The Times* published a letter in which Parnell expressed sympathy with the Phoenix Park murderers—a cynical smear, but not easily shaken off. He was still, however, working toward Home Rule with Gladstone, and his popularity in Ireland was at its height when news broke of his long-standing relationship with a married woman. Parnell’s credibility was shot, as far as his supporters were concerned. Parnell died a broken, marginalized figure in 1891, aged 45. Gladstone went on alone, trying again with the Irish

Government Bill of 1893. This made it through the Commons before being thrown out by the House of Lords.

Fighting Gladstone

Gladstone, the boxing kangaroo, defends his Second Home Rule Bill (1893), an Irish “Joey” peeping from his pouch, in this cartoon by Franz Jüttner.

The “Irish Question” had still to be answered. And, sadly, much more blood had still to be shed. The stronger the Nationalist impulse; the more resolute the Unionist reaction.

ULSTER PROTESTANTS

While Republicans fought for freedom, Protestants in Ulster opposed Home Rule 332–33 >>: their freedom could only be guaranteed in the context of the United Kingdom, they insisted. Thousands of them went to the trenches of **World War I**, laying down their lives for the Britain they felt was theirs 322–23 >>. The compromises made to accommodate Ulster’s Protestants came back to haunt Britain—and the Irish “Free State” (and later Republic)—most seriously in **the Troubles** of the late 20th century 378–79 >>.

“NO HOME RULE” BANNER, 1910

Fall of Parnell

Just a few days later, however, the Irish Chief Secretary Lord Frederick Cavendish and Undersecretary

BEFORE

Conflict with the Boers was a feature of Cape life from 1795, with the Boers finally establishing their own republics.

BOER REPUBLICS

The British seized Cape Colony during the French Revolutionary Wars, << 240–41 as they feared that France would snatch it from a Dutch Empire in decline. The Boers, Dutch-descendants who had farmed the region since the 17th century, were increasingly irked by British interference. The abolition of slavery << 234–35 was the last straw: the Boers undertook a Great Trek into the interior, establishing new Boer Republics in Transvaal and Natal.

THE GREAT TREK

Battle of Elands River

The “Death or Glory Boys” of the 17th Lancers live up to their nickname in Richard Caton Woodville’s iconic painting. A press and public hungry for heroics turned defeats into patriotic victories.

The Boer War

Years of tension between the British and the Boers came to a head in 1899, plunging South Africa into a bitter—and often dirty—guerrilla war. The victory that was eventually wrested was welcomed more with relief than with rejoicing in Britain, and with a good deal of soul-searching on the public’s part.

As the music-hall song of the 1870s suggested, “We don’t want to fight, but by jingo if we do/ We’ve got the men, we’ve got the ships, we’ve got the money too!”, Britain was in bullish mood as its imperial power expanded in the late 19th century. It met with one significant setback, though, in 1880, when Transvaal’s Boers rose up against the 1877 annexation of their state by the British. After 10 weeks of sporadic fighting, a truce was declared and Britain restored the Boers’ independence in 1881, but with the Boers accepting nominal British control.

Empire builder

Meanwhile, Cecil Rhodes (1853–1902) was carving out his own territory within the British Empire. A mining magnate,

he founded De Beers in 1880 and the British South Africa Company in 1889. To describe Rhodes as a businessman, however, does not do justice to the extraordinary—even exorbitant—scope of his activities or ambitions. His racial philosophy proclaimed the natural fitness of the Anglo-Saxon peoples to dominate and civilize the rest of the world, reflecting the fact that imperial mission was becoming quasi-religious in some quarters. Rhodes hoped for a corridor of British-ruled territory to extend the length of Africa “from the Cape to Cairo”, but his vision for

the Empire was greater still. One day, he believed, it would take back the United States and become the supreme government of the world.

In such a context, Rhodes’ exploits in southern Africa seem relatively modest, but they were outrageous. Effectively, he was licensed by the British government to extend his company’s control as a colonial government over enormous

27,927 The number of Boer women and children who died in British concentration camps; it is not known how many native African internees died in the camps, but it was, at the very least, 14,000.

Boer soldiers in battle

The Boers mishandled the Mafeking siege: though far outnumbering the British garrison, they allowed commander Baden-Powell to keep them at bay with a series of cunning bluffs until reinforcements came.

territories to the north of Cape Colony. Malawi and Botswana managed to avoid his interference, making their own protectorate deals directly with London. He was beaten in his bid for Katanga by King Leopold II of Belgium, who incorporated it into his Congo Free State. But Rhodes still took over the whole of what are now Zambia and Zimbabwe: this territory was named Rhodesia in his honor in 1894.

All this time Rhodes was a member of the Cape parliament, and was elected its prime minister in 1890.

Rhodes was determined to expand Cape Colony into Transvaal, as gold finds there had sent British prospectors rushing to the territory. To Rhodes, the obvious way of legitimizing the situation was to make this Boer Republic a British territory by force. Led by one of his men, Leander Starr Jameson, a group of irregular soldiers attacked Transvaal in 1895, hoping to trigger an uprising among the English *Uitlanders* (British residents in the former republics of the Transvaal and Orange Free State). The Jameson Raid was a disaster, and Rhodes was forced to resign.

Collision course

Tensions grew until, on October 12, 1899, the Boers ambushed a British armored train, capturing weapons and ammunition. In the following weeks, the Boers invaded Cape Colony, making rapid headway against an unprepared enemy. They were held at Elandslaagte on October 21, but British forces then fell back, allowing the Boers to advance and besiege the towns of Ladysmith and Mafeking. The Boers were soon besieging Kimberley as well. Further defeats for Britain came at Magersfontein and Colenso. The latter began with a botched attempt to lift the Siege of Ladysmith. A subsequent effort on

Pretoria won

After the Relief of Mafeking came the relief of seeing Pretoria fall: the British public was weary of a war that had gone on much longer, and been more unpleasant, than expected.

January 23, 1900 saw British forces taking the summit of Spion Kop in a dawn attack—only to find themselves under fire from Boer artillery on overlooking hills.

However, the Boers had now pinned themselves down. The ensuing stalemate allowed Britain to regroup and bring in reinforcements, resulting in the mobilization of the largest British army yet sent abroad, with almost 200,000 in the field. Ultimately, the advantage in numbers and resources told. The Siege of Ladysmith was finally lifted on February 27. Amidst jubilant celebrations back in Britain, Mafeking was relieved on May 18, while Transvaal's capital, Pretoria, was taken on June 5.

War of attrition

Rather than surrender, though, the Boers took to the hills to wage another guerrilla war. Britain reacted ruthlessly, with a scorched-earth policy (see box), creating its own small forces of mounted troops to counter the Boer raiding parties. Trains were used to whisk men and munitions around the country. Controversially, Lord Kitchener, the British Chief-of-Staff, confined more than 100,000 Boer civilians in “concentration camps.”

The mood in Britain was somber. There was little glory to be gained in warfare of this kind. Like the

Crimean conflict, this was a very well-publicized war, swarming with special correspondents

(including the young Winston Churchill). Radicals such as Lloyd George and the Labour Party leader Keir Hardie made opposition to war an important rallying point for their supporters.

Some maverick Conservatives also came out on the pro-Boer side.

For what it was worth, the war had been won.

The Boers were forced to sign the Treaty of Vereeniging in 1902, giving up their territory—though they were to be

given a degree of autonomy five years later. For now, the Boers agreed to come under British sovereignty. In 1910, South Africa became a self-governing dominion, comprising Cape Colony, Natal, Transvaal, and the Orange Free State. It would have to wait until 1961 to be totally free of British rule and become a republic.

INNOVATION

CONCENTRATION CAMPS

Lord Kitchener pursued a scorched-earth policy, killing the livestock, destroying the crops, and contaminating the water supplies the Boers depended on. To him it seemed only logical that he should also remove the families and communities who were helping sustain their struggle. More than 40 tented concentration camps were prepared, into which women, children, and elderly men were herded. Food supplies and sanitation were hopelessly inadequate and thousands died of dysentery, typhoid, and other diseases. The British did not want to risk keeping Boer prisoners of war in the country: they were sent to St. Helena, Ceylon, and other offshore islands.

AFTER

Despite their defeat, the Afrikaans-speaking Boers remained a force in South African society; in some ways, indeed, the dominating force.

RECRUITMENT DRIVE

Britain put the Boer War behind it: with a **belligerent Germany arming fast**, it had more pressing concerns to attend to **312–13** >>. Kitchener was to gain immortality as the face of Britain's recruiting campaign for World War I **320–21** >>.

SOUTH AFRICAN MATTERS

Back in **South Africa**, defiance of Britain **continued**. The country became a self-governing dominion from 1910. Afrikaans was given parity with English as official language in 1925, while full independence was gained in 1931.

Racist discrimination against the black majority was enshrined in law with **the introduction of apartheid** (literally “apartness”: segregation) in 1948. **Protests against its injustices marked the student unrest** of the 1960s and the 1970s.

AN APARTHEID NOTICE IN CAPE TOWN

BEFORE

Over many years waiting to accede, Bertie, as Edward was commonly known, developed the habits of a lifetime that would also color his reign.

NOT GROOMED TO RULE

Born on November 9, 1841, in Sandringham, Norfolk, the future Edward VII was the second child and eldest son of Queen Victoria. Bertie served as **heir apparent longer than anyone else** in British history. Failing to flourish in the army or at university, he lacked focus or any outstanding abilities. As Prince of Wales, Bertie became a **playboy, famed for a string of indiscretions**, including a divorce and gambling scandals. His extravagant habits formed a model for the wealthy leisured people of the day. **Lavish country house parties**, especially shooting weekends at Sandringham, were his speciality. In 1863, he married the Danish Princess Alexandra (1844–1925), but his philandering continued, including a high-profile affair with actress Lillie Langtry. Appalled by him, Victoria **kept him away from affairs of state**, so he was badly prepared for kingship.

LILLIE LANGTRY

The Edwardian Age

The Edwardian era was one of extravagance and elegance—for the wealthy. Edward's short reign saw a transition between Victorian and post-Great War values. Aspects of the modern world were forged, with achievements and novelties ranging from motorcars and tabloid newspapers to airplanes and cinemas.

The dawn of a new century after Victoria's death brought a new, if not youthful (at almost 60 years), monarch in Edward VII, whose persona was far more fun loving than that of his mother. It felt like a fresh start, filled with technological innovation.

However, Victorian attitudes persisted (see pp.278–79 and pp.282–83). Wealthy industrialists still contributed large sums toward art galleries and museums. Civic authorities proclaimed their importance with impressive buildings in an overblown Baroque style. In 1903, the Workers' Educational Association (WEA) was founded for working adults, and military officer Robert Baden-Powell founded the Boy Scouts in 1908, to teach boys citizenship and leadership skills.

King and country

A racier edge to life also developed. Immediate precedent came from decadent tastes during the turn-of-the-century years, spearheaded by figures such as writer Oscar Wilde (1854–1900)

and Art Nouveau–Aesthetic artist Aubrey Beardsley (1872–98), with his stylized, daring illustrations.

A long time in waiting for the throne, Edward had grown outgoing and hedonistic, and stamped his reign with that trait. He could be charming, pleasant, and diplomatic. Always

liberal, others not—he was against votes for women (see pp.308–09). His son George V, much quieter and not a party-goer, nevertheless continued the monarchy's popularity with the public. The early part of his reign is often included under the Edwardian era.

Faster and faster

Life in Britain was speeding up.

There were car rallies and record-breaking flying contests. For the wealthy, motorcars became far more common. Modern cars first appeared in the late 1800s. In 1909, John Moore-Brabazon became the first resident Englishman to make an officially recognized airplane flight in England.

Electric trams replaced the Victorians' horse-drawn trams, transforming life and leisure for urban working people in the expanding towns and cities. The Victorians' railway system continued to flourish (see pp.258–59). For the wealthy, this was the heyday of luxury transatlantic passenger liners, such as the Cunard Line's *Mauretania* and *Lusitania* (both 1906), and competition for the coveted Blue Riband award for fastest transatlantic crossing. People emigrated abroad as third-class passengers on these liners in increasing numbers.

Popular pursuits

These less stern times saw a huge rise in popular culture. Music hall had evolved in the late Victorian era and now moved into more lavish theaters, such as the London Palladium (1910). Queen of Edwardian music hall was Marie Lloyd (1870–1922), with songs such as *The Boy I Love is Up in the Gallery*.

Lloyd's colorful private life, and scandals such as that of wife-killer Dr. Crippen, hanged in 1910, were splashed across tabloid newspapers, thanks to the rapid growth of the popular press under Lord Northcliffe. The first British press baron, Northcliffe founded the *Daily Mail* in 1896 and the *Daily Mirror* in 1903.

Crippen was the first criminal to be caught using wireless telegraph. In 1901, Italian Guglielmo Marconi sent the first

Pomp and circumstance

Edward is seen here with Queen Alexandra in an image celebrating his coronation. He injected great pomp and ceremony into royal life and raised the profile of the monarchy.

“I never in my life met with such a **thorough and cunning lazybones.**”

PRINCE ALBERT ON HIS SON BERTIE

impeccably dressed, he pursued open philandering and headed the pleasure-seeking country house party set. Yet he was popular despite his lavish lifestyle.

Edward's more serious interests lay in the armed forces, foreign policy, and European diplomacy, although he is seen as having exercised little real political power. Some of his views were

Motoring in style

The Rolls Royce Silver Ghost was a British car that captured the spirit of the times. Charles Rolls and Henry Royce formed the Rolls Royce company in 1906. Their ambition was to create English-made cars that were the best in the world.

KEY MOMENT

LONDON OLYMPICS 1908

A PARTICIPANT IN THE NATIONAL ROUND ARCHERY EVENT

London stepped up when, in 1906, Rome backed out of hosting the fourth Olympic Games in 1908, due to an eruption of Mount Vesuvius. The 1908 London event breathed new life into the Games, with the help of Britain's solid Amateur Athletics Association and British Olympic Association (formed 1905). It also gave birth to the current international marathon distance—arrived at arbitrarily, after members of the British royal family extended the course so that they could observe it better.

transatlantic radio message from England. In 1908, the first English cinema opened, in London, with early silent stars including Charlie Chaplin.

Home habits

The middle class, supported by business and industry, continued to grow, demanding large, airy homes within easy reach of towns and cities. Spacious, well-planned suburbs sprang up on the urban fringes close to railway lines. Garden suburbs and garden cities, inspired by models such as Liverpool's Port Sunlight (see pp.278–79), founded in late Victorian times, included London's Hampstead Garden Suburb (begun 1907), with contributions by Edwin Landseer Lutyens (1869–1944). Cottage-like Arts and Crafts house styles were popular (see pp.282–83). Inside homes, electricity became more widespread for the better-off, although many poor families had to wait until the 1920s to enjoy this benefit.

Divided Britain

Edwardian Britain saw a great gap between the extravagant aristocracy and the poor, and an economic downturn relative to Victorian times was felt in some quarters. The rise of socialism and demands for reform continued, responded to in part after

the Liberal victory of 1906. Despite problems there was some greater social mobility and improved literacy.

Artistic differences

This was a fertile period for the arts, reflecting the era's shifting attitudes. Traditional, patriotic writers such as Rudyard Kipling (1865–1936), famed for his children's *Just So Stories* (1902), jostled with people like H.G. Wells (1866–1946), whose *Tono Bungay* (1909) satirized Edwardian society. Irish Fabian George Bernard Shaw's plays, such as *Pygmalion* (1913), questioned contemporary conventions. Two other Irishmen, W.B. Yeats (1865–1939) and James Joyce (1882–1941), ushered in

Modernism with works including Yeats's *The Green Helmet and Other Poems* (1910) and Joyce's short stories, *Dubliners* (1914).

Visual art embraced the glamorous society portraits of Anglo-American John Singer Sargent (1856–1925) and the seedy Camden Town paintings of Walter Sickert (1860–1942). Critic-painter Roger Fry's (1866–34) Post-Impressionist exhibitions at London's Grafton Galleries (1910–12), featured work by Cézanne, Gauguin, van Gogh, and the Cubists that shocked Edwardians with their bold areas of flat color and strange perspectives.

1900 The year the Prince of Wales bought a Daimler Phaeton. This purchase was soon to make him the first British monarch to own a motorcar.

Edward's reign saw the last flourishing of an old order; its innovations helped to forge a very different future world.

A POST-WAR WORLD

During George V's reign, there were **growing shifts in society**—such as the increasingly strident calls for female suffrage **308–09** >>. After the horrors of the Great War, the Edwardian era looked impossibly outmoded and distant.

TOWN PLANNING

One of the defining threads of 20th-century Britain was the **creation of new towns**, with almost 40 built in the UK between the mid-1940s and mid-1970s. Edwardian garden cities—the world's first was at Letchworth, Hertfordshire (1903)—prepared the way. Their pioneer was Ebenezer Howard (1850–1928).

THE MARCH OF MODERNISM

Modernism came into full force after World War II. Modernist writers included T.S. Eliot, James Joyce, W.B. Yeats, Virginia Woolf, W.H. Auden, Aldous Huxley, and D.H. Lawrence. Edwardian Art Nouveau, with its strong flowing lines and stylized forms, often nature-inspired, fed into 1920s and '30s **Art Deco**.

The social season

The social season of the wealthy included the Henley Regatta, where these Edwardians are heading, Epsom, Ascot, Lords, Cowes, and Wimbledon—all good opportunities to meet a wealthy spouse.

**TITANIC
DISASTER
GREAT LOSS
OF LIFE**
EVENING NEWS

DECISIVE MOMENT April 14, 1912

Sinking of the Titanic

More than 1,500 lives were lost when RMS *Titanic* hit an iceberg and sank on her maiden voyage—a truly dreadful tragedy in human terms. But the disaster also dealt a shattering blow to British prestige and pride, denting the confidence of the world’s first industrial power.

The luxury liner RMS *Titanic* set out from Southampton on its maiden voyage with all the fanfare that might be expected for the largest passenger ship ever built. Unfortunately though, it was never to reach New York. Just four nights into the journey, the White Star liner hit an iceberg and—despite a seemingly impressive array of safety features—swiftly sank. Of the 1,517 people who died, many must have been condemned by the fact that there were only 1,178 lifeboat places for the 2,227 souls on board.

True or false?

Rumors ran rife in the days after the disaster—and the myth-making has hardly abated even now. Some said the first-class passengers were given precedence in the lifeboats. According to others, the makers had claimed that the *Titanic*’s watertight compartments made it “unsinkable”. It was also believed that the ship was speeding to satisfy a whim of the White Star chairman, J. Bruce Ismay; it fell victim to a curse; and so on. While none of these are backed by evidence, it is true that the lifeboat davits were a great deal

closer to the first-class accommodation. One of the more inspiring stories turned out to be true; many survivors attested that the saloon band kept on calmly playing as the ship went down.

New standards for safety

Inquiries in both the United States and Britain revealed that the *Titanic* had actually carried fewer lifeboats than maritime law required. The regulations were quickly tightened up. The US Hydrographic Office established a permanent “Ice Patrol” in the North Atlantic shipping lanes.

Radio also had a part to play: reports of ice in the area had been received and could have been passed on to the *Titanic*’s crew. Ironically, though the vessel had been fully fitted with the latest Marconi telegraph receiving and transmitting equipment, this had been kept as a luxury option for first class passengers.

The sinking of the *Titanic* quickly took on all but mythic status, but another myth was punctured by her loss. Britons could no longer feel quite so complacent about their industrial and technological preeminence. The 20th century saw them struggling to stay ahead.

“The loss...was due to **collision with an iceberg**, brought about by the **excessive speed** with which it was being navigated.”

JUDGEMENT OF THE OFFICIAL BRITISH INQUIRY INTO THE *TITANIC*’S SINKING, 1912

The story of the century

A newsboy does a roaring trade as Londoners stop to read all about the *Titanic*’s tragedy. Newspapers abounded with stories of the disaster, and people were eager to get the latest information.

Emmeline Pankhurst arrested

On May 21, 1914, toward the end of the militant campaign, Emmeline Pankhurst was arrested yet again. She had been trying to present a petition to the King at Buckingham Palace. The Great War would soon overtake suffragette hostilities.

The Suffragettes

During the early 1900s, enraged by Parliament's failure to introduce female suffrage and give voting rights to women, "suffragettes" took matters into their own hands. With leaders such as Emmeline and Christabel Pankhurst, they began a campaign of demonstrations and escalating direct action.

As the 20th century began, women were increasingly making their presence felt in society, especially in higher education and some professions, although a continuation of Victorian values meant women still had no vote, vital for true progress. Despite some support in Parliament for female suffrage (extending the franchise to women), many men still thought the murky, boisterous business of politics too complex and indelicate for the female mind and constitution. Male-dominated medical opinion at the time often painted women as emotionally unstable, incapable of reasoned decision-making on weighty matters. There were even women who agreed—in 1908, novelist Mrs. Humphry Ward

Forcible feeding

This issue of *Suffragette*, founded in 1912 and edited by Christabel Pankhurst, focuses on the controversy of force-feeding while in prison.

formed the National Anti-Suffrage League. The word "suffragette" seems to have been coined sarcastically by the *Daily Mail* in an article on January 10, 1906. After this, the term suffragette tended to be used for someone taking militant action.

Fighting the fight

Angered by the blocking of reform bills, politically active middle-class socialist

Emmeline Pankhurst

(1858–1928),

and daughter, Christabel

(1880–1958), set

up the Women's Social and Political Union (WSPU) in

1903, adopting the slogan "Votes For Women." At first, their campaigning was fairly moderate. Meetings were held and campaigning literature was handed out in the street. Gradually, they

gathered enormous support from women around the country.

In 1905, after Christabel was arrested and imprisoned for assaulting a policeman attempting to remove her from an election meeting for being disruptive, the campaign gathered militancy. At the end of 1906, 21 suffragettes were in prison. By 1911, after the Parliamentary campaign failed yet again, militancy moved far beyond rallies and demonstrations. Suffragettes chained themselves to railings, poured acid on golf courses, invaded Downing Street, and, in March 1912, smashed windows across London's West End and Knightsbridge.

Emmeline was establishing a reputation as a highly skilled, rousing orator. In a speech at the Albert Hall, London, on October 17, 1912, she declared: "I say to the Government: You have not dared to take the leaders of Ulster for their incitement to rebellion. Take me if you dare."

Militant suffragettes in prison resorted to hunger strikes as a protest, and attempted to resist force-feeding as a way to get their message across. Meanwhile, the National Union of Women's Suffrage Societies continued a more moderate campaign, and had more than 50,000 members by 1913.

The Cat and Mouse Act

People were deeply shocked by the imprisonment and force-feeding, especially at a time when women were still considered by many to be fragile creatures. Herbert Asquith's Liberal government decided they must tackle the hunger-striking issue decisively. In 1913, they passed an Act nicknamed the "Cat and Mouse Act", which released suffragettes prior to the desperate stage where force-feeding might become necessary, and then re-imprisoned them again when their health had recovered. The year saw a crescendo of extreme action. Emmeline was detained in New York while fund-raising there, and there was an attempt to blow up Chancellor of the Exchequer Lloyd George's house. Suffragette Emily Wilding Davison was killed after throwing herself under the King's horse at the Derby on June 4, 1913. Thousands packed London's streets for her funeral procession. Also that year, Sylvia (1882–1960), another of Emmeline's daughters, formed the East London Federation, which

Suffragette hunger-strike medal

Hunger-strike medals were first presented to suffragettes in August 1909, at St. James's Hall, London. The lower bar shows the date of arrest, and the disk has the presentee's name on the other side.

organized marches through London.

By 1914, society was becoming more horrified at seeing women involved in these actions. Politicians were nervous, especially with an election imminent, although this made the suffragettes hopeful that something might finally be done. In another dramatic protest, Mary Richardson slashed Velázquez's *Rokeby Venus* painting in the National Gallery. Then, with female suffrage still unresolved, the Great War broke out. The issue passed into a kind of limbo.

BEFORE

Victorian women's lives were restricted, but vital strides toward improving their rights were made in the 1800s.

INEQUALITY AND DISSATISFACTION

In Victorian times, poorer women sought paid work, while better-off women focussed on nurturing home and family << 278–79. Women had no vote, and before 1883 could not even retain their own property once married.

GETTING ORGANIZED

In 1866, a group of women petitioned JS Mill, Liberal MP and supporter of women's rights, to push for female suffrage, but his amendment to the 1867 Reform Bill was defeated. From the 1860s, barrister Richard Pankhurst, who married Emmeline Goulden in 1879, drafted early women's rights bills, but the government always blocked voting reforms. In 1888, Annie Besant organized the matchgirls' strike at Bryant & May's factory in London's East End; it won better pay and recognition of the health risks to workers. The next year, the Pankhursts

founded the Women's Franchise League, winning some local voting rights for married women. In 1897, Millicent Fawcett helped form the more moderate National Union of Women's Suffrage Societies (NUWSS).

MATCHGIRLS' STRIKE AT BRYANT & MAY

AFTER

The Great War would prove a watershed in the battle for female enfranchisement, and the 1920s saw equal voting rights for all.

GREAT WAR AND AFTER

At the outbreak of war 320–21 >>, all imprisoned suffragettes were released. Emmeline campaigned to recruit women for the war effort. Many were impressed by how well women filled the roles of absent men and this helped change attitudes further. In 1918, women over 30 gained the vote (men could vote at 21), but it was debatable whether it was the militant or the moderate approach that had been the key to success. In 1919, Nancy Astor became the first woman to sit in the House of Commons. All women over 21 finally got the vote in June 1928, a few weeks short of Emmeline's death.

NANCY ASTOR MP

Guardsmen and police on sentry duty

National security was at stake, it seems, in the railwaymen's dispute of 1911: this London railway signal box was to be protected at all costs. The authorities had no compunction about suggesting that strikers were shameless criminals and national enemies.

Trade Unionists and Socialists

Political developments in the late 19th century brought Britain's most marginalized and ground-down communities a sense of new possibilities, optimism, and hope.

BEFORE

The poor had learned early that, weak as they might be individually, collectively they could represent a powerful force.

UNITED FORCE

The **Peasants' Revolt** of the 14th century << 104–05 was the most celebrated of the early shows of strength by the marginalized, a powerful **statement of defiance** against their oppressors. Since then, the structure of society had changed completely, most notably with the advent of industrialization << 232–33. The **Chartists** made attempts to find **strength in unity** << 264–65, but the high hopes placed in electoral reform had not been realized << 268–69. Britain was the world's most successful industrial nation, but the question of the workers getting their share remained unanswered.

For Britain's working class, the Great Reform Act of 1832 (see pp.268–69) had been a huge disappointment—a collective workers' voice had still not emerged. From 1874, the trade unions financed the campaigns of a series of Liberal candidates for Parliament. The trend peaked in 1885, when 12 such MPs were elected.

Striking out

Any improvement in the lot of the working class through Parliamentary legislation was clearly going to be slow in coming. They did, however, have muscle in the mass. Individually, workers hardly came poorer or more powerless than the matchgirls of Bryant & May's factory in London's East End. When Annie Besant (see pp.308–09) led them in a strike in 1888, they showed the way to other workers.

Union banner, 1910

The slogan on the banner says "Unity is strength", but equally important is the implication of the dignity of labor. All swirling scrolls and symmetry, this banner, ironically, carries the suggestion of an aristocratic coat of arms.

The first big show of union might came in 1889 on the London docks. The dockers, poorly paid casual workers, demanded greater security and higher wages. The dispute was spontaneous—unions were formed as the action went on, spreading quickly to other ports. The employers' uncompromising stand was defeated by the determination of the dockers, supported by their comrades in foreign ports as far as Australia.

James Keir Hardie

The first leader of the Labour Party, Hardie's pragmatic moderation—much criticized at the time—helped ensure the party's appeal beyond a Marxist fringe.

Sir Henry Campbell-Bannerman's Liberal government brought in the 1906 Trade Disputes Act, explicitly removing any question of such liabilities on the part of unions.

Liberal treatment

His successor, Herbert Asquith, and Chancellor David Lloyd George tried to alleviate conditions for the working class. Limited provision was made for free school meals and pensions for those over 70 years of age.

Their "People's Budget" (1909) increased taxes for the rich, whose outrage was expressed in an enraged press—and an obstructive House of Lords.

Even so, a National Insurance Act was passed in 1911. People paid into a fund while they worked. In return, they received sick pay and medical treatment or maternity care. Labor exchanges were opened and some unemployment

Striking back

Employers could take collective action too. In 1897, machine-operators' demand for a maximum eight-hour day was met by a national lockout. The men were barred from their workplaces (unpaid, of course) until the Amalgamated Association of Engineers agreed to management's terms.

Just how badly the workers' power had frightened the Establishment was evident in the judge's ruling in the Taff Vale Railway Dispute (1901)—it held the railwaymen's union liable for the loss of revenue caused to the South Welsh railway company by its members' strike. The union was fined £3,000 plus £19,000 expenses, sparking a series of similar suits from employers.

Even middle-class liberals were uneasy about this ruling, which effectively outlawed strike action.

“The Labour Party is in league with life, and works for liberty that men may live.”

ACTIVIST KATHARINE GLASIER IN HER DIARY, JANUARY 1893

44,325 The total number of votes cast for the Independent Labour Party in the 1895 election. All 28 candidates came last in their respective polls, including Keir Hardie in London's West Ham South.

benefit paid. The Conservatives as well as the hardline free market Liberals criticized these measures.

Labor pangs

The left wing of the labor movement also attacked these measures for being inadequate. The strikes continued, especially in the mines and the transportation sector. The Scottish Labour Party was founded in 1888, and Scottish-born workers helped create the Independent Labour Party in England in 1893. The election of James Keir Hardie as an Independent to the seat of West Ham South in 1892 was a milestone.

The Labour Party grew slowly, but the caution and vague idealism so derided by more sophisticated left-wing thinkers ultimately brought it popularity and strength. Even so, with only 30,000 members by 1914, it showed little sign of shaking the foundations of the system.

SOCIAL REFORMER (1858–1943)

BEATRICE WEBB

Born into a middle-class family, Beatrice Potter married the socialist Sidney Webb (1859–1947) in 1890. Together they helped give the growing labor movement an intellectual arm. During the 1890s, they led the Fabian Society, which had been founded in 1884. Named for Quintus Fabius Maximus, a Roman general who had used what was called “softly-softly” delaying tactics to defeat his enemies, the Society argued for a nonrevolutionary road to socialism. Its members included writers such as Virginia Woolf, George Bernard Shaw, E. Nesbit, and H.G. Wells. The Webbs founded the London School of Economics in 1895, to advance social studies, and a left-wing magazine, the *New Statesman*, in 1913.

AFTER

The 20th century was to see the fortunes of the labor movement rise and fall, a prey to fluctuations in the economy—and the public mood.

GROWING MILITANCY

The Great Depression 334–35 >> left workers in a weak position. The Jarrow March 336–37 >> was more an appeal for action than a defiant stand. Much as the nation revered its wartime leader Winston Churchill, it cheerfully ditched his Conservative Party in 1945, sweeping Clement Attlee's Labour government into office with a **mandate to construct a socialist Welfare State 360–61 >>**. In hindsight, however, this was to seem something of a high water mark for the movement. The student radicalism of the 1960s and the union militancy of the 1970s 376–77 >> produced a profound reaction in the country as a whole. Amid claims that the trade union “barons” were “holding the nation to ransom”, **Margaret Thatcher won a milestone election victory 382–83 >>**.

CLEMENT ATLEE WINS THE 1945 ELECTION

Garment workers' strike, 1914

Internationalism was central to socialist thinking: it was said that the British workers had more in common with their comrades in Italy or Russia than with an exploitative upper class in the UK.

The Road to War

Britain began the 20th century in a position of considerable economic strength, and with its imperial authority felt around the world. Yet clouds were gathering as a new European power emerged. Germany was still an unknown quantity, but Britain did not like what it was seeing.

Germans rejoiced to see their nation unified, but heartwarming as their story was, their leaders had not necessarily seen it the same way. To Bismarck, unification had not been about the brotherhood of man but “Blood and Iron.”

A similar tone was taken by Kaiser Wilhelm II, who ascended the throne in Berlin in 1888 determined to bring back “glorious times” and secure Germany the “place in the sun” that it deserved. He was speaking literally, perhaps, hinting at the need to acquire African and Asian colonies, but his meaning had been understood as mainly figurative. His Germany was to take its rightful place at the forefront of

European states. Sending his troops to China to help put down the 1900 Boxer Rebellion that had risen up against the European powers there, he bade them to be as ruthless as Attila’s ancient Huns, thus bestowing on his countrymen an enduring, if ugly, nickname.

Strange bedfellows

Other nations were naturally wary of Germany’s new ambition. In 1902, Britain made an alliance with Imperial Japan, so that the Royal Navy might concentrate on waters closer to home. The new threat trumped even long-standing enmities. An unprecedented Entente Cordiale (Friendly Agreement) was reached with France in 1904. Russia already (since 1892) had its own treaty with France, so the signing of the Anglo-Russian Treaty in 1907 produced a Triple Alliance between these three powers. Mere agreement would not be enough, though, in the face of the unabashed and growing militarism of the German regime.

Germany sought its own allies. Already (since 1879) allied with Austria-Hungary, it now wooed the Ottoman Empire. Afraid of Russian expansion, the Ottoman Turks responded. Despite its historical antipathy for the Turks, Bulgaria feared Russia even more, so it too moved into an alliance with these Central Powers.

Arms race

Wilhelm, sardonically known in Britain as Kaiser Bill, was a grandson of Queen Victoria (and, some said, her favorite grandson), as well as the nephew of King Edward VII. He had also been something of an Anglophile, especially with regard to the Royal Navy. The story went that the humiliation of seeing his country’s paltry showing at the British naval review staged for his

£398 MILLION

The total military expenditure of Britain, France, Russia, Italy, Austro-Hungary, and Germany in 1914. In 1870, it was £94 million; in 1910, £289 million.

grandmother’s Diamond Jubilee in 1896 left him resolved to catch up at any cost. He placed Admiral Alfred von Tirpitz at the head of the Imperial Naval Office with explicit orders to build up the German navy.

“The German emperor is aging me; he is **like a battleship...** but with no rudder...”

EDWARD GREY, BRITISH FOREIGN SECRETARY, 1908

Britain had a head start, but clearly had to respond. In 1906, the Admiralty commissioned its latest battleship, HMS *Dreadnought*. Steam turbine-driven, it was much faster than its predecessors. It also carried much bigger guns, enabling it to engage its enemies at distance, beyond torpedo range. It transformed naval warfare to such an extent that a whole generation of warships was named after her. Germany, inevitably, got its own equivalent, the *Nassau*, in service by 1908. Just as inevitably, this produced a clamor from British Conservative campaigners for more dreadnoughts: “We want eight, and we won’t wait!”, the slogan went.

A logic of war

Build-ups were under way in other arms of the military as well, and other European states joined in the arms race. The result was that nobody really felt safe. One of the worst-kept secrets of the period, the Schlieffen Plan (drawn up at Wilhelm’s orders by Count Alfred von Schlieffen in 1904, although subsequently modified) envisaged simultaneous invasions of Russia in the east and France (via neutral Belgium and Luxembourg) in the west.

German militarism prompted answering moves toward militarism abroad, bringing the top brass into the very heart of government. In Britain, the Liberal government of Herbert Asquith was busy with important welfare reforms, but armament proceeded apace at the same time. War seemed an inevitability: the only question was exactly when.

There had already been a couple of nasty moments. Berlin had been alarmed at the implications for colonial Africa of Franco-British friendship. In March 1905, the Kaiser paid a much-publicized visit to Tangiers, promising the Moroccan King his support against French domination. France and Britain both reacted angrily to this, the First Morocco Crisis. A second was caused six years later by the deployment of the German gunboat *Panther*, off Agadir, in July 1911. The threat of war in Europe was again averted, though. On November 4, 1911, a face-saving territorial exchange was

BEFORE

The latter half of the 19th century saw a shift in power in Europe, with Germany emerging as a strong, new nation.

EUROPE’S CHANGING AGGRESSORS

British enmity with France was more or less an established tradition since the Hundred Years’ War of medieval times << 96–97, << 118–19, and the Napoleonic wars were a real threat << 240–41. However, times had changed, and through the 1860s, behind the banner of **Otto von Bismarck, the Prussian Chancellor**, the miscellaneous little kingdoms, statelets, and duchies of Germany came together to form a **powerful new nation at the heart of Europe**. Bismarck secured his goal in the face of French opposition in 1871, after inflicting a humiliating defeat in the Franco-Prussian War.

OTTO VON BISMARCK

Entente Cordiale, 1904

French soldiers and British sailors fraternize: a magazine takes an upbeat view of Anglo-French relations, though the new friendship was going to take getting used to.

British armaments factory

With years to prepare for a war that many believed was coming, nations had plenty of time to build up vast quantities of weapons for their growing armed forces. There had never before been such an arms race.

agreed. Germany withdrew its claims in Morocco and instead received territory in Equatorial Africa to add to its existing protectorate in Cameroon.

Spiraling into destruction

The problem with complex alliances was that they produced many potential flashpoints. In the end, the spark that set off the explosion came from Sarajevo, in Bosnia. The Serbian anarchist Gavrilo Princip's assassination

of Archduke Franz Ferdinand, heir to the Austrian throne, on June 28, 1914, precipitated the July Crisis and, as of July 28, war between Austria and Serbia, a Russian ally. As Russia mobilized for war with Austria, their respective allies France and Germany also mobilized as committed. Britain went through the form of demanding a promise from Germany that it would respect Belgian neutrality. This was not forthcoming. Instead, the Germans put the latest revision of the Schlieffen Plan into action, invading Belgium on August 4. Britain had no alternative now but to declare war. Many genuinely believed that the war would all be over by Christmas.

AFTER

SARAJEVO ASSASSINATION

Gavrilo Princip's bullets at Sarajevo set in motion a meat-grinder of a war; millions suffered in a nightmare of mud and slaughter.

EUROPE'S TRAGEDY

Britain prevailed in the Great War—later known as World War I—but at enormous cost **322–23** >>. And even then, the “war to end wars” did not live up to its billing. The **writing was on the wall** from the moment of the Versailles Treaty **330–31** >>, but it took the rise in Germany of Hitler and the Nazis to make **a second catastrophe** a reality **346–47** >>.

MODERN TIMES

1914–present

In the 20th century, the rich, proud, and powerful British nation heroically fought two world wars, but inexorably lost its empire, and saw its global influence diminish. Its strong parliamentary democracy and constitutional monarchy persisted, and the country developed a pioneering welfare state and a worldwide reputation for culture, science, and technology.

The Morris Mini-Minor

As the appetite for large cars waned and the threat of German “bubble cars” loomed, the British Motor Corporation unveiled its “proper miniature car.”

Known affectionately as the “mini”, it quickly became a modern British icon during the 1960s.

War of attrition

British soldiers sent to fight in France and Belgium in World War I found themselves engaged in static trench warfare along the Western Front. Three-quarters of a million Britons were killed in four years of conflict.

and revolution, Britain's liberal institutions of parliamentary democracy and constitutional monarchy were extraordinarily robust, and the country performed a heroic role in two world wars.

Conflict and decline

Britain's entry into World War I in 1914 stands as a watershed in the nation's history. That epic conflict, with its massive losses of young men's lives in the often inglorious warfare of the trenches, was a shock to the British psyche, using up long-accumulated reserves of patriotic sentiment that were never to be fully restored. Britain may have won the war, but its finances were undermined by war debts, and its core industries fundamentally weakened. High levels of unemployment disfigured areas of Britain well before the onset of the worldwide Great Depression in 1929. Southern Ireland broke away from the United Kingdom after a traumatizing conflict. Yet a more modern Britain also took shape in the 1920s and 1930s, a country in which women had the vote on the same basis as men, and electricity pylons and arterial roads became symbols of progress. Despite Britain's best efforts for peace, a second war with Germany broke out in 1939. World War II was truly, in Prime Minister Winston

»» A global zenith

In 1914, Britain ruled the largest empire in history, and the City of London was the hub of global finance. Much of the world's trade was carried in British ships, the Royal Navy dominated the oceans, and British industry was still a force to be reckoned with. The story of Britain over the following century is inevitably a tale of decline—the loss of empire and the dwindling of economic, financial, and military power. In 1997, Britain's colony of Hong Kong was handed over to China; in 2008, an Indian company took over Jaguar and Land Rover factories in Britain. Both these events show a shift in power and status that, from the perspective of 1914, is awesome. Yet through times when the world was racked by warfare

Churchill's words, Britain's "finest hour." The social solidarity and collective sacrifice that carried the British people through early disasters to eventual victory brought irresistible demands for a more democratic, egalitarian future, embodied in the welfare state created by a Labour government after 1945.

Post-war Britain

Britain's efforts to maintain "great power" status in the post-World War II period failed. Over 20 years, the British Empire was disbanded, and Britain's subservient status to its American ally was tacitly accepted. Domestically, a combination of welfarism, consumerism, and full employment made the 1950s and 1960s a secure and satisfying time for many Britons. While car and home ownership increased, Britain became a global force in popular culture, especially the worlds of popular music and fashion. Mass immigration, mostly from former colonies, transformed Britain into a multiracial, multicultural society, but commitment to the post-imperial Commonwealth declined in importance, as Britain moved towards closer economic and political integration with Europe. The failings of the British economy were at times humiliating, with sterling crises

underlining the country's financial weakness, and in the 1970s, trade union action leading to temporary breakdowns of power supplies and public services. Terrorism became a fixed feature of British life after Northern Ireland descended into a state close to civil war.

The 1980s saw a change of direction. Economic liberalization made employment less secure and society less equal, while increasing opportunities for enterprise and wealth creation. Britain experienced the benefits and occasional severe shocks of being tied into an expanding but unstable globalized economy. Whatever the future held, in the early 21st century the British people were more prosperous, healthier, better educated and housed, and arguably more tolerant and open-minded than ever before.

21st-century London

The glittering office towers of the modern capital reflect the leading role of the financial and service industries in Britain's economy, after the long-term decline of the country's once-dominant manufacturing sector.

BEFORE

Britain had developed an isolationist tradition, depending on its navy to ensure national security, and avoiding alliances with European powers. But in August 1914 the country was caught up in the rush to war.

WAR IN EUROPE

Germany declared war on Russia on August 1, 1914, and on France two days later. Britain's Liberal government was divided over whether to enter the war on the side of France. Britain had made secret military commitments to the French but there was **no formal alliance**. However, the German invasion of Belgium on August 4 provided a clear justification for a declaration of war, since Britain was a **guarantor of Belgian independence**.

LONG STRUGGLE ENVISIONED

The British Army had **prepared for a European war**. A force of six infantry divisions and one cavalry division was available for **rapid mobilization** and dispatch to the Continent. On August 9 the first elements of this British Expeditionary Force (BEF) left for France. Lord Kitchener, newly appointed Secretary of State for War, told the Cabinet that they would have to prepare for a **three-year war** and raise an army numbering **millions of men**.

Britain Enters the Great War

Britain declared war on Germany on August 4, 1914. At first, popular expectation that it would be “over by Christmas” did not seem absurd, but with the stalemate of trench warfare on the Western Front, the country was soon committed to fielding a mass citizen army in a merciless war of attrition.

Although the outbreak of war with Germany was greeted by a cheering crowd in Trafalgar Square, London, most British people did not enter the conflict in a spirit of flag-waving jingoism—diaries and private letters of the time reveal anxiety, resignation, and dismay. But the average Briton was intensely patriotic and believed that the cause was just. When the government requested volunteers for the army, it triggered what historian John Keegan called “a spontaneous and genuinely popular mass movement.” The initial request was for 100,000 men to come forward; in September 1914, about 175,000 volunteered in a single week.

In Ireland, the Protestant Ulster Volunteer Force and the majority of the Catholic Irish Volunteers both offered their services to the British Army. Volunteers also responded to the call to arms in Australia, New Zealand, and Canada, which unhesitatingly supported the British cause.

Early setbacks

However, the daunting task of organizing, training, and equipping a mass citizen army would take many months, and in the meantime Britain depended upon its small regular army, augmented by reserves and part-time Territorials.

Queuing for war

High-spirited volunteers, responding to the call to serve “King and Country”, queue outside a recruiting office. More than 3 million men had entered the British armed forces as volunteers by the end of 1915.

Arriving in Europe through August 1914, the British Expeditionary Force (BEF) took up position on the northern end of the French line. There they found themselves directly in the path of Germany’s main offensive, delivered in a right hook through Belgium. After fighting holding actions at Mons and Le Cateau, they were soon in full retreat, along with their French allies. Germany looked set for a swift victory. By the end of August, the commander of the BEF, cavalry general Sir John French, had decided to withdraw his forces from a campaign he considered lost, but he was overruled by Lord Kitchener, the War Minister, in London. Thus the British supported France in its decisive counter-offensive at the Battle of the Marne in September. The Germans were driven back and pursued northward. The culminating battle of 1914 was fought at Ypres, in northern Belgium, in October and November. At immense cost, the British and French armies fought the German Army to a standstill. Exhausted, both sides dug in to a series of heavily fortified trenches along a line from the English Channel coast to Switzerland, which became known as the Western Front.

Determined spirit

The losses in the fighting in 1914 were unprecedented. Britain’s pre-war regular army had been wiped out, but despite some fraternization with enemy troops at Christmas, Britain’s commitment to the war remained unshaken. German massacres of civilians and wanton destruction during the occupation of Belgium—real, if exaggerated by Allied propagandists—

Imperial strength

Britain relied on its Empire to provide much of its manpower. These Sikhs were among more than 1 million Indian troops who served during the war.

had convinced most of the British public that they were fighting for civilization against barbarism. During 1915, German use of poison gas on the Western Front, the sinking of the ocean liner *Lusitania* by a German submarine, and the first Zeppelin (airship) bombing raids on London all served to confirm hatred of “the Hun” and the British determination to fight. Britain’s military

89,864 The number of British casualties on the Western Front in the first three months of the war. It is more than the total number of troops in the British Expeditionary Force at the start of the war, which was 84,000.

and political leaders, however, struggled in vain to find a path to victory. The war at sea was in effect a stalemate, with Germany unable to break a British naval blockade of their ports, but the Royal Navy suffered unexpected losses to German submarines and mines. This stand-off was most unsatisfactory to a British public brought up on tales of Nelson’s heroic victories. There was also

trench stalemate on the Western Front. Through 1915, mass infantry assaults on the German trench line, from Neuve Chapelle in the spring to Loos in the autumn, cost tens of thousands of British lives for minimal gains.

Further frustration

The entry of Ottoman Turkey into the war on the German side in October 1914 provided a potentially easier target for Britain to attack. However, in March 1915, an Anglo-French naval force failed to force a passage through the Dardanelles straits and capture Constantinople (Istanbul), the Ottoman capital. The following month, the Allies landed troops at Gallipoli, to the west of the Dardanelles. The force included a large Anzac (Australian and New Zealand) contingent, but again Turkish resistance was unexpectedly strong and, as on the Western Front, the fighting became bogged down in static trench warfare. Despite landings at Suvla Bay in August, the Gallipoli campaign was another failure. By the time the Allied troops were pulled out in January 1916 it had cost more than 21,000 British and almost 9,000 Australian lives. The innocence and enthusiasm of August 1914 was by then left far behind.

Early failures brought changes in political and military leadership, but Britain remained committed to a war of attrition.

EFFECTIVE GOVERNMENT

Asquith’s Liberal government was criticized for failing to provide **sufficient munitions** for the army (the “shell scandal”) and for the Gallipoli fiasco. In May 1915, Asquith brought the Unionists (Conservatives) into a **coalition government**, with a token place for Labour. **Winston Churchill**, blamed for Gallipoli, was fired as **First Lord of the Admiralty**. Lloyd George, the Chancellor of the Exchequer, took up a new role as **Minister of Munitions**, rapidly increasing weapons output.

MAJOR MILITARY CHANGES

In December 1915, the British **military command** was shaken up. In London, General William Robertson, appointed Chief of the Imperial General Staff, pushed Kitchener into the sidelines. In France, Sir John French, **blamed for serious errors** at Loos, was replaced by General Douglas Haig. Robertson and Haig were convinced that the war could only be won by **even larger offensives** on the Western Front

322–23 >>

WAR GENERAL DOUGLAS HAIG

Infantry rifle

The Lee Enfield .303 bolt-action rifle was the standard British infantry weapon during the Great War (later called World War I). It could fire more than 30 rounds a minute.

“The **plunge** of civilization into this **abyss of blood**... is too **tragic** for words.”

LONDON-BASED AUTHOR HENRY JAMES IN A PRIVATE LETTER, AUGUST 4, 1914

BEFORE

By 1916, the demands of Britain's war effort were leading to the abandonment of cherished freedoms. The Liberal Party split under the strain and David Lloyd George emerged as a decisive war leader.

FILLING THE RANKS

By the end of 1915, about 2.5 million men had volunteered for military service, but the demand for soldiers was insatiable. Many Liberal and Labour politicians were strongly opposed to compulsory military service, but in January 1916, the government introduced **conscription for single men**, extended to married men four months later. A small number of conscientious objectors were, however, allowed to assert their right not to fight for their country.

NEW ENERGY

Herbert Asquith, Liberal Prime Minister since 1908, was widely seen as **lacking the drive** to energize the war effort. In December 1916, Lloyd George rebelled against Asquith, taking part of the Liberal Party with him. A five-man **War Cabinet** was formed, headed by Lloyd George as Prime Minister, along with three Conservatives and Labour's Arthur Henderson.

DAVID LLOYD GEORGE

Trench hitter

Howitzers were essential in trench warfare as they lobbed a shell in a high trajectory. This 6-in (15.2-cm) British howitzer was one of the smaller howitzers to be used.

Victory through Slaughter

The battles on the Western Front in France and Flanders in the years 1916 to 1918 were industrialized warfare at its most destructive. Drawing on deep reserves of patriotism, courage, and stoical endurance, British and Empire troops ultimately triumphed, but at the cost of almost 1 million lives.

On the Western Front in 1916, General Haig commanded about 2 million soldiers in the largest army that Britain had ever known. It comprised patriotic volunteers, many in "Pals battalions" from their own neighborhood, workplace, or sports club, as well as Canadians, Australians, and New Zealanders, who were to earn an outstanding reputation for fighting skill and aggression. British industry provided vast quantities of artillery shells and weapons of decent quality, and an expanding Royal Flying Corps provided air support.

An Anglo-French offensive was planned for summer 1916 at the River Somme. With France's armies already overstretched by the epic Battle of Verdun, the British took the dominant role. Haig hoped for a breakthrough that would win the war. Instead, the initial attack on July 1 was a military disaster (see pp.324–25), and the operation degenerated into attritional warfare. Lasting more than four months, it did at least inflict

"I suppose to people **at home** it is a **fine victory**. Well, so it is, but they don't see **the dead**."

LIEUTENANT FIRSTBROOKE CLARKE, PASSCHENDAELE, 1917

around half a million casualties on the Germans, almost as many as the British and French, but the maximum advance made in return for this terrible loss was 7.4 miles (12km).

Through 1917 the burden of the Allied war effort fell increasingly on Britain, as the French army was racked by mutinies, and Russia collapsed in revolutionary upheaval. Although conscription proved a disappointment, with fewer men conscripted during 1916 than had volunteered in the previous year, the British Army continued to grow and British industry supplied ever more shells and guns. Haig mounted further large-scale offensives against the Germans' heavily defended trench systems, at Arras in April 1917 and at Third Ypres (Passchendaele) from July to November. These operations had their successes—the seizure of Vimy Ridge by the Canadians in April, the momentary breakthrough of tanks at Cambrai in November—but, as at the Somme, little ground was gained and casualties were massive.

Fighting at Passchendaele was especially grim because of the persistent rain and waterlogged terrain that made conditions for troops atrocious—the mud was sometimes so deep that men who slipped into it sank without trace. A dispute over strategy raged as Lloyd George demanded his military commanders come up with a more imaginative, less costly way of fighting the war. Although British imperial forces took over German colonies in Africa, and fought the Turks in Iraq and Palestine, these remained sideshows. Haig was probably correct in believing that there was no alternative to winning the war other than fighting on the Western Front.

Meanwhile, the sea war had not met British expectations. The British and German battleship fleets, focus of such patriotic enthusiasm before the war, clashed only once, at Jutland on May 31–June 1, 1916. However, the battle was, for Britain, unsatisfactorily inconclusive, although the Royal Navy retained control of the North Sea.

Submarine threat

More important than battleships were the German submarines (U-boats). A serious nuisance earlier in the war, in 1917 U-boats became a menace to Britain's survival as they were unleashed in large numbers against merchant shipping bound for or leaving British ports. Unrestricted submarine attacks on their ships helped bring the United States into the war, but threatened to starve Britain into defeat before the Americans could mobilize an expeditionary force. In April 1917, around one in four merchant ships that set sail from a British port was sunk. The crisis was overcome when the

78 British generals were killed during the war. This makes it evident that senior officers did not always fight the war from the safety of a comfortable chateau well to the rear, as is sometimes imagined.

Royal Navy began to organize and escort merchant convoys, and losses to U-boats fell to a sustainable level.

Toward final victory

In 1918, the trench stalemate came to an end. The United States, at war with Germany since April 1917, took more than a year to organize and train a mass army to fight in Europe. In March 1918 Germany imposed a harsh peace upon revolutionary Russia's Bolshevik government. It released huge German forces for an offensive on the Western Front that they hoped would win the war before the Americans arrived to

Contemporaries called the 1914–18 conflict “the Great War” with good reason. It cost the lives of 956,703 British Empire military personnel, of whom 704,803 were from the British Isles.

NATION IN MOURNING

The vast majority of dead were victims of enemy action—a contrast to earlier wars when disease was the major killer. **Medical advances** ensured that many of the **seriously wounded survived**. About 40 percent of the 5 million British soldiers who served received disability pensions. Mental hospitals housed tens of thousands of victims of “shell-shock.” In terms of total British population, the loss was actually lower than the 300,000 people who had been emigrating annually before 1914. But the **deaths were shockingly selective**—almost one in three men born between 1890 and 1895 were killed.

Although a Victory Parade was held in London after the Versailles peace agreement in 1919 **330–31** >>, the ceremonial emphasis after the war was on the **memory of the fallen**. For many years, the two-minute silence on Armistice Day (November 11) was assiduously observed. **Commemoration** focused upon the **ordinary servicemen**, epitomized by the funeral of the Unknown Warrior on Armistice Day 1920. Towns and villages throughout Britain erected **war memorials** that still stand today—sadly, often with the dead of World War II added on.

The killing fields

British troops cope with the horrors of war on the battlefield at Passchendaele in 1917. Although poison gas was the most notorious weapon in World War I, artillery bombardment caused the majority of casualties, as well as creating a wasteland of shell craters and mud.

neutralize their numerical advantage. Launched on March 21, it was initially a great success. German forces tore through British trenches and advanced across the old Somme battlefields. After a follow-up offensive in Flanders in April, Haig issued an appeal to his troops on April 11: “With our backs to the wall and believing in the justice of our cause, each one of us must fight to the end...” The Allies created a joint command, with French General Ferdinand Foch becoming supreme commander. Resistance stiffened and the Germans stalled 62 miles (100km) short of Paris. In June, the first American troops entered the fighting, beginning to tip the advantage away from the Germans.

Contrary to myth, British soldiers did not spend the war walking in lines into machine-gun fire under the orders of uniformly stupid officers. By 1918 the British Army had developed a set of fighting techniques that combined precision use of artillery with flexible

infantry tactics and support from tanks and ground-attack aircraft. Many lower-level officers had been promoted on merit from the ranks and senior commanders had learned from experience. On August 8, 1918, the

170 MILLION The number of artillery shells manufactured in Britain during the Great War. In one day in September 1918, the British Army fired 943,000 shells at a cost of £3,871,000.

British launched a counter-offensive at Amiens, inflicting heavy casualties and taking many prisoners. German General Erich Ludendorff called it “the black day of the German army” and told the Kaiser the war was lost. Over the following two months, Allied forces

drove the demoralized Germans back in attack after attack, penetrating territory that had been under German occupation since 1914. Wanting to end the fighting before Allied armies entered Germany, the Germans sought an armistice. They tried to obtain lenient terms by negotiating with US President Woodrow Wilson, but Britain and France insisted on, in essence, a German surrender. With their Turkish and Austro-Hungarian allies defeated, and their cities in the grip of a revolutionary upheaval, the Germans had no choice but to submit. The guns fell silent at 11 am on November 11, 1918. The presence of increasing numbers of Americans was important, and the French had fought well, but it was above all a British victory.

“I hope **we may all say that thus, this fateful morning, came to an end all wars.**”

DAVID LLOYD GEORGE, HOUSE OF COMMONS, NOVEMBER 11, 1918

INNOVATION

BRITISH MK IV TANK

The British Army made the first-ever use of tanks in warfare during the Battle of the Somme. Employed at Flers-Courcelette in September 1916, Mark I tanks failed to achieve the hoped-for impact. The Mark IV, used successfully on the opening day of the Battle of Cambrai in November 1917, still had severe defects. It was slow and prone to mechanical failures; the crew suffered from poor visibility and arduous conditions. Nevertheless, more than 400 tanks led off the significant Amiens offensive in August 1918.

MARK IV TANK

DECISIVE MOMENT July 1, 1916

First Day of the Somme

The opening of the Somme offensive was the worst disaster in British military history. In a single day, the British Army suffered 57,740 casualties, including the death of more than 19,000 men. The majority of those who fell were volunteers of the New Armies recruited in 1914–15. Entering battle for the first time, thousands were cut down without even having fired their weapons.

General Douglas Haig doubted the fighting worth of the clerks and factory workers who joined up so enthusiastically at the start of the war. He believed that they would be incapable of flexible infantry tactics, in which soldiers exploited cover and rushed forwards, while colleagues gave supporting fire. The order was given by Haig that: “The assaulting troops must push forward at a steady pace in successive lines....”

The battle begins

In Haig’s view, the task of the infantry would merely be to occupy devastated German trenches. For a week before the offensive, more than 1,000 British guns pummeled the German lines. Moreover, 21 mines tunneled under the enemy positions were exploded just before the attack. But the German trenches at the Somme were deep and well constructed. The bombardment neither killed the defenders, nor cleared away the dense barbed wire behind which they sheltered.

At 7:30am on July 1, British troops, many of whom were carrying up to 60lb (27kg) of equipment, clambered out of their trenches and walked in line across “no man’s land.” When German machine-guns opened fire, men fell in swathes. If they could not penetrate the enemy barbed wire, they were trapped in a killing ground. In some places German positions were taken—the 36th Ulster Division, which adopted more sophisticated infantry tactics, was able to penetrate to the German second line of trenches.

German counterattacks were fierce, and most ground gained was lost again. “Pals” battalions, such as the Accrington Pals and the Grimsby Chums, formed by colleagues and neighbors, suffered grievously in the attack. Another unit, the Newfoundland Regiment, went into the battle with 780 men; the following day 68 answered roll call. Haig’s conclusion about the day’s events was that the Germans had “undoubtedly been severely shaken” and that the offensive should resume immediately.

“... magnificent display of trained and **disciplined valor**... only failed... because **dead men can advance no further.**”

MAJOR-GENERAL SIR BEAUVOIR DE LISLE, DESCRIBING THE NEWFOUNDLAND REGIMENT ON THE FIRST DAY OF THE SOMME, JULY 1, 1916

Going over the top

British soldiers go into action at the Battle of the Somme. Once “over the top” of their own trenches, they were encouraged to push forward toward the German lines, as the British commanders feared that if they were allowed to take cover during the attack, they would “go to ground” and never resume their advance.

BEFORE

The outbreak of war in 1914 temporarily brought a remarkable degree of unity to a country deeply divided on many social and political issues.

STRIKERS' COOPERATION

In the years just before World War I, the government and employers were challenged by **mass strike action** organized by militant trade unions ◀◀ 310–11. In mid-1914, the coal miners, transport workers, and railwaymen negotiated a Triple Alliance that threatened a general strike. The war, however, showed that the **patriotism of most British workers** was far stronger than their class allegiance. The trade union movement called for “an immediate effort... to terminate all existing trade disputes.” Although socialists theoretically believed in international solidarity between workers, the majority of the **Labour Party supported the war**. The most prominent exceptions were Ramsay Macdonald and the veteran Kier Hardie.

SUFFRAGETTE SUPPORT

The militant campaign for **women's suffrage** was vehement in 1914 ◀◀ 308–09. The leaders of the Women's Social and Political Union (WSPU), Emmeline and Christabel Pankhurst, responded to the war by ordering an immediate **suspension of the campaign**. They instead began agitating for the “women's right to serve.”

IRELAND'S CONTRIBUTION

Although Ireland was on the brink of **civil war**, after the declaration of war on Germany, both Protestants and Catholics **volunteered for service** in the British Army. A minority of Catholic radicals, however, believed a German victory would **further their interests**.

The Home Front

World War I made Britain a more democratic society. Although the authorities curtailed freedoms and used propaganda and censorship to show the war in a favorable light, they recognized that Britain could achieve victory only through the efforts of all its citizens and that social solidarity was an ideal to pursue.

The war brought an unprecedented expansion of the powers of the state in Britain. By and large, this was readily accepted by a population committed to the single-minded goal of defeating the enemy.

The Defence of the Realm Act (DORA), introduced four days after the start of the war, gave the government the power to introduce regulations “for securing the public safety and the defense of the realm.” This blanket measure was used to authorize the censorship of newspapers, and the compulsory takeover of ships, land, or factories.

It also allowed the government to introduce a variety of relatively minor limitations on freedom.

In the course of the war, bans were applied to mundane activities, ranging from the buying of rounds in pubs and the ringing of bells, to the purchase of binoculars and the lighting of bonfires.

Restrictions on pub opening hours, imposed in an effort to increase war production in 1915, were not relaxed until the 1980s. The change of the clocks for British Summer Time introduced in 1916 has continued to the present day.

The government had an ideological aversion to state interference in the running of the economy—“business as usual” was a popular slogan early in the conflict—but found itself carried along the path of state intervention by the demands of total war.

New changes

Paper banknotes for sums of £1 and 10 shillings were issued to replace the use of gold sovereigns. Railways and coal mines were taken under government control. With millions of men subtracted from the nation's workforce to

fight in France, and a massive increase in armaments production required, new workers had to be found for the factories. Almost 800,000 women were recruited for munitions work. Trade union objections were overcome by the promise of limits on the profits of employers. Women also worked in large numbers as bus conductors, military nurses, office clerks, and farm laborers in the Women's Land Army. Price inflation, wages, and taxes rose sharply. There were winners and losers: a working-class couple in well-paid jobs

30 The standard percentage rate of income tax collected by the British government in 1918. In 1914, at the start of the war, it had been 6 percent.

**Calling for support**

A government poster calls on civilians to support the nation's servicemen by their efforts. Propaganda engaged newly developed advertising techniques.

could enjoy prosperity, while a family with the breadwinner away in the forces may be impoverished due to the rising prices. However, new works' canteens at least improved the diet of those in factory employment.

Outrage against Germany

Soldiers returning home from the front often felt that civilians were hopelessly out of touch with the realities of the war. Censorship and propaganda hid the horror of the trenches, while promoting a hearty jingoism and savage hatred of “the Hun” (the Germans). Yet most families and communities had an intense emotional involvement in the conflict, and painfully grieved the mutilation and death suffered by so many of their friends, sons, and brothers. Popular feeling against the Germans was strong. In May 1915, the liner *Lusitania* was sunk by a German U-boat (submarine), killing more than 1,000. In response, rioting mobs attacked German businesses in British towns and cities, or any corporation

Air raids

A damaged London house shows the effects of a German airship raid. Air attacks killed 1,400 people in Britain during the war, most of them civilians.

AFTER >>

At the end of the war there was a move to return to prewar “normality”, but the change in women’s status was accepted, at least in part, as irreversible.

WOMEN’S PROGRESS

Women were **immediately evicted** from traditional male jobs in industry and transport, but the Sex Disqualification (Removal) Act in 1919 **lifted formal barriers** to women’s progress in the professions and the civil service. Women over 30 voted in the December 1918 general election, and the following year Nancy Astor became the **first woman MP** to sit in Parliament. The extension of the vote to women, on the same basis as men, had to wait until 1929.

SPANISH FLU

In mid-1918, Britain was ravaged by an influenza epidemic, **the Spanish flu**, which killed 250,000 people. Preventive measures, such as wearing masks and using antifu sprays on public transport, were slow to be adopted. It was by far the **worst epidemic** in modern British history, yet was overshadowed by memory of the war.

PREVENTING SPANISH FLU

Women munitions workers

The presence of women in munitions factories was the starkest symbol of the abandonment of traditional limits on female roles. The work was hard and hazardous, but the women earned status and good money.

with a foreign name. The royal family were later obliged to demonstrate their Britishness by changing their name of Saxe-Coburg and Gotha to Windsor.

The government was sensitive to criticism from demagogues, such as Horatio Bottomley, who accused it of failing to prosecute the war with enough energy, and for being soft on “traitors” who advocated peace.

Air raids on civilians

British civilians came under direct enemy attack in December 1914, when east coast towns including Scarborough, Hartlepool, and Whitby were shelled by German warships, killing more than 100 people. *Zeppelin* and *Schütte-Lanze* airships conducted nighttime bombing raids on London in May 1915.

A blackout was enforced, and the capital ringed with gun batteries and searchlights. Night-flying aircraft armed with incendiary ammunition eventually provided the answer to the airships, which became too vulnerable to continue their campaign. In 1917, the German Gotha bomber aircraft took

over, with a raid on Folkestone, Kent, in May killing 95 people. Their first attack on London, arriving without warning in the middle of the day on June 13, killed 162. Night raids by Gothas led Londoners to seek shelter in Underground stations. Popular demands for improved air defense, and for revenge raids against German cities, helped lead to the formation of the Royal Air Force in April 1918.

Opposition and inclusion

The war inevitably placed immense strain upon the social and political system. In 1917, with no end to the conflict in sight, and the German U-boat campaign creating food shortages, discontent expressed itself in strikes with a distinct political edge. Siegfried Sassoon, a serving officer who had won the Military Cross in France, publicly appealed to the government to seek peace, arguing

that the conflict was being prolonged unnecessarily, making it “a war of aggression and conquest.” News of the Russian Revolution excited the hopes of socialists and the fears of the Establishment. Yet, outright opposition to the war remained limited to a minority in socialist and pacifist circles. In response to popular discontent, the government brought in measures to control rents and hold down prices of essential foods. It eventually introduced rationing, although on a much smaller scale than in World War II.

Meanwhile the Representation of the People Act, passed by Parliament in March 1918, conceded the largest extension of franchise in British history. Giving the vote to all men over the age of 21, and to all women above 30 years, it increased the electorate from under 8 million to more than 21 million. The war made Britain a true democracy for the first time in its history.

“Master had gone to war and Missis ruled the household.”

War graves

The Imperial War Graves Commission, established in 1917, created war cemeteries in France and Flanders (in Belgium) for the men who died in the Great War. They were buried alongside their brothers-in-arms rather than being returned home to their families. Headstones were made plain and uniform, so there would be no distinction between officers and other ranks. Where remains could not be identified, the headstones bore the inscription, "A Soldier of the Great War Known unto God".

Armistice Day
Servicemen on leave and joyful civilians celebrate peace and victory in Trafalgar Square, London, on November 11, 1918. Street parties were held and church bells rung across Britain.

Peace and After

AFTER

British celebrations on the signing of the armistice in November 1918 were overshadowed by awareness of the human cost of victory and of the difficulties that lay ahead on the path to a durable peace. For many people the transition from war to peace was to prove a thoroughly disillusioning experience.

Although the armistice of November 11, 1918 ended the fighting in World War I, it did not end the war. A conference was convened to meet in Paris, where the victorious powers determined the peace terms to be presented to Germany. Also on their agenda were issues arising from the collapse of the Austrian, Russian, and Ottoman Turkish empires. Meanwhile, Britain maintained its naval blockade of Germany. When the peacemakers met in 1919, Britain's Lloyd George balanced the cynical realism of France's Georges Clemenceau with the lofty idealism of US President Woodrow Wilson. Lloyd George supported Wilson's pet plan for an international organization to maintain peace, the League of Nations, and also attempted to moderate Clemenceau's demands on Germany.

Dinner's ready

This 1916 cartoon denounces wartime deals to reward Britain's allies with enemy territory. Many people wanted a peace based on just principles, rather than on profit for the victors and the plunder of the defeated.

It severely restricted German armed forces, put the Rhineland under Allied military occupation for 15 years, imposed unspecified reparations payments, and declared Germany guilty of having caused the war. German reaction was swift: sailors of the German High Seas Fleet, interned at Scapa Flow, in the Orkneys, under the armistice agreement, scuttled their warships in protest. The British intellectual elite soon turned against the peace agreement. Economist John Maynard Keynes's 1919 best-seller, *The Economic Consequences of the Peace*, helped generate a widespread impression in Britain that the Germans had been unfairly treated.

Britain's troubles

Conflict rather than peace was the keynote of both domestic and foreign affairs in the immediate aftermath of the war. In 1919, British forces were in action from Afghanistan to Arkhangelsk, where they briefly intervened against the Bolshevik government in the Russian Civil War. Ireland was in revolt (see pp.332–33), and in Britain trouble also flared. Demobilization of the wartime armed forces proceeded too slowly. Thousands of soldiers eager to return to civilian life demonstrated in central

London in early 1919. Protests by Canadian troops at Rhyl, in north Wales, were suppressed violently. When they eventually returned to their homes and families, the ex-servicemen faced an uncertain world.

Industrial disputes proliferated. In January 1919, Glaswegian workers inspired by the Bolshevik Revolution led a strike on "Red Clydeside" that had to be suppressed by troops. The army was also called in when a police strike in Liverpool unleashed rioting in August 1919. Further strikes were provoked when the railways and mines, nationalized during the war, were returned to private ownership against the wishes of their workers. At the 1918 general election, Lloyd George promised to build "a fit country for heroes to live in." His government tried to respond to discontent and reward wartime loyalty. Unemployment benefit was extended and government housing accorded a priority. However, a brief post-war economic boom soon

With a coalition of Conservatives and Liberals in government from 1918, the Labour Party was able to establish itself as the leading opposition force in Parliament.

CONTRASTING FORTUNES

Post-war discontent fueled support for Labour, which won 142 seats in Parliament in 1922, and 191 seats in 1923. This was enough for Ramsay MacDonald to finally form the **first of two minority Labour governments** in the 1920s, although the first lasted less than 10 months. The **Liberal Party was reduced** to a third-party status and Lloyd George's political career went into decline. The Labour Party condemned the Versailles Treaty in 1919 and remained **strongly pacifist** throughout the 1920s and 1930s.

12 MILLION The number of workers eligible for unemployment benefit under new 1920 legislation. This was five times the number covered by the unemployment insurance program introduced in 1911.

collapsed and by 1921, there were 2 million workers without jobs. The era of mass unemployment had begun in Britain. The British had won the war, but it did not feel like a victory.

Down but not out

A former soldier turns street performer to earn a living. Such scenes were common in much of Britain during the economically depressed 1920s and 1930s.

BEFORE

Britain entered World War I with the sole declared aim of protecting Belgian independence. Other aims later appeared.

EVOLVING IDEALS

In the first two years of the war, various **secret agreements** were made with Britain's allies that would, for example, have allowed Tsarist Russia to annex Constantinople (Istanbul) from Turkey. Partly through pressure from the United States, Britain later evolved **more idealistic war aims**. In January 1918, Prime Minister David Lloyd George denied that Britain was fighting a "war of aggression", embraced the **cause of self-government** for the Poles and the Slav peoples of the Austrian Empire, and committed Britain to support founding an "international organization", which would be "an alternative to war." This became the **League of Nations**.

ANTI-GERMAN SENTIMENT

Fighting a general election in December 1918, however, Lloyd George felt the need to appeal to **popular hostility against Germany**. Supporters of his Liberal-Conservative coalition reacted favorably to slogans such as "Hang the Kaiser" and "Make the Germans Pay." On a tide of **aggressive patriotism**, the coalition won a crushing majority in Parliament, taking 475 seats.

BEFORE

In 1914, the confrontation between Ulstermen and Catholic Nationalists over Home Rule threatened civil war. This was averted by the outbreak of World War I.

HOME RULE OPPOSED

The **Home Rule Bill** of 1912 would have given a devolved Irish parliament great powers. The House of Lords delayed its passage but by August 1914 it only awaited **Royal Assent**. Protestants, who formed a majority in most parts of Ulster, opposed Home Rule. Supported by senior figures in the Conservative Party and the British Army, they formed the Ulster Volunteers, an armed militia to **resist Home Rule**. The Nationalists responded by founding and arming the Irish Volunteers.

HOME RULE POSTPONED

At the outbreak of war ◀◀ **320–21**, Home Rule was **postponed for the duration** of the conflict. The Ulster Volunteers enrolled in the British Army, most forming the 36th Ulster Division. The majority of the Irish Volunteers also chose to serve Britain, forming the 10th and 16th Irish Divisions. Around 30,000 Irishmen **died fighting in the British armed forces** in World War I.

The war on the streets

British troops, brought in to suppress the Easter Rising in April 1916, man a makeshift barricade in a Dublin street. The British Army suffered almost 500 casualties in a week's street fighting, including 116 soldiers killed.

Irish Independence

A failed uprising by Irish Republicans in Dublin at Easter 1916 set in motion a train of events that led to the independence of southern Ireland six years later. The six counties of Northern Ireland received Home Rule, remaining a part of the United Kingdom under a sectarian Protestant government.

The decision of Irish Nationalist leader John Redmond to support the British war effort in August 1914 split the Nationalist movement. A minority of the Irish Volunteer militia rejected the call to join the British Army. They were to a large degree under the control of the radical Irish Republican Brotherhood (IRB). The IRB saw the war as an opportunity to overthrow British rule. They established contact with the Germans, who agreed to supply arms. An uprising was set for Easter 1916. Nothing went as planned. A ship carrying German rifles arrived off the Irish coast, but was intercepted by the British. Orders were distributed to the Irish Volunteers canceling the

uprising. However, a hardcore of the IRB in Dublin, led by Padraic Pearse, went ahead regardless. Supported by James Connolly's Citizens Army, a small socialist group, the IRB launched an insurrection on Easter Monday. They took over buildings in Dublin, including the General Post Office where Pearse declared Ireland an independent republic. The rebels numbered around 1,600 men, and were armed with rifles and shotguns. The Dublin population was either indifferent or hostile. The British rushed troops to the city and suppressed the uprising with the use of artillery. More than 400 people died in the fighting, before Pearse agreed to surrender on April 29.

Belfast volunteers

Belfast shipyard workers volunteering for service in the British Army in August 1914. More than 200,000 Irishmen, Protestant and Catholic, fought for Britain in World War I.

“Ireland, **through us**, summons her **children** to her **flag** and strikes for her **freedom**.”

PADRAIC PEARSE, PROCLAMATION OF THE IRISH REPUBLIC, APRIL 1916

By their behavior after the uprising, the British authorities turned a victory into a defeat. Outraged at this “stab in the back” in wartime, they executed 15 leaders of the uprising, including Pearse and Connolly. It made martyrs of the republicans and won widening support for their cause. Sinn Féin, previously insignificant, became the political embodiment of Republicanism. In April

47 The number of the 73 Sinn Féin MPs elected in the December 1918 general election who were in jail at the time. They had been arrested in a British crackdown on Republicans. The British released them all the following April.

1918, faced with a crisis in the war with Germany, the British government proposed extending conscription to Ireland. The Republican response was hostile. Conscription was denounced by Catholic priests and Irish Nationalist MPs withdrew from Westminster.

Rise of Sinn Féin

The British backed down, but too late to save the situation slipping beyond their control. When a general election was held in December 1918, 73 Irish seats were won by Sinn Féin. Rejecting the Westminster Parliament, the Sinn Féin MPs set up an Irish Parliament, the Dáil Éireann, to rule the republic that had been proclaimed in Easter 1916.

In January 1919, the Irish Republican Army (IRA), led by Michael Collins, began a campaign of ambush and assassination, to which the British responded with an equally unscrupulous use of force. Recently demobilized British soldiers were recruited as Black and Tans, and auxiliaries, to aid the army and police in suppressing the rebellion. These often ill-disciplined irregulars terrorized

Easter Rising medal

In 1941, on the 25th anniversary of the 1916 Easter Rising, a medal was created for those Republicans who claimed to have taken part in the rebellion.

the Catholic population, while the IRA shot village policemen in the back. The British government sought a political solution in a variant on Home Rule. The 1920 Government of Ireland Act established separate devolved parliaments for southern Ireland in Dublin and for the six largely Protestant counties of Ulster in Belfast. The Protestants accepted the deal, and a Northern Ireland Parliament opened in Belfast in June 1921. Sinn Féin rejected this devolution, but in July agreed to a truce and opened negotiations with the British government.

Agreement reached

In December 1921, the Irish delegation, led by Michael Collins, signed an agreement in London with the British government, which gave effective independence to all Ireland except the six counties of Ulster as a dominion within the British Commonwealth. The Anglo-Irish Treaty split Sinn Féin. Eamonn de Valera, the leader of both the party and of the Republican government, led the opposition to the agreement, chiefly over symbolic issues such as the requirement for members of the Dáil Éireann to swear fidelity to the British monarch. Pro- and anti-Treaty republicans then embarked on a civil war, but this did not stop the new Irish Free State from being formally founded on December 6, 1922.

Led initially by Michael Collins, pro-Treaty Irish republicans fought a civil war against anti-Treaty republicans, while Catholics in Northern Ireland came under Protestant rule, creating an issue for future conflict.

CIVIL WAR

The **Irish Civil War** lasted from June 1922 to May 1923, killing several thousand, before the IRA “irregulars” were **defeated by the Irish Free State** government. **Eamonn de Valera**, the most prominent anti-Treaty politician, later emerged as Ireland’s **dominant political figure**, after his Fianna Fáil party won a Dáil majority in 1932.

DE VALERA’S IRELAND

De Valera combined conservative Catholic social policies with **anti-British** nationalism. In 1937, he changed the constitution, renaming the Irish Free State “Éire” or “Ireland” and claiming the whole of the island as national territory. In World War II **348–49** >>, he kept **Ireland neutral**.

UNRESOLVED DIVISIONS

Northern Ireland’s borders enclosed a **large Catholic minority**, while ensuring permanent Protestant domination. Its **government** harshly repressed the IRA and **intimidated Catholics**. The partition of Ireland continued to be regarded by the IRA as a *casus belli* with Britain. In 1939–40, an **IRA bombing campaign** on the British mainland caused great damage and loss of life.

IRA LEADER (1890–1922)

MICHAEL COLLINS

Collins was born in County Cork in 1890. He joined the Irish Republican Brotherhood and took part in the 1916 Easter Rising. As an IRA leader during the war of independence he was responsible for the assassination of 13 people, including British intelligence officers, on “Bloody Friday”, November 21, 1920. In December 1921, he negotiated the Anglo-Irish Treaty that ended the war, and in June 1922 led the attack on anti-Treaty IRA forces in Dublin, leading to civil war. Commander-in-chief of the government forces, he was shot dead in an anti-Treaty ambush in Cork on August 22, 1922.

The London crash

A crowd gathers outside the London Stock Exchange after the collapse of the financial empire of speculator Charles Hatry in October 1929.

Crisis and Depression

In the 1920s and 1930s, Britain faced a decline in industrial output, a general strike, worldwide depression, financial crisis, and unemployment. While it struggled to cope with a troubled new world, the nation did not succumb to the political extremism that destroyed democracy through much of Europe.

The crisis in the world economy, known as the Great Depression, is generally dated to 1929, but the economic woes of the inter-war period started much earlier in Britain. Mass unemployment struck in 1920–21, following a brief inflationary boom. After that, the number of jobless never fell below 1 million until World War II.

Production levels of coal mining, shipbuilding, and textiles decreased, turning areas dependent on such traditional industries into persistent unemployment black spots. Agriculture

stalemate, a compromise was negotiated with the government, which allowed the trade union leadership to call off the national strike. The miners, however, maintained their stance. They continued the strike for six months, but were ultimately starved into submission.

In the end, it was not the workers' militancy that rocked the established order, but a worldwide economic catastrophe. The crash of the New York Stock Exchange in October 1929 signaled the beginning of the Great Depression. World trade shrank,

election in May 1929, unseating Stanley Baldwin's Conservatives. The new government now faced the consequences of global economic turmoil. Macdonald and his Chancellor of the Exchequer, Philip Snowden, were under pressure to slash government spending. Then in 1931, a banking collapse in Austria and Germany had a knock-on effect on Britain. The Bank of England advised budget cuts to the government in order to avoid the collapse of Sterling.

Altered politics

When Snowden proposed cutting unemployment benefit as part of a package of austerity measures, nine Labour ministers resigned. Macdonald stayed on as Prime Minister, forming a coalition government with the Conservatives and Liberals, while the Labour Party went into opposition. The move ate into the pay of all public employees, including sailors of the Royal Navy, who staged protests at Invergordon. Inflated accounts of this "mutiny" led to renewed pressure on Sterling and the Gold Standard had to be abandoned.

The pound devalued sharply. The long-term effect of this devaluation was beneficial, but the shock of the crisis to

"... ordinary decent people... to whom an extraordinary misfortune has happened."

SIR WILLIAM BEVERIDGE, BBC RADIO BROADCAST, 1931

BEFORE

World War I did irreparable damage to the British economy. The country entered the post-war period heavily in debt and with key industries vulnerable to foreign competition.

A COSTLY AFFAIR

The war cost Britain more than £11 billion. Only a fraction of this expenditure was covered by increased taxation. The national debt rose from £650,000 to £8 billion, mostly owed to investors by way of war loans. After the war, about a **half of the government's income from taxation** was spent on **servicing the debt**. Britain also came out of the war owing £850 million to the United States, although the British were in turn owed money by other wartime allies. This chain of debts **complicated international financial relationships**, blocking the return to a stable global economy.

INDUSTRIAL DECLINE

British industry coped well with the demands of war, but while its **factories focused on war production**, exports suffered. In the post-war period, it proved **impossible to recover** the lost markets. Britain's **industrial production** had been **falling for decades**, but in 1914 its shipyards, for example, had built more ships than the rest of the world combined. By the 1920s, such traditional industries had simply lost their competitive edge.

was also thrown into crisis by falling prices and global overproduction. Yet Britain's government, bankers, and industrialists continued to dream of returning to the life of the pre-war world, with the City of London as the financial center of the global economy. It was this vision that lay behind the economically irrational decision to return to the Gold Standard in 1925, a system under which the nation's currency could be exchanged for a fixed weight of gold on demand at the central bank. This fixed the value of Sterling well above its natural exchange rate. The move raised the cost of British exports, depressed wages, and worsened the fate of struggling industries.

Escalating tensions

In 1926 a crisis in the coal-mining sector led to the General Strike, the era's most famous challenge to the established order. Mine-owners responded to foreign competition and declining profits by demanding wage cuts and longer working hours. When the country's million-strong coal miners refused to accept the owners' terms, they found themselves locked out of the pits. The trade union reluctantly embarked on a national strike in support of the miners. The government, aided by volunteers, undertook emergency measures to maintain essential services. Moderation and good sense on both sides largely averted violence. After a week-long

currencies were devalued, banks collapsed, industrial and agricultural output plummeted, while unemployment figures soared. By December 1930, the number of people left jobless rose above 2.5 million in Britain. The Labour Party, led by Ramsay Macdonald won a general

Keeping working

A poster for the London and North Eastern Railway advertises its role in keeping blast furnaces working during the prolonged lock-out of the coal miners in 1926.

62 The percentage of unemployed in the working population of Merthyr, a mining district of South Wales in 1934. This compared with a rate of 5 percent in Coventry, a center for new industries.

national self-confidence was palpable. By 1932, more than half the working population remained idle in regions such as South Wales, Tyneside, and parts of Scotland. The government took timid measures to revive local economies, providing funding under the Special Areas program, while attempting to limit the cost of unemployment.

The apparent bankruptcy of the existing system seemed to validate new social and political beliefs. Young people flocked to embrace socialism and Marxism, providing a ready audience for works such as George Orwell's *The Road to Wigan Pier*, distributed by the Left Book Club. The British Communist Party, founded in 1920 in the wake of the Russian Bolshevik Revolution, never won a mass following, but was nonetheless influential. At the other

Blackshirt salute

British fascist leader Oswald Mosley receives a Nazi-style salute from his blackshirted followers during a rally in Hyde Park in 1934. The banning of such military-style parades two years later punctured Mosley's popular appeal.

area of London's East End led to violent clashes with anti-fascists. This "battle of Cable Street" stirred the government to ban political uniforms and limit rallies. After this, the influence of Mosley and the BUF sharply declined.

50,000 The number of members claimed by the British Union of Fascists in the 1930s. In the late 1930s, the Communist Party had a membership of about 16,000.

end of the political spectrum, Oswald Mosley, a disillusioned former member of the Labour government, established the British Union of Fascists (BUF) in 1932. The membership of the party was never large, but the aggressive posturing of Mosley's supporters ensured plentiful publicity. In October 1936, a provocative BUF march through a predominantly Jewish

Democracy intact

In truth, unlike many other countries in Europe, Britain in the 1930s remained a remarkably stable parliamentary democracy. While there were some local protests by the unemployed, the majority of the population remained largely contented. The deflationary slump produced stable or falling prices, while wages tended to rise, improving living standards. The introduction of advanced coal-cutting machines also stemmed the decline of the old industries. A general election in 1935 confirmed the Conservatives as the largest party in the House of

In retrospect, mass unemployment was the dominant image of the inter-war years. This bred a determination among Britain's policy makers to ensure it would not happen again.

RISE IN INDUSTRIAL PRODUCTION

With strong growth in new industries such as motor manufacture and electrical goods, British industrial production in the late 1930s was 75 percent higher than it had been before World War I. However, unemployment remained stubbornly high in the areas most affected by the Depression **338–39** >>. It was not until 1940 that nationwide unemployment fell below 1 million for the first time in 20 years. By 1941, though, labor shortages posed a serious threat to the war effort **354–55** >>.

THE KEYNESIAN METHOD

Fearing that unemployment would return at the end of the war, British politicians came under the influence of economist John Maynard Keynes. During the 1930s, Keynes had argued that governments should abandon their obsession with balancing their budgets. Instead, they should run budget deficits to **stimulate the economy during a slump**. He explained how governments could use spending and interest rates to manage demand in the economy and **maintain full employment**. There was interest in Keynes's ideas during the 1930s, but the government **did not abandon traditional economic policy**. After World War II, however, Keynes's ideas became the basis for successful efforts by post-1945 British governments to maintain full employment **360–61** >>.

Commons under Stanley Baldwin. The British economic, social, and political system survived the Depression surprisingly intact.

Eviction protest

The eviction of poor families from their terraced houses for non-payment of rent is the occasion for a spontaneous protest in a Chelsea street. Such small-scale protests against poverty and unemployment, although common in the 1930s, were politically ineffectual.

JARROW
CRUSADE

DECISIVE MOMENT October 5, 1936

The Jarrow March

In October 1936, 200 unemployed men from the Depression-hit Tyneside shipbuilding town of Jarrow marched to London to present a petition to Parliament. Their protest was brushed aside by the government and ultimately had no practical effect.

The closure of Palmers shipyard, Jarrow's major employer, in 1933 had devastated the local economy.

By 1936 unemployment in the town had risen to more than 70 percent. Jarrow's Labour MP, Ellen Wilkinson, later called it "the town that was murdered." After a project to build a new steel works at Jarrow was canceled, local councillors organized the march to draw attention to the town's desperate plight.

The marchers

Throughout the Depression years, "hunger marches" had been staged by masses of unemployed workers tramping from industrial areas to the capital. Regarded as a communist-inspired threat to the social order, these marches were ignored or disparaged by the media, and the marchers were often harassed by the police. But the organizers of the Jarrow "crusade" ensured that no communists took part, and even won the backing of the local Conservatives. To avoid disorder, the march was kept small, with 200

men picked out of 1,200 volunteers. Their petition, couched in respectful terms, carried 11,572 signatures.

The marchers set off on October 5, 1936, with the blessing of the Bishop of Jarrow and led by their mayor. Press coverage was copious and largely favorable. The marchers encountered a generous and enthusiastic reception at their stopping points along the 300-mile (480-km) route. So much food was provided that, coming from a community in which malnutrition was rife, the men found themselves gaining weight.

The impact of the march

The popular sympathy that the march evoked was not echoed in government circles. When the marchers reached London, Prime Minister Stanley Baldwin ignored them. On November 4, the petition was delivered to Parliament and representatives of the marchers, including Ellen Wilkinson, met MPs in the House of Commons. The practical impact of the march was minimal. Only the need for ships during World War II ended mass unemployment in Jarrow.

"We didn't know we were entering the history books. We did it because we were desperate for work..."

JARROW MARCHER CORNELIUS WHALEN, 2001

On their way to London

Presented sympathetically by the press, the Jarrow marchers moved the British public with the dignity of their protest. The marchers asked only for a chance to work for a living. The instruments for their mouth-organ band were paid for by journalists.

BEFORE

Major social and technological changes that characterized British society in the period between the wars were a continuation of developments visible in the Edwardian era.

POPULATION CHANGES

Probably the biggest change in society was a **fall in the birth rate**. Women who married in the 1880s had borne on average 4.6 children. By the 1900s, the standard British family had just over three children, and in the 1920s the **average figure dropped** to 2.2. Contrary to a long-established myth, low birth rates in the 1920s and 1930s were not the result of a lack of husbands caused by World War I. **A lower proportion of women remained unmarried** in the 1920s–30s than in the pre-war period, but couples were **choosing to have smaller families**, and achieving this aim despite limited availability of contraceptives.

AN URBAN SOCIETY

The **consumerism** of the 1920s and 1930s was also rooted in pre-war Britain. Movie theaters, motor vehicles, professional spectator sports, and mass newspapers were **all part of the urban society** of the 1900s, but were on a significantly smaller scale than between the wars. **Electricity generation** existed on a local basis, but only one house in 17 had electric power by 1920. In 1939, the Central Electricity Board was supplying two-thirds of the homes in Britain.

Carry on smiling
Glamorous dance troupes were a staple of West End shows and movie musicals in the 1930s, providing a hard-working living for young women escaping poverty.

Life in the Twenties and Thirties

In the years between the two World Wars, British social life underwent rapid change that, for many people, brought greater freedom, comfort, and fun. It was a time of picture palaces, dance halls, and wireless radio. While the unemployed survived “on the dole” in the old industrial towns of the north, a new home-owning, car-owning British society was beginning to take shape in much of the south.

In 1933, author J.B. Priestley went on a journey through England, writing an account of the state of the nation. In the depressed, old industrial areas of the north he found jobless men in cloth caps loitering in boarded-up streets, and poverty mitigated only by the solidarity of long-established working-class communities. In the south he found a wholly new England. It was, Priestley wrote: “the England of arterial and by-pass roads, of filling stations and factories that look like exhibition buildings, of giant cinemas and dance halls and cafes, bungalows with tiny garages, cocktail bars, Woolworths,

motor-coaches, wireless, hiking, factory girls looking like actresses, greyhound racing and dirt tracks, swimming pools and everything given away for cigarette coupons.” This was a new world that angered opinion-forming intellectuals. They railed against the spread of pebble-dashed cheap housing in “ribbon development” along roads outside towns and cities. They denounced the corruption of British culture by the

Life in the suburbs

A suburban home was an ideal for many middle-class families. About 2.5 million new houses were built for private sale in the period between the wars.

influence of American movie celebrities, popular music, and dance crazes. But even the critical left-wing author George Orwell admitted that, for a young person in the 1930s, “indulging in a private daydream of yourself as Clark Gable or Greta Garbo... compensates you for a great deal.”

Class differences and modernization

British society was, of course, deeply divided by class and income. Men signing on the dole (unemployment), children with rickets, people on welfare harassed by “means-test” snoopers enquiring into the details of their life, and families crowded into insalubrious slums were a world away from the middle-class life of suburban houses and commuting by electric train. Yet many advances of the 1920s and 1930s were widely shared. Housing improved

for some poorer people with slum clearance plans and new government home building. The national grid spread electricity supply across the country.

The radio, a state monopoly run by the BBC from 1922, provided home entertainment. About 10 million newspapers were sold daily. Movie-going was near universal, with the northern town of Bolton boasting 14 cinemas for its population of 260,000. The making of cheap, stylish clothing and

cosmetics marketed through chain stores such as Marks & Spencer and Woolworths helped banish archaic items such as clogs and shawls. Young people strutted their finery to big band music at dance halls on Saturday nights.

Spectator sports attracted huge crowds. Wembley Stadium was first used as a venue for football’s FA Cup

Foreign travel

While working-class people took paid vacations at British seaside resorts, a growing number of more affluent people could now afford to travel abroad.

“Fish and chips... the movies, the radio, strong tea, and the Football Pools have **between them averted revolution.**”

GEORGE ORWELL, *THE ROAD TO WIGAN PIER*, 1937

final in 1923, its capacity of 127,000 swamped by the number of fans clambering to see the game. Active participation in sports flourished. Open-air pools were built for swimming in many towns, and hiking across the countryside became popular. Only the better off could afford a car, but British factories were building 300,000 a year, and by 1939 there were about 2 million private cars in Britain.

Women empowered

The position of women—granted the vote on an equal basis with men in 1928—changed as well. They lost many of the work opportunities that had opened up for them during the war, but in 1931 there were almost

Sporting heroes

Everton and England footballer Dixie Dean was one of many sporting celebrities of the era. Yet the high status of sports heroes was not matched by their pay, which remained that of a skilled factory worker.

The job hunt

Desperate men scrutinizing job advertisements were a familiar sight in northern industrial towns, but less so in prosperous southern England and the Midlands.

750,000 more women in employment than 20 years earlier. Many refused to go into domestic service, instead working in offices and light industry. The middle classes had difficulty finding servants, and the shortage was permanent. Many middle-class women were forced to do housework, their chores mitigated by labor-saving devices, such as electric vacuum cleaners and electric irons. Bearing fewer children than previous generations, they enjoyed better health. Women also had more freedom to develop relations with the opposite sex, while the introduction of disposable sanitary towels contributed to their comfort. Marie Stopes’s popular books, especially *Married Love*, published in 1918, encouraged marriage in which a man was attentive to a woman’s sexual needs. They were indicative of changing attitudes. Society still had no doubt that a woman’s true place was as a wife and mother, but there were now exceptions.

For the lower middle classes and more prosperous working class, it could be a good time to live. A £25 deposit and easy credit from a building society could buy a

The slow growth in **female employment** during the 1920s and 1930s gathered pace in the 1940s. By 1951, there were almost 7 million women in employment compared with 5.5 million in 1911. The high number of **women going out to work** became a feature that distinguished Britain from continental Europe.

new house. Unemployment and poverty marked the era, but suburban streets, family cars, and affordable consumer goods showed the way of the future.

INNOVATION

SUPERMARINE SEAPLANE

Britain’s aircraft industry was one of the success stories of the inter-war years. The streamlined Supermarine seaplanes, designed by Reginald Mitchell, were built to compete in the prestigious Schneider Trophy, an international speed trial, which attracted large crowds in the 1920s. In 1931, Britain was given the trophy to keep after Supermarine won its third consecutive contest. It was the first aircraft to fly at more than 400mph (650kph). Mitchell went on to design the Supermarine Spitfire, one of the most successful of the World War II monoplane fighter aircraft.

Domestic Appliances

Appliances for household use grew in importance as domestic servants became less common. The arrival of plastics and of electricity in the home in the 1930s opened the way for a boom in the sale of consumer durables of all kinds.

1 Refrigerator marketed by the Thomson-Houston company in the 1930s; a time when few British homes had fridges. 2 Food processor, the first made by Kenwood, dating from 1948. It was a chunky appliance made mostly of metal. 3 Electric stove from 1900 with resistance wires that heated up iron plates. 4 Telephone from the 1930s with a cradle design and rotary dial. A classic style of the period, almost invariably made in standard black. 5 Dry shaver marketed in the 1950s as a contrast to the traditional “wet” shaving, requiring hot water and foam. 6 Electric toaster in chrome from the early 1950s. A drop side allowed for inserting and removing the bread, a design that was soon superseded by the pop-up toaster. 7 Cona coffee maker, first made in 1910, and designed to make the “perfect” coffee. Its glass structure allowed infusion to take place at the correct temperature. This model dates from the 1950s. 8 Star vacuum cleaner from around 1920—a hand-pumped machine for use in pre-electric households. 9 Kettle and urn with a handle and feet of Bakelite, one of the first plastics, valued for its heat-resistant properties. 10 Electric heater dating from

1913. 11 Television, known as a “televisor” and invented by John Logie Baird in 1926. It showed a “visual wireless” image in black-and-white on its small screen from the beginning of the television age. 12 Can opener, bulls-head style, made in the 1920s. This style was first developed in the mid-19th century. 13 Electric hair drier dating to the 1920s; this model has a wooden handle. 14 Goblin teasmoid dating from the 1950s. This machine was designed to wake a sleeper with a fresh cup of tea automatically prepared—as its name suggests—performing the function of the live-in maid that many could no longer afford to employ. 15 Gramophone of a wind-up portable variety that was widely used through both world wars. 16 Electric kettle, made of stainless steel with a Bakelite handle and whistling spout. 17 Cabinet wireless radio by the British electronics company Ekco, dating from 1932. This boldly modernist style was made out of Bakelite. 18 Washing machine—the English Electric Liberator was an expensive front-loader washing machine introduced in the 1940s; it was designed to “liberate” the housewife from one of the heaviest household chores.

RECRUITMENT POSTER FOR WORLD WAR I

About 230,000 troops from the British Empire died fighting for Britain in World War I. This sacrifice had a decisive impact on relations between Britain and the dominions and India.

GROWING INDEPENDENCE

The British government tried to use the war to strengthen ties between the white dominions and the home country. In 1917, the prime ministers of Australia, Canada, South Africa, and New Zealand were invited to London to serve in an **Imperial War Cabinet**. However, pride in their role in the war made the **dominions more assertive** of their independence after 1918 than they had been before. India, who **suffered heavier losses** in the war than any dominion, was promised in 1917 that it would be rewarded with “responsible government”—that is, **very limited self-rule**—within the British Empire.

Imperial Issues

In the 1920s and 1930s, the British Empire reached its greatest extent, expanded after World War I by German colonies in Africa and part of the former Ottoman Empire. Yet Britain ruled with declining confidence, its authority challenged in particular by a vigorous independence movement in India.

The territories taken over by Britain after World War I, including Palestine and Mesopotamia in the Middle East, and Tanganyika in Africa, were officially held under mandate from the League of Nations. This committed Britain to govern in the interests of the local population and when possible to prepare them for full independence. Although in a sense the mandate system was little more than a fig leaf to cover the shame of imperialist expansion, it did accord with the then-British view of empire. The official British mission was to raise the benighted local population to a level of civilization high enough for them to achieve self-government.

India, by far Britain's largest possession, was considered relatively well advanced toward preparedness

Larwood was part of a diplomatic incident in 1932–33, when his “bodyline” bowling, as directed by his team captain, Douglas Jardine, was objected to by Australia.

for limited self-government under a British-educated elite. Instead of benignly conducting a slow, peaceful progress toward a degree of self-rule, however, Britain found itself faced with a clamorous independence movement that provoked confrontation and fed off the repressive measures taken by the authorities in response. At Amritsar in April 1919, troops commanded by General Reginald Dyer fired on Indian demonstrators, causing heavy loss of life. It triggered widespread protests against British rule, during which Mohandas Gandhi, a master of political propaganda, emerged as the leader of the main independence movement, the Indian National Congress. In 1929, Britain undertook to make India a

self-governing dominion at some time in the future, but this only redoubled Congress pressure for immediate independence. Gandhi led a famous march to the sea in spring 1930, to challenge a British tax on salt. When he visited Britain for a Round Table Conference on India's future in 1931, he was given a hero's welcome by some British workers, and denounced by arch imperialist Winston Churchill as “a seditious middle temple lawyer, now posing as a fakir...”. Despite Churchill's opposition, and the noncooperation of Congress, a Government of India Act was passed by the Westminster Parliament in 1935, giving India some self-government. The Act kept Britain's viceroy in control, however, and was a compromise, which settled nothing and satisfied no one.

458 MILLION

The population of the British Empire in 1922—about a quarter of the total world population at the time. Its land area was 13 million sq miles (34 million sq km).

At the heart of the question was race: Britain recognized the right of white people to self-determination, but was reluctant to extend that right to non-whites. In 1926, Britain formally recognized the independence that the white dominions had long exercised in practice. Britain and its dominions were now “equal in status, in no way subordinate to one another... freely associated as members of the British Commonwealth of Nations.” This was embodied as the 1931 Statute of Westminster. The dominions were thus distinguished from colonies in the West Indies, southeast Asia, and Africa, although where there were substantial white populations—in Southern Rhodesia (now Zimbabwe) and Kenya—colonies were accorded a degree of self-government.

A new closeness

Formally, the Commonwealth of Nations was linked by allegiance to the monarchy. Serious efforts were also made to nourish sentimental, cultural, and practical bonds between the Commonwealth’s equal and

independent members, as well as between Britain and its colonies. As commercial aviation developed, the routes of Britain’s Imperial Airways were consciously planned with this in mind; traveling by luxury flying-boat from London to Cape Town or Sydney via Kenya or India in the late 1930s, showed the global reach of empire. Sports had an essential part to play in imperial bonding. The first Empire Games were held in 1930, as legal ties between the dominions were loosening. Cricket was seen as embodying important British values. Australia and South Africa had played against England since the 19th century, but in the inter-war years this was extended to the West Indies, India, and New Zealand. However, the most

important links were economic. The Depression struck the Commonwealth and colonies hard, chiefly through the sharp fall in prices of the primary products they exported. A British Empire Economic Conference at

“We are **engaged** in an entirely **new experiment** in the world’s **history** and **empire building**.”

LORD BALFOUR, SPEECH IN PARLIAMENT, NOVEMBER 24, 1925

KEY MOMENT

EMPIRE EXHIBITION IN WEMBLEY

The British Empire Exhibition, held at Wembley, London, in 1924–25, was a large-scale celebration of Britain’s imperial past and present. It was opened in April 1924 by King George V, who gave the first royal broadcast, his speech relayed by radio. Attended by more than 27 million visitors, the exhibition was a striking success. Its attractions included a model of the Prince of Wales made from Canadian butter, and reenactments of World War I battles. The exhibition was a conscious attempt to revive imperial sentiment, and its great popularity suggested that the British remained very much attached to the idea of having a huge empire spread throughout the world.

Arab protests

British authorities attempt to control a rioting Arab crowd in Palestine in November 1933, during protests against Jewish immigration. Opposed by both Arabs and Jews, the British found the Palestinian problem intractable.

Ottawa in 1932 instituted “imperial preference”, which encouraged trade within the Empire while erecting a tariff barrier against trade with the rest of the world. By the late 1930s, Britain was the destination of more than half of Australia’s exports and of more than four-fifths of New Zealand’s.

Imperial bonding was by no means a total success. The economic downturn stimulated discontent with colonial rule in the West Indies and in Britain’s West African colonies. Canada was being drawn into the economic and cultural orbit of the United States—it was the only dominion that did not join a British-led Sterling zone in the 1930s. South Africa’s Boers—the majority of the dominion’s whites—remained of doubtful allegiance. Perhaps most significant, if apparently trivial, was the furore caused by the England cricket team’s tour of Australia in 1932–33. The English adopted “bodyline” bowling tactics to counter the Australian batting hero Don Bradman. Seen as dangerous and unfair, it led to both informal popular and formal diplomatic protests in Australia. The message was that both the governments and the people of the dominions were ready to assert their independence against the British.

Middle East problems

The extension of British imperial interests in the Middle East after the collapse of the Ottoman Empire in 1918 brought complex problems. Out of its League of Nations mandated territories, Britain crafted the new states of Iraq and Jordan, soon given nominal independence under pro-British Arab rulers—similar to the independence granted to Egypt in 1922, which did not preclude the maintenance of British troops there. In Palestine, however, no such arrangement could be made. By the Balfour Declaration of 1917, Britain committed itself to “the establishment in Palestine of a national home for the Jewish people.” After World War I, Jewish immigration increased, and so did tension with the Arab population. The British authorities were caught in a trap. Their efforts to limit Jewish immigration earned them the hostility of the Jews, while their failure to end Jewish immigration roused the wrath of the Arabs. From 1936, the British faced a full-scale Arab revolt that was repressed by armed force. A British proposal for the partition of Palestine between Arab and Jewish states was rejected by both sides. The issue remained unresolved.

AFTER

Five million soldiers from the dominions and colonies fought with British troops in World War II. It confirmed the Empire’s importance, but also advanced its downfall.

END OF EMPIRE APPROACHING

In 1939, Australia and New Zealand joined Britain at war **without hesitation**, quickly followed by Canada. In South Africa, a neutralist prime minister was ousted by the pro-British veteran Jan Smuts. South Africa **remained divided**, the Afrikaner Nationalist Party supporting Hitler. Despite talk of self-government, India was brought into the war by the viceroy **without consultation** with Indian political leaders.

Britain’s **early defeats in the war**, and especially the loss of Singapore to the Japanese in February 1942, **undermined its status** as an imperial power, as did the attitude of Britain’s ally, the United States. The **Atlantic Charter**, an Anglo-American statement of war aims, declared “the **right of all people** to choose the form of government under which they live.” Britain’s Prime Minister **Winston Churchill** remained a **convinced imperialist**, announcing he did not intend “to preside over the dissolution of the British Empire”, but by 1945, pressure for an **end to colonialism** was mounting **364–65** >>

Edward, Prince of Wales

As heir to the throne, the future Edward VIII was a glamorous figure, at least by the standards of British royalty, and the formal pose shown here contrasted to the informality he would bring to the role of king.

The Abdication of Edward VIII

In December 1936, Britain was threatened with a constitutional crisis when the young King Edward VIII declared his intention of marrying twice-divorced American Wallis Simpson. The government considered the King's choice of consort unacceptable. The issue was resolved when Edward abdicated, choosing love and exile over duty and the throne.

BEFORE

King George V died on January 20, 1936. His eldest son was to be crowned Edward VIII on May 12, 1937, but it never happened.

THE PRINCE

George V's reign had been one of **moral conservatism** in private life, and a rigid adherence to the principles of **constitutional monarchy** in the execution of public duties. Edward had shown while Prince of Wales that he was **unlikely to be so restrained** in either sphere. He had on occasion commented publicly on political issues, such as unemployment.

A "FAST" SOCIAL SET

Considered handsome and, at 41 years old, still **relatively young at his accession**, Edward was used to mixing with a "fast" social set, where such modern trends as cocktails and jazz were enjoyed, and **extra-marital affairs were normal**. This was ultimately to be his undoing.

CORONATION CUP

At his accession Edward VIII was a popular King. He brought a fresh breath of modernity, glamour, and relative youth to the stuffy image of the British monarchy. However, the Conservative Prime Minister Stanley Baldwin and other key Establishment figures, such as the Archbishop of Canterbury, Cosmo Lang, disapproved of him. The British press shielded the public from knowledge of the Prince of Wales's private life, but insiders knew that Edward—like his grandfather Edward VII—did not conform to contemporary standards of rectitude in sexual morality. Baldwin was also troubled by the fear that the new King, who had loose sympathies with Nazi

British Establishment, however, the idea of an American divorcée as queen was unthinkable. Baldwin won backing from his own government and party, as well as from the opposition and heads of Britain's Dominions, for an absolute rejection of the King's planned marriage. A proposal for a morganatic union—with Simpson the King's wife, but not his queen—was equally unacceptable. Edward was told to choose between marriage to Simpson and the throne.

The storm breaks

Early in December, the British press at last broke its self-imposed silence and the issue exploded into the headlines. There was much popular sympathy for the king, but politically he won the support only of extremists and eccentrics,

"I renounce the throne for myself and my descendants."

KING EDWARD'S MESSAGE ANNOUNCING HIS ABDICATION, 1936

Germany and Oswald Mosley's Fascist BUP, would refuse to be governed by his ministers on political issues.

A marriage crisis

A far greater storm than Edward's political views was brewing from a quite different direction. On November 16, Edward informed Baldwin that he was determined to marry Mrs. Wallis Simpson, who was already in her second marriage. From 1934, she was his constant companion, a fact widely reported in the American and other foreign press, but ignored by British newspapers, partly because they respected the privacy of the royal family, and partly because the major press barons, Lords Rothermere and Beaverbrook, were well disposed toward Edward. So the crisis was at first played out entirely behind closed doors. Simpson had been granted a decree nisi at a divorce court in Ipswich on October 27, so there was no legal obstacle to her eventually marrying Edward. To the

including the Communist Party, Mosley's BUP, and the maverick Conservative backbencher Winston Churchill.

Ignoring pleas from Simpson, who had fled abroad, that he should abandon her and keep the throne, on December 10

Edward abdicated. The abdication was confirmed by Act of Parliament the following day.

Edward's brother Albert, Duke of York, became King George VI.

In a dignified, moving radio broadcast that evening, Edward,

now Duke of Windsor, said: "I have found it impossible to carry the heavy burden of responsibility and to discharge my duties as King as I would wish to do without the help and support of the woman I love." That night he sailed from Portsmouth into exile.

The British people, whatever diverse opinions they held in private, docilely accepted this reassertion of the values of the British Establishment. The shy and stuttering George VI inherited the coronation arranged for Edward.

Duchess memorabilia

Since the Duchess of Windsor's death in 1986, many of her possessions have been sold at auction, including the handbag and gloves shown here.

The abdication document

The Instrument of Abdication was signed by Edward and witnessed by his three brothers at Fort Belvedere in Windsor Great Park on December 10, 1936.

AFTER

Edward's reign lasted 327 days. His subsequent life as Duke of Windsor lasted 35 years, during which he made only rare and fleeting visits to Britain.

DUKE AND DUCHESS

On June 3, 1937, the **Duke of Windsor married** Wallis Simpson at the Château de Condé, in France. No member of the British Royal Family

CHÂTEAU DE CONDÉ

attended. Wallis Simpson became Duchess of Windsor, but George VI would **not accord her the right** to be styled "Her Royal Highness."

GOVERNOR OF THE BAHAMAS

Edward made no secret of his **admiration for Nazi Germany**. In World War II **348-49 >>**, he was made Governor of the Bahamas to remove him from possible **contact with Germans**, who saw him as a future king of a fascist Britain.

American divorcée

Born Bessie Wallis Warfield, Wallis Simpson was a well-off socialite from Pennsylvania, who had been divorced twice. In 1930s Britain, few people considered divorce morally or socially acceptable.

BEFORE

After World War I, Britain felt secure and took part in international efforts to promote disarmament and find peaceful methods of resolving disputes.

SEARCH FOR PEACE

Britain was a founding member of the **League of Nations** << 330–31, which undertook to deter any act of aggression by collective action. This, and the **absence of any powerful enemies**, enabled Britain to slash defense spending to 2.5 percent of national income. In 1928, Britain signed the Kellogg-Briand Pact, **renouncing war** “as an instrument of national policy.”

COUNCIL OF THE LEAGUE OF NATIONS

Digging air-raid trenches

Children at Harrow, near London, prepare primitive air-raid shelters in their school playing field during the Munich Crisis of September 1938.

Slide to War

The rise of Adolf Hitler’s aggressive Nazi regime in Germany from 1933 posed a challenge that the British did not want to face. Seeking peace at almost any price, Neville Chamberlain’s government followed a policy of appeasement, which at least bought the country time to rearm. In the end, Hitler’s actions made it impossible for Britain to avoid war.

On January 30, 1933, Adolf Hitler became Chancellor of Germany, determined to overthrow the 1919 Versailles Treaty (see p.331) and restore Germany as a great power. Ten days later, Oxford Union students voted that they would “in no circumstances fight for [their] King and Country.” The unpatriotic vote led to outrage in much of the British press, but it reflected a widespread anti-war sentiment—a heartfelt desire to avoid a repetition of the slaughter of World War I.

Britain’s response to Hitler’s insistent provocation was inhibited from the outset by the belief that Germany had a genuine grievance over the Versailles Treaty. It was also confused by the Conservative Party’s perception of the Nazis as a useful barrier to the spread of Soviet communism. The Labour Party and the trade union movement were also implicated in the failure to stand up to Hitler, opposing British rearmament until the late 1930s.

Public opinion in Britain would never have supported military action to uphold the Versailles Treaty in 1935–36, when Hitler openly embarked on rapid rearmament and sent troops into the demilitarized Rhineland. The League of Nations proved incapable of decisive action against Japanese aggression in

Manchuria in 1931, and the Italian invasion of Ethiopia in 1935. By the second half of the 1930s, the idea of collective security through the League was dead. Traditional balance of power diplomacy stumbled amid European ideological divides between dictatorships and democracies, fascists and communists. Britain tried to make an ally of Italy, but fascist dictator Benito Mussolini found Hitler more accepting of Italy’s aggressive ambitions. Soviet Russia, an obvious potential ally against Germany, was shunned because of British dislike of Stalin’s communist regime. The same ideological complications paralyzed the British government response to the Spanish Civil War of 1936–39. While Germany and Italy intervened militarily on behalf of Francisco Franco’s right-wing nationalists, Britain’s only involvement

Vital war material

Britain raced to produce shells and other munitions as war approached. Defense budgets more than tripled in 1935–39.

came from individuals joining the communist-organized International Brigades.

Appeasement

By the time Neville Chamberlain took over from Stanley Baldwin as Prime Minister in 1937, Conservative backbencher Winston Churchill’s warnings against giving in to German aggression were sounding uncomfortably convincing. Chamberlain believed that Britain lacked the military strength to stand up to the Germans. He accelerated the rearmament program that Baldwin had tentatively begun two years earlier, while simultaneously pursuing appeasement—the satisfaction of Germany’s “legitimate claims.” After absorbing Austria in the “Anschluss” of March 1938, Hitler turned his attention to Czechoslovakia, which had a German minority in its Sudetenland region. Faced with a possible German attack on the Czechs, in September 1938, Chamberlain embarked on a diplomatic initiative, flying

twice to meet Hitler in Germany. However, each concession made was followed by Hitler raising the stakes. War looked inevitable, but at the last hour, an agreement reached at Munich saw the Sudetenland region detached from Czechoslovakia, and Chamberlain returned home to triumphantly announce “peace for our time.”

Euphoria was short-lived, however, and a sense of having given in to aggression through fear was confirmed in March 1939 when Hitler sent troops into the Czech capital, Prague—to which he had no “legitimate claim.”

Invasion news

London's *Evening Standard* announces the German invasion of Poland, and Britain's subsequent mobilization, on September 1, 1939. Britain declared war on Germany two days later.

Britain responded by guaranteeing to defend a number of countries, including Poland, against German aggression, and by seeking a military accord with Soviet Russia. They were preempted by the Nazis, who concluded their own pact with Stalin in August, clearing the way for a German attack on Poland on September 1.

Munich Pact

Returning from the Munich Conference to cheering crowds on September 30, 1938, Prime Minister Neville Chamberlain waves a paper bearing Hitler's signature and his own. He later declared he had returned from Germany “bringing peace with honor”, but Winston Churchill called the agreement a disaster.

600,000 An estimate of the number of civilian deaths expected through German bombing in the first two months of fighting. The actual civilian death toll was 60,000 in more than five years of war.

Because of Britain's commitment to defend Poland, on September 3, 1939 Chamberlain grimly informed the British people that they were “at war with Germany.”

FIRST DAYS OF WAR

The war had been long expected. The authorities were prepared for the immediate **bombing of British cities**, and assumed there would be mass casualties. On September 1, two days before the declaration of war, the **evacuation of cities** began and a **black-out was enforced**. Some 1.5 million Anderson air-raid shelters had already been distributed for people to erect in their gardens, but the **bombing did not happen immediately**. In September 1939, most casualties were caused by **road accidents in the black-out**. Conscription was already in place when the war began, but Britain did not have any plans for giving military assistance to Poland, which was **left to fight alone**.

Retreat from Dunkirk

Troops waded through water to reach rescue vessels during the evacuation from Dunkirk in May–June 1940. A total of 340,000 British and other Allied soldiers were rescued from the military disaster in France, but all tanks and artillery were lost.

Britain Alone

In the early years of war, Britain narrowly avoided defeat by Nazi Germany. The country's survival, under the leadership of Winston Churchill, was an epic of endurance. Loyal supported by its Commonwealth, Britain upheld the cause of freedom in Europe.

BEFORE

Britain declared war on Germany on September 3, 1939, following the German invasion of Poland. The Poles were defeated five weeks later, leaving it unclear what Britain would do next.

SLOW START

The period from the outbreak of war to spring 1940 was dubbed the **Phoney War**, because of the lack of action. A British Expeditionary Force took up position alongside the French, but the Germans did not attack.

On **April 9, 1940**, however, **Hitler** brought the Phoney War to an abrupt end by **invading Denmark and Norway**. Within a month, **Britain was facing comprehensive defeat** in the Norwegian campaign and Prime Minister Neville Chamberlain was forced to resign << 346–47.

INNOVATION

RADAR

From 1935, a research team led by Robert Watson-Watt worked on a system using radio waves to track aircraft in flight. Although radar was also developed in other countries, including Germany, Britain took the lead in perfecting the technology and its deployment as part of an integrated air-defense system. Radar was vital to Britain's survival during the Battle of Britain in 1940.

Winston Churchill replaced Chamberlain on May 9, 1940, forming a broad-based coalition government. The following day, German forces invaded the Netherlands and Belgium as a prelude to an attack on France. The campaign rapidly degenerated into a disaster for the Allies—the fast-moving German Blitzkrieg tactics outclassed British and French forces. Though Britain successfully evacuated its encircled troops from Dunkirk, it still signaled a major defeat. The French surrender on June 22 left Britain isolated. Hitler expected the British government to accept humiliating peace terms, but the pugnacious Churchill rallied the nation behind a stance of “no surrender.” Through the summer of 1940, as an air war raged over southern England (see pp.356–57), British forces stood ready to resist a German invasion.

Failing to achieve command of the skies, Hitler called off his invasion plans in mid-September, but Britain's situation remained dire, as the German Luftwaffe turned to night bombing. The Blitz failed to break morale or halt war production, but the extent of the destruction was daunting. A more potent strategic threat was posed by German U-boat submarines, operating from bases on France's Atlantic coast. They menaced Britain's maritime supply lines, which if severed would starve the country. Despite warships escorting merchant convoys, U-boats sank more than a thousand Allied ships in the first two years of the war.

Dogged resistance

Even in the desperate summer of 1940, Churchill sought opportunities for offensive action, keen to impress the United States with Britain's will to fight. The Special Operations Executive (SOE)

was set up to arm resistance movements in occupied countries and sabotage economic targets. The Royal Air Force (RAF) began night raids on Germany, but the results were disappointing, as British bombers, ill-prepared for night flying, missed their targets. The British Army won some heartening victories against Mussolini's Italian forces in the North African desert after June 1940. Yet here too, Britain suffered once the Germans intervened. It lost Greece and Crete in spring 1941, when Erwin Rommel's Afrika Korps turned the tide in the desert war.

War in the desert

The North African desert was the site of successes for British and Commonwealth forces in the winter of 1940–41, when they defeated poorly led Italian troops.

Britain needed powerful allies to stand a chance of victory. US President Franklin D. Roosevelt, although sympathetic, was conscious of deep-rooted anti-war sentiments in his country. American economic support was more forthcoming, especially after the lend-lease program came into force in March 1941. This enabled the British to borrow war supplies against later repayments. The Soviet Union, invaded

Battle of Britain

The RAF had a numerical advantage in the Battle of Britain. The British built 1,900 fighter planes, while the Germans had only 775. The map shows the major cities bombed, radar stations, and the RAF and Luftwaffe bases in 1940.

by Germany in June, became Britain's first major fighting ally. Churchill and Roosevelt agreed the Atlantic Charter—a statement of war aims—in August, and American warships began to defend Atlantic convoys. The Japanese attack on Pearl Harbor on December 7 forced the US to enter World War II, much to Churchill's joy.

43,000 The number of people killed in the bombing of British cities between September 1940 and May 1941. Around half the casualties were in London.

AFTER

The entry of the US into World War II in December 1941 did not immediately bring relief to Britain. The Japanese onslaught in Asia led to fresh disasters.

LOSSES IN ASIA

Britain had long been uncomfortably aware that it **lacked the resources to defend its Asian colonies**, while simultaneously fighting a war in Europe. **Japan rapidly took Hong Kong**, overran Malaya and, in February 1942, captured the **British military base at Singapore**. The tide of Japanese advance continued into Burma before stalling at the borders of India **358–59** >>.

BRITISH PRIME MINISTER Born 1874 Died 1965

Winston Churchill

“In war, **resolution**;
in defeat, **defiance**;
in victory, **magnanimity**;
in peace, **goodwill**.”

WINSTON CHURCHILL, *THE SECOND WORLD WAR*, 1948–53

Winston Leonard Spencer Churchill was born into an aristocratic family and grew up in a late-Victorian Britain that saw imperialism in full flood. His father was a senior Conservative politician, and his beautiful mother an American heiress. As a young cavalry officer and war correspondent, Winston Churchill developed a love of empire and a delight in warfare. After seeing military service in British India, he took part in the Battle of Omdurman in 1898, in the Sudan, where the Mahdists were slaughtered by British firepower, and in 1900 witnessed the British military disaster at Spion Kop, during the Boer War. A gifted writer and natural self-publicist, he wrote articles and books that showcased his

experiences, describing his participation in a cavalry charge at Omdurman or his escape from a Boer prisoner of war camp in the style of boys' adventure stories. By the time he entered Parliament as a Conservative MP in 1900, following in his father's footsteps, he was already a recognized public personality. Too restless and ambitious to settle comfortably in the Tory ranks, in 1904 he “ratted” to join the Liberal Party, whose interest in radical reform offered more scope for dramatic action. Along with David Lloyd George, he made himself the most newsworthy

minister in the pre-World War I Liberal administration. Home Secretary in 1910, at the age of 35, he found plenty of outlet for his bellicosity in

confrontations with striking trade unionists, pro-Union Ulster Protestants, and militant suffragettes intent on votes for women. As First Lord of the Admiralty from October 1911, he drove forward the “naval race” with Germany. Embracing technological innovation, he gave the Royal Navy oil-fired battleships with 15-in (38-cm) guns, and created the Royal Naval Air Service to exploit the potential of aircraft—just as he would later promote the development of the first tanks for the army.

The British bulldog

This American poster dating from 1942 shows Prime Minister Winston Churchill as a bulldog. It was a familiar image for a British wartime leader determined to defend the nation he loved.

The Great War

As war with Germany approached in the summer of 1914, Churchill described his emotional state as “interested, geared up, and happy.” Yet the first year of the war proved a personal disaster. The Royal Navy failed to live up to the British public's expectations. Churchill's fascination with imaginative schemes led him to back the disastrous Gallipoli campaign against Germany's Ottoman ally in 1915. When it failed, with huge British casualties, he was ejected from the Admiralty. Shocked and humiliated,

Master of war

Churchill is photographed in North Africa in 1944, a still vigorous leader approaching his 70th birthday. He was not a warmonger – he did his best to preserve peace – but it was his nature to be thrilled by armed conflict.

Welcome visit

Churchill visits bomb-damaged Bristol after a raid in April 1941. His walkabouts were designed to raise morale among the hard-pressed British. Despite some skepticism, his presence seems to have been genuinely welcomed by the majority.

Churchill struggled to achieve political rehabilitation. By July 1917, after a spell in the army at the front line in France, he was back in the Cabinet, now led by Prime Minister Lloyd George, but although he continued to hold high office into the post-war period, his reputation had taken a hard knock. His talents and energy were admired, but he was widely distrusted, even by his own party members, as an irresponsible adventurer.

Wilderness years

Churchill “re-ratted” to join the Conservative Party in 1924. In the unlikely role of Chancellor of the Exchequer, he was responsible for Britain’s disastrous return to the Gold Standard in 1925—a decision based on the advice of financial experts that was designed to return stability to a jittery post-war international financial system. When Wall Street crashed and the world economy nosedived in 1929, Churchill was among the victims, losing much of his personal wealth.

“... what is **our aim?** I can answer in one word: **Victory.** **Victory** at all costs...”

WINSTON CHURCHILL, MAY 13, 1940

Relegated to the backbenches, in the 1930s, his career was saved by the rise in Germany of Adolf Hitler and the Nazi Party. Churchill’s ominous warnings of the growing German threat, advocacy of British rearmament, and opposition to the appeasement of Hitler looked increasingly prescient as the European situation worsened. It was inevitable that he should be asked to join the government by Prime Minister Neville Chamberlain when war broke out again in September 1939.

War leader

Churchill’s rise to Prime Minister in May 1940 was paradoxical. He had been more responsible than anyone else for the fiasco of the Norwegian campaign that had brought down the Chamberlain government. Yet his warlike spirit and his sheer desire for the job made him the natural choice to lead the country in its greatest crisis. He told the British people “we shall never surrender”, and convinced them that he meant it. His old-fashioned, high-flown speeches, broadcast on radio, touched a chord with their stirring, if daunting, promise of “blood, toil, tears, and sweat.” The impact on the nation’s morale was immediate. Less successful was Churchill’s impact on military operations. He wanted to run the war himself, overriding the military professionals, but had lost none of his propensity for ill-judged offensives. His work rate was phenomenal for a man

beyond retirement age. He flew around the world to Allied summits, from Tehran and Yalta to Casablanca and Quebec. His total commitment to defeating Hitler made him a loyal ally of Joseph Stalin, despite his hatred of Soviet communism, and he assiduously courted President Roosevelt, both before and after America’s entry into the war in December 1941. In the long run, he was ill-rewarded for his pains, as both Roosevelt and Stalin intended to end the British Empire that Churchill loved, and British influence was increasingly sidelined.

Post-war years

After the heroic days of 1940, Churchill’s hold on the British public waned. He could not identify himself with the popular desire for social change. His defeat in the 1945 general election was not a judgment upon his war leadership, but on the policies he was expected to follow in peace. In 1946, he alerted the Americans to the danger of Soviet expansion in his “Iron Curtain”

speech at Fulton, Missouri. Publication of his war memoirs won him the Nobel Prize for Literature. His second spell as Prime Minister from 1951 was marred by his worsening health, and his reluctant resignation in 1955 was a relief to his colleagues (he stayed an MP until 1964). But his place in British hearts was never lost, and his state funeral in 1965 was an occasion of deep-felt national mourning.

Presidential gift

This medallion was presented to Churchill in 1955 by US President Dwight Eisenhower. Churchill always stressed the bond between the two “English-speaking peoples.”

TIMELINE

November 30, 1874

Churchill is born at Blenheim Palace, Oxfordshire, son of Lord Randolph Churchill and Jennie Jerome. He is educated at Harrow (1888–93) and the Royal Military College, Sandhurst (1893–94).

1895–1900

Cavalry officer and war reporter in Cuba, India, Sudan, and South Africa.

YOUNG CHURCHILL

October 1900 Elected Unionist (Conservative) MP for Oldham. Crosses the floor of the House of Commons in 1904 to join the Liberal Party.

1908 Enters Cabinet in the Liberal government of Herbert Asquith; marries Clementine Hozier.

1911 Appointed First Lord of the Admiralty; holds post as Britain enters World War I in 1914.

May 1915 Ousted from Admiralty after failed Gallipoli landings. Serves on Western Front from November 1915 to March 1916. Becomes Minister of Munitions in July 1917.

1919–22 Secretary of State for War and the Colonies. Loses seat in 1922 general election.

October 1924 MP for Epping. Rejoins the Conservative Party and becomes Chancellor of the Exchequer to June 1929.

1929–39 Out-of-office backbencher. Critical of Conservative policy on India and appeasement.

September 1939 Outbreak of World War II. He is again appointed First Lord of the Admiralty.

May 1940 Churchill replaces Chamberlain as Prime Minister, leading a broad coalition government through World War II.

July 1945 Defeated in general election, but remains leader of the Conservative Party.

October 1951 Wins general election and resumes as Prime Minister, serving to April 1955.

January 24, 1965 Churchill dies in London. He is accorded a state funeral on January 30.

FUNERAL CORTEGE OF WINSTON CHURCHILL

Life during the Blitz

A milkman carries out his duties the morning after a German bombing raid over London during the winter of 1940–41. This period of intense bombing, which became known as the Blitz, was devastating, but most were determined to remain defiant in the face of the enemy.

Missing luxuries

Some women painted seams on their legs to create the illusion of stockings—the kind of luxury goods almost unobtainable under austerity regulations.

Life in Wartime Britain

The authorities in Britain recognized that the war for national survival could not be won without enlisting the support of the whole population. Civilians in Britain's cities and factories were in the front line of the war against Hitler.

The British entered World War II without enthusiasm, but with a better understanding of the demands of total war than in 1914. They accepted conscription with barely a murmur of dissent, and the government introduced rationing when it discovered that the public favored it. The distribution of gas masks, the imposition of black-outs, and the mass evacuation of children from cities reflected expectations of immediate aerial bombardment. The evacuation of children from urban slums to rural

Bomb shelter

Anderson shelters were structures of corrugated steel that people erected in their backyards. Half-buried and covered with a layer of earth, they offered good protection for a family. More than 3 million shelters were distributed by the government.

England, where there was less risk of air raids, was a shock for everyone—some of the children had never seen a cow, while many people who housed them had never seen children who slept without pyjamas. The experience is credited with making the British middle class more aware of the realities of urban poverty.

Preparing for war

The war did not take on urgency and drama until spring 1940. After the establishment of a coalition government under Winston Churchill in May and the fall of France in June, a sense of social solidarity and common endeavor was forged. This was not only exaggerated by official propaganda, but also truly felt by a population with its back

79 London Underground stations acted as bomb shelters during the Blitz. Some 177,000 people were sleeping in them every night, at the height of the bombing.

to the wall. More than a million men, most too old for the army, enrolled in the Home Guard militia in summer 1940 and prepared to fight until death if the Germans invaded. When the Blitz, the long-awaited German bombing of towns and cities began in September, civilian morale held up far better than the authorities had expected. Of course, bombed civilians were terrified. In London, many took refuge in Underground stations or in

BEFORE

World War II brought a vast extension of the powers of the British state over its citizens. From the outset, some basic liberties were suspended.

THE PRICE OF WAR

The **Emergency Powers Act** authorized the government to make regulations that it thought necessary for the defense of the country, or for the prosecution of the war. In October 1939, a **National Register** of British citizens was compiled and **identity cards** were issued.

INTERMENT OF ENEMY ALIENS

At first, **German nationals** in Britain were **assessed by tribunals** and those identified as pro-Nazis were interned. In 1940, almost all enemy aliens were interned. About 1,500 **British Fascists were imprisoned** without trial, including their leader Sir Oswald Mosley.

INTERMENT CAMP AT LIVERPOOL

“This war, whether those at present in authority like it or not, has to be **fought as a citizens’ war.**”

J.B. PRIESTLEY, *OUT OF THE PEOPLE*, 1941

communal shelters, although more remained in their home. In smaller cities people decamped to the countryside. There were instances of breakdown of order—looting of bomb-damaged buildings and theft of valuables from the dead. These acts were wholly outweighed by the everyday heroism of air-raid wardens, firefighters, medical personnel, police, and ordinary citizens, who carried on with their daily lives amid the devastation. By the end of the second year of the war, more British civilians had been killed by enemy action than British servicemen. Yet popular support for the war effort remained intact—members of the government or the royal family were able to visit recently bombed streets with minimal security and with the expectation of a warm response.

Consensus and sacrifice

The high level of consensus in support of the war allowed the state to exercise control over people’s lives without being seen as oppressive. Aware that the battle for production was as important as the clash of armies, the government in effect extended conscription to civilian life. The Ministry of Labour, under leading trade unionist Ernest Bevin, was vested with the power to direct “any person in the United Kingdom to perform any service required in any place.” The blurring of the distinction between military and industrial service was exemplified by the Bevin Boys, young conscripts chosen by lot in 1944 to work in understaffed coalmines instead of battlefronts. Even more than in World War I, women were called upon to carry out jobs traditionally occupied by men. The conscription of women, first introduced in December 1941, was the subject of much soul-searching for the government, but readily accepted by the population at large. Productivity rose steeply, not only in factories but also in

agriculture, where fertilizers and tractors pushed up yields. There was little trade union resistance to the direction of labor or measures taken to increase output, partly because industrial wages rose by around 10 percent above inflation through the war. The middle classes by contrast did badly, hard hit when the standard rate of income tax was raised to 50 percent in 1941.

8 MILLION The number of women in work by 1943. Around 2 million women were employed in arms factories and 500,000 in non-combat roles in the armed forces.

The involvement of the whole population in the war effort was one of the key purposes of government propaganda. Campaigns for people to hand in their unwanted aluminum pots and pans to be recycled as Spitfires, or to “Dig for Victory” by growing vegetables in their flower beds, were important not for their practical effect, but for the sense of participation they encouraged.

Rationing and austerity were the order of the day for the British people, but were made bearable by apparent equality of sacrifice. Government regulations set the size of the lapels on a jacket and the length of shirt-tails, the recipe for a loaf of bread, the style and wood content of furniture, the maximum price of a restaurant meal, and the size of a pencil. The state also provided people with cheap food in work canteens and national restaurants (communal kitchens), cod liver oil and free school meals for children, and useful advice on how to cook nutritious vegetables. Despite shortages, such as the lack of bananas, the British people, in general, ate more healthily during the war than before it.

The American influence

The later stages of the war were in many ways different from the heroic period of the invasion scare and the Blitz. The huge influx of foreign troops, primarily Americans, in 1943–44, had a significant impact

Stay-at-home vacations

A government poster tells people to vacation at home, to lessen pressure on the railway system. This advice was rejected by the people, who continued leisure travel despite the cancellation of some train services.

brides”, who eventually sailed to the United States. The subjection of the war-weary London population to attack by V-1 flying bombs and V-2 rockets in 1944 was psychologically harder to bear than the Blitz. By 1945, people were yearning not only for peace, but for a better future. There was a widespread desire that Britain should not go back to the way it had been before—that unemployment and poverty had to be left behind. This mood underlay the landslide Labour victory in the 1945

general election, contested

while the country was still at war with Japan.

It conveyed the sense that people deserved decent lives for patiently bearing the risks and sacrifices of the path to victory.

Child’s gas mask

Gas masks were distributed not just to adults, but also children and babies. They weren’t of much use, as neither side resorted to the use of chemical weapons.

on British society. It opened up new perspectives for people, many of whom had rarely, if ever, met a foreigner before the war. American soldiers and airmen were only partly responsible for the extraordinary rise in the illegitimate birth rate, which tripled during the war. Nevertheless, the attraction that the proverbially “overpaid and oversexed” allies exercised upon British women was reflected in the 80,000 “GI

AFTER

The foundations of a post-war welfare state were laid by Churchill’s coalition government during the war, most famously through the conclusions of the 1942 Beveridge Report.

THE BEVERIDGE REPORT

In 1941, economist and social reformer Sir William Beveridge was appointed chairman of a government committee on social insurance. The report he published the following year was an instant bestseller. It advocated “**cradle to grave**” social security to be funded by national insurance, with contributions from individual employers and the state. There was to be a national health service and an end to mass unemployment. The new plan would slay the hostile “giants on the road of reconstruction”, which Beveridge capitalized as: Want, Disease, Ignorance, Squalor, and Idleness.

The Beveridge report was welcomed by Labour members of the governing coalition. In 1944, the government issued white papers with

proposals for a national health service, full employment, and social insurance **360–61** >>. Meanwhile the President of the Board of Education, the Conservative politician, R.A.B. Butler, produced an Education Act that instituted free, universal secondary schooling.

WILLIAM BEVERIDGE

DECISIVE MOMENT July 10–October 12, 1940

The Battle of Britain

In the summer of 1940, Royal Air Force (RAF) pilots in Hurricanes and Spitfires fought to deny the German Luftwaffe command of the skies over southern England. If the RAF had failed, Germany might have mounted a cross-Channel invasion of Britain, with the Royal Navy unable to intervene because of a lack of air cover.

On June 18, 1940, Prime Minister Winston Churchill told the House of Commons that “The Battle of France is over. The Battle of Britain is about to begin.” However, his statement was premature.

The duel begins

Into mid-July, as preliminary skirmishes between the RAF and the Luftwaffe commenced over the English Channel, Adolf Hitler continued to hope that Britain would agree to a humiliating peace settlement with Germany. It was not until August 13 that the Germans launched a sustained campaign to destroy Britain’s air defenses.

Fortunately for Britain, this was a battle the RAF had long prepared to fight. A system of radar stations linked to central control rooms allowed RAF fighters to scramble in time to intercept incoming German bombers and their Messerschmitt fighter escorts. Hugh Dowding, the head of RAF Fighter Command, cleverly conserved his

forces, while the Luftwaffe wavered in its objectives, never sufficiently systematic in targeting radar stations, aircraft factories, or airfields.

The RAF also benefitted from an influx of pilots from the dominions and from across occupied Europe. This was essential, for although there were always sufficient aircraft, experienced pilots were particularly in short supply.

On September 7, with RAF Fighter Command hard pressed, the Luftwaffe switched from attacking airfields to the daylight mass bombing of London.

The battle climaxes

On September 15, now known as Battle of Britain Day, around 1,000 German aircraft attacked in two waves. The RAF responded in strength, claiming to shoot down 186 enemy aircraft on the day. Although this is now discounted as exaggerated, Britain’s air defenses had not broken, and while daylight raids continued into October, any invasion plans were indefinitely postponed.

“Never in the field of human conflict was so much owed by so many to so few.”

PRIME MINISTER WINSTON CHURCHILL, HOUSE OF COMMONS, AUGUST 20, 1940

Hurricanes in flight

RAF Hawker Hurricanes fly in tight formation in the skies over southern England in the summer of 1940. Although its role in the Battle of Britain is often overshadowed by that of the Supermarine Spitfire, the Hurricane actually accounted for most of the RAF’s kills in the battle.

Celebrating victory

The inhabitants of a street in Bristol—without most of their young men, who were still away in the armed forces—celebrate victory in 1945. The British were determined that winning the war would be followed by building a fairer society.

The array of forces aligned with Britain in 1942 was impressive. As well as the US and the Soviet Union, there were the Commonwealth countries that had stood by Britain from the start, and governments-in-exile and the freedom fighters of defeated European countries—the Free French and the Polish resistance making some particularly notable contributions. Yet the tide of the fighting flowed against the Allies for a long while. By the summer of 1942, the Japanese advance reached the borders of India, and German armies continued to push deep into the Soviet Union. In North Africa, the Axis forces under General Rommel invaded Egypt, placing the Suez Canal at risk. In the Atlantic, the sinking of Allied merchant ships by U-boats rose steeply. Churchill's popularity slumped and his leadership came to be questioned as the sequence of military disasters appeared unstoppable. Then, in October–November 1942, General Bernard

committed themselves to seeking the “unconditional surrender” of their enemies. The Allies were divided on strategy though. Churchill successfully resisted American pressure for a speedy invasion of France—his attitude was based on a pessimistic estimate of the risks involved—and convinced the US to devote resources to the Mediterranean. Meanwhile, British and American air forces undertook a joint bombing offensive against Germany, with the RAF attacking by night and the US Army Air Force (USAAF) by day. They achieved

two notable acts of mass devastation—of Hamburg in July 1943, killing more than 40,000 German civilians, and of Dresden in February 1945, killing around 25,000. The merits or otherwise of the bombing of German cities remains one of the war's most controversial aspects.

Britain's weakening control

Britain's waning influence on the war was evident when Churchill met Stalin and Roosevelt at Tehran in 1943, where he had to accept an invasion of France in 1944.

“These are **not dark days**: these are great days—the **greatest days** our country has ever lived.”

WINSTON CHURCHILL, SPEECH GIVEN ON OCTOBER 29, 1941

An Allied Victory

Between 1942 and 1945, Britain fought as part of an alliance dominated by the United States and the Soviet Union. The British could be rightly proud of their role in the victory over Germany and Japan, but the supreme effort of war exhausted the nation's resources.

BEFORE

The United States entered World War II as an ally of Britain after the Japanese attacked Pearl Harbor on December 7, 1941. Hitler obligingly declared war on the Americans four days later.

ANGLO-AMERICAN ALLIANCE

The foundation for a wartime Anglo-American alliance had already been somewhat laid. The **Atlantic Charter**, agreed between Churchill and President Roosevelt in August 1941, provided a **principled statement of war aims**, including “no territorial gains”, “self-determination”, and “freedom from want and fear.” The **American lend-lease program was already established** as the basis for providing Britain and other allies of the United States with war supplies.

On December 13, 1941, British and American leaders met in Washington at the Arcadia conference and thrashed out terms for military cooperation. They set up the **Combined Chiefs of Staff as a joint supreme command**. Britain also handed the Americans the fruit of its atom bomb research. Although the Soviet Union had been fighting alongside Britain since June 1941, no such close-knit relationship existed.

Montgomery's Eighth Army defeated Rommel in the Egyptian desert at El Alamein. Churchill later wrote, “Before Alamein we never had a victory. After Alamein we never had a defeat.”

The Allies fight back

In 1943, the enemy was pushed back on all fronts. The U-boat menace in the Atlantic was finally subdued, and the

1 MILLION The total weight in tons of the bombs dropped on targets in Germany by the RAF during World War II. More than 55,000 airmen of RAF Bomber Command were killed in the war.

Soviet Red Army defeated the Germans at Stalingrad and Kursk. Italy was invaded and had to surrender, although the Germans continued the fight in the Italian peninsula. Japan was also pressed back by the Americans and Australians in the Pacific. At a summit in Casablanca in January 1943, Churchill and Roosevelt

Liberation march

British soldiers march through the French port of Cherbourg, captured from the Germans less than a month after the Normandy landings in 1944. Everywhere they went, Allied troops were welcomed as liberators.

Triumph in Europe

A newspaper announcement on May 8, 1945 declares that "Victory in Europe" has officially arrived. VE Day had been frustratingly delayed as a series of German surrenders took six days to complete.

England was turned into a massive armed camp in preparation for landings in Normandy, which took place on D-Day (June 6). The Allied invasion force was under the command of the American General Dwight D. Eisenhower, although many of the troops were British and Canadian. In the hard fight to break out of Normandy, relations between Britain's war hero Montgomery and Eisenhower deteriorated rapidly. They remained acrimonious during the eventful and costly campaigns that took the

Allied armies across France and Belgium, and eventually over the Rhine in spring 1945.

In the last months of the war, British troops drove the Japanese out of Burma, advanced into northern Italy, and occupied the Ruhr, while the RAF laid waste German cities. Yet the country's financial resources were exhausted and so were its people. The German surrender, finalized on May 8, 1945, was greeted with relief and enthusiasm. When the Allied leaders met at Potsdam, Germany, in July—with the newly elected Prime Minister, Clement Atlee, replacing Churchill during the conference—Britain still commanded its place at the top table, and was accorded occupation zones in Germany alongside America, Russia, and France. But the United States dropped atom bombs on Hiroshima and Nagasaki in August and accepted the subsequent Japanese surrender with only the most cursory reference to its allies.

4.7 MILLION The number of men in the British armed forces in June 1945, comprising 2,920,000 in the Army, 783,000 in the Royal Navy, and 950,000 in the Royal Air Force.

The Big Three at Yalta

Churchill, Roosevelt, and Stalin meet in February 1945 to discuss the war and post-war arrangements. Britain's influence on key decisions was, by this stage, waning.

“In defending ourselves, we were **defending the liberties of the whole world...**”

KING GEORGE VI, SPEECH GIVEN ON VE DAY, MAY 8, 1945

AFTER

In August 1945, the Treasury warned that Britain was facing bankruptcy, described by economist J.M. Keynes as “a financial Dunkirk.” Victory had been won at a heavy cost, in terms of both lives and cash.

COST OF WAR

About 400,000 British people lost their lives in the war, including more than 300,000 members of the armed forces, 60,000 civilians, and more than 30,000 merchant seamen.

The war **placed Britain in deep debt**. When Japan surrendered, American aid under lend-lease was abruptly cut off. Britain was obliged to enter into negotiations for a loan, which was accorded by the Americans on harsh terms in December 1945.

BEFORE

The 1945 general election was a victory for the Labour Party, which won 3 million more votes than the Conservatives and took 393 seats in Parliament.

LABOUR'S REFORM POLICIES

Many of the reforms of the new Prime Minister, Clement Attlee, and others were influenced by Churchill's wartime government << 350–51, in which they had served. These included proposals on welfare reform.

LABOUR PARTY POSTER FOR THE 1945 GENERAL ELECTION

The Postwar Years

The Labour government, elected in 1945, set itself a Herculean task. It had to rebuild a war-devastated country, simultaneously create a welfare state, and mitigate the injustices of a capitalist economy. In spite of its partial failures, the Labour government was successful in its efforts.

Whereas in the wake of World War I many people had longed to return to the certainties of the pre-war world, the prevalent mood in 1945 was captured by the slogan: “Never again!” The 1930s had been a time of poverty and unemployment, and World War II was seen as a “people’s war” fought for a better future.

The Labour government encouraged the continuation of the war-time spirit of shared sacrifice and collective effort. In truth there was little alternative, for Britain’s economic situation was dire. The nation was impoverished and had to pay for the war—foreign debts totalled £25 billion and only a grudgingly accorded US loan kept government finances afloat. There were worldwide

Nationalization of the mines

Miners read a notice announcing the nationalization of coal mines. In practice, the state-owned pits were run by bureaucrats rather than by “the people.”

Free medical care

This National Health Service hospital opened in Wiltshire in July 1948. Free medical care was the most durable and popular innovation of Attlee’s postwar Labour government.

food shortages and Britain lacked the foreign currency to pay for imports. Wartime rationing was not only maintained, but tightened and extended—even bread was rationed in 1946. Black-market “spivs” flourished, satisfying the desire for small luxuries, from restricted foodstuffs to nylon stockings.

The early months of 1947 were perhaps more depressing than any part of the war. A winter of freezing temperatures and heavy snowfalls—including the coldest February on record at the time and a three-week

period in which no sunshine was recorded in London at all—coincided with a critical shortage of coal. Some coal-fired power stations shut down, factories closed, and families huddled

110,000 The number of houses in London that were destroyed during the war by the Luftwaffe and the V-weapons.

in unheated homes by candlelight. Shortages remained normal into the 1950s. When London hosted its first postwar Olympic Games in 1948, foreign athletes were encouraged to bring their own food.

A socialist commonwealth

Against this background of austerity, the Labour government forged ahead with welfare reforms in education and healthcare. When the new Parliament met in 1945, their election manifesto promised a “socialist commonwealth.” A wave of nationalization brought the Bank of England, the railways, gas and electricity supply, telephones, road transportation, and the coal mines under state control.

This did not, in reality, create socialism, but a mixed economy, in which bureaucratically managed state monopolies existed alongside private enterprises. Efforts to create the socialist panacea, a planned economy, were tentative. However, there was no return to the mass unemployment of prewar years. Government measures to boost depressed areas succeeded and, by the end of 1947, there were labor shortages.

Reform measures

Meanwhile, welfare reforms aimed to ensure freedom from want “from the cradle to the grave.” They provided more security from life’s misfortunes than British people had ever known before. The National Health Service was guided into existence by Health Minister Aneurin Bevan, in 1948. It was popular with everyone except doctors, who fought against it until they were able to continue private practice alongside their state duties.

The problem of substandard living conditions was compounded by the war. A practical and popular temporary solution was the erection of “prefabs”—simple prefabricated houses. By 1948, as a long-term measure, 200,000 council houses (public housing) were being built every year. The 1946 New Towns Act began a drive to relocate people from overcrowded inner cities to rural locations such as Stevenage in Hertfordshire and Basildon in Essex.

School Milk Act

Children enjoy free school milk, provided to all pupils under the Act passed in 1946. This health and welfare measure was repealed by Margaret Thatcher during her tenure as an Education Secretary in 1971.

The working classes consolidated wage rises they had achieved during the war, gaining ground on the middle classes, whose salaries tended to fall relative to the cost of living. A high level of income tax—45 percent was the standard rate—helped further narrow the gap between better-paid professionals and manual workers.

The building of houses for sale to owner-occupiers virtually ceased and gasoline rationing restricted private motoring. Yet the middle class were also among the beneficiaries of the welfare state, as they did not need to pay for healthcare or education—their children made up the majority of those who passed the 11-plus entrance

examination and attended the free grammar schools.

Growth of the leisure industry

With austerity the order of the day, a drabness infected much of daily life. People chafed at the irritations of petty bureaucracy, queues, and shortages. But

the lack of goods to buy in the shops paradoxically left people of all classes with money in their pockets to spend on leisure and entertainment. Movie-going reached a pitch never equaled before or since, with one in three of the population going to the movies every week. Sports events also drew enormous crowds. The taste for collective leisure found its most typical expression in the burgeoning of campgrounds, especially popular with workers who enjoyed at least a week’s paid vacation a year.

Relaxing restrictions

Some Labour leaders, notably Sir Stafford Cripps, believed austerity was a good thing. They disapproved of consumerism and luxury on moral and political grounds. On the whole, though, the government was keen to relax rationing and lift restrictions on people’s daily lives. However, Britain’s poor economic situation delayed the country’s return to normal peacetime conditions. Export-led manufacturing growth had gained strength by 1949–50, but the potential benefits of this were lost through financial shocks—an enforced devaluation of the pound in 1949, and the strain on government finances from Britain’s decision to enter the Korean War in 1950 (see pp.368–69). Labour tried to prove that it could offer fun as well as security by mounting the Festival of Britain in 1951, intended to highlight progress and provide an entertaining day out. However, the Attlee government, for all its durable achievements, was on its way out.

In 1951, the Labour government was forced out of power by the Conservatives. This did not, however, herald any radical change in economic or social policies.

LABOUR VS CONSERVATIVES

In the early 1950s, the Labour government was running out of energy and ideas. The drive to transform Britain through nationalization and welfare reform had been succeeded by a policy of “consolidation.” The Labour government came to power with a narrow majority in the February 1950 general election. Aneurin Bevan resigned from the Cabinet in April 1951, following the party split over introducing payment for National Health spectacles and dentures. In the election of October 1951, the Labour Party attracted the largest share of the popular vote—about 49 percent—but Churchill’s Conservatives won a working majority of seats in the House of Commons.

CONSERVATIVE MEASURES

Winston Churchill’s Conservative government denationalized the iron and steel industry, but left the other nationalized industries untouched. It also endorsed the welfare state, including the National Health Service, which continues to be the main provider of healthcare in Britain to this day. With more favorable economic conditions, the Conservatives were able to end rationing in June 1954 370–71 >>

Continuing austerity

Ration books were introduced during World War II and remained a part of people’s everyday life until the 1950s.

“The Labour government has ensured full employment... contrast with prewar days!”

LABOUR PARTY ELECTION MANIFESTO, 1950

Time to celebrate

The Festival of Britain in 1951 was organized by the Labour government to celebrate British achievement and bring some color and enjoyment into the lives of the war-torn population.

The Modern Monarchy

The accession of Elizabeth II to the throne in 1952 was greeted by optimistic admirers of royalty as the start of a second glorious Elizabethan era. With traditional deference in decline, the monarchy experienced a rough ride through the latter half of the 20th century. Its survival into the new millennium showed an impressive ability to adapt to changing times.

Princess Elizabeth and Prince Philip were on a safari in Kenya when George VI died on February 6, 1952. The new Queen was a cool, self-possessed, and reticent young woman, with an absolute commitment to her royal duties. The preparations for her coronation revealed that she had a clearer sense of what was expected of a modern monarch than her advisers. The government and experts on royal protocol had agreed that the televising of the event should stop at the doors of Westminster Abbey. The Queen, however, insisted that the coronation ceremony itself should be televised, so that the moment could be shared with her people.

Held on June 2, 1953, the coronation was a demonstration of the power of archaic ceremony and modern technology. Three million people lined the streets in the rain to see Elizabeth pass by in her fairy-tale coach, while

more than 20 million watched on televisions, with neighbors crowding the front rooms of those lucky enough to possess a set. The event was a spectacular costume drama, with lords in ermine and coronets, bishops in copes, and Prime Minister Winston Churchill bizarrely garbed as the Lord Warden of the Cinque Ports.

The public loved it all, and left-wing intellectuals, who had hoped the working class would scorn at such royalist nonsense, were confounded.

Elizabeth grasped the need for a modern monarch to be seen by the people very early in her reign. Soon after the coronation, she embarked on a round-the-world tour during which she became the first reigning monarch to visit Australia and New Zealand. This trip was the first of many royal visits to the Commonwealth countries. They were conscious attempts to foster a popular sentiment of loyalty among former

colonies, the queen's status as head of state being the only surviving political link between the now fully independent countries. At home, the Queen gave her first televised Christmas speech in 1957—the royal Christmas broadcast on radio was a long-established tradition. Her manner was impeccably bland—the lack of evident personality or opinion suiting the role of a constitutional figurehead.

Family troubles

As at the time of the abdication of King Edward VIII in 1936, the troubles of the modern monarchy came from

The young monarch

Queen Elizabeth II was 27 years old at the time of her coronation in June 1953. The traditional regalia of the monarchy, such as the orb and scepter, were deployed during the ceremony.

BEFORE

Albert, Duke of York, acceded to the throne in December 1936 after the abdication of his elder brother, Edward VIII << 344–45. He took the regal name George VI.

KING GEORGE VI

King George VI was a shy and inhibited man, who suffered from a speech impediment that, although partly cured by therapy, made public speaking a trial for him and for his listeners. He had none of the glamour of his brother Edward, but he had a **strong sense of duty**. He followed the example of his father George V in reigning as an **impeccable constitutional monarch**. During the war he stayed in residence with his family at Buckingham Palace throughout the German bombing. His visits to bomb-damaged streets and munitions factories won him respect and affection.

ELIZABETH'S EARLY YEARS

George VI's eldest daughter Elizabeth **joined the Auxiliary Territorial Service (ATS)** toward the end of the war, driving trucks. With her sister Margaret, she mingled with celebrating crowds in London on VE Day in 1945. Two years later she **married Prince Philip** of Greece and Denmark, who was granted the title of Duke of Edinburgh.

Coronation souvenir

A gold-luster earthenware teapot in the shape of the royal coach was one among many souvenirs of the coronation. The image of Elizabeth on the coach recalls her war service in the ATS.

the collision between the demands of private life and public role. Elizabeth herself, like her father and grandfather, seemed immune to this conflict; her

The success of the Queen's Silver Jubilee in 1977 demonstrated the nation continued readiness to celebrate the monarchy—even if the Sex Pistols' ironic punk anthem *God Save the Queen* topped the charts. The marriage of Prince Charles, the heir to the throne, and Lady Diana Spencer in 1981 was, like the coronation, a romantic spectacle for the vast majority of the population. By the early 1990s, the messy disintegration of Charles and Diana's union, accompanied by detailed revelations of adultery by both parties, seriously undermined royalist sentiment. With the marriages of two of Elizabeth's other children, Princess Anne and Prince Andrew, also heading

“Throughout all my life and with all my heart I shall **strive to be worthy of your trust.**”

QUEEN ELIZABETH II, RADIO BROADCAST, JUNE 2, 1953

personal life was erased by the demands of royal duty. But members of her family were not. The first crisis of the modern monarchy concerned Elizabeth's sister, Princess Margaret. She wished to marry Group Captain Peter Townsend, who was divorced. The government, the Church of England, and the rest of the royal family were united in opposition to the marriage, and in 1955 Margaret called it off. She was not reconciled, however, to a life of duty. She married photographer Antony Armstrong-Jones in 1960,

for divorce, the royals were subjected to investigation of their private lives, personal attacks, and caricature. Such disrepute of the monarchy had not been seen in Britain since the Regency scandals of the early 19th century.

The extraordinary outpouring of grief that followed Diana's death in a car crash on August 31, 1997 developed a distinct antimonarchist edge. The Queen's lifelong reticence and reliance upon formal protocol played badly with the public in the grip of heightened emotion. Realizing that she needed to

16 The number of independent countries of which the Queen is head of state, the largest being Britain, Canada, and Australia. The 16 countries have a combined population of about 130 million.

drifted into a number of affairs, and finally divorced in 1978. This was a foretaste of much to come.

In the early years of Elizabeth's reign the media was respectful and protective toward the royal family. A rare criticism of the Queen's manner of speaking—an article in 1957 that described her as having the manner of a “priggish schoolgirl”—was greeted with united outrage by the press. From the 1960s, this deference progressively eroded and was slowly abandoned—but this change was slow to have effect.

Head of the Commonwealth

The Queen appears on an Australian postage stamp from the 1960s. Elizabeth takes her role as head of the Commonwealth most seriously, frequently visiting Commonwealth countries.

Remembering Diana

Thousands of bouquets, cards, and other tributes were left outside Kensington Palace by mourners after Princess Diana's death in August 1997. The Queen was criticized by many of Diana's admirers for her cool public response to the death.

portray a less aloof image, Elizabeth was soon seen chatting with her people on carefully stage-managed visits to pubs and council flats, while the media were offered behind-the-scenes access to life at Buckingham Palace.

Present-day monarchy

The popularity of the royal family was restored, based not on reverence, but on acceptance of the royals as both ordinary human beings and celebrities. In Australia, a referendum to make the country a republic was defeated in 1999, while in Britain, the abolition of the monarchy never became a serious proposition. In 2002, the 50th anniversary of the Queen's accession was celebrated by about 3 million people in London.

“It's vital that the monarchy keeps in touch with the people. It's what I try and do.”

DIANA, PRINCESS OF WALES

AFTER

In the first decade of the 21st century, the royal family entered a relatively tranquil phase after the troubles of the 1990s, with the new generation taking center stage.

ROYAL WEDDINGS

Prince Charles, himself divorced and widowed, married the divorcée Camilla Parker Bowles in a civil wedding in 2005. The **ending of resistance to divorce** on the part of the Church of England and the Establishment in general enabled the marriage to take place without Charles renouncing his right to inherit the throne.

Prince William and Prince Harry, Charles' sons from his marriage with Princess Diana, grew to adulthood enjoying a good level of popularity, despite occasional gaffes. Both continued the royal family's **tradition of service** in the armed forces. In 2010, William announced his plans to marry Kate Middleton. A member of the middle class would once have been considered an unsuitable match for a future king, but in this case, their **marriage plans** attracted a favorable public and media response.

KATE MIDDLETON AND PRINCE WILLIAM

The last viceroy and the lost leader

Mohandas Gandhi, leader of the Indian independence struggle, stands between Lord and Lady Mountbatten. Mountbatten was the last viceroy of the Indian Raj; Gandhi was assassinated by Hindu extremists soon after independence.

BEFORE

World War II delivered body blows to Britain's imperial authority from which the Empire never recovered. A series of defeats by Japan in 1941–42 fatally undermined British prestige in Asia.

TUMULT IN THE COLONIES

When **war with Japan** erupted in December 1941, Australia announced it would “look to America” as its prime ally. Australian troops were **withdrawn from fighting for the British** in the Mediterranean to defend their own country. The **surrender of the British base at Singapore** to the Japanese in February 1942, in which many Australians were taken prisoner, confirmed the **realignment of Australia** with the United States.

In India, 2.5 million men **volunteered to fight for Britain** in the war, but Subhas Chandra Bose's Indian National Army fought for the Japanese. The Indian National Congress declared a **campaign of civil disobedience** in July 1942 under the slogan “Quit Now”, which was **harshly repressed** by the British authorities.

WEAKENED BRITAIN

Britain fought the war as an ally of the United States and the Soviet Union; both were **hostile to British imperialism**. They emerged from the war strengthened **◀ 358–59**, while **Britain was much weakened**.

INDIAN PROTESTORS BEING PUNISHED, 1942

Retreat from Empire

After World War II, Britain had neither the means nor the moral authority to continue ruling a quarter of the world's population. Within 20 years of the war's end, Britain almost ceased to be a colonial power and its Commonwealth was an international organization of limited practical importance.

The Labour government elected to power in 1945 had no intention of dismantling the British Empire. Foreign secretary, Ernest Bevin, described himself as a “genuine enthusiast for empire.” But India was a special case. The Labour Party had long supported Indian self-rule. The issue was not whether India should become independent, but how the transfer of power was to take place. Lord Mountbatten was appointed viceroy with instructions to reach a swift agreement with the conflicting Indian political movements. The difficulty of reaching a satisfactory deal with Muhammad Ali Jinnah's Muslim League resulted in partition. At midnight on August 14, 1947, India celebrated independence, and so did Muslim Pakistan. Partition on independence led to immediate large-scale population movements and massacres, and to a series of wars over the following decades. However, both India and Pakistan remained members of the Commonwealth, maintaining generally friendly relations with the former imperial power.

Britain begins to withdraw

Withdrawing at the same period from Burma and Ceylon (Sri Lanka), Britain had divested itself of the largest part of its empire. This had remarkably little impact on Britain's self-image, however, because the dominions and colonies remained central to the country's status as a world power and to its hopes of post-war economic recovery. Between 1945 and 1955, around half of Britain's trade was with the colonies and Commonwealth. The United States relaxed its hostility to British imperialism in the context of the Cold War, recognizing British rule as a barrier to the spread of communism. Yet shrunken British resources and emboldened independence movements turned the imperial experience into a fighting withdrawal. Palestine was abandoned to warring Jews and Arabs in 1948. In Malaya, Britain conducted a successful military campaign against communist insurgents, granting independence to a pro-British government in 1957. In Kenya,

Colonial conflict

“Great Britain **has lost** an empire and has **not yet found** a role.”

US SECRETARY OF STATE DEAN ACHESON, DECEMBER 5, 1962

the Mau-Mau uprising by the Kikuyu was suppressed with considerable brutality between 1952 and 1960, while during the same period British troops fought a guerrilla movement in Cyprus. After the Suez Crisis of 1956 (see pp.366–67), however,

Britain began to reevaluate its position as a colonial power. The realization dawned that it no longer possessed the financial and military resources to impose its will on far-flung parts of the globe.

Rapid dissolution

The Gold Coast became the first of Britain's African possessions to be granted independence, as Ghana, in 1957. Cyprus became independent in 1960. Most other colonies were moving towards representative government. In 1960, while visiting South Africa, Prime Minister Harold Macmillan announced: “The wind of change is blowing through this continent. Whether we like it or not, this growth

of national consciousness is a political fact.” It showed that Britain intended to hand over its colonies to the African independence movements. Between 1960 and 1968, all remaining British

Commonwealth united

This optimistic image of multiethnic comradeship dates from World War II. The term “Commonwealth” came to be preferred to “Empire”, because it implied free cooperation between equals, instead of subjection.

territories in Africa were granted independence, except in Southern Rhodesia, where whites made a Unilateral Declaration of Independence (UDI)—not recognized by Britain—to avoid black-majority rule. Most of the West Indian colonies also became independent. A campaign was fought

23 The number of new independent countries created by the dissolution of the British Empire. The number of people outside Britain under British rule fell from around 700 million in 1945 to about 5 million in the 1970s.

against insurgents in Aden, in Arabia, between 1963 and 1967, before British troops were precipitately withdrawn. With this, the era of colonial wars was over. The British Empire ceased to exist except for a few outposts, the most important of which, Hong Kong, was handed back to China in 1997.

Kenyan independence

Prince Philip stands alongside Jomo Kenyatta at the celebrations for Kenya's independence in December 1963. Kenyatta had been imprisoned by the British in the 1950s for allegedly masterminding the Mau-Mau uprising.

Britain retreated from empire with a good measure of dignity in most places. Many in power in newly independent states, including Jawaharlal Nehru in India and Jomo Kenyatta in Kenya, kept good relations with Britain as members of the Commonwealth. British involvement, both political and economic, in former colonies was considerable—Britain backed Nigeria resolutely through the Biafra secession war of 1967–70. Yet some former colonies became hostile to Britain, as when Uganda was ruled by the brutal Idi Amin in the 1970s. South Africa also opposed British policies. Its white government withdrew from the Commonwealth in 1961 to pursue its racist apartheid policies. South Africa supported the white government of Southern Rhodesia, allowing its UDI regime to survive until 1980, when at last it became formally independent as Zimbabwe under black-majority rule.

After Britain joined the European Economic Community (EEC) in 1973, its economic links with the Commonwealth inevitably declined.

DECLARING INDEPENDENCE

In both Australia and Canada, new patterns of immigration from the 1970s created an ethnically mixed population. The Canada Act of 1982 and the Australia Act of 1986 affirmed the complete independence of the two countries.

MULTIETHNIC BRITAIN

While Britain was disbanding its empire, large numbers of immigrants from former colonies came to live in the old "mother" country. One of the main legacies of empire is the ethnic diversity of modern British society.

SIGNING THE EEC TREATY OF ACCESSION

DECISIVE MOMENT July 26–December 22, 1956

The Suez Crisis

The military intervention at Egypt's Suez Canal in 1956 was the moment Britain's ambition to remain an imperial power foundered. The humiliating climb-down forced upon the British government by economic weakness and international disapproval showed it could no longer carry out a foreign policy independent of the United States.

In July 1956, the United States announced it was withdrawing funding from the Aswan High Dam construction project in Egypt. Egyptian ruler Gamal Abdul Nasser reacted on July 26 by nationalizing the Anglo-French-owned Suez Canal, intending to fund the dam with revenue from the waterway. British Prime Minister Anthony Eden was savagely hostile to Nasser, describing him as a “Muslim Mussolini.” He feared that, once in control of the Canal, Nasser would block European oil supplies carried by tanker from the Middle East.

Eden wanted both to wrest the Canal from Egyptian control and to engineer Nasser's downfall. He was drawn by France into a secret agreement with Israel. The Israelis would attack Egypt in the Sinai, giving Britain and France an excuse to send in troops to “protect” the Canal. The Israeli operation began on October 29 and Anglo-French bombing raids struck Egypt the

following day. On November 4, British troops landed by air and sea to occupy the Suez Canal zone.

The attack on Egypt provoked a torrent of criticism in Britain, the opposition Labour Party denouncing it as illegal aggression. There was a mass anti-war protest in Trafalgar Square in London on November 4. More importantly, the United States and the United Nations denounced the invasion. After the United States encouraged the selling of Britain's currency on the international money markets, thus threatening the British economy, Eden agreed to a ceasefire on November 6. On December 22, British troops handed over the Canal zone to a UN peacekeeping force. Despite the volume of protest, however, opinion polls suggest that British voters were indifferent to the debacle. Nonetheless, Anthony Eden's health broke under the strain, and the Prime Minister resigned in January 1957.

“They have **besmirched** the name of Britain. They have made us **ashamed** [where] formerly we were proud.”

LABOUR MP ANEURIN BEVAN SPEAKING OF THE BRITISH GOVERNMENT AT AN ANTI-WAR RALLY IN TRAFALGAR SQUARE, LONDON, NOVEMBER 4, 1956

Blocked Suez Canal

In response to the British invasion, Egypt blocked the Suez Canal by sinking ships in the waterway. The resultant interruption of oil supplies from the Middle East led the British government to introduce gas rationing in December 1956. Rationing remained in force until spring 1957, when the Canal reopened.

Prepared for nuclear attack

Dressed in full gear, members of the Civil Defence Corps' Technical Reconnaissance Unit test for radiation as part of a civil-defense exercise at Bristol on February 10, 1951. Such rehearsals were undertaken in anticipation of nuclear strikes.

BEFORE

Britain's relationship with its major World War II allies, the United States and the Soviet Union, rapidly changed after the war. By 1948, the Soviets were identified as Britain's enemies.

RELATIONS BEGIN TO FREEZE

In March 1946, former Prime Minister **Winston Churchill**, << 350–51, warned an American audience in Missouri of an **"Iron Curtain"** dividing Europe. Britain supported US President Truman's fight against communism in 1947. In 1948–49, Britain and the United States staged the **Berlin airlift to West Berlin**, which had been placed under Soviet blockade. In April 1949, Britain became a founding member of the **North Atlantic Treaty Organization (NATO)**, which committed the United States to defend western Europe against Soviet aggression.

KEY MOMENT

THE ALDERMASTON MARCH

The Campaign for Nuclear Disarmament (CND) was founded in 1957. It hoped that by persuading the British government to renounce nuclear weapons it could trigger general disarmament worldwide. At Easter 1958, CND mounted a march from London to the Atomic Weapons Research Establishment at Aldermaston, Berkshire. Later, the march was reversed in direction, and became an annual ritual of protest, attracting a growing number of mostly young demonstrators. The last significant Aldermaston march was in 1963, though CND itself remains active today.

The Cold War

After World War II, Britain tried to retain its independent status as a great power, but in practice became a subordinate ally of the United States in its confrontation with the Soviet Union. The British now lived with the risk of annihilation in a nuclear war.

Britain's Labour government of 1945, and in particular its fiercely anticommunist Foreign Secretary Ernest Bevin, feared a Soviet invasion of western Europe. Although Bevin also encouraged cooperation between European countries, he saw the support of the United States—the world's only nuclear power at the time—as vital. The North Atlantic Treaty Organization (NATO), founded in 1949, was a triumph for British diplomacy. The payment in return for Britain was that it support the United States when the Korean War broke out in 1950, contributing substantially to the US-led United

Cambridge spies

Four of the Soviet agents recruited at Cambridge University in the 1930s included, clockwise from top left, Anthony Blunt, Donald Maclean, Kim Philby, and Guy Burgess.

Nations forces that fought North Korea and China to a standstill in the costly three-year conflict.

Despite cultivating its "special relationship" with the United States, Britain also intended to remain a great power. Thus, in January 1947, a secret Cabinet committee decided that Britain would develop its own atom bomb. Britain's first nuclear device was exploded in 1952. A nuclear strike force, the V bombers—Valiants, Victors, and Vulcans—came into service during 1955–58, capable of destroying Russian cities. Meanwhile, British civil defense

planners produced estimates of Britain's inevitable near-extinction in the event of a nuclear war.

Espionage

The secrecy surrounding nuclear weapons and the brinkmanship of nuclear confrontation encouraged espionage, and Britain was shown to have been penetrated by Soviet agents at the heart of its Establishment. In 1951, Guy Burgess and Donald Maclean, who had both worked at the British Embassy in Washington, fled to Moscow to avoid arrest. Their associate, Kim Philby, once a leading figure in Britain's Secret Intelligence Service, also defected to the Soviet Union in 1963. Much later it was revealed that Anthony Blunt, once Keeper of the

Queen's Pictures, had also been a spy. Whether or not this was evidence of the decay of Britain's ruling elite, it certainly annoyed Britain's US allies.

The purpose of Britain's independent nuclear deterrent was to maintain great power status, but in the 1960s Britain's subordination to the United States was

12 MILLION The number of people in Britain who might be killed in the first few days of an all-out nuclear war, according to a worst-case estimate by the Ministry of Defence in 1968.

British nuclear missile

The Avro Blue Steel air-launched missile was built for Britain's V bombers in the 1960s. Its effectiveness was fortunately never tested in action.

The NATO agreement

Signed on April 4, 1949, the North Atlantic Treaty Organization (NATO) bound member states—the United States, Canada, and 10 European countries—to collectively defend against attacks on member nations.

obvious. Unable to afford its own nuclear ballistic missiles, Britain had to beg the US for its Polaris missile to arm British submarines. During the Cuban Missile Crisis of October 1962, the most dangerous moment of the Cold War, the United States effectively ignored the British government. Britain was in the front line of US nuclear defenses against the Soviet Union, without any control over United States' policies.

AFTER

By the end of the 1960s Britain abandoned pretensions to an independent nuclear deterrent and accepted its place as a subordinate in an American-led alliance.

BRITAIN SIDELINED

When the United States and the Soviet Union embarked on **arms limitation talks** in 1969, Britain was sidelined. In the 1980s, Cold War tensions flared as US cruise missiles stationed in Britain provoked protests. Prime Minister Margaret Thatcher, 382–83 >>, **aggressively opposed Soviet communism**, yet negotiations from 1986 that ended the Cold War were held exclusively between the Soviets and the US.

IRONIC DECLASSIFIED NUCLEAR BUNKER SIGN

"We've got to have [the atom bomb]... We've got to have the bloody Union Jack on top of it."

BRITISH FOREIGN SECRETARY ERNEST BEVIN, OCTOBER 1946

BEFORE

RUSH FOR CANDY AT THE END OF RATIONING

The Conservative Party won the general election in 1951, just when Britain was emerging from post-war austerity. It took credit for improving living standards.

END TO RATIONING

The end of austerity was symbolized by the end of wartime rationing. Gas rationing came to an end in 1950. The Conservatives ended rationing for tea, candy, sugar, and meat, which was the last item to be de-rationed, in July 1954.

LESS NATIONALIZATION

The Conservative government denationalized the iron and steel industry in 1953 and road haulage in 1954. It left unchanged the Welfare State and the mixed economy created by the Labour government 360–61, with much of British industry still under state control.

TORY POLITICIAN (1894–1986)

HAROLD MACMILLAN

HAROLD MACMILLAN AS PRIME MINISTER

Harold Macmillan was educated at Eton, fought in the trenches in World War I, and represented a northern constituency during the Depression. His experiences made him a “one-nation” Tory, committed to full employment and welfare. He was also a flamboyant showman, a quality that served him well as Britain entered the age of television. Taking over as Prime Minister after the Suez debacle, he won an impressive election victory in 1959. He retired as premier in 1963, due to illness. In the 1980s, he was critical of Margaret Thatcher’s abrasive brand of Toryism.

Never had it so Good

The catchphrase “You’ve never had it so good!”, adapted from a speech by Harold Macmillan in 1957, sums up how many British people felt about life in the 1950s and early 1960s. Rising wages and near full employment brought security and growing prosperity, expressed in ownership of consumer goods.

In 1951, the average wage of an adult male in Britain was £8 6s (£8.30) a week; a decade later it had risen to £15 7s (£15.35). With price inflation modest, this near doubling of pay, combined with full employment, brought a striking change in living standards for most Britons. Seeking to win a general election in 1957, Prime Minister Harold Macmillan rightly described Britain as enjoying “a state of prosperity such as we have never had in my lifetime—or indeed in the history of this country.” Living conditions were still austere by the standards of the

21st century—only a minority owned a refrigerator or a telephone—but to those who had lived through the Depression and the war, financial security and new consumer goods were

6.9 MILLION The number of households across Britain that owned a television set in the late 1950s.

highly satisfactory and liberating, and most people were immune to the easy sneers of intellectuals railing

against shallow materialist aspirations. For the better off, the drive for home ownership of the 1930s resumed in the 1950s. Houses were affordable, and by 1961, more than 40 percent of the population owned their own homes. Few well-off people fulfilled a more

modest aspiration to rent a home with an inside toilet and a bath—in 1951, one-third of British homes had no bathroom. The Conservative (Tory) governments of the 1950s built a higher volume of public housing than their Labour predecessors, although with some sacrifice of quality. Old inner-city slums were demolished, and their population was emptied into freshly built suburban public housing or New Towns such as Corby, Harlow, and Hemel Hempstead. Although this move was criticized for breaking up working-class communities, it transformed living conditions and was broadly popular with those rehoused, who could now enjoy a new-found privacy, cleanliness,

Election victories in 1955 and 1959 kept the Conservatives in power for 13 years, but in 1964 Harold Wilson led Labour back to government with a promise to transform Britain in the “white heat of technology.”

CHANGE NEEDED

The need for the **modernization of Britain** was an important theme of public debate in the early 1960s. Sir Alec Douglas Home, who succeeded Macmillan as Prime Minister in 1963, was **out of touch** with the modern world and modern technology. Nevertheless, **Labour won** only a **small majority** of the popular vote and seats in Parliament in October 1964. It won a larger majority in another election in 1966.

LABOUR POLICIES

The Wilson government made little attempt to follow socialist policies. Labour's commitment to **economic planning proved ineffectual**. Instead, the government was preoccupied with Britain's **deteriorating financial position**, which led to a devaluation of the pound in 1967, and with the need to keep wage rises down to an affordable level. An attempt to curb the **power of the trade unions** failed **376-77**.

Road to progress

The M1 motorway opened in 1959, and it became a symbol of the modernization of Britain at this period. Although car ownership was rapidly expanding, only one in three families had a car, leaving plenty of space on the road.

Family viewing

By the end of the 1950s, television had replaced the radio as family entertainment in a majority of British homes. Concerns were frequently expressed about the influence of TV on children.

New arrivals

West Indian immigrants arrive at Victoria Station in London in 1956. By then, almost 50,000 West Indians were settling in Britain each year, drawn by the availability of jobs in understaffed public services.

and a yard. Economies from the late 1950s saw apartments built instead of houses, and the unpopular tower blocks transformed the skyline of British cities.

Culture and conflict

The values of a secure home-centered family life were celebrated, and the ideal “housewife and mother” image of womanhood was promoted by magazines and advertising. There had been a brief bulge in the birth rate in 1947 as men returned from war, but it was from the late 1950s that Britain experienced the “baby-boom.” By 1964, every woman was, on average, bearing three children.

The focal activity for the nuclear family was watching television. Kick-started by the televised coronation in 1953, owning or renting a television had become common in all classes by the late 1950s. Movie audiences halved in the decade. The advent of commercial television in 1955 was a crucial moment, breaching the BBC monopoly on broadcasting that had lasted since the 1920s. Although independent television was at first careful to court respectability, for example with some serious drama programs, competition for viewers inevitably led to more of mass entertainment and less “worthiness.”

“No more running out for a **bag of chips** to eat with your bread. Now, you got **fair wages...**”

ALAN SILLITOE, *SATURDAY NIGHT AND SUNDAY MORNING*, 1958

In the 1950s, labor shortages led to the recruitment of West Indians to staff National Health Service hospitals and public transport. The immigrants were granted right of entry to Britain with the 1948 British Nationality Act. In 1958, white mobs spearheaded race riots by attacking black residents in the Notting Hill district of London. An Immigration Act passed in 1962 failed to stem the inward flow from the Commonwealth or halt racial tensions.

In the 1950s, homosexuals were targeted by the police in a draconian campaign that brought more than 5,000 prosecutions for consensual sex acts. The liberal Wolfenden Report of 1957 was a reaction against this wave of persecution, but it would be another 10 years before its call for decriminalization was embodied in legislation.

Low economic growth

Despite the 1950s being a period when many Britons were doing well for themselves, due to the Welfare State and a nascent consumer society, growing prosperity was no antidote to an increasing sense of national decline. British industry was not performing well in comparison to its German and French competitors.

Falling exports led to a deficit in the balance of payments. Restrictive working practices imposed by trade unions and old-fashioned attitudes of management were blamed for stunting the growth of British productivity.

Conservative governments had adopted the basic tenets of Keynesian demand management economics, accepting a measure of inflation as the price to pay for maintaining full employment. Despite the apparent success of this approach, budgetary policy developed into an ever-more juddering stop-go alternation of the brake and accelerator, and the economy cooled or stimulated as inflation or unemployment threatened. By the 1960s, it was obvious that satisfying popular expectations of rising living standards was going to be problematic, and that the performance of the British economy was not going to be good enough.

Kitchen convenience

The Kenwood mixer is a classic design from the 1950s. It was the sort of kitchen equipment coveted by middle-class housewives, who were living in a world in which live-in domestic servants had become rare.

Britain goes Pop

Britain's image was transformed in the 1960s. The land of the bowler hat, tea, and the "brolly" became identified with popular culture, stylish art, and loose morals. Change was apparent, a genuine liberalization underlying the clichés of the swinging sixties.

The defining characteristic of Britain in the 1960s was the blend of a welfare state with a consumer society, of "cradle-to-grave" social security and full employment with enterprise and social mobility. Society was more egalitarian than it had been in the past and people were more prosperous than they had ever been. The spread of home and car ownership was accompanied by consumer spending, evident in the growing popularity of package vacations to Europe. The country's popular leisure activities centered around the home: television, gardening, and do-it-yourself home improvement. Despite growing prosperity, Britain did not become complacent. Instead, a modest but growing affluence was accompanied by innovation in culture and lifestyles.

The decline in respect for authority was one of the most obvious changes in the British mentality. In the 1950s, the mass media banned jokes about religion or the monarchy, and government ministers never faced hostile interviews or enquiries into their private lives. This was abandoned in the satire boom of the early 1960s. The theatrical review *Beyond the Fringe*, the magazine *Private Eye*, and the TV program *That Was the Week That Was* breached traditional restraints—for example, by having an actor caricature the Prime Minister.

In 1963, the burgeoning culture of disrespect was gifted a first-rate political scandal, revolving around War Secretary John Profumo's involvement with Christine Keeler. The unravelling of this complex affair brought explicit sexual references to news broadcasts

and considerable disrepute to the ruling classes. The defeat of the much-ridiculed Conservatives in a general election in 1964 brought no relief to politicians, for the Labour

400 MILLION The number of people who watched the worldwide TV broadcast of The Beatles' *All You Need Is Love* in June 1967. It was the first global satellite TV program.

government of Harold Wilson was subjected to a torrent of ridicule through its six years in office.

Popular culture

Britain's youth and pop culture displayed the same spirit of irreverence that animated political satire. Youth was a burgeoning market, not because most young people had a lot of money, but because they were prepared to spend all the money they had on records and clothes. Bright young working-class men and women, beneficiaries of new educational opportunities in the postwar grammar schools and art colleges, found openings for ambition in pop music, acting, fashion, or photography. However, the relevance of class was limited—Mick Jagger and John Lennon were from middle-class backgrounds, and many prime movers of pop culture were private-school educated.

The mass hysteria of Beatlemania in 1963 was the point at which the world began to picture a different Britain. The Beatles took the United States by storm the following year, opening the way for a series of other creative British bands.

Swinging London

In 1966, *Time* magazine created the label "Swinging London", and the fashion shops of Carnaby Street became a tourist attraction. Fashion designer Mary Quant's mini-skirt became an icon of the decade.

Fashion icon

Lesley Hornby, better known as Twiggy, became Britain's most prominent fashion model in 1966, aged 16. Her working-class origins and androgynous figure made her a perfect icon of Swinging London.

The Rolling Stones

Marketed as a more rebellious alternative to The Beatles, The Rolling Stones seemed genuinely subversive and threatening to many conservative parents in the mid-1960s. Forty years later, lead singer Mick Jagger was awarded a knighthood.

BEFORE

There were stirrings of a new spirit in Britain from the mid-1950s. Established conventions of public decency and respect for authority were increasingly challenged.

ANTI-CONVENTION

In 1956, the success of John Osborne's play *Look Back in Anger*—a tirade against the hypocrisy of British society—led to the invention of the label "Angry Young Men" for writers critical of the established order. In the same year, the arrival of American rock 'n' roll in Britain occasioned some un-British riotous misbehavior by young fans. In 1960, censorship was challenged by the publication of an unexpurgated Penguin edition of D. H. Lawrence's *Lady Chatterley's Lover*. The book was cleared of obscenity in a landmark trial.

LADY CHATTERLEY'S LOVER

In many British households the generation gap between the attitudes and tastes of children and their parents was a daily reality. Schools resisted the fashions for long hair for boys and short skirts for girls.

The Pill became widely available in the later 1960s, but there is little evidence of a sexual revolution. Recreational drugs circulated—pills early in the decade, pot later—but alcohol remained the most widely favored intoxicant. The drug-fueled world of free love and psychedelic style that centered around London “underground” magazines and music clubs of the late 1960s was very much a minority scene.

Protests and legislation

As in other countries, Britain underwent a large-scale expansion of university education in the 1960s. British students singularly failed, however, to form the revolutionary force seen in Europe and the United States. An anti-Vietnam War demonstration in London, in March 1968, was the sole example of violent protest. Real liberalization did come,

“Years of revolt, years of carefree, sinless excess, of **drugs, music, revolution...** of the ever-exciting **tomorrow.**”

JONATHAN GREEN, *DAYS IN THE LIFE, A 1960S RETROSPECTIVE*

The swinging sixties

The film *Blow-Up*, directed by Michelangelo Antonioni in London in 1966, is a typical foreigner's view of Britain at the time, and focuses on fashion photography, casual sex, and recreational drugs.

through due parliamentary process. The House of Commons voted to abolish capital punishment in 1965, homosexual acts between consenting adults were decriminalized in 1967, abortion was legalized, and by the end of the decade, the divorce laws had been liberalized. Also important were the first Race Relations Acts, which banned all forms of discrimination against Britain's growing immigrant population.

These reforms were hotly contested by those with more conservative attitudes. Groups such as Mary Whitehouse's National Viewers' and Listeners' Association campaigned against the relaxation of censorship and general moral decadence. In 1968, Conservative MP Enoch Powell articulated white fears about immigration in an infamous speech foreseeing “rivers of blood” in Britain's streets.

Even though this period brought bitter social conflict to much of Europe and the United States, a general

benevolence reigned in Britain—typified by the support expressed by *The Times*, a newspaper of the Establishment, for members of The Rolling Stones arrested on drugs charges in 1967. Essentially secure, Britain accepted youthful rebellion for what it mostly was—fun.

Anti-Vietnam War demonstration

Actress Vanessa Redgrave addresses anti-Vietnam War protestors in Trafalgar Square on March 17, 1968. The demonstration ended in violent clashes with police outside the US Embassy in Grosvenor Square.

In a general election held in June 1970, the Labour government suffered a shock defeat to Ted Heath's Conservatives. This did not, however, mark any sharp change of direction in society or culture.

CONTINUITY OF POPULAR CULTURE

The end of the 1960s cultural moment could be symbolized by the break up of The Beatles in 1970, or by the trial of radical journalists of the “underground” magazine *Oz* for obscenity in 1971. Britain continued to earn its reputation as an **innovative center of pop music and fashion**. Political policies were not reversed. For example, the **transition from grammar and secondary modern schools to comprehensives** initiated by the Labour government accelerated under Conservative Education Secretary Margaret Thatcher.

RISE OF REVOLUTIONARY GROUPS

However, a relatively liberal Conservative government faced a **sharp rise in political radicalism**. As well as suffering the overflow from violence in Northern Ireland **378-79**, Britain had its own urban terrorist group in the Angry Brigade, which carried out a score of bombings from 1970 to 1972. Various revolutionary Marxist groups, barely present in British universities in 1968, attracted substantial support among students in the 1970s. The **women's movement, gay liberation, and ecology movement** also flourished after 1970 from limited beginnings in the previous decade.

Beatlemania

Policemen struggle to restrain Beatles fans outside Buckingham Palace as the “Fab Four” receive their MBEs on October 26, 1965. The decoration of pop stars—officially for services to exports, though some said it was to improve Prime Minister Wilson’s popularity—was unprecedented and widely criticized. Some older recipients returned their MBEs in protest.

BEFORE

After 1945, the government and employers in Britain bought social peace with pay rises, full employment, and welfare payments. However, by the start of the 1970s, this deal was breaking down.

UNION MILITANCY

From World War II onward, governments began treating the trade union movement as legitimate representatives of the working people of Britain. But the second half of the 1960s brought a **rise in union militancy**. In 1966, the seamen's union called for a damaging nationwide strike and stoppages at the local level proliferated. Faced with **mounting economic problems**, the Labour government legislated to hold down prices and wages, but **limits on pay rises** were **opposed by**

trade unions. In 1969, opposition from union leaders blocked proposals to impose legal limits on strike action. The election of the Conservative government of Edward Heath in 1970 led to **redoubled confrontation** with the unions.

EQUAL PAY FOR EQUAL WORK

One industrial action of particular significance was a 1968 strike by women machinists at Ford's Dagenham plant in England. They demanded the **same pay as men**, for doing the same job. The strike stimulated the Labour government to pass an **Equal Pay Act** outlawing pay discrimination between men and women. It was one of the earliest displays of the women's movement that flourished in Britain in the 1970s.

Conflict in Society

Britain entered choppy waters in the 1970s as the postwar economic boom stalled, with high inflation and rising unemployment. Social and political conflicts raged against this background of economic uncertainty. Militant trade unions humiliated governments, while political activists demanded various kinds of liberation and equality. Some people expressed fears of a breakdown of liberal democracy.

The Conservative government led by Ted Heath from 1970 to 1974 had to deal with a world economic crisis. It also faced the hostility of trade unions determined to win large pay rises, regardless of the government's efforts to control inflation. In 1972, the first national coal miners' strike since the 1920s blacked out cities with daily power cuts. Mass picketing prevented the use of fuel stocks, and the miners only went back to work after winning a substantial wage increase. In the winter of 1973–74, a cut in oil supplies resulting from the Yom Kippur War in the Middle East coincided with more industrial action by miners. Heath

declared a three-day week to save fuel and called a general election, which he narrowly lost. Harold Wilson's incoming Labour government bought the miners' cooperation with large pay rises.

Left-wing militancy

Ideas emerging from the international student revolt in France during the late 1960s inspired trade union militancy. Marxism returned to fashion, and notions of revolutionary socialism and workers' power inspired influential minority groups, such as the Socialist Workers Party (SWP). However, the right-wing National Front also increased its membership and staged provocative

Women's liberation

Feminist demonstrators imaginatively represent a woman as crucified by the demands of sexual objectification, housework, and shopping.

**Anti-Asian demonstration**

Protestors oppose the government decision to admit Asians expelled from Uganda to Britain, in 1972. Their hero was Enoch Powell, an MP noted for opposing a multiracial society.

Grunwick strike

A picket is arrested in one of many clashes with police during the prolonged Grunwick dispute of 1976–78. The British tradition of a lightly equipped, good-humored police force was on the wane.

marches that led to violent clashes with anti-fascists.

Race and immigration were crucial issues. Despite a Race Relations Act in 1975, which tightened existing law banning racial discrimination, racial abuse and racially motivated attacks against Britain's black and Asian population were commonplace. In 1976, musicians mounted a Rock Against Racism campaign, and the following year the SWP initiated an Anti-Nazi League to oppose the activities of the National Front.

12.9 MILLION

The average number of working days lost to strike action in Britain annually, in the 1970s. During the 1990s, this figure was 660,000 working days.

Grunwick strike

A strike by Asian women workers at the Grunwick factory in London in 1976, seeking recognition for a union, became a focus for left-wing militancy. More than 500 arrests took place in various clashes between supporters of the strikers and police,

but the employers refused to yield and the strikers were defeated after a long struggle.

Flourishing feminism

The resurgence of militant feminism, which had not been in force since the time of the suffragettes, was in some ways the most radical feature of the 1970s. The first National Women's Liberation Conference was held in

1970, and the feminist magazine *Spare Rib* was first published in 1972. The "women's lib" attack on male supremacy and patriarchy went beyond the pursuit of equal pay and fair treatment at work—both subjects of 1970s legislation. It raised issues such as the division of work in the household, domestic violence, and the representation of women in the media. Like the movement for gay rights in the same period, militant feminism faced an uphill struggle. A mere 23 women MPs were elected to Parliament in February

Punk style

The 1970s punk movement outraged conservative opinion with its raucous music and unruly posturing, but punk fashions soon became a London tourist attraction.

1974 and trade union leaders were uniformly male.

To many observers, the ferment of 1970s Britain looked more like terminal decline than the building of a fairer society. From the violence of soccer gangs to the raw sound and outrageous styles of punk rock, they found plentiful evidence of anarchy. Faced with mounting public disorder, the police began to adopt tougher tactics. In April 1979, Blair Peach, a member of the Anti-Nazi League, was killed by police at an anti-racist demonstration in Southall. A certain gentleness, long taken to characterize the British, was disappearing into the past.

AFTER

From 1974, Labour governments sought to rule in close collaboration with trade union leaders. This policy ended disastrously in the 1978–79 "winter of discontent."

PACIFYING UNIONS

Labour agreed to a "social contract" with the unions. In return for government policies promoting social equality, unions accepted limits on wage rises. Inflation was cut sharply, but Britain's financial problems remained acute. In 1976, the government was forced to cut spending. Unemployment rose above 1 million for the first time since World War II.

MOUNTING FRUSTRATION

In the winter of 1978–79, union frustration at the government's tight wage policy boiled over. A nationwide stoppage by truck drivers threatened food and fuel supplies. Strikes by public service workers followed. This period ruined Labour's reputation as the party that could handle the unions, leading to the election of Margaret Thatcher as Prime Minister in 1979 **382–83** >>

"The **cosy world** we were told would go on for ever... **is gone.**"

JAMES CALLAGHAN, SPEECH TO LABOUR PARTY CONFERENCE, 1976

TRASH PILED UP IN A LONDON STREET DURING A GARBAGE COLLECTORS' STRIKE, 1979

Celebrating violence

A mural on a house in Northern Ireland celebrates the Ulster Volunteer Force, a Protestant paramilitary group that killed more than 400 people during The Troubles.

From the 1920s to the 1960s, British governments paid little attention to Northern Ireland. The Protestant majority was allowed to discriminate against Catholics in areas such as public housing and employment. In 1967, to oppose discrimination, the Northern Ireland Civil Rights Association was founded. Its demonstrations met a brutal response from Protestant police and extremists. In January 1969, a vicious attack on marchers at Burntollet Bridge led to battles between Catholics and police in the Bogside area of Derry. The Northern Ireland government failed to halt the rise of Protestant extremism or Catholic protest. On August 12–14, 1969, violence in Derry spread to Belfast, with Protestant police and rioters attacking Catholic districts. On August 15, British troops were sent in to halt the violence, in which eight

KEY MOMENT

BLOODY SUNDAY

On January 30, 1972, the Northern Ireland Civil Rights Association marched in Derry to protest against internment. The task of maintaining order was assigned to a battalion of the British Parachute Regiment. After some stone-throwing by youths, and reports of sniper fire, the “Paras” took the offensive. They opened fire, shooting 13 people dead (one more later died of wounds). All were unarmed. The report of the Saville Inquiry in 2010 described the killings as “unjustified and unjustifiable.”

Troubles in Northern Ireland

The deployment of British troops on the streets of Belfast and Derry in 1969 marked a breakdown of order in Northern Ireland. Over the following 30 years, more than 3,000 people, including 763 British soldiers, were killed in massacres and atrocities that scarred the reputation of the United Kingdom.

Hunger-strike riots

The death of IRA hunger striker Bobby Sands in May 1981 led to rioting by Northern Ireland Catholics. During his fast, Sands was elected a British MP in a by-election.

BEFORE

In 1922, six counties of Ulster became Northern Ireland, a part of the United Kingdom under a devolved Protestant-dominated government at Stormont.

GROWING REPUBLICANISM

In 1949, the Irish government in Dublin declared **Ireland a republic**. Britain promised Northern Ireland would stay in the UK as long as Stormont wished it. In 1956–62, the Irish Republican Army (IRA) mounted an **armed campaign** “to drive the British invader from the soil of Ireland”, but both the Irish and Northern Ireland governments **suppressed it**. In the late 1960s, a largely Catholic civil-rights movement **challenged Protestant domination** of Northern Ireland.

people had been killed and hundreds wounded. At first, British soldiers were welcomed by Catholics as impartial protectors. Britain’s Labour government was hostile to the Protestant Unionists and envisaged radical reforms, but political progress was too slow.

Escalating violence

In the summer of 1970, events spiraled out of control. Tough army action in Catholic Belfast, with house-to-house searches and a curfew, stirred up old hostility to the British. Extremists benefited. Frustrated by the inaction of the “official” Irish Republican Army (IRA), the breakaway Provisional IRA planned an armed campaign to drive the British out of Northern Ireland. Amid the general breakdown of order, many Catholics welcomed this new IRA as their best defense against Protestants and British troops. Protestant armed groups, such as the Ulster Volunteer Force (UVF), also grew in strength. In February 1971, the first British soldier was killed. Sniping and bombings became daily occurrences. In August, internment was introduced. The arrest without trial of hundreds of Catholics, some grossly ill-treated by interrogators, led to a rapid escalation of violence. In the last five months of 1971, 143 were killed, including 46 soldiers and police. Some Catholic districts of Belfast and Derry became barricaded no-go areas openly controlled by the IRA.

CIVIL RIGHTS MARCH, 1969

Bloody Sunday, in January 1972 (see box), increased Catholic support for the IRA. It seemed that nothing could stem the rising violence.

New strategies

Desperate for a solution, the British government placed the province under direct rule from Westminster, and, in early July, flew IRA leaders to London for secret peace talks. No agreement was reached and mayhem followed. Fifteen British soldiers were killed in eight days, and, on July 21, the IRA exploded 19 bombs in central Belfast. Catholic opinion was shocked by the bombings, which killed and maimed Catholic and Protestant alike. Britain seized the moment as support for the gunmen flagged and launched a large-scale military operation to reoccupy the no-go areas. From July 1972, the rate of bombings and shooting halved, and compared with the 467 killed in 1972, the 1973 death toll was down to 250. This was seen an “acceptable level” of violence by the British government. Increasingly, the killings were sectarian, with gruesome murders of Catholics by Protestants and vice versa. The IRA

extended its terrorist campaign to mainland Britain. The worst incident, in November 1974, saw 19 killed in the bombing of two pubs in Birmingham; six men were soon arrested and convicted, but were later proved innocent. Meanwhile, Britain tried a political solution: a Protestant and

Anti-riot duty

British soldiers in riot gear prepare for action in Northern Ireland. Rubber bullets and CS gas were among weapons deployed against rioters.

Catholic power-sharing executive was installed at Stormont, and in May 1974 the Irish government’s right to a say in Northern Ireland’s affairs was recognized by the Sunningdale Agreement.

Protestants responded with a general strike, while UVF bomb attacks in the Republic of Ireland killed 33. Unable to overcome Protestant resistance, Britain resumed direct rule and abandoned the political settlement.

From 1975, the intensity of the killings subsided. The IRA, well organized and well armed, was capable of sustaining a terrorist campaign indefinitely, as it proved by occasional spectacular acts, such as the murder of Lord Mountbatten in August 1979, on the same day as killing 18 British soldiers at Warrenpoint. However, it was a different kind of IRA pressure that radically altered the Northern Ireland political scene in the 1980s. In 1981, IRA inmates at the high-security Maze prison began a hunger strike in pursuit of political-prisoner status. While

Prime Minister Margaret Thatcher refused to negotiate, first Bobby Sands and then nine other IRA prisoners starved themselves to death. For the first time, Sinn Féin, the political wing of the IRA, won mass support among Northern Ireland Catholic voters. Although not evident at the time, this shift was to open the way to a Northern Ireland settlement.

In the 1990s, the deadlock over Northern Ireland was broken. The Good Friday agreement of April 1998 raised hopes of an end to terrorism and sectarian violence.

TOWARD PEACE

Buoyed by **electoral support** from Northern Ireland Catholics, Sinn Féin leader Gerry Adams began to seek a **political route to achieving nationalist aims**. The IRA continued its terrorist campaign—for example, in a mortar attack on Downing Street in 1991, and the bombing of the City of London in 1993. John Major’s **British government entered into negotiations** with both Sinn Féin and the Irish government. Much progress had been made by 1997, when Tony Blair was elected British Prime Minister. His appointment of Mo Mowlam as Secretary of State for Northern Ireland **started a decisive peace offensive**. For the first time, Catholic and Protestant extremists, many serving life prison sentences, were included in negotiations.

The 1998 Good Friday Agreement reprised the **power-sharing arrangement** of 1973–74, but with a feasible plan for disarming terrorists on **both sides of the sectarian divide**. The killing of 28 people in a bomb attack by IRA dissidents in Omagh, in August 1998, showed how difficult it would be to uphold a settlement.

BEFORE

Throughout the postwar period, governments pursued economic policies designed to guarantee full employment, while supporting rising living standards and a welfare state.

TROUBLES

In the 1970s, however, high inflation, balance of payments crises, and pressure on the value of the

CARS WAITING FOR GASOLINE

pound made full employment impossible to sustain and forced **cuts in government spending** << 376–77. One key problem was reliance on imported oil from the Middle East, which led to queues at gas pumps in 1973–74.

Miners' strike

Strikers confront police during the miners' strike of 1984–85 at the Orgreave coking plant in June 1984. The government made ruthless use of police powers in crushing the strike.

Turn to the Right

Margaret Thatcher's election as Prime Minister in May 1979 marked a decisive change in direction for Britain. A long-term trend toward equality was reversed as the celebration of wealth and enterprise replaced belief in social solidarity and security. Much of British industry was consigned to the trash can of history, while the City of London was awash with easy money.

The most distinctive feature of Thatcher's years in power, from 1979 to 1990 (see pp.382–83), was the abandonment of any effort toward consensus. Her government's style was confrontational and opponents were to be overcome, not won over. During her early years in power, she presided over a widespread collapse of British manufacturing. High interest rates, a strong pound, and cuts in public spending combined to destroy struggling businesses. As factories closed, the number of unemployed more than doubled to over 3 million. Working-class communities that had been created by the Industrial Revolution of the 19th century and had survived the Depression were finally ruined.

Curbs on unionism

Trade unions might have been expected to lead resistance to this process, but from the outset Thatcher ended the convention of consulting union leaders

on policy. New trade union legislation outlawed mass picketing and introduced financial penalties for illegal strikes. In 1981, Thatcher made concessions to avoid a confrontation with the powerful National Union of Mineworkers (NUM), but by 1984 she welcomed a national miners' strike as a chance for a decisive confrontation.

The defeat of the miners in a year-long strike inspired a change of attitude in employers. Strikes were resisted, with ruthless use of the new legal powers, and terms and conditions were increasingly imposed on employees without negotiation. The discontent of the unemployed, especially black youths who were also victims of racism, spilled over into riots in Brixton and Toxteth.

The Conservatives' ability to carry through a radical program was helped by a split in the Labour Party in 1981, when the Social Democrats were founded. They were also able to exploit widespread popular disillusion with the

397 The number of seats in Parliament won by the Conservatives in the election of 1983, giving them an overall majority of 144. The opposition was split; Labour won only 28 percent of the popular vote.

Bang and crash

Worried traders on the stock exchange watch fortunes disappear in the crash of October 1987. The crash came just a year after the deregulation of the London stock market in the "big bang."

condition that Britain had reached in the 1970s (see pp.376–77). The crackdown on strikes was quite widely welcomed and few people regretted the mass privatization of the nationalized industries in the mid-1980s—better-off members of the working class lined up to buy shares in British Telecom or British Gas. Working-class families also

responded to the “right-to-buy” policy that gave them a chance to purchase rented government properties. Some people felt enlivened by a sense of opportunity and competition, while others were angered by loss of security and an end of “jobs for life.” The deregulation of the financial sector, climaxing in the “big bang” in the City of London in 1986, allowed individuals who were not necessarily from

5,000 The number of coal miners employed in South Wales by the end of 1989; the South Wales coalfields had once employed 250,000 men.

traditional moneyed backgrounds to make large sums of money. Cuts in income tax—compensated by rises in indirect taxation—left people on good incomes with far more money in their pockets. The obsessively consumerist yuppie was a symbolic figure of the period. The contrast between the rampant consumerism and evident prosperity of many areas of

“It is certainly safe... to pronounce the brain death of socialism.”

NORMAN TEBBIT MP, 1988

UNION LEADER (1938–)

ARTHUR SCARGILL

Born into a Yorkshire mining family, Arthur Scargill started work at a pit at the age of 15. As a left-wing militant in the National Union of Mineworkers (NUM), he orchestrated a crucial mass picket at Saltley Gate during the 1972 miners' strike. He was elected President of the Yorkshire section of the NUM in 1973 and national NUM President in 1981. He sought a chance for strike action against the Thatcher government, which he believed intended to destroy the coal industry and the NUM. He refused to hold a national ballot of members when a strike began over pit closures in Yorkshire in March 1984, splitting the union. His attempt to use mass picketing, so successful in 1972, failed in the face of the ruthless policing. The defeat of the strike in March 1985 was followed, as he had predicted, by large-scale pit closures.

Privatization

The trend-setting privatization of British Telecom in 1984 not only reversed state ownership, but also sought to make ordinary people into shareholders. Shares were sold at a price that guaranteed investors a profit.

southern England and the urban decay of northern industrial towns and inner cities was as stark as in the 1930s.

Boom and bust

Britain's image on the world stage improved in the 1980s. Once perceived as the “sick man of Europe”, Britain

4,500,000 The number of people who bought shares in British Gas when it was privatized in 1985. The sale raised £5.4 billion for the government coffers.

was now seen as economically dynamic and financially sound. Whether the changes carried out merited this response is more doubtful. The Thatcherite allegiance to thrift applied only to government spending. From the mid-1980s, easy credit made possible a boom in house prices and a rapid rise in private debt. Inflation was far from conquered, reaching almost 9 percent in the late 1980s, forcing a rise in the base interest rate to a punishing 15 percent.

Unemployment remained stubbornly high throughout the decade. Rising output from North Sea oil fields helped with

the balance of payments and public finances, but the cost of unemployment benefits absorbed a good deal of revenue from oil. A stock market crash in October 1987 revealed the instability that deregulation brought in its wake, and put in question the wisdom of encouraging ordinary citizens to invest their savings in shares.

Thatcher's influence

Yet, if Britain's financial problems were not solved, a definite change in attitudes was nonetheless achieved for better or for worse. Those who continued to believe in raising direct taxes to reduce inequality, or those who thought that economic activity should have any other goal besides maximizing profits, found themselves swimming against the tide. Thatcher fell from power in 1990, but her policies were set to continue.

“Let Labour's Orwellian nightmare... spur us... to rebuild the fortunes of this... nation.”

MARGARET THATCHER, CONSERVATIVE PARTY CONFERENCE SPEECH, OCTOBER 10, 1980

Oil rig in the North Sea

The exploring of North Sea oilfields, begun in the 1970s, reached its full effect in the 1980s and 1990s. It strengthened Sterling, which made British exports expensive, and encouraged the switch from coal to oil.

AFTER

The fall of Margaret Thatcher from power in 1990 followed a sharp drop in popularity in her final term in office. She was succeeded as Prime Minister by her protégé John Major.

NO MAJOR CHANGE

Thatcher's unpopularity resulted from mounting economic problems in the late 1980s and from her persistence in introducing a **poll tax to replace the council rates**, a measure that provoked serious riots and was regarded as unjust by many of the government's own supporters. There was also dissension within the Conservative Party over Europe, with **Thatcher's anti-European stance** being highly divisive.

Taking over as Prime Minister after Thatcher was unseated by a Conservative Party revolt, John Major replaced the poll tax with a fairer council tax and ensured that Britain took part in the founding of the European Union (EU) in 1992. His subsequent general election victory, the **fourth consecutive Conservative win**, forced the Labour Party to begin a fundamental rethink of its policies.

Major's government soon found the strain of coordinating its currency with other EU countries unsustainable. The result was an enforced **devaluation of the pound**, which inflicted a damaging humiliation on the government, but unexpectedly resolved Britain's most pressing economic difficulties. By the mid-1990s, both **unemployment and inflation were falling**.

BRITISH PRIME MINISTER Born 1925

Margaret Thatcher

“With huge **courage** and **perseverance**, she turned **Britain** into a **different country.**”

DAVID CAMERON, SPEECH, JANUARY 30, 2006

Margaret Thatcher was Britain’s most controversial prime minister of the 20th century. Her personal influence on the direction taken by British society and the British economy in the 1980s was decisive. She was a person of narrow views and limited sympathies—even one her closest aides and greatest admirers, Ferdinand Mount, admitted that he “never became fond of her.” But she was a fiercely effective political

and unemployment was a sign of idleness. Neither the sufferings of the Depression nor the collectivist sentiment of wartime affected her attitudes. Winning a place at Oxford University from grammar school, she later became president of its

12.5 The percentage at which unemployment in the United Kingdom peaked under the Thatcher government in January 1982.

operator, ready to make concessions to avoid defeat, but ruthless and uncompromising once in a position of strength. Outspoken and direct where other politicians were evasive, she was hated by her opponents, and eventually alienated many within her own party, but she also commanded loyalty and admiration. Winning three consecutive general elections for the Conservatives was made easier by a split within the Labour Party, but it was also a tribute to her strength of leadership and, in a sense, the success of her policies.

Early life

Thatcher’s father was a shop owner in Grantham, Lincolnshire, prominent in local politics, and a great influence on her. Like him, she felt none of the sentimental affection for the British working classes found among many Tory grandees of the upper classes. To her, poverty was a personal failing,

Prime Minister Margaret Thatcher

Britain’s first woman Prime Minister poses for an official photograph in 1985. Margaret Thatcher turned Britain into a more dynamic and enterprising country, although at the expense of social solidarity.

Return from the Falklands War

Crowds greet the returning Task Force after victory in the Falklands War of 1982. Thatcher's unwavering response to Argentinian aggression aroused patriotic fervor and transformed her standing in opinion polls at the time.

Conservative Association. Progress for a woman in the Conservative Party was hard, but persistence and talent saw her win the parliamentary constituency of Finchley in the 1959 general election.

As Education Secretary in the early 1970s, she displayed her ability to infuriate opponents. For abolishing free school milk, she was abused as "Margaret Thatcher, Milk Snatcher", ironically making her name memorable to a broad public. After Ted Heath had been humiliated by the trade unions, and lost two general elections in 1974, she was put forward as a candidate by Conservative MPs seeking to challenge him and sharply change policy. To general astonishment, she beat not only Heath, but also the experienced and moderate William Whitelaw. Choosing the first-ever woman party leader surprised the Conservatives, who had hardly intended to make a statement about gender and politics. It also wrong-footed militant feminists, confronted with the singular success of a woman with whose views they almost entirely disagreed.

Election victory

Through the 1970s, Thatcher absorbed the ideas of thinkers who rejected the post-war consensus built around the welfare state, Keynesian economics, and full employment. Control of the money supply, unfettered free-market capitalism, and an end to state interference in the economy were to provide an answer to Britain's persistent economic problems. As Thatcher later said, the roots of her beliefs lay rather in the principles that her small-town background had taught her: "an honest day's work for an honest day's pay; live within your means; pay your bills on time; support the police." Neither Thatcher's personality nor her policies were especially attractive to voters in the 1979 general election, but

the clear failings of the Labour government of Jim Callaghan helped her to win a comfortable majority. At first, her tenure of office looked set to be brief. As unemployment and

Brighton bombing

In October 1984, an IRA bomb exploded in the Grand Hotel, Brighton, where Conservatives attending a party conference were sleeping. Thatcher, the main target of the bomb, escaped, but five other people died.

inflation soared in 1980–81, her popularity ratings dropped to among the lowest ever for a Prime Minister. It was typical of Thatcher that her response was an intransigent speech to a Conservative Party conference declaring: "The lady's not for turning!" Then came the Falklands War (see pp.384–85). Thatcher's resolute nationalism won her a military victory and a popular following that she never lost in virtually all of her years in office.

Thatcher puppet

This puppet of Margaret Thatcher, from the TV show *Spitting Image*, was typical of the hostile caricature to which she was subjected. Her opponents disliked her demeanor as much as her policies.

"There is no such thing as society: there are individual men and women, and ... families."

MARGARET THATCHER, INTERVIEW, SEPTEMBER 1987

As her hold on power tightened from 1983 onward, Thatcher initiated radical change. The privatization of nationalized industries, tax cuts, and the freeing of capital markets changed the face of Britain. She convinced a new generation that the pursuit of wealth was good, and that dependence on the welfare state was bad. She had no sympathy for those made jobless by her economic policies, or for the miners and other workers crushed by her crusade against trade unions. Her instincts were authoritarian, and she employed police power ruthlessly in the suppression of strikes and riots. When the Greater London Council became a center of opposition to her rule, she abolished it. Her willpower and courage were unquestionable, whether shrugging off an attempt by the IRA to assassinate her at Brighton in 1984, or facing down revolt by members of her Cabinet. Like no Prime Minister since Winston Churchill, she cut a figure on the world stage, convincing foreigners that Britain was again a power to be reckoned with. Her downfall came through her stubborn persistence in introducing the poll tax, which alienated much public opinion,

and her anti-European gestures, which alienated leading members of her Cabinet and party.

By the time a party revolt unseated her in 1990, however, she had changed Britain for good.

TIMELINE

- **October 13, 1925** Born Margaret Hilda Roberts in Grantham, Lincolnshire.
- **1943–47** Studies chemistry at Oxford University.
- **1950–51** As the Conservative candidate for Dartford in two general elections, she fails to win a seat in Parliament.
- **1951** Marries divorced businessman Denis Thatcher.
- **1953** Qualifies as a barrister. Gives birth to twins.
- **October 1959** Enters the House of Commons as Conservative MP for Finchley, the constituency she would represent until 1992.
- **1970–74** Serves as Secretary of State for Education and Science in the Conservative government of Edward Heath.
- **February 11, 1975** Elected as leader of the Conservative Party.

CAMPAIGNING IN THE 1950S

- **January 19, 1976** Makes a speech accusing Soviet Union of attempting world dominance, leading a Soviet publication to dub her "the Iron Lady".
- **May 4, 1979** Becomes Prime Minister after winning a 43-seat majority in the general election.
- **1981** Soaring inflation and unemployment and collapsing industrial output, make Thatcher's government immensely unpopular.
- **April–June 1982** Leads Britain to victory over Argentina in the Falklands War.
- **June 9, 1983** Reelected as Prime Minister with a landslide 144-seat majority in Parliament.
- **March 1984–March 1985** Defeats a strike by the National Union of Mineworkers (NUM) (see pp.380–81), ending the era of trade union power.
- **October 12, 1984** Escapes unscathed when the IRA blow up the Brighton hotel, where she was staying for the Conservative Party annual conference.
- **November 1984** Initiates the policy of privatization of nationalized industries, beginning with the sale of British Telecom to private investors.
- **June 11, 1987** Thatcher wins her third general election, with a working majority of 102 seats.
- **April 1990** Faces opposition on the introduction of the Community Charge, or poll tax, in England and Wales.
- **November 22, 1990** Announces her resignation and is replaced as Prime Minister by John Major.

BEFORE

Britain retained conscription—renamed **National Service**—for 15 years after the end of World War II, before making a transition to a slimmed down, highly professional armed force.

COSTS OF WAR

After World War II, Britain's **military commitments were extensive**, including fighting colonial wars, contributing to the North Atlantic Treaty Organization (NATO) alliance, and developing an independent nuclear deterrent. In 1963, Britain spent **10 percent of its national wealth on defense** (the comparable figure for 2008 was 2.5 percent). This level of **cost was unsustainable**. Commitments were reduced by granting independence to colonies and abandoning a global role to **concentrate on Europe and the contribution to NATO**.

MILITARY DOWN-SIZING

Since the late 1960s, the **Royal Navy** faced **drastic spending cuts**, while the **Army** became a **much smaller body of regulars**. The Army's elite units, such as the **SAS** and the **Paras**, **gained an international reputation**. Though trained to fight as part of NATO forces, its **combat role** in the 1970s was **mostly to quell the "Troubles"** in Northern Ireland << 378–79.

Wars in Peacetime

By the 1980s, the training and equipment of British forces were based on expectations of a nuclear war against the Soviet Union or on countering low-level terrorism. Instead they became involved in arduous and often controversial campaigns in the Falklands, the Balkans, Iraq, and Afghanistan.

In April 1980, Britain's Special Air Service (SAS) stormed the Iranian Embassy in London to free hostages taken by Arab gunmen. The following year a group of women set up a peace camp to protest against the planned stationing of American cruise missiles with nuclear warheads at Greenham Common in Berkshire. These events illustrated the primary military preoccupations of the early 1980s: terror attacks, which Britain had developed great expertise in countering, and the nuclear confrontation with the Soviet Union and its allies. When

war came in April 1982, it was from another direction altogether. Argentina, governed by a military junta, occupied the Falkland Islands, a tiny and remote remnant of the British Empire, situated in the South Atlantic.

When Prime Minister Margaret Thatcher dispatched a Task Force to retake the islands, an old-fashioned war proved immensely popular with a surprisingly jingoistic British public. Thatcher avoided a Suez-style diplomatic disaster (see pp.366–67) by carefully securing American support for the military action. Her ruthlessness

in ordering a submarine to sink the Argentinian battleship *Belgrano*, as the Task Force approached the islands, showed the character of a natural war leader. Although the much reduced Royal Navy was stretched to the limit by the demands of the operation, losing four warships in fierce air and sea battles, British troops were successfully deployed on the island. Once ashore, the Royal Marines and Paras demonstrated outstanding fitness and fighting skills. The Argentinians were defeated in June, with almost 10,000 soldiers surrendering. Thatcher's

Occupying Iraq

British soldiers conduct a long-range desert patrol in Iraq in 2006. Jalal Talabani, Iraqi President from 2005, praised the British for having come "to liberate Iraqi people from the worst kind of dictatorship."

Welcome to Kosovo

British troops entered Kosovo as part of a NATO-led peacekeeping force in 1999 after the withdrawal of Serb forces. They were greeted enthusiastically by the local Kosovan population.

United States in 2001, there were few dissenting voices when Blair spoke of standing “shoulder-to-shoulder” with the American people against Islamic terrorism. The subsequent American invasion of Afghanistan, in which Britain played a supporting role, was widely accepted as a reasonable action, overthrowing a Taliban regime that was allied to al-Qaeda terrorists and that was oppressive, especially in its treatment of women.

The British government found itself tied into US foreign policy, though with no real influence over its direction. The right-wing administration of President George W. Bush embarked on an aggressive “war on terrorism” that ignored basic human rights and on a policy of intimidation of “rogue states” that led in 2003 to the invasion of Iraq. Blair was pulled along in the wake of American action, for which he proved a

SA80 Bullpup assault rifle

The SA80 Bullpup became the standard-issue British infantry rifle in 1987. It has seen combat use in the Gulf War of 1991, the invasion of Iraq in 2003, and operations in Afghanistan.

more eloquent spokesman than Bush. The commitment of 45,000 British troops to the Iraq invasion provoked massive anti-war demonstrations. Instead of a clear military victory and the installation of democracy in Iraq, the invasion led to a long struggle against insurgency, the collapse of Iraq into civil strife, and the disgrace of

Anglo-American occupation forces by revelations of torture and mistreatment of Iraqis. By the time British troops were extricated from Iraq in 2009, the situation in Afghanistan had deteriorated radically. Many British servicemen were killed fighting the resurgent Taliban, with no end to the conflict in sight.

blatant aggression of the Iraqis, the UN endorsement of the use of force, the swiftness of the victory, and the low coalition casualties combined to make the war largely uncontroversial with the British public.

Defending human rights

The break-up of Yugoslavia in the 1990s brought warfare to Europe for the first time since 1945. In early 1999, efforts to find a negotiated settlement between Serbian leader Slobodan Milosevic and a movement seeking independence for Kosovo failed. Faced with the prospect of the massacre of Kosovans by Serb forces, NATO embarked upon the first offensive in its 50-year history, launching bomb and missile attacks on Serb targets. The attacks caused considerable civilian casualties, but the Serbians were induced to withdraw from Kosovo.

British Prime Minister Tony Blair was a leading advocate of the military action against Serbia and enunciated what became known as the “Blair doctrine”—arguing that the “international community” had a right and duty to intervene militarily in any country to uphold human rights and enforce civilized conduct. The term “international community” did not mean the UN, which had failed to support military action in Kosovo, but the United States and its allies.

War on terror

Blair’s positioning of himself as America’s closest ally was in line with British foreign policy since World War II—the sole exception being the Wilson government’s refusal to contribute forces to America’s Vietnam War in the 1960s. After the 9/11 attacks on the

Mourning the fallen

Mourners grieve as a cortege of hearses carry the repatriated bodies of seven British soldiers and Marines killed in Afghanistan through the town of Wootton Bassett, Wiltshire, in June 2010.

popularity with voters soared, guaranteeing her reelection in 1983, and Britain’s international standing was on the whole enhanced.

Crisis in the Middle East

Britain’s next major military action was in the Middle East. Any illusions that the end of the Cold War in the late 1980s would be followed by an era of world peace were dispelled when Iraqi dictator Saddam Hussein invaded Kuwait in 1990. With the blessing of the United Nations, the United States organized a coalition to counter this act of aggression. Britain made a larger military contribution than any other of America’s allies, with more than 40,000 troops deployed, and the RAF and Royal Navy fully involved. Iraqi forces were defeated in 1991. The

750,000 The estimated number of people in London who protested against the planned invasion of Iraq on February 15, 2003. It was one of the largest political demonstrations in British history.

BEFORE

The election of Tony Blair as Prime Minister in May 1997 ended 18 years of Conservative rule and ushered in a new era in British political life.

BLAIR'S LEADERSHIP

As leader of the Labour Party from 1994, Blair **abandoned** its long-standing commitment to the **state control of key industries** and **embraced the wealth-creating potential of free enterprise**, in effect accepting the economic changes wrought by Thatcherism << 380–81. His “New Labour” won a landslide victory in the 1997 election against John Major’s Conservatives. At 43, Blair was the youngest British Prime Minister in the 20th century.

TONY BLAIR CELEBRATES ELECTION VICTORY

By the late 1990s, Britain appeared to have recovered from the persistent economic and financial problems that had plagued the country for decades. Inflation was below 1.5 percent and the unemployment rate around 5.5 percent—both among the lowest figures in Europe. The British economy boomed, growing in every quarter of every year during the decade 1997–2007. Although wealth was unequally shared, most British people benefited to some degree by rising living standards, helped by the introduction of a minimum wage and greater job opportunities. Government spending on the National Health Service and on education rose steeply. The strength of the pound made it seem unnecessary for Britain to join the European single currency in 2002; Britain was one of only three European Union states to stay outside the Eurozone.

Labour Prime Minister Tony Blair and his Chancellor of the Exchequer Gordon Brown inevitably took much of the

credit for this rosy economic situation, which was the single largest factor in securing further Labour general election victories in 2001 and 2005.

The downside

Some aspects of the economic prosperity provided cause for disquiet. British manufacturing continued its seemingly irreversible decline, although it was compensated by rapid growth

in the services and financial sector. Gross inequalities in wealth were highlighted by the bonus culture of banks and finance companies, which made lump sum payments to employees equivalent to a lifetime’s earnings for others. Britain was awash with easy money—consumption was fueled by credit-card borrowing and property prices inflated by the availability of cheap mortgages.

The news that the Northern Rock bank was on the verge of collapse in 2007 marked the beginning of the credit crunch and the end of the long boom. Inheriting the premiership from Blair, Gordon Brown found himself at the forefront of an international effort to stem a global banking collapse, taking failing banks into state ownership at the expense of a vast expansion of budgetary deficit and public debt.

**Financial meltdown**

Investors queue to withdraw their money from the insolvent Northern Rock bank in September 2007. The banking crisis revealed that much of Britain’s prosperity was built on shaky foundations.

A period of change

The period of Tony Blair’s premiership from 1997 to 2007 brought some radical reforms in Britain’s system of government. Since the 1970s, the

Facing the Future

After the shocks and upheavals of the 20th century, Britain entered a new millennium with its people prosperous, unemployment low, and freedom and democracy intact. In the following decade, however, terrorism and counterterrorism and a brush with financial catastrophe suggested that the present century was shaping up to be as troubled as the last.

London skyline

A panoramic view of the British capital stretches from the center of financial power in the City to the seat of political power in the Houses of Parliament. By 2006, almost one-third of London’s citizens were born outside the United Kingdom.

London bomb attacks

British-born Hasib Hussain was 18 years old when he blew up this bus on July 7, 2005, killing 14 people including himself. Suicide bombers also targeted three Underground trains in the rush-hour terrorist attacks.

Scottish National Party (SNP) had been a significant force in British politics. Blair was not prepared to accept the SNP's demand for independence, but instituted a Scottish Parliament with a devolved government exercising considerable powers in 1999. Wales was also given its own assembly. When a Catholic-Protestant power-sharing executive was made to function in Northern Ireland, England was left as the only part of the United Kingdom without a devolved parliament and government. There was also a radical change in Westminster. All but 92 hereditary peers lost their seats in the House of Lords in 1999.

Evolving attitudes

One significant aspect of the 1997 election was the number of seats won by women MPs—119 in all, compared

to 24 women elected in 1974. This reflected ongoing changes in attitudes toward women and their expectations. In the first decade of the 21st century, 70 percent of British women had paid employment, one of the highest in the

£14 BILLION The total sum estimated to have been paid in bonuses to workers in the City of London in 2007, with more than 4,000 individuals receiving personal bonuses in excess of £1 million.

world. Although a lot of these jobs were part-time and women remained under-represented in boardrooms, it was true that many barriers to women's advancement had crumbled and gender roles had become far less sharply defined.

Attitudes to homosexuals also underwent a radical transformation. To be known to be gay was no longer a bar to advancement in politics or almost any other area of life, and by 2010 the annual Gay Pride marches had become popular festivals rather

than acts of protest. Of course, sexism and homophobia continued to flourish among individuals and groups who were at odds with the dominant liberal consensus. The issues of race and immigration remained contentious, despite the officially adopted ideology of multiculturalism and generally high levels of integration. The West Indian and Asian presence in Britain was long established, but the expansion of the European Union to include the countries of Eastern Europe in 2004 was followed by a fresh influx of immigrants. In 2008, more than one in 10 of the UK population had been born abroad.

Terrorist threat

The growth of international Islamic terrorism and British military involvement in contentious wars in Afghanistan and Iraq led to concerns about the allegiance of Britain's Muslim minority. In July 2005, suicide bomb attacks on Underground trains and a bus in London killed 52 people. Three of the men responsible for the atrocity were British-born Muslims. Britain's security services reacted to the threat of terrorism efficiently, stopping many plots from reaching fruition, but also committed serious errors, notably the killing of the innocent Brazilian Jean Charles de Menezes in the wake of the 2005 bombings. The use of special powers to combat terrorism led to fears of an erosion of civil liberties. Britain in the 21st century was characterized as much by its profusion of security cameras and large prison population as by its tolerance and diversity.

The problem-plagued premiership of Gordon Brown, lasting from 2007 to 2010, was followed by a close-fought general election and a coalition government of Conservatives and Liberal Democrats.

A COALITION EMERGES

The Brown administration steered a perilous path through the economic crisis of 2007–08, **avoiding a banking collapse and alleviating recession.** The negative political effects of the crisis were magnified by **a scandal involving MPs' expenses.** In the election of May 2010, David Cameron's Conservatives won only 36 percent of the popular vote and no overall majority in Parliament. **Cameron negotiated a coalition with Nick Clegg's Liberal Democrats** to become Prime Minister, embarking on a rigorous policy of **public spending cuts.**
